orality (ọ̄-ral′i-ti), *n.* [*oral* + *-ity.*] **1.** Capability of being orally conveyed to another.—**2.** Oral communication.

oralization (ō-rạl-i-zā′shọn), *n.* [*oralize* + *-ation.*] The process of making (the muscular movements in eating, etc.?) more distinctly oral or concerned with the mouth muscles (and thereby more manageable for 'oral' or vocal utterance). [Rare.]

> Articulation is traced from the strenuous movements in the mastication and ingestion of foods, through increasing *oralization*, relaxation, and adjustments.
> *Amer. Anthropologist*, Jan.–March, 1900, p. 171.

oralize (ō′rạl-īz), *v. t.*; pret. and pp. *oralized*, ppr. *oralizing.* [*oral* + *-ize.*] To render oral.

orally, *adv.* **3.** Toward or in the mouth or oral region.

oralward (ō′rạl-wạ̈rd), *adv.* Toward the mouth or oral region of an animal. [Rare.]

orange^{1}, *n.*—**Acridine orange,** a basic coal-tar color related to acridine. It is of no value for dyeing wool, but dyes silk and tannin-mordanted cotton a bright orange.—**Alizarin orange,** a mordant coal-tar color derived from anthracene. It is a nitro-derivative of alizarin, formed by the action of nitric acid upon alizarin in the presence of sulphuric acid: used in calico-printing and wool-dyeing. It gives an orange color with an aluminium mordant.—**Alpha-naphthol orange.** Same as *orange I.*—**Aniline orange.** Same as *Victoria ★yellow.*—**Atlas orange.** Same as *orange II.*—**Beta-naphthol orange.** Same as *orange II.*—**Bitter orange, Seville orange.** See *bigarade.*—**Brilliant orange.** Same as *crocein ★orange.*—**Brilliant orange G,** a direct cotton coal-tar color of unpublished composition. It dyes unmordanted cotton a bright orange from a salt bath.—**Brilliant orange R,** an acid coal-tar color of the monoazotype, prepared by combining diazotized xylidine with β-naphthol-monosulphonic acid. It dyes wool and silk yellowish red from an acid bath. Also called *scarlet GR, scarlet R*, and *orange L.*—**Cerasin orange.** Same as *★Sudan G.*—**Cerotin orange.** Same as *chrysoidine.*—**Chicago orange,** a direct cotton coal-tar color related to stilbene. It dyes unmordanted cotton orange in a neutral salt bath.—**Chloramine orange,** a direct coal-tar color of unpublished composition. It dyes unmordanted cotton orange in a salt bath.—**Chlorophenin orange,** a direct cotton coal-tar color related to stilbene. It dyes unmordanted cotton bright orange in a salt bath.—**Cloth orange,** a mordant acid coal-tar color of the diazo type, derived from benzidine and salicylic acid. In an acid bath it dyes wool an orange color which is rendered faster by an after-chroming. It may also be dyed upon chromium-mordanted wool.—**Columbia orange,** a direct coal-tar color. It dyes unmordanted cotton orange in a salt bath.—**Crocein orange,** an acid coal-tar color of the monoazotype, prepared by combining diazotized aniline with β-naphthol-sulphonic acid. It dyes wool and silk an orange yellow from an acid bath. Also called *ponceau 4 GB, orange GR, pyrotine orange, orange ENL, GRX*, and *orange ENZ.*—**Diamine orange B** and **G,** two direct cotton coal-tar colors of unpublished composition. They dye unmordanted cotton orange in an alkaline salt bath.—**Diamond orange.** Similar to *diamond ★yellow.*—**Dimethylaniline orange.** Same as *helianthin.*—**Diphenyl orange,** a direct cotton coal-tar color of the stilbene type, derived from nitrotoluene-sulphonic acid. It dyes unmordanted cotton orange from a salt bath.—**Direct orange,** a direct cotton coal-tar color similar to direct yellow, made by the reduction of direct yellow with alkaline reducing-agents. It dyes unmordanted cotton various hues of orange in a salt bath and possesses good fastness.—**Janus orange,** a mixture of Janus red and Janus yellow.—**Kid-glove orange,** the mandarin orange, *Citrus nobilis*: so called because its rind is thin and may easily be removed in one piece, like a kid glove.—**Kongo orange G** and **R,** direct cotton coal-tar colors of the diazo type. They dye unmordanted cotton orange in a salt bath.—**Metanil orange I** and **II,** acid coal-tar colors of the monoazo type derived from meta-aniline-sulphonic acid. They dye wool orange in an acid bath.—**Methyl orange.** Same as *helianthin*: largely used as an indicator in volumetric chemical analysis. It gives a pale yellow coloration with alkaline solutions and a pink coloration with acid solutions.—**Mikado orange,** a direct cotton coal-tar color of the stilbene type, prepared by the action of alkaline reducing-agents upon mikado yellow. It dyes unmordanted cotton orange in a salt bath.—**Milling orange,** a mordant acid coal-tar color of the diazo type, prepared by combining diazotized amidoazobenzin-sulphonic acid with salicylic acid. It may be dyed upon unmordanted wool in an acid bath and then after-chromed, or may be dyed upon chromium-mordanted wool.—**Naphthol orange.** Same as *orange I.*—**Native orange.** (*b*) In Australia, *Capparis Mitchellii*, a congener of the caper-tree, bearing fruits 1–2 inches in diameter, with a fragrant pulp which is eaten by the natives. It is often called *small native pomegranate.* (*c*) Same as *native ★lime* (*b*).—**Neutral orange,** a mixed pigment used by artists which consists of cadmium yellow and Venetian red.—**Orange A, extra,** and **OP.** Same as *orange II.*—**Orange B.** Same as *orange I.*—**Orange basket-worm.** See *★basket-worm.*—**Orange Chionaspis.** See *★Chionaspis.*—**Orange ENL** and **GRX.** Same as *crocein ★orange.*—**Orange ENZ.** Same as *crocein ★orange.*—**Orange GR.** Same as *crocein ★orange.*—**Orange GS, M,** and **N.** Same as *diphenylamine-orange* (which see, under *orange*^{1}).—**Orange L.** Same as *brilliant ★orange R.*—**Orange leaf-beetle.** See *★leaf-beetle.*—**Orange leaf-roller.** See *★leaf-roller.*—**Orange leaf-rust.** See *★leaf-rust.*—**Orange MN.** Same as *metanil ★yellow.*—**Orange plant-louse.** See *★plant-louse.*—**Orange R.** (*a*) An acid coal-tar color of the monoazo type prepared by combining diazotized xylidine-sulphonic acid with β-naphthol. It dyes wool and silk reddish orange in an acid bath. (*b*) A mordant acid coal-tar color of the monoazo type prepared by combining diazotized para-nitraniline with salicylic acid. Also called *alizarin yellow R.* (c) Same as ★*orange T.*—**Orange T**, an acid coal-tar color of the monoazo type prepared by combining diazotized ortho-toluidine-monosulphonic acid with β-naphthol. It dyes wool orange in an acid bath.—**Pyrotine orange.** Same as *crocein* ★*orange.*—**Six-spotted mite of orange.** Same as *California* ★*spider.*—**Spring orange**, the American storax, *Styrax Americana.* See *Styrax.*—**Vegetable orange.** See ★*vine-peach.*—**Victoria orange.** Same as *Victoria* ★*yellow.*—**Wild orange.** (*d*) In Australia, same as *wild* ★*lemon.*

orangeado† (or″an-jä′dō), *n.* Same as *orangeat.*

orange-aphis (or′ạnj-ā″fis), *n.* An aphis, *Aphis gossypii*, common in Florida, which infests the leaves and young twigs of the orange and lemon, as well as cotton and cucurbits. See cut under ★*cotton-aphis.*

orange-berry (or′ạnj-ber″i), *n.* **1.** Same as ★*lime-berry.*—**2.** An immature orange. The small, immature fruits which drop from the trees, when collected and dried, are used in medicine.

orange-butterfly (or′ạnj-but″ėr-flī), *n.* Same as *cresphontes* ★*butterfly.*

orange-cups (or′ạnj-kups), *n. pl.* In *bot.*, same as *cluster-cups.*

orange-dog, *n.* **2.** See *giant* ★*swallowtail.*

orange-fin (or′ạnj-fin), *n.* The salmon-trout, *Salmo brutia*, found in the north of Europe and the British Isles. When young it often has orange or red spots on the sides. The bull trout parr of the Tweed is also sometimes called *orange-fin.* *Seeley*, Fresh-Water Fishes of Europe, p. 311.

Orange-flower tree, the syringa or mock-orange, *Philadelphus coronarius.*

orange-fly (or′ạnj-flī), *n.* Any one of several trypetid flies whose larvæ feed on orange-fruit, as the Morelos orange-fly, *Trypeta ludens.*

orange-gum (or′ạnj-gum), *n.* See ★*gum*².

orange-melon (or′ạnj-mel″ọn), *n.* Same as ★*vine-peach.*

orange-mite (or′ạnj-mīt), *n.* Any one of several mites found on orange-trees, as *Tetranychus sexmaculatus*, or *Tetranychus mytilaspidis.*

orange-peel, *n.* **2.** In *ceram.*, an oriental glaze with rough pitted surface, resembling the skin of an orange. See *peau d'orange.*—**Orange-peel bucket.** See ★*bucket.*

orange-quit (or′ạnj-kwit), *n.* A Jamaican bird, *Glossoptila ruficollis.* *Newton*, Dict. of Birds, p. 761.

orangeroot, *n.*—**Climbing orangeroot**, the climbing bittersweet, *Celastrus scandens.*

orange-rust (or′ạnj-rust), *n.* A fungus, *Cæoma luminatum*, which produces copious orange-colored spores on the stems of blackberries and raspberries.

orange-scab (or′ạnj-skab), *n.* See ★*scab.*

orange-tip, *n.*—**Falcate orange-tip**, an American pierid butterfly, *Synchloe genutia*, having white wings with orange tip, and the apex of the fore-wings hooked. It is found from Georgia to Connecticut, and its larvæ feed on slender cruciferous plants such as shepherd's-purse.—**Olympia orange-tip**, an American pierid butterfly, *Synchloe olympia*, occurring in the southwestern United States. Its larvæ feed on hedge-mustard and other cruciferous plants.

orange-tree (or′ạnj-trē), *n.* **1.** Any one of several species of trees belonging to the genus *Citrus* which bear oranges. See *orange*¹, 2, and *citrus*, 2.—**2.** In New Zealand, the tarata, *Pittosporum eugenioides*, so called from the odor of its leaves when crushed. Also called *New Zealand orange-tree.* See *hedge-laurel* and ★*tarata.*

orangist¹ (or′ạnj-ist), *n.* [*orange* + *-ist.*] One who raises oranges; a planter of orange-groves. *N. E. D.*

Orangist² (or′ạnj-ist), *n.* [*Orange* (see def.) + *-ist.*] **1.** An adherent of the House of Orange, in the Netherlands.—**2.** An Orangeman.

orarian (ō-rā′ri-ạn), *a.* and *n.* [L. *orarius*, of the coast, < *ora*, shore, coast.] **I.** *a.* Belonging to or living on the sea-coast.

II. *n.* One who lives on the sea-coast. *N. E. D.* [Rare.]

orat. An abbreviation of *orator.*

orational (ō-rā′shọn-ạl), *a.* [NL. *orationalis*, < L. *oratio(n-)*, speech, prayer.] Of or pertaining to prayer in church service. *N. E. D.* [Rare.]

oratorian, *a.* **2.** [*cap.*] Of or pertaining to one of a religious society known as The Oratory, especially to the English branch of The Oratory of St. Philip Neri, a congregation of the Fathers of the Oratory, at Brompton.

> In Rome . . . he [Manning] saw Newman "wearing the *Oratorian* habit and dead to the world."
> *Encyc. Brit.*, XXX. 523.

oratorio-singer (or-ạ-tō′ri-ọ-sing″ėr), *n.* One who sings oratorios or oratorio music.

oratorship (or′ạ-tọr-ship), *n.* The position or office of orator, as the public oratorship in an English university. See *orator*, 6.

oratrice (or′ạ-tris), *n.* [F. *oratrice* < L. *oratrix*, fem. of *orator*: see *oratrix.*] Same as *oratrix.*

orbicular, *a.* **5.** In *petrog.*, in phanerocrystalline igneous rocks, having large spheroidal aggregations of minerals, in radial or concentric groups of megascopic crystals: as, *orbicular* granite, *orbicular* diorite.

Orbiculoidea (ôr-bik-ụ-loi′dẹ-ạ̈), *n.* [NL., < *Orbicula*, a genus of brachiopods, + Gr. εἶδος, form.] A genus of neotrematous brachiopods of the family *Discinidæ*, having circular chitinous shells, the pedicle passage being in the form of a slit which extends from the beak of the pedicle-valve forward, and closed behind, as growth advances, by a listrium. It is common in all rocks from the Lower Silurian to the Cretaceous.

orbific (ôr-bif′ik), *a.* [L. *orbis*, orb, + *-ficus*, < *facere*, make.] Orb-making; world-making.

> An instant impulse urging to begin
> The work *orbific;* glorying in their plans
> Of future suzerainty and wide-spread sway
> Among new worlds of creatures yet to be.
> *P. J. Bailey*, A Spiritual Legend, 1. 99.

orbilla (ôr-bil′ạ̈), *n.*; pl. *orbillæ* (-ē). [NL., dim. of L. *orbis*, orb.] A lichen-shield, apothecium, or pelta in the genus *Usnea.* *Cooke's Manual.* See cut at *apothecium.*

orbit, *n.*—**Ferrel's orbit theory**, in *meteor.*, Ferrel's explanation of the growth of hailstones by the addition of successive layers of ice as the hailstone is carried by wind along a path or orbit consisting of a series of loops passing successively into and out of the strata where rain or ice is forming.

Orbital crest, ring. See ★*crest, ring*¹.

orbitale (ôr-bi-tā′lē), *n.*; pl. *orbitalia* (-li-ạ̈). **1.** In *ichth.*, same as *prefrontal.*—**2.** In *craniom.*, the lowest point of the inferior border of the orbit. *Von Török.*

orbite (or′bīt), *n.* [*Orb(eshöhe)*, a place in Hesse, + *-ite*².] In *petrog.*, a fine-grained diorite-porphyry with phenocrysts of hornblende and lime-soda feldspar. *Chelius*, 1892.

orbitofrontal (ôr″bi-tō-fron′tạl), *a.* [L. *orbita*, orbit, + *frons* (*front-*), forehead, + *-al*¹.] Relating to the orbits and to the frontal bone or the forehead.

Orbitoides (ôr-bi-toi′dēz), *n.* [NL., < L. *orbita*, orbit, + Gr. εἶδος, form.] A genus of *Foraminifera* similar to *Nummulites* (which see). It abounds in the Cretaceous and Eocene Tertiary and in places gives name to the rock: as, the *Orbitoides* limestone of the Gulf States or Orbitolitic group. See *Vicksburg group.*

Orbitolina (ôr″bi-tō-lī′nạ̈), *n.* [NL., < L. *orbita*, orbit, + *-ol-* + *-ina*¹.] A genus of *Foraminifera* having a silicious test composed of concentric rings divided into numerous chambers. It is very abundant in the Cretaceous rocks.

orbitomaxillary (ôr″bi-tō-mak′si-lạ-ri), *a.* [L. *orbita*, orbit, + E. *maxillary.*] Relating to the orbits and to the superior maxillary bones.

Orbitonasal foramen. See ★*foramen.*

orbitopalpebral (ôr″bi-tō-pal′pe-brạl), *a.* [L. *orbita*, orbit, + *palpebra*, eyelid, + *-al*¹.] Relating to the orbits and to the eyelid; noting one of the insertions of the levator palpebræ muscle.

orbitosphenoid, *n.* **2.** In *ichth.*, a bone anterior to the alisphenoid and usually forming part of the orbital septum. It is common only among the soft-rayed fishes. The orbitosphenoid of Owen is the alisphenoid of Huxley and Parker.

orbitostat (ôr′bi-tọ-stat), *n.* [L. *orbita*, orbit, + Gr. στατός, < ἵστασθαι, stand.] In *craniom.*, an instrument used for determining the central point of the orbit and the direction of the orbital axis which passes through this point and the optic foramen.

orbitotympanic (ôr″bi-tō-tim-pan′ik), *a.* [L. *orbita*, orbit, + E. *tympanic.*] Pertaining to the region of the orbit and the tympanum, as the bony ridge, present in many toads, which runs from the eye to the ear.

> A thick *orbito-tympanic* bony ridge.
> *Proc. Zool. Soc. London*, 1897, p. 203.

orb-web (ôrb′web), *n.* The kind of web spun by the spiders of the family *Epeiridæ.*

O. R. C. An abbreviation of *Order of the Red Cross.*

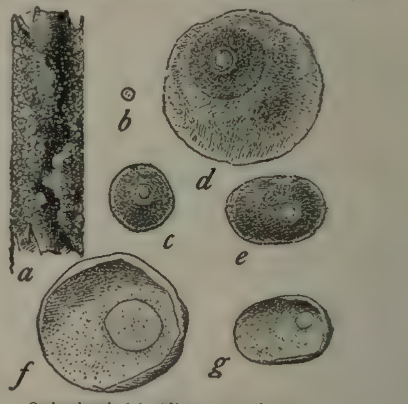
orchard, *n.*—**Indian orchard**, in certain parts of New England and New York, "an old orchard of ungrafted trees, the time of whose planting is not known." (*Bartlett.*) The name is sometimes given to the neighboring village. *Jour. Amer. Folk-lore*, April–June, 1902, p. 109.

orcharded (ôr′chạ̈r-ded), *p. a.* Set out or planted with fruit-trees.

orcharding, *n.* **2.** Land planted with orchards; orchards collectively: as, acres of *orcharding.*—**Turpentine orcharding.** See ★*turpentining.*

orchardman (ôr′chạ̈rd-mạn), *n.* Same as *orchardist.*

orchard-scale (ôr′chạ̈rd-skāl), *n.* Any one of many scale-insects found on orchard trees; specifically, the European orchard-scale, *Aspidiotus ostreæformis*, which occurs on the apple, pear, plum, peach, cherry, and other trees in Europe (its native home), the United States, and Canada.



Orchard-scale (*Aspidiotus ostreæformis*).

a, infested twig, natural size; *b*, life size female scale; *c*, half-grown female scale; *d*, full-grown female scale; *e*, full-grown male scale; *f*, female scale from below; *g*, male scale from below; *c–f*, greatly enlarged.

orchestrally (ôr-kes′trạl-i), *adv.* In the manner of, or for the use of, an orchestra: as, music arranged *orchestrally;* with an orchestra: as, *orchestrally* accompanied.

orchestration, *n.* **2.** Figuratively, a harmonious arrangement as of colors in painting. [Rare.]

> In their lack of any graspable theme and in their delicately elaborated *orchestration* of tone they can be appreciated, priced, that is to say, at their proper worth, only by those whose sense of color is very cultivated.
> *C. H. Caffin*, Amer. Masters of Painting, p. 41.

orchestric, *a.* **2.** Of or pertaining to dancing.

orchestrina di camera (ôr-kes-trē′nä dē kä′me-rä), *n.* [It. 'little orchestra of the chamber.'] One of a group of small reed-organs, invented by Evans of London, which are intended for solo use in the place of certain orchestral instruments, such as the flute, the clarinet, the oboe, the bassoon, and the French horn, the tone of each instrument being skilfully imitated by varying the form of the reeds or of their wind-channels. They are serviceable as substitutes for a real orchestra and for the study of orchestral music.

orchid, *n.*—**Queen of orchids.** See ★*Grammatophyllum.*

orchidacean (ôr-ki-dā′sẹ-ạn), *n.* Same as ★*orchidist.* [Rare.]

Orchidales (ôr-ki-dā′lēz), *n. pl.* [NL. (Lindley, 1847), < *Orchis* (*Orchid-*) + *-ales.*] An order of monocotyledonous plants including the families *Burmanniaceæ* and *Orchidaceæ*, which agree in their mostly complete 3–6-merous flowers, inferior compound ovary, and very numerous minute seeds (whence called also *Microspermæ*).

orchidalgia (ôr-ki-dal′ji-ạ̈), *n.* Pain in the testicles.

orchidist (ôr′kid-ist), *n.* [*orchid* + *-ist.*] One who cultivates orchids; one who is fond of orchids. Also called *orchidacean.*

orchidomania (ôr″ki-dọ-mā′ni-ạ̈), *n.* [*orchid* + Gr. μανία, madness.] An exaggerated passion for orchids.

orchidopexy (ôr′kid-ō-pek″si), *n.* [Gr. ὄρχις (assumed stem ὀρχιδ-), testis, + πῆξις, fastening.] Fixation of an undescended testis to prevent it from engaging in the inguinal canal and causing pain.

orchidotomy (ôr-ki-dot′ọ-mi), *n.* Same as *orchotomy.*

Orchil red. See ★*red*^{1}.—**Orchil substitute.** Same as ★*archil substitute.*

orchiocele (ôr′ki-ọ-sēl), *n.* [Gr. *ορχις*, testicle, + *κήλη*, tumor.] 1. Tumor of a testicle.—2. Hernia of a testicle.

orchis^2, *n.*—**Female orchis,** *Orchis Morio,* a common European plant.—**Flaming orchis,** *Blephariglottis psycodes,* of eastern North America. Also called *smaller purple fringed orchis.*—**Fringeless orchis,** *Blephariglottis paramœna,* a handsome purple-flowered species of the eastern United States, the petals of which are simply erose.—**Gay orchis,** the showy orchis.—**Male orchis,** *Orchis mascula,* a very common Old World plant which has received a variety of names.—**Marsh-orchis,** *Orchis latifolia.* See *Cain-and-Abel.*—**Purple orchis,** the showy orchis.—**Ragged orchis,** *Blephariglottis lacera,* of the eastern United States, with greenish-yellow flowers, the lip deeply fringed or lacerate.—**Smaller purple fringed orchis.** See *flaming* ★*orchis.*—**Spring orchis,** the showy orchis, which blooms in early spring.—**Tubercled orchis, yellow orchis,** *Perularia flava,* a terrestrial orchid of the eastern United States with tubercled roots and greenish-yellow flowers.—**Yellow fringed orchis,** *Blephariglottis ciliaris,* of the eastern United States, with large and showy bright orange or yellow flowers, the lip copiously fringed more than half way to the middle.

orcinol (ôr′si-nol), *n.* [*orcin* + *-ol.*] Same as *orcin.*—**Gamma-orcinol.** Same as ★*isorcinol.*

ord. An abbreviation (*b*) of *ordained;* (*c*) of *ordnance.*

order, *n.* **17.** Specifically, in the tobacco-trade, same as ★*case*^{1}, 9.

> When thoroughly dried the laths of tobacco are taken down during a warm, damp spell, and piled in heaps with sacks or cloths spread over them to keep the pile in "*order*" for several days. "*Order*" or "case" in tobacco curing means a moist condition in which the tissue will not break.
> *U. S. Dept. Agri.,* Farmers' Bulletin No. 60, p. 4.

22. In *petrog.,* in the quantitative system of classification (see ★*rock*^{1}), a taxonomic division of igneous rocks which follows the class and is based on the proportions of the standard mineral subgroups within the preponderant salic or femic group on which the class is based.—**23.** In *milit. tactics,* the position of a rifle in a military drill after the command to order arms has been obeyed: as, to load from the *order.*—**Adelphic order.** See ★*adelphic.*—**A large order,** an excessive or large demand or request; a tax upon one's resources. [Slang.]

> "Tell him . . . what I think of Miss Theale?" Densher stared. It was, as they said, *a large order.*
> *H. James,* Wings of a Dove, II. 232.

Albert order, an order in the kingdom of Saxony, founded in 1850.—**Ancient Order of Foresters, Independent Order of Foresters.** See ★*forester,* 7.—**Close order.** (*b*) *Naval,* the distance of from one to two cable's-lengths from mainmast to mainmast of a number of war-ships in line or column.—**Distinguished Service Order,** a British order for military merit, founded by Queen Victoria in 1886.—**Ernestine Order,** an order in the Saxon duchies of Germany.—**Fraud order.** See ★*fraud.*—**Greek orders,** those orders of classical architecture which are of strictly Greek origin. They are the Grecian Doric (as of the Parthenon), the Ionic (as of the Erechtheum), and the Corinthian, in its original type (as at Epidauros). The so-called *Persian order* is not generally recognized.—**Imperial Service Order,** a British order founded in 1902 and awarded for merit in the imperial civil service.—**Military Order of the Loyal Legion,** an organization which consists primarily of commissioned officers who served in the Union Army during the civil war. Civilians who performed eminent service for the government during the same period are also eligible. The right to membership descends to the eldest male heir.—**Open order.** (*b*) *Naval,* the distance of from three to four cable's-lengths from mainmast to mainmast of a number of war-ships in line or column.—**Order of African Redemption,** an order of merit in the republic of Liberia, founded in 1879.—**Order of connection.** See ★*connectivity.*—**Order of Danilo,** a Montenegrin order for civil merit, founded in 1855.—**Order of Elizabeth Theresa,** an Austrian order originally founded in 1750.—**Order of Francis Joseph,** an Austrian civil and military order, founded by the emperor of that name in 1849.—**Order of Henry the Lion,** an order for civil and military merit in Brunswick, originally founded in 1834.—**Order of Imtiaz,** a Turkish order for military merit, founded in 1879.—**Order of Kalakaua,** a Hawaiian order founded in 1874, awarded for military merit.—**Order of Kamehameha I.,** a Hawaiian order for civil and military merit, founded in 1865.—**Order of Kapiolani,** a Hawaiian order for civil and military merit, founded in 1880.—**Order of Leopold.** (*b*) A Belgian order of merit, founded by Leopold I. in 1832.—**Order of Fidelity,** a military order in Baden, founded in 1715.—**Order of Maximilian Joseph,** a Bavarian military order founded in 1806.—**Order of Merit,** a British order founded by King Edward VII. on the occasion of his coronation in 1902. It includes those who merit distinction in the army and navy, and in science, art, and literature. Such foreign members as the King shall appoint are added to the original twenty-four British members to which the order is limited.—**Order of Natives of British East Indies,** a British order for military merit, founded in 1842.—**Order of Osmanieh,** a Turkish order for civil and military merit, founded in 1861.—**Order of Rue Crown.** See ★*Crown.*—**Order of Saint Anne,** a Russian order founded in 1735.—**Order of Santa Rosa,** an order in Honduras for civil and military merit, founded in 1868.—**Order of Saint Gregory the Great,** a papal order of merit, founded in 1831.—**Order of Saint Hubert,** a Bavarian order for military merit, founded in 1444.—**Order of Saint Maurice and Saint Lazarus,** an Italian military order, originally founded in 1434.—**Order of Saint Olaf,** an order in Norway for civil and military merit, founded in 1847.—**Order of Saint Stephen of Hungary,** a military order in Austria-Hungary, founded in 1764.—**Order of Saint Vladimir,** a Russian order, founded in 1782.—**Order of the African Star,** an order of merit in the Kongo Free State, founded in 1888.—**Order of the Bust of Bolivar,** a civil and military order in Venezuela, founded in 1854 by President Monagas.—**Order of the Danebrog.** See *Danebrog.*—**Order of the Double Dragon,** a Chinese order for merit, founded in 1882.—**Order of the Golden Lion.** See ★*lion.*—**Order of the House of Hohenzollern,** a Prussian military order, founded in 1842.—**Order of the Iron Crown of Italy.** See *iron.*—**Order of the Oak Crown.** See ★*Crown.*—**Order of the Oceanic Star,** a Hawaiian order for civil and military merit, founded in 1886.—**Order of the Pole Star,** an order in Sweden for civil merit, founded in 1748.—**Order of the Star of Rumania,** a Rumanian order for civil and military merit, founded in 1877.—**Order of the Tower and Sword,** a Portuguese order for civil and military merit, originally founded in 1459.—**Order of the White Elephant.** (*b*) A Siamese order for civil and military merit, founded in 1861.—**Order of Vasa,** an order for civil merit, founded by Gustavus III. of Sweden, in 1772.—**Order of William,** a Dutch order for military merit, founded in 1815.—**Order of zeros.** In $fx = a(x-x_1)^n(x-x_2)^m$, the zeros at x_1 and x_2 are of orders n and m respectively.—**Persian order,** in *arch.,* an order in which human figures take the place of the columns on the shafts of the columns. The term is taken from Vitruvius.—**Protection order,** a term used, chiefly in England, to denote an order or decree of court issued for the protection of a wife in the enjoyment of property obtained by her after being deserted by her husband.—**Restraining order,** a temporary injunction granted by the court pending the hearing on an application for an injunction.—**Royal Order of Victoria and Albert,** a British order of court distinction for women, founded in 1862.—**Royal Victorian Order,** a British order for personal services, founded in 1896.—**Sealed orders,** official orders, especially naval or military, delivered with the instruction that they are not to be opened before a certain date.—**Vesting order,** an order in equity passing a legal title in lieu of a conveyance. Formerly it was granted only by the chancery division of the High Court of Justice, but it is granted now by commissioners also. *Wharton.*

order-book, *n.*—**Night order-book** (*Naut.*), a memorandum-book in which the captain sets down his orders for the guidance of the officers of the watch during the night.

order-paper (ôr′dėr-pā″pėr), *n.* A paper on which questions, etc., coming in the order of the day, in a legislative assembly, are entered. *N. E. D.*

order-word (ôr′dėr-wėrd), *n.* *Milit.,* the password of the day.

ordinable, *a.* **3.** In *math.,* capable of being arranged in order.

> An *ordinable* manifold may, in general, by the application of different criteria, be arranged in order in a variety of ways.
> *Encyc. Brit.,* XXXI. 281.

ordinal. I. *a.*—**Cantorian ordinal number.** See ★*Cantorian.*—**Ordinal fraction, integer, system.** See ★*fraction,* etc.—**Transfinite ordinal number.** See ★*number.*

II. *n.*—**Cantorian ordinal.** See ★*Cantorian ordinal number.*

ordinally (ôr′di-nal-i), *adv.* In an ordinal way; in regard to order.—**Ordinally similar.** See ★*similar.*

ordinar (ôr′di-när), *a.* and *n.* [OF. *ordinaire,* < L. *ordinarius.* See *ordinary.*] Same as *ordinary.* [Scotch.]—**By ordinar,** more than ordinarily; extraordinarily.

ordinary. I. *a.*—**Topically ordinary point, line,** or **surface of a place P,** a point, line, or surface within P, such that an object which fills it at any instant could begin, by an absolutely total motion, to generate any one of the same number of homogeneously exclusive homogeneous parts of P, as an object which fills some other point, line, or surface respectively, in its vicinity within P.

II. *n.* **11.** The bicycle with a large front and a small rear wheel, which preceded the 'safety' bicycle: so called because it was the common form of bicycle before 1890. See *bicycle.*—**12.** In the stock-market, a share of ordinary or common (that is, not preferred) stock.

ordinate, *n.* **2.** Any one of a set of parallel chords of a conic in relation to the diameter bisecting them. What in this sense was called *semiordinate* is now usually called *ordinate.*

ordinately, *adv.* **2.** In *math.,* as or so as to form an ordinate.

ordinative, *a.* II. *n.* In *gram.,* a particle which ordinates clauses. *N. E. D.*

ordn. An abbreviation of *ordnance.*

Ordnance datum, the standard level surface above which altitudes are measured, in the official surveys of the British Isles.

> To provide the necessary head of water (770 feet above *ordnance datum*) for the Birmingham supply.
> *Geog. Jour.* (R. G. S.), XV. 58.

Ordnance drift-piece. See ★*drift-piece.*—**Ordnance map,** a map issued by the ordnance survey of Great Britain and Ireland. See *ordnance survey.*

ordnance-hoy (ôrd′nans-hoi), *n.* A specially fitted hulk for the transportation of ordnance stores.

ordu (ôr′dū), *n.* [Turk. *ordu, urdu,* an army: see *horde.*] A Turkish army-corps.

> The whole empire is divided into 7 army districts, with which are associated 7 corps d'armée called *Ordus.*
> *The Statesman's Year-Book,* 1901, p. 1133.

ore^1, *n.* **3.** One of the walls which surround the hearth of a Catalan forge. *Phillips and Bauerman,* Elements of Metallurgy, p. 184.—**Bessemer ore,** iron ore sufficiently low in phosphorus and sulphur to be suitable for the acid Bessemer process.—**Cat-tooth ore,** a local English name of the lead carbonate cerusite. *Nature,* April 11, 1907, p. 574.—**Cleveland ore,** a clay-ironstone bed in the Cleveland district of England.—**Fossil ore.** Same as *lenticular* ★*ore.*—**Lake-ore,** limonite or brown hematite iron, much of it of very recent deposition, found at the bottom of lakes, especially in Sweden, where it is collected by dredging or 'fishing.'—**Lenticular ore,** a variety of hematite occurring in minute flattened concretions. Also called *fossil ore.*—**Looking-glass ore,** specular iron ore or hematite.—**Magnetic ore,** an iron ore consisting wholly or in large part of magnetite.—**Ore currents.** See ★*current*^{1}.—**Ore in sight,** in *mining,* ore developed by mining operations so fully that its existence may be taken as fully proved. In general, mining engineers demand that the block of ore shall be exposed on at least three sides.—**Ore reserve,** in *mining,* ore bodies in a mine that are fully developed and ready for mining. Compare ★*ore in sight.*—**Peacock ore.** (*b*) Same as *chalcopyrite.*—**Pencil-ore,** a massive hematite which separates easily in slender pencil-like forms.—**Pottern ore,** in *early metal.,* an ore which, when heated, becomes vitrified like the glazing on pottery.—**Purple ore.** (*a*) Bornite. (*b*) In the metallurgical treatment of the residue from burning off the sulphur of pyrites in the manufacture of sulphuric acid this material is mixed with common salt, roasted in a suitable furnace with free access of air, and, after cooling, leached with water to extract salts of copper. The dark-red oxid of iron which is left from the leaching is known as *purple ore* or *blue billy.* It is reduced to pulverulent metallic iron and used to precipitate copper from the solution obtained in the leaching.—**Rank ore,** tin ore which contains much arsenic and sulphur. *Phillips and Bauerman,* Elements of Metallurgy, p. 513.—**Specular ore, specular slate ore.** Same as *specular iron ore* (which see, under *specular*).

Ore., Oreg. Abbreviations of *Oregon.*

Oreamnos (ō-rẹ-am′nos), *n.* [Gr. *ὄρος,* a mountain, + *ἀμνός,* a lamb.] A genus of hoofed mammals including the mountain goats of North America, two species of which are now recognized. The name was used by Rafinesque in 1817 as a subgenus of the genus *Mazama,* this latter, so long used for the mountain goat, being originally given to a deer. See *Haplocerus,* with cut.

ore-body (ōr′bod″i), *n.* Ore as existing in the ground in veins, lodes, etc.; a body of ore that has not been mined. *Science,* May 31, 1901, p. 871.

ore-car (ōr′kär), *n.* In *car-building,* a special type of gondola car or hopper-car, used for carrying iron or other ores. See *hopper-car.*

ore-crusher (ōr′krush″ėr), *n.* A machine similar to a stone-crusher for breaking ore.

orective (ọ-rek′tiv), *a.* [*orectic* + *-ive.*] Same as *orectic.*

ore-dressing (ōr′dres″ing), *n.* In *mining,* the mechanical treatment of ores by processes depending on physical laws and physical properties of minerals, such as specific gravity, magnetic or electric properties, etc. The principal objects of ore-dressing are the concentration of low-grade ore, the purification of ores by the removal of objectionable material, and the separation of two or more useful minerals occurring in the same ore in order to render each more valuable.

ore-furnace (ōr′fėr″nās), *n.* A furnace for melting ore; specifically, a furnace of the reverberatory type, having a comparatively large grate and small hearth, used for melting coarse metal.

oregano (ō-rā′gä-nō), *n.* [Sp. *orégano,* < L. *origanum,* marjoram.] In Spanish-American countries, a common name of a number of aromatic plants belonging chiefly to the *Verbenaceæ* and to the mint family. In Mexico the principal ones are *Lippia Palmeri,* of the west coast; *L. Berlandieri,* of the warmer regions of the interior; and *Poliomintha longiflora,* of the vicinity of Saltillo: all of which are used in the same manner as sage and thyme in seasoning sausages and other articles of food.

Oregon char. Same as *Dolly Varden trout.*—**Oregon sturgeon.** Same as *white sturgeon.* See *sturgeon.*

orejon (ō-rā-hōn′), *n.*; pl. *orejones* (ō-rā-hō′nes). [Sp., a dried slice of apple, peach, etc., lit. a little ear, dim. of *oreja,* < L. *auricula,* ear. See *auricle.*] In Spanish-American countries, a dried slice of apple, peach, or other fruit; usually in the plural, dried fruit.

ore-leave (ōr'lēv), *n.* In *mining law*, the right to mine and take ore.

ore-loader (ōr'lō'dėr), *n.* A machine for loading loose material, such as coal, sand, ore, etc., upon carts, cars, or vessels.

oreman (ōr'mạn), *n.*; pl. *oremen* (-men). A dealer in ores, especially in iron ore.

> The position of the United States Steel Corporation is understood to have been a neutral one and the merchant *oremen* made the decision, which is generally regarded as conservative. *N. Y. Com. Advertiser*, April 11, 1901.

orenda (ō-ren'dạ̈), *n.* [Iroquois.] Magic power believed to be present in all bodies: proposed as a technical term for magic power by J. N. B. Hewitt. It has, however, not come into common use. See ★*wakanda* and *manito*. *Amer. Anthropologist*, Jan.–March, 1902, p. 33.

orendite (ọ-ren'dīt), *n.* [*Orenda* Butte, Leucite Hills, Wyoming, + *-ite*^{2}.] In *petrog.*, a name given by Cross (1897) to an aphanitic lava, with micaphenocrysts composed of leucite and orthoclase in nearly equal amounts, with phlogopite and diopside. It is related to wyomingite and madupite.

Oreocarya (ō"rẹ-ọ-kar'i-ạ̈), *n.* [NL. (Greene, 1887), < Gr. ὄρος, mountain, + *carya*, a word which occurs in the names of related genera, as *Allocarya*, *Eremocarya*, *Pectocarya*; in allusion to the prevailingly mountain habitat of the species.] A genus of coarse biennial or perennial herbaceous plants of the family *Boraginaceæ*, having mostly basal leaves and a leafy-bracted, thyrsoid, or sometimes racemose-paniculate inflorescence. It is distinguished from related genera by the persistent fruiting calyx and smooth, rugose, or tuberculate nutlets, with their margins acute or winged. There are about 20 species, natives of the mountain region of western North America from Montana and eastern Washington to Chihuahua, Mexico. See *white* ★*forget-me-not*.

oreoselin (ō-rẹ-os'e-lin), *n.* [Gr. ὀρεοσέλινον, mountain-parsley, < ὄρος, mountain, + σέλινον, parsley: see *celery*.] A crystalline substance, $C_{14}H_{12}O_4$, formed by warming peucedanin with acids or with alcoholic potash. It yields resorcinol and acetic acid when fused with caustic potash. It melts at 170° C.

oreoselone (ō-rẹ-os'e-lōn), *n.* [*oreosel(in)* + *-one*.] A crystalline substance, $C_{14}H_{12}O_4$, which is formed when peucedanin is treated with hydrochloric acid. It melts at 177° C.

Oreosoma (ō"rẹ-ọ-sō'mạ̈), *n.* [NL., < Gr. ὄρος, mountain, + σῶμα, body.] A genus of fishes of the family *Zeidæ*, known from a single small specimen taken in the open Atlantic.

ore-shoot (ōr'shöt), *n.* In *mining*, a body of ore, commonly of elongated shape, within a vein: usually applied to the workable portions of a vein only.

ore-sorting (ōr'sôr"ting), *n.* The separation of the lumps of mixed ore and veinstone into different piles according to the visible richness in real ore of the various fragments. Several piles may be made, of which the two extremes will represent apparently pure ore and worthless veinstone.

ore-stamp (ōr'stamp), *n.* A stamp-mill for breaking up the ore-rock and making it ready for the separation process. This is done by stamping the ore with heavy weights which are lifted and allowed to fall like a pestle upon the rock in the mortar of the mill.

ore tenus (ō'rē tē'nus). [L.: *ore*, abl. of *os*, mouth; *tenus*, up to, unto.] In *law*, at the mouth; by word of mouth; orally: used especially of pleadings not required to be written.

ore-washer (ōr'wosh"ėr), *n.* A machine for washing clay and earths out of earthy brown hematite ores.

orexigenic (ọ-rek-si-jen'ik), *a.* [Gr. ὄρεξις, appetite, + -γενης, -producing.] Stimulating the appetite.

> An *orexigenic* and stomachic action which is not to be lightly esteemed.
> *Amer. Jour. Clin. Med.*, Oct., 1907, p. 1252.

orexine (ọ-rek'sin), *n.* [Gr. ὄρεξις, appetite, + *-ine*^{2}.] Phenyldihydroquinazoline, a colorless, odorless, crystalline compound derived from quinoline. It melts at 95° C. It is used in medicine to increase the appetite.

orfan, *a.*, *n.*, and *v. t.* An amended spelling of *orphan*.

org. An abbreviation (*a*) of *organic*; (*b*) of *organized*.

organ^1, *n.*—**Acoustic organ.** Same as *organ of Corti*.—**Anteocular organ.** Same as *prostemmatic* ★*organ*.—**Biddler's organ,** an organ found only in the amphibian genus *Bufo*, lying between the fat-body and the testis or ovary: apparently a portion of the ovary that undergoes degeneration. *Nature*, Sept. 26, 1907, p. 553.—**Cerebral organ.** See ★*cerebral*.—**Chambered organ.** Same as *five-chambered* ★*organ*.—**Collateral organ,** in *Echinoderma*, same as *heart* or *plastidogen* ★*organ*. *Perrier*.—**Conservative organs,** in *biol.*, the organs that secure the preservation of the individual organism, as distinguished from those of reproduction; nutritive organs. In plants these are principally the root, stem, and leaves.—**Coxal organ.** See ★*coxal*.—**Cribriform organ.** See ★*cribriform*.—**Dorsal organ,** in echinoderms. Same as ★*axial organ*.—**Five-chambered organ,** in crinoids, a cavity at the apex of the calyx containing the apical parts of the axial organ, and divided into five chambers by five radially arranged partitions of connective tissue. In *Antedon* the organ is inclosed in the centrodorsal. In stalked crinoids the organ extends as a canal into the stalk and sends offshoots into the cirri when the latter are present. Also called *chambered organ* and *chambered sinus*.—**Johnston's organ,** a complex nervous structure in the basal joint of the antennæ of certain dipterous insects, supposed to be connected with the perception of vibration. It is very well developed in *Culex* and *Chironomus*, and is larger in the male than in the female.—**Keber's organ,** in lamellibranchs, same as *pericardial* ★*gland*.—**Lateral organ,** in nemerteans, one of a pair of ciliated tubes or cavities opening externally at the sides of the head, generally in a groove or slit, and terminating internally in the interior of a pair of posterior brain-lobes which may or may not be united with the rest of the brain.—**Luminous organ.** See ★*luminous*.—**Mayer's organ,** a patch of circumvallate papillæ on either side of the supero-posterior part of the tongue.—**Organ of Semper,** in pulmonate gastropods, an organ situated on each side of the mouth and now regarded as having a gustatory function.—**Organ of Siebold,** an elongate flat ganglion on a branch of the acoustic nerve in the tibia of a locustid insect.—**Organ of Syrski,** the milt-organ of the male eel, discovered by Dr. Syrski in 1873.—**Organ style,** in *music*, a style of composition or of performance characterized by full connected harmony or dignified counterpoint, such as are common in organ music.—**Photogenic organ,** the luminous organ in any one of the so-called phosphorescent insects.—**Plastidogen organ.** Same as ★*axial organ*.—**Postantennal organ.** Same as *prostemmatic* ★*organ*.—**Prostemmatic organ,** a curious circular organ whose function is unknown, situated in front of the ocelli in certain collembolous insects. Also called *anteocular organ* and *postantennal organ*.—**Sensory organ,** in *anat.* and *zoöl.* Same as *sense-organ*.—**Stewart's organ,** in some echinoids, one of the arborescent bodies projecting inward from the peristome and supposed to have a respiratory function.—**Water-testing organ,** in mollusks, an osphradium.

organacidia (ôr"gạn-a-sid'i-ạ̈), *n.* [NL., < Gr. ὄργανον, organ, + NL. *acidum*, acid.] In *pathol.*, secretion, usually in excess, of an organic acid.

> Hemorrhage from erosion—ulcer—of the œsophagus is not a rare occurrence in *organacidia* gastrica.
> *Med. Record*, April 4, 1903, p. 549.

organ-beater (ôr'gạn-bē"tėr), *n.* [Trans. of ML. *pulsator organorum*.] A name given to an organ-player when the keyboard consisted of large levers that were struck with the fist. *N. E. D.*

organ-bird (ôr'gạn-bėrd), *n.* **1.** One of the crow-shrikes, *Gymnorhina organicum*, found in Tasmania: a near relative of the Australian piping-crow.—**2.** In South America, a wren, *Cyphorhinus cantans*.

organ-building (ôr'gạn-bil"ding), *n.* The art, trade, or occupation of making organs, usually pipe-organs, but sometimes reed-organs as well. It properly includes every division of a complex industry, involving not only the manufacture of all sorts of pipes, wooden and metal, with their precise voicing, regulation, and tuning, the manufacture of the key- and stop-action in all its parts, and the making of the organ-case, often with much carved or painted ornamentation, but also the drafting of the specifications and plans for particular instruments, the actual assembling of all the parts required, and the setting of them up in the place for use. In early organ-building the chief workman was skilled in every branch of the art and moved from place to place, making and setting up instruments on the spot as required, but now the business is far more complicated and is carried on chiefly from fixed factories employing many workmen in distinct departments.

organ-cactus (ôr'gạn-kak"tus), *n.* **1.** A giant cactus with simple columnar stems, *Cereus marginatus*, much used for hedges in Mexico, especially in the states of San Luis Potosí, Hidalgo, and Guanajuato. It takes its common name from the resemblance of its rows of parallel stems to the pipes of an organ. Its flowers are inconspicuous and its fruit, unlike the pitahayas of many other species of *Cereus*, are not edible.—**2.** A name given to other columnar cacti, including *Cereus eburneus* of southern Mexico, which bears edible fruit and is also planted in hedges, and the giant saguaro of the south-western United States, *Cereus giganteus*. See *saguaro* and *pitahaya*.

organ-case (ôr'gạn-kās), *n.* In *organ-building*, the external framework or structure in which an organ is contained. In churches and halls it is often highly elaborate and forms a prominent feature in the interior architecture of the building.

organ-desk (ôr'gạn-desk), *n.* Same as ★*console*^{2}, 4.

organella (ôr-gạ-nel'ạ̈), *n.*; pl. *organellæ* (-ē.) [NL., < Gr. ὄργανον, organ, + L. dim. *-ella*.] One of the organ-like structures in the cell-body of an infusorian, such as the eye-spot, a myonema, the cytostome, cytoproct, contractile vacuole, etc. *Haeckel*.

organ-gallery (ôr'gạn-gal"ẹ-ri), *n.* Same as *organ-loft*.

organic, *a.* **4.** Applied to the substances which form the chemical material of the bodies of plants and animals, as also to numerous other substances of more or less analogous chemical character. But such material may or may not possess the special mechanical structure to which the term *organized* is applied, adapting it to the performance of the vital functions of plants or animals. The distinction between the two words is important. Organic substances may be produced from inanimate materials by laboratory processes, but organized structure is thus far only known as a result of change in a living plant or animal.—**Organic aggregation.** Same as *biological* ★*aggregation*.—**Organic geography, rhythm, selection.** See ★*geography*, etc.

organically, *adv.* **2.** In *pathol.*, with reference to the structure of an organ: opposed to *functionally*.—**3.** With derivation from organic or organized matter: as, *organically* derived detrital rocks.

organicist (ôr-gan'i-sist), *n.* [*organic* + *-ist*.] A sociologist who explains social phenomena by biological analogies, or who conceives and interprets society as an organism. *L. F. Ward*, Pure Sociol., p. 79.

organite (ôr'gạ-nīt), *n.* [Gr. ὄργανον, organ, + *-ite*^{2}.] A small or feebly developed organ or part. [Rare.]

> From this it follows that the so-called "cellulæ ethmoidales" are not *organites* proper only to the ethmoid of Man, and hence are not without phylogenetical importance. *Proc. Zool. Soc. London*, 1901, p. 261.

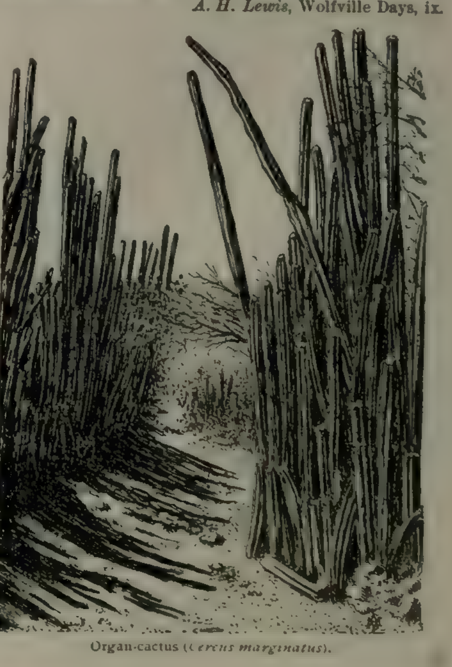
organization, *n.* **4.** In *biol.*: (*a*) The structural composition of an organism. (*b*) Metaphorically, the cause or explanation of the structure of organisms; that which organizes; an organizing influence. Most of the attempts to imagine an architecture in the egg as an explanation of the structure of the being that is developed from the egg are based upon the metaphorical conception of organization. See ★*germ-plasm* and *physiological* ★*unit*.—**5.** In *pathol.*, conversion of an amorphous substance, such as a blood-clot, into organized tissue.

organizational (ôr"gạn-i-zā'shọn-al), *a.* [*organization* + *-al*^{1}.] Pertaining to or of the nature of organization.

organizationist (ôr"gạn-i-zā'shọn-ist), *n.* [*organization* + *-ist*.] One who believes in organization or organized work; one who organizes.

organize, *v. i.* **2.** To arrange; plan; prepare. [Slang.]

> "Willyum," he 'd say . . . when he 'd notice me *organizin'* to go down to the village, . . . "if anybody asks you what you be, . . . you tell 'em that you 're Union, but you remember you 're secesh."
> *A. H. Lewis*, Wolfville Days, ix.



Organ-cactus (*Cereus marginatus*).

organofaction (ôr″ga̤n-ọ̄-fak′sho̤n), *n.* [L. *organum* + *facere*, make. See *organum.*] Construction or development of organs in the course of evolution. [Rare.]

> The Darwinian exclusion of the unfit has been largely the exclusion of the visually unfit, and the survival of the fittest has been the survival of those possessing the best ocular mechanism. No task in *organofaction* has been so difficult of achievement and of healthy preservation as that of making the most perfect ocular mechanism.
> *G. M. Gould*, in Med. Record, Nov. 2, 1907, p. 723.

organogen (ôr-gan′ọ̄-jen), *n.* [*organ*(*ic*) + *-gen.*] A chemical element, usually carbon, and, in a less degree, hydrogen, oxygen, nitrogen, sulphur, and phosphorus, which is regarded as the characteristic constituent of an organic compound.

organogenetic, *a.* **2.** Of or pertaining to the presence in a fertilized egg of germinal areas definitely set apart or specialized for the production of specific organs or regions of the body.

> Some authorities . . . have suggested that the predetermination is expressed in the organization of the egg-cytoplasm—the essential idea of "*organogenetic* germinal areas." *Encyc. Brit.*, XXXII. 212.

organoid (ôr′ga̤-noid), *a.* and *n.* [Gr. ὄργανον, organ, + εἶδος, form.] **I.** *a.* Resembling an organ: applied to a tumor which contains several different tissues.

II. *n.* Same as ⋆*organella.*

organolith (ôr-gan′ọ̄-lith), *n.* [Gr. ὄργανον, organ, + λίθος, stone.] Same as ⋆*biolith.*

organology, *n.* **5.** The science, history, and mechanics of the pipe-organ.

organolyricon (ôr″ga̤n-ọ̄-lir′i-ko̤n), *n.* [Gr. ὄργανον, organ, + λυρικός, of a lyre. See *lyric.*] A form of orchestrion.

organomagnesium (ôr″ga̤n-ọ̄-mag-nē′ṡium), *n.* [NL., < Gr. ὄργανον, organ, + NL. *magnesium.*] **1.** A body composed of one atom of magnesium united with two organic radicals, as magnesium ethyl, $Mg(C_2.H_5)_2$, magnesium diphenyl, $Mg(C_6H_5)_2$.—**2.** A substance composed of one atom of magnesium united with a molecule of an organic halide, as ethyl-magnesium bromide, $C_2H_5.MgBr$, magnesium-phenyl iodide, $C_6H_5.MgI$.

organomotor (ôr-ga̤n″ọ̄-mō′to̤r), *a.* In *comp. psychol.*, noting a movement prompted by excitation from an internal bodily organ: opposed to *sensorimotor* and *ideomotor.* [Rare.]

> The animal keeps constantly moving; but his activity at this stage is evidently sensori-motor (or *organo-motor*).
> *Amer. Jour. Psychol.*, XII. 229.

organonomia (ôr″ga̤n-ọ̄-nō′mi-ä̤), *n.* [NL.] Same as *organonomy.*

organophone (ôr′ga̤n-ọ̄-fōn), *n.* [Gr. ὄργανον, organ, + φωνή, sound.] A variety of reed-organ.

organotherapeutics (ôr-ga̤n″ō-ther-a̤-pū′tiks), *n.* [Gr. ὄργανον, organ, + E. *therapeutics.*] Same as ⋆*organotherapy.*

organotherapy (ôr″ga̤n-ọ̄-ther′a̤-pi), *n.* [Gr. ὄργανον, organ, + θεραπεία, medical treatment.] Treatment of disease by extracts or other preparations made from various organs or glands of the sheep or other animals.

> *Organotherapy* is beginning to be useful in treating diseases of the liver, and diseases caused by the products of the liver. *Med. Record*, July 11, 1903, p. 56.

organ-pedal (ôr′ga̤n-ped″a̤l), *n.* One of the keys or foot-levers that make up the pedal keyboard of an organ; a pedal-key, as distinguished from a pedal of any other sort.

organ-player (ôr′ga̤n-plā″ėr), *n.* One who plays the organ; also, a mechanical device for playing an organ. Compare ⋆*piano-player.*

organ-register (ôr′ga̤n-rej″is-tėr), *n.* Same as *organ-stop.*

organry (ôr′ga̤n-ri), *n.* [*organ*^{1} + *-ry.*] Organ music. [Rare.]

> If she must poetize, let her lay her mind to such manly verse as Pope's, or to such sound and ringing *organry* as Comus.
> *D. G. Mitchell*, Sea Coal, Reveries of a Bachelor, p. 42.

organule (ôr′ga̤-nūl), *n.* [*organ*^{1} + dim. *-ule.*] An animal- or plant-cell considered as a small organ.

Org. Chem. An abbreviation of *organic chemistry.*

orgia (ôr′ji-ä̤), *n. pl.* [L. *orgia*, < Gr. ὄργια. See *orgies.*] Orgies: as, the *orgia* of Bacchus. *N. E. D.*

orgiac (ôr′ji-ak), *a.* and *n.* [*orgia* + *-ac.*] **I.** *a.* Relating to or of the value of an orgy.

II. *n. pl.* Orgies; secret rites connected with the worship of some of the deities of classical mythology.

orgiasm (ôr′ji-azm), *n.* [Gr. ὀργιασμός, < ὀργιάζειν, celebrate orgies, < ὄργια, orgies.] The celebration of orgies; the mystical, sometimes extravagantly licentious, revelry which marked orgiastic worship.

orgiast (ôr′ji-ast), *n.* [Gr. ὀργιαστής, < ὀργιάζειν, celebrate orgies.] One who celebrates orgies.

orgiastical (ôr-ji-as′ti-ka̤l), *a.* Same as *orgiastic.*

orgueillite, *n.* See ⋆*meteorite.*

Oribe ware. See ⋆*ware*^{2}.

oriconic (ō′ri-kon-ik), *n.* [L. *ora*, margin, edge, + E. *conic.*] In *Bolyaian geom.*, a curve of the second degree with the center at infinity.

> The curves with center situated at infinity are the *oriconics* (oriellipse, with the variety oricycle of Lobachevski, orihyperbola). *Science*, Sept. 16, 1904, p. 365.

oricycle (ō′ri-sī-kl), *n.* [L. *ora*, margin, edge, + Gr. κύκλος, circle.] In *Bolyaian geom.*, a boundary line; that plane curve for which all perpendiculars erected at the mid-points of chords are parallel to each other. See ⋆*limit-line. Lobachevski.*

> In the Euclidean geometry the limit approached by a circumference as the radius increases is a straight line. In the non-Euclidean geometry this is a curve called the *oricycle.* Thus the method of Kempe's book 'How to draw a straight line,' would here draw not a straight line, but a curve. *Science*, March 11, 1904, p. 404.

oriellipse (ō″ri-e-lips′), *n.* [L. *ora*, margin, edge, + E. *ellipse.*] A species of the genus oriconic. See the extract under ⋆*oriconic.*

oriellipsoid (ō″ri-e-lip′soid), *n.* [L. *ora*, margin, edge, + E. *ellipsoid.*] A species of the oriquadric. *P. Barbarin.*

> At the limit, when they become tangent to this sphere, they are transformed into oriquadrics (*oriellipsoid*, orihyperboloid) and into their varieties.
> *Science*, Sept. 16, 1904, p. 365.

orient, *v. t.* **4.** In *biol.*, to place (an organism) in a favorable position for study or description, or to treat it in reference to this position. *Science*, July 3, 1896, p. 11.—**5.** To place (a map or chart) in such a horizontal position that a line joining any two given points on the map shall be parallel to the line joining the corresponding points on the earth's surface; literally, to make the east direction on the map point toward the east.

orient. An abbreviation of *orientalist.*

Oriental cloth. See ⋆*cloth.*

orientalization (ō-ri-en″ta̤l-i-zā′sho̤n), *n.* [*orientalize* + *-ation.*] The act of rendering or becoming oriental in character.

orientation, *n.* **7.** Arrangement; distribution. [Rare.]

> Now the question arises, is development a function only of the mass or is it also a function of the *orientation* of the protoplasm of the egg?
> *J. Loeb*, Biol. Lectures, 1895, p. 62.

8. In *chem.*, the relative position of the atoms or radicals in a molecule.

orienting (ō′ri-en-ting), *a.* Causing orientation; in *chem.*, designating the influence of an atom or group of atoms in a compound upon the position of other atoms or groups that are subsequently introduced by substitution.

> It is, in all probability, an ortho substitution-product produced as a result of the well-known *orienting* influence of the hydroxyl group.
> *Amer. Chem. Jour.*, Feb., 1903, p. 125.

orientize (ō′ri-en-tīz), *v. t.*; pret. and pp. *orientized*, ppr. *orientizing.* [*orient* + *-ize.*] Same as *orient.*

orifice, *n.*—**Acoustic orifice.** See ⋆*acoustic.*—**Vasiform orifice**, in *entom.*, an opening on the dorsum of the last abdominal segment of the larvæ and pupæ of the *Aleyrodidæ.*

orificial (or′i-fish-a̤l), *a.* [L. *orifici*(*um*), orifice, + *-al*^{1}.] Of or pertaining to an orifice, especially one of the orifices of the body.—**Orificial surgery**, surgery applied to any orifice, as the anus, vulva, etc., with a view to the suppression of reflex disturbances supposed to originate there. *Dunglison.*

oriform (ō′ri-fôrm), *a.* [L. *os* (*ori-*), mouth, + *forma*, form.] Mouth-shaped; formed like a mouth.

origanize (or′i-ga̤n-īz), *v. t.*; pret. and pp. *origanized*, ppr. *origanizing.* [*origan* + *-ize.*] To flavor with origan or marjoram. *N. E. D.*

origelle (ō-ri-zhel′), *n.* [F.] In polyzoans, a bud-like formation. *Jullien.*

> Shell-substance very massive and surrounding the oral opening like a collar; no oral spines; frontal surface punctate all over; *origelles* of slightly larger size are round the base.
> *Annals and Mag. Nat. Hist.*, July, 1903, p. 114.

Origenian (or-i-jē′ni-a̤n), *a.* and *n.* [*Origen* (see def.) + *-ian.*] **I.** *a.* Relating or attributed to Origen, one of the Greek fathers of the church (185?–253?).

II. *n.* A disciple or follower of Origen.

Origenic (or-i-jen′ik), *a.* [*Origen* + *-ic.*] Same as ⋆*Origenian.*

Origenical (or-i-jen′i-ka̤l), *a.* Same as ⋆*Origenic.*

Origenize (or′i-jen-īz), *v. i.*; pret. and pp. *Origenized*, ppr. *Origenizing.* [*Origen* (see def.) + *-ize.*] To follow or adopt the opinions of Origen.

original, *a.* **6.** In *geol.*, noting those constituent minerals of an igneous rock which have crystallized from fusion during the period of consolidation: contrasted with *secondary*, which describes a mineral produced by alteration or decay. *Geikie*, Text-book of Geol., p. 89.—**Original hand.** See ⋆*hand.*

originist (or′i-jin-ist), *n.* [*origin* + *-ist.*] One who writes on the origin of things. *N. E. D.*

origin-myth (or′i-jin-mith), *n.* See ⋆*myth.*

origoto (ō-ri-gō′tō), *n.* [Jap.] A folding or flexible harp.

orihyperbola (ō″ri-hī-pėr′bọ̄-lä̤), *n.* [L. *ora*, margin, edge, + E. *hyperbola.*] One of the two species of the oriconic.

> The curves with center situated at infinity are the oriconics (oriellipse, with the variety oricycle of Lobachevski, *orihyperbola*). *Science*, Sept. 16, 1904, p. 365.

orihyperboloid (ō″ri-hī-pėr′bọ̄-loid), *n.* [L. *ora*, margin, edge, + E. *hyperboloid.*] A species of the oriquadric. See the extract under ⋆*oriellipsoid.*

Orindan (ọ̄-rin′da̤n), *n.* [*Orinda*, California.] One of the sedimentary formations of the Lower Berkleyan, a division of the Pleistocene of the Coast Range of California. *Bulletin Geol. Soc. Amer.*, XIII. p. 545.

oriocrystal (ō″ri-ọ̄-kris′ta̤l), *n.* [Prop. *horiocrystal*; < Gr. ὅριον, boundary, + κρύσταλλος, crystal.] A phenocryst of relatively large size, in the border of an intrusive mass of igneous rock, and developed because its temperature of formation lies midway between the original high temperature of the intrusive and the low one of the wall-rock, and coincides with conditions of long duration. *A. C. Lane*, in Bulletin Geol. Soc. Amer., XIV. 388.

Orionid (ọ̄-rī′ọ̄-nid), *n.* [*Orion* + *-id*^{2}.] One of the meteors of the flock which annually, in October, appear to radiate from the constellation of Orion.

> Unlike the August Perseids, the Lyrid meteor-stream, like those of the Quadrantids, *Orionids* and Geminids in January, October and December, seldom exhibits an abundant shooting-star display, more nearly resembling in that respect the Leonid and Bielid meteor-systems than the stream of August Perseids, its materials appearing to be still collected in one or more dense clusters in its orbit. *Nature*, April 23, 1903, p. 585.

Orion's hound. See ⋆*hound.*

oripore (ō′ri-pōr), *n.* [L. *os* (*ori-*), mouth, + E. *pore.*] A mouth-like pore or opening. [Rare.]

oriquadric (ō-ri-kwod′rik), *n.* [L. *ora*, margin, edge, + E. *quadric.*] In Bolyaian space, a paraboloid at the limit, when it is tangent to the sphere of infinite radius (orisphere). *P. Mansion.*

> At the limit, when they become tangent to this sphere, they are transformed into *oriquadrics* (oriellipsoid, orihyperboloid) and into their varieties.
> *Science*, Sept. 16, 1904, p. 365.

oririme (ō′ri-rīm), *n.* [L. *os* (*ori-*), mouth, + *rima*, cleft.] A mouth-like cleft. *Dana.* [Rare.]

Oriskanian (or-is-kā′ni-a̤n), *a.* and *n.* **I.** *a.* In the geology of New York, pertaining to the period or group represented by the Oriskany sandstone and limestone. See ⋆*Oriskany* and *Oriskany sandstone*, under *sandstone.*

II. *n.* The Oriskanian period or group.

Oriskany (ọ̄-ris′ka̤-ni), *n.* [*Oriskany*, a creek and a village in Oneida county, New York.] In the geology of New York, an arenaceous or calcareo-arenaceous member of the rock series, in the eastern part of the State lying above the Helderberg limestones and below the Esopus and Schoharie grits, in the western part lying above the Waterlime series, with which it is unconformable, and beneath the Onondaga limestone. It extends southward along the Appalachians in New Jersey, Pennsylvania, and Maryland, and westward into the Ohio valley. It is profuse in fossils and those of the more arenaceous littoral deposits are usually of large size. The formation belongs to the early Devonian.

orisphere (ō′ri-sfēr), *n.* [L. *ora*, edge, margin, + E. *sphere.*] In *Bolyaian geom.*, a boundary surface; that surface which arises from the revolution of the boundary line about one of its axes. See ★*limit-surface.*

It has been known, since Lobachevski and Bolyai, that the characteristic geometry of *orispheres* is Euclidean. *Science*, Sept. 16, 1904, p. 366.

oristic (ọ-ris'tik), *a.* [Prop. **horistic*, ‹ Gr. *ὁριστικός*, of or for defining, ‹ *ὁρίζειν*, divide, determine, define. See *horizon.*] Determinately expressed. *Bentham. N. E. D.* [Rare.]

Oriya (ō-rē'yạ̈), *n.* [Also *Ooriya*, *Uriya*; ‹ Hind. *Oṛiya*, *Uṛiya*, adj. from *Oṛ-deśa*, *Oḍra-deśa*, whence European *Orissa*, *Orisa*, 'land of the Oḍras': Skt. *Oḍra*, name of the people and of their country (*Oḍrāshtra*).] The language of Orissa, former kingdom and modern province lying between Bengal and the Coromandel coast. It belongs to the Indic branch of the Indo-European family. *Keane*, Ethnology, p. 412.

Orkneyan (ôrk'ni-a̤n), *a.* Of or pertaining to the Orkney Islands.

orlean (ôr'lẹ̄-a̤n), *n.* [*Or(e)l(la)* + *-e-* + *-an.*] Same as *arnotto*, 2.

Orleans (ôr'lẹ̄-a̤nz), *n.* [Named from *Orléans* in France.] A wool-and-cotton fabric for women's wear.

orl-fly (ôrl'flī), *n.* [*orl*, dial. form of *alder*, + *fly.*] A British anglers' name for a sialid insect, *Sialis lutaria.* Also called *alder-fly* and, in Wales, the *humpback.*

orlong (ôr'long), *n.* [Prop. **arlong*, ‹ Malay *ārlong*; also *harelung* and *relong.*] A measure of area, equal in Singapore to 80 yards square or 1⅓ acre.

orlop-deck (ôr'lop-dek), *n.* See ★*deck*, 2, and *orlop.*

orlop-stringer (ôr'lop-string″ėr), *n.* In *shipbuilding*, a broad, continuous plate fitted on the ends of the orlop-deck beams.

ornability (ôr-nạ-bil'ị-ti), *n.* [NL. **ornabilitas*, ‹ **ornabilis*, ‹ L. *ornare*, ornament.] Capability of being ornamented or of ornamenting. *Bentham*, Frag. Unit. Grammar, Introd. *N. E. D.*

ornamental, *n.* **2.** Specifically, a plant or vine which is grown only for the beauty of its flowers or foliage.

It could be done more easily with strawberries, or with some of the common *ornamentals* that do not reproduce true to seed. *Pop. Sci. Mo.*, Jan., 1903, p. 277.

ornamentalism (ôr-nạ-men'ta̤l-izm), *n.* [*ornamental* + *-ism.*] The character of being ornamental; also, a tendency to attach too much importance to ornament.

ornamentality (ôr″nạ-men-tal'ị-ti), *n.* [*ornamental* + *-ity.*] The character of being ornamental; capacity of ornamenting; also, an ornament.

ornamentalize (ôr-nạ-men'ta̤l-īz), *v. t.*; pret. and pp. *ornamentalized*, ppr. *ornamentalizing.* [*ornamental* + *-ize.*] To render ornamental.

ornansite (ôr'nan-sīt), *n.* See ★*meteorite.*

ornation (ôr-nā'shọn), *n.* [L. *ornati(o-)*, ‹ *ornare*, ornament. See *ornate.*] The act of ornamenting; the fact of being ornamented or adorned; ornamentation.

ornatrix (ôr-nā'triks), *n.* [L. *ornatrix*, fem. of *ornator*, ‹ *ornare*, ornament.] A woman who ornaments or embellishes; a dressing-maid. *N. E. D.*

orné (ôr-nā'), *a.* [F., pp. of *orner*, ‹ L. *ornare*, ornament.] Ornamented; adorned; usually in the phrase "a cottage *orné.*"

ornery (ôr'nẹ-ri), *a.* [Also *ornary*, a reduction of *ord'nary.*] Ordinary; common; mean; coarse; ugly: a term of depreciation, ranging from mild disapproval to great contempt. [Prov. U. S.]

ornithin (ôr'ni-thin), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *-in*^{2}.] A basic substance, $C_5H_{12}N_2O_2$, which, in combination with a guanidin radical, constitutes arginin, one of the most constant decomposition-products of the albumins. In the form of ornithuric acid it is obtained from the urine of chickens after feeding them with benzoic acid. Structurally it is *α-δ*-diaminovalerianic acid.

Ornithischia (ôr-ni-this'ki-ạ̈), *n. pl.* [NL., ‹ Gr. *ὄρνις* (*ὀρνιθ-*), a bird, + *ἰσχίον*, hip-joint.] An order of *Dinosauria* containing the *Iguanodon* and other species which have the bones of the pelvis arranged much like those of a bird. It is practically equivalent to the *Ornithopoda* of other writers. Contrasted with *Saurischia.*

ornithischian (ôr-ni-this'ki-a̤n), *a.* [NL. *Ornithischia* + *-an.*] Pertaining to or having the characters of the group of dinosaurs named *Ornithischia* by Seeley; having the bones of the pelvis like those of a bird.

ornithite (ôr'ni-thīt), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*) + *-ite*^{2}.] A hydrated calcium phosphate observed in small monoclinic crystals in the Sombrero Island bird-guano. It may be an altered metabrushite.

ornithivorous (ôr-ni-thiv'ọ-rus), *a.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + L. *-vorus*, ‹ *vorare*, devour.] Feeding upon or eating birds. [Rare.] *N. E. D.*

ornithocephalic (ôr″ni-thọ-se-fal'ik), *a.* Same as *ornithocephalous.*

Ornithocheiroidea (ôr″ni-thọ-kī-roi'dẹ̄-ạ̈), *n. pl.* [NL., ‹ Gr. *ὄρνις* (*ὀρνιθ-*), a bird, + *χείρ*, hand, + *εἶδος*, form.] A suborder of the pterosaurian reptiles, including the pterodactyls. It is characterized by a short tail; metacarpal of the wing as long as the bones of the antebrachium; vestigial fifth digit of the pes; and absence of cervical ribs. The members of this suborder vary in size from that of a sparrow to a wing expanse of 20–25 feet. The group appeared in late Jurassic times, and culminated and became extinct in the Cretaceous.

ornithodelph (ôr'ni-thọ-delf), *n.* [NL. *Ornithodelph(ia).*] Any member of the group *Ornithodelphia*, or egg-laying mammals: contrasted with *didelph* and *monodelph.*

ornithogeographic (ôr″ni-thọ-jē-ọ-graf'ik), *a.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + E. *geographic.*] Relating to the geographical distribution of birds.

ornithogeographical (ôr″ni-thō-jē-ọ-graf'i-ka̤l), *a.* Same as ★*ornithogeographic.*

ornithographic (ôr″ni-thọ-graf'ik), *a.* [*ornithograph(y)* + *-ic.*] Relating to, or having to do with, the scientific description of birds; ornithological.

ornithography (ôr-ni-thog'rạ-fi), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *-γραφια*, ‹ *γράφειν*, write.] Descriptive ornithology.

ornithoidic (ôr-ni-thoi'dik), *a.* [*ornithoid* + *-ic.*] Having resemblance to birds: said especially of decoration based on bird forms.

Ornithol. [*l. c.* or *cap.*] An abbreviation (*a*) of *ornithological*; (*b*) of *ornithology.*

ornitholeucism (ôr″ni-thọ-lū'sizm), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *λευκός*, white, + *-ism.*] In *ornith.*, albinism, or abnormal white plumage.

ornithologize (ôr-ni-thol'ọ-jīz), *v. i.*; pret. and pp. *ornithologized*, ppr. *ornithologizing.* [*ornitholog(y)* + *-ize.*] To study ornithology.

ornithomantist (ôr″ni-thọ-man'tist), *n.* [*ornithomancy* (*-mant-*) + *-ist.*] One who divines by means of birds.

ornithomelanism (ôr″ni-thọ-mel'ạ-nizm), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *μέλας* (*μελαν-*), black, + *-ism.*] In *ornith.*, melanism; abnormally dark coloration.

ornithomorphic (ôr″ni-thọ-môr'fik), *a.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *μορφή*, form, + *-ic.*] Resembling or having the form of a bird.

"There was continual war between the crow and the eagle"; between these two *ornithomorphic* creators the strife was as fierce as between wolf and raven. *Lang*, Myth, Ritual, and Religion, II. 4.

ornithomyzous (ôr″ni-thọ-mī'zus), *a.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *μύζειν*, suck.] Living as parasites upon birds and, in a strict sense, upon the blood of the host.

ornithopaleontologist (ôr″ni-thọ-pā″lẹ̄-on-tol'ọ-jist), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + E. *paleontologist.*] A student of fossil birds.

ornithophilist (ôr-ni-thof'i-list), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *φιλεῖν*, love, + *-ist.*] A lover of birds. *N. E. D.*

ornithophilite (ôr-ni-thof'i-līt), *n.* [*ornithophil(ist)* + *-ite*^{2}.] Same as ★*ornithophilist.*

ornithophily (ôr-ni-thof'i-li), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *-φιλια*, ‹ *φιλεῖν*, love.] The love of birds.

ornithopter (ôr-ni-thop'tėr), *n.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *πτερόν*, wing.] A flying-machine in which an attempt is made to imitate the oscillatory movement of the wings of a bird.

ornithotomically (ôr'ni-thọ-tom'i-ka̤l-i), *adv.* According to the methods of bird anatomy.

ornithuric (ôr-ni-thū'rik), *a.* [Gr. *ὄρνις* (*ὀρνιθ-*), bird, + *οὖρον*, urine, + *-ic.*] Derived from the urine of a bird that has been fed with benzoic acid.—**Ornithuric acid**, dibenzoyl-diaminovaleric acid, $(NH.C_7H_5O)_2.C_4H_7.CO_2H$, a crystalline compound which melts at 184° C.

orobanchaceous (or″ọ-bang-kā'shius), *a.* Belonging to or having the characters of the *Orobanchaceæ*, or broom-rape family of plants.

orocentral (ō-rọ-sen'tra̤l), *n.* [L. *os* (*or-*), mouth, + E. *central.*] In crinoids, a name given by P. H. Carpenter to a plate supposed to be the correlative of the dorsocentral.

The *oro-central* is a discredited myth. *E. R. Lankester*, Treatise on Zoology, III. 14.

orodiagnosis (or″ọ-dī-ag-nō'sis), *n.* [NL., ‹ Gr. *ὀρός*, whey (serum), + *διάγνωσις*, diagnosis.] Diagnosis based upon the effect of the administration of a specific therapeutic serum, or upon the agglutination of specific pathogenic bacteria caused by the addition of blood-serum drawn from a patient suspected of the disease caused by such bacteria. See *serum* ★*diagnosis.*

Orodus (or'ọ-dus), *n.* [NL., ‹ Gr. *ὄρος*, mountain, + *ὀδούς*, tooth.] A genus of extinct cestraciont selachian fishes or sharks, known only from its obtuse elongate teeth with crested crown. It occurs abundantly in the Carboniferous limestone.

orogenesis (or-ọ-jen'e-sis), *n.* [Gr. *ὄρος*, mountain, + *γένεσις*, production.] The process of mountain-making or upheaval: opposed to ★*epirogeny.*

orogenetic (or″ọ-jẹ̄-net'ik), *a.* [*orogenesis* (*-et-*) + *-ic.*] Relating to the origin of mountains.

The slope is gentle, indicating an absence of *orogenetic* activities. *Geog. Jour.* (R. G. S.), X. 268.

Orogenetic physiography, the physiography of those land-forms which are produced by orogenetic or mouning-making processes.

orogenic (or-ọ-jen'ik), *a.* [Gr. *ὄρος*, mountain, + *-γενης*, -producing, + *-ic.*] Same as ★*orogenetic.* *Geikie*, Text-book of Geol., p. 392.

orogeny (ọ-roj'e-ni), *n.* [Gr. *ὄρος*, mountain, + *-γενεια*, ‹ *-γενης*, -producing.] Same as ★*orogenesis.* *Geikie*, Text-book of Geology, p. 392.

orograph (or'ọ-gräf), *n.* [Gr. *ὄρος*, mountain, + *γράφειν*, write.] A surveyors' instrument designed for military use, to replace the engineers' chain and level. It records on paper an accurate profile of the country over which it is rolled.

oroheliograph (or-ọ-hē'li-ọ-gräf), *n.* [Gr. *ὄρος*, mountain, + E. *heliograph.*] In *photog.*, a camera, devised by Noë, by which a panoramic view of the horizon may be taken. A vertical lens to which is attached a silvered mirror of peculiar shape is employed to focus the panoramic view from the entire horizon on a horizontal sensitive plate. *Woodbury*, Encyc. Dict. of Photog., p. 317.

orohydrographic (or-ọ-hī-drọ-graf'ik), *a.* [Gr. *ὄρος*, mountain, + E. *hydrographic.*] In *phys. geog.*, of or pertaining to relief (mountains, etc.) and drainage.

The *oro-hydrographic* conformation of the Andine region extending southwards of Mount Tronador is extremely complex. *Geog. Jour.* (R. G. S.), XVI. 35.

orohydrographical (or-ọ-hī-drọ-graf'i-ka̤l), *a.* Same as ★*orohydrographic.* *Geog. Jour.* (R. G. S.), VI. 548.

orometer (ọ-rom'e-tėr), *n.* [Gr. *ὄρος*, mountain, + *μέτρον*, measure.] A form of aneroid barometer provided with two scales, one giving barometric pressures, the other the approximate elevation above the sea-level where the observation is made; a mountain-barometer.

orometric (or-ọ-met'rik), *a.* [*orometr(y)* + *-ic.*] Of or pertaining to orometry or the measurement of mountains, especially to averages of altitudes: as, "an *orometric*-anthropogeographical study." *Geog. Jour.* (R. G. S.), X. 311.

orometry (ọ-rom'e-tri), *n.* [Gr. *ὄρος*, mountain, + *-μετρια*, ‹ *μέτρον*, measure.] In *phys. geog.*, the measurement of mountains, especially with regard to averages of altitudes.

As the geoid is treated in geodesy, he treats the oroid in *orometry.* *Geog. Jour.* (R. G. S.), XI. 205.

Oronoco, Oronoko (ō-rọ-nō'kō), *n.* [Origin uncertain: said not to be connected with the river-name Orinoco.] An old variety of tobacco.

The different species of the genus [Nicotiana] have been in former days distinguished in Virginia by the names of *Oronoko*, sweet-scented, and little Frederick. *W. Tatham*, Cult. and Com. of Tobacco, p. 4, note.

Orophodontidæ (ō″rọ-fọ-don'ti-dē), *n. pl.* [NL., ‹ *Orophodon* (*-t-*), the type genus, + *-idæ.*] A family of extinct edentate mammals, based on scattered teeth from the *Pyrotherium* beds of Patagonia. *Ameghino*, 1895.

ororotundity (ō″rọ-rọ-tun'di-ti), *n.* Same as ★*orotundity.*

Orosian (ọ-rō'si-ạn), *a.* [NL. **Orosianus*, < *Orosius*.] Relating to Paulus Orosius, a Spanish priest (born in the latter part of the fourth century, died in the fifth century), or to his works: alluding, usually, to his history ("Historiarum contra paganos libri VII"), known as Hormesta, Ormesta, or Ormista, explained by some as Or[osii] M[undi] Hist[oria] (Orosian History of the World).

> Prof. Miller argues ingeniously, from various details, that this *Orosian* material appears to be derived more directly from the lost *Orosian* map.
> *Geog. Jour.* (R. G. S.), XV. 134.

orotherapy (or-ọ-ther'ạ-pi), *n.* [Gr. *ὀρός*, whey (serum), + *θεραπεία*, medical treatment.] 1. Same as ★*serum-therapy*.—2. Same as *whey cure*.

orotund, *a.* 2. Pompous; self-satisfied; inflated: applied to a style of utterance.

II. *n.* A deep, full voice.

> The *orotund* is fuller in volume, and purer in quality than the common voice.
> *J. Rush*, Philos. of the Human Voice, p. 130.

orotundity (ō-rọ-tun'di-ti), *n.* [*orotund* + *-ity*.] The character of being orotund.

orp (ôrp), *v. i.* [Origin obscure.] To fret; murmur; weep fretfully. [Prov.]

Orphéon (ôr-fā-ôṅ'), *n.* [F. *Orphéon* (Wilhelm, 1833), < *Orphée*, Orpheus, + *-on*, as *odéon*, odeum.] A school of vocal music in Paris, organized in 1835 under governmental supervision and connected with the public-school system; hence, any similar singing-society. Such societies are now numerous throughout France, and are a notable feature in popular education.

Orpheonist (ôr'fē-ọn-ist), *n.* [F. *orphéoniste*, < *Orphéon*. See ★*Orphéon*.] A member of an Orphéon; a choral singer.

Orphical (ôr'fi-kạl), *a.* Same as *Orphic*.

Orphically (ôr'fi-kạl-i), *adv.* In an Orphic or Orphical manner; after the fashion of the Orphic mysteries.

Orphicism (ôr'fi-sizm), *n.* [*Orphic* + *-ism*.] Same as *Orphism*.

orphol (ôr'fol), *n.* The trade-name of naphthol bismuth or basic *β*-naphthol bismuth, $(Bi(C_{10}H_7O)_3)_2.Bi_2O_3$ or $Bi(C_{10}H_7O)_3.3HO$, a neutral non-irritating light-brown powder. It is used in medicine as a sedative and antiseptic, because in the intestine it is resolved into its constituents.

Orpington (ôr'ping-tọn), *n.* A modern breed of domesticated fowls originated by William Cook and Sons at Orpington, Kent, England, in 1886. The breed resembles a clean-legged langshan and is the result of crosses between that bird, the Plymouth Rock, and the Black Minorca. There are ten varieties of the breed, single- and rose-combed of five colors. They are hardy, grow rapidly, and are good layers.

orqueta (ôr-kā'tä), *n.* [Sp. name at Panama.] A common name of *Chloroscombrus orqueta*, a carangoid fish found on the Pacific coast of tropical America.

orrhodiagnosis, *n.* Same as ★*orodiagnosis*.

orrhoid (or'oid), *a.* [Gr. *ὀρρός*, whey (serum), + *εἶδος*, form.] Resembling, or of the nature of, serum.

orrhotherapy, *n.* Same as ★*orotherapy*.

Orsat's apparatus. See ★*apparatus*.

Orseille carmine. See ★*carmine*.

orsellesic (ôr-se-les'ik), *a.* [*orsell*(*ic*) + *-es-* + *-ic*.] Same as ★*orsellinic*.

orsellinic (ôr-se-lin'ik), *a.* [*orsell*(*ic*) + *-in* + *-ic*.] Noting an acid related to orsellic acid.—**Orsellinic acid,** dihydroxyparatoluic acid, $C_6H_2(CH_3)(OH)_2CO_2H$, made by boiling orsellic acid with lime-water, or by heating erythrin with caustic soda or baryta-water. It is a crystalline mass which melts at 176° C. and yields carbon dioxid and orcinol.

ort[2] (ôrt), *n.* [G. *ort*, MHG. (> Dan. Norw.) *ort*, a fourth part, a weight, a coin, = D. *oord*, a fourth part; the same as G. MHG. *ort*, a point, corner, place, region, = OFries. OS. AS. ME. *ord*, a point: see *ord* and *odd*. The application to money and weight arose from the division of a coin into four quadrants by a cross.] 1. A money of account in Germany, Norway, Denmark, Riga, etc.—2. A Danish unit of weight, the thousandth part of the pund or pound.

ort[3] (ôrt), *n.* [An abbreviation of *orientation*.] A vector of unit length.

> There is another term also adopted by Prof. Henrici the justification of which is at least difficult, viz. the term "*ort*." A vector of unit length is called an "*ort*," which is explained to be "short for orientation," and "orientation" makes a dangerous suggestion of rotation. The "*ort*" is, of course, Hamilton's *unit vector*. The "rotor" and the "*ort*" should be regarded by anti-Hamiltonians as the trail of the serpent. *Nature*, Oct. 29, 1903, p. 617.

ortalid (ôr'tạ-lid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Ortalidæ*.

II. *a.* Having the characters of or belonging to the family *Ortalidæ*.

ortegon (ōr-tạ-gōn'), *n.* [Augmentative of Sp. *ortiga*, < L. *urtica*, nettle.] In Porto Rico, *Coccolobis rugosa*, a tree with very large wrinkled leaves and purple flowers which form spikes a yard long. It is one of the most important trees of the island, and its heart-wood, which is purplish, hard, and heavy, is used for cabinet work.

orthal (ôr'thạl), *a.* [Gr. *ὀρθός*, straight, + *-al*[1].] Noting the movement of the jaws in a vertical plane, as in the carnivorous mammals. *Cope*, in Amer. Nat., Nov., 1887, p. 991.

orthangle† (ôr'thang-gl), *n.* [Gr. *ὀρθός*, right, straight, + E. *angle*.] A rectangle.

orthic (ôr'thik), *a.* [Gr. *ὀρθός*, straight, + *-ic*.] 1. In *min.*, having directions at right angles to each other; orthoclastic: said of cleavage-planes, as of those of certain feldspars.—2. In *geom.*: (*a*) Orthocentric. (*b*) Designating algebraic curves which satisfy Laplace's equation in two dimensions. *Science*, Aug. 19, 1904, p. 227.—**Orthic axis.** The homologous sides of ABC and its orthocentric triangle cross in 3 costraight points on t_o, the *orthic axis* of the two triangles.

Orthidæ (ôr'thi-dē), *n. pl.* [NL., < *Orthis* + *-idæ*.] A family of brachiopods typified by the genus *Orthis*.

orthine (ôr'thin), *n.* [Gr. *ὀρθός*, straight, + *-ine*[2].] A trade-name for orthohydrazine-paraoxybenzoic acid: used as an antiseptic and antipyretic remedy, but unstable and hence not much employed.

Orthis (ôr'this), *n.* [NL., < Gr. *ὀρθός*, straight.] A genus of protrematous brachiopods having a straight hinge, subquadrate valves with ribbed exterior, well-developed teeth and sockets, and no calcified brachidium. The genus has been greatly subdivided, and is now restricted to a comparatively few species which occur in the early Silurian rocks.

ortho-acid (ôr'thō-as"id), *n.* [Gr. *ὀρθός*, straight, + E. *acid*.] An acid in which the theoretically greatest possible number of hydroxyl-groups is combined with the central atom or radical, as orthocarbonic acid, $C(OH)_4$, ortho-acetic acid, $CH_3C(OH)_3$. The name is less correctly applied to certain other acids, as orthophosphoric acid, $PO(OH)_3$.

orthoboulia (ôr-thọ-bö'li-ạ), *n.* [Gr. *ὀρθοβουλία*, < *ὀρθόβουλος*, willing the right, < *ὀρθός*, right, + *βουλή*, will, counsel.] The willing of what is right or good; the giving of good counsel.

orthobrachycephalic (ôr"thọ-brak"i-se-fal'ik or -sef'ạ-lik), *a.* [Gr. *ὀρθός*, straight, + *βραχύς*, short, + *κεφαλή*, head.] In *craniom.*, combining the characteristics of orthocephaly and brachycephaly.

orthocarbonic (ôr"thọ-kär-bon'ik), *a.* [Gr. *ὀρθός*, right, + E. *carbonic*.] Designating a variety of carbonic acid, $C(OH)_4$, which contains the maximum number of hydroxyl-groups. It does not exist in the free state.—**Orthocarbonic ester.** See ★*ester*.

orthocenter (ôr'thō-sen-tėr), *n.* [Gr. *ὀρθός*, straight, right, + E. *center*.] The cointersection point of the straight lines through the three vertexes of a triangle perpendicular to the opposite sides.

orthocentric (ôr-thọ-sen'trik), *a.* [*orthocenter* + *-ic*.] Pertaining to the orthocenter.

orthocentroidal (ôr"thọ-sen-troi'dạl), *a.* Pertaining at once to the orthocenter and the centroid. *Tucker*.—**Orthocentroidal circle.** See ★*circle*.

orthocephalous (ôr-thọ-sef'ạ-lus), *a.* Same as *orthocephalic*.

orthoceracone (ôr-thọ-ser'ạ-kōn), *n.* [NL. *Orthoceras*, a genus of cephalopods, + Gr. *κῶνος*, a cone.] In the cephalopods, the straight cone when formed by the shell in youth and maintained through all growth stages, as in the genus *Orthoceras*.

orthochlorite (ôr-thọ-klō'rīt), *n.* [Gr. *ὀρθός*, straight, + E. *chlorite*.] A name given by Tschermak to those species of the chlorite group which commonly occur in distinct crystals or plates: opposed to ★*leptochlorite*.

Orthochoanites (ôr-thō-kọ-ạ-nī'tēz), *n. pl.* [NL., < Gr. *ὀρθός*, straight, + *χοάνη*, funnel, + *-ites* (improperly used for the plural).] In Hyatt's classification of the fossil cephalopods, a suborder in which the septal funnels are long and straight and an endosiphuncle is absent.

orthochromatic, *a.* 2. Staining in the exact shade of color of the dye used.

II. *n.* An orthochromatic plate; a photographic plate the sensitiveness of which is so distributed throughout the spectrum as to give in the image a normal gradation of light and shade.

orthochromatism (ôr-thọ-krō'mạ-tizm), *n.* [*orthochromat-ic* + *-ism*.] The quality of being orthochromatic.

orthochromatization (ôr-thọ-krō"mạ-ti-zā'-shọn), *n.* [*orthochromatize* + *-ation*.] The act of orthochromatizing or rendering orthochromatic; the state of being orthochromatized.

orthochrome (ôr'thọ-krōm), *n.* [Gr. *ὀρθός*, straight, right, + *χρῶμα*, color.] The trade-name of a mercury-vapor lamp in which an attempt is made to supply the lack of red light in the ordinary mercury arc by means of glow-lamps placed in the same circuit. *Elect. Rev.*, Aug. 27, 1904, p. 312.

orthocœlous (ôr-thọ-sē'lus), *a.* Same as *orthocœlic*.

> Again, if the intestine forms a number of (mostly closed) loops, which run parallel with each other in the long axis of the body, we term this arrangement *orthocœlous*, or straight-gutted. *Newton*, Dict. of Birds, p. 142.

orthocœly (ôr'thọ-sē-li), *n.* [*orthocœl*(*ic*) + *-y*[3].] The fact or condition of being orthocœlic. *Trans. Linnean Soc. London*, Zool., Oct., 1901, p. 197.

orthocone (ôr'thọ-kōn), *n.* [Gr. *ὀρθός*, straight, + *κῶνος*, cone.] The straight cone of the young shell in the nautiloid cephalopods, the mature form of which may be either straight (orthoceracone) or curved.

orthocycle (ôr'thọ-sī-kl), *n.* [Gr. *ὀρθός*, straight, right, + *κύκλος*, circle.] The locus of intersections of tangents to a conic perpendicular to each other; the director circle.

orthodiactin (ôr"thọ-dī-ak'tin), *n.* [Gr. *ὀρθός*, straight, + *δι-*, two, + *ἀκτίς* (*ἀκτιν-*), a ray.] In the sponge-spicules, a form in which two of the arms of the caltrop have been suppressed and the remaining two stand at right angles to each other.

orthodiæne (ôr-thọ-dī'ēn), *n.* [Gr. *ὀρθός*, straight, + (as if *δίαινα*, a fork) *δι-*, two, + *-αινα*, as in *τρίαινα*, trident.] In the sponge-spicules, a triod which has two arms of equal length and recurvature, the first being straight and longer or shorter than the rest.

orthodiagraph (ôr-thọ-dī'ạ-gráf), *n.* [Gr. *ὀρθός*, right, + *διά*, through, + *γράφειν*, write.] An apparatus for determining the shape and size of internal organs of the body and of foreign bodies. Their outlines are made visible on a phosphorescent screen by a Rontgen-ray apparatus placed on the other side, and can thus be traced on a drawing-board or the body. A movable frame with adjustable sections carries both the X-ray bulb and the recording stylus, which move in unison, thus obviating the distortion which would be due to the divergent X-rays, the perpendicular rays only being followed in tracing.

> A so-called *orthodiagraph*, an apparatus which serves in connection with Roentgen tubes for determining the exact size of the heart and for locating foreign bodies.
> *Elect. World and Engin.*, Sept. 24, 1904, p. 514.

orthodiazin (ôr"thọ-dī-az'in), *n.* Same as ★*pyridazin*.

orthodichotriæne (ôr-thọ-dī-kọ-trī'ēn), *n.* [Gr. *ὀρθός*, straight, + *δίχα*, in two, + *τρίαινα*, trident.] In the sponge-spicules, a dichotriæne with straight branches. See *dichotriæne*.

orthodichoxytriæne (ôr-thọ-dī"kok-si-trī'ēn), *n.* [Gr. *ὀρθός*, straight, + *δίχα*, in two, + *ὀξύς*, sharp, + *τρίαινα*, trident.] In the nomenclature of the spicular elements of the sponges, a dichotriæne in which the forked arms of the spicule are straight and sharp. See *dichotriæne*.

orthodolichocephalic (ôr-thọ-dol"i-kọ-se-fal'-ik or -sef'ạ-lik), *a.* [Gr. *ὀρθός*, straight, + *δολιχός*, long, + *κεφαλή*, head, + *-ic*.] In *craniom.*, combining the characteristics of orthocephaly and dolichocephaly.

> Of a Hottentot skull from a cave on the Orange-Transvaal frontier, Dr. Mies states that "its form is *orthodolichocephalic*, as with the Wasandawi."
> *Virchow* (1895), quoted in Encyc. Brit., XXIX. 341 [(note).

Orthodon (ôr'thọ-don), *n.* [NL., < Gr. *ὀρθός*, straight, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of cyprinoid fishes found in fresh waters in the western United States.

orthodontia (ôr-thō-don′ti-ä), *n.* [NL., < Gr. *ὀρθός*, straight, + *ὀδούς* (*ὀδοντ-*), tooth.] That branch of dentistry which is concerned with the straightening of irregular teeth.

orthodoxian (ôr-thō-dok′si-an), *a.* [*orthodoxy* + *-an.*] One who professes orthodoxy. *N. E. D.* [Rare.]

orthodoxism (ôr′thō-dok-sizm), *n.* [*orthodox* + *-ism.*] 1. Orthodoxy.—2. The regarding of orthodoxy as the most important feature of religion.

ortho-ester (ôr′thō-es″tėr), *n.* The ester of an ortho-acid.

orthoform (ôr′thō-fôrm), *n.* [Gr. *ὀρθός*, straight, + (*chloro*)*form.*] The methyl ester of p-amino-m-hydroxybenzoic acid, $C_6H_3(NH_2)(OH)CO_2H$. It is a white crystalline powder which forms soluble salts with acids: used as a local anesthetic in the treatment of ulcers and other painful skin-diseases.

orthogamic (ôr-thō-gam′ik), *a.* [*orthogam*(*y*) + *-ic.*] In *bot.*, pertaining to direct fertilization or orthogamy.

orthogenesis (ôr-thō-jen′e-sis), *n.* [NL., < Gr. *ὀρθός*, straight, + *γένεσις*, generation.] The direct or immediate origin of species, according to the opinion that it takes place by the 'organic growth' of one species into another in a definite line which is predetermined by the constitution which outward circumstances have given to each organism.

> The Neo-Lamarckians say 'use-inheritance' (as Eimer, who calls the determination secured by this means '*orthogenesis*'); Weismann says 'germinal selection'; those who accept 'organic selection' say that it is a determining factor (the resulting determination of evolution being called 'orthoplasy'); others say 'determinate variation' (continued in the same direction for successive generations); Professor Osborn says, 'determinate variation' with 'organic selection.'
> *J. M. Baldwin*, Development and Evolution, p. 161.

orthogenetic (ôr-thō-jē-net′ik), *a.* Pertaining to or of the nature of orthogenesis.

> The *orthogenetic* formation of the chambers exerts an increasing pull upon the chamber of attachment, and as a completed structure, by the law of acceleration, appears in successively earlier stages of the ontogeny, it is obvious that cameration finally led to detachment among a part of the forms. *Amer. Geol.*, April, 1903, p. 205.

orthogenid (ôr-thoj′e-nid), *n.* [Gr. *ὀρθός*, right, straight, + *γέν*(*εσις*), generation, + *-id*¹.] The sinusoid spiral. *Allégret.*

orthogneiss (ôr′thō-nīs), *n.* [Gr. *ὀρθός*, right, straight, + E. *gneiss.*] In *petrog.*, a name given by Rosenbusch (1898) to gneiss derived from igneous rocks: opposed to ⋆*paragneiss.*

orthogon, *n.* 2†. A right-angled triangle.

Orthogonal circle, the circle orthogonal to all circles of a circle-complex with positive power.—**Orthogonal coördinates.** Same as *rectangular coördinates* (which see, under *coördinate*).—**Orthogonal sphere, spheres.** See ⋆*sphere.*—**Orthogonal system of lines, orthogonal system of surfaces.** See ⋆*system.*—**Triply orthogonal**, said of a combination of three systems of surfaces such that every surface of either system is at right angles to all those of the other two systems.

orthogonial† (ôr-thō-gō′ni-al), *a.* Same as *orthogonal.*

orthograde (ôr′thō-grād), *a.* [Gr. *ὀρθός*, straight, right, + L. *gradi*, go, walk.] Carrying the body upright in walking, or in a vertical position: opposed to ⋆*pronograde.*

> Dr. A. Keith (Journal of Anatomy and Physiology, vol. xxx. p. 18) calls attention to the fact that naturalists are wrong in describing the larger apes as quadrupedal. They are so only when on the ground, which is not their proper habitat. When at home among the trees they carry the body upright, and may thus be called *orthograde*, in contradistinction to the lower Primates, which are pronograde. *Nature*, Oct. 30, 1902, p. 661.

orthografer, orthografic, orthografy. Amended spellings of *orthographer*, etc.

orthohexactin (ôr″thō-hek-sak′tin), *n.* [Gr. *ὀρθός*, straight, + *ἕξ*, six, + *ἀκτίς* (*ἀκτιν-*), ray.] In the sponge-spicules, a six-rayed or triaxial spicule with arms at right angles.

orthoid (ôr′thoid), *n.* [Gr. *ὀρθός*, straight, right, + *-oid.*] The path of a point in a fixed position with respect to a straight line which rolls upon any curve.

orthoketonic (ôr″thō-kē-ton′ik), *a.* [Gr. *ὀρθός*, right, + E. *ketone* + *-ic.*] Designating a ketone containing the grouping $-CO-CH_3$.

orthologer (ôr-thol′ō-jėr), *n.* [*ortholog*(*y*) + *-er.*] One who speaks correctly, or who treats of the correct use of words. *N. E. D.*

orthologian (ôr-thō-lō′ji-an), *n.* Same as ⋆*orthologer.*

orthological (ôr-thō-loj′i-kal), *a.* [*ortholog*(*y*) + *-ic-al*¹.] Of or pertaining to orthology or the correct use of words.

orthology, *n.* 2. The correct use of words.

orthometopic (ôr″thō-me-top′ik), *d.* [Gr. *ὀρθός*, straight, + *μέτωπον*, forehead, + *-ic.*] Having a vertical forehead, like many children and women. *Ecker.*

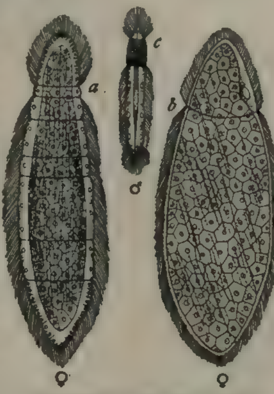
orthomonæne (ôr-thō-mon′ēn), *n.* [Gr. *ὀρθός*, straight, + *μόνος*, single, + *-αινα*, as in *τρίαινα*, trident.] In the sponge-spicules, a triæne which by atrophy has lost two of its branches, the remaining one being straight.

Orthomorphic transformation. See ⋆*transformation.*

orthomorphosis (ôr″thō-môr′fō-sis), *n.* [Gr. *ὀρθός*, straight, + *μόρφωσις*, forming.] 1. Orthopædic treatment.—2. Expansion or contraction without disturbing the conformal relation between corresponding lines or areas.—3. Orthomorphic ⋆ transformation (which see).

> It is easy to deduce the *orthomorphosis* of the rectangle into a circle. *Cayley*, Works, XIII. 191. *N. E. D.*

Orthonectidæ (ôr-thō-nek′ti-dē), *n. pl.* [NL.] A group of organisms of uncertain position but evidently related to the *Dicyemida.* They consist of an outer layer of ciliated cells surrounding a mass of compact cells, and have a layer of fibers, possibly muscular, between the outer layer and inner mass of cells. The males are smaller than the females, and the latter occur in two forms, cylindrical and flattened, both of which produce eggs. Those of the cylindrical form are probably fertilized, while those of the flattened form are thought to develop parthenogenetically. The family contains the genus *Rhopalura*, found parasitic in turbellarians, nemertines, and ophiurids. Also *Orthonectida.*



Orthonectidæ (*Rhopalura giardii*). Metschnikoff. (From the brittle-star, *Amphiura squamata.*)

a, cylindrical female; *b*, flattened form of female; *c*, full grown male: all highly magnified. (After Julin.)

(From "Cambridge Natural History.")

Orthonychia (ôr-thō-nik′i-ä), *n.* [NL., < Gr. *ὀρθός*, straight, + *ὄνυξ* (*ὀνυχ-*), claw.] A genus of platypodous Paleozoic gastropods allied to the *Capulidæ* and having conical furrowed shells slightly twisted and curved at the tip.

orthophoric (ôr-thō-for′ik), *a.* [*orthophor*(*ia*) + *-ic.*] Relating to or marked by orthophoria.

orthophosphate (ôr-thō-fos′fāt), *n.* [Gr. *ὀρθός*, straight, + E. *phosphate.*] A salt of orthophosphoric acid. All phosphates of natural occurrence are orthophosphates.

orthophosphoric (ôr″thō-fos-for′ik), *a.* [Gr. *ὀρθός*, straight, + E. *phosphoric.*] Noting an acid, H_3PO_4, produced by the interaction of phosphorus pentoxid or pentachlorid and water by boiling dilute nitric acid with phosphorus, or by treating the calcium phosphate of bone-earth with sulphuric acid. It may be obtained in the form of colorless crystals, but is generally seen as a syrupy liquid which contains some water. It has no smell, but a strongly sour taste. It is used in medicine. By progressive heating it is converted into pyrophosphoric and metaphosphoric acid. It is often referred to as *common phosphoric acid.*

orthophyllotriæne (ôr-thō-fil-ō-trī′ēn), *n.* [Gr. *ὀρθός*, straight, + *φύλλον*, leaf, + *τρίαινα*, trident.] In the sponge-spicules, a triæne with flattened, undivided leaf-like branches.

orthophyric (ôr-thō-fir′ik), *a.* [*orthophyre* + *-ic.*] In *petrog.*, belonging to or having the characters of orthophyre.

orthoplaced (ôr′thō-plāsd), *a.* [Gr. *ὀρθός*, straight, + E. *placed.*] In *chem.*, being in the ortho-position.

> The hydroxyl group and one of the halogen atoms (an *ortho-placed* halogen atom) having exchanged positions.
> *Nature*, Feb. 5, 1903, p. 332.

orthoplastic (ôr-thō-plas′tik), *a.* [Gr. *ὀρθός*, straight, + *πλαστός*, formed, + *-ic.*] Directive of or determining the changes in living beings to which the origin of species is due.

> All the influences which work to assist the animal to make adjustments or accommodations will unite to give directive determination to the course of evolution. These influences we may call '*orthoplastic*' or directive influences.
> *J. M. Baldwin*, Development and Evolution, p. 142.

orthoplasy (ôr′thō-plā-si), *n.* [Gr. *ὀρθός*, straight, + *πλάσις*, forming, + *-y*³.] 1. The definite and determinate changes in the history of the origin of species which have been attributed to organic selection.

> And the general fact that evolution has a directive determination through organic selection we may call '*Orthoplasy.*'
> *J. M. Baldwin*, Development and Evolution, p. 142.

2. The doctrine or opinion that the origin of species has been guided or directed by organic selection.

> The theory of evolution which makes general use of organic selection is called *Orthoplasy.*
> *J. M. Baldwin*, Development and Evolution, p. 173.

orthopnœic (ôr-thop-nē′ik), *a.* [*orthopnœ*(*a*) + *-ic.*] Relating to or affected with orthopnœa.

Orthopoda (ôr-thop′ō-dä), *n. pl.* [NL., < Gr. *ὀρθός*, straight, + *πούς* (*ποδ-*), foot.] An ordinal term introduced by Cope for a division of the dinosaurian reptiles otherwise known as the ⋆*Predentata* (which see).

orthopodous (ôr-thop′ō-dus), *a.* Pertaining to or having the characters of the *Orthopoda.*

ortho-position (ôr″thō-pō-zish′on), *n.* In *chem.*, the 'position' indicated by the prefix *ortho-.* See *ortho-.*

Orthopristis (ôr-thō-pris′tis), *n.* [Gr. *ὀρθός*, straight, + *πρίστις*, a kind of whale?] A genus of fishes belonging to the family *Hæmulidæ.* Nearly all of the species are American.

orthoprosopic (ôr″thō-pros-ō′pik), *a.* [Gr. *ὀρθός*, straight, + *πρόσωπον*, face.] In *anthrop.*, having a medial facial index; having a face in which the greatest breadth expressed in per cents. of the total length has a middle value. *Deniker*, Races of Man, p. 71.

orthoprosopous (ôr″thō-pros′ō-pus), *a.* Same as ⋆*orthoprosopic.*

orthopter, *n.* 2. A form of dirigible flying-machine or aërodrome, heavier than the air it displaces and using no gas-bag, in which the motor supplying the energy to lift and move the machine acts directly to produce motion in the desired direction. Distinguished from the *helicopter*, in which helical surfaces revolving like propellers are used to lift the weight by their rotary motion in some direction other than that of the flight. Orthopters are sometimes built with movable wings, beating the air like those of a bird, but more usually the fixed aëroplane with adjustable inclination to the horizon is depended on to give the straight flight, and support the weight. Gliders are in this general class. *Sci. Amer.*, Oct. 12, 1907.

Orthopteroidea (ôr-thop-te-roi′dē-ä), *n. pl.* [NL., < *Orthoptera* + Gr. *εἶδος*, form.] In Scudder's classification of the fossil insects, an order which corresponds to the recent order *Orthoptera* and occurs in the Paleozoic rocks.

orthoptic, *a.* 2. Relating to normal binocular vision.

orthorachic (ôr-thō-rā′kik), *a.* [Gr. *ὀρθός*, straight, + *ῥάχις*, spine.] Having a spinal column with a straight lumbar curve, or with a lumbovertebral index of between 98 and 102. *Turner.*

Orthoscopic eyepiece. See ⋆*eyepiece.*

orthosiid (ôr-thō-sī′id), *n.* and *a.* I. *n.* A member of the lepidopterous family *Orthosiidæ.*

II. *a.* Having the characters of or belonging to the family *Orthosiidæ.*

orthosis (ôr-thō′sis), *n.* [NL., < Gr. *ὄρθωσις*, straightening, < *ὀρθοῦν*, straighten, < *ὀρθός*, straight.] The straightening, or the becoming straight, of a part.

orthoskiagraphic (ôr-thō-skī-a-graf′ik), *a.* [Gr. *ὀρθός*, straight, + *σκιά*, shadow, + *γράφειν*, write, + *-ic.*] Pertaining to photography which attempts to render truthful gradations in light and shade. *Wall*, Dict. of Photog., p. 415.

orthostates (ôr-thos′ta-tēz), *n.*; pl. *orthostatai* (-tī). [Gr. *ὀρθοστάτης*, one who stands upright, an upright pillar, prob. adj., standing upright, < *ὀρθός*, upright, + *-στάτης*, < *ἱστάναι*, stand.] In *Gr. arch.*, any upright support. The word usually denotes a rectangular masonry pier in distinction from a circular column.

orthostatic (ôr-thō-stat′ik), *a.* [Gr. *ὀρθόστατος*, standing upright, + *-ic.*] Of or pertaining to an upright position.—**Orthostatic albuminuria**, the temporary occurrence of albumin in the urine when the patient stands for a considerable time.

orthostereoscope (ôr-thọ-ster′ẹ-ọ-skōp), *n.* [Gr. ὀρθος, right, + E. *stereoscope.*] A binocular microscope in which the objects viewed appear as in reality, not being inverted or transposed.

orthostereoscopic (ôr-thọ-ster″ẹ-ọ-skop′ik), *a.* [*orthostereoscop*(*e*) + *-ic.*] Pertaining to or connected with an orthostereoscope; giving a normal view without inversion or transposition.

orthostigmat (ôr-thọ-stig′mat), *n.* [Gr. ὀρθός, straight, right, + E. *stigmat*(*ic*).] The trade-name of a lens system consisting of two similar groups of three lenses each; each group taken by itself is completely corrected and may be used as a separate system. *Encyc. Brit.*, XXXI. 696.

Orthostœchus (ôr-thọ-stē′kus), *n.* [NL., < Gr. ὀρθός, straight, + στοῖχος, row.] A genus of fishes, of the family *Hæmulidæ*, found on the Pacific coast of tropical America.

orthosubstituted (ôr-thọ-sub′sti-tū-ted), *a.* Containing a substituting atom or group in the ortho-position.

> The question of space interference, a phenomenon first observed by V. Meyer in the case of *ortho-substituted* aromatic acids which can only be esterified with great difficulty, and in some cases not at all.
> *Nature*, Nov. 19, 1903, p. 64.

orthosymmetric, *a.* **2.** In *crystal.*, same as *orthorhombic.*

orthosymmetrically (ôr″thō-si-met′ri-kạl-i), *adv.* In accordance with right symmetry.

orthosymmetry (ôr-thọ-sim′e-tri), *n.* [Gr. ὀρθός, straight, right, + συμμετρία, symmetry.] In *crystal.*, right symmetry. See ★*symmetry*, 6.

Orthothetes (ôr-thoth′ẹ-tēz), *n.* [NL., < Gr. ὀρθός, straight, + -θετης, < τιθέναι, put, place.] A genus of fossil protrematous brachiopods, of the family *Strophomenidæ*, having reversed convexo-concave shells. It occurs from the Silurian to the Carboniferous.

orthotoluidine (ôr″thọ-tọ-lū′i-din), *n.* [Gr. ὀρθός, straight, right, + E. *toluidine.*] An amine base produced by the action of nascent hydrogen on orthonitrotoluene. Mixed with paratoluidine it occurs in commercial toluidine, which is a valuable material in the production of some of the coal-tar dyes.

orthotomy (ôr-thot′ọ-mi), *n.* [*orthotom*(*ous*) + *-y*³.] The property of cutting or intersecting at right angles.

orthotriæne, *n.* **2.** A caltrop in which one of the arms is very long and straight. See ★*caltrop*, 4.

orthotrichoxytriæne (ôr″thọ-trī″kok-si-trị′-ēn), *n.* [Gr. ὀρθός, straight, + τρίχα, threefold, + ὀξύς, sharp, + τρίαινα, trident.] In the sponge-spicules, a trichotriæne or thrice-branched triæne which has the branches straight or sharp.

orthotriod (ôr-thọ-trī′od), *n.* [Gr. ὀρθός, straight, + E. *triod.*] In the sponge-spicules, a triod in which the arms are equal and one at right angles to the other two.

orthotropy (ôr-thot′rọ-pi), *n.* [*orthotrop*(*ous*) + *-y*³.] In *bot.*, the condition of being orthotropous: said of an ovule.

orthoxytriæne (ôr″thok-si-trī′ēn), *n.* [Gr. ὀρθός, straight, + ὀξύς, sharp, + τρίαινα, trident.] In the sponge-spicules, a triæne with the arms straight and sharp. See *triæne*, ★*oxytriæne.*

orthozygous (ôr-thoz′i-gus), *a.* [Gr. ὀρθός, straight, + ζυγόν, yoke, + *-ous.*] In *craniom.*, having a stephanozygomatic index of 100.

Orthrocene (ôr′thrọ-sēn), *n.* [NL., < Gr. ὄρθρος, dawn, + καινός, recent.] In *geol.*, a term adopted by W. Dawson for the Eocene Tertiary.

ortica (ôr′ti-kä), *n.* [A corruption of L. *urtica*, nettle (?).] A kind of cloth made in Europe from the fiber of the American plant *Urticastrum divaricatum. Dodge*, Fiber Plants, p. 213.

ortiga (ōr-tē′gä), *n.* [Sp. *ortiga*, nettle, < Lat. *urtica.*] In Spanish America, a name given to a number of stinging plants of various families, and also to those which resemble nettles in appearance. In Mexico the name is applied to the introduced ramie-fiber plant, *Bœhmeria nivea*; in Porto Rico to species of *Urera*, including *U. Caracasana* and *U. baccifera*, which bear edible fruit; in the warm regions of Mexico to species of *Cohiba*, belonging to the *Hydrophyllaceæ*, especially to *C. urens*; and in the State of Jalisco to *Tournefortia hirsutissima*, belonging to the *Boraginaceæ*. See cut at *Bœhmeria*.

ortol (ôr′tol), *n.* A trade-name for a compound of o-aminophenol with hydroquinone. It is used as a developer in photography.

Ortonia (ôr-tō′ni-ạ̈), *n.* [NL., after a personal name.] A genus of extinct tubicolous worms forming small conical irregular tubes and often growing in clusters from a single surface of attachment. It occurs in Silurian rocks.

orvinite (ôr′vi-nīt), *n.* See ★*meteorite.*

oryctogeology (ọ-rik″tọ-jẹ-ol′ọ-ji), *n.* [Gr. ὀρυκτός, dug out (fossil), + E. *geology.*] The classification of rocks by their fossils.

oryctographically (ọ-rik-tọ-graf′i-kạl-i), *adv.* With respect to oryctography; on the basis of fossils; paleontologically.

orylic (ọ-ril′ik), *a.* [Gr. ὀρός, whey (serum), + *-yl* + *-ic.*] Noting an acid, $C_{18}H_{28}O_8N_4$, which is obtained, together with succinic and lactic acids, by boiling carniferrin with baryta-water. It is a powder easily soluble in water.

os¹, *n.*—**Os angulare,** the small bone on the posterior end of the articulare of fishes. To it a ligament from the interopercular is attached.—**Os articulare,** the posterior of the two large bones forming the lower jaw in fishes.—**Os basilare,** the basioccipital, or posterior inferior median bone of the cranium in fishes.—**Os coracoideum,** variously identified in fishes as the hypocoracoid, the clavicle, the postclavicle, or the supraclavicle.—**Os cricoideum,** in fishes, the inferior pharyngeal, a paired bone behind the fourth gill-arch, usually bearing teeth.—**Os dentale,** the dentary bone, the anterior and the tooth-bearing one of the two large bones of the lower jaw in fishes.—**Os extrascapulare,** the pterotic, the outermost of the posterior bones of the cranium in fishes.—**Os frontale,** the frontal, the largest bone on top of the cranium in fishes. It is over the orbital cavity, and is usually paired, but sometimes it is a single bone.—**Os hamuli,** a small bone developed on the fifth metacarpal of some primates.—**Os intermaxillare,** the premaxillary, the anterior of the two large bones which form the upper border of the mouth in teleost fishes.—**Os interparietale,** the epiotic, one of the superior bones of the posterior part of the cranium in fishes.—**Os japonicum,** in *anthrop.*, the lower portion of the malar bone when divided by a transversal suture.—**Os lenticulare.** Same as *os orbiculare.*—**Os mastoideum.** (*b*) The epiotic, one of the superior posterior bones of the cranium in fishes: not the 'os mastoideum' of Stannius. (*c*) Same as ★*os extrascapulare.*—**Os maxillare,** the maxillary, the posterior one of the two large bones which border the mouth above in fishes. It articulates with the premaxillary.—**Os nasi,** the nasal, a bone in fishes in relationship with the olfactory cavity.—**Os naviculare,** the scaphoid bone.—**Os occipitale externum,** the epiotic, one of the superior posterior bones of the cranium in fishes.—**Os occipitale laterale,** the exoccipital, one of the paired occipital bones in fishes. There is one on each side of the foramen magnum.—**Os occipitale superius,** the supra-occipital, the superior median bone in the posterior part of the cranium in fishes.—**Os palatinum,** the palatine, the anterior bone of the palatoquadrate arch in fishes. It often bears teeth.—**Os parietale,** the parietal, one of a pair of bones just posterior to the frontals in fishes.—**Os pharyngeum superius,** the superior pharyngeal, a superior bone of the gill-arches of fishes, usually bearing teeth.—**Os pterygoideum,** usually the pterygoid; sometimes the meso-pterygoid, a bone in fishes just behind the eyeball.—**Os quadratum.** (*b*) The quadrate, the bone in teleost fishes to which the lower jaw is hinged.—**Ossa carpi,** the coracoid elements (hypocoracoid and hypercoracoid), the bones in fishes to which the actinosts are attached.—**Ossa infraorbitalia,** the suborbitals, a chain of small dermal bones extending around the lower part of the eye in fishes.—**Ossa interspinalia,** the interneural spines, the spines which support the dorsal fin of fishes and extend between the neural spines.—**Ossa jugalia,** the suborbitals, the chain of small dermal bones extending below the eye in fishes.—**Ossa metacarpi,** the actinosts, the small bones which support the pectoral fin in fishes.—**Ossa orbitalia,** the suborbitals, the ring of small bones which borders the eye below, in fishes.—**Os sphenoideum anterius,** the basisphenoid, a small bone anterior to the inner wings of the proötic which roof the myodome.—**Os sphenoideum basilare,** the parasphenoid, a long median bone in the roof of the mouth in fishes. It lies between the vomer and the basioccipital.—**Os styloideum,** the interhyal, the uppermost of the hyoid bones in fishes. It attaches the hyoid arch to the hyomandibular.—**Os Sylvii.** Same as *os orbiculare.*—**Os symplecticum,** the symplectic, a bone situated between the hyomandibular and the quadrate in fishes.—**Os temporale,** the hyomandibular, an important bone in the skull of fishes. It suspends most of the lateral bones of the head from the cranium.—**Os terminale,** the nasal, one of a pair of anterior bones in the cranium of fishes. It is usually attached to the frontal and extends over the olfactory organ.—**Os thyreoideum,** in fishes, the hypobranchials of the first and second arches, lower bones of the gill-arches, above and at each side of the basibranchials.—**Os transversum,** the mesopterygoid, a bone behind the eyeball of fishes, attached to the pterygoid and palatine.—**Os trigonum,** a small bone at the posterior part of the astragalus, sometimes separate and sometimes attached to that bone.—**Os tympani,** the metapterygoid, a bone in fishes behind the mesopterygoid.—**Os uncinatum,** in *ornith.*, a small bone attached to the free or ventral end of the lachrymal, and in its typical form somewhat hook-shaped. It is found in gulls and some other birds.—**Os xiphoides,** the sternum.—**Os zygomaticum,** the suborbitals, the chain of small bones below the eye in fishes. It usually bears a sensory tube.

O. S. An abbreviation (*d*) of the Latin *oculus sinister*, left eye; (*e*) of *old school*; (*f*) of *old side*; (*g*) of *Outside Sentinel.*

O. S. A. An abbreviation of the Latin *Ordo Sancti Augustini*, Order of St. Augustine.

Osage group. See ★*group*¹.

osamine (ōs-am′in), *n.* [*-ose* + *amine.*] An amino compound formed by the action of alcoholic ammonia on the hexoses.

osar (ō′sär), *n. pl.* [Sw. *åsar*, pl. of *ås*: see ★*ås* and *os*³.] **1.** Same as *asar*, pl. of *ås*, *os*³. —**2.** [*sing.*] Same as *os*³. A ridge of glacial debris of considerable longitudinal extent, showing rough water-stratification: same as *eskar*. Also called *serpent-kame.*

> Eskers or *osars* is the name applied to certain well-defined ridges of more or less completely-stratified drift.
> *R. D. Salisbury*, Geol. Surv. of New Jersey, 1892, p. 41.

osar-plain (ō′sär-plān), *n.* In *geol.*, the expanded distal end of an eskar; a glacial sand-plain.

osazone (ōs-az′ōn), *n.* [*-ose* + *azo-* + *-one.*] A yellow crystalline compound formed by the action of phenyl-hydrazine on a sugar in the presence of acetic acid. Glucose yields phenylglucosazone, $C_{18}H_{22}N_4O_4$, usually called *glucosazone.* The other hexoses, except inosite, which is not a true sugar, yield osazone of the same composition but differing in molecular structure. Some of the saccharobioses, as maltose and lactose, yield osazones of the composition $C_{24}H_{32}N_4O_9$; others, such as cane-sugar, are first broken down into hexoses, which then form the osazones, $C_{18}H_{24}N_4O_4$. Osazones of the same composition but unlike in molecular structure differ in their melting-points, solubility, etc., and are thus of importance in identifying the sugars.

O. S. B. An abbreviation of the Latin *Ordo Sancti Benedicti*, Order of St. Benedict.

Oscarella (os-kạ-rel′ạ̈), *n.* [NL.] The typical genus of the family *Oscarellidæ. Vosmaer*, 1881.

Oscarella lobularis. (After Schulze.)
Two thirds natural size.
(From Lankester's "Zoology.")

Oscarellidæ (os-kạ-rel′i-dē), *n. pl.* [NL. *Oscarella* + *-idæ.*] A family of myxospongidans having spherical ciliated chambers. It contains the single genus *Oscarella*, found in the Mediterranean near the surface.

oscheoplasty (os′kẹ-ọ-plas-ti), *n.* [Gr. ὄσχεον, scrotum, + πλαστός, formed, + *-y*³.] Restoration of defects in the scrotum by a surgical operation.

oschophoria (os-kọ-fō′ri-ạ̈), *n. pl.* [NL., < Gr. ὀσχοφόρια, < ὀσχοφόρος, bearing vine-branches, < ὄσχος, a branch, esp. of the vine, + -φορος, < φέρειν, bear.] A festival of Dionysus at Athens in which a procession of boys dressed as women marched from the temple of Dionysus to that of Athene Skiras.

oscillant (os′i-lạnt), *a.* [L. *oscillans*, ppr. of *oscillare*, swing. See *oscillate.*] Swinging backward and forward; oscillating.

Oscillating current, separator, series. See ★*current*¹, ★*separator*, ★*series.*

oscillation, *n.* **5.** In *math.*, the difference, for values of x in the interval $(x-h, x+h)$, between the lowest value that a real function fx of a real variable x cannot exceed and the highest value below which fx cannot fall.—**Hertzian oscillation,** an electromagnetic wave of the kind discovered by Hertz; a Hertzian wave (see ★*wave*¹).—**Needle of oscillation.** See ★*needle.*—**Oscillation galvanometer, transformer.** See ★*galvanometer*, ★*transformer.*—**Oscillation of a function** in the number interval (a, b), the difference between the superior and inferior limits of the values of $f(x)$ in (a, b).—**Retinal oscillation,** in *exper. psychol.*, a term introduced by Charpentier in 1891 for the following and similar phenomena.

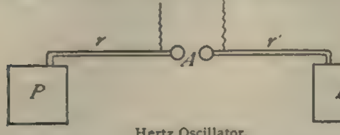
> A white sector of 90° is pasted on a black disk of 25-30 centimeters diameter, and the disk is rotated once per second. If the middle of the disk is fixated, the retreating edge of the black is always followed by a narrow shadowy sector in the white. The retina on first being stimulated with white apparently reacts in the direction of black, then swings again toward white, and so on. *E. C. Sanford*, Exper. Psychol., p. 168.

oscillator, *n.* **4.** A motor in which the piston oscillates in the cylinder over a minute range at high speed. In combination with a dynamo it is used to obtain currents of high frequency. —**5.** In *wireless teleg.*, that part of the transmitting apparatus which produces the electric waves or oscillations. See *wireless* ★*telegraphy.*

> The function of the receiving aerial is to bring about a union between these two operations above and below ground. When the electric waves fall upon it, they give rise to electromotive force in the receiving aerial, and therefore produce oscillations in it which, in fact, are electric currents flowing into and out of the receiving

aerial. We may say that the transmitting aerial, the receiving aerial and the earth form one gigantic Hertz *oscillator*. *Pop. Sci. Mo.*, Sept., 1903, p. 442.

Hertz oscillator, a device used by Heinrich Hertz in his study of electric waves for producing electric oscillations of uniform and definite frequency. One of the numerous forms consists of two metal plates, P and P′, two metallic rods, r and r′, terminating in polished balls also of metal, and a spark-gap, A, of one centimeter or less between the balls. The rods are connected to the terminals of an induction-coil.—**Linear oscillator**, in *elect.*, a Hertz oscillator in which linear conductors, as rods or wires, are substituted for the plates usually employed.

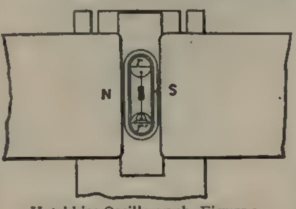


Hertz Oscillator.

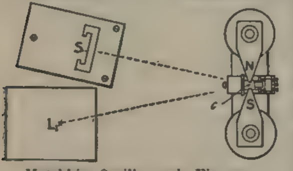
Oscillatory discharge, electric discharge, as of a condenser, in which, owing to the character of the circuit, a number of periodic and rapidly diminishing reversals of change occur before equilibrium is established. Lightning frequently takes the form of an oscillatory discharge, and the discharge of an induction-coil or static machine may readily be rendered oscillatory by adjusting the capacity, inductance, and resistance of the circuit.

oscillogram (os′i-lọ̄-gram), *n.* [Irreg. < L. *oscillare*, swing, + Gr. *γράμμα*, a writing.] The graphic trace or record made by an oscillograph.

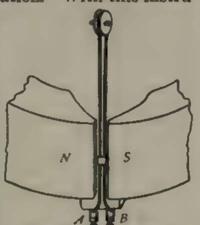
oscillograph (os′i-lō-gräf), *n.* [Irreg. < L. *oscillare*, swing, + Gr. *γράφειν*, write.] 1. An instrument for recording alternating-current wave-forms and for the study of electrical oscillations. The oscillograph in its usual form is a development of the D'Arsonval galvanometer in which the moment of inertia of the moving parts is reduced to a minimum and the period of the instrument is sufficiently shortened to enable the moving parts to follow the rapid oscillations that are to be recorded. In 1892 Moler constructed a curve-writing voltmeter for recording the changes in potential in the coils of dynamo-machines which, although lacking in sensitiveness and incapable of giving very rapid fluctuations, must be regarded as the forerunner of the oscillograph. It consisted of a needle of soft iron mounted between the poles of a permanent magnet and carrying a very light pointer of aluminium by means of which the movement of the needle was recorded upon a revolving metallic drum with smoked surface. The frequency was something over 100 complete vibrations per second. In the following year Blondel, to whom the name *oscillograph* is due, described various forms of the instrument, of which the most successful consisted of a soft iron needle and mirror pivoted between the poles of an electromagnet and vibrating with a frequency of 1,000 oscillations per second. In 1894–95, by greatly reducing the size of the needle and mirror and mounting the same by means of a quartz fiber between the poles of an electromagnet, Hotchkiss succeeded in producing a galvanometer having a frequency of nearly 10,000 single vibrations per second. The essential features of this instrument are shown in Fig. 1 and Fig. 2. The needle is mounted between the pole-pieces N and S, Fig. 1, by means of a fiber stretched between the supports r and r′, about which is also wound a coil of wire within which the oscillations to be studied are set up. Rays from an arc-light L_1, Fig. 2, are reflected to the sensitive plate of a camera, S, so constructed that the plate can be shot through the field at right angles to the plane of vibration. With this instrument not only alternating-current curves but likewise curves showing the phenomena of the oscillatory discharge of condensers may be recorded with great fidelity. The form of oscillograph now generally employed is that devised by Duddell in 1897. It consists essentially of a flat strip of phosphor-bronze carried vertically up through the field of an electromagnet, over a roller, and down through the field parallel to itself; to these strips in the middle of the field the mirror and needle are attached. The frequency of oscillation reaches .0003 of a second. When a current is sent through the strip from A to B (Fig. 3) the portion in which the current is flowing upward moves in the opposite direction from that in which the flow is downward, and the mirror is deflected. The spot of light reflected from the mirror is thrown upon the screen for observation, or upon a moving photographic plate for permanent record.



Hotchkiss Oscillograph, Figure 1.



Hotchkiss Oscillograph, Figure 2.



Duddell Oscillograph. Figure 3.

2. An apparatus for recording graphically the motions of oscillation of any structure or element as to frequency and magnitude. The element may carry a pen or tracing-point, while a paper, borne on a fixed support, is moved before the tracer as the latter oscillates; or the principle may be reversed: used to record the effect of trains on bridges, or of moving machinery in buildings, or the effect of earth-movements on structures.

oscillometer (os-i-lom′e-tėr), *n.* [Irreg. < L. *oscillare*, swing, + Gr. *μέτρον*, measure.] A device for indicating and measuring the rolling of a ship. It consists of a motor-driven gyroscope mounted in gimbals, which maintains its absolute plane of rotation in space and, by the movement of pointers along scales attached to the frame, shows the angular departure of the vessel from the vertical. *Sci. Amer.*, July 29, 1890.

oscillophone (os′i-lọ̄-fōn), *n.* The trade-name of a microphonic receiver with resistances, used in testing telephone circuits.

oscillum (os′i-lum), *n.*; pl. *oscilla* (-lạ̈). The trade-name for a special form of spark-plug for explosion-engines.

oscine² (os′in), *n.* A crystalline alkaloid, $C_8H_{13}O_2N$, found in crude belladonine and also made from other alkaloids. It melts at 110° C. Also called *pseudatropine*, *scopoline*, and *oxytropine*.

oscinid (os′i-nid), *n.* and *a.* **I.** *n.* One of the *Oscinidæ*.

II. *a.* Having the characters of or belonging to the dipterous family *Oscinidæ*.

oscitance (os′i-tạns), *n.* Same as *oscitancy*.

osculable (os′kụ̈-lạ-bl), *a.* [L. *osculare*, kiss, + *-ble*.] That may be kissed. [Rare.]

Oscular muscle. Same as *oscularis*.—**Oscular sphincter.** See ★*sphincter*.

osculate, *v. i.*—**Osculating surface.** See ★*surface*.

Osculatory parabola. See ★*parabola*².

-ose. [1. L. *-ōsus*, fem. *-ōsa*, neut. *-osum*, earlier *-on-sus*, a suffix used to form, from nouns, adjectives noting fullness or supply, and usually equivalent to Eng. adjectives in *-ful* or *-y*¹, as *copiosus*, plentiful; *odiosus*, hateful; *nebulosus*, cloudy; *nivosus*, snowy; *pluviosus*, rainy; *vitiosus*, faulty; etc. In most cases this Latin suffix is represented by the form *-ous*, derived through Old French and Middle English, as in *copious*, *odious*, *nebulous*, *pluvious*, *religious*, *vicious*, etc. See *-ous*. 2. In its application to chemical terms *-ose* first appeared in the original form of *glucose*, namely, F. *glucose*. This word is on its face composed of Gr. *γλυκ(ύς)*, sweet, + *-ose*; but in the original report of the committee of the French 'Académie des Sciences' (1838), in which the word was proposed, it is explained by a vague and inexact reference to Gr. *γλεῦκος*, must, sweet wine, apparently implying that the committee meant that *-ose* should represent the Greek neuter noun ending in *-ος*. But this is rather substitution than representation. The form *-ose* in modern French, as in modern English, in effect represents the Latin *-osus* (see def. 1), and in *glucose* and the numerous chemical terms formed on the same model, it is commonly so taken.] 1. A suffix occurring in many English adjectives, formed, most of them in recent scientific use, from Latin or Middle Latin adjectives in *-osus*, as *bellicose*, *globose*, *jocose*, *morose*, *otiose*, *pilose*, *verbose*, etc. In the seventeenth century many adjectives before that date and since spelled with *-ous* were often spelled with *-ose*, probably not always with a different pronunciation, as *ambitiose*, *gloriose*, *pompose*, etc. Abstract nouns in *-ity* from adjectives in *-ose* or *-ous* take the form *-osity*, as *globosity*, *jocosity*, *pomposity*, etc.—2. In *chem.*: (*a*) A suffix designating members of the group of sugars, as *glucose*, *lactose*, *maltose*, etc. (*b*) A suffix showing that the substance is a primary decomposition-product of a proteid, as *albumose*, etc.

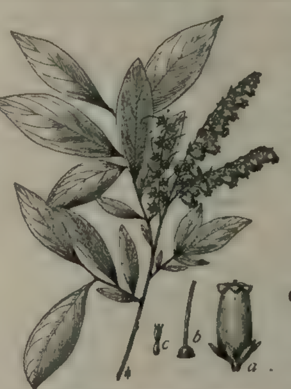
O. S. F. An abbreviation of the Latin *Ordo Sancti Francisci*, Order of St. Francis.

oshac (ō′shak), *n.* [Persian *ushak*.] A plant of the parsley family, *Dorema Ammoniacum*, which yields gum ammoniac. See *ammoniac* and *Dorema*.

Osiandrian, *n.* **II.** *a.* Of or pertaining to the doctrine of Andreas Osiander, a German theologian of the Reformation and a disciple of Luther. He agreed fundamentally with his master, but propounded a mystical doctrine of justification by faith, claiming that it is not an imputation but an infusion of the divine righteousness.

Osiandrist (ō-si-an′drist), *n.* and *a.* Same as ★*Osiandrian*.

osier, *n.*—**Green osier.** (*a*) See *osier*. (*b*) Either the round-leaved dogwood, *Cornus circinata*, or the alternate-leaved dogwood, *C. alternifolia*, the twigs of which are green.—**Purple osier**, the purple willow, *Salix purpurea*.—**White osier.** (*a*) See *osier*. (*b*) *Leucothoë racemosa*, an ornamental shrub of the eastern United States with racemes of waxy white flowers borne on the under side of recurved racemes.



White Osier (*Leucothoë racemosa*).
a, flower; *b*, pistil; *c*, stamen.

osiery, *n.* 2. Basketwork. *Haddon*, Evolution in Art, p. 104.

-osis. [NL. L. *-ōsis*, < Gr. *-ωσις* (**-ωτ-γι-ς*), abstract termination (from secondary verbs in *-ό-ω*, inf. *-οῦν*), as in *μόρφωσις*, forming; *μεταμόρφωσις*, transforming, metamorphosis; *βίωσις*, way of life, etc.; *ὄρθωσις*, straightening; *στένωσις*, narrowing.] A suffix of Greek origin in words signifying the act of making something so-and-so (equivalent to *-ing*, *-ation*, etc.), process, state, etc., as in *anastomosis*, *orthosis*, *sphrigosis*. In medical terms it often implies an abnormal or diseased condition, as in *chlorosis*, *melanosis*, *necrosis*, *neurosis*, *stenosis*, *trichinosis*, *tuberculosis*, etc.

O. Sl. An abbreviation of *Old Slavonic*.

osmatic (os-mat′ik), *a.* [Irreg. < Gr. *ὀσμή*, smell, + *-atic*².] Relating to or possessing the sense of smell.

> The related doctrines that the olfactory organs are large in *osmatic*, small or absent in anosmatic animals.
> *Amer. Anthropologist*, Oct.-Dec., 1903, p. 638.

osmatism (os′mạ-tizm), *n.* [*osmat*(*ic*) + *-ism*.] A well-developed sense of smell. *Trans. Linnean Soc. London*, Zool., Feb., 1903, p. 369.

Osmerus (os-mē′rus), *n.* [NL. (Artedi), < Gr. *ὀσμηρός*, odorous, said to be in allusion to the meaning 'smell' imagined to exist in the E. *smelt*, Dan. *smelt*, etc. See *smelt*².] A genus of fishes (smelts) of the family *Argentinidæ*, found on the northern coasts of America and Europe.

osmesis (os-mē′sis), *n.* [NL., < Gr. *ὄσμησις*, a smelling, < *ὀσμᾶσθαι*, smell, *ὀσμή*, a smell.] Same as *olfaction*.

osmiamate (os′mi-ạ-māt), *n.* [*osmiam*(*ic*) + *-ate*¹.] A salt of osmiamic acid. Potassium osmiamate is produced by acting with ammonia on osmium tetroxid in the presence of potash. It forms orange-yellow crystals.

osmiamic (os-mi-am′ik), *a.* [*osmium* + *amine* + *-ic*.] Noting an acid obtained by decomposing its barium salt with dilute sulphuric acid. It forms a yellow solution in water, which if concentrated soon undergoes decomposition. Its formula is $HNOsO_3$, and it probably contains the nitroso-group.

osmiate (os′mi-āt), *n.* [*osmium* + *-ate*¹.] A salt of osmic acid: same as *osmate*.

osmite (os′mīt), *n.* [*osm*(*ium*) + *-ite*².] In *chem.*, a name formerly given to what is now known as an *osmate* or *osmiate*; a salt of osmic acid.

osmium, *n.* This, the most refractory of the metals, has, though with difficulty, been completely fused into globules by means of the electric furnace.—**Osmium tetroxid**, a substance produced by heating finely divided osmium in the air, or by oxidizing it with nitric acid or aqua regia. It forms nearly colorless, transparent crystals, more fusible than wax, readily subliming at the temperature of the hand, and, when melted, boiling at 100° C. The odor of the vapor is penetrating and violently irritant, the eyes, nostrils, and lungs being more dangerously attacked than by chlorin. A painful eruption is also produced upon the skin by this substance. It dissolves in water, but does not give rise to an acid, behaving as one of the neutral peroxids. It is used in staining histological preparations for examination with the microscope.

osmogram¹ (os′mọ̄-gram), *n.* [Gr. *ὀσμή*, smell, + *γράμμα*, a writing.] Literally, a smell-writing; hence a message conveyed by smell. [Rare.]

> If we ever fully know the higher *osmograms* of aphrodisiacs and the aura seminalis, love itself may be raised to a higher level. *G. S. Hall*, Adolescence, II. 16.

osmogram² (os′mō̤-gram), *n.* [*osmo*(*tic*) + Gr. *γραμμα*, a writing.] A graphic record of osmotic force.

osmograph (os′mō̤-gråf), *n.* [*osmo*(*tic*) + Gr. *γράφειν*, write.] An instrument which registers osmotic force or records the height of the liquid in an osmometer.

osmology¹ (os-mol′ō̤-ji), *n.* [Gr. *ὀσμή*, odor, + *-λογια*, < *λέγειν*, speak.] The study of odors and of their appreciation by the senses.

osmology² (os-mol′ō̤-ji), *n.* [Gr. *ὠσμός*, impulsion (see *osmosis*), + *-λογια*, < *λέγειν*, speak.] The study of the phenomenon of osmosis.

osmon (os′mo̤n), *n.* The trade-name of peat dried by a special process and offered for sale in the form of briquets to be used as fuel.

osmose, *n.*—**Electric osmose.** See *electrical endosmosis*, under *endosmosis*.—**Osmose process.** See ★*process*.

osmose (os′mōs), *v. i.*; pret. and pp. *osmosed*, ppr. *osmosing*. [*osmose*, *n.*] To diffuse through a septum, as in osmosis; exhibit osmosis.

osmotactic (os-mō̤-tak′tik), *a.* [*osmotaxis* (*-tact-*) + *-ic*.] Of or pertaining to the motion of organisms in relation to density or osmotic value of a liquid; exhibiting osmotaxis.

osmotaxis (os-mō̤-tak′sis), *n.* [NL., < Gr. *ὠσμός*, impulsion (see *osmosis*), + *τάξις*, disposition, arrangement.] The movement of cells or of organisms in relation to the density or osmotic value of the liquid they are in, and not in relation to its chemical nature.

Osmotic equivalent. See ★*equivalent*.—**Osmotic pressure**, the pressure which causes diffusion between the solution of a substance and its solute or between solutions differing in concentration. The existence of osmotic pressure may be demonstrated and its magnitude measured by the use of a semipermeable membrane. Such membranes have the property of permitting the solute to pass through more freely than the particles of the dissolved substance are able to do. Animal membranes, such as parchment or the skin of a bladder, were first used for experiments in osmosis, but it is also possible to prepare semipermeable membranes artificially by precipitating certain substances, such as gelatinous copper ferrocyanide, within interstices of a porous substance such as porcelain. If a glass tube, the bottom of which is closed by a semipermeable membrane, is partly submerged in a vessel containing water, and if a concentrated solution of copper sulphate is poured into the tube until the heights of the liquid within and without are the same, osmosis will take place. The semipermeable membrane permits the free passage of water, but impedes the passage of the dissolved particles of the salt. The osmotic pressure of the solution will cause water to enter the tube, gradually raising the level of the liquid. This process will continue until the hydrostatic pressure due to the difference of level in the tube and in the surrounding vessel balances the osmotic pressure (see Fig. 1). Osmotic pressures in certain cases reach very large values. If the solution within the tube, for example, consists of cane-sugar dissolved in water, the liquid may rise in the tube to a height of 30 feet or more. Osmotic pressures of several atmospheres have been repeatedly measured. To determine these large pressures, Pfeffer made use of the apparatus shown in Fig. 2. It consists of a porcelain cell, *c*, rendered semipermeable, into the mouth of which a glass tube, *g*, is inserted. This tube is closed above and connects through a side opening with a mercury manometer as shown. The cell and the glass tube are filled with the solution to be tested, and the cell is then submerged in a vessel of water. The compression of the air column in the top of the closed tube of the manometer affords a measure of the osmotic pressure of the solution. Osmotic pressure is proportional to the concentration of the solution and is independent of the nature of the membrane. The pressure exerted by many solutions is so great that it is impossible to observe it directly, except in the case of comparatively dilute solutions, on account of the breaking of the membrane. It is, however, possible to compute the osmotic pressure of solutions which are too great for measurement. The laws of osmotic pressure have been found to be strictly analogous to those governing gas pressures. In the case of gases the pressure, according to Boyle's law, is inversely proportional to the volume, or, what is the same thing, the pressure of a gas varies directly as the concentration of the gas, just as the osmotic pressure varies directly with the concentration of the solution. According to Charles's law for gases, the pressure of a gas increases with the temperature, the increase being $\frac{1}{273}$ per degree centigrade. Osmotic pressure likewise increases with temperature and in very nearly the same proportion. *Principle of Soret.* It has been shown by Soret that if a portion of a homogeneous solution be maintained at a temperature different from the remainder the solution increases in concentration in the cold portions, a phenomenon analogous to that which is observed in the case of gases. *Application of Avogadro's law to osmotic pressure.* According to the law of Avogadro, equal volumes of gases at a given temperature and pressure contain the same number of particles. It has been found that, in equal volumes of solutions which at the same temperature have the same osmotic pressure, the number of dissolved particles is equal, and that the osmotic pressure of a solution is exactly equal to the pressure exerted by a gas containing a number of particles per unit volume equal to the number of dissolved particles per unit volume in the solution. *Exceptions to the laws of osmotic pressure.* Just as there are exceptions to the laws of gases, which are strictly applicable only to an ideal gas, so in the case of osmotic pressure numerous and significant exceptions are found. Many solutions exhibit osmotic pressure in excess of that which can be accounted for by the number of molecules held in solution. This discrepancy is, however, explained upon the theory of electrolytic dissociation, according to which, when acids, salts, or bases are dissolved in water, their molecules are broken up into smaller particles, called ions, so that there is an increase in the number of dissolved particles and therefore a corresponding increase in the osmotic pressure.—**Osmotic theory.** See ★*osmotic pressure*.

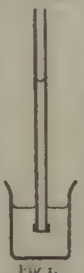


Fig 1. Osmotic Pressure.

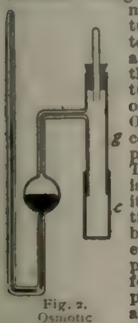

Fig. 2. Osmotic Pressure.

osmund¹, *n.*—**Royal osmund**, the royal fern, *Osmunda regalis*. See *osmund*¹ and *Osmunda*.

osphranter (os-fran′tėr), *n.* [Gr. *ὀσφραντήριος*, smelling, able to smell, < *ὀσφραίνεσθαι*, smell.] Same as *antilopine* ★*kangaroo*.

osphretic (os-fret′ik), *a.* [Gr. *ὀσφρητικός*, < *ὄσφρησις*, smelling.] Same as *olfactory*.

Osphyolax (os-fi-ō′laks), *n.* [NL., < Gr. *ὀσφύς*, the small of the back, + *ὦλαξ*, *αὖλαξ*, a furrow, a groove.] A genus of fishes of the family *Syngnathidæ*. The only known example was taken in the open Atlantic.

osseid (os′ē̤-id), *n.* [L. *osseus*, bony, + *-id*².] A term formerly used to designate albuminoids.

ossements (os′me̤nts), *n. pl.* [F. *ossements*, < ML. *ossamenta*, dead bones, < L. *os* (*oss-*), bone.] Human bones from which the flesh has been taken; bones of the dead.

> It [blood] had been poured upon these *ossements*, which were afterwards covered with earth.
> *Is. Taylor*, Anc. Chr., II. 263. *N. E. D.*

osseocartilaginous (os″ē̤-ō̤-kär″ti-laj′i-nus), *a.* [L. *osseus*, of bone, + *cartilago* (*-agin-*), cartilage, + *-ous*.] Relating to both bone and cartilage.

osseofibrous (os″ē̤-ō̤-fī′brus), *a.* [L. *osseus*, bony, + E. *fibrous*.] In *histol.*, combining the characters of fibrous connective tissue and bone, or representing a transition between these two kinds of tissue.

osseomucoid (os″ē-ō̤-mū′koid), *n.* [L. *osseus*, bony, + E. *mucoid*.] A mucoid which is peculiar to osseous tissue.

ossia (os-sē′ä), *conj.* [It. *ossia*, orig. *o sia*, 'or be it': *o* (< L. *aut*), or; *sia* (L. *sit*), 3d pers. sing. subj. of *essere*, be.] In *music*, a direction indicating an alternative form of a passage, either one that is easier or one suited to a different variety of instrument. Also *oppure* and *ovvero*.

Ossianism (osh′ia̤n-izm), *n.* [*Ossian* + *-ism*.] The literary characteristics of Ossianic poetry; partiality for the Ossianic style.

Ossianize (osh′ia̤n-īz), *v. t.*; pret. and pp. *Ossianized*, ppr. *Ossianizing*. [*Ossian* + *-ize*.] To change or translate (a poem) into the style of Macpherson's "Ossian."

ossicle, *n.*—**Dermal ossicle**, a small bone, of irregular shape, embedded in the skin. Such dermal ossicles are found in many reptiles and in the extinct ground-sloths of the genus *Grypotherium*.—**Radial ossicle**, a sesamoid on the radial side of the wrist, found in its extreme form in the large curved bone of the mole.

ossiculectomy (os″i-kṳ̄-lek′tō̤-mi), *n.* [L. *ossiculum*, ossicle, + Gr. *ἐκτομή*, excision.] Excision of the ossicles of the ear.

> The operation known as *ossiculectomy* (that is, removal of drum membrane and small bones).
> *Med. Record*, Aug. 3, 1907, p. 198.

ossiculotomy (os″i-kṳ̄-lot′ō̤-mi), *n.* [L. *ossiculum*, ossicle, + Gr. *-τομια*, < *ταμεῖν*, cut.] Section through one or more of the ossicles of the middle ear.

ossiculum, *n.*—**Ossiculum Bertini.** See *bones of Bertin*, under *bone*¹.—**Ossiculum Camperi**, a sesamoid found in the wrist of some apes, the supposed homologue of that center of ossification in man known as the *intermedium antebrachii*.—**Ossiculum Daubentoni**, a sesamoid, which occurs in the wrist of the gibbons, *Hylobates*, considered as homologous with the proximal or carpal portion of the pisiform of man.—**Ossiculum palatinum.** See the extract.

> In other forms, e.g. Guira, Crotophaga, the antorbital plate, though large, has the external lateral and inferior borders deeply excised. In such cases the orbito-nasal foramen described above is represented by a notch. Attached to the inferior border of this plate is a vestigial *ossiculum palatinum*, which, however, is generally wanting in dried skulls. *Proc. Zool. Soc., London*, 1903, p. 263.

ossicusp (os′i-kusp), *n.* [L. *os* (*oss-*), bone, + *cuspis*, a point.] A conical bony horn, such as those found in the okapi.

> It [the okapia] is closely related to *Samotherium*, especially in the presence of these suprafrontal *ossicusps* (conical bony horns). *Science*, Nov. 7, 1902, p. 752.

ossifiant (os′i-fī-a̤nt), *a.* [F. *ossifiant*, ppr. of *ossifier*, ossify, + *-ant*.] Becoming rigid as if ossifying; ossifying. [Rare.]

> Assuming, not that the human being has no skeleton, but that it is all skeleton, it rounds an *ossifiant* theory of progress on this negation of a soul; and having shown the utmost that may be made of bones, and constructed a number of interesting geometrical figures with death's-heads and humeri, successfully proves the inconvenience of the reappearance of a soul among these corpuscular structures. *Ruskin*, Unto this Last, p. 19.

ossificatory (os′i-fi-kā̤-tō-ri), *a.* [*ossific* + *-atory*.] Having a tendency to ossification; ossifying. [Rare.]

ossifier (os′i-fī-ėr), *n.* That which ossifies. *N. E. D.*

ossifluent (o-sif′lö̤-e̤nt), *a.* [L. *os* (*oss-*), bone, + *fluens* (*fluent-*), flowing.] Relating to or proceeding from disintegration of bone: said of an abscess associated with caries of bone.

ossifrage, *n.* **2.** The lammergeier, *Gypaëtus barbatus*.

> Hence its name *Ossifrage*, by which the Hebrew Peres is rightly translated in the Authorized Version of the Bible. *Newton*, Dict. of Birds, p. 503.

ossipite (os′ip-īt), *n.* [*Ossipee*, a local name connected with *Ossipees*, a tribe of Indians living at one time in New Hampshire, + *-ite*².] In *petrog.*, a variety of gabbro containing olivin, diallage, and labradorite. *Hitchcock*, 1871.

ossuary, *n.* **3.** A bone-cave, or deposit formed largely of bones, belonging to late geological times. *N. E. D.*

ostalgia (os-tal′jiä̤), *n.* [NL., < Gr. *ὀστέον*, bone, + *ἄλγος*, pain.] Pain in a bone.

ostarthritis (ost-är-thrī′tis), *n.* Same as ★*osteoarthritis*.

osteal, *a.* **2.** Relating to bony tissue.

osteamœba (os″tē̤-a̤-mē′bä̤), *n.*; pl. *osteamœbæ* (-bē). [NL., < Gr. *ὀστέον*, bone, + *ἀμοιβή*, exchange (see *amœba*).] A name applied to a bone-cell or bone-corpuscle. Compare ★*myamœba*, *neuramœba*, etc. *Coues*.

osteite (os′tē̤-īt), *n.* [Gr. *ὀστέον*, bone, + *-ite*².] See the extract.

> I have found it convenient to add two new terms to the general terminology of the skeleton. An independent cartilaginous element or centre of chondrification, is called a chondrite, an independent bony element or centre of ossification an *osteite*, both words being formed on the model of the well-known entomological term "sclerite." *Phil. Trans. Roy. Soc. London*, ser. B., 1891, p. 43.

osteitis, *n.*—**Condensing osteitis**, chronic inflammation of bone resulting in a deposit of new substance encroaching upon the Haversian spaces and the medullary cavity.—**Rarefying osteitis.** See *rarefy*.—**Vascular osteitis**, a form of chronic inflammation of bone, resembling rarefying osteitis, in which new blood-vessels are formed and occupy the spaces resulting from the loss of osseous substance.

osteoaneurism (os″tē̤-ō̤-a̤n′ṳ̄-rizm), *n.* [Gr. *ὀστέον*, bone, + E. *aneurism*.] Enlargement of a bone due to the growth of an aneurism in its medullary cavity.

osteoarthritic (os″tē̤-ō̤-är-thrit′ik), *a.* Relating to inflammation of a joint and of the bones entering into its formation.

> Prince discusses the *osteo-arthritic* changes which he believes are identical with those found in certain types of rheumatoid arthritis or osteo-arthritis.
> *Phil. Med. Jour.*, Jan. 31, 1903, p. 205.

osteoarthritis (os″tē̤-ō̤-är-thrī′tis), *n.* [Gr. *ὀστέον*, bone, + *ἀρθρῖτις*, inflammation of the joints.] Inflammation of a joint in which the bones are involved as well as the soft tissues: sometimes employed as synonymous with *arthritis deformans*. *Buck*, Med. Handbook, I. 544.

osteoarthropathic (os″tē̤-ō̤-är″thrō̤-path′ik), *a.* Of or pertaining to osteoarthropathy. *Med. Record*, June 27, 1903, p. 1054.

osteoarthropathy (os″tē̤-ō̤-är-throp′a̤-thi), *n.* [Gr. *ὀστέον*, bone, + *ἄρθρον*, joint, + *πάθος*, disease.] A disease of a joint in which the bones as well as the soft parts are affected. *Buck*, Med. Handbook, I. 96.—**Hypertrophic pulmonary osteoarthropathy**, an enlargement of various joints, swelling of the tips of the fingers, curvature of the nails, etc., associated with chronic pulmonary disease.

osteoarthrotomy (os″tē̤-ō̤-är-throt′ō̤-mi), *n.* [Gr. *ὀστέον*, bone, + *ἄρθρον*, joint, + *-τομια*, < *ταμεῖν*, cut.] Division through the articular end of a bone within the capsule of the joint.

osteocachectic (os″tē̤-ō̤-ka-kek′tik), *a.* Pertaining to or affected with osteocachexia.

osteocachexia (os″tē̤-ō̤-ka-kek′si-ä̤), *n.* [Gr. *ὀστέον*, bone, + NL. *cachexia*.] **1.** Cachexia resulting from long continued disease of the bones or joints.—**2.** Chronic disease affecting the structure of the bony tissues.

osteocartilaginous (osʺtẹ̄-ọ̄-kär-ti-laj′i-nus), *a.* [Gr. *ὀστέον*, bone, + E. *cartilaginous.*] Relating to both bone and cartilage.

osteochondrophyte (osʺtẹ̄-ọ̄-kon′drọ̄-fīt), *n.* [Gr. *ὀστέον*, bone, + *χόνδρος*, cartilage, + *φυτόν*, a growth.] Same as *osteochondroma.*

osteochondrosarcoma (osʺtẹ̄-ọ̄-konʺdrọ̄-sär-kō′mä̤), *n.*; pl. *osteochondrosarcomata* (-ma̤-tä̤). [NL., < Gr. *ὀστέον*, bone, + *χόνδρος*, cartilage, + *σάρκωμα*, sarcoma.] A tumor formed of sarcomatous masses inclosed in a framework of bone and cartilage. *Buck*, Med. Handbook, II. 123.

osteoderm (os′tẹ̄-ọ̄-dėrm), *n.* [Gr. *ὀστέον*, bone, + *δέρμα*, skin.] A bone or ossicle developed in the skin of an animal. Typical examples are the bony plates of crocodiles and the ossicles of the great extinct sloth, the *Grypotherium.*

> Exquisite examples of true dermal bones are those ossifications "within the skin" which in Amphibia and Reptiles are now generally called *osteoderms.* They occur also, among Mammalia, in the Armadillos, but in no other group of this class, unless it were in the Cetacea, where Kuckenthal has found traces of a dermal armour.
> *Proc. Zool. Soc. London*, 1902, p. 208.

osteodermal (osʺtẹ̄-ọ̄-dėr′ma̤l), *a.* [*osteoderm* + *-al*¹.] Relating to or having the character of an osteoderm, or bone developed in the skin.

osteofibroma (osʺtẹ̄-ọ̄-fī-brō′mä̤), *n.*; pl. *osteofibromata* (-ma̤-tä̤). [NL., < Gr. *ὀστέον*, bone, + NL. *fibroma.*] A tumor composed of osseous and fibrous elements. *Buck*, Med. Handbook, I. 269.

osteofibrous (osʺtẹ̄-ọ̄-fī′brus), *a.* [Gr. *ὀστέον*, bone, + E. *fibrous.*] Pertaining both to bone and to fibrous tissue.

osteogenous (os-tẹ̄-oj′e-nus), *a.* [Gr. *ὀστέον*, bone, + *-γενης*, -producing.] Same as *osteogenic.*

osteohalisteresis (osʺtẹ̄-ọ̄-ha-lisʺtẹ-rē′sis), *n.* [NL., < Gr. *ὀστέον*, bone, + *ἅλς*, salt, + *στέρησις*, deprivation.] Loss of the mineral portion of bone.

osteolysis (os-tẹ̄-ol′i-sis), *n.* [NL., < Gr. *ὀστέον*, bone, + *λύσις*, dissolution.] Softening and disintegration of bone.

osteolytic (osʺtẹ̄-ọ̄-lit′ik), *a.* Pertaining to or affected with osteolysis.

osteomalacosis (osʺtẹ̄-ọ̄-malʺa̤-kō′sis), *n.* [NL., < Gr. *ὀστέον*, bone, + *μαλακός*, soft, + *-osis.*] Same as *osteomalacia.*

osteomatoid (os-tẹ̄-om′a̤-toid), *a.* [*osteoma*(*t*-) + *-oid.*] Resembling a bone tumor.

osteoncus (os-tẹ̄-ong′kus), *n.*; pl. *osteonci* (-on′sī). [Gr. *ὀστέον*, bone, + *ὄγκος*, mass (tumor).] A bone tumor.

osteonecrotic (osʺtẹ̄-ọ̄-ne-krot′ik), *a.* [*osteonecrosis* (*-ot-*) + *-ic.*] Pertaining to or affected with necrosis of bone tissue.

osteopath (os′tẹ̄-ọ̄-path), *n.* [A back-formation from *osteopathy.*] A believer in the treatment of disease by osteopathy; specifically, one who professes to cure disease by that method.

> The exclusion of *osteopaths* from the ranks of medical practitioners is eminently just, until they meet in their schools the four-year educational requirements for other practitioners. *Detroit Med. Jour.*, Feb., 1903, p. 725.

osteopathic (osʺtẹ̄-ọ̄-path′ik), *a.* [*osteopath-y* + *-ic.*] Of or pertaining to osteopathy; practising osteopathy.

osteopathically (osʺtẹ̄-ọ̄-path′i-ka̤l-i), *adv.* According to the system of osteopathy; by means of osteopathy.

osteopathist (os-tẹ̄-op′a̤-thist), *n.* [*osteopath*(*y*) + *-ist.*] Same as ★*osteopath.*

osteopathy (os-tẹ̄-op′a̤-thi), *n.* [Gr. *ὀστέον*, bone, + *πάθος*, disease.] 1. A theory of disease and a method of cure, advocated by Dr. A. T. Still, resting upon the supposition that most diseases are traceable to deformation of some part of the skeleton (often due to accident) which, by mechanical pressure on the adjacent nerves and vessels, interferes with their action and the circulation of the blood. As a remedy a form of manipulation is used. —2. Any disease of the bones.

osteoperiosteal (osʺtẹ̄-ọ̄-per-i-os′tẹ̄-a̤l), *a.* [Gr. *ὀστέον*, bone, + NL. *periosteum* + *-al*¹.] Relating to bone and its periosteal covering.

osteophage (os′tẹ̄-ọ̄-fāj), *n.* [G. *ὀστέον*, bone, + *-φαγος*, < *φαγεῖν*, eat.] Same as *myeloplax.*

osteophagus (os-tẹ̄-of′a̤-gus), *n.*; pl. *osteophagi* (-jī). [NL., 'bone-eating,' < Gr. *ὀστέον*, bone, + *-φαγος*, < *φαγεῖν*, eat. Compare *sarcophagus*, 'flesh-eating.'] A box or coffin in which to bury bones. [Rare.]

> Among the boxes of bones found in the caves of the Mount of Olives . . . brought from elsewhere, for interment near the expected site of the Last Judgment . . . one *osteophagus* bears the name of 'Judah' in Hebrew, with a square cross marked below.
> *Edinburgh Rev.*, Jan., 1895, p. 210.

osteophone (os′tẹ̄-ọ̄-fōn), *n.* [Gr. *ὀστέον*, bone, + *φωνή*, sound.] Same as *audiphone.*

osteophyma (osʺtẹ̄-ọ̄-fī′mä̤), *n.*; pl. *osteophymata* (-ma̤-tä̤). [NL., < Gr. *ὀστέον*, bone, + *φῦμα*, growth.] A bone tumor.

osteoporotic (osʺtẹ̄-ọ̄-pọ̄-rot′ik), *a.* Of or pertaining to osteoporosis. *Buck*, Med. Handbook, I. 610.

osteoporous (os-tẹ̄-op′ọ̄-rus), *a.* [Gr. *ὀστέον*, bone, + *πόρος*, pore, + *-ic.*] Same as ★*osteoporotic.* *Buck*, Med. Handbook, II. 121.

Osteopulmonary arthropathy. See ★*arthropathy.*

osteoscopy (os-tẹ̄-os′kọ̄-pi), *n.* [Gr. *ὀστέον*, bone, + *-σκοπια*, < *σκοπεῖν*, view.] The examination and scientific comparison of bones, particularly of the bones of the extremities. *Rep. Brit. Ass'n Advancement of Sci.*, 1900, p. 904.

osteotome, *n.* 2. A form of chisel used to divide the bone in the operation of osteotomy for the correction of deformity.

osteotomoclasis (osʺtẹ̄-ọ̄-tọ̄-mok′la̤-sis), *n.* [NL., < Gr. *ὀστέον*, bone, + *τόμος*, section, + *κλάσις*, breaking.] An operation for the correction of abnormal curvatures in a long bone. It consists in division of part of the bone with an osteotome and forcible fracture of the remainder.

osteotomy, *n.*—**Cuneiform osteotomy**, the excision of a wedge-shaped piece of bone.—**Linear osteotomy**, longitudinal division of a bone.

osthexia (os-thek′si-ä̤), *n.* [NL., irreg. < Gr. *ὀστέον*, bone, + *ἕξις*, condition.] A tendency to abnormal ossification.

osthexy (os′thek-si), *n.* Same as ★*osthexia.*

ostial (os′ti-a̤l), *a.* [L. *ostium* + *-al*¹.] Of or pertaining to an ostium.

ostiate (os′ti-āt), *a.* [NL. **ostiatus*, < L. *ostium*, a door.] Provided with ostia. The heart of an arthropod or annelid, which communicates with the surrounding blood-spaces through lateral apertures or ostia, is ostiate.

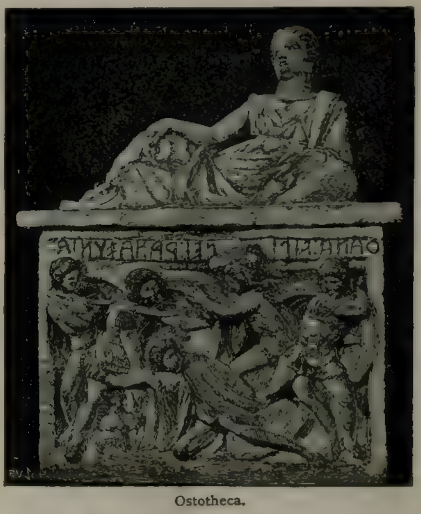
> The parapodial jaws and the *ostiate* heart cannot be supposed to have been both developed independently in each group of arthropods, or in any two of them.
> *E. R. Lankester*, in Nat. Sci., April, 1897, p. 266.

ostiole, *n.* (*b*) In *zoöl.*: (2) One of the small inhalant pores or orifices of sponges.

ostium, *n.* (*b*) In *zoöl.*: (2) In sponges, the opening of an incurrent canal.—**Ostium tubæ**, the abdominal opening of the oviduct or Fallopian tube.

Ostmannic (ōst-man′ik), *a.* Of or pertaining to the Ostmen.

ostotheca (os-tọ̄-thē′kä̤), *n.*; pl. *ostothecæ* (-sē). [Gr. *ὀστοθήκη*, < *ὀστέον*, bone, + *θήκη*, receptacle.] In *Gr. antiq.*, a vase or other receptacle for bones; an ossuary.



Ostotheca.

> A good many of these *ostothecæ* remain intact.
> *W. R. Paton*, in Jour. Hellenic Studies, VIII. 69.

ostotic (os-tot′ik), *a.* [*ostosis.*] Pertaining to bone produced under a greatly increased circulation of the blood, such as is formed during the growth of antlers.

> Subperiosteal *ostotic* outgrowths of the cranial bones, covered presumably with thickened skin-pads.
> *Proc. Zool. Soc. London*, 1902, p. 215.

Ostraciidæ (os-trạ̄-sī′i-dē), *n. pl.* [NL., < *Ostraci*(*on*) + *-idæ.*] A family of fishes living in tropical waters: commonly known as the *trunk-fishes.*

ostracioid (os-trā′si-oid), *a.* [*Ostraci*(*on*) + *-oid.*] Resembling or belonging to the *Ostraciidæ.*

ostracitis (os-tra̤-sī′tis), *n.* [Gr. *ὀστρακῖτις*, cadmia, fem. of *ὀστρακίτης*, earthen, < *ὄστρακον*, shell.] An old name for zinc oxid occasionally met with as an incrustation in the cooler parts of smelting-furnaces.

ostracizable (os′trạ̄-sīz-a̤-bl), *a.* [*ostraciz*(*e*) + *-able.*] That can be ostracized.

ostracizer (os′trạ̄-sī-zėr), *n.* One who ostracizes, exiles, banishes, or excludes from favor.

ostracod (os′tra̤-kod), *n.* Same as *ostracode.*

ostracodal (os-tra̤-kō′da̤l), *a.* [NL. *Ostracod*(*a*) + *-al*¹.] Pertaining to or having the characteristics of the *Ostracoda.*

Ostracodermi, *n. pl.* 2. Same as ★*Ostracophori*, but in that sense preoccupied.

ostracoid (os′tra̤-koid), *a.* and *n.* [Gr. **ὀστρακοειδής*, otherwise *ὀστρακώδης*, like an earthen pot or shard, < *ὄστρακον*, an earthen pot, a shard, + *εἶδος*, form.] I. *a.* Having the characters of or pertaining to the *Ostracoda.*

II. *n.* One of the *Entomostraca* allied to the *Ostracoda.*

ostracological (osʺtra̤-kọ̄-loj′i-ka̤l), *a.* Of or pertaining to ostracology or conchology.

ostracology (os-tra̤-kol′ọ̄-ji), *n.* [Gr. *ὄστρακον*, a shell, + *-λογια*, < *λέγειν*, speak.] Conchology.

ostracon (os′tra̤-kon), *n.*; pl. *ostraca* (-kä̤). [Gr. *ὄστρακον*, an earthen vessel, a potsherd, etc. See *ostracize.*] In *Gr. antiq.*, a potsherd or tile; a square plaque of terra-cotta on which an inscription is written.

Ostracophori (os-tra̤-kof′ọ̄-rī), *n. pl.* [NL., < Gr. *ὄστρακον*, a shell, + *φέρειν*, bear.] A division of fishes, commonly regarded as a subclass, containing extinct species whose remains are found from the Silurian to the Lower Carboniferous. Jaws, a segmented backbone, and limb-arches are wanting, and the head and front part of the body are protected by bony plates. The term is in common use, though antedated by *Aspidoganoidei.* *Gill*, 1876.

ostracothere (os′tra̤-kọ̄-thēr), *n.* [NL. *Ostracotherea*, < Gr. *ὄστρακον*, shell, + *θηρίον*, beast.] An ostrocode crustacean of the genus *Ostracotheres.*

ostreal (os′trẹ̄-a̤l), *a.* [L. *ostre*(*a*), oyster, + *-al*¹.] Of or pertaining to oysters. [Rare.]

ostrean (os′trẹ̄-a̤n), *a.* Ostreal; ostracean.

ostreger † (os′tre-jėr), *n.* [Also *ostringer*, etc.] Same as *austringer.*

> Eustace Saxby, the falconer (or *ostreger*, as he preferred to be styled), was as gallant-looking as the hardy birds on his fist. *W. H. Ainsworth*, Ovingdean Grange, p. 63.

ostreicultural (osʺtrẹ̄-i-kul′t̬ṳ̄r-a̤l), *a.* Of or pertaining to ostreiculture.

ostreoid (os′trẹ̄-oid), *a.* [L. *ostrea*, oyster, + *-oid.*] Like an oyster.

ostreophage (os′trẹ̄-ọ̄-fāj), *n.* [Gr. *ὄστρεον*, oyster, + *-φαγος*, < *φαγεῖν*, eat.] Same as *ostreophagist.*

ostreophagous (os-trẹ̄-of′a̤-gus), *a.* [*ostreophag*(*e*) + *-ous.*] Feeding on or eating oysters.

ostrich, *n.* Four species of ostriches are now recognized, the name *Struthis camelus* being restricted to the northern species that ranges into Arabia. *S. molybdophanes* is from Somaliland, and *S. meridionalis* or *masaicus* from Central Africa. The southern species, *S. australis*, is the one that has been partially domesticated and is kept in ostrich-farms for the sake of its feathers. The eggs of these species differ quite as much as do the birds themselves, that of *S. camelus* being quite smooth while the others are more or less deeply pitted.

Ostrich-feather grass, the common reed, *Trichoon Phragmites.*

ostrichism (os′trich-izm), *n.* [*ostrich* + *-ism.*] Conduct like that of the ostrich: alluding to its habit of considering itself wholly concealed when only its head is hidden. [Rare.]

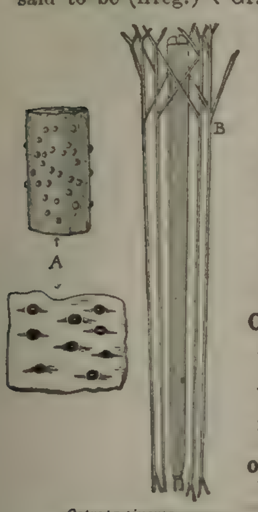
ostriculture (os′tri-kul-t̬ṳ̄r), *n.* Same as *ostreiculture.*

ostringer †, *n.* Same as *austringer.*

ostrog (os-trōg′), *n.* [Russ. *ostrogŭ.*] In Siberia, a stockaded house or village.

Ostrogothian (os-trọ̄-goth′i-a̤n), *a.* Same as *Ostrogothic.*

Ostropa (os′trọ-pä̤), *n.* [NL. (Fries, 1825), said to be (irreg.) < Gr. *ὄστρακον*, a shell, + *ὄψις*, appearance.] A genus of ascomycetous fungi having the ascocarps globose, corky, at first sunken in the host, finally erumpent and opening by a narrow longitudinal slit. The spores are filiform, hyaline, and many-celled. Only a few species are known. They occur on dead branches.



Ostropa cinerea.

A, about one-half natural size, and several fruit bodies; B, ascus, or spore-sack, with paraphyses highly magnified.

Ostropaceæ (os-trọ-pā′sẹ̄-ē), *n. pl.* [NL., < *Ostropa* + *-aceæ.*] A family of ascomycetous fungi named from the genus *Ostropa.* See ⋆*Ostropa.*

ostruthin (os-trö′thin), *n.* [NL. *Ostruth-(ium)* + *-in*^{2}.] A nearly tasteless crystalline compound, $C_{18}H_{20}O_3$, obtained by extracting the root of *Imperatoria Ostruthium* with alcohol. Its solutions in alcohol and in alkali have a strong blue fluorescence.

Ostwald's dilution law. See ⋆*dilution.*

osur (ō′sör), *a.* [Heb., < *āsar*, bind.] Among the Jews, forbidden: a rabbinical term applied to things ritual or secular. Opposed to ⋆*muter* (which see).

O. T. An abbreviation (*b*) of *on track* (railroad).

Otakia (ọ-täk′i-ä̤), *n.* [NL., named in honor of its discoverer, Professor K. *Otaki* of the Imperial College of Agriculture at Sapporo.] A genus of Japanese fishes of the family *Cyprinidæ,* found in Lake Biwa. The species is *Otakia rasbornia.*

otalli (ō-tal′yē), *n.* Same as ⋆*otate.*

Clavigero describes the Mexican tlacochtli or dart, a small lance of *otalli* or some other strong wood.
Smithsonian Rep. (*Nat. Mus.*), 1900, p. 220.

Otapiri (ō-tạ-pē′ri), *n.* In *geol.*, a subdivision of the Triassic system in New Zealand, lying at the top, above the Wairoa beds, and bearing fossils which indicate its equivalence with the Rhætic stage.

otarian (ọ-tā′ri-ạn), *a.* [NL. *Otaria* + *-an.*] Relating to, resembling, or having the characters of, the eared seals, *Otariidæ;* otarine.

Otarioidea (ọ-tā-ri-oi′dẹ̄-ä̤), *n. pl.* [NL., < *Otari(a)* + *-oidea.*] The eared seals, *Otariidæ,* raised to the rank of a superfamily: correlative with *Phocoidea* and *Rosmaroidea.* See cut at *otary.*

otate (ō-tä′tạ̈), *n.* [Mex. *otate,* < Nahuatl *otatli,* bamboo.] In Mexico, *Chusquea Nelsoni* (= *Guadua amplexifolia*), and several other giant grasses used by the ancient Mexicans for making darts and lances, and now used for making baskets and for other domestic purposes.

otatli (ō-tät′lē), *n.* Same as ⋆*otate.*

otedama (ō-tā-dä′mä), *n.* [Jap., < *o* (Chin. *o*), an exclamation or introductory syllable, + *te,* hand, + *tama,* ball, bead.] In Japan, among children, little stones or marbles (or sometimes very small bags filled with rice) used in playing a game like jackstones.

otherest (uᴛʜ′ėr-est), *a.* [*other*^{1} + *-est.*] Most different. [Rare.]

Other men are lenses through which we read our own minds. Each man seeks those of different quality from his own, and such as are good of their kind; that is, he seeks other men, and the *otherest.* The stronger the nature, the more it is reactive.
Emerson, Uses of Great Men, in Representative Men, [p. 12.

otherism (uᴛʜ′ėr-izm), *n.* [*other*^{1} + *-ism.*] Regard for the rights, welfare, and point of view of others; altruism; in evolutionary philosophy, "the struggle for the life of others," especially for the life of offspring. [Rare.]

The significant note is ethical, the development of *Other-ism* as Altruism—its immediate and inevitable outcome. *H. Drummond,* Ascent of Man, p. 17.

othertime (uᴛʜ′ėr-tīm), *adv.* At another time.

As Mr. Dorsey observes, there were no sacred rites connected with lodge-building or tent-making at the time of examination; yet the symbolism elsewhere or *othertime* connected with such ceremonials persisted.
Smithsonian Rep. (*Bur. of Ethnol.*), 1891–92, p. lv.

othertimes (uᴛʜ′ėr-tīmz), *adv.* At other times. [Obsolete or rare.]

otherwhence (uᴛʜ′ėr-hwens), *adv.* From otherwhere.

otherwiseness (uᴛʜ′ėr-wīz-nes), *n.* The state of being otherwise.

othniid (oth′ni-id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Othniidæ.*

II. *a.* Having the characters of or belonging to the family *Othniidæ.*

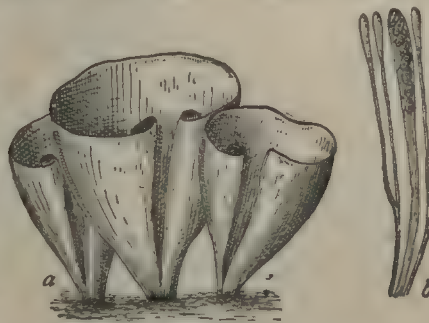
otiant (ō′shi-ạnt), *a.* [L. *otians,* ppr. of *otiari,* take one's ease. See *otiation.*] Taking one's ease; idling; indolent.

otiatria (ō-ti-at′ri-ä̤), *n.* [NL., < Gr. *οὖς* (*ὠτ-*), ear, + *ἰατρεία,* medical treatment.] Same as *otiatrics.*

otiatric (ō-ti-at′rik), *a.* [NL. *otiatr(ia)* + *-ic.*] Of or pertaining to the medical treatment of the ear.

oticodinia (ō″ti-kọ̄-din′i-ä̤), *n.* [NL., < Gr. *ὠτικός,* of the ears, + *δῖνος,* a whirling.] Dizziness associated with disease of the ear; Ménière's disease.

Otidea (ọ-tid′ẹ̄-ä̤), *n.* [NL. (Persoon, 1851), < Gr. *οὖς* (*ὠτ-*), ear.] A genus of fleshy discomycetous fungi of the family *Pezizaceæ,* having smooth, more or less irregular ascocarps, usually split on one side, and the margins convolute. The species are mostly large and brownish, and grow on the ground. *O. Onotica* is a common species in Europe and America.



Otidea Onotica.

a, ascocarps.; *b*, antheridium with paraphyses. (From Engler and Prantl's "Pflanzenfamilien.")

otiorhynchid (ō″ti-ọ-ring′kid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Otiorhynchidæ.*

II. *a.* Having the characters of or belonging to the family *Otiorhynchidæ.*

otiosely (ō′shi-ōs-li), *adv.* In an otiose or perfunctory manner; futilely.

otioseness (ō′shi-ōs-nes), *n.* Otiosity; perfunctoriness; futility.

otitic (ọ-tit′ik), *a.* [*otit(is)* + *-ic.*] Relating to or affected with otitis.—**Otitic meningitis.** See ⋆*meningitis.*

otoba-fat (ō-tō′bä̤-fat″), *n.* Same as *otoba-butter.*

otobite (ō′tọ-bīt), *n.* [NL. *Otoba* (see def.) + *-ite*^{2}.] A tasteless crystalline substance, $C_{24}H_{26}O_5$, insoluble in water, which is found in the fat of the fruits of *Myristica Otoba.*

Otocystic canal, in cephalopods and other mollusks, a narrow passage which leads from the organ of hearing to the exterior. It is closed externally in the nautilus and other species.

otodynic (ō-tọ-din′ik), *a.* [Gr. *οὖς* (*ὠτ-*), ear, + *ὀδύνη,* pain, + *-ic.*] Pertaining to or affected with otodynia or earache.

otogenic (ō-tọ-jen′ik), *a.* [Gr. *οὖς* (*ὠτ-*), ear, + *-γενης,* -producing, + *-ic.*] Of aural origin; originating in the ear.

otogenous (ọ-toj′e-nus), *a.* Same as ⋆*otogenic.*

Otol. An abbreviation of *otology, otological.*

otolaryngologic (ō″tọ-lạ̄-ring″gọ-loj′ik), *a.* Of or pertaining to otolaryngology. Also *otolaryngological.*

The Western Ophthalmologic and *Oto-Laryngologic* Association. *Detroit Med. Jour.*, Feb., 1903, p. 732.

otolaryngology (ō″tọ-lar-ing-gol′ọ-ji), *n.* [Gr. *οὖς* (*ὠτ-*), ear, + *λάρυγξ,* larynx, + *-λογια,* < *λέγειν,* speak.] Otology and laryngology regarded as a single specialty in medical practice.

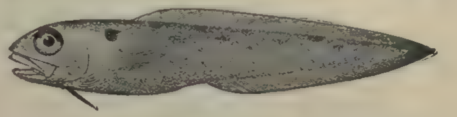
otolith, *n.* 1. (*b*) One of the calcareous concretions found in various sensory organs of lower animals, as hydromedusans, ctenophorans, holothuroideans, worms, and crustaceans, and considered to be functional in the auditory or equilibrium sense.

Otomian (ō-tō-mē′ạn), *a.* and *n.* **I.** *a.* Pertaining or belonging to the Otomis, or to the Otomi stock. See *Century Cyclopedia of Names.*

II. *n.* A member or the language of the Otomi stock.

otopathic (ō-tọ-path′ik), *a.* [*otopath-y* + *-ic.*] Relating to or suffering from otopathy or disease of the ear.

Otophidium (ō-tō-fid′i-um), *n.* [NL., < Gr. *οὖς* (*ὠτ-*), ear, + NL. *Ophidium.*] A genus of fishes of the family *Ophidiidæ,* found on the coasts of tropical America.



Otophidium omostigmum.
(From Bulletin 47, U. S. Nat. Museum.)

otopiesis (ō-tọ-pī′e-sis), *n.* [NL., < Gr. *οὖς* (*ὠτ-*), ear, + *πίεσις,* a pressing.] A sinking in of the drum membrane consequent upon a partial vacuum in the middle ear; also, pressure from any cause on the labyrinth, or internal ear, and the consequent deafness.

otorhinolaryngology (ō″tọ-rī″nọ-lar-ing-gol′ọ-ji), *n.* [Gr. *οὖς* (*ὠτ-*), ear, + *ῥίς* (*ῥιν-*), nose, + *λάρυγξ,* larynx, + *-λογια,* < *λέγειν,* speak.] The medical specialty which deals with diseases of the ear, nose, and larynx. *Nature,* Oct. 2, 1902, p. 554.

otosclerosis (ō″tọ-sklẹ̄-rō′sis), *n.* [NL., < Gr. *οὖς* (*ὠτ-*), ear, + *σκλήρωσις,* hardening.] **1.** A hardening of the tissues and ankylosis of the ossicles of the middle ear.—**2.** A growth of spongy bone substance in the capsule of the internal ear.

otoscope, *n.*—**Siegle's otoscope,** an ear-speculum in which, by varying the air-pressure, the drum membrane may be made to move while under inspection.—**Toynbee's otoscope,** an instrument resembling a stethoscope, which consists of a flexible rubber tube with an ear-piece at each end. One of these is inserted into the auditory meatus of the patient, the other into that of the examiner.

otosphenal (ō-tọ-sfē′nạl), *n.* [Gr. *οὖς* (*ὠτ-*), ear, + *σφήν,* wedge, + *-al*^{1}.] The basioccipital, a bone at the posterior base of the cranium, in fishes, to which the vertebral column is attached. *Starks,* Synonymy of the Fish Skeleton, p. 533.

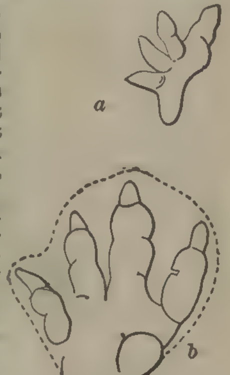
otosphenoidal (ō″tọ-sfẹ̄-noi′dạl), *a.* [Gr. *οὖς* (*ὠτ-*) ear, + E. *sphenoidal.*] Relating to the sphenoid and bony parts of the ear collectively.

Ototyphlonemertes (ō″tọ-tif″lọ-nẹ̄-mėr′tēz), *n.* [NL.] The typical and only genus of the family *Ototyphlonemertidæ.* *Diesing.*

Ototyphlonemertidæ (ō″tọ-tif-lọ-nẹ̄-mer′ti-dē), *n. pl.* [NL.] A family of nemerteans of the order *Metanemertini,* consisting of small forms, with bodies nearly cylindrical, eyes absent, and one pair (rarely two) of otocysts ventral to the brain. It contains the single genus *Ototyphlonemertes.*

Otozoum (ō-tọ-zō′um), *n.* [NL., < Gr. *οὖς* (*ὠτ-*), ear, + *ζῷον,* animal.] The generic name applied to the footprints of a gigantic extinct dinosaurian reptile that usually walked erect on its hind legs with a stride a yard long. These tracks are found in the red Newark sandstones of the Connecticut valley, twenty-four such consecutive imprints having been exposed in one of the quarries at Portland, Connecticut.

Otrantine (ọ-tran′tin), *a.* Of or pertaining to Otranto in Italy: as, the *Otrantine* dialect.



Otozoum moodii.

a, fore foot; *b*, hind foot. (× 1/18). Hitchcock.

Otrynter (ō-trin′tėr), *n.* [NL., < Gr. *ὀτρυντήρ,* one who stirs up, < *ὀτρύνειν,* stir up.] A genus of deep-water sparoid fishes found off the west coast of Florida.

otter^1 (ot′ėr), *v. i.* [*otter*^{1}, *n.*] **1.** To hunt otters with dogs.—**2.** (*a*) To fish with a float and hooks. See ⋆*otter-board.* (*b*) To fish with line and flies. See *otter*^{1}, *n.*, 4. [U. S.]

otter-board (ot′ėr-bōrd), *n.* In *fishing*, a floating board from which fishing-lines are suspended. It is sometimes rigged with tow-lines so attached to it that it is driven far out from shore at an angle against the current, as a kite rises in the air.

otterer (ot′ėr-ėr), *n.* One who fishes with an otter. See *otter*¹, *n.*, 4. *N. E. D.*

otterman (ot′ėr-man), *n.* Same as ★*otterer*. *N. E. D.*

otter-moth (ot′ėr-môth), *n.* An English hop-growers' name for the ghost-moth, *Epialus humuli*, whose larvæ feed on the roots of the hop-plant.

otter-raft (ot′ėr-ráft), *n.* In Alaska, a bed of seaweed or kelp which sea-otters frequent.

otter-sheep (ot′ėr-shēp), *n.* See *otter*¹, 5.

Otto cycle. See ★*cycle*¹, 12.

Ottomanean (ot-ọ-man′ẹ-an), *a.* [*Ottoman* + *-e-an.*] Of or pertaining to the Ottoman Turks. [Rare.]

Ottomanic (ot-ō-man′ik), *a.* and *n.* [*Ottoman* + *-ic.*] **I.** *a.* Of or pertaining to the Ottoman Turks; Ottoman.

II. *n.* One of the family or tribe of Osman or Othman; one of the Turkish subjects of the Sultan; an Osmanli.

Ottomanize (ot′ọ-man-īz), *v. t.*; pret. and pp. *Ottomanized*, ppr. *Ottomanizing*. [*Ottoman* + *-ize.*] To render Turkish or Ottoman.

> Midhat Pasha was seeking by law and method to *Ottomanize* European Turkey.
> *Eclectic Mag.*, Oct., 1895, p. 564.

Ottweiler (ot′vī-lėr), *n.* [From a G. local name.] In *geol.*, a division of the Coal-measures of North Germany, comprising the upper portion of the series, in beds from 7,000 to 10,000 feet thick, consisting of sandstone and shale with several coal-seams.

O-tube (ō′tūb), *n.* A capillary tube in the shape of an elongated letter O sealed to a capillary compression-tube. The lower portion contains mercury, above which on one side is a liquefied gas, on the other its saturated vapor and a drop of liquid. The volume of the liquid is determined from the differences in the heights of the mercury and the liquid columns. *M. W. Travers*, Exper. Study of Gases, p. 250.

O. U. An abbreviation of *Oxford University*.

O. U. A. An abbreviation of *Order of United Americans*.

ouabaic (wä-bā′ik), *a.* [*ouaba*(*in*) + *-ic.*] Noting an amorphous, gum-like acid, $C_{30}H_{48}O_{13}$, obtained by the action of caustic alkalies upon ouabain.

ouabain (wä-bä′in), *n.* [*ouabaio* (*wabaio*) + *-in*².] A glucoside which exists in the root and wood of ouabaio (wabaio), *Acokanthera ouabaio*, from which is prepared the arrow-poison of the Somalis of the east coast of Africa. The pure glucoside crystallizes in colorless transparent needles, which are extremely poisonous (twice as much so as strophanthin) when introduced directly into the circulation, though harmless when swallowed. It has been proposed for medicinal use instead of digitalin. Also *wabain*.

ouabaio (wä-bī′ō), *n.* [Somali name.] 1. Either of two shrubs or small trees of the dogbane family, *Acokanthera Ouabaio* and *A. Schimperi*, the juice of which is used, by certain African tribes, to poison arrows.—2. An arrow-poison used by the Somalis and prepared from the root and wood of various species of *Acokanthera*. It contains ouabain. Also *wabaio*.

ouachitite (wä′shi-tīt), *n.* [*Ouachita* river, Arkansas, + *-ite*².] In *petrog.*, a dark-colored aphanitic porphyry composed of a glassy ground-mass with large phenocrysts of biotite and very subordinate augite and magnetite; a fourchite rich in biotite. *Kemp*, 1890.

ouananiche (wä-nä-nish′), *n.* [Prop. **wananish*, recorded also as *winninish*: < Canadian F. *ouananiche*, from a Montagnais Indian name, said to be from *wanan*, salmon.] A common name of a subspecies of the Atlantic salmon, *Salmo salar ouananiche*, found in the Saguenay river, Canada, and neighboring waters. Being more active and vigorous, though smaller, than the salmon, it has attracted much attention from fishermen. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 264.

> My premonition proved to be correct. When that Kri-karee, invisibly attached to my leader, went floating down the stream, the *ouananiche* was surprised. It was the fourteenth of September, and he had supposed the grasshopper season was over. The unexpected temptation was too strong for him. He rose with a rush, and in an instant I was fast to the best land-locked salmon of the year.
> *H. van Dyke*, Fisherman's Luck, p. 43.

oubliette (ö-bli-et′), *v. t.*; pret. and pp. *oublietted*, ppr. *oublietting*. [*oubliette*, *n.*] To imprison in an oubliette.

> Could you keep her
> Indungeon'd from one whisper of the wind,
> Dark even from a side glance of the moon,
> And *oublietted* in the centre.
> *Tennyson*, Becket, iv. 2.

oud, *n.* See ★*'ud*.

ouf (ouf), *interj.* [Also *ouff*; = F. *ouf*; imitative of an impatient utterance.] 1. An exclamation of discomfort or impatience.—2. An imitation of a dog's bark.

ouija (wē′yä′, in American use wē′jä), *n.* [Formed as a trade-mark name, from F. *oui*, yes, + G. *ja*, yes. The name thus implies 'a thing that will answer *yes* in any language' — a good description of a well-managed planchette.] A form of planchette, consisting of a board marked with the letters of the alphabet and the ten numerals, and of the planchette proper, which (under the hand of the operator) moves over the board and touches certain letters and numerals and thus 'answers' questions.

> The next higher grade of motor automatism, involving considerable subconscious action of intelligence, is found in the various alphabet-using forms of amateur mediumship, such as table tipping, the '*Ouija*-board,' and certain other devices for making our muscles leaky and liable to escape from control.
> *Pop. Sci. Mo.*, Jan., 1904, p. 195.

oulap (ö′lap), *n.* [South African Dutch.] A copper coin; specifically, an English penny.

oulitis (ö-lī′tis), *n.* [NL., < Gr. *οὖλον*, gum, + *-itis.*] Inflammation of the gums; gingivitis.

ounce¹, *n.* 4. A gold coin of Australia struck in 1853.

ounce-stuff (ouns′stuf), *n.* In *mining*, quartz which yields about an ounce of gold per ton. [Australia.]

ouralium (ö-rā′li-um), *n.* [NL. in French style, < F. *Oural*, *Ural* (mountains in Russia).] The name of a supposed new metal announced by Guyard as occurring in native platinum from Russia. Its existence has not been confirmed.

Ouralo-Altaic (ö″ra-lō-al-tā′ik), *a.* Same as *Ural-Altaic*. See *Altaic family of languages*, under *Altaic*.

Ourouparia (ör-ọ-pā′ri-ạ̈), *n.* [NL. (Aublet, 1775), from *y-ourou-pari*, a Carib name of the type species.] A genus of dicotyledonous plants belonging to the family *Rubiaceæ*. See *Uncaria*.

-ous. 2. In *chem.*, a suffix used to denote the presence in a compound of a relatively electronegative constituent in smaller proportion than in the corresponding compound of which the name bears the suffix *-ic*. In each case the suffix is attached to the name of the relatively electropositive constituent, as *ferrous* oxid (FeO) and *ferric* oxid (Fe_2O_3), *stannous* chlorid ($SnCl_2$) and *stannic* chlorid ($SnCl_4$).

oustee (ous-tē′), *n.* One who is ousted. [Rare.]

> To turn from general to particular retrospect, we may mention the omission of "*oustee*," which we have just found in Perkins's 'Profitable Book' (1642).
> *Athenæum*, May 28, 1904, p. 284.

out, *n.* 4. In *printing*, the omission by the type-setter of a word or of lines in the copy.

outage (ou′tāj), *n.* [*out* + *-age.*] 1. In *elect.*, the failure of an arc-lamp, in a series arc-circuit, to start when current is sent into the circuit.

> The lamp hours were 54,187; percentage of lamp *outage*, 6–10; globes broken, 23.
> *Elect. World and Engin.*, April 18, 1903, p. 653.

2. A charge made by the State of Maryland for the labor of handling tobacco inspected for export.

outblaze (out-blāz′), *v.*; pret. and pp. *outblazed*, ppr. *outblazing*. **I.** *trans.* To blaze more brightly than; outshine.

II. *intrans.* To blaze out; to burst from within.

outblaze (out′blāz), *n.* A blazing out, literally or figuratively.

outblowing (out′blō″ing), *a.* Blowing out (from).

> Blowing towards and in upon the polar regions to make good the drain caused by the surface *outblowing* south-easterly winds.
> *Geog. Jour.*, XVI. 406.

outboard, *a.* 2. In *mech.*, situated on the outer side or the side farther from the main center. Thus, the outboard bearing of a fly-wheel on an engine is the bearing which is farther from the crank than the fly-wheel itself, the inboard bearing being between the fly-wheel and the crank.

out-book (out′bůk), *n.* Short for ★*out-clearing book*.

outbred (out′bred), *p. a.* Produced by out-breeding; bred outside the stock or pair of animals under consideration: contrasted with *inbred*. See ★*outbreed*.

> Before the cause of the great preponderance of the number of wild-coloured mice in the litters of pure-bred over the number of those in the litters of cross-bred albinos can be ascertained waltzing mice must be crossed with in-bred and *out-bred* pure-bred albinos and in-bred and *out-bred* cross-bred albinos.
> *Biometrika*, Feb., 1903, p. 171.

> *Out-bred* cross-bred mice were obtained by crossing black or yellow mice with albinos.
> *Biometrika*, Jan., 1904, p. 6.

outbreed (out′brēd), *v. t.* and *i.* To breed outside the limits of the family, variety, race, or tribe.

outbreeding (out′brē″ding), *n.* 1. In *biol.*, the crossing of a pure strain of organisms with members of another strain or of the same strain from another locality.

> "In-and-in breeding," "*outbreeding*," and other expressions relating to the close or distant relationship of parents have been prominent subjects among animal breeders.
> *U. S. Dept. Agri.* (Div. Veg. Physiol. and Pathol.), Bulletin 29, 1901, p. 38.

2. In *ethnol.*, the custom of intermarrying or interbreeding outside the tribe.

> Since the tribes practiced far more in-breeding than *out-breeding*, the tendency was toward forming not only verbal linguistic groups, but biological varieties.
> *Encyc. Brit.*, XXV. 372.

outburst, *n.* 2. In *mining*: (*a*) A sudden outbreak of gas or water in a mine. (*b*) The outcrop.

outcast, *n.* 5. Material ejected; specifically, in *astron.*, ejected matter which lies outside of the nucleus of the sun.

> I fear, therefore, that Miss Clerke's division of the solar *outcasts* into "several distinct envelopes" overlying the photosphere (p. 16)—reversing layer, chromosphere, corona, etc.—is somewhat too definite.
> *Astrophysical Jour.*, Sept., 1903, p. 158.

outcaste (out-kást′), *v. t.*; pret. and pp. *outcasted*, ppr. *outcasting*. To put (a person) out of his caste; cause to lose caste.

outclass (out-klás′), *v. t.* To surpass (another, especially a competitor or rival), so as to belong to a higher class.

> Lady Dainty *outclassed* her field in the steeplechase, and Mara . . . waited with her to the last jump, then went to the front and won cleverly.
> *N. Y. Com. Advertiser*, April 11, 1901.

out-clearer (out′klēr″ėr), *n.* In the bank clearing-house system of London, the bank-clerk who arranges in alphabetical order, enters in his books, and sends out to the clearing-house for settlement, the checks, etc., payable to his bank by the other banks; the out-clerk. See ★*in-clearer*.

out-clearing (out′klēr″ing), *n.* 1. The sending out to the clearing-house by a bank, for settlement, of the checks and bills of exchange payable to it by the other banks.—2. The total amount represented by these checks and bills of exchange. See ★*in-clearing*.—**Out-clearing books**, the books in which a bank's out-clearings are entered, under the names of the different banks, before being sent to the clearing-house.

out-clerk (out′klėrk), *n.* Same as ★*out-clearer*.

out-college (out′kol″ej), *a.* Not living within a college; not taking place within the bounds of a college.

> In cooperation with five county councils, a complete scheme of "*out-college*" work in agriculture has been organised. *Nature*, Oct. 23, 1902, p. 647.

outcoming (out′kum″ing), *n.* 1†. The place of issuance.—2. The act of coming out or forth.—3. A result; that which comes out as a product; emanation.

> '. . . This extended view of our Lord's preaching is no mere *outcoming* of modern thought, but was held in the early Church.' *E. White*, Life in Christ, p. 323.

outcross (out′krôs), *n.* An organism born to parents who belong to different families, varieties, races, or tribes.

> Recent results from increases and *outcrosses* lead to the belief that hybridizing is of paramount importance to supply the best stocks for the more laborious work of selection.
> *U. S. Dept. Agri.* (Div. Veg. Physiol. and Pathol.), Bulletin 29, 1901, p. 55.

out-curve (out'kėrv), *n.* In *base-ball, lawn-bowls, basket-ball,* and similar games, a curve toward the left hand made by a ball delivered by the right; the reverse of *in-curve.*

outdate (out-dāt'), *v. t.*; pret. and pp. *outdated,* ppr. *outdating.* To make out of date or obsolete: put behind the time or out of fashion.

outdraft (out'drȧft), *n.* Outward draft as of a current of air; the undertow of a wave. [Rare.]

outdweller (out'dwel″ėr), *n.* One who lives outside of a place, or in another place. *N. E. D.*

outer¹, *a.* and *n.* I. *a.*—**Outer product.** See ★*product.*

II. *n.* 2. In *elect.*, one of the outside wires of a three-wire circuit. *Jour. Brit. Inst. of Elect. Engin.*, 1899–1900, p. 538.

outfall, *n.* 4. That which is discharged from an outfall. See *outfall,* 1.

> It should be noted that the oysters used at the banquet . . . were taken, . . . from beds located in the south of England, and it is charged that over some of these beds "an *outfall* of sewage has been permitted to flow."
> *Forest and Stream*, Jan. 31, 1903, p. 92.

outfit, *n.* 4. An allowance, not exceeding a year's salary, made by the United States to an ambassador, minister plenipotentiary, or *chargé d'affaires* leaving the country to go to his foreign post.

outflame (out-flām'), *v.*; pret. and pp. *outflamed,* ppr. *outflaming.* I. *trans.* To exceed in brilliancy of flame.

II. *intrans.* To flame out; appear as flame.

outflash (out-flash'), *v.* I. *trans.* To outshine; excel in brilliancy.

II. *intrans.* To flash out.

outfling (out-fling'), *v.*; pret. and pp. *outflung,* ppr. *outflinging.* I. *trans.* To fling or wave in the air, as a banner; fling or throw out, as wine from a glass. [Rare.]

II. *intrans.* To rush away abruptly or angrily. [Rare.]

outfoot (out-fut'), *v. t.* 1. To outrun; go faster than. [Colloq.]—2. *Naut.*, to outsail: as, 'the schooner *outfooted* her rival.'

outfront (out-frunt'), *v. t.* To brave down; to outstare. *N. E. D.*

outgang (out'gang), *n.* [ME. *outgang,* AS. *ūtgang* (D. *uitgang* = G. *ausgang*), < *ūt,* out, + *gang,* going. See *gang, n.*] 1. An outgoing; the act of giving up occupancy of property.—2. An outgate; a cattle-gate. [Scotch.]

outgate, *n.* 2. The act or fact of going out; exit.

outgive (out-giv'), *v.*; pret. *outgave,* pp. *outgiven,* ppr. *outgiving.* I. *trans.* To surpass in generosity; give more than (another).

II. *intrans.* To give out; come to the last of.

outgiving (out'giv″ing), *n.* 1. The giving out of a statement; the fact of making a statement.—2. That which is given out; in the plural, disbursements; expenses as opposed to receipts.

outgush (out-gush'), *v. i.* To gush forth, as water.

outgush (out'gush), *n.* A gushing or rushing out; a gushing forth: as, a sudden *outgush* as of molten metal.

outhaul, *n.*—**Foretrysail outhaul,** the rope by which the head of the foretrysail is hauled out to the gaff-end.

outhector (out-hek'tọr), *v. t.* To intimidate by bullying; to be more hectoring than Hector himself.

outheel (out-hēl'), *v. t.* To outfoot; sail faster than; defeat in a race.

outhousing (out'hou″zing), *n.* [*outhouse* + *-ing*¹.] A number of outhouses; the outbuildings of an estate.

outing, *n.* 6. The condition of being out in the sense of being before the public, exposed to comment, etc. [Rare.]

> But the eternal healer, Time, soothed matters down wonderfully. Captain Owen Kettle's week's *outing* in the daily papers ran its course with due thrills and headlines, and then the Press forgot him, and rushed on to the next sensation.
> *Cutcliffe Hyne*, A Master of Fortune, xii.

7. The most distant part of the open visible sea; the offing.—**Outing flannel,** a soft thin cotton material, made in imitation of flannel, with a short nap.

outjockey (out-jok'i), *v. t.*; pret. and pp. *outjockied,* ppr. *outjockeying.* To outwit; circumvent by cheating; overreach.

outlaw, *n.* 3. A vicious, untamed animal: sometimes used attributively.

> The whole Western country was scoured over for the wildest and most vicious "*outlaw*" bronchos that could be found. The more sinister their reputation the more they were desired. *Wide World Mag.*, March, 1903, p. 546.

outlimb (out'lim), *n.* The terminal portion of any of the extremities of the body.

outliv, *v.* A simplified spelling of *outlive.*

outly (out'li), *adv.* [*out* + *-ly*².] 1. Thoroughly; out and out.—2. On the outward side; outwardly. *N. E. D.*

outman (out'mạn), *n.* [*out* + *man.*] One who lives or works outside of the bounds, as of a town.

> A council of thirty-two . . . who . . . took part . . . in choosing the *out-men* who were to be made burgesses.
> *Mrs. J. R. Green*, Town Life in 15th Cent., II. 185.

outmarch (out'märch), *n.* The outward march; the starting forth of a military expedition.

out-pension (out'pen″shọn), *n.* A pension granted without the obligation of living in a particular house or institution.

out-pension (out-pen'shọn), *v. t.* To grant an out-pension to. *N. E. D.*

outplace (out-plās'), *v. t.*; pret. and pp. *outplaced,* ppr. *outplacing.* In *lawn-tennis,* effectually to place (the ball) in the courts and beyond the reach of an opponent.

out-play (out'plā), *n.* In *cricket,* the play by the out side.

out-player (out'plā″ėr), *n.* In *rackets,* the one who receives the service.

outpocketing (out'pok″et-ing), *n.* In *embryol.*, eversion or pushing out of a hollow sack-like or pocket-like structure; evagination.

outpoint, *v. t.* 2. To excel in number of points, as a horse or a dog in a prize exhibition.

> In the tandem class . . . [the] black geldings Sampson and Sigsbee *outpointed* their rivals.
> *Spirit of the Times*, CXXXVI. 416.

outpublish (out-pub'lish), *v. t.* To publish (the banns of marriage) or ask in a church for the third and last time; outask. [Prov. Eng.]

outpush (out'pu̇sh), *n.* Pressure from within outward.

output, *n.* 2. In *physiol.*, the waste eliminated from the body by the lungs, skin, and kidneys, not including that from the bowels: opposed to *income,* material taken into the system.—**Output coefficient.** See ★*coefficient.*

outputter² (out'pu̇t″ėr), *n.* One who manufactures and turns out industrial products; one who produces and puts on the market.

outrange, *v. t.* 2. To have a longer range than: said of guns.—3. To pass or range beyond the borders of, literally or figuratively.

outraught (out-rât'). Archaic pp. of *outreach.*

> Beyond the matron-temple of Latona . . .
> Lies a deep hollow, from whose ragged brows
> Bushes and trees do lean all around athwart,
> And meet so nearly, that with wings *outraught,*
> And spreaded tail, a vulture could not glide
> Past them, but he must brush on every side.
> *Keats*, Endymion, i.

outray², *v. i.* 2. To throw out rays.

> *Outray* (distinct from "outray" = surpass in radiance, revived by Lord de Tabley).
> *Athenæum*, May 28, 1904, p. 684.

outreach (out'rēch), *n.* Length of reach: as, an *outreach* of four feet; the act of reaching out.

out-relief (out'rē-lēf″), *n.* Assistance given by a charitable institution to beneficiaries who live in their own homes; outdoor relief.

> Sir Walter Foster asked the President of the Local Government Board . . . whether he would take steps to improve the methods of granting medical *out-relief.*
> *Lancet*, June 25, 1904, p. 1829.

outride, *n.* 2. The district of an outrider. See ★*outrider* (*f*). [Prov. Eng.]

outrider, *n.* (*f*) A commercial traveler. [Prov. Eng.]

outrig (out-rig'), *v. t.*; pret. and pp. *outrigged,* ppr. *outrigging.* To fit or equip with outriggers.

> So soon as the outrigger came in, oarsmen realised the advantage to be gained by applying it to the gig, in a modified form. Half-*outrigged* gigs became common; they had a reduced beam, and commanded more speed; they were used for cruising purposes as well as for racing.
> *N. B. Woodgate*, Boating, p. 143.

outrigger, *n.* 7. A frame used on a farm wagon, to enable it to carry larger loads, as of hay. [Local Eng. and New Eng.]

outright (out'rīt), *a.* 1. Downright; unqualified: as, *outright* wickedness.—2. Straight out; straight on.—3. Total; entire: as, the *outright* sum was $3,000.

outring (out'ring), *n.* [*out* + *ring*¹.] In *curling,* same as ★*outwick,* 2.

outroar, *v.* II. *intrans.* To roar; roar out.

> *Out-roaring* Dick was a strolling singer of such repute that he got twenty shillings a day by singing.
> *Southey*, Doctor, cxxv.

outrooper, *n.* See ★*outroper.*

outroot (out-röt'), *v. t.* 1. To excel in rooting.—2. To uproot; root out.

outroper (out'rō-pėr), *n.* [*outrope, outroop,* + *-er*¹.] One who sells by outrope or outcry; an auctioneer. The Common Crier of London at one time exercised this office and was called by this name. Also *outrooper.*

outrun (out'run), *n.* 1. An outlying pasture or run for cattle or sheep. [Australia.]—2. The result of a calculation; amount or outcome of an estimate.—3. That which runs out; outpour.

outrunner, *n.* 2. One who or that which runs out or outside; an attendant who runs before or beside a carriage; a horse that runs in traces beside one that draws within shafts; the leader of a team of sledge dogs; etc. *N. E. D.*

outscour (out'skour), *n.* The scouring out of a channel by water.

outscout (out'skout), *n.* 1. An advance scout; a scout.—2. In *cricket,* an out-fielder.

outsee (out-sē'), *v. t.*; pret. *outsaw,* pp. *outseen,* ppr. *outseeing.* 1. To see more or farther than (another), literally or figuratively.—2. To see farther than (a certain point or object).

outset, *n.* 2. A tidal current running from the land; the ebb. *Geog. Jour.* (R. G. S.), XI. 641.—3. In Scotland, an inclosure from surrounding moorland or common.—4. The act of setting off, or ornamenting; that which sets off.—5. Outlay; primary outlay; also, in the plural, outgoings; expenses.

outset (out-set'), *v. t.* 1. To set off; ornament; display properly.—2. To put out; set outside.

outside-fired (out'sīd-fīrd), *a.* Externally fired; having the grate and fire-box on the outside of that which is to be heated, as in a horizontal return-tubular boiler where the fire is outside the shell of the boiler.

outskirt (out-skėrt'), *v. t.* [*outskirt, n.*] To form an outskirt; skirt or run along the border of.

outslang (out-slang'), *v. t.* To exceed in the use of slang.

> Put him at Iffley Lock and he could *out-slang* the boldest bargeman. *Thackeray*, Vanity Fair, xxxiv.

out-soul (out'sōl), *n.* An exterior intelligence; some being outside of man.

> How dared I let expand the force
> Within me, till some *out-soul,* whose resource
> It grew for, should direct it?
> *Browning*, Sordello, iii.

outspan¹ (out'span), *n.* [*outspan*¹, *v.*] 1. The act of unyoking or unharnessing oxen or horses. [South Africa.]—2. The time and place of the outspan; hence, an encampment; a camp. [South Africa.]

outspan² (out-span'), *v.* [*out* + *span, v.*] I. *trans.* To stretch beyond the span or reach of. [Rare.]

> The very exhaustiveness of the Gospel of Christ constitutes its chief peril. Its reach and scope are so large, that the lines of connection, which hold it fast into consistent unity, lose themselves, vanish, *outspan* our sight.
> *Henry Holland*, Logic and Life, Sermon xvii., p. 254.

II. *intrans.* To spread out or extend, as an arch.

> When the storm-rack drives leeward, the rainbow *outspanneth.* *Skrine*, Under Two Queens, I. 18. *N. E. D.*

outspan² (out'span), *n.* [*outspan*², *v.*] The entire span or stretch, especially the span of an arch.

> Make demonstrable, how, by night as day,
> Earth's centre and sky's *outspan,* all 's informed
> Equally by Sun's efflux!
> *Browning*, Parleyings, Bernard de Mandeville, x.

outspokenly (out'spō″kn-li), *adv.* In an outspoken, frank, straightforward manner.

outspread (out'spred), *n.* [*outspread, v.*] 1. Expansion; the act of spreading abroad; extension.—2. An extension; an expanse; a spreading out or beyond.

outspred, *v. t.* A simplified spelling of *outspread.*

outstander (out'stan″dėr), *n.* One who dissents; an effectual resister; one who stands out against persuasion.

out-station (out'stā″shọn), *n.* 1. A stock-farm or station at a distance from the head or main station. [Australia.]—2. A regimental station far from headquarters or from a center of population. [India.]

out-still (out′stil), *n.* [*out* + *still*2.] In India, a private still, with a government license, situated outside of the central distillery districts.

outstroke (out′strōk), *n.* 1. In a single-acting engine, the stroke on which the piston or plunger moves outward; the stroke during which the space inclosed by the cylinder and the end of the piston increases; the stroke during which the piston travels away from the cylinder-head.—2. In *mining*, the privilege of working and conveying underground the coal from an adjoining royalty. [Great Britain.]—**Outstroke rent**, the rent paid to the owner of one royalty for coal brought from an adjoining royalty. [Great Britain.]

outsweep (out-swēp′), *v.* I. *intrans.* To move outward with a sweeping motion: as, 'with wings *outsweeping*.' [Rare.]

II. *trans.* To sweep or rush beyond. [Rare.]

outthrow (out′thrō), *n.* 1. Something thrown out; the act of throwing out; ejection.—2. The act of throwing out of line; the state of being thrown out of line.

out-thrust (out′thrust), *n.* 1. The act of thrusting outward; in stone or steel construction, a thrust outward, as in a bridge which is not perfectly equilibrated.—2. A projection from a building.

out-thrust (out-thrust′), *v. t.* To thrust out or outward.

out-trump (out-trump′), *v. t.* To play more or higher trumps than another, as at cards; hence, figuratively, to get the better of.

out-turn, *n.* 2. In the tea industry, specifically, tea-leaf after infusion, its color being a test of quality. In a black tea the prevailing color should be that of a new penny. *Money*, Tea-Culture, p. 110.

outvoter (out′vō″tėr), *n.* One who, in parliamentary elections in the United Kingdom, is qualified as a holder of real property of a specified value to vote for a parliamentary representative of the county in which the property is situated, though not himself a resident of it; or one who, being an enrolled graduate of Dublin University or of one of certain English universities, or who is a member of the university court and general council of a Scotch university, etc., is entitled to vote for a parliamentary representative of his university though not resident there; a non-resident voter.

out-ward, *n.* 2. A ward of a town or city outside of the original limits of the borough.

outwash (out′wash), *n.* and *a.* I. *n.* The act of washing out; that which is washed out.

II. *a.* Of or pertaining to outwash; specifically, noting the side of a glacial moraine that is away from the ice.

> These moraines are usually bordered by sand plains on the *outwash* side and by till plains on the side which was toward the ice-sheet. *Bot. Gazette*, Jan., 1903, p. 38.

> They were more widespread than the river terraces of *outwash* gravel, and consisted of rock benches well covered with mantle rock. The latter "contained little clay and no transported material but was mostly sand." Although always above all the *outwash* terraces, they descend nearly to the upper ones, but never merge with them. *Amer. Jour. Sci.*, Feb., 1908, p. 108.

outwick (out′wik), *n.* 1. In *lawn-bowls*, a ball that curves in the opposite direction from ★inwick.—2. In *curling*, a shot that cannons off the outside of another stone so as to impel it nearer the tee: practised when a well-guarded adversary's stone is *in*, and an 'inwick' cannot be taken. *N. E. D.*

outwick (out-wik′), *v. i.* In *curling*, to make or take an outwick.

ouzel, *n.*—**Rose-colored ouzel**, the rose-colored pastor or starling, *Pastor* (*Turdus Linn.*) *roseus*. *N. E. D.*

Ov. An abbreviation of the Latin *ovum*, egg.

O. V. An abbreviation of *oil of vitriol*.

oval1. I. *a.*—**Oval quadric, sphere.** See ★*quadric*, ★*sphere*.

II. *n.* 2. (*b*) Specifically, in *athletics*, an elliptical field, or one on which an elliptical track is laid out.—**Oval of Venturi**, an oval halo around the sun ascribed to hexagonal ice crystals floating in the atmosphere. Venturi's oval is 22 degrees across in its minor vertical axis, and is tangent to the ordinary 22-degree halo at the highest and lowest limb of the latter.

ovalbumin (ōv-al-bū′min), *n.* Same as ★*ovo-albumin*.

ovalize (ō′vạl-īz), *v. t.*; pret. and pp. *ovalized*, ppr. *ovalizing*. To make oval: as, an *ovalizing* machine for forming chain-links.

> The work is performed by means of three special machines — a winder, a finishing roller, and an *ovalizing* press. As a matter of fact, the chain is not, properly speaking, weldless, but one in which the welding is done mechanically. *Sci. Amer. Sup.*, March 11, 1905, p. 24404.

ovaloid, *a.* II. *n.* A surface, such as Fresnel's wave-surface in crystals, the cross sections of which are ovals. The equation of such a surface has the form $r^2 = a^2d_1^2 + b^2d_2^2 + c^2d_3^2$ in which r is the radius vector, d_1, d_2, and d_3 its direction cosines, and a, b, and c are the principal axes of the ovaloid.

Ovarian aperture. Same as *genital* ★*pore* (*b*).—**Ovarian sac.** See ★*sac*2.

ovarin (ō′vạ-rin), *n.* [*ovar*(*y*) + *-in*2.] The dried and powdered ovarian substance. The same term is applied to a preparation made from the expressed juice of the fresh ovaries.

ovarist (ō′vạ-rist), *n.* Same as *ovulist*.

ovary1, *n.*—**Chambered ovary**, in *bot.*, an ovary in which the margins of the carpels project into the interior, forming incomplete longitudinal dissepiments.

ovaserum (ō″vạ-sē′rum), *n.*; pl. *ovasera* (-rạ̈). [L. *ovum*, egg, + NL. *serum*.] An antiserum produced by immunization with egg-albumin.

ovatolanceolate (ọ-vā″tō-lan′sẹ̄-ọ-lāt), *a.* Having the shape of a long oval, pointed at the end. *Dana.*

oven, *n.* 5. In *bacteriol.*, a compartment which can be heated and maintained at a temperature sufficient to sterilize glassware and various bacteriological apparatus. Also *hot-air sterilizer*.—**Appolt oven**, a coke-oven consisting of 18 rectangular retorts arranged in two rows within four brick walls. Each retort is provided with a cast-iron door at the bottom and is surrounded by an air-space, all air-spaces communicating with each other, as well as with the inside of the retorts, and forming one large divided chamber in which the combustion of the products resulting from the decomposition of the coal takes place. The oven is charged at the top, and the time of operation is about 24 hours.—**Carvé oven**, a coke-oven consisting of one long, narrow, and high chamber, containing the coal to be coked, with horizontal flues in the side walls and under the floor. The products of combustion pass from the fireplace through the flues under the floor and from there into the side flues, finally passing into the chimney. The products of carbonization of the coal are drawn off into condensers, where they are freed from the ammoniacal liquors and tarry oils, while the gases return to the fireplace and ignite. In some modified Carvé ovens the fireplace is altogether done away with, the oven being heated entirely by the return gases, and the air for combustion being forced in through a special pipe.—**Continuous oven**, any mechanical oven which is fired continuously and into which the material to be dried or baked is fed continuously, or partially so, as in a reel oven. See *reel oven* and *rotary oven*, under *oven*.—**Dutch oven.** (*b*) An oven constructed of brick and used by heating with a wood fire, then withdrawing the fire, placing the article to be cooked inside, and closing the oven up. The heat of the walls does the cooking.—**Pernolet oven**, a form of coke-oven with provision for collecting and saving the tar and ammonia liquor given off.—**Portable oven**, a baking chamber built mostly of iron, resembling a furnace oven. It is used in small bakeries and is built so that it can be taken apart and easily moved.—**Rotary oven.** (*b*) An oven built of brick, in which the baking surface consists of soapstone attached to a perpendicular shaft which causes it to rotate.

oven (uv′n), *v. t.* [*oven*, *n.*] 1. To bake in an oven.—2. To inclose; muffle up in an oven.

ovenchyma (ọ-veng′ki-mạ̈), *n.* In *bot.*, loose tissue consisting of ovoid cells.

oven-furnace (uv′n-fėr″nās), *n.* A gas-furnace having an oven-shaped casing: used in heating dies and tools preparatory to hardening them.

ovenman (uv′n-man), *n.* See ★*kilnman*.

overaction (ō-vėr-ak′shọn), *n.* Too much action; unnecessary and exaggerated action: applied specifically to a trained horse (a high stepper) in which the knee-action is too noticeable.

overactive (ō-vėr-ak′tiv), *a.* Too active; unnecessarily active.

overactivity (ō″vėr-ak-tiv′ị-ti), *n.* Excessive activity.

over-aged (ō″vėr-ājd), *a.* In any aging process, noting a result (usually of a detrimental character) brought about by carrying the process too far: a term frequently used in the logwood industry and by textile colorists.

overall, *n.* II. *a.* In measurements, extending from one extreme limit to the other; including the whole extent.

> The total length of the bridge proper is 502 feet, the approaches on the Middlesex and Surrey sides bringing the *overall* length to 1182 feet. *Nature*, Oct. 29, 1903, p. 633.

Over-all dimensions, dimensions taken between boundaries so placed as to include all parts of an object or space.

> The *overall dimensions* of the floor space taken up by this generating set are approximately 35 by 45 ft. *Elect. World. and Engin.*, May 7, 1904, p. 867.

Over-all efficiency, the ratio of the electrical output of a generator to the indicated power of the engine by which it is driven.

overarm (ō′vėr-ärm), *a.* In *cricket*, delivered with the arm above the shoulder; overhand.

> *Overarm* action in bowling is now universal. *Encyc. Brit.*, XXVII. 276.

overbank (ō-vėr-bangk′), *v. i.* In *watch-making*, a term used to describe slip or lost motion in an escapement, whereby the balance-wheel loses a beat. It may be caused by a swaying motion of the watch or by unskilful winding.

overberg (ō′vėr-bėrg), *a.* [*over* + D. *berg*, mountain.] Over a mountain: as, the *overberg* track: specifically, in South Africa, over the mountain from or toward Natal.

over-bridge (ō′vėr-brij), *n.* A bridge which carries a highway or foot-walk over another artificial line of travel, as a railway: in distinction from a crossing of the two ways at grade.

overburden, *n.* 2. An excessive load; a burden or load greater than should be carried.

overcast (ō′vėr-kȧst), *n.* In *mining*, an air-duct or passage which crosses above another passage.

overcast (ō′vėr-kȧst), *a.* In *geol.*, cast or thrust beyond a normal position, as in a thrust-fault or overturned fold.

> The longitudinal folds [the rock-deposits in the Alpine district] had been steeply tilted, or "*overcast*," *i.e.* laid over into more horizontal positions, or fractured, and the parts carried into different oblique directions. *Geog. Jour.* (R. G. S.), XVI. 462.

overcheck (ō′vėr-chek), *n.* In harness, a check-rein passing over a horse's head between the ears; an overdraw-check.

overcoat, *n.*—**Inverness overcoat.** See *Inverness* ★*coat*.

overcome, *v. t.* 6. Overpowered by liquor; intoxicated: in the past participle.

over-compounded (ō″vėr-kọm-poun′ded), *p. a.* In *elect.*, provided with series-windings sufficient in number to give constant difference of potential, not at the terminals of the machine, but at some other point in the circuit: said of certain generators which have both shunt and series field-coils.

over-compounding (ō″vėr-kọm-poun′ding), *n.* The process of so winding the field-coils of a direct current generator as to obtain a constant difference of potential at a given point in the circuit supplied by the generator.

> For then by *over-compounding*, one can obtain a constant pressure, not at the terminals of the dynamo, but on the mains at some point in the midst of the lamp-network. *S. P. Thompson*, Dynamo-electric Machinery, p. 293.

overcool (ō″vėr-köl′), *v. t.* To cool below the temperature of fusion without bringing about solidification. It is possible, under certain conditions, thus to cool water to a temperature several degrees below its freezing-point, without converting it into ice. Same as ★*undercool* and ★*supercool*.

overcorrect (ō″vėr-kọ-rekt′), *v. t.* In *optics*: (*a*) To correct (a lens) so that the red rays come to a focus beyond the violet rays. See *correct*, 5. (*b*) To change one defect of vision into its opposite by means of too powerful lenses.

over-correction (ō″vėr-kọ-rek′shọn), *n.* In *ophthalmol.*, the conversion of one defect of vision into its opposite by means of too powerful lenses.

overday (ō′vėr-dā), *a.* Lasting more than a day; noting a period of more than twenty-four hours. *Encyc. Dict.*

over-decoration (ō″vėr-dek-ō-rā′shọn), *n.* In *ceram.*, decoration designed to hide a blemish in the glaze, or to add to the effect, or change the appearance of pieces of ware which have previously been decorated. Also *sur-decoration*.

overdevelop (ō″vėr-dẹ̄-vel′up), *v. t.* To develop to excess; in *photog.*, to develop too long or with too strong developer. See *over-development*.

overdoor (ō′vėr-dōr), *a.* and *n.* I. *a.* Set above a doorway, or prepared to be so placed: said of a panel or any decorative appliance. The overdoor paintings are an important feature in eighteenth-century interior decorations.

II. *n.* The space above a door.

> A noticeable feature of this room is the treatment of the *over-doors*. *R. S. Clouston*, in Burlington Mag., V. 243.

overdraft, *n.* 3. The act of overdrawing one's account, especially one's bank-account.

overdriven (ō′vėr-driv″n), *a.* In *mech.*: (*a*) Applied to an arrangement of driving mechanism such that the power is applied above the place where the work is done. (*b*) Said of a machine or plant which is driven at a speed or power beyond that which is normal or suitable to the design.

overedge (ō′vėr-ej), *a.* Noting a kind of stitching. See the following phrase.—**Overedge stitching,** a method of joining two selvage edges by means of a machine that causes the needle to pass alternately through the fabric and over the edges. The alternate stitches can be made to pass from the edge of one piece to the edge of the other.

overer (ō′vėr-ėr), *n.* and *a.* **I.** *n.* **1.** The upper or over part of anything; of two things, the one that is over the other.—**2.** A superior in office or station; one who is over another.

II. *a.* Upper; over; higher.

overexert (ō″vėr-eg-zėrt′), *v. t.* To exert or exercise too much; exert (oneself) to excess: usually reflexive.

> "Don't you *over-exert* yourself, Loo," said Mr. Chick, "or you 'll be laid up with spasms, I see."
> *Dickens*, Dombey and Son, ii.

overexpose (ō″vėr-eks-pōz′), *v. t.*; pret. and pp. *overexposed*, ppr. *overexposing*. In *photog.* and *radiography*, to expose too long to light or other radiation. See *over-exposure*. *Therapeutic Gazette*, Feb. 15, 1903, p. 80.

overfall, *n.* **2.** *Naut.*: (*c*) A sudden drop in the sea-bottom, as at the edge of a submarine terrace or ledge. *N. E. D.*

> The shingly shore shelves rapidly, without steps or *overfalls*, into blue water.
> *Geog. Jour.* (R. G. S.), old ser., XXIX. 236.

3. That portion of a dam or weir over which the water falls or flows, including the crest and the down-stream face of the dam.

overfall (ō-vėr-fâl′), *v.* **I.** *trans.* **1.** To fall over: as, a fog *overfell* them.—**2.** To fall upon; to attack.

II. *intrans.* To fall; fall over. [Rare.]

> Horse and riders *overfell*.
> *Mrs. Browning*, Rhyme of the Duchess May, st. xcv.

overfatigue (ō″vėr-fa̤-tēg′), *n.* Excessive fatigue carried beyond the normal recuperative power of the individual.

overfault (ō′vėr-fâlt), *n.* A reversed or thrust fault; one whose upper wall is thrust up on its under one.

overflow-pipe (ō′vėr-flō-pīp″), *n.* In *plumbing*, a pipe connecting the over-flow of a wash-bowl, sink, or bath-tub with a waste-, soil-, or sewer-pipe.

overflow-valve (ō′vėr-flō-valv″), *n.* A valve in an injector designed to allow the first water lifted by the injector to overflow or run off.

overfolding (ō′vėr-fōl″ding), *n.* In *geol.*, the process which results in an overturned fold.

overforged (ō′vėr-fōrjd), *a.* Forged until the quality of the metal has been injured: said of steel, wrought-iron not being subject to this action.

overfraught (ō-vėr-frât′), *p. a.* Overloaded. See *overfreight*, *v.*

overgrowth, *n.* **3.** The deposition of the crystals of one mineral species over those of another species, particularly when the individuals or subindividuals of the former have their orientation fixed by the latter; also one of the individuals or subindividuals so deposited.

overhead, *adv.* **3.** So that something is over one's head: as, to be ducked *overhead* in the river.

overhead, *a.* **2.** Average; applicable to all.

overhung (ō-vėr-hung′), *a.* **1.** Hung from above: said of a sliding door when it moves, by means of door-hangers or other appliances, upon a rail at the top. An *underhung* door is one in which the weight of the door is carried by a rail resting on the floor or by the wall near the base of the door.—**2.** In *mech.*, having no outboard bearing; hanging on the end of a shaft; hung on or supported by a shaft having a bearing only on one side of the piece which is supported.

overindividual (ō″vėr-in-di-vid′ū-al), *a.* Pertaining to or valid for all subjects of experience. See the extract. [Rare.]

> The further subdivision must be the same for both groups—that which is merely individual and that which is '*overindividual*'; we prefer the latter term to the word 'general,' to indicate at once that not a numerical but a teleological difference is in question. . . . The *overindividual* phenomena are, of course, the physical objects, the individual phenomena the psychical objects, the *overindividual* purposes are the norms, the individual purposes are the acts which constitute the historical world. We have thus four fundamental groups: the physical, the psychological, the normative and the historical sciences. Whoever denies *overindividual* reality finds himself in the world of phenomena a solipsist and in the world of purposes a sceptic.
> *Harvard Psychol. Stud.*, I. 649.

overindulgence (ō″vėr-in-dul′jens), *n.* The gratification of one's appetite or desires to an intemperate degree.

overland (ō-vėr-land′), *v. i.* In Australia, to cross the country with herds of cattle, sheep, etc.

> Herds used to be taken from New South Wales to South America across what were once considered the deserts of Riverina. That used to be called '*overlanding*.' But for many years the travelling of stock has been tending to become anything but an adventurous enterprise. *W. H. L. Ranken*, Dominion of Australia, xiii.

overlander (ō′vėr-lan″dėr), *n.* In Australia: (*a*) Originally, one who crossed the country before railways were introduced. (*b*) A difficult journey. (*c*) A man who drives sheep and cattle across country, from one colony to another. (*d*) A tramp; a sundowner.

> The present mining population of Hall's Creek is about twenty. This is augmented occasionally by the influx of "*overlanders*" from the Northern Territory and Queensland. *Geog. Jour.* (R. G. S.), XI. 274.

overlap, *n.*—**To establish an overlap.** In *yacht-racing*, an overlap is said to be established when an overtaking yacht has sailed up on the yacht ahead so that the latter's quarter is covered by the overtaking vessel's bow; and the overlap continues as long as the leeward vessel by luffing, or the weather vessel, by bearing away, insures fouling.—**Uncomformability of overlap.** In *geol.*, during the subsidence of a coast-line the sea will invade the land and deposit later sediments far beyond earlier ones, which latter are often buried from observation. While there is no difference in the dips of the two, there has obviously occurred a great change in conditions and the resulting relations are described by the above phrase. *Uncomformability of transgression* is synonymous.

overlap-fault (ō′vėr-lap-fâlt″), *n.* A fault in which the strata have been forced upward on the upper or hanging-wall side of the fault; a reverse fault.

overlapping (ō-vėr-lap′ing), *n.* **1.** The action or effect which occurs when one thing overlaps another; the production or the essential character of an overlap. Specifically—**2.** In *psychol.*, the supplanting of one mental disposition or of one combination of mental processes by another and more powerful disposition or combination, without appreciable conflict.

> Suppose the components of the one combination are a b c, and of the other a b x; c may be so favoured from the outset that it simply displaces x without any feeling of discrepancy arising, and without any attention to the difference. This process I call *overlapping*, or coalescence. . . . The most striking examples of coalescence . . . are those in which the *overlapping* is one-sided. One image is absorbed by another which prevails over it by sheer superiority of strength. . . . Everyone knows how our memory of what has happened becomes modified in accordance with our desires, our dramatic bias, our views of what ought to have taken place, and so forth.
> *G. F. Stout*, Anal. Psychol., I. 286.

overlay, *n.* **6.** In *quarrying*, the overburden or detrital material which covers the rock in a quarry. *Barrowman*, Glossary.

overlay-days (ō′vėr-lā-dāz), *n. pl.* *Naut.*, a specified number of days that are agreed upon between the shippers and the master of the vessel (or her agent) for the loading and discharging of the cargo, beyond which number of days a stipulated per diem demurrage (forfeit) is agreed to be paid to the vessel. Sundays and holidays are not included unless the words "running days" are used in the charter-party (i. e., the written agreement), in which case all days are counted. Also known as *lay-days*.

overlimen (ō′vėr-lī″men), *n.* In *psychophys.*, a stimulus-difference which must be transcended if the larger (smaller) of the two stimuli compared is to be adjudged much larger (much smaller) than the smaller (larger) stimulus. *E. B. Titchener*, Exper. Psychol., II. ii. 255.

overline (ō-vėr-līn′), *v. t.* **1.** To draw a line over (writing): the opposite of underline.—**2.** In manuscript or printed matter, to place a translation over each line.

overload (ō′vėr-lōd), *n.* An excessive load; a too heavy load.

> The automatic devices for the machines are so arranged that a fault or *overload* on either phase opens both oil switches on the two phases, differing in this respect from the independent automatic devices for the incoming line.
> *Elect. World and Engin.*, Feb. 18, 1905, p. 340.

overlock (ō′vėr-lok), *a.* A coined word used in the textile and other similar trades to describe a stitch made by a sewing-machine which, on the cut edge of a single thickness of material, or in joining the edges of two pieces of material, makes covering stitches which conceal the otherwise projecting thread-ends, and at the same time locks the stitches so as to give strength to the artificial selvage or seam thus made; also applied to the machine which makes this artificial selvage or overseam.

overman, *n.* **2.** In general, an overseer, or foreman.—**3.** An arbitrator, or umpire.—**4.** [Trans. G. *uebermensch.*] In the writings of F. W. Nietzsche, a type with more or less superhuman qualities toward which he supposed mankind to be developing.

overmantel, *n.* **II.** *a.* Placed over the shelf of a mantel, or prepared to be so placed: said of a painting, a carved panel, or the like.

over-maturation (ō″vėr-mat-ū-rā′shon), *n.* The condition of being too old properly to perform a normal function.

> Stunting of the growth, and *overmaturation* of the sap of plants induce early changes in the maturing and structure of aphides; the insects multiply without the interference of the ordinary destructive influences of bad weather, and delicate maggots, etc., which are generally drowned in very large numbers by storms of rain, emerge unharmed. *Smithsonian Rep.*, 1895, p. 306.

overnight (ō′vėr-nīt), *a.* and *n.* **I.** *a.* Done or occurring overnight; specifically, in *racing*, noting an entry made just before the day of the race, or a race arranged 'overnight.'

> There is little doubt to-day that Kingston was the greater horse, doomed to handicaps and *over night* gambling races, while the "mighty" Hanover was conserved for the more prominent stake events.
> *Outing*, Feb., 1906, p. 652.

II. *n.* **2.** In *racing*, a race (or entry) arranged the night before it is run.

> This threw him into *overnights*, handicaps, etc., only the Flatbush, the grand two-year-old test race, being open to him. *Outing*, Feb., 1906, p. 652.

overpainted (ō-vėr-pān′ted), *a.* **1.** Retouched; restored.—**2.** Painted with too much elaboration.

overpitch (ō-vėr-pich′), *v. t.* In *cricket*, to pitch (a ball) too far, so that it can be hit by the batsman before it touches ground.

overplacement (ō-vėr-plās′ment), *n.* **1.** Same as *superimposition*. Specifically—**2.** In *geol.*, applied to surficial deposits that are accumulated as a loose mantle upon the regular geologic strata.

> In addition to these well characterized formations there is a limited variety of residua left on decomposition of rock in place, of torrential or *overplacement* deposits formed by wash adown slopes.
> *W. J. McGee*, in Smithsonian Rep., 1890, p. 72.

overplay (ō′vėr-plā), *n.* In any duplicate card-game, especially bridge and whist, the play of a hand which has already been played at another table and by other players; in memory duplicate, the play of a hand by north and south which was originally held and played by east and west.

overpole (ō-vėr-pōl′), *v. t.* In *copper-refining*, to continue poling or reducing the oxids too long; to pole or deoxidize until the metal has passed the right point for toughness. In the last stage of copper-smelting the metal, when brittle from the presence of a little combined oxygen, is in the fused state stirred with poles of wood, the carbon of which unites with the oxygen and removes it as carbon monoxid. If the stirring is continued too long the metal, freed from oxygen, begins to take up carbon and again becomes brittle, assuming a coarse fibrous structure. It is then said to be *overpoled*.

overpoling (ō-vėr-pō′ling), *n.* The operation of almost entirely removing the oxygen from copper by excessive poling. By allowing the overpoled copper to absorb some oxygen from the air, the copper may be restored to the 'tough' pitch. Then all the impurities are oxidized, but no oxid of copper is present. See ★*overpole*.

overpot (ō-vėr-pot′), *v. t.* In *gardening*, to set out (a plant) in too large a pot.

overpowering (ō-vėr-pou′ėr-ing), *a.* That is too powerful to resist; overwhelming; crushing; too intense to bear.

overprint (ō′vėr-print), *n.* An offprint.

overprint (ō-vėr-print′), *v. t.* **1.** In *photog.*, to print (a positive) much darker than it will be when finished.—**2.** In *calico-printing*, to print one color over another, as the printing of indigo patterns on cloth previously dyed turkey red.

overproduce (ō″vėr-prọ-dūs′), *v. t.*; pret. and pp. *overproduced*, ppr. *overproducing*. To produce in excess of demand.

overreach, *v. i.*—**Overreaching clause.** See ★*clause.*

overright (ō′vėr-rīt), *adv.* Right over from; oppositely.

over-risen (ō″vėr-riz′n), *a.* Said of a vessel which shows too high a side out of water in comparison with her length and beam.

over-run, *v. t.*—**To over-run her reckoning,** said of a vessel when it is found that she is ahead either in latitude or in longitude of the place worked out by dead-reckoning. When the vessel is found to be behind her calculated point, she is said to have *under-run her reckoning.*

overrun (ō′vėr-run), *n.* In *printing,* composed type run over into the next line or page, to make space for something else, etc. See *overrun, v. t.,* 7.

> Every paragraph containing an alteration that compels one or more *overruns* should be re-read by a copy-holder in the same manner that has to be observed for the first proof.
> *De Vinne,* Practice of Typography, Correct Composition, [p. 309.

overseaming-machine (ō-vėr-sē′ming-ma-shēn″), *n.* A sewing-machine adapted to making the long stitches used in overseaming, eyeletting, serging, and in many kinds of fancy stitching. It employs a vibrating needle controlled by an adjustable cam that limits the traverse of the needle and hence the length of the stitch. Also called, from the motion of the needle, a *zigzag machine.* See ★*eyelet-machine.*

oversepticize (ō-vėr-sep′ti-sīz), *v. t.*; pret. and pp. *oversepticized,* ppr. *oversepticizing.* In certain methods of disposing of sewage, to subject the refuse material to the action of certain bacteria. The term has reference to the possibility of carrying the anaërobic destruction of the material too far for purposes of subsequent ready filtration.

overset, *v. i.* 2. To compose or set more type than is needed for a prescribed space.

overset (ō-vėr-set′), *p. a.* 1. Said of composed type that exceeds in amount the space prescribed.—2. Offset; not set in line: said of rivet-holes, partially blind.

overshot, *p. a.* 3. Having the upper teeth projecting beyond the lower: said of some dogs. Contrasted with *undershot.*

oversighted (ō-vėr-sī′ted), *p. a.* Hypermetropic.

oversize¹ (ō′vėr-sīz), *a.* and *n.* **I.** *a.* Of excessive size; specifically, noting material which is too large to pass through the meshes of a given screen or sieve. That which passes through the meshes receives one sort of treatment; the oversize, or oversized material, passes off from the screen on its upper surface to a subsequent process.

II. *n.* Material that is oversize.

> The *oversize,* which contains no slime whatever, is delivered directly to four Wilfley concentrating tables. The undersize, 50-mesh and finer, is delivered to unwatering and settling tanks from which all of the settled product, including such slimes as may be associated with same, is delivered to an entirely separate set of tables. The overflow from these tanks is delivered to the general slime tanks. *Electrochem. Industry,* March, 1905, p. 124.

overslaugh, *v. t.* 4. In *milit.,* to remit the ordinary duty of (an officer, or company), because he is detailed for some other work.

overslaugh (ō′vėr-slâ), *n.* [*overslaugh, v.*] 1. In *milit.,* remission of the ordinary daily duty of an officer or company on account of a detail to another duty which takes precedence.—2. A sand-bank or -bar which impedes navigation in a river; specifically, one near Albany, New York, in the Hudson.

oversman, *n.* 2. In *lawn-bowls,* one who decides as to the value of a shot in case of a dispute.

oversound (ō-vėr-sound′), *v. i.* Of organ-pipes, to produce the higher octave of the proper tone: occurring sometimes when the wind is too strong. See *overblow*¹, *v. t.,* 3. *Seidel,* Organ, p. 43. *N. E. D.*

overspin (ō-vėr-spin′), *v. t.* In the making of metal strings for musical instruments, to wind or wrap a covering-wire about a string so as to add to its weight and to lower its pitch. Overspun strings are used especially for the lower strings of the pianoforte, the guitar, and several instruments of the zither class.

overstain, *v.* **I.** *trans.* 2. Specifically, in *histol.,* to stain (a tissue) excessively in order to insure thorough coloring of particular elements when the excess of the stain has been washed out.

II. *intrans.* To perform the operation of overstaining tissue.

oversteepen (ō-vėr-stē′pn), *v. t.* To make excessively steep: as, a peak *oversteepened* by glacial erosion beneath it.

oversupination (ō″vėr-sū-pi-nā′sho̤n), *n.* Supination carried beyond the normal limit of movement.

overtake (ō′vėr-tāk), *n.* The act or fact of overtaking.

> Aggregation came about by *overtakes* in contradistinction to opposed collisions. *Science,* Feb. 20, 1903, p. 300.

overthrow, *v. t.* 3. In *cricket,* to throw (the ball) inaccurately at the wicket, and so give unearned runs to the opposing batsman.

overthrust, *n.* **II.** *a.* In *geol.,* thrust beyond: applied to the rocks on the upper side of a reversed fault, which are thrust upon those of later age, thus reversing the normal succession.

> Associated with the cross-compression [of Rock Deposits] new folds had formed, and *overthrust* masses had travelled in transverse and various oblique directions.
> *Geog. Jour.* (R. G. S.), XVI. 462.

overthrusting (ō-vėr-thrus′ting), *n.* In *geol.,* the process of producing an overthrust.

> The Sella mountain has subsided in several "fault-blocks" since the epoch of *overthrusting.*
> *Geog. Jour.* (R. G. S.), XVI. 463.

overtime (ō-vėr-tīm′), *v. t.*; pret. and pp. *overtimed,* ppr. *overtiming.* In *photog.,* to allow too much time in exposure or other treatment.

overtone, *n.*—**Electric overtone,** an electric oscillation of higher frequency than that of the fundamental oscillation with which it is associated, and usually harmonically related to the latter.—**Overtone current,** in *elect.,* an alternating current having a frequency higher than and usually harmonically related to the frequency of a fundamental current with which it is associated.

overtopped (ō-vėr-topt′), *a.* In *forestry,* having the crown shaded from above, although a side or sides may be free to light. See *crown* ★*class.*

overtrain (ō-vėr-trān′), *v.* **I.** *intrans.* To carry the process of training (athletic or mental) beyond the limits of safety, resulting in a physical breakdown.

II. *trans.* To subject to excessive training.

overtravel (ō-vėr-trav′el), *v. i.*; pret. and pp. *overtraveled, overtravelled,* ppr. *overtraveling, overtravelling.* In *mech.,* to travel farther than is necessary to do a certain act or perform a definite function.

overtread (ō′vėr-tred), *n.* The act or fact of treading over; a trampling upon.—**Overtread** or **overtreading plow,** a primitive foot-plow.

overtread (ō-vėr-tred′), *v. t.*; pret. *overtrod,* pp. *overtrod, overtrodden,* ppr. *overtreading.* To step over; step beyond; trample on; crush.

overtrump (ō-vėr-trump′), *v. t.* To trump (a plain suit) with a higher trump than that already played by another person.

overtype (ō′vėr-tīp), *a.* Noting a dynamo or motor which is a bipolar machine, with field of the horse-shoe form, and with the armature above the field-coils: opposed to *undertype* machines, in which the armature is below.

> The "*over-type*" form [of horse-shoe magnet] is best suited to small belt-driven dynamos, while the "under-type" is admirably adapted to be directly driven by the steam engine. *Encyc. Brit.,* XXVII. 584.

Overtype dynamo, a bipolar generator having the armature above the field-magnets.—**Overtype generator,** a bipolar electric generator having the armature above the field-magnets.

overwash (ō′vėr-wosh), *a.* In *geol.,* consisting of drift carried by streams from a glacier and deposited on the outer side of its moraine.—**Overwash plain, subaqueous overwash plains.** See ★*plain*¹.

overweightage (ō-vėr-wāt′a̤j), *n.* [*overweight* + *-age.*] Amount of extra weight; also, a charge for extra weight, in transportation.

overwelt (ō-vėr-welt′), *v. t.* and *i.* [*over* + dial. *welt,* variant of *walt,* turn.] To overturn; especially, of a sheep, to fall on its back and be unable to get up. [Prov. Eng.]

overwelt (ō′vėr-welt), *n.* [*overwelt, v.*] An overturn: said of a sheep. [Dialectal.]

overwood (ō′vėr-wůd), *n.* See ★*two-storied,* 2.

overworkings (ō′vėr-wėr″kingz), *n. pl.* In *mining,* coal mined in excess of the minimum fixed by the lease. [Great Britain.]

overworld (ō′vėr-wėrld), *n.* A world above or higher than this: sometimes used for heaven.

ovic (ō′vik), *a.* [NL. *ovicus,* < L. *ovum,* egg.] Of or pertaining to an ovum.

ovicelligerous (ō″vi-se-lij′e̤-rus), *a.* [*ovicell* + L. *gerere,* carry.] In polyzoans, bearing ovicells.

ovicidal (ō′vi-sī-da̤l), *a.* [*ovicid(e)* + *-al*¹.] That kills sheep; sheep-killing.

ovicular (ọ-vik′ụ-la̤r), *a.* [NL. **oviculum,* dim. of L. *ovum,* egg, + *-ar*³.] Resembling or pertaining to an egg.

oviculated (ọ-vik′ụ-lā-ted), *a.* [*ovicul-um* + *-ate*¹ + *-ed*².] In *arch.,* having egg-shaped ornaments.

oviculum (ọ-vik′ụ-lum), *n.*; pl. *ovicula* (-la̤). [NL., dim. of L. *ovum,* egg.] In *arch.,* one of the oval balls of an egg-and-dart ornament. See cut under *egg*¹.

oviductal (ō-vi-duk′ta̤l), *a.* [*oviduct* + *-al*¹.] Pertaining to, or having the characters of, an oviduct; oviducal.

ovigenesis (ō-vi-jen′e-sis), *n.* Same as *oögenesis.*

ovigenetic (ō-vi-jẹ-net′ik), *a.* Same as *oögenetic.*

> It is now known that the spermatogenic and *ovigenetic* cells of the sexual glands in higher animals pass through forms of division which differ from those which occur in the embryological development of these glands.
> *Lancet,* May 23, 1908, p. 1495.

ovination (ō-vi-nā′sho̤n), *n.* [L. *ovis,* sheep, + *-ine* + *-ation.*] Vaccination of sheep with sheep-pox virus. [Rare.]

ovine² (ō′vin), *n.* [L. *ovum,* egg, + *-ine*².] A form of cerebrin found in the yolk of eggs. *Sci. Amer.,* Sept. 7, 1907, p. 167.

oviparously (ọ-vip′a̤-rus-li), *adv.* In an oviparous manner; by means of eggs or germ-cells.

> All animals reproduce *oviparously.*
> *Geog. Jour.* (R. G. S.), IX. 563.

oviparousness (ọ-vip′a̤-rus-nes), *n.* The character of being egg-bearing or oviparous.

ovispermiduct (ō-vi-spėr′mi-dukt), *n.* In some mollusks, a duct which conveys both ova and spermatozoa.

ovistic (ọ-vis′tik), *a.* [*ovist* + *-ic.*] Of or pertaining to an ovist or to ovism.

ovivorous¹ (ọ-viv′ọ-rus), *a.* [L. *ovum,* egg, + *vorare,* eat.] Egg-eating; living in or on eggs, as the hymenopterous parasites of the proctotrypid subfamily *Scelioninæ* or the chalcidid subfamily *Trichogramminæ.*

ovivorous² (ọ-viv′ọ-rus), *a.* [L. *ovis,* sheep, + *vorare,* eat.] Sheep-eating. *N. E. D.* [Rare.]

ovoalbumin (ō″vọ-al-bū′min), *n.* An albumin, resembling serum-albumin, found in the white of birds' eggs. Also *oralbumin.*

ovocenter (ō′vọ-sen-tėr), *n.* [NL. *ovocentrum,* < L. *ovum,* egg, + *centrum,* center.] The centrosome of the egg or ovum during fertilization: opposed to ★*sperm-center.*

ovocentrum (ō-vọ-sen′trum), *n.*; pl. *ovocentra* (-tra̤). Same as ★*ovocenter.*

ovocylindrical (ō″vọ-si-lin′dri-ka̤l), *a.* Having the form of an elongated ovoid.

ovocyte (ō′vọ-sīt), *n.* [L. *ovum,* egg, + Gr. *κύτος,* a hollow (a cell).] Same as ★*oöcyte.*

ovofibrin (ō-vọ-fī′brin), *n.* [L. *ovum,* egg, + E. *fibrin.*] A derivative of ovofibrinogen.

ovofibrinogen (ō″vọ-fī-brin′ọ-jen), *n.* [*ovofibrin* + *-gen.*] A substance found in the albumin of birds' eggs which is similar to fibrinogen and gives rise to ovofibrin.

ovogone (ō′vọ-gōn), *n.* [NL. *ovogonium.*] Same as ★*oögonium.*

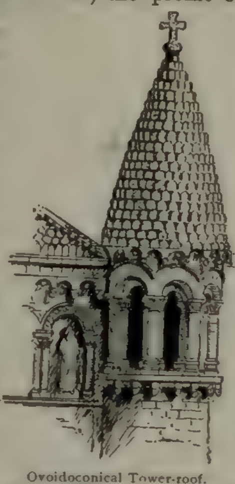
ovogonic (ō-vọ-gon′ik), *a.* [*ovogone* + *-ic.*] Same as ★*oögonial.*

ovogonium (ō-vọ-gō′ni-um), *n.*; pl. *ovogonia* (-a̤). [NL., < L. *ovum,* egg, + Gr. *γόνος,* generation.] Same as ★*oögonium.*

ovoid, *n.* 2. In *anthrop.,* a cranium the norma verticalis of which has an ovoid form. *G. Sergi* (trans.), Var. of the Human Species, p. 31.

Ovoides (ō-voi′dēz), *n.* [NL., < L. *ovum,* egg, + Gr. *εἶδος,* form.] A genus of fishes of the family *Tetraodontidæ,* with numerous species, chiefly of the tropical Pacific.

ovoidoconical (ō″voi-dǭ-kon′i-kạl), *a.* In *arch.*, noting a conical form, the profile of which is curved, as in the roofs of the towers of the Cathedral of Angoulême in France.



Ovoidoconical Tower-roof.
Cathedral of Angoulême, France.

ovokaryon (ō-vǭ-kar′i-on), *n.* [L. *ovum*, egg, + Gr. *κάρυον*, nut, nucleus.] Same as ⋆*oökaryon.*

ovolecithin (ō-vǭ-les′i-thin), *n.* [L. *ovum*, egg, + E. *lecithin.*] Lecithin derived from the yolk of eggs.

ovolemma (ō-vǭ-lem′ạ̈), *n.* [L. *ovum*, egg, + Gr. *λέμμα*, peel, skin, scale.] Same as *oölemma.*

ovological (ō-vǭ-loj′i-kạl), *a.* [*ovolog*(*y*) + *-ical.*] Same as *oölogical.*

ovologist (ǭ-vol′ǭ-jist), *n.* [*ovolog*(*y*) + *-ist.*] An oölogist.

ovolysin (ǭ-vol′i-sin), *n.* [L. *ovum*, egg, + E. *lysin.*] A cytotoxin which causes the destruction of egg-cells.

ovomucoid (ō-vǭ-mū′koid), *n.* [L. *ovum*, egg, + E. *mucoid.*] The mucoid substance which occurs in the white of hens' eggs.

ovoplasma (ō-vǭ-plaz′mạ̈), *n.* [L. *ovum*, egg, + Gr. *πλάσμα*, anything formed.] Same as *ovoplasm* or ⋆*oöplasm.*

ovotid (ō′vǭ-tid), *n.* Same as ⋆*oötid.*

ovovitellin (ō″vǭ-vi-tel′in), *n.* [L. *ovum*, egg, + E. *vitellin.*] A nucleo-albumin found in the yolk of eggs. The paranucleinic radical which enters into its composition is the avivitellinic acid described by Levene and Alsberg.

ovoviviparism (ō″vǭ-vī-vip′ạ-rizm), *n.* [*ovovivipar*(*ous*) + *-ism.*] Ovoviviparity.

Ovular decidua. See ⋆*decidua.*

ovulase (ō′vụ-lās), *n.* [*ovule* + *-ase.*] An enzym supposed to exist in the living egg and to act as a stimulus to its mitotic divisions.

ovum, *n.*—**Ruptor ovi**, a hatching spine or egg-burster; a temporary organ, appearing late in the embryonic life of certain insects and other animals, by the use of which they are able to break open or cut open the egg-shell.

ovum-nucleus (ō′vum-nū″klę̄-us), *n.*; pl. *ovum-nuclei* (-ī). The egg-nucleus or germinal vesicle of the unfertilized egg.

owala (ǭ-wä′lạ̈), *n.* [Native name in Gaboon.] A leguminous tree of western Africa, *Pentaclethra macrophylla*, which bears pods about 2 feet long containing large flat seeds. These yield an oil and are used as food by the natives. They also form one of the ingredients of ⋆*udika-bread* (which see).

owdell (oud′l), *n.* [W. *awdl*, a rime or assonance (pl. *odlau*); also as in def. (pl. *awdlau*).] A poem consisting of compositions in all the 24 strict meters. *N. E. D.*

Owenism (ō′en-izm), *n.* [*Owen* + *-ism.*] The communistic system of Robert Owen.

Owenist (ō′en-ist), *a.* and *n.* [*Owen* + *-ist.*] I. *a.* Of or pertaining to Owenism.

II. *n.* Same as *Owenite.*

owl[1], *n.*—**Acadian owl**, the saw-whet owl, *Nyctala acadica.* See *Nyctala.*—**Cuckoo owl.** Same as ⋆*boobook* (which see).—**Owl-face vases.** See ⋆*vase.*—**Owl nebula.** See ⋆*nebula.*—**Pygmy owl**, *Glaucidium gnoma*, a common diminutive species of California and the Southwest, having a length of about seven inches. It is brown above, spotted with white, and white below, with reddish-brown streaks. Also called *gnome-owl.* See *Glaucidium*, with cut.—**Richardson's owl**, the arctic saw-whet, *Nyctala tengmalmi richardsoni*, seen in the northern United States only in winter.—**White owl.** (*a*) The snow-owl. (*b*) Sometimes applied to the barn-owl, *Strix pratincola*, which is white below and when in flight seems almost entirely white. See cut at *barn-owl.*

owlet, *n.*—**Black owlet**, a noctuid moth, *Noctua c-nigrum*, common to Europe and the eastern United States. Its larva is known as the *spotted* ⋆*cutworm*, which see, with cut.—**Clover-looping owlet**, either of two American noctuid moths, *Drasteria erechtea* or *D. crassiuscula*, whose larvæ, having only three pairs of prolegs, walk like geometrid larvæ and feed on clover.—**Hooded owlet**, any noctuid moth of the genus *Cucullia.* These moths have a prominent tuft of scales on the thorax, which often projects over the head like a hood.—**Scalloped owlet**, a noctuid moth, *Scoliopteryx libatrix*, common to Europe and North America, brownish gray in color, with scalloped fore wings. Its larvæ feed on the willow.—**Similar-winged owlet**, an American noctuid moth, *Homoptera lunata*, brownish in color, with marbled wings. Its larvæ feed on the willow, plum, rose, and maple, and on other plants.

owl-gazel (oul′gạ-zel″), *n.* A misspelling and consequent misuse of *aoul*, the native African name for Sömmering's gazel.

owl's-clover (oulz′klō″vėr), *n.* In California, a plant of the scrophulariaceous genus *Orthocarpus*, particularly *O. erianthus.* The genus is related to *Castilleja*, the painted-cup. The white owl's-clover is *O. versicolor*, by some considered a variety of the former. See ⋆*escobita* and ⋆*cream-sacs.*

owl's-crown (oulz′kroun), *n.* Either the cotton-rose, *Gifola Germanica*, or the chafeweed, *Gnaphalium sylvaticum*, old-world cudweeds introduced into the United States.

ownership, *n.*—**Absolute ownership**, in *law*, the right, title, or interest in property which one party has to the total exclusion of all other parties, and subject only to the general laws.

ox, *n.* 3. Same as ⋆*ox-coin.*—**Kafir ox**, the Cape buffalo, *Bubalus caffer.*

oxadoddy (ok′sạ-dod-i), *n.* The Culver's-physic or Culver's-root, *Leptandra Virginica.*

oxalan (ok′sạ-lan), *n.* [A metathesis of *alloxan.*] Oxaluramide, $NH_2CONH.C_2O_2NH_2$, a crystalline compound made by treating oxaluric ester with alcoholic ammonia, and also by treating a dilute solution of alloxan with hydrocyanic acid and then with ammonia.

oxalantine (ok-sạ-lan′tin), *n.* [*oxalan* + *-t-* + *-ine*[2].] A crystalline substance, $C_6H_6O_6N_4$, obtained by boiling alloxanic acid a long time with water, and also by the reduction of parabanic acid with zinc and hydrochloric acid.

oxaldehyde (ok-sal′dę̄-hīd), *n.* [*ox*(*ygen*) + *aldehyde.*] Same as *glyoxal.*

oxalethyline (ok-sal-eth′i-lēn), *n.* [*oxal*(*ic*) + *ethyl* + *-ine*[2].] Meta-methyl-n-ethylglyoxaline, $C_4H_5N.N.C_2H_5$, a liquid with a strong, narcotic odor. It has the same physiological action as atropin, and is a strong base.

oxalhydrate (ok-sal-hī′drāt), *n.* [*oxal*(*ic*) + *hydrate.*] An obsolete name for a salt of saccharic acid.

oxalhydric (ok-sal-hī′drik), *a.* [*oxal*(*ic*) + *hydric.*] An obsolete name for *saccharic.*

oxalidaceous (ok-sal-i-dā′shius), *a.* Belonging to the *Oxalidaceæ*, or sorrel family of plants.

oxaline (ok′sạ-lin), *n.* [*oxal*(*ic*) + *-ine*[2].] Same as ⋆*glyoxaline.*

oxaluramide (ok-sạ-lūr′am-id), *n.* [*oxalur*(*ic*) + *amide.*] The amide of oxaluric acid, $NH_2CONH.COCONH_2$, prepared by heating the ester of the acid with alcoholic ammonia. It is crystalline and nearly insoluble in water.

oxalyl (ok′sạ-lil), *n.* [*oxal*(*ic*) + *-yl.*] The radical, C_2O_2, of oxalic acid.

oxalylurea (ok-sạ-li-lū′rę̄-ạ̈), *n.* [*oxalyl* + *urea.*] Same as ⋆*parabanic acid.*

oxamethane (ok-sa-meth′ān), *n.* [*oxa*(*late*) + *methane.*] Ethyl oxamate, $NH_2.OC.CO_2C_2H_5$, a white crystalline compound prepared by the action of dry ammonia gas on ethyl oxalate. It melts at 114–115° C.

oxamethylane (ok-sạ-meth′il-ān), *n.* [*oxa*(*late*) + *methyl* + *-ane.*] Methyl oxamate, $NH_2.OC.CO_2CH_3$, a crystalline compound made by passing dry ammonia gas into fused methyl oxalate.

oxamidin (ok-sam′i-din), *n.* [*ox*(*alic*) + *amidin.*] 1. The amidin of oxalic acid, $(C.NH.NH_2)_2$. The hydrochlorid, $C_2H_6N_4.HCl$, is formed when the hydrochlorid of oximido ester is boiled a long time with ammonia dissolved in absolute alcohol.—2. Same as ⋆*amidoxime.*

oxamine (ok-sam′in), *n.* [*oxam*(*ic*) + *-ine*[2].] A name of a number of coal-tar colors which are related to oxamic acid. See *oxamine* ⋆*black*, ⋆*blue*, ⋆*red*, etc.

oxammite (ok-sam′īt), *n.* [*ox*(*alate*) + *amm*(*onium*) + *-ite*[2].] Ammonium oxalate, occurring in yellowish-white crystals, also granular and pulverulent: found in the guano of the Guañape Islands of Peru.

oxanilamide (ok-sa-nil′am-id), *n.* A crystalline compound, $NH_2.OC.CO.NHC_6H_5$, which melts at 224° C., formed when cyaniline is decomposed by hydrochloric acid. Also called *phenyloxamide.*

oxanilic (ok-sạ-nil′ik), *n.* [*ox*(*alic*) + *anil*(*ine*) + *-ic.*] Derived from oxalic acid and aniline.—**Oxanilic acid**, phenyloxamic acid, a white crystalline compound, $C_6H_5NH.OC.CO_2H$, formed by heating aniline with an excess of oxalic acid, and also by boiling oxanilide for a short time with alcoholic potash. It melts at 149–150° C.

oxanilide (ok-san′i-lid), *n.* [*ox*(*alic*) + *anilide.*] The anilide of oxalic acid, $(CONHC_6H_5)_2$, a crystalline compound which melts at 245° C.

oxaniline (ok-san′i-lin), *n.* [*ox*(*ygen*) + *aniline.*] Hydroxyaniline or aminophenol, $C_6H_4(OH)NH_2$.

oxaphor (ok′sạ-fōr), *n.* [Trade-name.] A 50 per cent. alcoholic solution of oxycamphor, used in cardiac dyspnœa.

oxazin (ok-saz′in), *n.* [*ox*(*ygen*) + *az*(*ote*) + *-in*[2].] The unknown mother-substance, C_4H_5ON, of compounds containing a ring composed of four carbon atoms, a nitrogen, and an oxygen atom.—**Oxazin color.** See ⋆*color.*

oxazole (ok-saz′ōl), *n.* [*ox*(*ygen*) + *az*(*ote*) + *-ole.*] The unknown mother-substance, C_3H_4ON, of compounds containing a ring composed of three carbon atoms, one nitrogen, and one oxygen atom.

ox-ball (oks′bâl), *n.* 1. An ornamental brass tip designed to be placed on the horns of cattle.—2. A round hairy concretion often found in the stomachs of oxen.

oxbane (oks′bān), *n.* [*ox* + *bane*[1], 2.] A South African plant, *Buphone toxicaria*, injurious to cattle. See *poison-bulb.*

ox-bile (oks′bīl), *n.* Same as *ox-gall.* In a purified and dried condition it is occasionally used in medicine.

ox-blood (oks′blud), *n.* See *sang-de-bœuf.*

ox-bot (oks′bot), *n.* The larva of the bot-fly of the ox. See *bot*[1] and *bot-fly.* Also called *ox-warble* or *wormil.*

ox-coin (oks′koin), *n.* An ancient silver coin bearing the image of the head of an ox or a bull. Also called *ox.*

> These *ox coins* to which Pollux refers have been identified with certain silver coins with a bull's head struck in Euboea. . . . We must therefore take [their value] in Delos at two silver drachmas.
>
> *Isaac Taylor*, in The Academy, Sept. 10, 1892, p. 220.

oxeote (ok′sē-ōt), *a.* Same as *oxeate.*

Oxf. An abbreviation of *Oxford.*

Oxford gray, tracts. See ⋆*gray*, *tract*[3].

Oxfordism (oks′fǭr-dizm), *n.* 1. A characteristic of Oxford or of Oxford scholarship.—2. The characteristics of the Oxford movement, or that movement itself.

Oxfordist (oks′fǭr-dist), *n.* One who adheres to the principles of the Oxford movement.

Oxford-weed (oks′fǭrd-wēd), *n.* The Kenilworth ivy, *Cymbalaria Cymbalaria.*

ox-harrow (oks′har-ō), *n.* A large and very heavy harrow, originally drawn by oxen.

oxharrow (oks′har-ō), *v. t.* To harrow with an ox-harrow.

oxid, *n.*—**Acidic**, or **acid, oxid**, an oxid of an electronegative element or radical, which is capable of combining with the elements of water to produce an acid, or of combining with a basic oxid to produce a salt. Also known as the anhydrids of the corresponding acids.—**Blue oxid**, the finely divided metallic zinc which is condensed in the sheet-iron drums fixed upon the clay adapters of zinc retorts. It consists mainly of zinc and zinc oxid, and, on account of its extreme state of division, is employed as a reducing agent in various chemical operations, or it is sometimes converted into metallic zinc or zinc white.—**Stannic oxid**, tin dioxid, SnO_2, which occurs in nature as cassiterite or tinstone, and may be artificially prepared by strongly heating tin in the air or by igniting the metastannic acid formed by the interaction of tin and nitric acid. As thus prepared it appears as a white or slightly yellowish powder, of specific gravity 6.7, unattacked by acids except concentrated sulphuric acid. Industrially the oxid is used in making milk-glass or white enamel, and under the name putty-powder as a polishing material.—**Titanic oxid**, titanium dioxid, TiO_2. It occurs in nature in three different crystalline forms as the minerals rutile, anatase, and brookite. As artificially produced it is a white insoluble powder, closely resembling silica in its chemical relations. It has been used to give color to artificial teeth.—**Uranium oxid.** Of the oxids of uranium the one most commonly seen is the trioxid, UO_3; but the oxid of uranium, or uranium yellow of commerce, is sodium uranate, $Na_2U_2O_7$. It is prepared from the mineral pitchblende, found in the Bohemian Erzgebirge, and forms a bright-yellow powder, used to color glass, giving it a peculiar fluorescence, and to paint on porcelain.—**Zinc oxid**, zinc monoxid, ZnO, the only known compound of zinc and oxygen, occurring in nature and utilized as one of the ores of the metal. Artificially prepared by allowing zinc vapor to escape into and burn in the air, it forms a white powder, which becomes temporarily yellow when heated, and is used as a pigment, having the advantage of not blackening by exposure to air containing sulphurated hydrogen.

oxidase (ok′si-dās), *n.* [*oxid* + *-ase.*] An oxidizing ferment occurring widely distributed in animal and plant life. Many if not all intracellular oxidations are referable to the presence of oxidases. They are divided into three classes: (*a*) the *oxygenases*, which take up molecular oxygen with the formation of peroxids; (*b*) the *peroxidases*, which in themselves do not cause oxidations, but increase the power of oxidation on the part of the peroxids; (*c*) the *catalases*, which are only feeble oxidizing agents. Also *oxydase.*

oxidasic (ok-si-dā′sik), *a.* [*oxidase* + *-ic.*] Of or pertaining to the oxidases.—**Oxidasic oxidation,** combination with oxygen brought about by an organic enzym of the class known as oxidases.

Oxidation black, colors. See ★*black*, ★*color*.

oxidative (ok′si-dā-tiv), *a.* [*oxidate* + *-ive.*] Producing or tending to produce oxidation.

oxidimetric (ok″si-di-met′rik), *a.* [*oxidimetr*(*y*) + *-ic.*] Involving or concerned with oxidimetry.

oxidimetry (ok-si-dim′ẹ-tri), *n.* [*oxid* + Gr. *-μετρια*, < *μέτρον*, measure.] In *chem.*, a process of analysis, usually volumetric, in which the quantity of a substance is determined by ascertaining the quantity of oxygen which it combines with or gives up in a particular chemical reaction.

oxidizability (ok″si-dī-zạ-bil′ị-ti), *n.* [*oxidizable* + *-ity.*] The capability of being oxidized.

oxidulated, *a.* In *chem.*: (*b*) Containing a smaller proportion of oxygen than that in another compound of the same element or radical: as, *oxidulated* iron ore (magnetite) in contradistinction to red iron ore or ferric oxid.

oxidule (ok′si-dūl), *n.* [F. *oxidule*; < *oxid* + *-ule.*] A French name, not generally adopted into English, for an oxid containing a smaller proportion of oxygen than that in another compound of the same element or radical.

oxidulous (ok-sid′ụ̄-lus), *a.* Same as ★*oxidulated.*

oxime (ok′sim), *n.* [*ox*(*ygen*) + *im*(*in*)*e.*] A compound formed by the action of hydroxylamine on an aldehyde (aldoxime) or a ketone (ketoxime). The oximes contain the atomic grouping =C:N.OH. They have played an important part in the study of the stereochemistry of nitrogen. Their formation indicates the presence of carbonyl oxygen in the substances from which they are derived.

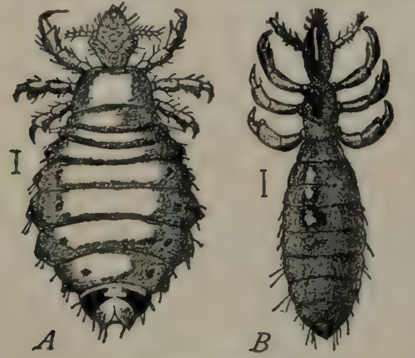
oximide (ok-sī′mid), *n.* [*ox*(*alic*) + *imide.*] The imide of oxalic acid, C_2O_2NH, a colorless crystalline compound which is easily changed into oxamide and oxalic acid.

oximido (ok-si-mī′dō). In *chem.*, the first element in some compound names, indicating that the substance named contains the isonitroso group, =N.OH.

oxindol (ok-sin′dol), *n.* [*ox*(*ygen*) + *indol.*] A colorless crystalline substance, C_8H_7ON, formed by reducing isatin or the anilide of orthonitrophenylacetic acid. Also called *indolinone.*

oxiodic (ok-sī-od′ik), *a.* [*ox*(*ygen*) + *iod*(*ine*) + *-ic.*] Containing oxygen and iodine united to the same element or radical.

ox-louse (oks′lous), *n.* Either of two species of true lice (family *Pediculidæ*) which affect cattle: *Hæmatopinus eurysternus*, known as the short-nosed ox-louse, and *H. vituli*, the long-nosed ox-louse. See ★*cattle-louse.*



Ox-louse. Female.
A, *Hæmatopinus eurysternus*; *B*, *H. vituli.*

ox-money (oks′mun-i), *n.* A tax levied on oxen. *N. E. D.*

oxolin (ok′sọ̄-lin), *n.* [*ox*(*ygen*) + *-ol* + *-in*2.] The trade-name of a low-grade substitute for india-rubber, made by impregnating such fibrous materials as hemp or jute with linseed-oil, repeatedly exposing it, spread out on trays, to the oxidizing action of air at about 45° C., and working the product between rollers into a uniform mass, capable of undergoing an imperfect vulcanization.

oxone (ok′sōn), *n.* [*ox*(*ygen*) + *-one.*]. The trade-name of sodium dioxid in compact form produced by fusion, to be used for the generation of oxygen by contact with water.

oxonic (ok-son′ik), *a.* [*ox*(*ygen*) + *-on-* + *-ic.*] Formed by the oxidation of uric acid.—**Oxonic acid**, an unstable acid, $C_4H_5O_4N_3$, which is not known in the free state. The potassium salt is formed when a solution of uric acid in caustic potash is oxidized in the air.

Oxonien. An abbreviation of the Latin *Oxoniensis*, of Oxford.

oxonite (ok′sọ̄-nīt), *n.* The trade-name of an explosive made by dissolving 54 parts of picric acid in 46 parts of nitric acid of specific gravity 1.50.

oxonium (ok-sō′ni-um), *n.* [NL., < *ox*(*ygen*) + *-on-ium.*] A radical, $^{R}_{R'}\!\!>\!O\!<\!^{R''}_{R'''}$, containing a quadrivalent oxygen atom and possessing salt-forming properties.

oxpecker, *n.* It is somewhat smaller than a robin, of a grayish-brown color, with dark wings and a yellow bill. This bird is found in northern and eastern Africa. A second species, the red-billed oxpecker, *B. erythrorhyncha*, inhabits central Africa. See *Buphaga*, with cut.

oxter, *n.* **2.** In *coal-mining*, a reëntrant corner in a working face.

oxter-plate (oks′tėr-plāt), *n.* Same as ★*tuck-plate.*

ox-warble (oks′wâr-bl), *n.* Same as ★*ox-bot.* Compare also *warble*3, 3.

ox-wort (oks′wėrt), *n.* The butter-bur or butterfly-dock, *Petasites Petasites.*

oxy-. [*oxy*(*gen*).] In *chem.*, a prefix indicating that the substance named contains oxygen. In almost all cases it is chemically synonymous with ★*hydroxy-*, which is to be preferred.

oxyacanthine (ok″si-a-kan′thin), *n.* [*oxy*(*gen*) + (?) Gr. *ἀκανθα*, thorn, spine, + *-ine*2.] A crystalline compound, $C_{19}H_{21}NO_3$, obtained from the bark of the root of the barberry, *Berberis vulgaris.* Also called *vinetine.*

oxyacetic (ok″si-a-set′ik), *a.* [*oxy*(*gen*) + *acetic.*] Same as *glycolic.*

oxyacetylene (ok-si-a-set′i-lēn), *a.* [*oxy*(*gen*) + *acetylene.*] Noting the mixture of oxygen and acetylene.—**Oxyacetylene blowpipe.** See ★*blowpipe.*

oxyacid, *n.* This term was formerly used to distinguish an acid containing oxygen from one in which this element is not present, as sulphuric acid, H_2SO_4, from hydrochloric acid, HCl. In modern organic chemistry the same term is often applied to an acid which contains both a carboxyl and a hydroxyl group, as oxyacetic or glycolic acid, $CH_2.HO.COOH$. Substances of this kind are perhaps better called *hydroxyacids* or *alcohol acids.*

oxyammonia (ok″si-a-mō′ni-ạ̈), *n.* [*oxy*(*gen*) + *ammonia.*] Same as ★*hydroxylamine.*

oxyamygdalic (ok″si-am-ig-dal′ik), *a.* [*oxy*(*gen*) + *amygdalic.*] Noting p-oxyphenylglycolic acid, $C_8H_8O_4$, which has been found in the urine in cases of acute yellow atrophy.

oxyazin (ok-si-az′in), *n.* [*oxy*(*gen*) + *az*(*ote*) + *-in*2.] One of a class of artificially produced coal-tar dyes, which includes among others gallocyanine, Meldola's blue, and the beautifully fluorescent resorcinal blue.

oxyazo-. In *chem.*, a prefix showing that the compound named is an azo compound containing hydroxyl in one of the radicals, as in *oxyazobenzene*, $C_6H_5N_2C_6H_4.OH$: same as ★*hydroxyazo-*, which is to be preferred.—**Oxyazo dyes.** See ★*dye*1.

oxybaphon, *n.* **2.** In *Gr. antiq.*, a vinegar-cruet; a small shallow vase for holding condiments.

oxybenzoic (ok″si-ben-zō′ik), *a.* [*oxy*(*gen*) + *benzoic.*] Noting benzoic acid in which hydroxyl takes the place of a hydrogen atom.—**Oxybenzoic acid**, $C_6H_4(OH)CO_2H$; hydroxy-benzoic acid. Of the three isomeric varieties the ortho compound, or salicylic acid, is the best known.

oxybromide (ok-si-brō′mid), *n.* [*oxy*(*gen*) + *brom*(*ine*) + *-ide*2.] A substance containing oxygen and bromine united to the same element or radical: as, carbon *oxybromide* or carbonyl bromide, $COBr_2$.

oxybromochlorid (ok″si-brō-mọ̄-klō′rid), *n.* [*oxy*(*gen*) + *brom*(*ine*) + *chlor*(*in*) + *-id.*] A substance containing oxygen, bromine, and chlorin united to the same element or radical: as, phosphorus *oxybromochlorid* or phosphoryl bromochlorid, $POBrCl_2$.

oxybutyric (ok″si-bū-tir′ik), *a.* [*oxy*(*gen*) + *butyric.*] Noting butyric acid in which one hydrogen atom is replaced by hydroxyl.—**Oxybutyric acid**, an acid, $C_4H_8O_3$, which occurs in three isomeric forms. Alpha-oxybutyric acid is found in the urine of diabetic patients. Also called *butanolic acid* and *hydroxybutyric acid.*

oxycaltrop (ok-si-kal′trop), *n.* [Gr. *ὀξύς*, sharp, + E. *caltrop.*] In the sponge-spicules, a caltrop with sharply pointed equal arms.

oxycamphor (ok-si-kam′fọ̈r), *n.* [*oxy*(*gen*) + *camphor.*] A name of two compounds: (*a*) *Alpha-oxycamphor*, $C_{10}H_{16}O_2$, formed by reducing camphoquinone. It melts at 203–205° C. (*b*) *Beta-oxycamphor*, $C_{10}H_{16}O_2$, made by the action of nitrous acid on β-amino-camphor. It is a crystalline substance which melts at 154–155° C. Other varieties are made by oxidizing camphene and borneol.

oxycannabin (ok-si-kan′ạ-bin), *n.* [*oxy*(*gen*) + *cannabin.*] A name formerly given, incorrectly, to *nitrocannabinolactone*, $NO_2.C_6H_3(CH_3)\underset{\llcorner O \lrcorner}{C_3H_5}CO$.

oxycaproic (ok″si-ka-prō′ik), *a.* [*oxy*(*gen*) + *caproic.*] Noting an acid derived from caproic acid by replacing one atom of hydrogen by hydroxyl.—**Oxycaproic acid**, an acid, $C_6H_{12}O_3$, four varieties of which are known. Also called *hydroxycaproic* or *hexanolic acid.* Alpha-oxycaproic acid is also called *leucic acid.* See ★*leucic.*

oxycarbanil (ok-si-kär′bạ-nil), *n.* [*oxy*(*gen*) + *carb*(*on*) + (*an*)*il.*] A colorless compound, $C_6H_4\!\!<\!\!{}^{NH}_{O}\!\!>\!\!CO$ or $C_6H_4\!\!<\!\!{}^{N}_{O}\!\!\gg\!\!COH$, prepared by fusing orthophenylenediamine hydrochlorid with urea.

oxycellulose (ok-si-sel′ụ̄-lōs), *n.* [*oxy*(*gen*) + *cellulose.*] A white amorphous compound, $C_{18}H_{26}O_{16}$ or $C_{36}H_{60}O_{31}$, made by boiling cellulose with nitric acid. Other varieties have been made by the action of potassium chlorate ($C_{24}H_{38}O_{21}$)(?), bromine water ($C_{12}H_{20}O_{11}$), and hydrogen peroxid ($C_{36}H_{62}O_{31}$). The composition of these compounds is uncertain. See ★*celloxin.*

oxycephalic (ok″si-se-fal′ik), *a.* [*oxycephal*(*y*) + *-ic.*] In *anthrop.*, characterized by oxycephaly.

> There is a generally recognised tendency to the pointed (*oxycephalic*) or sugar-loaf form of head.
> *H. H. Ellis*, The Criminal, p. 50.

oxycephaloid (ok-si-sef′ạ̈-loid), *a.* [*oxycephal*(*ic*) + *-oid.*] Similar to oxycephalic forms.

oxycephaly, *n.* **2.** In *anthrop.*, the head-form resulting from artificial deformation applied all around the head and preventing lateral and occipital growth, thus making the head very high in the region of the bregma. Similar forms result from premature synostosis of the parietals with the occipital or temporal bones. *Virchow.*

oxychlor-, oxychloro-. In *chem.*, prefixes showing that the compound named is oxychloric. See ★*oxychloric.*

oxychlorate (ok-si-klō′rāt), *n.* [*oxychlor*(*ic*) + *-ate*1.] An early name for what is now called *perchlorate*, a salt of perchloric acid.

oxychloric (ok-si-klō′rik), *a.* [*oxy*(*gen*) + *chlor*(*in*) + *-ic.*] Containing oxygen and chlorin united to the same element or radical.—**Oxychloric acid**, an early name for the substance now called *perchloric acid*, $HClO_4$.

oxychlorid, *n.*—**Phosphorus oxychlorid**, a colorless liquid, $POCl_3$, of peculiar acid smell, fuming strongly in the air, obtainable by heating together phosphorus pentoxid and sodium chlorid, and also by other processes. In organic chemistry it serves as a valuable reagent.

oxychloruret (ok-si-klō′rö-ret), *n.* An early and little-used name for an oxychlorid.

oxychromatin (ok-si-krō′mạ̈-tin), *n.* [*oxy*(*gen*) + Gr. *χρῶμα*(*τ-*), color, + *-in*2.] That portion of the nuclear substance of the cell which is stained by acid aniline dyes: equivalent to *linin.* *Heidenhain*, 1894.

oxyclad (ok′si-klad), *n.* [Gr. *ὀξύς*, sharp, + *κλάδος*, a shoot or branch.] In sponge-spicules, a form having branches.

Oxyclænidæ (ok-si-klē′ni-dē), *n. pl.* [NL., < *Oxyclænus*, the type genus, + *-idæ.*] A family of small mammals, based on remains from the Puerco Eocene: of somewhat doubtful affinities, but generally placed in the *Creodonta.* *Scott*, 1892.

oxyconine (ok-si-kō′nin), *n.* [*oxy*(*gen*) + *Con*(*ium*) + *-ine*2.] Same as *conhydrine.*

oxycopaivic (ok″si-kọ̄-pā′vik), *n.* [*oxy*(*gen*) + *copaiva* + *-ic.*] Of or pertaining to copaiba.—**Oxycopaivic acid**, a crystalline constituent, $C_{20}H_{28}O_3$, contained in paracopaiba balsam.

oxycraspedote (ok-si-kras′pe-dōt), *a.* [Gr. *ὀξύς*, sharp, + *κράσπεδον*, edge.] In *anthrop.*, having a sharp margin: said of the nasal skeleton. *Jour. Anthrop. Inst.*, 1900, p. 147.

oxycyanide (ok-si-sī′ạ̈-nid), *n.* [*oxy*(*gen*) + *cyan*(*ogen*) + *-ide*1.] A substance containing oxygen and the radical cyanogen united to the same element or radical: as, mercuric *oxycyanide*, or *oxycyanide* of mercury, $Hg_2(Cn)_2O$.

oxycymene (ok-si-sī′mēn), *n.* Hydroxycymene, the scientific name for both carvacrol and thymol.

oxycynurine (ok-si-sin′ū-rin), *n.* [*oxy(gen)* + *cynurine.*] An oxidation-product of cynurine.

oxydase, *n.* See ★*oxidase.*

oxydation, *n.* See *oxidation.*

oxydiamine (ok-si-dī′am-in), *n.* [*oxy(gen)* + *di-*² + *amine.*] A name by which several direct cotton coal-tar colors are designated.—**Oxydiamine black.** See ★*black.*

oxydimorphine (ok″si-dī-môr′fin), *n.* [*oxy-(gen)* + *di-*² + *morphine.*] A colorless non-poisonous alkaloid, $C_{34}H_{36}O_6N$, contained in opium and prepared by the gentle oxidation of morphine. Also called *oxymorphine, dehydromorphine,* and *pseudomorphine.*

oxyethyl (ok-si-eth′il), *n.* [*oxy(gen)* + *ethyl.*] Ethyl in which one hydrogen atom is replaced by hydroxyl, as $CH_2(OH).CH_2$ or $CH_3.CH(OH)$. It occurs only as a substituting group in compounds.

oxyfatty (ok-si-fat′i), *a.* [*oxy(gen)* + *fatty.*] Noting fatty acids in which part of the hydrogen is replaced by hydroxyl, as lactic acid, $C_2H_4(OH)CO_2H$, glyceric acid, $C_2H_3(OH)_2CO_2H$, and saccharic acid, $C_5H_7(OH)_4CO_2H$. *Buck,* Med. Handbook, I. 683.

oxygen, *n.* **1.** Oxygen was first liquefied on a small scale by Cailletet and Pictet near the end of the year 1877, and has since then been obtained in the liquid state in large quantity. It forms a liquid of light-blue color, with a specific gravity of 1.124 at its boiling-point (− 182°.6 C. or − 296°.7 F.), and strongly paramagnetic.—**Available oxygen,** the proportion of oxygen in a manganese or in excess of one atom for each atom of manganese, such excess alone being effective in producing free chlorin from hydrochloric acid in the manufacture of bleaching-powder.—**Oxygen star.** See ★*star*¹.

oxygenant (ok-sij′ẹ-nant), *n.* [*oxygen* + *-ant.*] A substance that produces or is capable of producing oxidation.

oxygen-carrier (ok′si-jen-kar″i-ėr), *n.* A substance used to bring about the transfer of oxygen so as to produce a compound of this element which would not be formed in the absence of the carrier. Thus, nitrogen dioxid serves as a carrier of oxygen derived from the air to sulphur dioxid and water in the lead-chamber process for making sulphuric acid.

oxygeneity (ok′si-je-nē′ị-ti), *n.* Same as ★*oxygenity.*

Oxygeneum (ok′si-jẹ̄-nē′um), *n.* [NL., < Gr. ὀξύς, sharp, + γένειον, chin, jaw.] A genus of cyprinoid fishes found in the Illinois river.

oxygeniferous (ok″si-je-nif′ẹ-rus), *a.* [*oxygen* + L. *-fer,* < *ferre,* bear.] Containing or serving to transfer oxygen.

oxygenity (ok-si-jen′ị-ti), *n.* [*oxygen* + *-ity.*] The essential character of oxygen. Also *oxygeneity.* [Rare.]

oxygenoid (ok-sij′e-noid), *a.* [*oxygen* + *-oid.*] More or less like oxygen (in some respects): formerly applied to oxygen and to the other elements which resemble it in being strongly electronegative, as chlorin, fluorin, etc.

oxygenophore (ok-si-jen′ō-fōr), *n.* [*oxygen* + Gr. -φορος, < φέρειν, bear.] An apparatus for liberating oxygen. It contains sodium peroxid, which with water yields oxygen and sodium hydrate. The latter may serve to absorb carbon dioxid. The air of an inclosed space may therefore be maintained fit for respiration by the use of this instrument. It was devised by Sabatier. *Sci. Amer. Sup.,* June 4, 1904, p. 23,769.

oxygenotaxis (ok″si-jen-ọ-tak′sis), *n.* [NL., < *oxygen* + Gr. τάξις, disposition.] Same as ★*aërotaxis.*

oxygenotropism (ok″si-jen-ot′rọ-pizm), *n.* [*oxygen* + Gr. τρόπος, a turning, + *-ism.*] Same as ★*aërotropism.*

oxyhaloid (ok-si-hā′loid), *a.* [*oxy(gen)* + *hal(ogen)* + *-oid.*] Containing oxygen and one or more of the halogen elements, fluorin, chlorin, bromine, and iodine, united to the same element or radical, as sulphuryl chlorid, SO_2Cl_2.

oxyhemacyanin, oxyhæmacyanin (ok-si-hem-ạ-sī′ạ-nin), *n.* Same as ★*oxyhemocyanin.*

oxyhemocyanin, oxyhæmocyanin (ok″si-hem-ọ-sī′ạ-nin), *n.* [*oxy(gen)* + *hemocyanin.*] The oxy compound of hemocyanin: analogous to oxyhemoglobin. See *hemocyanin.*

oxyhexactine (ok″si-hek-sak′tin), *n.* [Gr. ὀξύς, sharp, + ἕξ, six, + ἀκτίς (ἀκτιν-), ray.] In sponge-spicules, a hexactine whose rays end in sharp points: contrasted with ★*discohexactine.* See *oxyhexact.*

oxyhydrate (ok-si-hī′drāt), *n.* [*oxy(gen)* + *hydrate.*] Same as *hydroxid:* sometimes applied to an oxyhydroxid or compound of the same metal with both oxygen and hydroxyl, as the mineral limonite, $Fe_4O_3(HO)_6$.

oxyhydric (ok-si-hī′drik), *a.* [*oxy(gen)* + *hydr(ogen)* + *-ic.*] Containing oxygen and hydrogen, or depending upon the use of both these elements: as, the *oxyhydric* blowpipe (oxyhydrogen blowpipe).

oxyiode (ok-si-ī′ōd), *n.* [*oxy(gen)* + *iod(in)e.*] A name formerly used for an iodate or salt of iodic acid.

oxyiodic (ok″si-ī-od′ik), *a.* [*oxy(gen)* + *iodic.*] Iodic: as, *oxyiodic* acid, a name formerly used for iodic acid.

oxyiodide (ok-si-ī′ọ-did), *n.* [*oxy(gen)* + *iodide.*] A substance which contains oxygen and iodine united to the same element or radical: as, mercuric *oxyiodide,* $Hg_4O_3I_2$.

oxyiodine (ok-si-ī′ọ-din), *n.* [*oxy(gen)* + *iodine.*] A name originally proposed by Davy for iodine pentoxid, the anhydrid of iodic acid.

oxyisocamphor (ok-si-ī-sọ-kam′fọr), *n.* [*oxy-(gen)* + *iso-* + *camphor.*] A variety of oxycamphor made by oxidizing borneol acetate. It is a yellow crystalline substance which has the odor of vanilla and melts at 248–249° C.

Oxyjulis (ok-si-jū′lis), *n.* [NL., < Gr. ὀξύς, sharp, + NL. *Julis* for *Iulis.*] A genus of labroid fishes found on the coast of southern California.

oxyketone (ok-si-kē′tōn), *n.* [*oxy(gen)* + *ketone.*] A ketone in which part of the hydrogen is replaced by hydroxyl, as acetol, $CH_3.CO.CH_2(OH)$. More correctly called *hydroxyketone.*—**Oxyketone colors.** See ★*color.*

oxykrinin (ok-si-krin′in), *n.* [*oxy(gen)* + Gr. κρίνειν, separate, + *-in*².] Same as ★*secretin.*

oxylic (ok-sil′ik), *a.* In *chem.,* containing a hydroxyl group. *Nature,* April 11, 1907, p. 575.

oxymandel (ok-si-man′del), *a.* [*oxy(gen)* + G. *mandel,* almond (see *amygdalic*).] Same as ★*oxyamygdalic.*

oxymethylene (ok-si-meth′i-lēn), *n.* [*oxy(gen)* + *methyl* + *-ene.*] A polymerization-product $(CH_2O)_n$ of formic aldehyde, made by heating paraformaldehyde. It is a white crystalline substance which melts at 171-172° C. When heated with water it yields formaldehyde; with sulphuric acid it gives α-trioxymethylene; when allowed to stand with milk of lime it yields formic acid and the sugar formose, $C_6H_{12}O_6$. Also called *metaformaldehyde* and, less correctly, *trioxymethylene.*

oxymetric (ok-si-met′rik), *a.* Same as ★*oxidimetric.*

oxymorphine (ok-si-môr′fin), *n.* [*oxy(gen)* + *morphine.*] Same as ★*oxydimorphine.*

oxyneurine (ok-si-nū′rin), *n.* [*oxy(gen)* + Gr. νεῦρον, nerve, + *-ine*².] Trimethylglycocoll.

oxynitrate (ok-si-nī′trāt), *n.* [*oxy(gen)* + *nitrate.*] A substance which contains oxygen and the radical of nitric acid united to the same metal or electropositive radical: as, mercuric *oxynitrate,* $Hg_3O_2(NO_3)_2$.

oxynitrion (ok-si-nī′tri-on), *n.* [NL., < *oxy-(gen)* + *nitr-ic* + *-ion.*] A name proposed by Daniell for the radical NO_3, which in combination with hydrogen forms nitric acid, HNO_3, and with the metals nitrates, as potassium nitrate, KNO_3.

Oxynoë (ok-sin′ọ-ẹ̄), *n.* [NL.] The typical genus of the family *Oxynoëidæ. Rafinesque,* 1819.

Oxynoeidæ (ok-sin-ọ-ē′i-dē), *n. pl.* [NL., < *Oxynoë* + *-idæ.*] A family of opisthobranchiate gastropods with a long body, auriform tentacles, large simple or wing-like epipodia, long narrow foot, and small thin and slightly spiral shells incompletely covering the body. It contains the genera *Oxynoë* and *Lobiger,* found in the Mediterranean, the Antilles, and Polynesia.

Oxynoticeras (ok′si-nọ-tis′ẹ-ras), *n.* [NL., < Gr. ὀξύς, sharp, + νῶτος, back, + κέρας, horn.] A genus of sharply keeled ammonites with highly complicated septal sutures, occurring in the Lias.

oxypetalous (ok-si-pet′ạ-lus), *a.* [Gr. ὀξύς, sharp, + E. *petal* + *-ous.*] Having sharp-pointed petals.

oxyphenic (ok-si-fē′nik), *a.* [*oxy(gen)* + *phen(ol)* + *-ic.*] Noting a compound derived from phenol by the substitution of hydroxyl for part of its hydrogen.—**Oxyphenic acid.** Same as ★*pyrocatechol.*

oxyphenine (ok-si-fē′nin), *n.* [*oxy(gen)* + *phen(yl)* + *-ine*².] Same as *chloramine* ★*yellow.*

oxyphenol (ok-si-fē′nol), *n.* [*oxy(gen)* + *phenol.*] Same as ★*pyrocatechol.*

oxyphil (ok′si-fil), *a.* [Also *oxyphile;* < *oxy-(gen)* + Gr. φιλεῖν, love.] Having an affinity for acid dyes. Certain leucocytes of the blood are called *oxyphil leucocytes,* because of the presence in their protoplasm of granules which have such affinity for acid dyes. As eosin is one of the most common of these, the term 'eosinophil' is often used synonymously with *oxyphil,* and is in fact more common.

Ehrlich distinguished (a) eosinophil or *oxyphil* granulations staining with acid stains, (b) basophil or metachromic granulations which take on basic stains, and (c) neutrophil granulations which will stain only in neutral mixtures. *Jour. Roy. Micros. Soc.,* Aug , 1903, p. 486.

oxyphilic (ok-si-fil′ik), *a.* Same as ★*oxyphil. Simon,* Physiological Chem., p. 303.

oxyphilous (ok-sif′i-lus), *a.* [*oxyphil* + *-ous.*] Same as ★*oxyphil.*

oxyphyre (ok′si-fīr), *n.* [*oxy(gen)* + *por-(phyry).*] In *petrog.,* a name suggested by Pirsson (1895) for porphyries in which quartz, the feldspars, and feldspathic minerals preponderate: opposed to *lamprophyre.*

oxypropionic (ok″si-prō-pi-on′ik), *a.* [*oxy-(gen)* + *propionic.*] Noting an acid known in two modifications or isomers, α-oxypropionic acid, $CH_3.CH(OH).CO_2H$, and β-oxypropionic acid, $CH_2(OH).CH_2.CO_2H$. The former is ordinary lactic acid, also known as ethidene lactic acid. The latter is known as hydracylic acid or ethylene lactic acid, and may be obtained by boiling β-iodopropionic acid with water, or on heating it with moist silver oxid. Both are syrupy, non-crystallizable liquids.

oxyprotonic (ok″si-prọ-ton′ik), *a.* [*oxy(gen)* + Gr. πρῶτος, first, + *-on-ic.*] Noting an organic substance, of the character of a polybasic acid, which Maly obtained on careful oxidation of albumin.

oxyprotosulphonic (ok″si-prō″tọ-sul-fon′ik), *a.* [*oxy(gen)* + Gr. πρῶτος, first, + *sulph(ur)* + *-on-ic.*] Same as ★*oxyprotonic.*

oxypurine (ok-si-pū′rin), *n.* [*oxy(gen)* + *purine.*] A substance derived from purine by replacing hydrogen by hydroxyl, as 6-oxypurine or hypoxanthine ($C_5H_4ON_4$), 2,6-dioxypurine or xanthine ($C_5H_4O_2N_4$), and 2,6,8-trioxypurine or caffeine ($C_5H_4O_3N_4$).

oxypyrone (ok-si-pī′rōn), *n.* [*oxy(gen)* + *pyr(omeconic)* + *-one.*] Same as ★*pyromeconic acid.*

oxyquinaseptol (ok′si-kwin-ạ-sep′tol), *n.* [*oxy(gen)* + *quin(ine)* + *asept(ic)* + *-ol.*] A trade-name for quinoline orthophenol-sulphonate, $C_6H_4{\begin{matrix}{}^{/}OH\\{}_{\backslash}SO_3H\end{matrix}}(C_9H_7N)_2$, a powerful but little used antiseptic. It forms amber-colored transparent hexagonal crystals and melts at 185° F. Also called *diaphtherin.*

oxyquinoline (ok-si-kwin′ọ-lin), *n.* [*oxy(gen)* + *quinoline.*] A substance derived from quinoline by replacing hydrogen by hydroxyl, as α-oxyquinoline or carbostyril, $C_9H_6N(OH)$.

oxyrhynch, *n.* **II.** *a.* Pertaining to or having the characters of the *Oxyrhyncha;* having a sharp or pointed rostrum, as a spider-crab.

oxystomous (ok-si-stō′mus), *a.* Same as *oxystomatous.*

oxysulphate (ok-si-sul′fāt), *n.* [*oxy(gen)* + *sulphate.*] A substance which contains oxygen and the radical of sulphuric acid united to the same metal or electropositive radical, as ferric oxysulphate (Monsell's salt), $Fe_2O(SO_4)_2$.

oxysulphion (ok-si-sul′fi-on), *n.* A name proposed by Daniell for the radical SO_4, which in combination with hydrogen forms sulphuric acid (H_2SO_4), and with the metals sulphates, as sodium sulphate (Na_2SO_4).

oxytocia (ok-si-tō′si-ạ̈), *n.* [NL., < Gr. ὀξύς, sharp, quick, + τόκος, parturition.] Abnormally rapid parturition.

oxytocous (ok-sit′ọ-kus), *a.* Same as *oxytocic.*

oxytoluene (ok-si-tol′ụ-ēn), *n.* [*oxy(gen)* + *toluene.*] The same as *cresol.*

oxytoluic (ok″si-tọ-lū′ik), *a.* [*oxy(gen)* + *toluic.*] Denoting an acid derived from toluic acid by replacing part of the hydrogen by hydroxyl.—**Oxytoluic acid.** Same as *cresotic acid.*

oxytriæne (ok-si-trī′ēn), *n.* [Gr. ὀξύς, sharp, + τρίαινα, a trident.] In the sponge-spicules, a triæne with sharp arms. See *triæne.*

oxytrichinous (ok-si-trik′i-nus), *a.* Same as *oxytrichine.*

oxytriod (ok-si-trī′od), *n.* [Gr. ὀξύς, sharp, + E. *triod.*] In the nomenclature of the sponge-spicules, a triod with straight, sharp-pointed arms. See *triod.*

oxytropine (ok-si-trō′pin), *n.* Same as ★*oscine*^{2}.

Oxyura, *n.* **2.** A group of hymenopterous insects corresponding to the family *Proctotrypidæ.* [Obsolete.]

oxyuriasis (ok′si-ụ̄-rī′ạ-sis), *n.* [NL., < *Oxyuris* + *-iasis.*] Infection with nematode worms of the genus *Oxyuris;* pinworm infection.

oxyurifuge (ok-si-ū′ri-fūj), *n.* [*Oxyuris* + L. *fugere,* flee.] A vermifuge of special service in the destruction and removal of *Oxyuris vermicularis* from the intestines.

Oxyuris curvula, a large pinworm which infests the rectum of horses.—**Oxyuris equi.** Same as ★*Oxyuris curvula* Schrank. 1788.

oyster, *n.*—**Drift oyster,** *Ostrea subtrigona,* of Australia, so named because its buds are thought to be shifted by tides and storms.—**Fresh-water oyster,** an ostreiform bivalve found adhering to rocks in African and South American rivers.—**Green oyster,** an oyster whose branchiæ and labial tentacles are colored green by the presence of the coloring-pigment of the diatom *Navicula ostrearia* in the blood: esteemed a delicacy.—**Long oyster,** an English sailors' name for the crawfish.—**Mud-oyster,** *Ostrea angasi,* regarded by some conchologists as a variety of the European species, *O. edulis.* [Australia.]—**Saddle oyster.** Same as *saddle-shell.*—**Spanish oyster,** a species of *Pinna.* [Bermuda.]

oysterage (ois′tėr-ạ̄j), *n.* [*oyster* + *-age.*] An oyster-bed.

oyster-bay, *n.* **2.** An eating-house where oysters form the principal dish served.

oyster-cellar (ois′tėr-sel″ạ̈r), *n.* An oyster-shop in a cellar or basement.

oyster-colored (ois′tėr-kul″ọ̈rd), *a.* Of the somewhat iridescent color of light gray mother-of-pearl. See ★*oyster-white.*

oyster-crusher (ois′tėr-krush″ėr), *n.* A common name of *Heterodontus galeatus,* a shark found in Australian waters. It is interesting from the fact that it is a representative of many related forms belonging to the Devonian and Carboniferous ages. More commonly known as the *Port Jackson shark.*

oyster-drag (ois′tėr-drag), *n.* Same as *oyster-dredge.*

oyster-float (ois′tėr-flōt), *n.* A raft or float for immersing oysters in fresh water to remove the salt-water flavor.

oyster-fungus (ois′tėr-fung″gus), *n.* Same as *oyster-mushroom.*

oyster-gray (ois′tėr-grā″), *n.* A slightly dark silver-gray color.

oysterize (ois′tėr-īz), *v. t.*; pret. and pp. *oysterized,* ppr. *oysterizing.* [*oyster* + *-ize.*] To make or treat like an oyster; swallow whole, like an oyster. *N. E. D.* [Rare.]

oyster-meter (ois′tėr-mē″tėr), *n.* In England, an officer appointed by the Court of the Fishmongers' Company to supervise the oyster industry. *N. E. D.*

oysterous (ois′tėr-us), *a.* [*oyster* + *-ous.*] Resembling oysters. [Rare.]

oyster-parlor (ois′tėr-pär″lọ̈r), *n.* A restaurant where oysters are the principal food served. [Colloq., U. S.]

oyster-planter (ois′tėr-plan″tėr), *n.* One who prepares oyster-beds, and plants and raises oysters.

oyster-seed (ois′tėr-sēd), *n.* Oyster spat; also young oysters at any stage of development suitable for transplantation to artificial culture-beds.

oyster-whelk (ois′tėr-hwelk), *n.* An herbivorous Australian gastropod, *Potamides ebeninus,* found associated with oysters. Also called *toondah.*

oyster-white (ois′tėr-hwīt″), *a.* A white color with greenish-gray shadows, usually seen in satin for women's gowns.

oystery (ois′tėr-i), *a.* [*oyster* + *-y*^{3}.] Abounding in oysters; smelling or tasting like oysters.

Ozark series. See ★*series.*

ozocerine, ozokerine (ō-zọ̄-sē′rin, -kē′rin), *n.* [*ozocer(ite)* + *-ine*^{2}.] A soft, semisolid yellow material resembling vaseline, made from the mineral ozocerite, used in ointments, etc. When bleached by treatment with fuming sulphuric acid, it has been used instead of fat oil in the extraction of the perfume of flowers by the process of enfleurage.

ozonator (ō′zọ̄-nā-tọ̈r), *n.* [*ozone* + *-ator.*] The trade-name of an apparatus for the production of ozone by means of an electrical brush-discharge in air.

ozone, *n.* In the gaseous state, ozone, if seen through a column of sufficient depth or under considerable pressure, has a blue color like that of ordinary oxygen, but more marked, and when liquefied appears dark blue. The liquid boils under atmospheric pressure at —106° C. (—159° F.). It is magnetic, and more soluble in water than ordinary oxygen. Animals breathing air which contains ozone in appreciable quantity present the phenomena of slow respiration, enfeebled circulation, lowering of bodily temperature, venous condition of the blood, and ultimately death. Air charged with ozone has been applied to the treatment of distilled spirits with a view to the removal of fusel-oil, but with only partial success.—**Ozone hydrogen.** See ★*hydrogen.*

ozone-cage (ō′zōn-kāj), *n.* Same as *ozone-box.*

ozone-test (ō′zōn-test), *n.* See ★*test*^{1}.

ozone-water (ō′zōn-wâ″tėr), *n.* Water which contains ozone in solution. In popular language this term has been applied to hydrogen dioxid.

ozonide (ō′zọ̄-nid), *n.* A substance formerly supposed to contain as a constituent ozone or the specially active form of oxygen. The term is sometimes rather vaguely applied to a substance capable of producing ozone.

ozonine (ō′zọ̄-nin), *n.* [*ozone* + *-ine.*] A trade-name for turpentine which has been treated with ozone: used as a bleaching agent.

Ozonium (ọ̄-zō′ni-um), *n.* [NL. (Link, 1809), so called from the branching stems, < Gr. ὄζος, a branch, + *-on-ium.*] A name applied to certain forms of sterile fungous mycelia whose connection with fruiting forms is either doubtful or unknown. The root-rot of cotton and various other cultivated and wild plants in the southwestern United States has been attributed to *O. auricomum.* See ★*root-rot.*

> *Ozonium* . . . applied, as is well known, since the time of Palisot de Beauvois to sterile mycelial strands which sometimes attained a great size in damp woods, cellars, and mines, but their connection with distinct forms of sporophore, owing to the slight attention which was formerly paid to the study of mycelia, was never actually decided. *De Bary* (trans.), Fungi, p. 29.

ozonize, *v. t.*—**Ozonized oxygen,** oxygen which has been in part converted into the allotropic form ozone.

ozonizer, *n.*—**Andreoli ozonizer,** an apparatus for the production of ozone. It consists of a number of flat pewter rings, toothed on the inside and connected longitudinally by strips of metal to form a cage. The cage fits over an exhausted glass cylinder into which an electrode is sealed so closely that the points touch the glass everywhere. The leads from an induction-coil are connected with the cage and with the electrode in the vacuum-tube. The exhausted tube may be replaced by one through which water circulates. The ozonizer is placed inside the vessel in which the ozone is to be produced, and is highly efficient.—**Berthelot ozonizer,** an apparatus for the production of ozone from air. Two concentric vessels of thin glass are arranged to permit a flow of air in the space between them. The whole apparatus is placed in a tall jar which contains a weak solution of sulphuric acid, while some of the same liquid is placed in the inner tube. Two coils of bare copper wire are placed, one about the ozonizer, the other within the central tube. The coils are connected with the terminals of the secondary of an induction-coil, and when this is put in action the silent discharge passes across the air-space and can be seen in a darkened room as a violet light. The oxygen of the air is transformed to ozone under the electric influence.—**Brodie ozonizer,** a form of apparatus for producing ozone. It consists of two concentric glass vessels sealed together, the intervening space being occupied by the gas (oxygen) which is to be submitted to a silent discharge. Flowing water is used to cool the inner vessel.

ozonous (ō′zọ̄-nus), *a.* [*ozone* + *-ous.*] Having some of the characteristic properties of ozone; resembling ozone: as, an *ozonous* odor.

Ozorthus (ō-zôr′thus), *n.* [NL., < Gr. ὄζος, branch, + ὀρθός, straight.] A genus of blennioid fishes found in Japan.

ozostomia (ō-zọ̄-stō′mi-ạ̈), *n.* [NL., < Gr. ὀζόστομος, having a bad breath, < ὄζη, bad smell, + στόμα, mouth.] A condition in which the breath has an offensive odor.

ozotype (ō′zọ̄-tīp), *n.* [Gr. ὄζη, bad smell (?), + τύπος, type.] In *photog.,* a method of carbon- or pigment-printing invented by T. Manly.

> The principle involved is the old, old one discovered by Ponton in 1839, the splitting up, by light, of chromium trioxide into chromium sesquioxide, and the rendering insoluble of soluble organic matter by the action of the nascent oxygen. In the practical application of this to *ozotype,* paper is coated with a solution containing a chromate and a manganous salt, and exposed under a negative in the ordinary way, till a distinct image of a brown color is formed. The image is positive and is then washed in water till the unaltered salts are removed, and nothing but the positive image is left. The next step is to immerse the print and a piece of unsensitized carbon tissue in a solution containing acetic acid and hydroquinone or other suitable phenol derivative. They are then withdrawn and squeegeed together, and hung up to dry. When dry, they are placed for half an hour in cold water and then transferred to warm water, and developed as an ordinary carbon print. *Sci. Amer.,* May 6, 1899, p. 277.

P 3. (*c*) The initial of *pressure*, used in formulæ for fluid pressure, as of liquids or gases upon an area. In British and American writings it is usually expressed in pounds per square inch or pounds per square foot, the zero of pressures being the vacuum line as given by the barometer, or about 14.7 pounds below the pressure of the atmosphere. In metric units it is usually expressed in kilograms per square centimeter. (*d*) In *mechan.*, a symbol for power. (*e*) In *psychophys.*, the symbol for the Fechnerian time-error.—**4.** An abbreviation: (*g*) Of *population.* (*i*) Of the Latin *pars*, a part. (*j*) [*l. c.* or *cap.*] Of *participle.* (*k*) [*l. c.* or *cap.*] Of *past.* (*l*) Of the Latin *pater*, father. (*m*) [*l. c.* or *cap.*] Of *penny.* (*n*) [*l. c.* or *cap.*] Of *pint.* (*o*) [*l. c.* or *cap.*] Of *pipe.* (*p*) [*l. c.* or *cap.*] Of *pole.* (*q*) Of the Latin *pondere*, by weight. (*r*) In *electro-technics*, of *power.* (*s*) Of *president.* (*t*) Of *prince.* (*u*) Of *professor.*

Pa. An abbreviation of *Pennsylvania.*

P. A. An abbreviation of *Post Adjutant.*

p. a.. An abbreviation (*b*) of *particular average*, a term used in marine-insurance policies. See *average*^{2}, *n.*, 1. (*d*).

paar (pär), *n.* A local name in northern Ceylon and southeastern India for sands upon the present sea-bottom which are cemented into solid rock by calcareous deposits formed through the agency of *Polyzoa* and nullipores.

> The sand forming the floor of the Gulf [of Manaar] has, in many places, been cemented in situ into calcareous sandstones or "calcretes," locally known as "*paars.*" In the north part the *paars* arrange themselves roughly into three groups, running parallel with Adam's Bridge, north-north-west to south-south-east.
>
> *J. Lomas*, in Rep. Government of Ceylon on the Pearl [Fisheries of the Gulf of Manaar, 1903, p. 151.

paauw (pä'ō), *n.* [D. *paauw*, peacock.] The South African bustard (*Eupodotis*): extensively adopted as a popular name.

pabulary (pab'ū-lā-ri), *a.* [LL. *pabularius*, < L. *pabulum*, food. See *pabulum.*] Relating to or affording pabulum or food; of the nature of pabulum.

pac, *n.* See ★*pack*^{4}.

pacai (pä-kī'), *n.* [Also *pacay*; Quichua.] In Peru, *Inga Feuillei*, an indigenous tree of the mimosa family, bearing large woody pods which contain a sweet, cottony, white, edible pulp surrounding the seeds. Representations of the pods in terra-cotta and the pods themselves are found in ancient graves, together with other food-staples and ceremonial articles. See *pacay.*

pacara (pä-kä-rä'), *n.* [Native name.] In western Argentina, either of two large trees belonging to the mimosa family, *Anneslia Pacara* (*Calliandra Pacara* of Grisebach) and *Enterolobium contortisiliquum.* They yield excellent woods used for carpentry and house-construction. In eastern Argentina the last-named species is called ★*timbo* (which see).

paca-rana (pä'kä-rä'nä), *n.* The Tupi Indian name for the excessively rare Peruvian rodent *Dinomys branichi.* The name signifies 'false paca,' and alludes to the resemblances between the two animals, although *Dinomys* has no cheek-pouches and possesses a tail. See cut in next column.

pace^1, *n.*—**Pace of the wicket**, in *cricket*, the degree of speed with which the ball comes from the pitch when bowled. *Hutchinson*, Cricket, p. 252.

pace^1, *v. t.* **4.** To set the pace for (a contestant) in training for a race, or in racing, as for a boat's crew, for a bicycle rider, etc.

> All sorts and conditions of riders volunteered their services . . . to *pace* anyone to whom they might be assigned. *Field*, Jan. 26, 1901, p. 105.

To pace the warp, to regulate the delivery of the warp in the loom for even weaving.

pace-follower (pās'fol"ō-ėr), *n.* In *cycling*, one who follows a pace-making or wind-breaking machine to attain greater speed. The machine followed may be anything from an ordinary bicycle to a motor or even a locomotive.

pace-maker, *n.* **1.** Specifically, one who rides between a bicycle racer and the wind, acting as a shield. The original idea of making the pace has become merged into that of acting as a wind-shield.
2. One who or that which makes a record for speed.

pacer, *n.* **4.** Same as ★*pace-maker*, 1.

pachak (pä-chäk'), *n.* [Hindi.] The costus, *Heterotrichum Lappa.* See *costus-root* and *Saussurea.*

Pachastrella (pak-a-strel'ä), *n.* [NL.] The typical genus of the family *Pachastrellidæ.* *O. Schmidt*, 1838.

Pachastrellidæ (pak-a-strel'i-dē), *n. pl.* [NL., < *Pachastrella* + *-idæ.*] A family of *Demospongiæ* in which the chief megascleres are caltrops, there are no triænes, and the microscleres are spirasters, spherasters, or microrhabds. It includes the genera *Pachastrella*, *Calthropella*, and *Dercitus.*

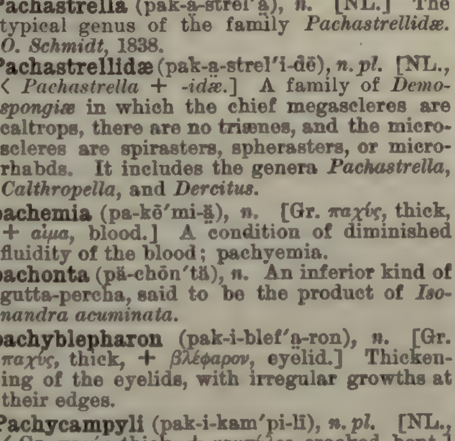
pachemia (pa-kē'mi-ä), *n.* [Gr. παχύς, thick, + αἷμα, blood.] A condition of diminished fluidity of the blood; pachyemia.

pachonta (pä-chōn'tä), *n.* An inferior kind of gutta-percha, said to be the product of *Isonandra acuminata.*

pachyblepharon (pak-i-blef'a-ron), *n.* [Gr. παχύς, thick, + βλέφαρον, eyelid.] Thickening of the eyelids, with irregular growths at their edges.

Pachycampyli (pak-i-kam'pi-lī), *n. pl.* [NL., < Gr. παχύς, thick, + καμπύλος, crooked, bent.] In Hyatt's classification of the *Cephalopoda*, a suborder of the *Ammonoidea* in which the ornamentation of the shell attains extreme complexity in the evolution of the ribs, nodes, and spines, and the sutural lobes and saddles have broad bases and are deeply divided only at their edges.

pachycampylous (pak-i-kam'pi-lus), *a.* [NL. *Pachycampyli* + *-ous.*] Pertaining to or having the characters of the *Pachycampili.*



Paca-rana (*Dinomys branichi*).

Pachycardia^2 (pak-i-kär'di-ä), *n.* [NL., < Gr. παχύς, thick, + καρδία, heart (*Cardium*, genus of mollusks).] A genus of prionodesmaceous pelecypods with oblong trigonal shells having terminal beaks, two strong divergent cardinal teeth, and a long posterior lateral tooth in each valve. It occurs in the Alpine Trias.

pachycholia (pak-i-kō'li-ä), *n.* [NL., < Gr. παχύς, thick, + χολή, bile.] Diminished fluidity of the bile.

Pachycormus (pak-i-kôr'mus), *n.* [NL. (Coville, 1905), < Gr. παχύς, thick, + κορμός, trunk.] A genus of dicotyledonous trees of the family *Anacardiaceæ.* See *Veatchia.*

pachydermatocele (pak"i-dėr'ma-tō-sēl), *n.* [Gr. παχύς, thick, + δέρμα(τ-), skin, + κήλη, tumor.] **1.** The presence of several fibrous tumors on a nerve, associated with a pendulous condition of the skin in the region.

> Still another and important manifestation is the so-called plexiform neuroma or *pachydermatocele* of Valentine Mott. This in a more diffuse form produces the elephantiasis neuromatodes.
>
> *Med. Record*, June 13, 1903, p. 925.

2. Same as *dermatolysis.*

Pachydermia laryngis, thickening of the mucous membrane of the larynx, a result of chronic inflammation.—**Pachydermia vesicæ**, a condition in which the mucous membrane of the bladder is thickened and assumes the appearance of skin.

pachydermial (pak-i-dėr'mi-al), *a.* [*pachydermi(a)* + *-al*^{1}.] Relating to or marked by pachydermia, or thickening of the skin.

pachydermic (pak-i-dėr'mik), *a.* [*pachyderm* + *-ic.*] Thick-skinned; pachydermatous.

pachyglossous (pak-i-glos'us), [illegible] Gr. παχύς, thick, + γλῶσσα, tongue, + *-ous.* [illegible]ing a thick tongue.

Pachygnathus (pa-kig'nā-thus), *n.* [NL., also orig. in the erroneous form *Pachynathus* (Swainson, 1831), < Gr. παχύς, thick, + γνάθος, jaw.] A genus of fishes, belonging to the family *Balistidæ*, found on both sides of the Pacific.

pachymose (pak'i-mōs), *n.* [*Pachyma* + *-ose.*] An amorphous substance, $C_{10}H_{24}O_{14}$, obtained from *Pachyma pinctorum*, a Chinese fungus, and also from *P. Cocas.* It is probably a glucoside.

Pachyornis (pak-i-ôr'nis), *n.* [NL., < Gr. παχύς, thick, + ὄρνις, bird.] A genus of *Dinornithidæ*, or moas, characterized by extremely massive leg-bones and short tarsi.

pachyostosis (pak"i-os-tō'sis), *n.* [Gr. παχύς, thick, + ὀστ(έον), bone, + *-osis.*] Literally, a thickening of the bone: specifically applied to an increase in the amount of the bony network or reticulum that more or less completely fills the long bones of some animals, notably the elephant among mammals and *Dinornis* among birds.

pachyotous (pak-i-ō'tus), *a.* [Gr. παχύς, thick, + οὖς (ὠτ-), ear.] Marked by abnormal thickness of the ears.

pachyperitonitis (pak"i-per"i-tō-nī'tis), *n.* [NL., < Gr. παχύς, thick, + περιτόναιον, peritoneum, + *-itis.*] Inflammation of the peritoneum, resulting in notable thickening of this membrane.

pachyphyllous (pak-i-fil'us), *a.* [Gr. παχύς, thick, + φύλλον, leaf.] In *bot.*, thick-leafed.

Pachypops (pak'i-pops), *n.* [NL., < Gr. παχύς, thick, + ὑπό, below, + ὤψ (ὠπ-), eye.] A genus of fresh-water sciænoid fishes of Guiana and Brazil.

pachyrhizid (pak-i-rī'zid), *n.* [NL. *Pachyrhiz(us)* + *-id*^{2}.] A bitter non-nitrogenous substance obtained from the seed of *Pachyrhizus angulatus*, which acts as an energetic poison, especially to fish.

pachysaurian (pak-i-sâ'ri-an), *n.* [Gr. παχύς, thick, + E. *saurian.*] A thick-skinned reptile.

Pachytheca (pak-i-thē'kä), *n.* [NL., < Gr. παχύς, thick, + θήκη, a box.] Minute hollow spheroidal bodies of brown color described by Hooker, 1853, from the Ludlow bone-bed of the English Upper Silurian. They resemble *Sporangites* from the Devonian of North America, and they appear to be spores of lycopods or algæ, though their vegetable nature has been doubted by Solms-Laubach.

pachytrichous (pa-kit'ri-kus), *a.* [Gr. παχύς, thick, + θρίξ (τριχ-), hair, + *-ous.*] Having thick hair. *Mayne.*

Pacific blockade, in *international law*, a blockade exercised by one government or several governments for the purpose of forcing another to some demanded action without actual war. The first pacific blockade was that by Russia, France, and England against Greece in 1827.

pacificity (pas-i-fis′i-ti), *n.* [*pacific* + *-ity.*] The quality of being peaceful or pacific.

pacifico (pä-thē′fi-kō), *n.* [Sp. = E. *pacific.*] 1. A person of pacific or peaceful character; a non-belligerent; specifically, a native of Cuba or the Philippines who submitted without opposition to the Spaniards when the latter took possession of those islands.—2. During the Spanish-American war of 1898, a non-combatant.

> The *pacificos* who are in the fields supply the food for the army [insurgents in Cuba, February, 1898], and are under military supervision.
> *Harper's Weekly*, Feb. 19, 1898, p. 174.

pacify, *v. t.* 3. To make peaceful by force; render inactive by depriving of the means of opposition.

> Since I last wrote to you we have been having a quiet time down South "*pacifying* the country." This consists in collecting arms—which we keep—and inviting the burghers to take oaths—which they don't keep—at least some don't.
> *C. Lowther*, in War's Brighter Side, xxvii.

Pacinotti ring. See ★*ring*^{1}.

pack^1, *n.* 12. In *tanning*, a workmen's name for a lot of hides placed in the same pit to undergo the liming process.—**Still pack,** in card-games in which two packs are used alternately, the one which is not in play.

pack^1, *v.* I. *trans.* 12. To have in one's baggage, that is, in one's possession; possess. [Slang, western U. S.]

> Gents, I don't *pack* the nerve! . . . No, sir; I sees enough of woman an' her ways to teach me that now ain't no time to be standin'about irresoloote an' ondecided, an' I'm goin' to dig out. *A. H. Lewis*, Wolfville Nights, xi.

II. *intrans.* 7. To transport goods as a business: as, to *pack* over the trail. [U. S.]—**To pack in** or **out,** to march into or out of (the woods), carrying necessary provisions, etc., by packs, either on the backs of men or of animals.

pack^4 (pak), *n.* [Also *pac*, detached from *shoe-pack*, taken as a compound of *shoe*^{1} + *pack*^{1}.] 1. A moccasin made of hide prepared with tallow and wax, used by various North American Indian tribes.—2. A heavy felt or waterproof half-boot worn by loggers in the lumber-camps in winter.

package, *n.* 5. A box, basket, or other receptacle in which perishable articles of food are packed for transportation. See the extract.

> The kind of *packages* used in handling the different truck crops varies greatly in the different trucking regions, and they are now in many cases very different from those that were used in the early days of the business.
> *Yearbook, U. S. Dept. Agr.*, 1900, p. 451.

pack-drill (pak′dril), *n.* A military punishment in which the offender is compelled to walk up and down for a certain number of hours in full marching order, with arms, ammunition, knapsack, and overcoat.

> To meet an esteemed friend doing *pack-drill* outside the guard-room is embarrassing.
> *R. Kipling*, Daughter of the Regiment, in Plain Tales [from the Hills, p. 184.

packer, *n.* 8. Same as *pack-animal.* [Australia.]—9. One who packs juries, cards, facts, etc., to serve purposes of his own; one who is a confederate in fraudulent enterprises. Compare *pack*^{1}, *v. t.*, 8.—10. In a type-setting machine, an assembler.

> The types [in a simplex machine] are now guided, one by one, to the *packer*, where they run on a cam, are lifted, and are then carried forward to proper position. Types succeed each other in the packer with 3-em space between the words, until a continuous line is formed extending across the back of the keyboard, with the face in view.
> *Census Bulletin* 216, June 28, 1902, p. 61.

Subsurface packer, a machine so constructed as to create a compact bottom under a layer of loose soil.

packery (pak′e-ri), *n.*; pl. *packeries* (-riz). [*pack*^{1} + *-ery.*] 1. Same as ★*packing-house.*—2. A pack made up of various small packages.

packing^1, *n.* 1. Specifically: (*a*) A fibrous or spongy material which will hold oil or grease, used as a lubricating-pad on journals and bearings. (*b*) A device for making a fluid- or gas-tight stationary joint, as a joint in flanged piping made by a soft annular ring placed in V-grooves. (*c*) The material used where a sliding element is to move steam-, water-, or gas-tight under pressure, to allow sliding but prevent the leakage of fluid.
5. In *halma*, the stage of the game in which the player gets his men in order on the side of the board farthest from him.—6. In *shipbuilding*, the pieces of wood used to fill up the space between the bilgeways and the bottom of the ship. A large number of long wooden wedges are placed transversely between the packing and bilgeways, and the weight of the vessel is transferred from the building-blocks to the packing before launching the vessel by driving in the wedges.—7. In *telephony*, the crowding together or caking of the particles of carbon in a microphonic transmitter, whereby the sensitiveness of the instrument is impaired.—**Flax packing,** packing made by braiding flax into a square cord into which a quantity of grease has been worked: used for pump-pistons and in stuffing-boxes.—**Gum-packing,** soft packing of rubber or other elastic solid material, usually made in sheets which can easily be cut to any desired shape and size.—**Hydraulic packing,** packing for the piston or plunger of a pump or of a hydraulic press: usually of leather.

packing-board (pak′ing-bōrd), *n.* A device used to hold crackers in position when packing them into barrels.

packing-house (pak′ing-hous), *n.* An establishment in which provisions, especially beef and pork, are packed.

packing-machine (pak′ing-ma̤-shēn″), *n.* A machine for putting articles into packages or bundles; specifically, in *baking*, a machine for sorting and arranging crackers for packing in cartons or barrels. It consists essentially of a hopper in which the freshly baked crackers are placed, and suitable delivery-mechanism for selecting the crackers and setting them on edge upon conveyers which deliver them to the packers.

packing-piece (pak′ing-pēs), *n.* A separator; a short piece placed between two pieces that are to be fastened together, to keep them separated by a certain space.

packing-plate (pak′ing-plāt), *n.* A plate used to prevent the flow of a fluid across a certain area or space covered by the plate; a relief- or pressure-plate on the back of a slide-valve.

packing-ring, *n.* 2. A piston-ring; a ring of packing, either fibrous or metallic, placed in a stuffing-box or around a joint.

packing-strip (pak′ing-strip), *n.* 1. A strip of packing used to make a tight joint.—2. A liner; a metal strip used to build up a part of a machine, to take up the play in a joint or bearing.

pack-rope (pak′rōp), *n.* A rope used to secure a load to a pack-saddle.

packsand (pak′sand), *n.* A very fine-grained sandstone with calcareous cement so loosely consolidated that it may be cut with a spade. [Local, U. S.]

pack-trail (pak′trāl), *n.* A narrow single-file trail for pack-animals. [Western U. S.]

Pac. Oc. An abbreviation of *Pacific Ocean.*

Pacouria (pa-kö′ri-ä̤), *n.* [NL. (Aublet, 1775), < Carib. *pacouri* (*pacouri-rana*, the type species), Galipi *pacoury.*] A genus of dicotyledonous plants of the family *Apocynaceæ.* The type species, *P. Guianensis*, was originally described from South America, but has not since been found there. See *Landolphia*, *Vahea*, and *india-rubber*, 1.

pacova (pä-kō′vä), *n.* [Aboriginal name in Brazil.] 1. *Renealmia escaltata*, a plant belonging to the ginger family, with handsome scarlet flowers.—2. The banana.

pacovicugna (pak″ọ̄-vi-kö′nyä̤), *n.* [(*al*)*paca* + *vicugna.*] A cross between the alpaca and vicugna. Compare ★*catalo.*

paction, *n.* Specifically—2. In *international law*, a contract between nations which is to be performed by a single act, and of which execution is at an end at once. *Bouvier*, Law Dict.

pactorial † (pak-tō′ri-a̤l), *a.* [*pactory* + *-al*^{1}.] In *Scottish law*, same as ★*pactory.*

pactory † (pak′tọ-ri), *a.* [NL. **pactorius*, < L. *pactor*, one who makes a pact, < *pacisci*, agree: see *pact.*] Relating to a pact, agreement, or compact; of the nature of a compact.

pacu-grass (pak′ö-gràs), *n.* A small aquatic plant, *Ichthyobroma monadelphum* (*Lacis monadelpha* of Bongard), with delicate star-shaped pink flowers, belonging to the family *Podostemonaceæ.* It is a native of Guiana and Brazil and is a favorite food of the pacu.

pad^1, *n.* 2. [*pad*^{1}, *v.*] A dull sound, as of footsteps.

> Then there came from the compound the soft '*pad-pad*' of camels—'thieves' camels,' the Bikaneer breed that don't bubble and howl when they sit down and get up.
> *R. Kipling*, Kidnapped, in Plain Tales from the Hills, [p. 123.

pad^1, *v. i.* 2. To move with the soft thud of a bare foot striking the ground. [Rare.]

> The tune carried among the lanes and dwellings of the village, and naked feet *pad-padded* quickly up over dust and the grass. *Cutcliffe Hyne*, A Master of Fortune, v.

pad^3, *n.* 1. (*g*) A large floating disk-like leaf-blade, chiefly that of the water-lilies: used mostly in the combination *lily-pad;* so called from its suggesting a cushion. Also *pad-leaf.*

> If the petiole of a *lily pad* be traced down under the water, it will be found to arise from an intricate mass of thick knotted stems. *Coulter*, Plant Relations, p. 181.

4. Specifically, the pile of tobacco-leaf segments formed by booking, that is, laying smoothly one above another for use in cigar-making.—**Archesporial pad.** See ★*archesporial.*—**Nautical pads,** type forms of certain formulæ for the convenience of the navigator, and for the acceleration of his work. Also *navigation-pads.*—**To bowl off one's pads.** See ★*bowl2.*

pad^3, *v. t.* 6. In *leather-making*, to apply a heavy coating of solution to. *Davis*, Manuf. of Leather, p. 324.—7. In India, to pack on an elephant's pad.

pad-chuck (pad′chuk), *n.* A chuck having a square hole to receive the ordinary brace-bits, the hole or socket being of the same size as that in a brace.

pad-color (pad′kul″ọ̈r), *n.* A color that is applied to the cloth in a padding-machine.

paddies^2 (pad′iz), *n. pl.* A child's name for hands. Compare *pad*^{3}, 1 (*c*).

padding-liquor (pad′ing-lik″ọ̈r), *n.* In *calico-printing*, a liquor or solution of olein-oil and perhaps other constituents, with which the cloth is prepared, or padded, after bleaching and before printing. In the madder style of printing, an oil solution is used after dyeing and before steaming.

padding-mangle (pad′ing-mang″gl), *n.* A machine, consisting essentially of a vessel or tub and a pair of squeezing-rollers, for the treatment of cotton piece-goods chiefly, either for dyeing them with some coloring matter or preparing them with a mordant.—**Slop padding-mangle,** in *calico-printing*, a machine with pressure-rollers or -bowls for the continuous and thorough saturation of the cloth with a mordant or color, the cloth being kept full width and free from creases.

paddle^1, *v.* I. *intrans.* 6. To throw the feet outward with a circular sweep when trotting: said of horses. Also *dish.*

II. *trans.* 4. In *leather manuf.*, to wash or color by means of a paddle. See ★*paddle*^{1}, *n.*, 8. *Modern Amer. Tanning*, p. 93.—5. To pat, as the ore in a roasting-furnace, with the flat side of a paddle. *Phillips and Bauerman*, Elements of Metallurgy, p. 647.

paddle^1, *n.* 6. (*e*) A broad, thin piece of wood, or a ruler, in which holes have been bored, used in flogging. It inflicts a painful blow. (*f*) A tool used in working the charge of material in the hearth of the black-ash furnace in the Leblanc process for making carbonate of soda. Also called *slice.*
8. A tank containing a revolving wheel or paddle for washing, tanning, or coloring skins. *Modern Amer. Tanning*, p. 96.—**Duck-foot paddle,** a propelling device of an early design, used in steamboats before the adoption of the paddle-wheel. Vertical oars or sculls were mounted on each side of the hull, receiving a vertical motion from cranks above them, by which they were immersed for the working-stroke and lifted out of the water for the return. A second set of cranks and rods gave them the backward push which caused propulsion. *Hiscox*, Horseless Vehicles, p. 37.

Paddle-box boat. See ★*boat.*

paddle-engine (pad′l-en″jin), *n.* An engine for driving paddle-wheels on a vessel.

paddle-float (pad′l-flōt), *n.* One of the transverse planks fastened to the rim of a paddle-wheel of a vessel. See cuts under *paddle-wheel*, 1.

paddle-race (pad′l-rās), *n.* The sternward-flowing water which is driven back by a paddle-wheel of a steamer in motion.

paddle-staff, *n.* 3. A wooden paddle used in the mashing process in brewing: something like a spade in shape.

paddle-vat (pad′l-vat), *n.* Same as ★*paddle*^{1}, *n.*, 8. *Modern Amer. Tanning*, p. 100.

paddle-wheel, *n.*—**Radial paddle-wheel,** a paddle-wheel in which the floats or blades are flat boards or metal plates bolted directly to the radial arms. Such blades have the disadvantage of not entering and leaving the water at the best angle.

paddle-wing (pad′l-wing), *n.* See ★*wing-deck.*

paddle-worm (pad′l-wėrm), *n.* A bluish-green or yellowish-green polychætous worm, *Phyllodoce lamelligera*, from 8 to 12 inches long, found under stones and shells in the Laminarian zone.

paddling (pad′ling), *n.* 1. The act of one who paddles, in any sense.—2. The act of throwing the feet outward with a circular movement when trotting: said of horses.

paddock¹, *n.* **3.** Applied depreciatively to a person: in the play of "Macbeth," an evil spirit or a familar.

> *First Witch.* I come, Graymalkin!
> *Sec. Witch.* *Paddock* calls.
> *Third Witch.* Anon.
> *All.* Fair is foul, and foul is fair:
> Hover through the fog and filthy air.
> *Shak.*, Macbeth, i. 1.

paddock², *n.* **2.** A piece of land of any size, inclosed or not, used for cultivation. [Australia.] *E. E. Morris*, Austral English.—**3.** In *mining:* (*a*) A store-yard near a mine-shaft for ore or wash-dirt. (*b*) An open excavation in a superficial deposit. *N. E. D.*

paddock², *v. t.* **2.** To make into a paddock, as a run for sheep. [Australia.]

> When a run is not fenced, each flock of sheep requires a shepherd. . . . When a run is "*paddocked*," shepherds are not required;—but boundary-riders are employed, and these men are responsible not only for the sheep but for the fences.
> *Trollope*, Australia and New Zealand, I. xx.

3. In *mining*, to place or store (ore) in a paddock; dig or form a paddock in. [Australia.]

Paddy's hurricane. See ★*hurricane*.

paddy-barrow (pad′i-bar″ō), *n.* [*Paddy*¹ + *barrow*².] A wheel-barrow having a curved bottom and no removable sides. [Colloq., U. S.]

paddy-bird, *n.* **2.** In India, one of the small egrets which frequent the rice- or paddy-fields.—**3.** A name said to be applied by sailors to the sheath-bill, *Chionis*.

paddy-drill (pad′i-dril), *n.* See ★*drill*¹.

paddy-insect (pad′i-in″sekt), *n.* A Chinese silkworm.

Paddyism (pad′i-izm), *n.* [*Paddy*¹ + *-ism.*] An Irish characteristic; an Irishism.

paddy-lucerne (pad′i-lų̄-sėrn″), *n.* Same as *native* ★*lucerne*.

paddywhack, *n.* **4.** A fury; a rage. [Slang.]

> "Hold on, till King loses his temper. . . . He 'll be in a ravin' *paddy-wack.*" *R. Kipling*, Stalky and Co., p. 30.

pad-eye (pad′ī), *n.* In *ship-building*, a flat rectangular piece of metal with an eye or ring projecting edgewise from its surface, the whole forming one solid piece. It is attached to the surface on which it is placed by screws or rivets through the flat part.

pad-foot (pad′fu̇t), *n.* **1.** In certain parts of England, as Yorkshire, a name for a goblin or a spectral creature, traditionally appearing as a dog, a sheep, or simply as a 'ghost.' The name is said to be due to the fact that the goblin was imagined to run with a soft sound of footsteps, by the side of persons walking at night. [Eng. dial.]—**2.** A footpad. [Prov. Eng.]

pad-groom (pad′gröm), *n.* A mounted groom who follows his master when on horseback.

padkost (päd′kost), *n.* [D., < *pad*, path, + *kost*, provision.] In South Africa, provisions taken for use on a journey.

pad-leaf (pad′lēf), *n.* See ★*pad*³, 1 (*g*).

padouk (pä-douk′ or pä-dök′), *n.* [Burmese *pa-touk.*] Either of two large leguminous trees, *Pterocarpus Indicus* and *P. macrocarpus*, and also their woods. The former species is found from India and Burma to the Malayan islands, the Philippine Islands, and China; while the latter species, to which the name more properly belongs, is confined to Burma and yields the finest timber. The wood of this latter species is a deep, rich red streaked with black, and is used for the finest cabinet work, especially the interior finishing of sleeping-cars. Compare *redwood*, 2, *kiabooca-wood*, *Pterocarpus* and ★*asana*.

padrao (pä-drän′), *n.* [Pg. *padrão*, a model, standard, pattern, monument, = E. *patron* and *pattern*.] A monument. [Portuguese use.]

> The *padraos* were intended to be eternal monuments of Portuguese achievement. They were stone pillars with an inscription, and the arms of Portugal carved upon them—the well-known "cinco chagas," with the orle of the seven castles of Algarve. Each explorer was to plant one on a conspicuous point at his furthest point. The *padraos* were named after saints.
> *Geog. Jour.* (R. G. S.), XII. 10.

padre, *n.* **2.** A minister of any Christian denomination or a native priest. [India.]

padroadist (pä-drō-ä′dist), *n.* [Pg. *padroado* (beside *patronado*), patronage, < LL. *patronatus*, patronage: see *patronate*.] In India, one belonging to the Roman Catholic Church who upholds the custom of the padroado (patronage) claimed in that country by the king of Portugal. *N. E. D.*

pad-roller (pad′rō″lėr), *n.* In *calico-printing*, a roller in a cylinder printing-machine which applies color to the cloth, as in the production of aniline blacks.

padronage† (pa-drōn′ạj), *n.* [*padrone* + *-age.*] Same as ★*padronship*.

padrone, *n.* **2.** In Italy: (*a*)† The prime minister of the papal curia. *N. E. D.* (*b*) The landlord of an inn. (*c*) The captain or master of a Mediterranean trader.

padronism (pa-drōn′izm), *n.* [*padrone* + *-ism.*] The custom, now a felony in the United States, of bringing Italian children into a foreign country, in what was practically a state of slavery, to sing in the streets, beg, etc., for their 'padrone' or master.

padronship† (pa-drōn′ship), *n.* [*padrone* + *ship.*] The function or office of the prime minister of the papal curia: he is the cardinal patron or padrone. Also called *padronage*.

pad-saw (pad′sâ), *n.* A keyhole-saw; a thin, narrow saw, fastened in a split handle by two thumb-screws, used for cutting holes in the interior part of work and for sawing curves.

Paduanism (pad′ų̄-ạn-izm), *n.* [*Paduan* + *-ism.*] The characteristics of the Latin dialect of Padua (Patavium) or their use: used with reference to Livy, who was born in that place, and was criticized for his *Patavinitas* or Paduanism. See *patavinity*.

pæanize (pē′a̤-nīz), *v. i.*; pret. and pp. *pæanized*, ppr. *pæanizing*. [Gr. παιανίζειν, usually παιωνίζειν, < παιάν, a pæan.] To chant or sing triumphantly or joyfully.

pædology, pædomesoblast, pædomorphism, pædoparthenogenesis, etc. See ★*pedology*, etc.

pænol (pē′nol), *n.* [*Pæ(o)n(ia)* + *-ol.*] An aromatic crystalline compound, $CH_3CO.C_6H_3(OH)(OCH_3)$, found in the bark of the root of *Pæonia Moutan*. It is the monomethyl ether of dihydroxyacetophenone.

P. æq., Part. æq. [*l. c.* or *cap.*] Abbreviations of the Latin *partes æquales*, equal parts.

paganalian (pā-ga̤-nā′li-a̤n), *a.* [*paganali(a)* + *-an.*] Relating to the paganalia, or festival of the pagus, in ancient Italy. See *paganalia*.

paganization (pā″ga̤n-i-zā′shọn), *n.* [*paganize* + *-ation.*] The act of paganizing or the process of becoming paganized.

paganry (pā′ga̤n-ri), *n.* [*pagan* + *-ry.*] Pagan practices; paganism. [Rare.]

page², *n.* **4.** Any one of several South American uraniid butterflies marked with black and green in such a manner as to suggest a page's uniform.

Page effect. The tone or sound emitted by iron when it is subjected to sudden magnetization or demagnetization or to the rapid reversals of magnetization produced by an alternating current.

page-gage (pāj′gāj), *n.* A measuring-rod of wood or brass, notched to define the proper length of a page of type.

page-proof (pāj′pröf), *n.* A proof in page form, as distinguished from a *galley-proof* in a long strip.

paginary (paj′i-nā̤-ri), *a.* [L. *pagina*, page, + *-ary.*] Same as *paginal*.

paging-figure (pā′jing-fig″ų̄r), *n.* In *printing*, the number of a page of a book, etc.

> One of the novelties of reformed typography is the omission of all *paging figures*, both at the head and at the foot of the page.
> *De Vinne*, Mod. Book Composition, p. 145, note.

pagiopod (paj′i-ọ-pod), *a.* and *n.* **I.** *a.* Having the characters of or belonging to the *Pagiopoda*.

II. *n.* A member of the *Pagiopoda*.

Pagiopoda (paj-i-op′ọ-dä̤), *n. pl.* [NL., < Gr. πάγιος, solid, + πούς (ποδ-), foot.] In Schiödte's system, a division of the *Heteroptera* which includes the six purely aquatic families and corresponds rather closely to the *Cryptocerata*.

pago (pä′gō), *n.* [= Chamorro *pago*, Tagalog *balibago*, Malayan *baru*, Java *waru*, Tahitian *parau* or *barau*, Fijian *vau*, Samoan *fau*, Hawaiian *hau.*] In Guam, *Pariti tiliaceum*, a tree with tough inner bark, which is the principal source of cordage on the island. Ropes made from it are used for halters of buffalo and cattle, and for cables for ferrying bamboo balsas across the mouths of streams. See ★*balibago*, *corkwood*, and *mahoe*¹.

pagoda, *n.* **5.** A small ornamental structure made in imitation of an Eastern pagoda: especially, such a building in the streets of a city in which various small articles, such as tea, etc., are sold.—**Swami pagoda**, an Indian gold coin with a crescent and three figures, one representing Swami or Krishna.

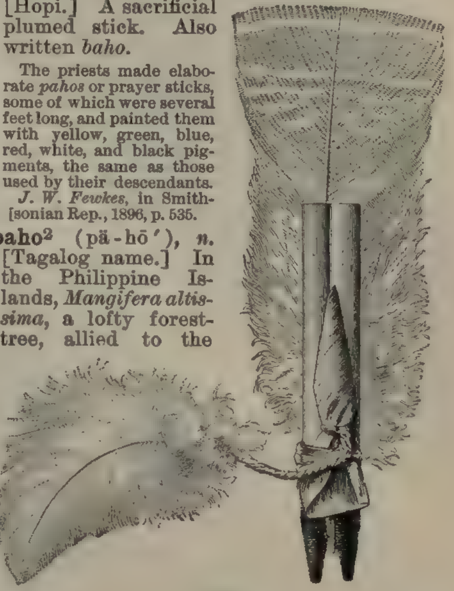
pagolo (pä′gō-lō), *n.* Same as ★*pangolo*.

pagoscope (pag′ọ-skōp), *n.* [Gr. πάγος, frost, + σκοπεῖν, view.] An apparatus for predicting frosts, a form of hygrodeik which shows the current temperature of the dew-point. It consists of a framework carrying a wet-bulb and a dry-bulb thermometer, a diagram of numbered curve-lines, and a pointer; for dew-points below freezing the diagram is colored, and the observer perceives graphically the possibility of frost during the approaching night.

pagurid (pag′ų̄-rid), *a.* Same as *paguroid*.

paha (pä-hä′), *n.* [Amer. Ind. (Minnesota and Iowa).] A North American Indian name for low knolls, inconspicuous elliptical hills, or elongated ridges of glacial drift capped with loess. The name was introduced by *W. J. McGee*, Pleistocene History of Northeastern Iowa, in Rep. U. S. Geol. Surv., 1898–90, I. 220.

pahi (pä′hẹ), *n.* [Tahiti.] A canoe or ship.



Paho.

paho¹ (pä′họ), *n.* [Hopi.] A sacrificial plumed stick. Also written *baho*.

> The priests made elaborate *pahos* or prayer sticks, some of which were several feet long, and painted them with yellow, green, blue, red, white, and black pigments, the same as those used by their descendants.
> *J. W. Fewkes*, in Smithsonian Rep., 1896, p. 535.

paho² (pä-hō′), *n.* [Tagalog name.] In the Philippine Islands, *Mangifera altissima*, a lofty forest-tree, allied to the mango, but bearing much smaller fruit. The latter is preserved by the natives, who gather it before it is ripe and pickle it in vinegar.

pahong (pä′hōng), *n.* [Chamorro name.] In Guam, the knob-fruited screw-pine, *Pandanus dubius*, a species with broad coarse leaves and a head of fruit composed of drupes each of which terminates in a projecting point. The seed kernels are edible and have a pleasant flavor, but are not a food staple of the natives. The leaves are too stiff for textile uses, though on other islands they are sometimes woven into mats of inferior quality after having been made pliable by heat.

pai (pī), *n.* Same as *pie*⁵.

paidological, paidologically, paidology, etc. See ★*pedological*, etc.

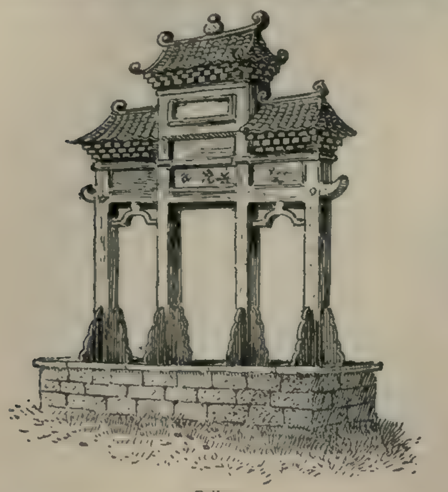
paidonosology (pī″dọ-nọ-sol′ọ-ji), *n.* Same as *pedonosology*.

paillard (pä-yär′), *n.* [F. See *palliard.*] A vagabond who sleeps in straw; hence, one who lives a low, knavish life; a dissolute fellow.

> The male part of the upper class are in youth a set of heartless profligates; in old age, a parcel of poor, shaking, nervous *paillards*. *Borrow*, Lavengro, xciv.

paillasse, *n.* **4.** A solid bed of masonry, as for the floor of an oven or furnace; by extension, any pedestal or base-block built of masonry if of considerable dimensions. *C. H. Haswell*, Mech. and Engin. Pocket-book, p. 1048. [Rare.]

pailoo, pailou (pī′lö), *n.* [Also *pai-low*; < Chin. *pai*, tablet, + *lou*, an upper story or room; a tower.] An elaborate gateway-like erection usually of massive hewn stone set up in China on the roadside near a city or in some public place in a city or town, by the local inhabitants (with imperial sanction) in honor of some one distinguished for filial piety or for some meritorious act, as when a widow commits suicide rather than remarry. A pailoo consists of four massive squared pillars (buttressed with conventional Chinese lions, the two in the center being taller than those at the side and supporting two horizontal cross-beams instead of one (as at the side), and covered with incised inscriptions eulogistic of the honored one and his or her virtues. The table is placed against the upper beam of the main division.



Pailoo.

pai marire (pī mä′rē̤-rā̤). [Maori, lit. good and peaceful.] A new faith, or religious superstition, that arose in New Zealand about 1864, and was supposed to be based on revelations from the angel Gabriel. The followers of this religion were called *hau-haus*, and were distinguished for their cruelty in the war against the colonial government.

pain¹, *n.*—**Bearing-down pains,** involuntary straining efforts which occur during childbirth.—**False pains,** colicky pains occurring toward the end of pregnancy, but not due to uterine contractions.—**Referred pain,** pain felt in some other part than that in which the exciting cause exists, as the pain in the knee common in cases of hip-disease. *Phil. Med. Jour.*, Jan. 31, 1903, p. 187.—**Vagabond pains,** wandering pains.

painiu (pī-nū′), *n.* [Hawaiian name.] In the Hawaiian Islands, a liliaceous plant, *Funckia Menziesiana*, with the habit of a *Tillandsia*, growing on old tree-trunks or on stony ridges at elevations of from 2,000 to 6,000 feet above the sea.

pain-point (pān′point), *n.* In *psychophys.*, same as ★*pain-spot.*

> He [Goldscheider] admits *pain-points* (points sensible to pain), but not a specific organ for pain nor special nerves to transmit it.
> *Ribot* (trans.), Psychol. of Emotions, p. 27.

pain-sensation (pān′sen-sā″shọn), *n.* In *psychol.*, the specific quality of sensation derived from the pain-spots of the skin and from the terminal organs of pain within the body. Psychologists are now agreed that pain is to be recognized as a distinct sensation, but have not yet reached agreement on the point of the number of primary pains. It may be that there is but one pain quality, the introspective differences being referable to differences of intensity, duration, recurrence, volume, etc.; or it may be that the bodily organs which are the seat of the various organic pains furnish each their own special pain quality.

> The sensations of pain are very different from either the temperature or the pressure sensations. . . . I could almost posit an area for the pressure sensations, but the *pain sensations* seemed to have no bigness at all.
> *E. B. Titchener*, Exper. Psychol., I. ii. 95.

pain-spot (pān′spot), *n.* In *psychophys.*, a spot upon the skin sensitive and sensitive only to pain, and representing a terminal organ of the pain-sense.

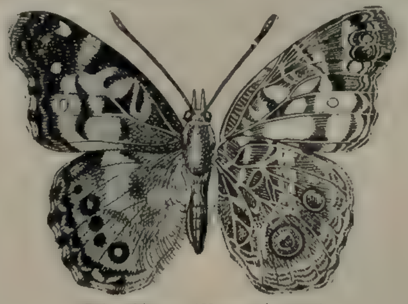
> The *pain spots* are more numerous than any of the others. There is no outward indication of their existence.
> *E. B. Titchener*, Exper. Psychol., I. ii. 95.

Asphalt paint. See *asphalt* ★*brown.*—**Balmain's paint,** calcium sulphid, used as a paint. After exposure to bright light it exhibits beautiful bluish phosphorescence in a dark room.—**Bartlett's fume paint,** paint produced by smelting lead ore in such a manner 'as to produce a maximum of fume, which is collected in iron pipes and, when cooled, filtered through woolen bags. The filtered fume, known as *blue powder*, is converted, by burning, into white crusts which are smelted, together with gray slags, in a low blast-furnace, yielding slag lead and a purified fume. This is collected in condensing-tubes and sold as white paint. It consists of about 26 per cent. of oxid of lead, 65 per cent. of sulphate of lead, and 6 per cent. of oxid of zinc.—**Indian paint.** (*c*) The strawberry-blite, *Blitum capitatum.* (*d*) The hoary puccoon, *Lithospermum canescens.* (*e*) Species of *Tradescantia.*—**Metallic paint,** a coating or paint used for painting ironwork to prevent its rusting. It is composed, usually, of some oxid of iron mixed with oil.—**Waterproof paint,** the trade-name under which sundry compositions are sold, for the most part involving the use of cheap materials as substitutes for or diluents of ordinary oil paint. Petroleum and stearic acid residues, rosin, sawdust, marble dust, etc., have been so applied.

Paint. [*l. c.* or *cap.*] An abbreviation of *painting.*

paint-brush, *n.* **2.** In *bot.*, the shrubby St. John's-wort, *Hypericum prolificum*, so called from its brush of yellow stamens; also the king-devil, *Hieracium præaltum*, named with reference to the yellow flower-head.—**Devil's paint-brush.** See ★*devil's-paint-brush.*—**Flora's paint-brush,** the orange hawkweed, *Hieracium aurantiacum.*—**Indian paint-brush,** the (Eastern) painted cup, *Castilleja coccinea*; also the Californian *C. parviflora Douglasii*: the name alluding to the highly colored brush-like inflorescence. The latter is also called *scarlet paint-brush.*—**Pink paint-brush.** See ★*escobita.*—**Scarlet paint-brush.** See *Indian* ★*paint-brush.*

painted-beauty (pān″ted-bū′ti), *n.* A handsome American nymphalid butterfly, *Vanessa huntera*, occurring in lower Canada and over most of the United States. Its larvæ feed on the everlasting plant.



Painted-beauty (*Vanessa huntera*).
Slightly reduced.

painter², *n.*—**To cut the painter,** to take oneself off; make off: said by convicts, etc., when 'making themselves scarce' as early as 1700. It has more recently been used in a political connection referring to the separation of a colony from the mother country. [Colloq.]

painterish (pān′tėr-ish), *a.* [*painter*¹ + *-ish.*] Like a painter or that of a painter: said of a style of art criticism which is too technical for the general reader. [Rare.]

> The study on Manet is a trifle too *painterish* for general interest.
> *Burlington Mag.*, III. 108.

painterite (pān′tėr-īt), *n.* [*Painter*, a personal name, + *-ite*².] A green to yellow micaceous mineral from Pennsylvania, allied to the vermiculites.

painting, *n.* **1.** The earliest use of color is decorative: representation comes later. Primitive people are content with simple ornamentation of objects of utility, especially pottery: as advance is made in civilization and permanent buildings are created, drawing and color, both of which may be included under the term 'painting,' become dependent upon architecture and, with its improvement, become more and more monumental. (*a*) *Egyptian and Assyrian.* In the historical sequence, the first appearance of painting as a developed and stable art was in Egypt, where its use during the entire known history of that country was common and developed according to clearly defined conventions. In Egyptian painting, the drawing, color, and detail are subordinated to the flat surface of the wall. There is no perspective or relief, no sense of light and shade, and little realization of natural color. The general scheme is quiet and harmonious; pure color is employed, but in light tones; the human figure is well drawn in outline; and sympathy for animal life is keen. The technical process employed appears to have been distemper. In excavations in Assyria traces of color have been found but have soon disappeared. (*b*) *Greek and Roman.* In Hellenic civilization painting was as highly regarded as sculpture, but much less information about it has come down to us. Mural decoration is to be found in the earliest Mycenæan remains. Painted pottery of every period appears. Of monumental painting and independent pictorial composition during the historical period there are no remains. For information we depend upon descriptive texts in classic authors, and the large body of paintings on vases which are supposed to represent the style of famous painters and which are sometimes their actual works. From an examination of these it appears that during the earlier and more important period of Greek painting the general scheme of Egyptian art was followed. A composition was arranged to tell its story intelligibly, with little aid from perspective or light and shade. It is probable that the color was pure, well arranged, and agreeable. The great beauty of Greek painting, in the strong period, rested undoubtedly upon the fine drawing and dignified composition of the figures. The pictures of Polygnotus in the fifth century B.C. were probably very like the contemporary frieze of the Parthenon. During and after the time of Alexander the Great (fourth century B.C.) painters came to a much fuller realization of nature. Perspective, foreshortening, landscape, and still-life received attention. This later period is undoubtedly well represented in the large number of works found at Pompeii. The processes employed by the classic painters were distemper and encaustic. See *Greek art*, under *Greek.* (*c*) *Byzantine.* With the decline of civilization in the later Roman and Byzantine periods, the higher pictorial qualities disappeared, but the decorative qualities remained, strengthened perhaps by the rigidity of the favorite material, mosaic. The human figure was again treated as a pattern and the composition as a decorative arrangement. The color-schemes are harmonious and powerful. The finest examples are in Rome, Ravenna, and Venice. The traditions of Byzantine painting passed over into Russia and Greece, where they are still followed. Medieval and Gothic painting of the Byzantine empire entered northern Europe chiefly in the form of illumination of manuscripts or miniature-painting, of which innumerable fine specimens were produced between the eighth and sixteenth centuries. The monasteries of Ireland were especially prolific in the production of miniatures during the early medieval period. The structural conditions of Gothic architecture did not admit the extensive areas of mural decoration which were possible in Byzantine and Romanesque buildings. There was occasional painting of walls, some of which still remains, as notably in the Abbey of St. Albans in England; but for the most part stained glass took the place of mural painting. The vast churches of the thirteenth century were decorated with glass which has never been equaled. The Cathedral of Chartres in France contains nearly its complete outfit of medieval glass in good condition. (*d*) *Renaissance in Italy.* The development of Byzantine painting into the Renaissance and modern schools was practically continuous in Italy. The modern historic sequence and the emergence of personalities begin with the record of Vasari, which mentions first Cimabue of Florence, Duccio di Buoninsegna of Siena, and Margaritone of Arezzo. In the next generation a painter of great independent power appeared in Giotto di Bondone (1276–1337), who has left the important decorations of the Church of San Francesco at Assisi, of the Arena Chapel at Padua, and of the Church of Santa Croce in Florence. Giotto was loyal to the fine decorative principles of the Byzantine painters, but in the realization of dramatic qualities belongs definitely to modern art. During the fourteenth century (the trecento) painting followed the lines laid down by Giotto, but in the fifteenth century (the quattrocento) the influence of antique culture and art begin to be felt. The drawing of the nude was first attempted in the decoration of the Brancacci chapel in the Church of Santa Maria del Carmine in Florence by Masaccio (1401– about 1429). Toward the end of the century the freely developed type of the early Renaissance picture is shown in the work of a large number of painters, among whom may be mentioned Fra Filippo Lippi (about 1402–69), Filippino Lippi (about 1460–1505), Sandro Botticelli (1447– about 1510) in Florence, Giovanni Bellini (about 1427–1516) in Venice, and Andrea Mantegna (1431–1506) in Mantua. At the beginning of the sixteenth century (the cinque-cento) a larger scale and a stronger tone were given to painting by the school formed on the cartoons of Michelangelo (1475–1564) and Leonardo da Vinci (1452–1519), exhibited in Florence in 1505. There was at the same time a more perfect appreciation of antique art and of the sciences of perspective and anatomy. The most extraordinary creation of the period was the decoration of the ceiling of the Sistine Chapel in the Vatican by Michelangelo. The work, however, which had the healthiest and most lasting influence upon modern art was the decoration of the Stanze and Loggie of the Vatican by Raphael (1483–1520). The orderly architectonic arrangement of the 'School of Athens' and 'Disputa' in the Stanza della Segnatura dominated pictorial composition until the nineteenth century. In Venice the greater freedom and power of the epoch were felt in the color and technical perfection of such masters as Titian (about 1477–1576), Tintoretto (1518–1594), and Veronese (1528–1588). After these masters painting became part of the general baroque movement and reached its highest expression outside of Italy in the work of Rubens, Rembrandt, and Velasquez. During the Italian Renaissance the favorite process for monumental work was fresco. For smaller pictures tempera was used at first. Oil-painting came gradually into use in the last half of the fifteenth century. (*e*) *Flemish, German, and Dutch Renaissance.* North of the Alps the development of painting proceeded mainly through illumination, the miniatures taking on more and more pictorial quality. The painting of the Primitives defines itself clearly in the work of Hubert and Jan van Eyck in Flanders, late in the fourteenth and early in the fifteenth centuries. The van Eycks did not invent oil-painting, as is commonly supposed, but they improved the method of its application and made its use for easel pictures popular. The production of pictures of great refinement was abundant in Flanders and the Netherlands in the fifteenth century. The art of painting entered France through Burgundy, then in close alliance with Flanders. Contemporaneous with the Flemish Primitives, and developed in much the same manner, a powerful school formed itself in the various towns of Germany, notably Cologne, Augsburg, and Nuremberg. The German school culminated in Albrecht Dürer (1471–1528) and Hans Holbein the Younger (about 1497–1543). In the seventeenth century the strong technical qualities, bold composition, and realism of the later Italian or baroque period found their way to Flanders and reached their complete development there. Peter Paul Rubens (1577–1640), a Fleming, trained in Italy, is the chief and typical master of the period. He was followed by Jakob Jordaens (about 1593–1678), Sir Anthony Vandyke (1599–1641), Frans Hals (about 1580–1666), and others. In Holland the naturalistic and technical tendencies of the time culminated in Rembrandt (1607–69), and the famous Dutch painters of interiors, landscape, and still-life, Teniers the Younger (about 1610–90), Brouwer (about 1606–38), Pieter de Hooch (about 1632– about 1681), Wouverman (about 1619–68), Hondekoeter (1636–95), Ruysdael (about 1625–82), Hobbema (1638–1709), etc. (*f*) *Spanish.* Spanish painting did not assume importance before the seventeenth century: it then fell into line with the schools of Italy and Flanders and produced several masters of splendid attainment as colorists and technicians. The chief of these is Velasquez (born about 1599, died Aug. 7, 1660). With him may be associated Theotocopuli, called El Greco (about 1545–1625), Ribera, called Spagnoletto (1588–1656), Zurbaran (1598–1662), and Murillo (about 1618–82). In the eighteenth century the strong qualities of Spanish painting reappear in the work of Francisco Goya (1746–1828). Since Goya Spanish painting has been dominated by French art. The strongest master of the nineteenth century is Fortuny (1838–74). (*g*) *French.* A definite school of French Primitives may be said to appear first in the later part of the fourteenth century about the court of the early Valois, under the leadership of the four sons of John II. (died 1364), Charles V., and the Dukes of Anjou, Berry, and Burgundy. Philip the Bold (1342–1404), Duke of Burgundy, who was then in close alliance with Flanders, became especially the patron of the fine arts. In the main the French Primitives preceded those of Flanders in style and method. In the Renaissance period the influence of Italian art was clearly defined. The chief representatives are Jean Foucquet (1415–90), François Clouet (about 1500– about 1571), Jean Perréal (1455–1527), and Jean Cousin (1501–90). During the reign of Francis I. (1515–1547) an effort was made to Italianize French art by the importation of Italian masters, especially for the decoration of the palace of Fontainebleau. A school of decorative painters was formed at this time which had a lasting influence upon the art of France. The leaders were Il Rosso (1494–1541), and Primaticcio (1504–1570). The movement begun at Fontainebleau found further expression in the seventeenth century, not in the importation of Italian masters, but in the adoption of the principles of later Italian art, in which advanced classicism was blended with the decorative freedom of the baroque style. The most notable landscape-painter was Claude Lorrain (1600–82). Art in France was much affected by the general centralization which characterized the reign of Louis XIV. (1643–1715). The artistic center of the movement was the Academy of Painting and Sculpture, established in 1648 on the model of those already installed in Italy. The chief organizer of the Academy, Charles Lebrun (1619–1690), established himself firmly in the favor of the king, and with his fellow academicians controlled the vast artistic production of the period. The painting of the reign of Louis XIV. is blended with architecture, sculpture, and other arts in the decoration of the royal palaces, especially Versailles. In the eighteenth century the Academy still controlled art in France, but the poverty of the court and the less serious character of the times did not permit its development in large and dignified schemes of decoration. Painters drifted into the representation of the brilliant, loose, and artificial life of the day; the *féte champétre* and *conversation galante* were the types preferred. The chief masters of the eighteenth century are Watteau (1684–1721), Le Moyne (1688–1737), Pater (1699–1736), Boucher (1703–70), and Fragonard (1732-1806); Chardin (1699–1779) and Greuze (1725–1805) belong to a more serious class. The first excavations at Pompeii in 1748, following those at Herculaneum in 1709 and 1738, recalled the attention of the artistic world from the current types of conventional classicism to the pure forms of the ancient monuments themselves. This interest was strengthened by the criticism of Winckelmann, which laid the foundation of the modern science of archæology. Painting in France responded to the classical tendencies of the period, which coincided with the Revolution and Empire. The leader of the classicists was Jacques Louis David (1748–1825), whose most prominent pupils were Girodet (1767–1824), Gérard (1770–1837), Gros (1771–1835), and Ingres (1780–1867). A reaction against the Academy of the seventeenth century, the artificiality of the eighteenth century, and the rigidity of the classicists of the imperial period appeared in the romantic movement which occurred in France in the early part of the nineteenth century. The exhibition in 1819 of "The Raft of the Medusa" by Géricault (1791–1824), followed by that of the "Dante and Virgile" by Delacroix (1799–1863), gave expression to this tendency. The principle of direct appeal to nature was definitely introduced into the practice of French painting by the exposition in Paris in 1824 of the works of the English painters Constable (1776–1837) and Bonington (1801–1828). Modern French realism comes from the Dutch, through the English landscape-painters. This interest in nature superimposed upon the foundation laid by the Academy has given to French painting its breadth and completeness. In the direct study of nature the French painters visited frequently the forest of Fontainebleau, the most picturesque region within easy reach of Paris, and made their headquarters at the little village of Barbison near the point where the Paris road enters the forest. An important school of landscape-painters grew up in connection with this colony, with which were associated Jean François Millet (1814–75), Diaz de la Peña (1807–76), Théodore Rousseau (1812–67), Corot (1796–1875), Charles François Daubigny (1817–78), Troyon (1810–65), and Jules Dupré (1811–89). Modern painting tends to divert the painter from the effects of the studio and to fix his attention on those of open daylight or *plein air*. As the effects of *plein air* are momentary, the tendency has been to study the momentary impression of nature. A school of painters loyal to this principle grew up about the painter Manet (1832–83) and called themselves impressionists. (*h*) *English.* The history of English painting during the middle ages and the Renaissance is hardly more than a shadow of the stronger development which was proceeding on the continent of Europe. The younger Holbein passed a considerable part of his life in England, and afterward Rubens and Vandyke followed his example. Vandyke left many pupils in England, and the style and method established by him persisted until about the beginning of the nineteenth century. A definite national character appears in the works of William Hogarth (1697–1764). The true successor of Vandyke and the leading personality in English painting was Sir Joshua Reynolds (1723–1792), who in 1768 organized the Royal Academy and became its first president. Reynolds, however, was successful only as a portrait-painter, and in this field was closely pressed by several others, notably Thomas Gainsborough (1727–88), George Romney (1734–1802), and Sir Thomas Lawrence (1769–1830). An interesting phase of English artistic development in the eighteenth century is a keen appreciation of nature, which appears to have come in largely from Holland through the county of Norfolk, which lies nearest to that country. In the town of Norwich a definite school developed of which the leaders were John Crome ('Old Crome,' 1768–1821) and John Sell Cotman (1782–1842). In landscape-painting, Richard Wilson (1714–82) was affiliated with the Italian school of Claude Lorrain (1600–82). The chief masters of the early English landscape school are Thomas Gainsborough, John Constable, and Richard Parkes Bonington, already mentioned. Constable was probably the first painter to practise consistently in the open air. An exhibition of his work, with that of Bonington and other Englishmen in Paris, in 1824 gave the initiatory impulse from which modern French landscape-painting has grown. Joseph Mallord William Turner (1775–1851) followed both the Dutch and Italian influences, which he combined with extraordinary power and fertility, and a fine decorative feeling for color. In the nineteenth century England produced many painters of note, but there appeared no large movement which deserves to be called a school except that of the Preraphaelite Brotherhood, a coterie of painters which crystallized about Dante Gabriel Rossetti (1828–82) soon after he entered the studio of Ford Madox Brown (1821–93) in 1847. It consisted first of Rossetti, Holman Hunt (1827–), and Millais (1829–96); and later others were enlisted. It was in general a protest against the conventionality and conservatism of English art and an appreciation of the sincerity, intensity, and naturalism of the quattrocento, the period before Raphael in Italian art. (*i*) *Germany.* After the fine efflorescence marked by Albrecht Dürer and Holbein, painting in Germany fell into decay. Whatever of importance was done during the seventeenth and eighteenth centuries was the creation of French and Italian masters. During the early part of the nineteenth century various centers of artistic activity developed in Germany, which, however, never created more than a local interest. The chief of these surrounded the court of Louis I., King of Bavaria (1825–48), of which the most important masters were Cornelius (1783–1867) and Kaulbach (1805–74). Although the results of their endeavor were not monumental, their interest in art was genuine and resulted in making Munich an art center second only to Paris in importance. About the Academy in Munich and kindred institutions in Vienna and Berlin has been formed an influential body of painters who, while they have been loyal, in the main, to the central activity of Paris, have felt more keenly than the French the influence of the German and Flemish masters of the sixteenth and seventeenth centuries. Among the most notable may be mentioned Hans Makart (1840–84), Munkácsy (1844–1900), Leibl (1844–1900), Böcklin, a Swiss (1827–1901), Klinger (1857–), Stuck (1863–), and Menzel (1815–1905). (*j*) *United States.* During the eighteenth century whatever art there was in the American colonies centered on the Royal Academy. Several good painters were trained in London and practised in England to some extent, notably Copley (1737–1815), Stuart (1755–1828), and Trumbull (1756–1843). During the early part of the nineteenth century there was little work in the United States which had more than a provincial interest. The first to enter the larger European movement was W. M. Hunt (1824–79), who formed himself on the work of Couture, Millet, and the Barbison School. Since the Civil War it has been the custom of American painters to complete their education in Paris, Munich, or some other European center. A large body of excellent painters follow, in the main, the practice thus learned. Among these may be mentioned Sargent (1856–), Blashfield (1848–), Dielman (1847–), Bridgman (1847–), Dannat (1853–), and Shirlaw (1838–). Beside these, several able artists have formed a more independent style, notably Whistler (1834–1903), La Farge (1835–), Fuller (1822–84), Inness (1825–94), and Abbey (1852–). (*k*) *Oriental.* The painting of India is mainly decorative, and illustrative of Buddhist doctrines. It is best represented by the extensive series in the rock-cut caves of Ajanta, which date from 200 B.C. to 600 A.D. In China the art reached a high point of development, best known from its reflection in the painting of Japan. In Japanese painting the art of the Orient has reached its most perfect definition and is fairly well understood. According to tradition, painting was introduced into Japan from China and Korea in the fifth and sixth centuries A.D. In its development certain definite periods or schools are recognized: (1) The Chinese or Buddhist school, which lasted for two or three centuries and did not differ essentially from the painting of China. (2) The Yamato-Tosa school, which flourished in the tenth and eleventh centuries and was established by a court painter, Kasuga Motomitsu: its technique was largely Chinese, its motives and feeling Japanese. (3) The Kano riu school, which owed its origin to the painter Kano Masanobu (1424–1520): it is characterized by bold calligraphic strokes, brilliant color, and careful drawing. (4) The Shijo riu school, the great naturalistic school of Japan, which was founded by the painter Okio about 1775: its principles are still practised and embody the higher artistic feeling of Japan. The name is derived from the Shijo or Fourth Street in Kioto in which Okio lived. Okio inaugurated the practice of drawing directly from nature. In its technique Shijo substitutes delicate tones and washes for the solid body-color of the earlier masters. (5) The Ukioye (drifting world) school, which is an advance upon Shijo in the direction of realism and democracy. Its matter is all nature, the shifting world of impressions. Ukioye is especially familiar to foreigners, and its chief master, Hokusai (1760–1849), has, through his brilliancy and fertility, acquired greater vogue than any other Japanese master. Second to him is Hiroshige.—**Norwich school of painting.** See ★*painting*, 1 (*h*).—**Poonah painting,** decoration, produced at Poonah, in the Bombay Presidency, consisting of pictures of birds, flowers, etc., on thin (rice) paper, done with little shading and no background.

painting-machine (pān′ting-ma̤-shēn″), *n.* A machine for spreading liquid paint or calcimine upon surfaces to be painted. The most common form employs an air-compressor, air- and paint-reservoirs, hose, and an atomizer-nozle. The compressed air serves to force the paint through the hose and deliver it at the nozle in the form of fine spray. The action is identical with that of the air-brush. The compressor may be operated by hand or by a small motor. With a motor several men can spread the paint from one reservoir evenly over a much greater surface and at a far greater speed than with paint-brushes. Such machines are also used with clear water to wash the sides of cars and walls of buildings.

> The *painting-machine* for painting large surfaces simply atomizes the paint by a jet of air; it was first used on the buildings at the Chicago World's Fair of 1893. *Encyc. Brit.*, XXXI. 803.

paint-room, *n.* 2. A compartment on a ship for the storage of paints, oils, and varnishes.

paint-stone (pānt′stōn), *n.* A stone used among primitive tribes as a material for paint. Hematite, mineral coal, etc., are so used, the stone being rubbed or crushed to a powder which is mixed with water, oil, or sticky liquids.

> The articles known as *paint-stones* scarcely come under the head of implements. Some of the hematite pieces are incipient celts, hemispheres, or cones; but most of them were used merely to furnish paint, at any rate until rubbed down quite small.
> *Smithsonian Rep.* (Bur. of Ethnol.), 1891–92, p. 115.

paipai-amo (pī″pī-ä′mō), *n.* [Tagalog *paipai*, fan, + *amo*, monkey.] An epiphytal fern, *Drynaria quercifolia*, which grows in the Philippine Islands: used as a remedy for fevers and as a vermifuge. Also called *cabcaban.*

pair^1, *n.* **10.** In *roulette*, an even number.—**11.** In *mech.*, two parts or pieces, each of which acts against the other to hold it in position or to restrain its motion, as a bearing and journal, or a screw and nut.—**A pair of colors.** (*b*) The position or rank of ensign: as, he was promised *a pair of colors*, that is, his commission as ensign.—**One pair,** in *poker*, a hand which contains two cards of the same denomination and three useless cards; in any card game, two cards of the same denomination.—**Pair of breeches.** See ★*breeches.*—**Pair of values** (*math.*), two mated or coupled values.—**Two pairs,** in *poker*, two cards of one denomination and two of another denomination, with one useless card, in the hand.

pair^1, *v. t.* **3.** In *cribbage*, to match (the card last played by the adversary).

pairedness (pãrd′nes), *n.* The state of being paired or double: as, the *pairedness* of the lungs, limbs, etc.

pair-horse (pãr′hôrs), *a.* Made for or used with a pair of horses: as, *pair-horse* harness, a double harness. *Knight.* [Eng.]

pairling (pãr′ling), *n.* [*pair*^{1} + *-ling*^{1}.] In *chem.*, a component radical. *Simon*, Physiological Chem., p. 178.

pais^2, *n.*—**Matter in pais,** in *law*, matter in the country, meaning for the jury, not matter of record.—**Trial per pais** or **trial by pais.** See *per pais.*

paisanite (pä-ē-sä′nīt), *n.* [*Paisano* Pass, western Texas, + *-ite*^{2}.] In *petrog.*, a variety of quartz-porphyry composed of soda-orthoclase and quartz, with phenocrysts of the same minerals, and a little riebeckite-arfvedsonite. *Osann*, 1893.

paiwari (pī-wä′rẹ̄), *n.* [S. Amer. (Guiana).] A native drink made by soaking pieces of cassava-bread in water, boiling, and allowing the liquid to ferment for several days. Originally the bread was chewed before boiling. [Guiana.]

pajarito (pä-hä-rē′tō), *n.* [Sp., dim. of *pajaro*, a bird.] The common halfbeak, *Hyporhamphus roberti.*

pajuil (pä-hŏ-ēl′), *n.* [Native name.] In Porto Rico, a name for the cashew or marañon, *Anacardium occidentale.*

pake^2 (pä′kạ̄), *n.* [Maori.] In New Zealand, a mat worn as a protection from the rain by the Maoris. *E. E. Morris*, Austral English.

pakeha (pä′kā-hä), *n.* [Maori.] Among the Maoris, a white man; a foreigner. *E. E. Morris*, Austral English.—**Pakeha Maori,** a white man who lives as a Maori.

pakiri kiri (pä-kē′rẹ̄ kē′rẹ̄), *n.* [Maori.] A fish, *Percis colias*, the blue cod, rock-cod, or coalfish, abundant about New Zealand.

pakkasi (pa-kä′sẹ̄), *n.* [Cape D. pronunciation of D. *pakkage*, baggage, luggage, = E. *package.*] In South African Dutch use: (*a*) Baggage; luggage; traps. (*b*) A heterogeneous mass of things; trash: also applied to persons.

pakpak-lauin (päk-päk′lou″in), *n.* [Tagalog *pacpac*, *pakpak*, wing, + *lauin*, hawk.] Same as ★*paipai-amo.*

pakwo (pä-kwō′), *n.* [Chinese.] The seeds of the gingko or maidenhair-tree, *Ginkgo biloba.* See ★*gingko-nut* and ★*icho.*

Pal. An abbreviation (*a*) of *Palestine;* (*b*) of *paleontology.*

pala^1, *n.* **4.** A thin layer of brain tissue, fancifully compared to the shape of a spade, at the extremity of the rima, which connects the cerebrum and the fimbriæ.—**5.** A Hawaiian name for syphilis.

pala^3, *n.* An abbreviated form of ★*impala.*

palaa (pä-lä-ä′), *n.* [Hawaiian name.] One of the commonest ferns of the Hawaiian Islands, *Odontosoria Chinensis*, from which the natives formerly extracted a red dye.

palace^2, **pallace** (pal′is), *n.* [Early mod. E. *paleys;* identical with *palise*, a paling, an inclosure.] **1**†. An inclosed place: a yard;

a landing-place inclosed by pales (see *palise*) or walls.—**2.** A cellar for the storing of fish. [Prov. Eng.]

palacheite (pal′a-kīt), *n.* [Named after Professor Charles *Palache*, of Cambridge, Massachusetts.] Botryogen, a name given to this mineral from the Boston (formerly the Redington) mercury mine at Knoxville, California. Palacheite occurs in loosely coherent aggregates of a deep brick-red color.

Palæacrididæ (pā″lẹ̄-a-krid′i-dē), *n. pl.* [NL.] A family established by Brongniart to include certain fossil insects in the carboniferous strata at Commentry, France.

palæ-American, *a.* See ★*paleo-American.*

palæanthropography, *n.* See ★*paleoanthropography. Nature*, May 14, 1903, p. 47.

palæ-Asiatic, *a.* See ★*paleo-Asiatic.*

Palæaspis (pā-lẹ̄-as′pis), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *ἀσπίς*, shield.] A genus of ostracoderm fishes of the order *Heterostraci*, with the head covered by a simple, triangular, dorsal shield from 3–5 inches long, notched at the orbits and without posterior spine, and by a quadrate ventral shield. One species is from the Salina group of the Silurian in Perry county, Pennsylvania, the other from the Old Red Sandstone of the Scottish Devonian.

Palæaspis americana.
Restoration giving probable form. (Claypole.)

Palæaster (pā-lẹ̄-as′tėr), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *ἀστήρ*, star.] A genus of primitive fossil starfishes, of the subclass *Encrinasteriæ*, found in rocks of Silurian to Carboniferous age in North America and Europe. These fossils have five stout pointed arms, the convex dorsal surfaces of which are covered with several rows of small, pointed, calcareous plates. The ventral surfaces of the arms show deep ambulacral grooves, with two rows of small, alternating, ambulacral plates, and on each side a single row of small adambulacrals and a row of large marginal plates.

palæethnologist, *n.* Same as *paleo-ethnologist. Jour. Hellenic Studies*, VIII. 450.

palæethnology, *n.* Same as *paleo-ethnology. Pop. Sci. Mo.*, Feb., 1899, p. 551.

palæic, *a.* Same as ★*paleic.*

palæichthyologist, *n.* Same as *paleoichthyologist. Proc. Zool. Soc. London*, 1897, p. 317.

palæo-. For words so beginning, not found below, see ★*paleo-.*

palæo-American, *a.* Same as ★*paleo-American.*

palæo-Asiatic, *a.* Same as ★*paleo-Asiatic.*

Palæoblattariæ (pā″lẹ̄-ọ̄-bla-tā′ri-ē), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + L. *blatta*, beetle, + *-ariæ.*] An order of insects established by Scudder to include the fossil cockroaches of the carboniferous deposits.

Palæoblattina (pā″lẹ̄-ọ̄-bla-tī′nạ̈), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Blattina*, a genus of cockroaches.] One of the oldest known fossil insects, represented by an imperfect orthopteroid wing found in the Middle Silurian of Calvados, France.

Palæocampa (pā″lẹ̄-ọ̄-kam′pạ̈), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *κάμπη*, caterpillar.] A fossil chilopodous myriopod, sole representative of the order *Protosyngnatha* of Scudder's classification, found in the Carboniferous shales of Mazon creek, Illinois. The body consisted of ten annular segments and, unlike modern myriopods, each segment was armed with bundles of fine needle-like spines, which caused it to be originally described as a fossil caterpillar.

palæoconch (pā′lẹ̄-ọ̄-konk), *n.* [NL. *Palæoconch(a).*] Any pelecypod the shell of which has the primitive characters of the *Palæoconchæ.*

Palæoconchæ (pā″lẹ̄-ọ̄-kong′kē), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + *κόγχη*, shell.] A provisional group of primitive pelecypods. It was erected by Neumayr to receive those with thin shells, indistinct pallial line and adductor-muscle scars, cardinal area amphidetic when present, and ligament external; hinge margin without hinge-plate and without true teeth, but often with polymorphous teeth formed by folds of the shell margin. It is a polyphyletic group of Paleozoic shells representing convergent expressions of different genera adapted to a pelagic life.

Palæocreusia (pā″lẹ̄-ọ̄-krū′siạ̈), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Creusia*, a genus of barnacles.] A genus of fossil balanoid barnacles, found as a commensal organism occupying cavities in the coralla of Devonian corals. The type species was imbedded in a *Favosites* of the Onondaga limestone of New York.

palæocrinoidean (pā″lẹ̄-ọ̄-kri-noi′dẹ̄-an), *a.* Of or pertaining to the *Palæocrinoidea*, or Paleozoic crinoids.

Palæocyclidæ (pā″lẹ̄-ọ̄-sik′li-dē), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + *κύκλος*, circle.] An extinct family of small discoid tetracorallian *Anthozoa*, of which *Palæocyclus* is the typical genus.

Palæocyclus (pā″lẹ̄-ọ̄-sī′klus), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *κύκλος*, circle.] A genus of small fossil corals typical of the family *Palæocyclidæ*, with flattened, discoid, simple coralla and many stout radial septa: found in the Silurian beds of Northern Europe and North America. Allied genera are *Hadrophyllum*, *Microcyclus*, etc., from Devonian beds.

palæoglyph, *n.* See ★*paleoglyph.*

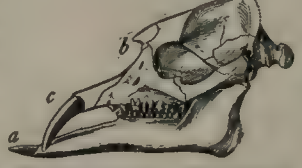
Palæognathæ (pā-lẹ̄-og′nạ̄-thē), *n. pl.* [Gr. *παλαιός*, ancient, + *γνάθος*, jaw.] Pycraft's name for a division of birds including the ostriches and their allies, and the tinamous; the equivalent of Stejneger's *Dromæognathæ.* Contrasted with *Neognathæ.*

Palæohatteria (pā″lẹ̄-ọ̄-ha-tē′ri-ạ̈), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Hatteria*, a genus of reptiles.] A long-tailed, lizard-like, rhynchocephalian reptile, about 18 inches in length, found in the lower Permian beds of Germany: one of oldest known reptiles. Its skull has large orbits, large upper and lower temporal arcades, and a full series of sharp conical teeth. The digits were clawed and the animal's habits were probably aquatic.

Palæolepidoptera (pā″lẹ̄-ọ̄-lep-i-dop′tẹ-rạ̈), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Lepidoptera.*] One of the three suborders of *Lepidoptera* proposed by Packard. It includes only the family *Micropterygidæ*, the other suborders being the *Protolepidoptera* and the *Neolepidoptera.*

Palæomantidæ (pā″lẹ̄-ọ̄-man′ti-dē), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Mantidæ.*] A family name proposed by Scudder to include certain fossil forms supposed to be related to recent *Mantidæ.* They have since been shown to be neuropterous.

Palæomastodon (pā″lẹ̄-ọ̄-mas′tọ̄-don), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Mastodon*, a genus of elephants.] An extinct genus of *Proboscidea* belonging to the family *Elephantidæ*, characterized by molar crowns with three transverse ridges and all the cheek-teeth functional at once. In the recent elephants the front cheek-teeth fall out before the hinder ones are cut. Taken from the Lower Oligocene of the Province of Fayum, Egypt.



Skull and lower jaw of *Palæomastodon beadnelli*, showing elongated chin with pair of terminal cutting teeth *a*, from the Upper Eocene of the Fayum, Egypt, greatly reduced; *b*, position of nostrils; *c*, upper incisor or tusk. (After C. W. Andrews.)
(From "Guide to Fossil Mammals and Birds," British Museum.)

Palæophonus (pā-lẹ̄-of′ọ̄-nus), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *φόνος*, death (scorpion)?] One of the oldest known fossil scorpions found in the Upper Silurian beds of Wisby, Gotland, and remarkably similar in its superficial appearance to those of modern time.

Palæopinna (pā″lẹ̄-ọ̄-pin′ạ̈), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + NL. *Pinna*, a genus of mollusks.] A pinna-like pelecypod from the Lower Devonian of Europe and North America. See *Pinna*^{2}.

Palæoscylium (pā″lẹ̄-ọ̄-sil′i-um), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *σκύλιον*, a dogfish.] A fossil dogfish, closely related to the modern genus *Scylium*, found with nearly complete skeletons in the Jurassic lithographic limestones of Solenhofen, Bavaria.

Palæospinax (pā″lẹ̄-ọ̄-spī′naks), *n.* [NL., ‹ *παλαιός*, ancient, + NL. *Spinax*, a genus of sharks.] A small fossil cestraciont shark, with hooked teeth, smooth dorsal spines, and enameled shagreen: known from a nearly complete skeleton from the Lias of England and Germany.

Palæospondylidæ (pā″lẹ̄-ọ̄-spon-dil′i-dē), *n. pl.* [NL., ‹ *Palæospondylus* + *-idæ.*] A family of extinct fish-like vertebrates, typified by the genus *Palæospondylus.*

Palæospondylus (pā″lẹ̄-ọ̄-spon′di-lus), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *σπόνδυλος*, vertebra.] A genus of primitive fish-like vertebrates considered to be related to the lampreys, but having the cartilages calcified and the vertebral centra represented by rings in the sheath of the notochord. There is no evidence of true jaws. The largest examples were a little under two inches in length. Their remains occur in the Lower Old Red Sandstone (Devonian) of Scotland. The only known species is *P. gunnii.*

Palæostoma, *n.* **2.** [*l. c.*]; pl. *palæostomata* (pā-lẹ̄-ọ̄-stō′mạ-tạ̈). In *embryol.*, the primitive mouth-opening of the vertebrates; an ancient structure lying in front of the present mouth opening, or neostoma, which some embryologists suppose to have arisen secondarily from a pair of branchial clefts.

Palæoteuthis (pā″lẹ̄-ọ̄-tū′this), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *τευθίς*, a squid.] Fossil beak-like jaws of unknown nautiloid cephalopods found in the Jurassic and Cretaceous rocks.

palæotherioid (pā″lẹ̄-ọ̄-thē′ri-oid), *a.* Same as *palæotheroid.*

palæotypic, paleotypic (pā″lẹ̄-ọ̄-tip′ik), *a.* [*palæotyp(e)* + *-ic.*] Of or pertaining to palæotype; having the characteristics of palæotype.

palæotypical, paleotypical, *a.* Same as ★*palæotypic.*

Palæozoicum (pā″lẹ̄-ọ̄-zō′i-kum), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *ζωικός*, pertaining to living things, ‹ *ζῷον*, a living thing, an animal.] In *geol.*, the entire congeries of Paleozoic formations of all parts of the world, comprising all the varied rocks deposited between the beginning of Cambrian and the end of Permian time.

Palafoxia (pal-a-fok′si-ạ̈), *n.* [NL. (Lagasca, 1816), named in honor of Jose de *Palafox* y Melzi (1780–1847), a Spanish general.] **1.** A genus of plants of the family *Asteraceæ.* There are three species, all North American.—**2.** [*l. c.*] A horticultural name of *Polypteris Hookeriana*, a handsome garden annual with rose-colored heads which are usually treated as 'everlastings.' It is native to the mid-continental region of North America. *Polypteris* is distinguished from *Palafoxia* by involucral bracts with colored tips, and by a deeply divided corolla limb.

palammer (pa-lam′ėr), *n.* [Perhaps from *palmer*^{1}, a card-sharper.] A playing-card. [Slang.]

> 'Thry the kyards!' Wid that he opined his jackut an' tuk out the greasy *palammers.*
> *R. Kipling*, Black Jack, in Soldiers Three, p. 160.

palandok (pal′an-dok), *n.* The small, striped chevrotain, *Tragulus memimna* or *Memimna indica*, of India and Ceylon.

palanquin, palankeen (pal-ạn-kēn′), *v. i.* To be carried in a palanquin: sometimes with *it.*

Palanthropic (pal-an-throp′ik), *n.* [NL., ‹ Gr. *παλαιός*, ancient, + *ἄνθρωπος*, man.] In *geol.*, in Dawson's classification, that portion of the Pleistocene epoch beginning with the retreat of the continental ice-cap and marked by the earliest appearance of man. [Rare, and not admitting of precise usage.]

palapalai (pä-lä-pä-lī′), *n.* [Hawaiian name.] A fern, *Microlepia hirta*, with an agreeable odor, used by the Hawaiians at their ceremonial feasts, and braided by them into wreaths and garlands.

palar (pā′lạ̈r), *a.* [L. *palaris*, relating to a stake.] In *bot.*, perfectly continuous with the stem: said of a root. *Jackson*, Glossary.

palatal, *a.* **3.** Situated on the outer lip, as the teeth at the aperture of a shell. [Rare.] —**Palatal length.** See ★*length.*

palatalism (pal′ạ̈-tạl-izm), *n.* [*palatal* + *-ism.*] In *phonol.*, the character of being palatal. See *palatal*, *n.*, 2.

palatality (pal-ạ-tal′i̤-ti), *n.* [*palatal* + *-ity.*] Palatalism.

palatiality (pạ-lā-shi-al′i-ti), *n.* [*palatial* + *-ity.*] The character of being palatial. [Rare.]

palatially (pạ-lā′shạl-i), *adv.* In the style of a palace; sumptuously; splendidly.

palatilar (pạ̄-lat′i-lạ̈r), *a.* Of or pertaining to the space between the posterior face of the incisors and the anterior edge of the bony palate.—**Palatilar length,** the distance in a straight line from the posterior margin of the sockets of the median incisors (henselion) to the anterior edge of the bony palate (palation), used in measuring the skulls of mammals.

palatinal (pa-lat′i-nạl), *a.* [*palatine*1 + *-al*1.] Pertaining to, or characteristic of, a palatinate.

palatine1, *n.* 3. [*cap.*] A native of the Palatinate. [Rare.]

> The first white settlement in the upper stretches of the valley was made by the *Palatines* in 1723. Following the devastating wars of Louis XIV., thousands of these stricken people left their homes on the Rhine and took refuge in England. *Geog. Jour.* (R. G. S.), XIII. 519.

4. A trade-name applied to several coal-tar coloring matters.

palatine2. I. *a.* 2. In *phonol.*, same as *palatal*, *a.*, 2.—**Palatine spur,** a pointed process from the antero-internal face of the palatine in such a bird as a woodpecker. *Proc. Zool. Soc. London*, 1891, p. 126. [Rare.]

II. *n.* 1. Specifically, in the teleost fishes, the anterior of the chain of bones which forms the palatoquadrate arch. It is in the roof of the mouth and often bears teeth which appear just inside and parallel to the premaxillary teeth. In the sharks, the palatoquadrate arch is a simple cartilaginous rod which forms the superior margin of the mouth and bears the upper teeth.

2. In *phonol.*, same as *palatal*, *n.*, 2.

palation (pa-lā′ti-ọn), *n.* [NL. Cf. *palate.*] The most anterior point of the hinder edge of the bony palate, whether in the middle line or on either side of a median spine: used as a fixed point in measuring the skulls of mammals.

palatization, palatize. Same as *palatalization*, *palatalize.*

palatodental (pạ̄-lā″tō-den′tạl), *a.* In *phonol.*, pertaining to the palate and the teeth: applied to consonants produced by placing the tongue against the palate immediately behind the teeth. *N. E. D.*

II. *n.* A consonant so produced.

palatogram (pạ̄-lā′tọ-gram), *n.* [L. *palatum*, palate, + Gr. *γράμμα*, a writing.] A graphic record of the movements of the soft palate during phonation.

palatograph (pạ̄-lā′tọ-gråf), *n.* [L. *palatum*, palate, + Gr. *γράφειν*, write.] A device for recording the movements of the soft palate in breathing or speaking.

palatography (pal-ạ̄-tog′rạ-fi), *n.* [*palatograph* + *-y*3.] The recording by means of special apparatus (palatograph) of the movements of the soft palate during breathing or speaking.

palatomaxillary, *a.*—**Palatomaxillary index.** See ★*index.*

II. *n.* In *craniom.*, the value of the palatomaxillary index. *Turner.*

palatometer (pal-ạ̄-tom′e-tėr), *n.* [L. *palatum*, palate, + Gr. *μέτρον*, measure.] In *phonet.*, an instrument for measuring the movements of the palate during speech.

palatoplasty (pạ̄-lā′tō-plas-ti), *n.* [L. *palatum*, palate, + Gr. *πλαστός*, formed, + *-y*3.] A surgical operation for the cure of cleft palate.

palatopterygoquadrate (pạ̄-lā″tō-ter″i-gō-kwod′rāt), *a.* and *n.* Same as *palatoquadrate.*

palatovelar (pạ̄-lā″tō-vē′lạ̈r), *a.* [L. *palatum*, palate, + *velum*, veil, + *-ar*3 (see *velar*).] Of or pertaining to the velum palati. *Scripture*, Exper. Phonetics, p. 443.

palaver, *n.* 4. Business; an affair to be settled; affairs. [Slang.]

> Guess it 's the Captain's *palaver*. If the old man likes his ship turned into a bear garden, 't is n't our grub they 're wasting. It's not your *palaver*, . . . or mine. If you want to stir up trouble, tell the State authorities.
> *Cutcliffe Hyne*, A Master of Fortune, I.

5. A dodge; a contrivance; a plot. [Slang.]

> There 's only one cure, and that 's to be got at the place where the poisoning *palaver* was worked from.
> *Cutcliffe Hyne*, A Master of Fortune, I.

Palaver set, in Gold Coast English, a phrase meaning the affair is settled; no more talk about it; the conference is over.

> You shall have your dash [bribe, gift] when doctor-*palaver set.* *Cutcliffe Hyne*, A Master of Fortune, i.

palaverment (pa-lav′ėr-mẹnt), *n.* [*palaver* + *-ment.*] Aggravated palaver; profuse talk. [Slang.]

palavitalism (pal-ạ-vī′tạl-izm), *n.* [For **paleovitalism*; < Gr. *παλαιός*, ancient, + E. *vitalism.*] The doctrine or opinion that life is due to a form of energy that is different in kind from those to which the changes in inorganic matter are attributed; a name introduced by Haeckel for the theories of vital force propounded from the time of Haller to that of J. Müller, that is, from the middle of the eighteenth to the middle of the nineteenth century: opposed to ★*neovitalism. Haeckel* (trans.), Wonders of Life, p. 48.

palay2 (pä-lī′), *n.* [Tagalog *palay*, rice; cf. Jav. *pāri*, Malay *pādi*, etc. See *paddy*3.] In the Philippine Islands, rice in the husk.

palazzo (pä-lät′sō), *n.* [It., < L. *palatium.* See *palace*1.] In Italian cities, a palace or large dwelling-house; a building arranged for a single wealthy family. Many buildings of this class are of great size and cost, and therefore come to be rented in apartments.

palberry (päl′ber-i), *n.* [Native Australian *palbri.*] In South Australia, a shrub or small tree, *Myoporum serratum*, which yields a hard white wood and bears edible berries having a salty and somewhat bitter taste. Called also *blueberry-tree*, *cockatoo-bush*, *native currant*, and *native juniper.*

pale2, *a.*—**Pale Peruvian bark,** loxa or crown bark.

pale4 (pāl), *v. t.* [*pale*4, *n.*] To beat or thrash (barley), so as to detach it from the awns or chaff. See *pale*4, *n.*, 1. [Obs. or dial.]

palea, *n.* 3. In annelids, a flattened seta, as in *Sabellaria.*

Palearctic, *a.* 2. [*l. c.*] Of or pertaining to the fauna and flora of the Palearctic region.

> Consequently, while the Neotropical element is the stronger in the south, this last, the *Palæarctic* element, is far more prevalent in the extreme north.
> *Geog. Jour.* (R. G. S.), IX. 76.

paleate (pā′lẹ̄-āt), *a.* [L. *palea*, a palea or chaff, + *-ate*1.] In *bot.*, bearing paleæ or chaff; paleaceous: said chiefly or wholly of the receptacle in a capitulum or head.

paleic, palæic (pạ̄-lē′ik), *a.* [Gr. *παλαιός*, ancient, + *-ic.*] In *geol.*, noting the old land surface as it existed at the opening of the ice age and before the formation of the present topography.

> If I am right in thinking that the gravel of Chobham Ridges, in Surrey, is a river gravel of the earliest Glacial or even of Pliocene date . . . then the surface upon which it lies is a bit of the *Palæic* surface of England, the bottom of a *Palæic* valley in fact.
> *H. W. Monckton*, in Geol. Mag., IX. 410.

paleman, palesman (pāl′mạn, pālz′mạn), *n.*; pl. *palemen*, *palesmen* (-men). [*pale*1, *n.*, 4, + *man.*] In Ireland, a man who lived in the English pale.

Palembolus (pạ̄-lem′bō-lus), *n.* [NL., < Gr. *παλαιός*, ancient, + NL. *Embolus*, a genus of *Insecta* (< Gr. *ἔμβολος*, a peg).] A genus of fossil flies found in the Oligocene shales of Florissant, Colorado. The species, *P. florigerus*, was about ¾ of an inch long, with large eyes, strong piercing and sucking mouth-parts, and bristly abdomen.

palenque (pä-län′ke), *n.* [Sp. *palenque*, a paling, a palisade, a stockade connected with *palanca*, a paling, a pole, lever, F. *palanque*, It. *palanca*, a palisade.] A fortified inclosure or village; especially a fortified retreat of fugitive slaves and negroes. [Spanish America.]

> They [the Guatusos] live in *palenques* (stockades), and their houses are similar to the maloccas of the Amazon tribes. [Each *palenque* shelters several families, who cook their food at separate fires built on the ground.
> *Geog. Jour.* (R. G. S.), X. 65.

paleo-American, palæo-American (pā″lẹ̄-ọ̄-ạ-mer′i-kạn), *a.* [Gr. *πάλαι*, in ancient times (*παλαιός*, ancient), + E. *American.*] Ancient American: applied to that type of South American man which is characterized by a long head with wavy hair. *Deniker*, Races of Man, p. 512.

paleo-anthropography, palæo-anthropography (pā″lẹ̄-ọ̄-an″thrọ-pog′rạ-fi), *n.* [Gr. *πάλαι*, in ancient times (*παλαιός*, ancient), + E. *anthropography.*] The science of the origin and descent of man, from his earliest appearance to the end of the prehistoric period: not in general use.

paleo-Asiatic, palæo-Asiatic (pā″lẹ̄-ọ̄-ā″shi-at′ik), *a.* [Gr. *πάλαι*, in ancient times (*παλαιός*, ancient), + E. *Asiatic.*] Pertaining or belonging to the isolated tribes of northeastern Asia, including the Ainu, Gilyak, Koryak, Kamtchadal, Chukchee, Yukaghir, Chewantzy, and Yenisei-Ostyak.

paleoatavism, palæoatavism (pā″lẹ̄-ọ̄-at′ạ-vizm), *n.* [Gr. *παλαιός*, ancient, + E. *atavism.*] The resemblance of higher animals to lower or more ancient ones, considered as reversion to remote ancestral characters. [Rare.]

paleoatavistic, palæoatavistic (pā″lẹ̄-ọ̄-at-ạ-vis′tik), *a.* [*paleoatavism.*] Concerning or pertaining to resemblances in higher animals to lower or more ancient ones, considered as inheritance from ancestors in the remote past, or as reversion to remote ancestral characters. [Rare.]

paleob. An abbreviation of *paleobotany.*

paleobiologist, palæobiologist (pā″lẹ̄-ọ̄-bī-ol′ọ̄-jist), *n.* [*paleobiolog(y)* + *-ist.*] One who is versed in or engaged in the study of fossil organisms.

> The method thus elaborated has been and is now in constant use by a number of *paleobiologists.*
> *Hyatt*, Biol. Lectures, 1899, p. 132.

paleobiology, palæobiology (pā″lẹ̄-ọ̄-bī-ol′ọ̄-ji), *n.* [Gr. *παλαιός*, ancient, + E. *biology.*] That branch of biology which treats of fossil organisms.

paleobotanic, palæobotanic (pā″lẹ̄-ọ̄-bọ̄-tan′ik), *a.* Same as *paleobotanical.*

paleoceanography, palæoceanography (pā″-lē-ō″shẹ̄-ạ-nog′rạ-fi), *n.* [Gr. *παλαιός*, ancient, + E. *oceanography.*] The oceanography of past geological periods. See ★*paleogeography.*

Paleocene, Palæocene (pā′lẹ̄-ọ̄-sēn), *n.* [For **paleo-Eocene*, < Gr. *παλαιός*, ancient, + E. *Eocene.*] In *geol.*, a term proposed by Schimper and Von Koenen, and adopted by many geologists, to designate those lowermost beds of Tertiary age whose fauna differs from that of the typical Eocene as widely as does the latter from that of the Oligocene. As thus constituted it includes the Montian, Thanetian, Sparnacian, and Cernaysian of France; those Tertiaries of England below the London clay, namely the Thanet, Woolwich, and Oldhaven beds; and the Midway, Shark River, and Puerco beds of North America, together with other correlated formations. The deposits are of marine and brackish water origin with the exception of the lacustrine Cernaysian and Puerco, of which the latter contains abundant remains of primitive types of mammals, chiefly multituberculates, *Condylarthra*, and *Insectivora.*

paleo-Christian, palæo-Christian (pā″lẹ̄-ọ̄-kris′ṭiạn), *a.* Having to do with the early ages of Christianity: specifically applied to methods of architectural design, etc., usually of the Western or Latin church.

paleoclimatic, palæoclimatic (pā″lẹ̄-ọ̄-klī-mat′ik), *a.* [Gr. *παλαιός*, ancient, + E. *climatic.*] Of or pertaining to climatic conditions of former geologic periods: a term introduced by C. A. White to describe "formerly existing conditions which, in certain parts of the earth, were more or less materially different from those which now exist in the same parts." *Smithsonian Rep.* (Nat. Mus.), 1892, p. 301.

paleoclimatology, palæoclimatology (pā″lẹ̄-ọ̄-klī-mạ-tol′ọ̄-ji), *n.* [Gr. *παλαιός*, ancient, + E. *climatology.*] The study of climatic conditions of the past periods of geologic time. It is based upon the examination of a large body of paleontologic and stratigraphic evidence; geographical distribution, migration, and evolution of fossil faunas and floras; upon the kind and degree of rock-disintegration during various geologic epochs; and also upon chemical and physical researches upon the interrelations of the constituents of the atmosphere and the oceanic waters with the deposition of carbonate rocks.

paleocrystal, palæocrystal (pā″lẹ̄-ọ̄-kris′-tạl), *a.* Same as *paleocrystic.*

paleocrystallic, palæocrystallic (pā″lẹ̄-ọ̄-kris-tal′ik), *a.* Same as *paleocrystic.*

paleodolerite, palæodolerite (pā″lẹ̄-ō-dol′-e-rīt), *n.* [Gr. *παλαιός*, ancient, + E. *dolerite.*] In *petrog.*, a name given by Sandberger (1873) to diabases of Silurian age.

paleo-ecology, *n.* See ★*paleo-œcology.*

paleo-ethnic, palæo-ethnic (pā″lẹ̄-ọ̄-eth′-nik), *a.* [Gr. *παλαιός*, ancient, + E. *ethnic.*] Same as *paleo-ethnological.*

paleo-ethnographer, palæo-ethnographer (pā″lẹ̄-ọ̄-eth-nog′rạ-fėr), *n.* Same as *paleo-ethnologist.*

paleo-ethnographic, palæo-ethnographic (pā″lẹ̄-ọ̄-eth-nō-graf′ik), *a.* Same as ★*paleo-ethnographical.*

paleo-ethnographical, palæo-ethnographical (pā″lẹ̄-ọ̄-eth-nō-graf′i-kạl), *a.* Of or pertaining to paleo-ethnography.

paleo-ethnography, palæo-ethnography (pā″lẹ̄-ọ̄-eth-nog′rạ-fi), *n.* Same as *paleo-ethnology.*

paleofauna, palæofauna (pā″lẹ̄-ō-fâ′nạ̈), *n.* [NL., < Gr., *παλαιός*, ancient, + NL. *fauna*, fauna.] In *geol.*, the fossil fauna of a geological formation, group, or system; the fauna of any period of geological history.

paleoflora, palæoflora (pā″lẹ-ọ-flō′rä), *n.* [NL. *palæoflora*, ‹ Gr. *παλαιός*, ancient, + NL. *flora*, flora.] In *geol.*, the fossil flora of any formation, or group of related formations, or of any period of geological history.

paleog. An abbreviation of *paleography*.

paleogenetic, palæogenetic (pā″lẹ-ọ-jẹ-net′ik), *a.* [Gr. *παλαιός*, ancient, + E. *genetic.*] Generated or originated in the past; inherited from ancestors; not newly acquired, as contrasted with *neogenetic* or newly generated. *Proc. Zool. Soc. London*, 1886, p. 551.

paleogeography, palæogeography (pā″lẹ-ọ-jẹ-og′rạ-fi), *n.* [Gr. *παλαιός*, ancient, + E. *geography.*] The study of the physical geography of past periods of the earth's history, founded as a distinct branch of geology by Canu in 1895, although the name had been employed before that date. It derives its data from paleontology, stratigraphy, and the geographic distribution of animals and plants, and attempts to restore the physiographic conditions and describe the evolution of those conditions through the successive epochs of geologic time.

> The occurrence of a Silurian fauna in northern Alaska has a direct bearing on one of the interesting problems of Silurian *paleogeography*, the route of intermigration between the Silurian faunas of Europe and America.
> *Amer. Jour. Sci.*, Feb., 1908, p. 128.

paleoglyph, palæoglyph (pā′lẹ-ọ-glif), *n.* [Gr. *παλαιός*, ancient, + *γλυφή*, a carving, engraved character.] An ancient character or inscription.

paleolatry, palæolatry (pā-lẹ-ol′ạ-tri), *n.* [Gr. *παλαιός*, ancient, + *λατρεία*, worship.] Excessive reverence for what is old, especially in art and letters.

> In every way . . . Mr. Steven's volume is a rare example of conscientious and loving typography, and what for want of a better word we must call *palæolatry*.
> *Athenæum*, Oct. 15, 1887, p. 498.

paleologian, palæologian (pā″lẹ-ọ-lō′ji-ạn), *n.* [*paleolog*(*y*) + *-an.*] Same as *paleologist*.

paleological, palæological (pā″lẹ-ọ-loj′i-kạl), *a.* Of or pertaining to paleology; of the nature of paleology. Also *paleologic*.

paleomachic, palæomachic (pā″lẹ-ọ-mak′ik), *a.* [Gr. *παλαιός*, ancient, + *μάχη*, fight, battle, + *-ic.*] Relating to early warfare. *N. E. D.*

paleometeorological, palæometeorological (pā″lẹ-ọ-mē″tẹ-ọ-rọ-loj′i-kạl), *a.* [Gr. *παλαιός*, ancient, + E. *meteorological.*] Of or pertaining to paleometeorology: as, a *paleometeorological* explanation of a geological problem.

paleometeorology, palæometeorology (pā″lẹ-ọ-mē″tẹ-ọ-rol′ọ-ji), *n.* [Gr. *παλαιός*, ancient, + E. *meteorology.*] The meteorology of the earth's atmosphere during ancient times; specifically, during geological epochs.

paleon., paleont. Abbreviations of *paleontology*.

paleontographic, palæontographic (pā-lẹ-on-tọ-graf′ik), *a.* Same as *paleontographical*.

paleo-œcology, palæo-œcology (pā″lẹ-ō-ẹ-kol′ọ-ji), *n.* [Gr. *παλαιός*, ancient, + E. *œcology.*] The œcology of plants known through fossil remains. Also *paleo-ecology*.

> Thus *paleoecology* might be defined as the science of adaptations of fossil organisms.
> *C. MacMillan*, in Minn. Bot. Stud., Bulletin IX., p. 950.

paleopathology, palæopathology (pā″lẹ-ọ-pạ-thol′ọ-ji), *n.* [Gr. *παλαιός*, ancient, + E. *pathology.*] The science of pathologic or abnormal conditions among extinct or fossil organisms.

paleophilist, palæophilist (pā-lẹ-of′i-list), *n.* [Gr. *παλαιός*, ancient, + *φίλος*, loving, + *-ist.*] An antiquary; a lover of antiquities.

paleophysiography, palæophysiography (pā″lẹ-ọ-fiz″i-og′rạ-fi), *n.* See the extract.

> But paleontology is not the whole of historical geology. Stratigraphy, or the physical characters and physical history of the rocks of the earth's crust — *paleophysiography* (if I may use a pet term, in spite of objections raised against it) — is fully one half of historical geology.
> *Science*, Oct. 27, 1905, p. 528.

paleophysiology, palæophysiology (pā″lẹ-ọ-fiz″i-ol′ọ-ji), *n.* [Gr. *παλαιός*, ancient, + E. *physiology.*] The physiological study of the early races of mankind. *N. E. D.*

paleopicrite, palæopicrite (pā″lẹ-ọ-pik′rīt), *n.* See *picrite*.

paleopithecine (pā″lẹ-ọ-pi-thē′sin), *a.* [Gr. *παλαιός*, ancient, + *πίθηκος*, ape, + *-ine.*] Pertaining to or characteristic of the group of *Primates* called by Wortman *Paleopithecini*.

Paleopithecini (pā″lẹ-ọ-pith-ẹ-sī′nī), *n. pl.* [NL., ‹ Gr. *παλαιός*, ancient, + *πίθηκος*, ape, + *-ini.*] A group of *Primates* including the living *Tarsius* and a number of extinct forms, such as *Anaptomorphus* and *Hemiacodon* from the Eocene.

paleoplain, palæoplain (pā′lẹ-ọ-plān), *n.* [Gr. *παλαιός*, ancient, + E. *plain*¹.] A term suggested by Hill for a destructional plain (erosion plain) buried beneath later deposits. [Rare.]

> *Paleoplains* is suggested as a name for buried destructional plains, but the word is objectionable etymologically; ancient plain may serve instead, as all the other classes of plains are indicated by adjectives.
> *Science*, May 17, 1901, p. 792.

paleopsychic, palæopsychic (pā″lẹ-ọ-sī′kik), *a.* [Gr. *παλαιός*, ancient, + E. *psychic.*] In *genetic psychol.*, pertaining to or derived from the oldest psychical strata of the human mind: opposed to ★*cenopsychic*. [Rare.]

> The problem, whether there is any *paleopsychic* race element, is as inevitable as it is unanswerable.
> *G. S. Hall*, Adolescence, II. 194.

paleopsychism, palæopsychism (pā″lẹ-ọ-sī′kizm), *n.* [Gr. *παλαιός*, ancient, + E. *psychism.*] The manifestation, by the higher animals or by man, of mental traits which are regarded as evidence of inheritance from lower and simpler animals in the remote past. [Rare.]

paleosophy, palæosophy (pā-lẹ-os′ọ-fi), *n.* [Gr. *παλαιός*, ancient, + *σοφία*, wisdom.] The wisdom of the ancients; ancient wisdom or knowledge.

paleosphere, palæosphere (pā′lẹ-ọ-sfēr), *n.* [Gr. *παλαιός*, ancient, + *σφαῖρα*, sphere.] In *petrog.*, a name given to nearly spherical grains of sand to indicate long erosion and high antiquity.

paleostylic, palæostylic (pā″lẹ-ọ-stil′ik), *a.* [*paleostyl*(*y*) + *-ic.*] Pertaining to or possessing that primitive condition of the second visceral arch termed *paleostyly*.

paleostyly, palæostyly (pā-lẹ-os′ti-li), *n.* [Gr. *παλαιός*, ancient, + *στῦλος*, pillar, support.] The condition of the mandibular and hyoid arches as retaining in large part their primitive function as gill-bearers: a hypothetical condition not shown by any known fish, but supposed to have been present in early forms of fish-like vertebrates.

paleothermal, palæothermal (pā″lẹ-ọ-thėr′mạl), *a.* [Gr. *παλαιός*, ancient, + *θέρμη*, heat, + *-al*¹.] Relating to the heat of past geological time: especially employed in the discussion of former climates, as, for instance, those which admitted of a tropical flora or fauna in the arctic circle. *Geikie*, Text-book of Geol., p. 834.

paleothermic, palæothermic (pā″lẹ-ọ-thėr′mik), *a.* [Gr. *παλαιός*, ancient, + *θέρμη*, heat, + *-ic.*] Relating to the thermal conditions prevailing in older geologic time; paleothermal.

> When we take into consideration the effect of the earth's atmosphere, a sun with a diameter even half that here indicated would account for the *paleothermic* phenomena made known by the records of the past life on the globe. *J. Murray*, in Smithsonian Rep., 1896, p. 409.

paleotragine (pā″lẹ-ot′rạ-jin), *a.* [Gr. *παλαιός*, ancient, + *τράγος*, a goat, + *-ine*¹.] Of the ancient goats: applied, in the phrase *paleotragine section*, to a subdivision of the family *Bovidæ* including certain fossil forms distinguished from existing sections of the family by laterally compressed horn-cores, like those of the modern goats, and upper molars resembling those of the brachyodont antelopes.

paleotypic, paleotypical, *a.* See ★*palæotypic*, ★*palæotypical*.

paleotypographist, palæotypographist (pā″lẹ-ọ-tī-pog′rạ-fist), *n.* One who is versed in paleotypography.

paleotypography, palæotypography (pā″lẹ-ọ-tī-pog′rạ-fi), *n.* [*palæo-* + *typography.*] Ancient typography; early printing.

Palestinian, *a.* **II.** *n.* A native of Palestine.

palethnographical (pal-eth-nọ-graf′i-kạl), *a.* Same as ★*paleo-ethnographical*. *Amer. Anthropologist*, April–June, 1902, p. 310.

palethnologist (pal-eth-nol′ọ-jist), *n.* Same as *paleo-ethnologist*. *Keane*, Man Past and Present, p. vi.

palethnology (pal-eth-nol′ọ-ji), *n.* Same as *paleo-ethnology*. *Deniker*, Races of Man, p. 10.

Palhoplotherium, *n.* See ★*Paloplotherium*.

Palici (pa-lī′sī), *n. pl.* [L., pl. of *Palicus*, ‹ *Palica*, a town in Sicily.] In *Rom. antiq.*, two Sicilian deities worshiped as protectors of agriculture.

Palicourea (pal-i-kö′rẹ-ä), *n.* [NL. (Aublet, 1775), probably from the native name in Guiana.] A genus of plants belonging to the madder family and including about 100 species, all natives of tropical America. They are shrubs with terete or angled branchlets, opposite or whorled leaves, and variously colored flowers disposed in terminal, or rarely axillary, corymbs, racemes, or panicles. A few species are grown for ornament in hot-houses, the leaves of several are sometimes used medicinally, and *P. tinctoria* yields a red coloring matter. See ★*goldshrub*.

palila (pä-lē′lä), *n.* A Hawaiian honey-sucker of the genus *Chloridops* or *Loxioides*.

palillo (pä-lēl′yō), *n.* [Peruvian name.] In Peru, a myrtaceous tree, *Campomanesia lineatifolia*, allied to the guava, which grows to a height of 20 or 30 feet. The leaves smell like myrtle and have an acid astringent taste. The bright yellow fruit, which is about the size of an apple, is very fragrant, and is used as an ingredient of an agreeable perfume called mistura.

palimphrasia (pal-im-frā′ziạ), *n.* [NL., ‹ Gr. *πάλιν*, again, + *φράσις*, speaking.] Same as ★*palinphrasia*.

palimpsestic (pal-imp-ses′tik), *a.* [*palimpsest* + *-ic.*] Pertaining to or of the nature of a palimpsest; made into a palimpsest.

palincosmic (pal-in-koz′mik), *a.* [Gr. *πάλιν*, again, + *κόσμος*, world, + *-ic.*] Distributed over the whole globe during paleontological time: said of certain organisms which at the present time are much more restricted in their geographical distribution.

palindromically (pal-in-drom′i-kạl-i), *adv.* After the fashion of a palindrome; in such a manner as to read the same either forward or backward.

palingenesian (pal″in-je-nē′si-ạn), *a.* [*palingenesis* + *-ian.*] Same as *palingenetic*.

palingenesist (pal-in-jen′e-sist), *n.* [*palingenes*(*is*) + *-ist.*] One who believes in palingenesis in some form.

Palingenetic regeneration. See ★*regeneration*.

palingenic (pal-in-jen′ik), *a.* [*palingen*(*esis*) + *-ic.*] Of or pertaining to the past or ancestral history of organisms; palingenetic. [Rare.]—**Palingenic variation.** See ★*variation*.

paling-irons (pā′ling-ī″ėrnz), *n. pl.* An iron tool with which barley is paled.

palingraphia (pal-in-graf′i-ä), *n.* [NL., ‹ Gr. *πάλιν*, again, + *γράφειν*, write.] In *mental pathol.*, the repetition in writing of letters, parts of words, or words: a chronic and exaggerated form of the repetitions which occur normally in careless writing. *Psychol. Rev. Mon. Sup.*, III. xiv. 85.

palinode (pal′i-nōd), *v.*; pret. and pp. *palinoded*, ppr. *palinoding*. [*palinode*, *n.*] **I.** *trans.* To retract or take back (something previously said or written).

II. *intrans.* To recant. *N. E. D.*

palinphrasia (pal-in-frā′ziạ), *n.* [NL., ‹ Gr. *πάλιν*, again, + *φράσις*, speech.] In *mental pathol.*, the repetition, in speaking, of words, parts of words, or phrases; a chronic and exaggerated form of the reiterations and reduplications which occur normally in careless speech. Also *palimphrasia*. *Psychol. Rev. Mon. Sup.*, III. xiv. 85.

Palinurichthys (pal″i-nụ-rik′this), *n.* [NL., ‹ Gr. *παλίνουρος*, L. *Palinurics*, name of a pilot in the Æneid, + *ἰχθύς*, a fish.] A genus of fishes of the family *Centrolophidæ*, found on the Atlantic coast of North America.

Palissy faïence. See ★*faïence*.

Palladianize (pa-lā′di-ạn-īz), *v. t.*; pret. and pp. *Palladianized*, ppr. *Palladianizing*. [*Palladian* + *-ize.*] To erect or remodel in the style of the Palladian school of architecture. See *Palladian*.

palladic (pa-lā′dik), *a.* [*pallad*(*ium*) + *-ic.*] In *chem.*, containing palladium as a constituent with apparently tetrad valence: as, *palladic* chlorid ($PdCl_4$).

palladiferous (pal-ạ-dif′ẹ-rus), *a.* [*palladi*(*um*) + L. *-fer*, -bearing, ‹ *ferre*, bear.] Containing palladium: as, *palladiferous* gold.

palladiotype (pa-lā′di-ọ-tīp), *n.* [*palladium* + *type.*] In *photog.*, a print toned with palladium solution.

palladious (pa-lā′di-us), *a.* [*palladi(um)* + *-ous.*] In *chem.*, containing palladium as a constituent, with apparently dyad valence: as, *palladious* chlorid ($PdCl_2$).

palladium, *n.* **3.** This rare metal occurs in minute quantity, along with like small amounts of platinum, iridium, and rhodium, in the nickel ores of Sudbury, Ontario, Canada. It is stated that palladium is now produced from this source to the extent of more than 3,000 ounces a year.—**Palladium hydrid.** See ★*hydrid*1.—**Palladium paper.** See ★*paper.*

palladous (pa-lā′dus), *a.* [*pallad(ium)* + *-ous.*] Same as ★*palladious.*

pallall (pa-läl′), *n.* [Also *palall, pallaly,* etc.; origin unknown.] The game of hop-scotch; also the stone with which the game is played. *Jamieson.* [Scotch.]

pallar (päl-yär′), *n.* [Chilian name.] On the west coast of South America, a cultivated bean, *Phaseolus Pallar*, one of the principal food plants of the natives. It resembles closely the Lima bean.

pallekarism (pal-e-kär′izm), *n.* [*pallekar* + *-ism.*] The military methods of the pallekars; the ways of pallekars.

pallet2, *n.* **11.** One of the small spatulate or lance-shape calcareous plates which form part of the boring apparatus of the shells of shipworms of the family *Teredinidæ.*—**12.** In *bell-founding*, same as ★*crown*, 7 (*p*).—**13.** In *ceram.*, a potters' wheel.

pallet-wire (pal′et-wīr), *n.* Wire used to connect a pallet or valve in an organ to an operating key; a pull-down.

pallial, *a.* **3.** Relating to the pallium or cerebral cortex.—**Pallial bay.** Same as *pallial sinus* (which see, under *pallial*).—**Pallial cavity,** in mollusks, the cavity containing the gills, anus, and renal openings; the mantle-cavity.—**Pallial complex, eye.** See ★*complex*, ★*eye*1.—**Pallial system,** the cerebrum or that portion of it which develops from the anterior portion of the brain-stem, not including the olfactory portion.

palliatively (pal′i-ạ̄-tiv-li), *adv.* In a palliative manner; so as to palliate.

pallie (pal′i), *a.* and *n.* See ★*paulie.*

palliostratus (pal″i-ō-strā′tus), *n.*; pl. *palliostrati* (-tī). [L. *pallium*, a cloth, + NL. *stratus.*] A continuous sheet of stratus cloud.

pallium, *n.* **6.** The cerebral cortex, or that portion of it which forms the roof and sides of the lateral ventricles: this is termed the *pallium*, or brain mantle, as distinguished from the stem of the brain on which it rests.—**Basal pallium,** the pyriform lobe in those mammals in which this part of the brain is regarded as arising independently.—**Marginal pallium,** the hippocampus in those mammals in which this part of the brain is regarded as arising independently of the other portions of the cortex.

pallograph (pal′ọ̄-gråf), *n.* [Gr. *πάλλειν*, sway, shake, + *γράφειν*, write.] A machine designed to record the vibrations of a ship or other structure exposed to the action of forces. The best devices record displacements in the three planes or directions, longitudinal, vertical, and lateral. A strip of paper driven by a clockwork receives traces from pen-recorders, actuated by masses free to move only in the determined direction, and whose motion is resisted by delicately adjusted springs or magnetic action. A standard clock in circuit records time intervals on the same strip, so that the curves traced give both the intensity and the period of the yielding of the structure to the forces which tend to shake it. Used in high-speed, high-powered boats and on bridges under moving train-load, or high buildings exposed to wind, the jar of machinery, or traffic stresses. *Sci. Amer.*, Feb. 9, 1907, p. 129.

pallone (pä-lō′ne), *n.* [It., a large ball, aug. of *palla*, a ball.] A game somewhat like tennis, played with a larger ball, which the player strikes with his arm, on which there is a guard from the wrist to the elbow.

> He [Francis I.] was a bold rider and an excellent archer, but he especially excelled in the game of *pallone*, introduced from Italy, which was played with a large football and a tin gauntlet lined with felt, and which required considerable skill and strength.
>
> *A. Tilley*, Lit. French Renaissance, I. 4.

palm1, *n.* **9.** A flat end formed on a tie-rod or strut, through which the rivets or bolts are passed to secure the piece to the rest of the structure.—**To anoint the palm,** to bribe. [Colloq.]

palm2, *n.*—**Arrow-root palm,** the coontie.—**Black palm,** a Queensland palm, *Ptychosperma Normanbyi*, the very hard black wood of which is beautifully marked and is used for making canes.—**Carnauba palm,** *Copernicia cerifera.* See *Copernicia* and *carnauba.*—**Coquilla palm,** *Attalea funifera.* See *bast-palm* and *coquilla-nut.* **Curua palm,** a Brazilian palm, *Attalea spectabilis.*—**Molucca palm,** a stemless palm, *Nipa fruticans*, growing in brackish water near the mouths of streams emptying into the ocean. It is widely spread in the East Indies and the Philippine Islands, and has been introduced into the island of Guam, where the pinnæ of its large leaves are used by the natives for thatching their houses. See *Nipa.*—**Needle-palm.** Same as *blue palmetto* (which see, under *palmetto*).—**Sugar-palm,** *Saguerus pinnatus.* See *gomuti*, 1, *ejoo*, and ★*cabo-negro.*—**Turu palm,** in British Guiana, the bacaba-palm, *Œnocarpus Bacaba.*—**Washington palm,** the desert palm, *Neowashingtonia filamentosa.*

palma2 (päl′mä), *n.* [Sp., < L. *palma*, a palm-tree. See *palm*2.] The general name, in tropical countries colonized by Spaniards, of palms and palm-like plants and trees. In the island of Guam the name is applied to all species of screw-pines (*Pandanus*) growing on the island. In Mexico the name is especially applied to arboreous yuccas, chiefly to *Yucca australis*, with narrow pendant panicles of flowers, and *Yucca valida*, with the panicles broader and erect or recurved. Other allied plants growing in Mexico are the palma barrigona or palma culona, *Dasylirion inerme*, having a swollen trunk; palma istle or palma samandoca, *Samuela Carnerosana* (first described from the pass of Carneros, in northern Mexico), which yields a valuable commercial fiber; and palma loca or palma pita, *Yucca Treculeana*, also the source of an excellent fiber. Among the true palms of Mexico are the palma Apache or palma dulce, *Brahea dulcis* (also called *palma de sombrero* from the fact that hats are made of its leaves), and the palma real, the royal palm, *Roystonea regia.* The palma de la Virgen is a cycad, *Dion edule*, which is also called *chamal.* In Porto Rico the palma real is *Roystonea borinquena*, and the palmas de sombrero are *Inodes causiarum* and *I. glauca.*

palmad (pal′mad), *adv.* [L. *palma*, palm, + *ad*, toward.] Toward the palm or ventral side of the fore limb.

palmar. I. *a.*—**Palmar aponeurosis.** Same as *palmar fascia.*

II. *n.* **3.** In the crinoids, according to both Carpenter's and Wachmuth and Springer's terminology, one of the plates of the arms or brachia which are of the third order of branching, situated beyond the distichal and within the postpalmars. They are the same as the third brachials in Bather's terminology.

palmarian (pal-mā′ri-ạn), *a.* [*palmary* + *-an.*] Same as *palmary.*

palmarosa-oil (pal-mạ-rō′sạ̄-oil), *n.* See *geranium-*★*oil* (*b*).

palm-bast (päm′bast), *n.* Twine or rope made from vegetable bast (nominally of palms), used for binding cigars and for hat-braids.

palm-beetle (päm′bē″tl), *n.* Any one of several species of beetles which infest palm-trees, especially the calandrid *Rhyncophorus palmarum*, a species whose larva bores into the cabbage-palm in tropical America. See *palm-weevil*, under *weevil.*

palm-borer (päm′bōr″ėr), *n.* See *palm-weevil*, under *weevil*, and *palm-worm*, under *worm.*

palm-civet (päm′siv″et), *n.* Same as *palm-cat.*

palmellin, *n.* **2.** A coloring-matter, somewhat resembling hematin, found in the spores of *Aspergillus niger.* Also called *aspergillin.*

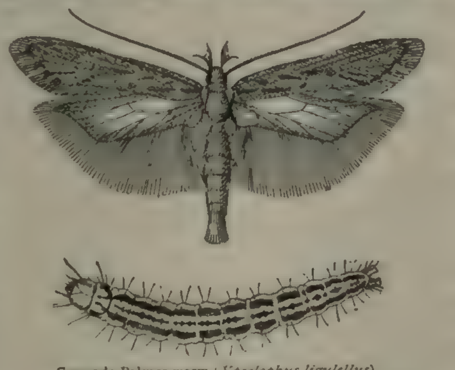
palmerite (päl′me-rīt), *n.* [Named after Sr. *Palmeri.*] A hydrated phosphate of aluminium which occurs in a white powdery form resembling kaolin. It is found in a cavern at Monte Alburas, Salerno, Italy.

palmer-nut (pä′mėr-nut), *n.* An old name for the cocoanut.

palmer-shell (pä′mėr-shel), *n.* Same as ★*pilgrim-scallop.*

palmer-trout (pä′mėr-trout), *n.* The young of *Salmo salar*, the salmon of Europe.

palmer-worm, *n.*—**Comrade palmer-worm,** the larva of an American moth, *Ypsolophus ligulellus*, which ties together and skeletonizes the leaves of the apple.—**Tawny-striped palmer-worm,** the larva of an American tineid moth, *Ypsolophus malifoliellus.* It feeds on apple-leaves, as does the common palmer-worm.



Comrade Palmer-worm (*Ypsolophus ligulellus*).
Moth above, "worm" or larva below. Much enlarged.

Palmesque (päl-mesk′), *a.* Noting the style of one of the Palmas, Venetian painters of the sixteenth century, especially that of Palma Vecchio (1480–1528).

palmette, *n.* **2.** In certain gastropods, an appendage of the head.

Palmetto leaf-miner. See ★*leaf-miner.*

palmetto-weevil (pal-met′ō-wē″vl), *n.* An American curculionid beetle, *Rhyncophorus cruentatus*, which damages palmettos.

palm-grease (päm′grēs), *n.* Money used to oil or grease the palm, that is, for a bribe. [Colloq.]

palm-grub (päm′grub), *n.* Same as *palm-worm* (which see, under *worm*).

palmiacol (pal′mi-ạ-kol), *n.* The trade-name for an antiseptic compound used as a substitute for creosote in cases of tuberculosis.

palmito2 (päl-mē′tō), *n.* [Sp. *palmito*, < *palma*, palm.] In Spanish America and the West Indies, the tender crown or terminal bud of unexpanded leaves of various species of palms, used as a vegetable, and sometimes called *palm-cabbage.* In the Bermudas this name was applied to the bud of the indigenous palmetto, *Inodes Palmetto*, a plant held in very high esteem by the first settlers.

palmitolic (pal-mi-tol′ik), *a.* [*palmit(ic)* + *-ol* + *-ic.*] Derived from palmitic acid by loss of hydrogen.—**Palmitolic acid,** a crystalline, waxy acid, $C_{16}H_{28}O_2$, which is made by the action of alcoholic potash on dibrompalmitic acid or bromhypogeic acid. It melts at 42° C.

palmitone (pal′mi-tōn), *n.* [*palmit(ic)* + *-one.*] A ketone, $(C_{15}H_{31})_2CO$, made by distilling palmitic acid with lime. It is a crystalline substance which melts at 82.8° C. Also called *dipentadecyl ketone.*

palmitoxylic (pal″mi-tok-sil′ik), *a.* [*palmit(ic)* + *ox(ygen)* + *-yl* + *-ic.*] Noting a crystalline acid, $C_{16}H_{28}O_4$, made by the action of fuming nitric acid on palmitolic acid. It melts at 67° C.

palm-kernels (päm′kėr″nelz), *n. pl.* A commercial name for the kernels obtained from the seeds of the West African oil-palm, *Elæis Guineensis*, which form an important article of export from West Africa to Europe. Each seed contains from one to four kernels.

palm-leaf, *n.* **3.** In *decorative art*, a common motive in Indian and Oriental design: sometimes called *pear* or *river-loop pattern.*

palm-lizard (päm′liz″ärd), *n.* The dabb, *Uromastix acanthurus*, of north Africa.

palm-nuts (päm′nuts), *n. pl.* The commercial name for the seeds of the West African oil-palm, *Elæis Guineensis*, after the pulpy matter which contains the palm-oil has been removed.

palmo (päl′mō), *n.* [It., < *palma*, palm. See *palm*1, *n.*] The Roman palm of 8.5 inches, which has been variously lengthened in Italy—in Genoa to 9.8 inches, in Naples to 10.4 inches, and in Lucca to 11.5 inches. In the Spanish peninsula and the affiliated American countries the length has not much changed. It varies from 8.3 to 8.9 inches in Spain, while in Argentina, Portugal, and Brazil it is nearly 8.6 inches.

palm-oil, *n.* **2.** See *oil of palms.*

palmoscopy (pal-mos′kọ̄-pi), *n.* [Gr. *παλμός*, pulsation, pulse, + *-σκοπια*, < *σκοπεῖν*, view.] In *pathol.*, observation of the pulse; formerly, divination or prognostication from examination of the pulse in any part of the body.

palmospasmus (pal-mọ̄-spaz′mus), *n.*; pl. *palmospasmi* (-mī). [NL., < Gr. *παλμός*, pulsation, + *σπασμός*, spasm.] Clonic, intermittent spasm.

palm-stay (päm′stā), *n.* A boiler-brace or tie-rod having at its end a palm or flat pad through which the rivets are passed to secure it to the shell.

palm-swift (päm′swift), *n.* One of the small swifts of the genera *Tachornis* and *Claudia*, found in tropical America: distinguished by having the toes arranged in pairs. One of the most common species is *Tachornis phœnicobius* of Jamaica. See *swift*1, 4.

palmula, *n.* **2.** In *entom.*, same as *empodium.* *A. S. Packard*, Text-book of Entom., p. 97.

palmus (pal′mus), *n.*; pl. *palmi* (-mī). [NL., < Gr. *παλμός*, vibration, pulsation, < *πάλλειν*, sway, quiver, leap, bound.] Pulsation; twitching; a form of spasmodic tic.

palm-willow (päm′wil″ō), *n.* The great sallow, *Salix Caprea.* See *palm*2, 3.

palmwise (päm′wīz), *adv.* With the palm uppermost.

palm-withy (päm'with″i), *n.* Same as ★*palm-willow.*

palo² (pä'lō), *n.* [Sp. *palo*, stick, wood.] Wood. —**Palo de Campeche.** Same as *logwood.*—**Palo de corcho,** the cork-wood, *Pisonia longifolia.*—**Palo de hierro,** or **palo de fierro** (iron-wood), the name of several hard-wood trees. In Mexico it is applied to several trees of the mimosa family, especially to *Siderocarpos flexicaulis, Prosopis Palmeri,* and *Albizzia occidentalis;* in Porto Rico to *Rhamnidium ferreum* and *Sarcomphalus reticulatus,* belonging to the *Rhamnaceæ,* and to *Ixora ferrea,* belonging to the *Rubiaceæ.*—**Palo de hueso** (bone-wood), in Porto Rico, a shrub, *Ilex nitida.*—**Palo del Brazil,** in Mexico, the logwood, *Hæmatoxylum Campechianum,* and the closely allied *H. boreale.*—**Palo de Maria,** same as ★*palo-Maria.*—**Palo de matos,** in Porto Rico, *Ormosia Krugii,* a leguminous tree bearing red-and-black hard seeds called *matos.*—**Palo de vaca,** the cow-tree, *Piratinera utilis.* See *cow-tree.*

palo-amarillo (pä″lō-ä-mä-rēl'yọ̄), *n.* [Sp. *palo amarillo,* yellow-wood.] In Mexico, a name applied to several shrubs and trees yielding a yellow dye, especially to *Bocconia frutescens* and *B. arborea,* belonging to the poppy family, and *Berberis pinnata,* an indigenous barberry.

palo-blanco, *n.* **2.** A name applied in Spanish America to many trees and shrubs with white wood or whitish bark or foliage; in Cuba, to *Simarouba glauca;* in Porto Rico to *Drypetes glauca* (*Euphorbiaceæ*) and *Chione glabra* (*Rubiaceæ*); in Mexico to a mimosa-like shrub or small tree, *Lysiloma candida,* the bark of which is used for tanning.

palo-dulce (pä-lō-dụl'thā), *n.* [Sp. *palo,* wood, + *dulce,* sweet.] A small tree of the bean family, *Viborquia polystachya,* from which the Mexicans make a sweet refreshing drink.

Palo Duro beds. See ★*bed*¹.

palo-jiote (pä″lō-hē-ō'tā), *n.* [Mexican name, < Sp. *palo,* wood, + Nahuatl *xiotl,* skin eruption.] A name of *Terebinthus Simaruba,* a tree yielding a medicinal gum-resin, called *gum-archipin.* Also called *cuajiote de Chiapas.* See *cachibou.*

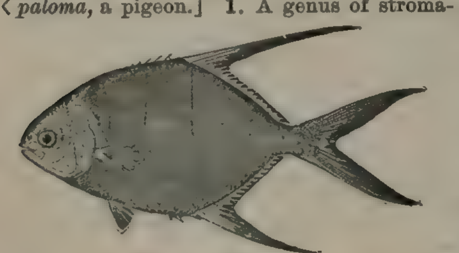
palola (pa-lō'lä̤), *n.* The palolo.

palo-mabi (pä″lō-mä-bē'), *n.* [Sp. *palo,* wood, + *mabí,* the name of a beverage.] In Cuba and Porto Rico, *Colubrina reclinata* and *C. Colubrina,* two shrubs or trees yielding bark from which a refreshing effervescent drink is made. See ★*mabi.*

palo-Maria (pä″lō-mä-rē'ä), *n.* [Sp. *palo Maria,* Saint Mary's wood.] In countries settled by the Spanish, a name applied to several trees which yield hard wood of good quality; in the Philippine Islands and on the Island of Guam, *Calophyllum Inophyllum* (see ★*bitanhol*); in the Philippine Islands, also *Kayea lepidota,* of the *Clusiaceæ;* in Cuba and Porto Rico, *Calophyllum Galba;* in Yucatan, *Sapota zapotilla;* and at Acapulco and Vera Cruz, Mexico, *Cordia Gerascanthus,* of the borage family.

Palombino marble. See ★*marble.*

Palometa (pal-ọ-mē'tä̤), *n.* [NL., Cuban Sp., < *paloma,* a pigeon.] **1.** A genus of stromateoid fishes of the tropical Pacific coast of America.—**2.** [*l. c.*] A common name for various members of the genus *Palometa* and of the genus *Trachynotus,* as *T. glaucus,* a carangoid fish common in the West Indies and northward to North Carolina.



Palometa (*Trachynotus glaucus*).
(From Bulletin 47, U. S. Nat. Museum.)

palo-piojo (pä″lō-pē-ō'hō), *n.* [Sp. *palo piojo,* louse-wood, < *palo,* wood, + *piojo,* louse.] A Mexican tree, *Willardia Mexicana,* belonging to the bean family. It yields very hard wood and from its bark a wash is made which is used as an insecticide.

Paloplotherium (pal″ọ-plọ-thē'ri-um), *n.* [For *Palhoplotherium:* < Gr. παλαιός, ancient, + ὅπλα, arms + θηρίον, a wild beast.] An extinct genus of *Equidæ,* not in the main line of descent to the modern horse. It is characterized by low-crowned, bunolophodont teeth, sometimes covered by a thin layer of cement, and tridactyl digitigrade feet. It occurs in the Middle and Upper Eocene of Europe.

palo-santo (pä-lō-sän'tō), *n.* [Sp. *palo santo,* holy-wood.] In countries settled by the Spaniards, a name given to several trees which either have medicinal qualities, or are esteemed by the natives for other reasons; in Mexico to *Guaiacum sanctum* and *G. officinale,* also called *guayacan,* belonging to the family *Zygophyllaceæ;* to *Fouquieria splendens,* which yields torches for burning at religious ceremonies (see ★*ocotilla*); to *Ipomœa murucoides,* yielding medicinal bark; and in the state of Jalisco, to a leguminous tree, *Diphysa suberosa.* In the Philippine Islands, the name is applied to *Koordersiodendron pinnatum,* a valuable timber-tree belonging to the *Anacardiaceæ* (see ★*amuguis*), and to *Rourea volubilis,* a climbing plant of the family *Connaraceæ,* highly esteemed by the natives for its medicinal properties. In Guiana, same as *panococo,* 2. In Argentina, *Bulnesia Sarmienti,* a fine tree belonging to the *Zygophyllaceæ,* yielding hard wood.

palo-verde (pä-lō-vãr'dạ̄), *n.* [Sp. *palo,* wood, + *verde,* green.] In the south-western United States and in Mexico, several closely allied trees belonging to the senna family, especially *Cercidium Texanum, C. Torreyanum, C. floridum, Parkinsonia aculeata,* and *P. microphylla.* The leaves of these plants, at most few and scattered, are often absent most of the year. The pale olive-green bark suggests the name, as also that of *green-barked acacia,* applied especially to the species of *Cercidium.*

palpacle (pal'pa̤-kl), *n.* [L. *palpus,* feeler: on the analogy of *tentacle.*] In some siphonophorans, a tentacle-like organ belonging to a palpon.

palparium (pal-pā'ri-um), *n.*; pl. *palparia* (-ä̤). [NL., < *palpus,* palp, + *-arium.*] The membrane at the base of the labial palpi of carabid beetles.

palpator (pal-pā'to̤r), *n.* [L. *palpator,* < *palpare,* touch, stroke.] In *med.,* one who ascertains the condition of organs by touch.

palpatorial (pal-pạ-tō'ri-a̤l), *a.* [*palpatory* + *-al*¹.] Of or pertaining to palpatory examination.

Palpebral lobe. See ★*lobe.*

palpebritis (pal-pe-brī'tis), *n.* [NL., < L. *palpebra,* eyelid, + *-itis.*] Inflammation of the eyelids.

palped (palpt), *a.* [*palp* + *-ed*².] Possessing palpi.

palpimanid (pal-pim'a̤-nid), *n.* and *a.* **I.** *n.* A member of the araneidan family *Palpimanidæ.*

II. *a.* Having the characters of or belonging to the family *Palpimanidæ.*

palpon (pal'pon), *n.*; pl. *palpa* (-pä̤). [NL., irreg. < *palpare,* touch (?).] In siphonophorans, a hollow tentacle-like organ closed at the outer end but communicating with the cavity of the stem; a dactylozoöid.

palsied (pâl'zid), *a.* [*palsy* + *-ed*².] Paralyzed; paretic.

palsy, *n.*—**Birth palsy,** spastic paralysis in the new-born child.—**Creeping palsy,** progressive muscular atrophy.—**Crossed palsy.** Same as *crossed paralysis* (which see, under *paralysis*).—**Diver's palsy.** Same as *caisson-disease.*—**Hammer-palsy,** a neurosis, analogous to writers' cramp, affecting the muscles of the shoulder and arm, occurring in blacksmiths and others who wield the hammer continuously.—**Landry's palsy.** Same as *Landry's paralysis.*—**Pen-palsy,** writers' cramp.—**Shoemakers' palsy.** See *occupation* ★*cramp.*—**Transverse palsy.** Same as *crossed paralysis* (which see, under *paralysis*).

palta (päl'tä), *n.* [Quichua name.] On the west coast of South America, the name applied to the avocado, *Persea Persea.* See *alligator-pear* and *avocado.*

Paltonium (pal-tō'ni-um), *n.* [NL. (Presl, 1852), < Gr. παλτόν, a dart, spear, from the shape of the fronds.] A genus of polypodiaceous ferns related to *Tænitis,* having simple, linear-lanceolate, coriaceous fronds a foot or less long, tapering both ways, with anastomosing veins and sori normally borne in a conspicuous submarginal line toward the apex. There are two species, the best known, *P. lanceolatum* (*Tænitis lanceolata*), being an epiphyte of tropical America and southern Florida; the second, a recently described Chinese plant.

palude† (pa-lūd'), *n.* [L. *palus* (*palud-*), a swamp, marsh.] A marsh.

paludial (pạ-lū'di-a̤l), *a.* [L. *palus* (*palud-*), a swamp, marsh, + *-ial.*] An erroneous form for *paludal.*

paludian (pạ-lū'di-a̤n), *a.* Same as *paludal.*

paludic (pal'ụ-dik, pạ-lū'dik), *a.* [L. *palus* (*palud-*), marsh, + *-ic.*] Same as *paludal.*

paludiferous (pal-ụ-dif'ẹ-rus), *a.* [L. *paludifer,* < *palus* (*palud-*), marsh, + *ferre,* bear.] That causes a fen or marsh. *Blount.*

Paludina limestone. See ★*limestone.*

paludinal (pạ-lū'di-na̤l), *a.* [*paludine* + *-al*¹.] Same as *paludinous.*

paludous (pal'ụ-dus), *a.* Same as *paludose.*

palusami (pä-lö-sä'mẹ̄), *n.* [Polynesian *palu,* paste, soft substance, + *sami,* sea-water.] In Samoa, a favorite native dish, indispensable at feasts, consisting of the custard-like juice expressed from grated coconuts, to which a little salt water is added, inclosed together with tender young taro leaves (*Caladium Colocasia*) in an older leaf, and baked in a native oven.

Paluxy sands. See ★*sand*¹.

pam., pamph. Abbreviations of *pamphlet.*

pam-. A form of *pan-* before a labial.

pamflet, *n.* and *v. i.* An amended spelling of *pamphlet.*

pampanito (päm-pä-nē'tō), *n.* [Sp., dim. of *pámpano.* See ★*pampano.*] A fish, *Trachynotus rhodopus,* belonging to the family *Carangidæ,* found on the Pacific coast of tropical America south to Panama.

pampano (päm'pä-nō), *n.* [Sp. *pámpano,* a tendril, also in Cuban Sp. several fishes so called with fins prolonged into threads; < L. *pampinus,* a tendril. See *pampine, v.*] A common name of various fishes of the genus *Trachynotus,* and also, though less correctly, of species of similar genera. In an adapted spelling the name appears as *pompano,* applied to *Trachynotus* and other genera. See *pompano.*—**Common pampano,** *Trachynotus carolinus,* of the tropical Atlantic coast of America. See *pompano,* 1.—**Gaff-topsail pampano,** *Trachynotus glaucus,* found from Virginia to the Caribbean Sea. See *pompano,* 1.—**Great pampano.** Same as *permit*².—**Round pampano,** *Trachynotus falcatus,* found from Cape Cod to Brazil.

pampa, *n.*—**Pampas clay,** a local name of a bluish clay, beds of which occur in many parts of the pampas.—**Pampas formation.** See ★*formation.*

pampero² (pam-pā'rọ̄), *n.*; pl. *pamperos* (-rōs). [Sp., < *pampa.* See *pampa.*] An Indian living on the pampas of South America.

pamphletage (pam'fle-tạ̄j), *n.* [*pamphlet* + *-age.*] A collection of pamphlets; all the pamphlets on a certain subject. [Nonce-word.]

> The *pamphletage* . . . on the subject must be vast, and the labour in front of Byron's editor is enormous.
> *A. Lang,* in Longman's Mag., May, 1896, p. 110.

pamphletize (pam'fle-tīz), *v. i.* and *t.*; pret. and pp. *pamphletized,* ppr. *pamphletizing.* [*pamphlet* + *-ize.*] To write pamphlets: as, to take to *pamphletizing;* to write a pamphlet on. [Nonce-word.]

pamphysical (pam-fiz'i-ka̤l), *a.* [Gr. πᾶν, all, + E. *physical.*] Regarding the physical universe as the all: opposed to *pantheistic.*

> In modern, as in ancient times, the extreme points between which philosophy has oscillated are the same: positively described, they are the pantheistic and (if I may invent a phrase) the *pamphysical* poles of doctrine.
> *J. Martineau,* Types of Ethical Theory, I. Introd. 19.

pamplegia (pam-plē'ji-ä̤), *n.* [NL., < Gr. πᾶν, all, + πληγή, stroke.] General paralysis of nearly all the muscles of the body, or of the four extremities.

Pamunkey formation. See ★*formation.*

pan¹, *n.* **13.** In *mining,* a hollow in the ground where the neck of a volcano formerly existed. [South Africa.]

> The mines are located in "*pans,*" in which is found the "blue ground" now recognized as the disintegrated matrix of the diamond. These "*pans*" are known to be the "pipes," or "necks," of former volcanoes, now deeply dissected by the forces of the atmosphere—in fact, worn down if not to their roots, at least to their stumps.
> *W. H. Hobbs,* in Smithsonian Rep., 1901, p. 359.

Berdan pan, a pan in which the ore is ground by means of heavy balls of cast-iron, working in an annular trough of U-shaped section which revolves about an inclined axis: used largely in Australia.—**Clean-up pan.** See ★*clean-up.*—**Hepburn and Peterson's pan,** an amalgamation-pan with a bottom inclined toward the center or shaped like an inverted cone. It has a capacity of 1400 pounds.—**Short pan,** a balance-pan with short hangers: used in determining specific gravities.—**Slip-pan,** a pan for the evaporation of water from the slip produced when the ingredients of a cement are mixed with water.—**To cut the pan.** See ★*cut.*—**To poison the pan,** a workmen's term meaning to add glue or some other colloid substance to the brine in a salt-boilers' pan in order to secure the formation of salt in very small crystals.—**Wetzel pan,** an arrangement for rapidly evaporating the juice of the sugar-cane, consisting of a semi-cylindrical pan to contain the juice, with a cylindrical cage formed of steam-pipes revolving in it and partially submerged. These pipes, as they emerge covered with juice, present a large heated surface to the air, from which vapor of water is rapidly given off.

pan^1, *v.* **I.** *trans.* **3.** To broil or bake in a pan.

Panned Oysters. . . . Clean one pint of oysters and add [to butter, etc., in pan]. Cook until edges curl, etc.
F. M. Farmer, Chafing Dish Possibilities.

4. To pour with a pan. *Modern Amer. Tanning*, p. 42.

II. *intrans.* **2.** To look for gold, using the method of washing the earth or crushed rock in the pan.

At the end of two months we had never struck a pocket. We had *panned* up and down the hillsides till they looked plowed like a field.
Mark Twain, Roughing It, lxi.

3. In *agri.*, to harden and cake from the effect of hot sunshine following rain: said of the soil. *Forby*, Vocab. East Anglia. [Dialect.]—**To pan off,** in *gold-digging*, to wash gold-bearing gravel in a pan to separate the gold.

These returned gnomes having been brought to light, at once commenced *to 'pan off,'* according to the recognized rule and practice.
Rolf Boldrewood, Miner's Right, vii.

panada, *n.*—**Chicken panada,** a dish made of chopped chicken rubbed to a paste, bread-crumbs, milk, egg, etc.

panæsthetic (pan-es-thet'ik), *a.* [*panæsthesia* (*thet-*) + *-ic.*] Of or pertaining to panæsthesia.

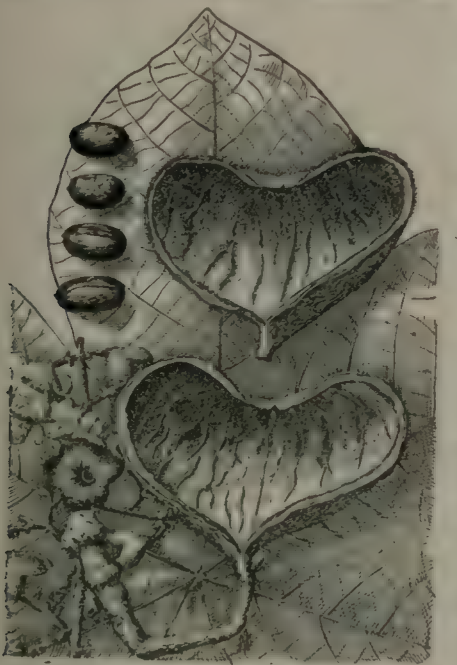
Pan-African (pan-af'ri-ka̤n), *a.* Relating to all persons of African parentage; entirely African: as, *Pan-African* government.

Pan-Africander (pan-af'ri-kan-dėr), *a.* Relating to all Africanders, that is, South Africans of Dutch descent, or to a government consisting of such persons: as, a *Pan-Africander* conference; a *Pan-Africander* republic.

panage, *n.* Same as *pannage.*

panalgebraic (pan-al-je-brā'ik), *a.* Designating a curve for which x, y, and dy/dx are connected by an algebraic equation. *Loria.*

panama (pä-nä-mä'), *n.* [Native name.] On the Isthmus of Panama, a handsome tree, *Sterculia Carthaginensis*, with large 5-lobed leaves, bearing 3-celled capsules covered with fine brittle hairs and containing a number of oblong oily edible seeds.



Panama (*Sterculia Carthaginensis*).

Panaman (pan'a̤-ma̤n), *a.* and *n.* [*Panama* + *-an.* The Sp. adj. is *Panameño.*] **I.** *a.* Of or relating to Panama.

II. *n.* An inhabitant of Panama.

Panamaniam (pan-a̤-mā'ni-a̤n), *a.* and *n.* Same as ⋆*Panaman.*

Panamic (pan'a̤-mik), *a.* [*Panam*(*a*) + *-ic.*] Relating to or characteristic of the region in the vicinity of the Isthmus of Panama, including the ocean.

As will be seen by the chart of our route, . . . the continental slope of the *Panamic* district is steep.
A. Agassiz, in Mem. of Mus. Compar. Zool., Harvard, [XXXI. 222.

Panamic fauna, the animal life of the Isthmus of Panama and its vicinity, including the ocean.

Dall affirms that Point Conception is the northern limit of the *Panamic fauna.* *Science*, Jan. 10, 1902, p. 63.

Panamist (pan'a̤-mist), *n.* [F. *Panamiste.*] A person who took part in the transactions by which the French Panama Canal Company secured political and financial help.

pananthropism (pan-an'thrọ-pizm), *n.* [Gr. πᾶν, all, + ἄνθρωπος, man, + *-ism.*] See the extract.

If Mr. Swinburne's creed is describable in one word, that word must be made for the occasion—*pananthropism*: . . . he sees the spirit of man (which be it borne in mind he calls 'God') everywhere animating and informing the universe.
H. B. Forman, Living Poets, p. 369. *N. E. D.*

panao (pä-nä'ō), *n.* [Philippine name.] A forest tree, *Dipterocarpus vernicifluus*, belonging to the family *Dipterocarpaceæ*, with alternate broadly lanceolate leaves, which are downy beneath, and flowers in spicate clusters, the corolla deeply 5-cleft and the calyx with two of its lobes greatly elongated in fruit. The wood is used in the construction of houses and in boat-building. The tree, when wounded, yields a copious supply of an oleoresin, called *balao* or *malapaho* in commerce, which is used as a varnish for pictures and as a protection for wood against termites. It is also used, where the trees are abundant, for torches. These are made of bamboo joints filled with the resin, and are consumed with it as it burns away. See ⋆*balao*^{2}. [Philippine Is.]

panapospory (pan-ap'ọ-spō-ri), *n.* [*pan-* + *apospory.*] In *bot.*, apospory over the whole surface of the frond.

panaquilone (pa̤-nak'wi-lōn), *n.* [*Pana*(*x*) *qui*(*nquefo*)*l*(*ium*) + *-one.*] An amorphous, yellow, bitter-sweet powder, $C_{20}H_{42}O_{15}$, found in the root of American ginseng, *Panax quinquefolium.* It is soluble in water and alcohol, and insoluble in ether.

panarchy (pan'är-ki), *n.* [Gr. πᾶν, all, + ἀρχή, rule. Compare ⋆*pantarchy.*] A realm or dominion which includes the universe. [Rare.]

The starry *panarchy* of space.
P. J. Bailey, Festus, xix. 208. *N. E. D.*

panarithmology (pan-ar-ith-mol'ọ-ji), *n.* [*pan-* + *arithmology.*] Arithmetic and algebra.

panarteritis (pan"är-te̤-rī'tis), *n.* [NL., < Gr. πᾶν, all, + ἀρτηρία, artery, + *-itis.*] **1.** Inflammation of all the coats of an artery.—**2.** Inflammation of all or most of the arteries in the body.

panathletic (pan-ath-let'ik), *a.* [*pan-* + *athletic.*] Relating to athletics of all kinds.

panatom (pan-at'ọm), *n.* [*pan*(*togen*) + *atom.*] A term employed by G. Hinrichs to signify the ultimate particles of a hypothetical primitive substance, called by him *pantogen*, from which he imagined all the known forms of matter to be built up.

panaulon (pan-â'lon), *n.*; pl. *panaula* (-lä̤). [Gr. πᾶν, all, + αὐλός, a flute.] An improved and extended form of flute invented by G. Bayr of Vienna early in the nineteenth century. It had fifteen keys, and was capable of double tones.

panautomorphic (pan"â-tọ-môr'fik), *a.* [Gr. πᾶν, all, + E. *automorphic.*] In *petrog.*, same as *panidiomorphic.*

panblastic (pan-blas'tik), *a.* [Gr. πᾶν, all, + βλαστός, germ, + *-ic.*] In *embryol.*, containing or consisting of derivations from all the germinal layers.

Panchatantra (pan-cha̤-tan'trä̤), *n.* [Skt. *pañchatantra* (*pañca-*), lit. 'five books' (cf. *Pentateuch*), < *pancha*, five, + *tantra*, books, manual, lit. loom, warp.] A collection of popular tales and fables in Sanskrit, compiled in five books by a Brahman about 500 A.D. This work was translated into Persian, Arabic, Syriac, and most European languages, and became familiar in England as the fables of Pilpay (Bidpai).

panchayat (pan-chī'a̤t), *n.* Same as *punchayet.*

Panchet or **Pantschet group.** See ⋆*group*^{1}.

panchreston (pan-kres'ton), *n.* [Also *panchrestum*, *pancreston*, etc.; L. *panchrestum* (sc. *medicamentum*), < Gr. πάγχρηστον, neut. of πάγχρηστος, good for all work, < πᾶς (παν-), all, + χρηστός, useful. Cf. *panacea.*] A (supposed) universal medicine; a panacea.

pan-Christic (pan-kris'tik), *a.* [*pan-* + *Christ* + *-ic.*] Identifying Christ with the universe. *N. E. D.*

Grotesque Egyptian Gnostic Gospels which . . . exhibit partly a *pan-Christic* conception.
Expositor, Dec., 1897, p. 416.

panchromatic (pan-krọ-mat'ik), *a.* [Gr. πᾶς (παν-), all, + χρῶμα(τ-), color, + *-ic.*] In *photog.*, sensitive to all the spectrum colors from the red to the violet. Such plates are obtained by the use of methyl and ethyl dyes, as methyl isocyanins.

The methyl and ethyl dyes are therefore well adapted to the preparation of *panchromatic* dry plates, and make it possible to produce plates possessing uniform sensitivity for the entire visible spectrum, the sensitivity extending into red as far as wave length 670 μ μ, and an appreciable increasing of the sensitivity being noticeable still further into the infra-red.
Sci. Amer., Sept. 12, 1903, p. 185.

panclarite (pan'kla-rīt), *n.* [A trade-name (?), appar. < Gr. πᾶς (παν-), all, + L. *clarus*, clear, + *-ite*^{2}.] A solution of rosin, glove-skin, and glycerin. *C. T. Davis*, Manuf. of Leather, p. 505.

panclastic (pan-klas'tik), *n.* [Gr. πᾶς (παν-), all, + κλαστός, broken, + *-ite*^{2}.] An explosive that will break any substance. [Rare.]

The prisoner . . . has a special knowledge of chemistry and has even invented a *panclastic* more terrible in its effects than any hitherto known.
Times (London), April 2, 1892.

pancosmic (pan-koz'mik), *a.* [Gr. πᾶς (παν-), all, + κόσμος, world, + *-ic.*] Relating to pancosmism; implying oneness with all things; relating to all things.

pancosmism (pan-koz'mizm), *n.* [Gr. πᾶς (παν-), all, + κόσμος, world, + *-ism.*] The theory that the cosmos is all—that the physical world comprises all that exists.

pancosmist (pan-koz'mist), *n.* [*pancosm-ism* + *-ist.*] One who believes in pancosmism.

pancreas, *n.*—**Accessory pancreas,** one or more lobules of pancreatic tissue separated from the main portion of the gland and found in the wall of the stomach or of the upper portion of the small intestine.—**Ventral pancreas,** in *embryol.*, a solid more or less bilobed or conical outgrowth on the ventral side of the intestine.

pancreatectomy (pan"krẹ-a̤-tek'tọ-mi), *n.* [Gr. πάγκρεας, sweetbread (pancreas), + ἐκτομή, excision.] Excision, in whole or in part, of the pancreas.

Pancreatic colic. See ⋆*colic.*

pancreaticoduodenal (pan"krẹ-at"i-kō-dū-ọ-dē'na̤l), *a.* Relating to both the pancreas and the duodenum.

pancreaticosplenic (pan"krẹ-at"i-kō-splen'-ik), *a.* Relating to both the pancreas and the spleen.

pancreatinize (pan'krẹ-a̤-ti-nīz), *v. t.*; pret. and pp. *pancreatinized*, ppr. *pancreatinizing.* [*pancreatin* + *-ize.*] Same as *pancreatize.*

pancreatization (pan"krē-a̤-ti-zā'shọn), *n.* [*pancreatize* + *-ation.*] The act of pancreatizing, or the state of being pancreatized.

pancreatogenic (pan"krẹ-a̤-tọ-jen'ik), *a.* [*pancreas* (*at-*), + *-o-* + Gr. -γενής, -producing.] Having origin in the pancreas: said of certain diseases dependent upon impaired function of the pancreas.

The intestinal disorders of digestion may be classified according to their etiology as gastrogenic, hepatogenic, *pancreatogenic*, or essential intestinal.
Med. Record, Aug. 3, 1907, p. 172.

pancreolytic (pan"krẹ-ọ-lit'ik), *a.* [*pancreas* + Gr. λυτικός, < λύσις, dissolution.] Exerting a destructive action upon the pancreas.

pancyclopedic (pan"sī-klọ-pē'dik), *a.* [*pan-* + *cyclopedic.*] Relating to or comprising the entire circle of the sciences.

panda, *n.*—**Great panda,** *Æluropus melanoleucus*, a rare mammal from eastern Tibet, sometimes placed with the bears. See cut under *Æluropus.*

pandal (pan'da̤l), *n.* [Tamil *pendal*, a shed.] In the East Indies, a shed or arbor, especially one for temporary use.

Pandalidæ (pan-dal'i-dē), *n. pl.* [NL., < *Pandal*(*us*) + *-idæ.*] A family of macrurous decapod crustaceans, having a long slender rostrum armed with teeth or spines, prominent eyes, the first pair of trunk-legs without and the second with chelæ, the pleopods biramous and the tail-fan well developed. It includes several genera, among them being *Pandalus*, *Pandalopsis*, and *Nothocaris.*

Pandalus (pan-dā'lus), *n.* [NL.] The typical genus of the family *Pandalidæ.* *P. montagui* is found off the coast of the United States. *Leach*, 1841.

pandan^2 (pän-dăn'), *n.* [Tagalog name.] In the Philippine Islands, the textile screw-pine, *Pandanus tectorius*, a species with glaucous sword-shaped leaves armed with spines on the keel and margin. and possessing great tensile strength and flexibility. The leaves are divested of their spiny margins and keel and after having been properly cured are split into ribbons of greater or less fineness and woven into hats, bags, and mats.

pandanaceous (pan-dạ-nā′shius), *a.* Belonging to or having the characters of the plant family *Pandanaceæ*.

Pandanales (pan-dā-nā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Pandanus* + *-ales*.] An order of monocotyledonous plants occupying the lowest position among angiosperms. It is technically characterized by monœcious, spicate, or capitate flowers, the perianth consisting of bristles or chaffy scales, and by the mealy or fleshy endosperm. It embraces the three families *Pandanaceæ*, *Typhaceæ*, and *Sparganiaceæ*.

Pandanus-disease (pan-dā′nus-di-zēz″), *n.* See ★*disease*.

Pandaram (pạn-dä′rạm), *n.* [Tamil *paṇḍāram*.] A Hindu beggar of the Sudra or a lower caste; in southern India and Ceylon, a low-caste Hindu priest.

pandaric (pan-dar′ik), *a.* [L. *Pandarus* (see *pander*) + *-ic*.] Of the nature of, or characteristic of, a pander.

pandectist (pan′dek-tist), *n.* [*pandect* + *-ist*.] One who is learned in the pandects.

pandemic, *a.* **2.** In *phytogeog.*, growing throughout the world; cosmopolitan. *Fenzl*, 1833.— **3.** Pertaining to all; human; hence, sensual; not spiritual.

pandemoniacal (pan″dē-mọ-nī′ạ-kạl), *a.* [*pandemoniac* + *-al*^{1}.] Resembling pandemonium, particularly with respect to its noise.

pandemonial (pan-dẹ-mō′ni-ạl), *a.* [*pandemonium* + *-al*^{1}.] Of or pertaining to pandemonium.

pandemonian (pan-dẹ-mō′ni-ạn), *a.* and *n.* [*pandemonium* + *-an*.] **I.** *a.* Same as *pandemoniac*.

II. *n.* One who lives in pandemonium or (figuratively) in some other lawless, disorderly place.

pandemonic (pan-dẹ-mon′ik), *a.* [*pandemon-ium* + *-ic* (after *demonic*).] Relating to all demons, or to pandemonium.

pandemonistic (pan-dē-mọ-nis′tik), *a.* [Gr. πᾶς (παν-), all, + δαίμων, demon, + *-ist* + *-ic*.] Characterized by the belief that supernatural powers or spirits are present in every object and in every natural phenomenon. *Ratzel* (trans.), Hist. of Mankind, II. 154.

pandemy (pan′dẹ-mi), *n.* [NL. *pandemia*.] Same as *pandemia*.

pandenominational (pan-dẹ-nom-i-nā′shọn-al), *a.* [*pan-* + *denomination* + *-al*^{1}.] Pertaining to or comprehending all (religious) denominations.

panderer (pan′dėr-ėr), *n.* One who panders; a pander.

pandiabolism (pan-dī-ab′ọ-lizm), *n.* [Gr. πᾶς (παν-), all, + διάβολος, devil, + *-ism*.] The (supposed) belief that the devil is the informing spirit of the universe; the belief that the devil and the universe are identical. Also *pan-Satanism*.

> [Some pessimists] would contend that . . . her [Nature's] cult is in reality, not Pantheism but *Pandiabolism*.
> *Literature*, Sept. 16, 1899, p. 281.

pandita (pạn-dē′tạ̈), *n.* [Sulu *pandīta*, < Malay *pandīta*, a learned man, an ecclesiastic, a dominie, < Sanskrit *paṇḍitá*, a learned man, a pandit. See *pandit*, *pundit*.] A Moro priest.

P. and O. An abbreviation of *Peninsular and Oriental Steamship Company*.

Pandolian cattle. See ★*cattle*.

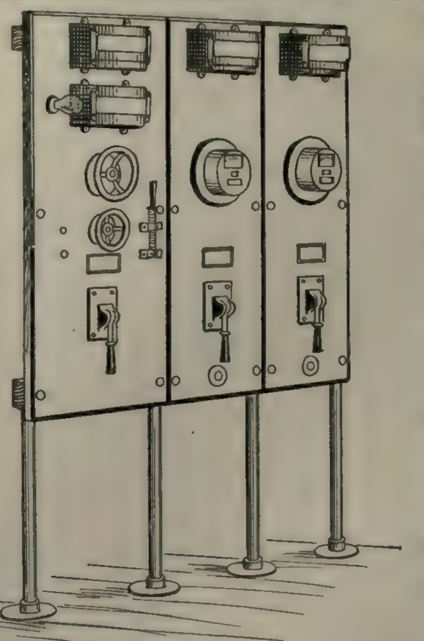
pandolichocephalism (pan-dol″i-kọ-sef′ạ-lizm), *n.* [Gr. πᾶς (παν-), all, + E. *dolichocephalism*.] The tendency to group together as one race all the dolichocephalic types of northwestern Europe. [Rare.]

> Still, far too much has been made of the Aryans as a separate type, and Dr. Houzé is right to laugh at what has been called "Anglo-Saxon *pandolichocephalism*," a term invented to describe "the skull which has the honour of sheltering the brain that has guided the world."
> *Nature*, Jan. 3, 1907, p. 237.

pane^1, *n.* **5.** (*i*) In *milling*: (1) The space between two leader-furrows in a millstone; the space from one leader-furrow to the next. (2) One of the burstones which form the face of a millstone.—**Magic pane,** in *elect.*, a condenser consisting of a pane of glass coated with detached particles of metal between which, during charge and discharge, minute sparks pass. The particles are sometimes arranged in patterns which are thus outlined in light by means of the sparks.

panel, *n.* **1.** (*d*) A large-sized portrait photograph (4 x 8½ inches), usually full-length.

2. (*g*) In *elect.*, a vertical board, usually of insulating material, such as marble or soapstone, on which switches, meters, and other controlling devices of electric circuits are mounted.



Panel.

7. A heap of dressed ore.—**On the panel, in the panel,** in *Scots law*, on one's trial.—**Panel carver and friezer.** See ★*carver*.—**Panel stamp,** in *bookbinding*, a single design which covers the central portion of the cover, made by one stamp and not by a series of tools as is usual. The panel stamp, which was invented about the middle of the fourteenth century, was found to be so useful in the decoration of the smaller books that its use for this purpose quickly became universal. *U. Y. Fletcher*, English Bookbindings, in Portfolio, XXIV. 55.

panela (pä-nā′lä), *n.* [Sp., a cake of corn, brown sugar.] See the extract.

> The name given to the resulting crude brown sugar is usually determined by its form, size, and weight . . . ; *panela* when it has the shape of a plate, each cake weighing about 1 kilo.
> *Daily Cons. and Trade Rep.*, Aug. 2, 1907, p. 7.

panel-back (pan′el-bak), *n.* A back of a window when paneled: generally so called to distinguish it from the same surface when plastered below the sill. Also *paneled back*.

panel-board (pan′el-bōrd), *n.* In *elect.*, a switch-board in the form of a panel and usually mounted upon a wall. See ★*panel*, 2 (*g*).

paneless (pān′les), *a.* [*pane*^{1} + *-less*.] Having no panes, as a window.

panel-feeder (pan′el-fē″dėr), *n.* A wire serving to convey an electric current to a panel-board or to one of the panels of a switch-board.

panel-gage (pan′el-gāj), *n.* An extra long marking-gage for wood: so called from its use in marking out panels.

panel-machine (pan′el-mạ-shēn″), *n.* A panel-planing machine; a panel-planer; a machine for planing thin boards.

panentheism (pan-en′thẹ-izm), *n.* [Gr. πᾶς (παν-), all, + ἐν, in, + θεός, God, + *-ism*.] The principle or belief that all things are contained in God.

> Krause (1781–1832), who himself limited the circulation of his philosophical writings among Germans by his strange terminology, . . . sought to improve upon the pantheism of the System of Identity by developing a doctrine of *Panentheism*, or a philosophy founded on the notion that all things are in God.
> *Überweg* (trans.), Hist. Philos., II. 280.

panfired (pan′fīrd), *a.* Treated by the process of ★pan-firing (which see).

pan-firing (pan′fīr″ing), *n.* In *tea manuf.*, the operation of firing (drying) green tea in thin iron bowls over a furnace, practised in Japan. Also ★*panning* (which see). Hot panning, continued half an hour with a temperature of 250° F., is followed by cold panning for 20 minutes. See *basket-fired* ★*tea*.

pangamia (pan-gā′mi-ạ̈), *n.* [NL.] Same as ★*pangamy*.

pangamic (pan-gam′ik), *a.* Same as ★*pangamous*.—**Pangamic mating.** See ★*mating*.

pangamous (pan′gạ-mus), *a.* [*pangam*(*y*) + *-ous*.] Of or pertaining to pangamy.

pangamously (pan′gạ-mus-li), *adv.* Promiscuously, or without selection, in mating.

> Whenever the sexes are equipotent, blend their characters and mate *pangamously*, all characters will be inherited at the same rate. *K. Pearson*, Grammar of Sci., p. 480.

pangamy (pan′gạ-mi), *n.* [Gr. πᾶς (παν-), all, + γάμος, marriage, + *-y*^{3}.] Pairing or mating at random, without conscious or unconscious selection or preference.

pan-gas (pan′gas), *n.* See ★*gas*.

pangen (pan′jen), *n.* [Also *pangene*; < Gr. πᾶς (παν-), all, + -γενης, -producing.] One of the hypothetical biological units postulated by Darwin and De Vries to account for the hereditary transmission of characters. See *pangenesis*.

> We may suppose that from the youngest ovarian ovum onwards the nucleus exerts a "control" upon the surrounding cytoplasm, whether by the migration of "*pangens*" (De Vries, Hertwig), or of specific "formative substances" (Sachs, Loeb). *Encyc. Brit.*, XXXII. 213.

> Apart from detail, Darwin, de Vries, and Weismann agree in ascribing as many different *pangens* to the organism (biophores, physiologic-units, gemmules, determinants) as it has of special organs and properties.
> *Pfeffer* (trans.), Physiol. of Plants, II. 187.

pangenesis, *n.*—**Intracellular pangenesis,** a hypothesis proposed by De Vries to account for inheritance. According to this hypothesis, pangens, which are the bearers of the hereditary qualities of cells, and not, like the gemmules of Darwin, the germs of entire cells, are transmitted from germ-cell to germ-cell in inheritance, and not, as in the pangenesis of Darwin, from the cells of the body to the germ-cells.

pangenic (pan-jen′ik), *a.* [*pangen* + *-ic*.] Of or pertaining to pangens.

pangeometer (pan-jẹ-om′e-tėr), *n.* [Gr. πᾶς (παν-), all, + E. *geometer*.] One skilled in pangeometry or the geometry of more than three dimensions.

pangeometrical (pan-jē-ọ-met′ri-kạl), *a.* [*pangeometr*(*y*) + *-ical*.] Of or pertaining to pangeometry.

pangeometry, *n.* **2.** The system of geometry which simply dispenses with Euclid's parallel postulate, using neither it nor any contrary assumption. It is therefore undifferentiated as between Euclidean and Bolyaian geometry. *Lobachevski*.

Pan-German (pan-jėr′mạn), *n.* and *a.* **I.** *n.* One who advocates Pan-Germanism.

II. *a.* Of or pertaining to all Germans, or to Pan-Germanism.

Pan-Germanic (pan-jėr-man′ik), *a.* Same as ★*Pan-German*.

Pan-Germanism (pan-jėr′mạn-izm), *n.* The plan or desire to unite all the German peoples in one political organization or state; organized effort directed to this end.

> They were jealous of Austrian interference south of their own territory, partly out of the fear of the encroachments of *Pan-Germanism*. *Encyc. Brit.*, XXIX. 457.

Pan-Germany (pan-jėr′mạ-ni), *n.* The German peoples collectively, considered as constituting one political community.

pangermic (pan-jėr′mik), *a.* [Gr. πᾶς (παν-), all, + E. *germ* + *-ic*.] Of or pertaining to pangermism: as, *pangermic* theories.

pangermism (pan-jėr′mizm), *n.* [Gr. πᾶς (παν-), all, + E. *germ* + *-ism*.] The doctrine that all diseases are due to germs.

> *Pangermism* has been exhausting its energies in sensational demonstrations of bacterial surprises and bacillar blunderings. *A. M. Brown*, Anim. Alkal., p. 126. *N. E. D.*

pangnosticism (pan-nos′ti-sizm), *n.* [Gr. πᾶς (παν-), all, + γνωστός, < γιγνώσκειν, know. See *Gnosticism*.] The doctrine that knowledge is possible concerning everything about which there can be any doubt or real question.

pangolo (pang-gō′lō), *n.* [Also *pagolo*; Polynesian.] A musical instrument used in the South Seas which consists of a strung bow, one end of which is held in the mouth, while the string is plucked with a plectrum.

Pangothic (pan-goth′ik), *a.* Of, pertaining to, or including all the Gothic peoples.

pangraphic (pan-graf′ik), *a.* [Gr. πᾶς (παν-), all, + γράφειν, write, + *-ic*.] Writing on any or every thing. [Rare.]

> The author of "Waverley" . . . is described by his admirers as great in many species of authorship . . . in short, he may be reckoned omni-scriptive or *pangraphic*.
> *Blackwood's Mag.*, VIII. 356.

panguipan (pän-gwē-pän′), *n.* A crude apparatus used in the Philippine Islands for extracting the fibers of manila hemp. It consists of a large knife which is fastened upon a block of wood and operated by means of a bamboo spring and foot lever.

pangymnastikon (pan-jim-nas′ti-kon), *n.*; pl. *pangymnastica* (-kạ̈). [Gr. πᾶς (παν-), all, + γυμναστικός, gymnastic.] A gymnasium apparatus which combines several appliances.

panhandler (pan′han-dlėr), *n.* A street beggar. [Slang.]

panharmonic (pan-här-mon′ik), *a.* [Gr. πᾶς (παν-), all, + E. *harmonic.*] 1. Adapted to all the harmonies or musical modes. *N. E. D.* —2. Harmonizing with all; agreeing with all. *N. E. D.*

panhas (păn′häs), *n.* [Also *paanhaas, ponhos,* < Pennsylvania G. **panhas*, G. **pfannenhase*, D. **panhaas*, ‘pan-hare,’ i.e., *pan-rabbit.*] In cooking, meal boiled in water in which hog’s liver and pork have been boiled and, when cold, sliced and fried for the table: a Pennsylvania German dish. Also *pan-rabbit.*

> But Rosa could cook. Himmel! Her *panhas* was like angel’s food, her liverwurst was the talk of the town, and the scraps she threw away would not keep a snowbird alive. *C. C. Lockhart*, in The Century, Aug., 1905, p. 602.

Pan-head rivet. See ★*rivet*^{1}.

panhidrosis (pan-hī-drō′sis), *n.* [NL., < Gr. πᾶς (παν-), all, + NL. *hidrosis.*] General perspiration over the entire body.

panhygrous (pan-hī′grus), *a.* [Gr. πάνυγρος, all wet, < πᾶς (παν-), all, + ὑγρός, wet.] Having a wet or damp surface. *Syd. Soc. Lex.*

panhysterectomy (pan″his-tẹ-rek′tọ̄-mi), *n.* [*pan-* + *hysterectomy.*] Total extirpation of the uterus. *Buck*, Med. Handbook, II. 714.

panic^1, *n.*—**Bitter panic** or **panic-grass**, a stout, hard grass, *Panicum amarum*, with strong, creeping rootstocks, which grows on seacoast sands from Connecticut to Mississippi, in the latter State especially rendering good service as a sand-binder. The stem and leaves have a bitter taste.—**Bulbous panic** or **panic-grass.** See *alkali* ★*zacaton.*—**Creeping panic** or **panic-grass**, *Panicum repens*, an extensively creeping maritime grass of the warmer parts of both hemispheres, which makes a good sand-binder. It occurs on beaches from Alabama to Louisiana.—**Low panic** or **panic-grass.** Same as *elm-*★*grass.*

Bitter Panic-grass (*Panicum amarum*).

a, small clump of the grass showing habit, reduced; *b*, empty glume, enlarged; *c*, flowering glume with palea, enlarged.

panically (pan′i-kal-i), *adv.* In a manner exhibiting panic or great alarm. [Rare.]

> Had the sea been a lake of living flames, he could not have shrunk more *panically* from its touch. *R. L. Stevenson*, The Merry Men, v.

panic-bent (pan′ik-bent), *n.* Same as *Munro* ★*grass.*

panichthyophagous (pan″ik-thi-of′ạ-gus), *a.* [Gr. πᾶς (παν-), all, + ἰχθύς, fish, + -φαγος, < φαγεῖν, eat.] Devouring all kinds of fish: as a *panichthyophagous* cat.

panicol (pan′i-kol), *n.* [L. *panicum*, panic-grass, + *-ol.*] A crystalline methyl phenol ether, $C_{12}H_{17}.OCH_3$, found in the oil of millet. It melts at 285° C.

panicular (pạ-nik′ụ̄-lär), *a.* [L. *paniculus* + *-ar.*] Pertaining to or resembling the paniculus muscle.

Panicularia (pạ-nik-ụ̄-lā′ri-ạ̈), *n.* [NL. (Heister, 1763), < L. *panicula*, a panicle. The allusion is to the conspicuously paniculate inflorescence of the type-species, *P. aquatica.*] A genus of grasses. See *Glyceria.*

panification (pan″i-fi-kā′shọn), *n.* [F. *panification*, < *panifier*, make bread (cf. L. *panifex*, bread-maker, *panificium*, bread-making), < L. *panis*, bread, + *facere*, make.] The making of bread; the chemical changes which convert flour into bread.

> Among other things, they recommended great attention to bees, to *panification*, and to the obstetrick art. *Arthur Young*, Travels in France, p. 292, line 14.

> The purposes which should be kept in view in the growth of wheat include those relating to the possibilities of *panification*. *Science*, Feb. 17, 1905, p. 272.

Panionian (pan-ī-ō′ni-ạn), *a.* [Gr. πανιώνιος, adj., < πανίωνες, the whole body of Ionians (πανιώνιον, their place of meeting), < πᾶς (παν-), all, + Ἴωνες, the Ionians.] Pertaining to all the Ionians, or to their place of meeting, Panionium, at Mycale.

> The Ionians had their common Sacrifices and Ceremonies at the Promontorie of Mycale, . . . The place was called Panionium, and the feast in which those sacrifices were offered Panionia. To those twelve cities, Strabo . . . addeth also Smyrna, and saith, that they were called to the *Panionian* solemnities by the Ephesians. *Purchas*, Pilgrimage, p. 376.

Paniselian series. See ★*series.*

Pan-Islam (pan-is′lạm), *n.* [*pan-* + *Islam.*] The union of all Mohammedan peoples; Mohammedan peoples considered as forming one body.

Panjabi (pun-jä′bẹ̄), *n.* [Hind. *Panjābī.*] An Indo-European language prevailing in the Panjab (Punjaub, ‘Five Rivers’), in northwestern India, related to Hindi, etc.

pankin (pan′kin), *n.* [ME. *pankyn*, < MD. **panneken*, < *pan*, pan, + dim. *-ken*, E. *-kin.* Compare *pannikin.*] A small pan or jar of earthenware; sometimes a jar of any size; a pancheon.

panlogism, *n.* 2. The metaphysical opinion of Schelling and Hegel that the universe is the embodiment of the Absolute.

> We have seen German Idealism plunging, in Schelling, now toward atheistic *panlogism* and now toward the extremest sort of theistic spiritualism. *H. Nichols*, Cosmology, I. § 113.

panlogistic (pan-lọ̄-jis′tik), *a.* [*panlog*(*ism*) + *-ist-ic.*] Pertaining to or of the nature of panlogism.

> The *panlogistic* confusion of the essences of things with the notions of reason. *Encyc. Brit.*, XXX. 656.

pan-mill (pan′mil), *n.* A miners’ contrivance for separating gold from gravel by panning. See *pan*^{1}, *v. t.*, 1.

panmixia, *n.* 2. Indiscriminate crossing of breeds; mongrelism.

pannarol (pan′ạ̈-rol), *n.* [*Pannar*(*ia*) (see def.) + *-ol.*] A white crystalline substance, $C_8H_8O_2$, extracted from the lichen *Pannaria lanuginosa.*

panne (pan), *n.* [F. *panne*, woolen velvet, etc., OF. *penne*, < L. *penna*, feather, wing. See *pen*^{2}, *n.*] A soft, shining fabric, plain or printed, used for trimmings and dresses.—**Panne velvet**, a light-weight velvet having the nap laid flat.

panniform (pan′i-fôrm), *a.* [L. *pannus*, a cloth, + *form*(*a*), shape.] Same as *pannose. Jackson*, Glossary.

panning (pan′ing), *n.* 1. In *mining*, especially gold-mining, metal (gold) obtained in the process of panning. See *pan*^{1}, *v. t.*, 1.—2. In *tea manuf.*, treatment of the material in an iron vessel: (*a*) in old Chinese practice, a light roasting of the leaf before and between rollings, now dispensed with in India; (*b*) in making green tea, a steaming of the fresh leaf in its own juices to wither it for rolling; (*c*) in Japan, same as ★*pan-firing.*

panning-machine, *n.* It is used for cutting dough into cookies, snaps, and fancy crackers ready for baking. The sheet of dough after being formed on a reversible brake is placed on the hopper of the panning-machine, where it is passed through a set of rolls so constructed as to regulate the thickness of the goods. The sheet of dough is then carried by an endless apron under a brush, where all the flour is removed, under a crimper, to give an impression if necessary, and then under a die or cutter, where the dough is stamped into the desired shape or form. The scrap or waste dough is here separated, the scraps being returned to the brake for a second sheet, and the goods continue on and are deposited on iron or wire trays, when they are ready for the oven. There is a semi-soft dough and brake attachment for running fig-newtons, bars, cookies, and snaps.

Pannonic (pa-non′ik), *a.* [L. *Pannonicus*, < *Pannonia*, Pannonia.] Of or pertaining to ancient Pannonia.

panocha, *n.* 2. A candy made of sugar, butter, and milk, into which, generally, nuts are stirred as it cools.

panoptic (pan-op′tik), *a.* [Gr. πανόπτης, all-seeing, + *-ic.*] 1. Seeing everything or seeing all things at once.

> He stops — looks at us ruefully — begins to tremble — would go back, if he could, or forward, if he durst — now and then vainly conceits that the great forest of books will hide him from our *panoptic* view. *Blackwood’s Mag.*, XX. 844.

2. Showing or exhibiting everything; allowing everything to be seen.

> Freedom is sacrificed on the elaborate altar. Teacher and pupil cannot know it. The school is the ward of one great, *panoptic*, prison-house, with the keepers before the door. The work of Professor Lorain gives a deplorable account of the state of things. *R. W. Hamilton*, The Institutions of Popular Educa- [tion, ix.

panopticon, *n.* 3. In *astron.*, a kind of telescope and microscope combined.

> Mr. Martin, when I called to see his *panopticon*, had not one ready; but was to let me know when he should have one to show me. *Franklin*, Letters, Works, IV. 176.

panoram (pan-ọ̄-ram′), *a.* and *n.* [*panoram*(*ic*).] I. *a.* Same as *panoramic.*

II. *n.* A panoramic camera. *N. E. D.*

panoramal (pan-ọ̄-rä′mạl), *a.* Same as *panoramic.*

Panoramic telescope. See ★*telescope.*

panorpate (pa-nôr′pāt), *a.* Having the characters of the order *Panorpatæ.*

panorpid (pa-nôr′pid), *n.* and *a.* I. *n.* A member of the mecopterous family *Panorpidæ.*

II. *a.* Having the characters of or belonging to the family *Panorpidæ.*

panorthodox (pan-ôr′thọ̄-doks), *a.* [*pan-* + *orthodox.*] Relating to, or common to, all the Orthodox Eastern churches.

panorthodoxy (pan-ôr′thọ̄-dok-si), *n.* [*pan-orthodox* + *-y*^{3}.] Orthodox churches regarded as forming a single body; specifically, the tendency to consider Russia as the head of all Orthodox nations.

> The Russian Church is numerically by far the greatest, and the tendency to regard Russia as the head, not only of the Slav races, but of all orthodox nations, inevitably reacts upon the Church, in the form of what has been called *pan-orthodoxy.* *Encyc. Brit.*, XXXI. 384.

panorthoscopic (pan″ôr-thọ̄-skop′ik), *a.* [*pan-* + *orthoscopic.*] Wholly orthoscopic.—**Panorthoscopic screen**, in *photog.*, a color-screen for orthochromatic photography. It consists of two plane glasses sealed together with a liquid dye between them. The screen is placed within the combinations of the lens.

panotype (pan′ọ̄-tīp), *n.* [Irreg. < Gr. πᾶς (παν-), all, + τύπος, type.] In *photog.*, a picture produced by the collodion process.

panpathy (pan′pa-thi), *n.* [Irreg. < Gr. πᾶς (παν-), all, + πάθος, suffering.] A universal feeling; a feeling shared by all. *P. Carus*, Hist. of the Devil, p. 462.

panphotometric (pan-fō-tọ̄-met′rik), *a.* [*pan-* + *photometric.*] Self-adjusting with respect to position, to both direct and diffused light: said of leaves. *Wiesner.*

pan-pie (pan′pī), *n.* Same as *pandowdy.* [Local, U. S.]

panplasm (pan′plazm), *n.* [Gr. πᾶς (παν-), all, + πλάσμα, anything formed.] The conception that all portions of the protoplasm of plants and animals are concerned in determining the forms and functions of the cells, as opposed to the conceptions which attribute the formative agency to particular cell-elements such as the idioplasm, nucleus, etc. *C. S. Minot.*

panpneumatism (pan-nū′mạ-tizm), *n.* [Gr. πᾶς (παν-), all, + πνεῦμα(τ-), spirit, + *-ism.*] A term used by Von Hartmann (only) to designate a “higher synthesis of panlogism and panthelism according to which the absolute is both will and thought.” *Baldwin*, Dict. of Philos. and Psychol., II. 256.

> The *panpneumatism* of Hartmann, combining Hegel with Schopenhauer. *Encyc. Brit.*, XXX. 663.

panpsychism (pan-sī′kizm), *n.* [Gr. πᾶς (παν-), all, + ψυχή, mind, + *-ism.*] The doctrine that the entire universe, or any least subdivision of it, has a mental as well as a physical side or aspect, and that the mental side stands to the physical (for instance, in the atom), precisely as human consciousness stands to the human body. Panpsychism may be monistic, reducing all reality to ultimate mental terms, or dualistic; and, if the latter, may receive an interactionist or a parallelistic interpretation. It is represented in ancient philosophy by hylozoism, has persisted in various forms throughout the history of philosophy, and finds acceptance among the moderns, for example, with G. T. Fechner.

> The explanation of the connection of mind and body is not in substance new. It is that which is implied in the *panpsychism* of Fechner and Clifford. *C. A. Strong*, Why the Mind has a Body, p. v.

> The *panpsychism* of Paulsen, continuing Fechner, but with the addition of an epistomology combining Kant with Schopenhauer. *Encyc. Brit.*, XXX. 663.

panpsychist (pan-sī′kist), *n.* and *a.* I. *n.* [*panpsych*(*ism*) + *-ist.*] One who accepts the theory of panpsychism.

> I think *panpsychists* are justified in maintaining that with their principles they are able to explain the connection of mind and body. *C. A. Strong*, Why the Mind has a Body, p. vi.

> Empedocles and the *panpsychists* spoke in same sense of sensation and effort in all things. *Haeckel* (trans.), Wonders of Life, p. 449.

II. *a.* Relating to panpsychism or to its adherents.

> I have chosen my title with the object of putting this *panpsychist* pretension distinctly on record. *C. A. Strong*, Why the Mind has a Body, p. vi.

panpsychistic (pan-sī-kis′tik), *a.* [*panpsychist* + *-ic.*] Relating to panpsychism or to its adherents; of the nature of panpsychism; panpsychist.

> His [Fechner's] system is, therefore, *panpsychistic*, and at the same time pantheistic.
> *Haeckel* (trans.), Wonders of Life, p. 340.

pan-rabbit (pan′rab″it), *n.* Same as ★*panhas.*

pan-salt (pan′sâlt), *n.* Common salt made from brine by evaporation in pans, generally of wrought-iron. Contrasted with *rock-salt.*

pan-Satanism (pan-sā′tạn-izm), *n.* Same as ★*pandiabolism.*

pan-scale (pan′skāl), *n.* In certain manufacturing processes, as in salt-boiling, the incrustation which forms on the inner surface of an evaporating-pan by deposition of less soluble substances, such as calcium carbonate or sulphate. If the incrustation becomes thick and compact it is sometimes called *pan-stone.*

pansciolism (pan-sī′ọ-lizm), *n.* [*pan-* + *sciolism.*] Universal sciolism.

pansclerosis (pan-sklẹ-rō′sis), *n.* [Gr. πᾶς (παν-), all, + σκλήρωσις, hardening.] A condition of complete fibrous induration of a tissue or organ.

pan-scratch (pan′skrach), *n.* Same as ★*pan-scale.*

Panslav (pan-slav′), *a.* Same as *Panslavic.*

Panslavonian (pan-slạ-vō′ni-ạn), *a.* [*pan-* + *Slavonian.*] Same as *Panslavic.*

Panslavonism (pan-slav′ọ-nizm), *n.* Same as *Panslavism.*

pansophic (pan-sof′ik), *a.* [*pansoph*(*y*) + *-ic.*] Pertaining to or of the nature of pansophy; universally wise.

pansophism (pan′sọ-fizm), *n.* Same as *pansophy.*

pansophist (pan′sọ-fist), *n.* [*pansoph*(*y*) + *-ist.*] One who possesses all human knowledge; one who is universally wise.

pansporoblast (pan-spō′rọ-blȧst), *n.* [*pan-* + *sporoblast.*] In some sporozoans, as the *Myxosporidia*, that portion of the body of the organism which gives rise to spores. It is separated from the surrounding endoplasm by a pellicle of thicker protoplasm, within which division of nuclei and subsequent formation of spores take place.

pan-stone (pan′stōn), *n.* See ★*pan-scale.*

pansymphonicon (pan-sim-fon′i-kon), *n.* [Gr. πᾶς (παν-), all, + συμφωνία, symphony, + *-ic-on.*] A form of orchestrion invented by P. Singer of Salzburg in 1839.

pansy-rust (pan′zi-rust), *n.* The disease of pansy-leaves due to *Peronospora Violæ.*

pantarchic (pan-tär′kik), *a.* [*pantarch*(*y*) + *-ic.*] Noting the cosmopolitan or universal stage of social aggregation. *L. F. Ward*, Dynamic Sociol., I. 466.

pantarchy (pan′tär-ki), *n.* [Gr. πανταρχία, < πάνταρχος, all-ruling, < πᾶς (παν-), all, + ἀρχειν, rule.] The rule of all; government invested in a community or people as a whole.

pantata (pän-tä′tä̤), *n.* [Bohem. *pán táta*, < *pán* (= Pol., Upper Sorbian *pan* = Russ. dial. *pan-* = Lith. *ponas* = Lett. *pōnis*), master, lord, + *táta* (= Pol., Sorbian, Russ. *tata* = Lith. *téta*, = L. *tata* = Gr. τάτα, τέττα = Skt. *tata*), father, = E. *dada*, *dad*, etc.: see *dad*¹.] **1.** Originally, in Bohemian use in New York (?), a master; a boss; one who is at the head of a society or a gang.—**2.** The boss or head man of a corrupt gang to whom money is improperly paid for any purpose, especially for immunity from interference by the police.

pantatrophia (pan-tạ-trō′fi-ä̤), *n.* [Gr. πᾶς (παντ-), all, + ἀτροφία, atrophy.] General wasting of the entire body.

pantatrophy (pan-tat′rọ-fi), *n.* Same as ★*pantatrophia.*

pantelegraphy (pan-tel′ẹ-graf-i), *n.* [*pan-* + *telegraphy.*] **1.** Telegraphy by means of a sort of shorthand code which makes possible the reduction of the number of signals constituting a message.—**2.** Facsimile telegraphy.

panteleologism (pan″tel-ẹ-ol′ọ-jizm), *n.* [*pan-* + *teleog*(*y*) + *-ism.*] Universal teleology; the adoption of teleology as the fundamental principle of metaphysics.

> The *panteleologism* of Lotze, reviving Leibnitz.
> *Encyc. Brit.*, XXX. 663.

pantelephone (pan-tel′ẹ-fōn), *n.* [*pan-* + *telephone.*] A form of microtelephone for the reproduction at a distance of sounds of feeble intensity.

Panteutonic (pan-tū-ton′ik), *a.* [*pan-* + *Teutonic.*] Of, pertaining to, or including all the Teutonic peoples.

Panteutonism (pan-tū′tọn-izm), *n.* [*Panteuton*(*ic*) + *-ism.*] The theory that all Teutonic peoples should be united in one political organization.

> Germany has long since outgrown the swaddling-clout of *Panteutonism*, and no ranting of anti-Semitic agitators . . . can permanently affect the public mind.
> *Pop. Sci. Mo.*, Jan., 1894, p. 306.

pantheic (pan-thē′ik), *a.* [*panthe*(*um*) + *-ic.*] Relating to or characteristic of a pantheum; uniting in one statue symbols of a number of different gods.

panthelematism (pan-thẹ-lem′ạ-tizm), *n.* [Gr. πᾶς (παν-), all, + θέλημα(τ-), will, + *-ism.*] Same as ★*panthelism.*

panthelism (pan′the-lizm), *n.* [Gr. πᾶς (παν-), all, + θέλειν, will, wish, + *-ism.*] The doctrine that will is the ultimate metaphysical principle; the doctrine that the absolute is will.

> The pure idealism of Fichte is at the bottom of it all [noumenal idealism]. The panlogism of Schelling and Hegel survives in its influence. So still more does the *panthelism* of Schopenhauer. *Encyc. Brit.*, XXX. 663.

pantheonic (pan-thẹ-on′ik), *a.* [*pantheon* + *-ic.*] Of the nature of a pantheon; having the characteristics of a pantheon: as, a *pantheonic* playhouse. *N. E. D.*

pantheonize (pan′thẹ-ọ-nīz), *v. t.*; pret. and pp. *pantheonized*, ppr. *pantheonizing.* [*pantheon* + *-ize.*] To bury in the pantheon; erect a memorial to (one) in the pantheon. *N. E. D.*

panther-cat (pan′thėr-kat), *n.* A name sometimes applied to the ocelot, *Felis pardus.*

panther-cowry (pan′thėr-kou″ri), *n.* An East Indian cowry, *Cypræa pantherina;* a spotted cowry.

pantheum (pan-thē′um), *n.*; pl. *panthea* (-ä̤). [LL., < Gr. πάνθειον. See *pantheon.*] A statue combining the figures, symbols, or attributes of several deities. *N. E. D.*

panthodic (pan-thod′ik), *a.* [Gr. πᾶς (παντ-), all, + ὁδός, way.] Radiating in every direction; said of a nerve impulse. [Rare.]

pantile, *n.* **3.** A ship's biscuit.

> *Pantiles*, on occasion the only item of food, are what the self-satisfied landlubber would call biscuits. They are served with a liberal hand, but the stock is protected by their almost irrefragable character. Out of *pantiles* a delectable dish is to be made by vigorous pounding in a bag, followed by the admixture of some handy liquid, preferably old pea soup, with the addition of a little fat pork. When this creation is browned in the oven it becomes "dog's body." Should there be molasses to add, the result is "dandy funk." *Daily newspaper.*

panting (pȧn′ting), *n.* **1.** The action of one who pants; hard and hurried breathing, with heaving of the breast or sides.—**2.** In *iron ship-building*, a distortion with an inward and outward motion: said of flat areas of plating of a vessel, particularly at the bows, when insufficiently supported by the framing against the pressure of waves and water when the vessel is pitching.

> Many instances have been noted where "*panting*," as it is termed, has taken place in those parts of badly constructed ships, the sides moving in and out under varying conditions. *White*, Manual of Naval Arch., p. 286.

panting-bellows (pȧn′ting-bel″ōz), *n.* Same as *winker*, 6.

panting-stringer (pȧn′ting-string″ėr), *n.* See ★*stringer*, 10.

pantod² (pan′tod), *n.* [Appar. a perversion of *fantod*, associated with *pant.*] **1.** A violent pain.—**2.** A mild discomfort corresponding to a 'conniption fit.' *Dialect Notes.* [Local, U. S.]

pantogelastic, pantogelastical (pan-tō-je-las′tik, -ti-kạl), *a.* [Gr. πᾶς (παντ-), all, + γελαστός, laughable, + *-ic* + *-al.*] Laughable throughout. [Rare.]

> Fashionable Biography . . . with a Preface and Notes, Pantological and *Pantogelastical.* *Title*, 1808. *N. E. D.*

pantogen (pan′tọ-jen), *n.* [Gr. πᾶς (παντ-), all, + -γενης, -producing.] A hypothetical primal substance from which all the chemical elements are supposed to be formed. *Science*, Jan. 15, 1904, p. 92.

pantogenous (pan-toj′e-nus), *a.* [Gr. πᾶς (παντ-), all, + -γενης, -produced, + *-ous.*] In *phytogeog.*, growing on all kinds of substrates: said of fungi.

pantoglot (pan′tọ-glot), *n.* and *a.* [Gr. πᾶς (παντ-), all, + γλῶττα, tongue.] **I.** *n.* One who understands or uses all languages.

II. *a.* Understanding or using all languages: as, a *pantoglot* interpreter.

pantoglottism (pan-tọ-glot′izm), *n.* [*pantoglot* + *-ism.*] The fact of understanding and speaking all languages. [Rare.]

> Angels of heaven, who cried to the King and his Knights,—*Seigneurs, tuez! tuez!* providentially using the French tongue, as being the only one understood by their auditors. This would argue for the *pantoglottism* of these celestial intelligences.
> *Lowell*, Biglow Papers, 1st ser, ii.

pantograph, *n.* **2.** A device made of pairs of perforated arms joined together and used for reducing the cross-head motion of an engine for the purpose of indicating; a reducing motion used in taking indicator-cards of engines and working on the reducing principle of the ordinary pantograph.—**Inversor pantograph**, one made of two Peaucellier cells.—**Precision-pantograph**, a form of pantograph used for scientific purposes (for instance, for the examination of speech curves), which reproduces a given figure (curve, etc.) with extreme accuracy upon an enlarged scale. *E. W. Scripture*, Exper. Phonetics, p. 73.—**Skew pantograph**, a plagiograph.

pantographer (pan-tog′rạ-fėr), *n.* **1.** Same as *pantograph*, 1.—**2.** One who uses the pantograph.

Pantolambda beds. See ★*bed*¹.

Pantolestidæ (pan-tọ-les′ti-dē), *n. pl.* [NL., < *Pantolestes* (the type genus) + *-idæ.*] A family of small artiodactyl mammals, whose fossil remains occur in the Bridger group of the Eocene. *Cope.* 1884.

pantologic (pan-tọ-loj′ik), *a.* Same as *pantological.*

pantomimetic (pan″tọ-mī-met′ik), *a.* [Gr. πᾶς (παντ-), all, + E. *mimetic.*] In *psychol.*, pantomimic; indicative or expressive of emotion, as distinguished from *mimetic.* See the extract.

> Movements of the oral muscles appear at first (mimetic movements), then movements of the arms and of the whole body (*pantomimetic* movements).
> *W. Wundt* (trans.), Outlines of Psychol., p. 171.

pantophagic (pan-tọ-faj′ik), *a.* Same as *pantophagous.*

pantophobia, *n.* **2.** Same as *hydrophobia.* *Syd. Soc. Lex.*

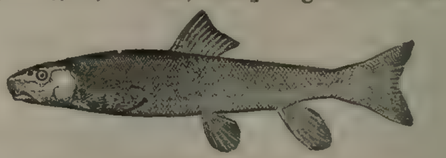
pantophobic (pan-tọ-fō′bik), *a.* [*pantophobia* + *-ic.*] Relating to or affected with pantophobia.

pantophobous (pan-tof′ọ-bus), *a.* Same as ★*pantophobic.*

pantopragmatic (pan″tọ-prag-mat′ik), *a.* and *n.* [Gr. πᾶς (παντ-), all, + πρᾶγμα(τ-), work, + *-ic* (see *pragmatic*).] **I.** *a.* Meddling with everything. [Humorous.]

II. *n.* A meddling person; *pl.*, a satirical name for the alleged 'science' of universal meddling. *N. E. D.*

Pantosteus (pan-tos′tẹ-us), *n.* [Gr. πᾶς (παντ-), all, + ὀστέον, bone.] A genus of fishes of the family *Catostomidæ*, found in streams in the Rocky Mountain region.



Pantosteus jordani.

pantostomate (pan-tos′tọ-māt), *a.* Of or pertaining to the *Pantostomata;* having no special oral orifice; pantostomatous.

pantostome (pan′tọ-stōm), *n.* One of the *Pantostomata.*

Pantostylopidæ (pan″tọ-stī-lop′i-dē), *n. pl.* [NL., < *Pantostylops* (type genus) + *-idæ.*] A family of tillodont mammals based on specimens from the Cretaceous (?) of Patagonia. *Ameghino*, 1901.

pantry-fly (pan′tri-flī), *n.* Any small fly found in the pantry, especially any one of several species of *Phoridæ* and *Drosophilidæ.*

pantryman (pan′tri-man), *n.*; pl. *pantrymen* (-mẹn). A man who does the domestic work which is carried on in pantries.

> Prisoner had been in the employ of the Savoy Hotel Company as *pantryman*, and after he had left . . . a quantity of plate was missed.
> *Daily News* (London), Nov. 9, 1891. *N. E. D.*

panurgic (pan-ėr′jik), *a.* [Gr. *πανοῦργος*, doing everything, < *πᾶς* (*παν-*), all, + *ἐργον*, work.] Skilful in any or every kind of work.

> No less *panurgic* and less encyclopædic a critic than Diderot himself could undertake to sweep with ever so light a wing over this vast area.
> *J. Morley*, Diderot and the Encyclopædiata, xvii.

panuroid (pa-nū′roid), *a.* [*Panurus* + *-oid.*] Having the characters of or allied to *Panurus*.

pan-wash (pan′wosh), *v.* **I.** *trans.* In *gold-digging*, to wash gold-bearing 'dirt' or crushed rock in the pan, with intent to separate the gold. *E. E. Morris*, Austral English.

II. *intrans.* In *gold-digging*, to subject gold-bearing 'dirt' or crushed rock to the process of washing in the pan, with intent to separate the gold.

panyar (pan-yär′), *v. t.* [Pg. *penhorar*, seize as a pledge, < L. *pignorare*, put in pledge, ML. take in pledge, plunder, < *pignus*, a pledge. See *pignorate.*] To seize as a pledge or guaranty; hence, kidnap; seize forcibly, as a person or property, as a means of obtaining redress.

panzoötia (pan-zọ̄-ō′shiạ̈), *n.* [NL. See *panzoöty.*] Any infectious disease which affects all the species of domestic animals in a certain district; panzoöty.

panzoötic (pan-zọ̄-ot′ik), *a.* and *n.* [*panzoöt*(*y*) + *-ic.*] **I.** *a.* Affecting all or a great many animals.

II. *n.* An epidemic disease which affects animals of many different species.

pap[1], *n.* **3.** A short cylindrical projection used to furnish a hold for the lathe-center on a casting which is to be turned; a socket; a tit.

papa[4] (pä′pä), *n.* [Sp. Amer.] In Mexico and Central and South America, the common potato, *Solanum tuberosum*.

Papagayo (pä-pä-gī′yō), *n.* [Sp. *papagayo*, parrot (see def.).] A local, violent, northeast wind, with tornadic whirls, which descends during October to May from the mountains into the Gulf of Papagayo at the northwest corner of Costa Rica and the southwest corner of Nicaragua. Similar storm winds, but less violent, extend along the Pacific coasts of Mexico, Guatemala, and Nicaragua. Also called *Papagallo*, *Papagalla*, *Papagello*.

papaia (pä-pī′ä), *n.* Same as *papaya*, 2. See *Carica*, 1, and *papaw*, 1.

papalistic (pā-pạ-lis′tik), *a.* [*papalist* + *-ic.*] Same as *papistic*.

papalization (pā″pạl-i-zā′shọn), *n.* [*papalize* + *-ation.*] The act of rendering papal or the process of becoming papal.

papaloi (pä-pä-lō′i), *n.* [*papa* + Bantu *loi*. See ★*mamaloi.*] In Haiti, the priest in voodoo ceremonies.

paparchical (pạ̄-pär′ki-kạl), *a.* [*paparch*(*y*) + *-al*[1].] Of or pertaining to paparchy or the rule of the Pope.

Papaverales (pā-pav-ẹ-rā′lēz), *n. pl.* [NL. (Britton, 1898), < *Papaver* + *-ales.*] An order of dicotyledonous, chiefly choripetalous plants, characterized by having two or more carpels united into a compound ovary, hypogynous stamens, and mostly distinct sepals. It embraces six families of which the most important are the *Papaveraceæ*, or poppy family, the *Brassicaceæ*, or mustard family, and the *Capparidaceæ*, or caper family.

papaveric (pap-a-ver′ik), *a.* [L. *papaver*, poppy, + *-ic.*] Derived from papaverine.—**Papaveric acid**, a finely crystalline acid, $C_{16}H_{13}O_7N + H_2O$, formed when papaverine is oxidized by potassium permanganate. It yields salts with bases and acids.

papaveroline (pap-ạ-ver′ọ̄-lin), *n.* [*papaver*(*ine*) + *-ol* + *-ine*[2].] A crystalline base, $C_{16}H_{13}O_4N + 2H_2O$, made by boiling papaverine with hydriodic acid and phosphorus.

papaverosine (pap-ạ-ver′ọ̄-sin), *n.* [*papaver* + *-ose* + *-ine*[2].] A crystalline alkaloid found in the dry seed capsules of the poppy, *Papaver somniferum*. It has a slightly sweet astringent taste.

papaw[2]† (pâ-pâ′), *n.* [Prob. from the name of the district *Popo.*] A slave from Dahome. [West Indies.]

> The Whidah Negroes are called generally, by the British traders, *Papaws*.
> *Bryan Edwards*, a Hist. of the Brit. W. Indies, II. 60.

papayaceous (pap-ā-yā′shius), *a.* [NL. *Papayace*(*æ*) + *-ous.*] Belonging to or having the characters of the plant family *Papayaceæ*.

pap-bowl (pap′bōl), *n.* A bowl in which pap, or boiled thickened milk, is served for infants. See *pap-boat*, 1.

papeeta (pa-pē′tạ̈), *n.* [Anglo-Ind., corruption of Sp. *pepita*, seed of some fruits, as melons or apples.] In India, St. Ignatius' beans. See under *bean*[1] and *Strychnos*.

paper, *n.* **10.** A sheet or piece of paper used to wrap up and carry small articles: as, a *paper* of nuts, a *paper* of soap.—**11.** A folded paper with needles or pins stuck through it in rows: as, a *paper* of pins, a *paper* of needles.—**12.** Sometimes applied to *papier-mâché* and other manufactured articles which are made with paper-pulp.—**13.** *pl.* Credentials.

> 'E 'as n't got no *papers* of 'is own,
> 'E 'as n't got no medals nor rewards,
> So we must certify the skill 'e 's shown
> In usin' of 'is long two-'anded swords.
> *R. Kipling*, Fuzzy Wuzzy, l. 25.

Alcoholized paper. See ★*alcoholize.*—**Alpha paper**, in *photog.*, a printing-paper coated with a gelatin film, in which is contained a combination of silver with a chlorid and a bromide. It is used for obtaining positives by artificial light, and is developed with ferrous oxalate, cleared with alum and acid, and toned in a gold or platinum bath. The fixing is effected, as usual, with hyposulphite of soda. *Woodbury*, Encyc. Dict. of Photog., p. 24.—**Anvil-paper**, an extra strong and tough paper used for the working-plans of buildings, etc.—**Autographic paper**, a paper prepared for receiving a specially made ink that can be transferred therefrom to a lithographic stone or to a metal plate for use on the type-printing press.—**Baryta paper**, paper coated with baryta chalk and gelatin, with a little tinting-matter added: used, in photography, for coating with gelatinochlorid emulsion and for making high-class prints by the collotype process.—**Basic photographic paper**, any paper used as a foundation for any actinic or photographic film or coating.—**Black-process paper**, actinic paper used in the black-print process. See ★*black-print.*—**Bromide paper**, in *photog.*, a paper sensitized by being coated with gelatin impregnated with silver bromide: used in printing and in making enlargements from the negative.—**Brown-print paper**, actinic paper used in a printing process which gives white lines on a brown surface.—**Chlorid paper**, photographic paper covered with a gelatinochlorid emulsion.—**Clay-faced paper**, a trade-name for a plated paper. See *plate-paper.*—**Commercial post paper**, an English writing-paper in sheets 11 × 17 inches.—**Contact paper.** See ★*contact.*—**Coördinate paper** or **squared paper.** Same as *cross-rule paper*. As used in mathematical work, it means paper ruled with great precision, with two sets of equidistant parallel straight lines, the lines of one set being perpendicular to those of the other. In most squared papers every tenth line, sometimes every fifth, is rather heavier than the rest, or is colored differently.—**Crêpe paper**, a tissue-paper crêped or bent into slight corrugations, and resembling crape: made in many colors and used for lamp-shades and decorative purposes.—**Cross-section paper.** Same as *coördinate* ★*paper.*—**Cyanotype paper.** Same as *blue-paper.*—**Detail paper**, a special kind of drawing-paper suitable for the details of plans.—**Developing-out paper**, a photographic paper which requires the use of reducing chemicals to produce the image.—**Duplex paper**, a tough, hard-surface drawing-paper of a cream or neutral color.—**Enfaced paper.** See ★*enface.*—**Gelatin paper**, in *photog.*, paper coated with sensitized gelatin.—**Heliographic paper**, any paper used as a base for blue-prints or allied solar prints.—**Hering papers**, series of gray and colored papers, much used for experiments upon vision in physiological and psychological laboratories.—**Kongo paper**, paper which has been soaked in a solution of Kongo red. It becomes blue-black with acids but is not affected by alkalies and is, therefore, used as a test for the presence of the former.—**Letter-size paper**, any writing-paper in single sheets 8 × 10 or 8½ × 11 inches.—**Logarithmic paper**, a paper having cross lines arranged in order for convenience in computing logarithms.—**Maduro paper**, an actinic brown-print paper.—**Meteoric paper**, a fibrous vegetable material resembling paper carried by the winds through the air.—**Millimeter paper**, paper cross-ruled at intervals of one millimeter for the platting of curves. The paper is ordinarily marked off by heavier lines into squares of 10 millimeters to the side. *E. B. Titchener*, Exper. Psychol., I. i. 61.—**Negative paper**, in *photog.*, paper prepared for the reception of negative proofs. The paper may be sensitized by the use of silver salts or be coated with gelatin emulsion. The paper is rendered transparent for printing by oil, fat, etc.—**Normal paper**, a fine quality of drawing-paper.—**Palladium paper**, in *chem.*, white paper which has been dipped in a solution of palladious chlorid and dried. It is used in testing for carbon monoxid, methane, etc., in the atmosphere, also in searching for leaks of illuminating-gas.—**Paper-cutting machine.** See ★*machine.*—**Paper yarn.** See ★*yarn*[1].—**Paraffin paper**, a soft, semitransparent and partly waterproof wrapping-paper, used in packing cakes, butter, cream cheese, crackers, etc. See *paraffin.*—**Peremptory paper**, in *Eng. law*, the official list of all motions, etc., to be disposed of before other business.—**Pinched post paper**, a small size of post, 18½ × 14½ inches.—**Plotting paper.** Same as *squared* ★*paper.*—**Porcelain paper**, in *photog.*, a paper which has a prepared surface resembling finely ground porcelain, and upon which silver-prints may be made, as the preparation, although without gloss, serves to keep the image on the surface. *Woodbury*, Encyc. Dict. of Photog., p. 391.—**Post-office paper**, a trade-name for a smooth yellow wrapping-paper.—**Post paper**, an English term for a printing- and writing-paper in sheets 15½ × 19 inches.—**Printing-out paper**, in *photog.*, a paper which gives a positive on exposure behind a negative without the use of a developer.—**Rive paper**, in *photog.*, a photographic paper manufactured at Rive-de-Gier, a town in France.—**Simplex-paper**, a variety of drawing-paper.—**Soft paper**, a trade-name for any unsized paper, as news- or book-paper.—**Solio paper**, in *photog.*, a silver chlorid gelatin printing-out paper.—**Squared paper.** Same as *coördinate* ★*paper.*—**Testamentary paper**, strictly, a last will and testament; the term is often used, however, to denote an instrument apparently intended as a will but which, from want of proper execution, is not a valid or legal will.—**Tetra paper**, paper saturated with a solution of tetramethylparaphenylene-diamine. It is used to detect ozone and ozonizers, as turpentine, pine wood, and also hydrogen peroxid, which cause it to turn violet.—**Topographical paper**, a paper ruled in horizontal and vertical lines, for convenience in topographic drawing; coördinate paper.—**Township-paper**, a drawing-paper ruled in lines which correspond to the system of township divisions used in Western States.—**Tribble paper**, a trade-name for any loft-dried paper, dried on a tribble (which see). See ★*loft-dried.*—**Umbria paper**, a trade-name for an actinic black-process paper.—**Universal paper**, a trade-name for a variety of drawing-paper.—**Unlaid paper**, a trade-term for any felted or wove paper which shows no wire marks; cylinder machine-paper. See ★*paper-machine.*—**Wasp paper**, the paper-like substance of which the nests of the social wasps are made.—**White paper**, a trade-term for any unprinted paper.—**Willesden paper**, the trade-name for paper which has been dipped in a solution of cupric hydroxid in aqueous ammonia and dried by passing over a heated cylinder. The solution acts superficially on the cellulose of the paper, and leaves on evaporation a pale bluish-green, varnish-like film on the surface, cementing the fibers together, adding materially to the strength and toughness of the paper, and enabling it to resist the action of water.

paper-backed (pā′pėr-bakt), *a.* Having the back made or as if made of paper; hence, weak; flimsy. [Rare.]

> 'Push, men!' sez Crook. 'Push, ye *paper-backed* beggars!' he sez. 'Am I to pull ye through?' So we pushed, . . . an' God help the front-rank man that wint down that day!
> *R. Kipling*, With the Main Guard, in Soldier Stories, p. 9.

paper-beam (pā′pėr-bēm), *n.* A small weighing-beam used to determine the number of pounds of paper to a ream by weighing one sheet of paper.

paper-book (pā′pėr-bůk), *n.* In *Eng. law*, a transcript of the record of a case prepared, formerly by the clerk of the papers, but now by the plaintiff's attorney, or, in the case of an appeal, by the appellant's attorney, for the use of the court.

paper-faced, *a.* **2.** Faced with paper.

paper-fish (pā′pėr-fish), *n.* The young of *Latris forsteri*, a fish found in New Zealand and Tasmania, belonging to the family *Cirrhitidæ*.

paper-hunt (pā′pėr-hunt), *n.* Same as *paper-chase*.

papering (pā′pėr-ing), *n.* In *mech.*, the operation of sticking pins in the papers in which they are sold.

paper-machine, *n.* Specifically, the machine used in the final process of paper-making and following the various machines used in the rag-mill and pulp-mill in cleaning, shredding, grinding, bleaching, refining, and mixing the rags, wood-pulp, or other material, in water to form the stock fed to the paper-machine. Paper-mills are known as *one-machine*, *two-machine mills*, etc., independently of their pulp-making capacity. Two types of paper-machines are in general use. In the *cylinder machine* the stock, composed of about 96 parts of water and 4 parts of pulp of some kind mechanically suspended in the water, is fed in a continuous stream to a series of narrow vats placed side by side and forming the first part of the machine, where the process of paper-making begins. In each vat is suspended a cylindrical frame covered with fine brass wire cloth. Each cylinder, supported horizontally in the vat by an arbor which passes through the ends of the vat, revolves while partially submerged in the liquid stock, none of the liquid being able to escape through the bearings of the shaft or to enter the ends of the cylinder. The water of the stock passes freely through the wire cloth and enters the interior of the cylinder and is led out of the machine. The pulp floating in the water cannot pass the wire cloth and is drawn against it, rapidly covering the cylinder with a film. On reaching the highest point in the revolution of the cylinder the film of pulp meets a continuous web of felt traveling horizontally in the same direction as the surface of the cylinder at this point. Immediately above the felt is a roll, called the *couch-roll*, which presses upon the felt, causing the film of pulp to leave the cylinder and cling firmly to the felt. Each cylinder in the series of vats contributes its film of pulp to the traveling felt, all being pressed together and moving on the felt as a continuous band of wet pulp until it passes out of this first part of the machine and is delivered to the next or second part. The second, third, and fourth parts are essentially the same as the corresponding parts of the Fourdrinier machine described below. In the *Fourdrinier machine*, the production of a continuous film of pulp on wire cloth is effected in a different way. The first, or Fourdrinier, part of the machine consists essentially of a traveling-apron of wire cloth, called the *wire*, supported by table-rolls in a horizontal position. On each side of the wire a thick endless rubber band, called a *deckle*, rests upon the moving wire and travels with it. The wire and the two deckles form a shallow moving trough and into this trough is fed a thin stream of stock which fills it and moves onward with it. The rubber deckles act as dams on each side to prevent the escape of the liquid and also serve to define the edges (deckle edges) of the rapidly forming film of pulp. The water in the stock sinks downward through the wire into the save-all boxes and is led out of the machine. The pulp, unable to pass through the wire, is caught on it and moves onward as a continually formed and continuous film. As more water escapes through the wire the film becomes more coherent and passes under a dandy roll which compacts it more firmly together. Finally, the water being almost completely extracted and the film changing from a sheet of pulp into a band of soft paper, the endless deckles, moving over suitable rolls, leave the wire, while the latter passes between large couch-rolls which cause the paper to leave it and to pass out to the second part of the machine. The second part of a paper-machine, called the *press part*, consists essentially of three pairs of rolls called *press-rolls*. The soft wet paper, from the first part of the cylinder or of the Fourdrinier machine, is transferred to a woolen felt and passes with it between each pair of press-rolls, each in turn serving to press more and more water out of the paper, compacting it together and making it comparatively strong and dry. The third part consists of a long series of hollow iron cylinders filled with steam and called the *driers*. This part is usually covered with a hood having suitable pipes for withdrawing the clouds of steam that rise from the drying paper. The web of paper passes in turn round all the steam-heated driers and is completely freed from its moisture, reaching the end of the third part as finished plain or uncalendered paper. In the fourth part, the web of paper is passed over and around *calender rolls*, is given its final surfacing, and is wound on the reel. When full, the reel is unwound and the paper passed through the slitting-machine and cut to commercial sizes and rewound in rolls ready for shipment.— **Cylinder paper-machine,** a machine that takes up fluid paper-pulp upon a hollow cylinder covered with close-woven wire cloth and perfects the web at the end of its rotation.

paper-miller (pā'pėr-mil″ėr), *n.* One who works in or operates a paper-mill.

paper-minister (pā'pėr-min″is-tėr), *n.* In Scotland, a depreciatory name for a minister who openly reads his sermons to the congregation, instead of giving them the appearance of being extempore.

paper-model (pā'pėr-mod″el), *n.* A scientific design of a vessel laid down mathematically on a drawing-table.

paper-mouth (pā'pėr-mouth), *n.* One of the numerous common names of *Pomoxis annularis*, one of the sunfishes of the eastern United States.

paper-scales (pā'pėr-skālz), *n. pl.* A multiplying-balance which shows the weight of a ream of paper when a single sheet is placed on it. See ★*paper-beam.*

paper-shale (pā'pėr-shāl), *n.* A very thinly stratified shale in which the individual laminæ are comparable with sheets of cardboard. When such shales are saturated with petroleum or its residues they assume a toughness which gives the name special significance.

paper-skin (pā'pėr-skin), *n.* In general, any pale dry condition of the skin in cattle and sheep; especially verminous bronchitis in calves: also used in referring to verminous gastritis. Properly speaking, it is a symptom rather than a disease.

paper-varnish (pā'pėr-vär″nish), *n.* Mastic-gum dissolved in alcohol. *Thorpe*, Dict. Applied Chem., I. 623.

paper-wasp (pā'pėr-wosp), *n.* Any one of the social wasps which makes its nest of a paper-like substance.

paper-works (pā'pėr-wėrks), *n.* A paper-mill.

papetto (pä-pet'tō), *n.* [It., dim. of *papa*, pope. See *pope*^{1}.] A silver papal coin, struck by Pius VII., Gregory XVI., and Pius IX.

papia (pä'pi-ä), *n.* A West Indian creeping warbler, *Dendroica plumbea.*

papile (pa-pēl'), *n.* [F. *papile*, formed from *papier*, paper, or *papillon*, butterfly?] In France, a technical name for a certain kind of cheap thin paper.

> It is brought on a wagon constructed for that purpose, and the gas is passed into balloons made of "*papile*," sent from the Trappes Observatory and which hold about thirty cubic meters.
> *U. S. Monthly Weather Rev.*, April, 1903, p. 178.

Papilio, *n.*—**Short-tailed papilio,** an American papilionid butterfly, *Papilio brevicauda*, which occurs in Newfoundland and about the Gulf of St. Lawrence. Its larvæ feed on parsley and other umbelliferous plants.

papilionian (pạ̄-pil-i-ō'ni-ạn), *a.* and *n.* Same as ★*papilionid.*

papilionid (pā-pil-i-on'id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Papilionidæ.*

II. *a.* Having the characters of or belonging to the family *Papilionidæ.*

papilla, *n.*—**Adhesive papilla,** one of the three papillæ developed on the head of the ascidian larva and enabling it to attach itself to surfaces.—**Dental papilla,** the conical mass of cells about which a tooth is developed.—**Genital papilla,** in earthworms, one of the papillæ on the ventral side of the clitellum.—**Papilla duodenalis.** Same as *Vater's* ★*papilla.*—**Urinary papilla,** in *ichth.*, a small papilla which marks the opening of the urinary sinuses into the cloaca.—**Urinogenital papilla,** in *ichth.*, a papilla which marks the opening of the urinogenital sinus into the cloaca.—**Vater's papilla,** a slight projection from the mucous membrane of the duodenum where the ductus communis choledochus enters. Also called *papilla duodenalis.*

papilla-formation (pạ̄-pil'ä̤-fôr-mā″shọn), *n.* The production or formation of papillæ or cylindrical or conical elevations on the surface of the integument, a gland, or other layer of tissue.

Papillary cancer. See ★*cancer.*

papillectomy (pap-i-lek'tọ̄-mi), *n.* [L. *papilla*, nipple, + Gr. *ἐκτομή*, excision.] Excision of papillæ.

papillomatosis (pap″i-lō-mạ-tō'sis), *n.* [NL. *papilloma* (*-t-*) + *-osis.*] A morbid condition in which there is a tendency to the formation of papillomata.

papillosarcoma (pạ̄-pil″ọ̄-sär-kō'mä̤), *n.*; pl. *papillosarcomata* (-mạ-tä̤). [NL., < *papilla* + *sarcoma.*] A papilloma of malignant type.

papillosity (pap-i-los'i̤-ti), *n.* [*papillose* + *-ity.*] The state or condition of being papillose.

papillote, *n.* **2.** Folded oiled paper on which chops, etc., are prepared and sometimes served.

papiomorphous (pap″i-ọ̄-môr'fus), *a.* [NL. *papio*, baboon, + Gr. *μορφή*, form, + *-ous.*] Resembling, or having the characters of, the large dog-faced baboons of the genus *Papio* and related genera. [Rare.]

> The morphological differences . . . which separate these anthropoids from the *papiomorphous* baboons, the lowest of the catarrhines. *Smithsonian Rep.*, 1895, p. 465.

papoid (pā'poid), *n.* [*pap*(*aya*) + *-oid.*] Same as *papain.*

papolatry (pạ̄-pol'ạ-tri), *n.* [ML. *papa*, pope, + Gr. *λατρεία*, worship.] Excessive devotion to the Pope. *N. E. D.*

papoose-board (pa-pös'bōrd), *n.* The board on which an Indian baby is carried; an Indian cradle. See cut under *papoose.* Also called *papoose-frame.*

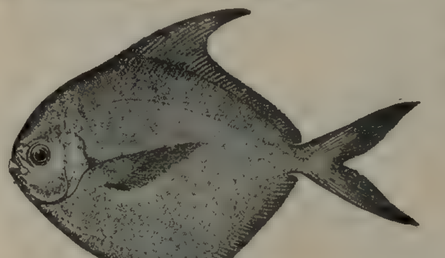
papoose-frame (pa-pös'frām), *n.* Same as ★*papoose-board.*

paposite (pä'pọ̄-sīt), *n.* [*Paposa* (see def.) + *-ite*^{2}.] A hydrous ferric sulphate which occurs in dark red crystalline masses: found near Paposa, Atacama. It may be identical with amarantite.

pappescent, *a.* A better form of *papescent.*

pappiform (pap'i-fôrm), *a.* [NL. *pappus*, + L. *forma.*] Having the form of a pappus. *Treas. Bot.*, p. 844.

pappy-fish (pap'i-fish), *n.* A stromateoid fish, *Peprilus paru*, found on the Atlantic coast of the United States and southward.



Pappy-fish (*Peprilus paru*).
(From Bulletin 47, U. S. Nat. Museum.)

paprika (pap'ri-kä̤), *n.* [Hungarian, red pepper.] A condiment prepared from a cultivated form of *Capsicum annuum* by grinding the dried peppers after removal of the seeds. It is much less pungent than the ordinary red pepper.—**Paprika huhn,** chicken stewed and highly seasoned with Hungarian pepper or paprika; Hungarian chicken.

pap-shell (pap'shel), *n.* A limpet, so named from being used to apply fullers' earth or similar remedies to the sore nipples of nurses.

papula, *n.* **3.** *pl.* In *Stelleroidea*, same as *dermal* ★*branchiæ.*

papuloid (pap'ụ̄-loid), *a.* [*papule* + *-oid.*] Resembling a papule or pimple.

papulopustular (pap″ụ̄-lọ̄-pus'tụ̄-lä̤r), *a.* Characterized by the presence of both papules and pustules. *Buck*, Med. Handbook, I. 78.

papulosity (pap-ụ̄-los'i̤-ti), *n.* [*papulose* + *-ity.*] The state of being covered with papules; also a papule.

papulosquamous (pap″ụ̄-lọ̄-skwā'mus), *a.* Characterized by the presence of both papules and epidermic scales. *Buck*, Med. Handbook, III. 725.

papulovesicular (pap″ụ̄-lọ̄-vẹ̄-sik'ụ̄-lä̤r), *a.* Characterized by the presence of both papules and vesicles. *Buck*, Med. Handbook, I. 456.

papyrine (pạ̄-pī'rin), *a.* [Gr. *παπύρινος*, < *πάπυρος*, papyrus. See *papyrus* and *paper.*] **1.** Consisting of papyrus: as, a *papyrine* roll.—**2.** Made of something which resembles paper. *Mayne.*

papyristite (pạ̄-pir'is-tīt), *n.* [Gr. *πάπυρος*, paper, + *-ist* + *-ite*^{2}.] The trade-name for a composite material made from paper-pulp, designed to be used as a covering for floors and walls.

Papyrius (pạ̄-pir'i-us), *n.* [NL. (Lamarck, 1804), < L. *papyrius*, an adjective derived from L. *papyrus* (Gr. *πάπυρος*), the papyrus plant, paper; in allusion to the use of the bark in paper-making.] A genus of plants belonging to the family *Moraceæ.* See *Broussonetia*, ★*malo*, and ★*wauke.*

papyrograph, *n.* **3.** In *photog.*, a photographic positive printed on paper resembling parchment. *E. L. Wilson*, Cyclopædic Photog., p. 270.

papyrography, *n.* **2.** In *photog.*, the production of papyrographs.

papyrolite (pạ̄-pī'rọ̄-līt), *n.* [Gr. *πάπυρος*, paper, + L. *oleum*, oil, + *-ite*^{2}.] The trade-name for a composite material made from finely ground wood sawdust, designed to be used for covering floors.

papyrological (pạ̄-pī-rọ̄-loj'i-kạl), *a.* [*papyrolog*(*y*) + *-ical.*] Of or pertaining to papyrology.

papyrology (pā-pī-rol'ọ̄-ji), *n.* [Gr. *πάπυρος*, papyrus, + *-λογια*, < *λέγειν*, speak.] The study of papyri. See *papyrus*, 2.

papyrotype, *n.* **2.** A print made by the papyrotype process.

papyrotypy (pạ̄-pī'rọ̄-tī-pi), *n.* See *papyrotype.*

papyroxylin (pā-pī-rok'si-lin), *n.* [Gr. *πάπυρος*, paper, + E. (*pyr*)*oxylin.*] Pyroxylin made from paper, instead of from loose cotton fiber.

par^2, *n.* **5.** In *golf*: (*a*) Perfect play. (*b*) At each hole, the number of perfectly played strokes from tee to green (two putts being added). The par of a 320-yard hole, for instance, is usually fixed at 4 strokes.

par. An abbreviation (*b*) of *parallel*; (*c*) of *parish.*

para, *n.* **3.** A copper coin of Servia (one centime).

Para. An abbreviation of *Paraguay.*

para red. A shortened name for *para-nitraniline* ★*red.*

para-appendicitis (par″ạ-ạ-pen″di-sī'tis), *n.* Localized peritonitis in the neighborhood of the appendix vermiformis.

parabanic (par-ạ-ban'ik), *a.* Derived from uric acid by transformation.—**Parabanic acid,** a crystalline acid, $C_3H_2O_3N_2$, made by boiling uric acid with nitric acid, or with manganese peroxid and sulphuric acid, or other oxidizing agents. Also called *oxalylurea.*

parabates (par-ạ-bat'ēz), *n.*; pl. *parabatæ* (-ē). [Gr. *παραβάτης.*] In *Gr. antiq.*, the warrior who stood in the chariot beside the charioteer.

parabellum (par-ạ-bel'um), *n.*; pl. *parabella* (-ä̤). [Appar. L. *para bellum*, 'prepare for war'; *para*, impv. of *parare*, prepare; *bellum*, war.] A commercial name for a form of automatic pistol used by the Swiss government (1904) as a service weapon. See ★*automatic firearm.*

parabiosis (par″ạ-bī-ō'sis), *n.* [Gr. *παρά*, beside (alluding to *paralysis*), + *βίωσις*, living.] The temporary abolition of conductivity and excitability in a nerve.

> The author [N. E. Wedensky] designates by "*parabiosis*" the various conditions which produce this uniform change in the nerve. *Parabiosis* consists essentially in the complete temporary suppression of excitability and conductivity. The parabiotic current shows the negative variation under the influence of tetanization.
> *Sci. Amer. Sup.*, May 9, 1903, p. 22866.

parabiotic (par″ạ-bī-ot'ik), *a.* Relating to, caused by, or coincident with parabiosis. See the extract under ★*parabiosis.*

parabola², *n.*—**Apollonian parabola.** Same as *quadratic* ★*parabola.*—**Asymptotic parabola.** Same as ★*parabolic asymptote* (*b*).—**Osculatory parabola,** that parabola which osculates and measures the variation of the curvature of any curve at a given point.—**Quadratic parabola,** the common parabola.

parabolar† (pa-rab′ọ-lạr), *a.* Same as *parabolic.*

parabolaster† (pa-rab′ọ-las-tėr), *n.* [*parabol*(*a*) + *-aster.*] Any parabola other than the Apollonian. See *parabola²*, 2.

parabolic², *a.*—**Parabolic asymptote.** (*a*) See ★*asymptote.* (*b*) A parabola so approaching a curve that their distance apart becomes and remains less than any given distance, though never zero.—**Parabolic branch,** a branch of a curve which extends to infinity without approaching an asymptote: opposed to *hyperbolic branch.*—**Parabolic catenary,** the ordinary catenary, called *parabolic* as being the roulette of the focus of a parabola, and to distinguish it from the elliptic catenary, the roulette of the focus of an ellipse, and the hyperbolic catenary, the roulette of the focus of a hyperbola.—**Parabolic involution.** See ★*involution.*—**Parabolic reflector.** See *reflector.*—**Parabolic substitution.** See ★*substitution.*

II. *n.*† A parabola or paraboloid.

parabolimber (pa-rab-ọ-lim′bėr), *n.* The skew curve which is the intersection of one parabolic cylinder with another.

parabolist² (pa-rab′ọ-list), *n.* [*parabol*(*a*) + *-ist.*] One who studies, or a partizan of, the parabola. [Rare.]

parabolization (pa-rab″ọ-li-zā′shọn), *n.* [*parabol*(*a*) + *-ize¹* + *-ation.*] The operation of making the surface of a mirror a true paraboloid: essential to its perfect performance in a telescope. *Sci. Amer. Sup.*, Oct. 17, 1903, p. 23232.

parabolize¹ (pa-rab′ọ-līz), *v.* [Gr. *παραβολή*, a parable, + *-ize.*] I. *trans.* To express, as in a parable; treat as a parable; make into a parable.

> He [Christ] *parabolizes* the truth, and gets it thus into human conditions or analogies.
> *Bushnell*, Christian Nurture, ii., sermon 7.

II. *intrans.* To speak parabolically.

> As our Saviour Christ rightly *parabolized* of such.
> *Watson*, Decacordon, p. 34 (1602). *N. E. D.*

parabolize² (pa-rab′ọ-līz), *v. t.* [Gr. *παραβολή*, a parabola, + *-ize.*] To make a parabola of; give a parabolic form to.

parabolograph (pa-rab′ọ-lọ-gråf), *n.* [Gr. *παραβολή*, parabola, + *γράφειν*, write.] An instrument for the mechanical tracing of parabolic curves. *K. Pearson*, in Philos. Mag., Feb., 1904, p. 200.

paraboloid, *n.* 3. A solid or surface of the second degree some of whose plane-sections are parabolas.—**Elliptic paraboloid,** a surface of the second order whose plane sections perpendicular to the axis are ellipses, while sections containing the axis are parabolas.—**Hyperbolic paraboloid,** a ruled surface the point at infinity of one of whose generating projective ranges is correlated to the point at infinity of the other.—**Paraboloid of revolution,** a surface of the second order generated by the revolution of a parabola about its axis. See *solid of revolution*, under *revolution.*

II. *a.* Paraboloidal. [Rare.]

paraboulia (par-ạ-bö′li-ạ̈), *n.* Same as ★*parabulia.*

Parabrahma (par-a-brä′mạ̈), *n.* [Skt. *parabrahman*, nom. *-mā.*] The Supreme Being.

parabulia (par-ạ-bū′li-ạ̈), *n.* [Also *paraboulia*; < Gr. *παρά*, beside, + *βουλή*, will.] Any disorder affecting the will.

parabuxine (par-ạ-buk′sin), *n.* [*para-* + L. *buxus*, box, + *-ine²*.] An amorphous, poorly characterized alkaloid found in the green leaves of the box, *Buxus sempervirens.*

parabuxinidine (par″ạ-buk-sin′i-din), *n.* [*parabuxine* + *-id* + *-ine²*.] A crystalline alkaloid found in the green leaves of the box, *Buxus sempervirens.*

paracalcarine (par-ạ-kal′kạ-rin), *a.* [*para-* + *calcarine.*] Near or beside the calcarine: as, a *paracalcarine* sulcus: noting an unstable fissure observed by G. Elliot Smith in the cerebrum of lemurs, which has more or less intimate relations with the calcarine as a dorsal branch of the intercalary or parieto-occipital fissures. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 332.

paracamphoric (par″ạ-kam-for′ik), *a.* Noting inactive camphoric acid.

paracanthoma (par″a-kan-thō′mạ̈), *n.*; pl. *paracanthomata* (-mạ-tä). [NL., < Gr. *παρά*, beside, + *ἄκανθα*, thorn, spine, + *-oma.*] A tumor originating in the prickle-cell layer of the skin.

paracanthosis (par″a-kan-thō′sis), *n.* [Gr. *παρά*, near, + NL. *acanthosis.*] Disease affecting the prickle-cell layer of the skin.

paracarpous (par-ạ-kär′pus), *a.* [Gr. *παρά*, beside, + *καρπός*, fruit.] Joined together by the margins only: said of the carpels of some compound ovaries. *K. E. Goebel*, Organography, II. 558.

paracarthamin (par-ạ-kär′thạ-min), *n.* [*para-* + *carthamin.*] A compound of uncertain composition, formed by the action of sodium amalgam on rutin, and said to be related to carthamin.

paracasein (par-ạ-kā′sẹ-in), *n.* [*para-* + *casein.*] A substance which results from the action of chymosin upon casein, whereby a small amount of albumose-like substance is split off, the remainder constituting paracaseinogen or lime paracasein, from which paracasein is obtained by removal of the lime.—**Lime paracasein,** the neutral lime salt of casein, after the hydrolytic severance of Hammarsten's albumose-like substance, as a result of the action of chymosin. *Simon.*

paracaseinogen (par-ạ-kā-sẹ-in′ọ-jen), *n.* Same as *lime* ★*paracasein.*

paracathodic (par″ạ-ka-thod′ik), *a.* [*para-* + *cathode* + *-ic.*] Of or pertaining to rays formed, especially at low vacuum, by the impact of cathode rays upon a body, the anticathode, placed in their path. Paracathodic rays have properties differing from those of either cathode rays or X-rays.

paracele (par′ạ-sēl), *n.* [Also *paracœle*; < Gr. *παρά*, beside, + *κοῖλος*, hollow.] A lateral ventricle of the brain. *Buck*, Med. Handbook, II. 139.

paracelian (par-ạ-sē′li-ạn), *a.* [*paracele* + *-ian.*] Of or pertaining to the lateral ventricle of the brain. *Buck*, Med. Handbook, II. 139.

paracellulose (par-ạ-sel′ụ-lōs), *n.* [*para-* + *cellulose.*] A poorly characterized modification of cellulose supposed to occur in the cellular tissue and pith of plants.

Paracelsianism (par-ạ-sel′si-ạn-izm), *n.* [*Paracelsian* + *-ism.*] The medical practice of Paracelsus.

Paracelsic (par-ạ-sel′sik), *a.* Same as *Paracelsian.*

paracerebellar (par-ạ-ser-ẹ-bel′är), *a.* [Gr. *παρά*, beside, + NL. *cerebellum* + *-ar³*.] Relating to the lateral portion of the cerebellum. *Buck*, Med. Handbook, II. 249.

paracholia (par-ạ-kō′li-ạ̈), *n.* [NL., < Gr. *παρά*, beside, + *χολή*, bile.] The presence of bile in the blood-vessels or tissues outside of its regular channels.

parachrœa (par-ạ-krē′ạ̈), *n.* [NL., < Gr. *παρά*, beside, + *χροιά*, color.] Same as ★*parachroma.*

parachroma (par-ạ-krō′mạ̈), *n.* [NL., < Gr. *παρά*, beside, + *χρῶμα*, color.] An abnormal change of color in the skin.

parachromatophorous (par″ạ-krọ-mạ-tof′ọ-rus), *a.* [Gr. *παρά*, beside, + *χρῶμα*(*τ-*), color, + *-φορος*, < *φέρειν*, bear.] A term applied to pigment-bacteria when the color is contained mainly in the cell-wall. See ★*chromophorous*, 2, and ★*chromoparous.*

parachronistic (pa-rak-rọ-nis′tik), *a.* [Gr. *παρά*, beside, + *χρόνος*, time, + *-ist* + *-ic.*] Misdated; especially, dated too late.

parachronize (pa-rak′rọ-nīz), *v. t.*; pret. and pp. *parachronized*, ppr. *parachronizing.* [Gr. *παρά*, beside, + *χρόνος*, time, + *-ize.*] To date wrongly, especially date too late; mistime. *Blount.*

parachute, *n.* 5. A large funnel of tinned copper set in the skimming-vat of a brewery, the mouth on a level with the surface of the beer, used to receive and carry off the yeast which is skimmed into it by means of a plank paddle.—6. In *bot.*, a down or tuft of hairs attached to a seed enabling it to float in the air as if supported by a parachute: most properly, a tuft supported by a long beak as in the dandelion (see *pappus*, cut *a*), but also applied more broadly. Often adjectival, as in the phrases *parachute mechanisms*, *parachute seeds*, etc.

paracine (par′ạ-sin), *n.* Same as ★*paricine.*

paracinesis, *n.* See *parakinesis.*

paracinetic, *n.* See ★*parakinetic.*

paracitric (par-ạ-sit′rik), *a.* [*para-* + *citric.*] Noting an acid, the same as *aconitic acid.*

paraclase (par′ạ-klāz), *n.* [Gr. *παρά*, beside, + *κλάσις*, breaking.] In *geol.*, a fault: a name suggested by Daubrée. Compare ★*diaclase* and ★*lithoclase.*

> The occurrence in many areas of similarly regular networks of streams in which the elements are essentially straight lines in parallel series over considerable distances has now long been known, and has been given an adequate explanation by Daubrée as conditioned by the system of fractures (lithoclases) of the region, in part by the faults (*paraclases*) and in part by the joints (diaclases).
> *W. H. Hobbs*, in Jour. of Geol., Nov.–Dec., 1902, p. 886.

Paraclinus (par-ạ-klī′nus), *n.* [NL., < Gr. *παρά*, beside, near, + NL. *Clinus.*] A genus of blennioid fishes inhabiting the coast of Venezuela.

paracmastic (par-ak-mas′tik), *a.* [Gr. *παρακμαστικός*, past the culmination, < *παρά*, beyond, + *ἀκμή*, culmination.] Having passed the culmination or crisis; gradually declining: said of a disease which is progressing to recovery, or of the vital processes in old age.

paracœle, *n.* Same as ★*paracele.*

Paracolon bacillus. See ★*bacillus.*

paracolpium (par-ạ-kol′pi-um), *n.* [Gr. *παρά*, beside, + *κόλπος*, womb.] Connective tissue surrounding the vagina.

paracondylar (par-ạ-kon′di-lạr), *a.* Same as *paracondyloid.*

paracone (par′a-kōn), *n.* [Gr. *παρά*, near, + *κῶνος*, cone.] The antero-external cusp in the upper molar teeth of mammals. See cut under ★*tooth*, 1.

paraconic (par-ạ-kon′ik), *a.* [*para-* + *acon*(*it*)*ic.*] Related to aconitic acid.—**Paraconic acid,** a deliquescent crystalline acid, $C_5H_6O_4$, which is the anhydrid of itamalic acid.

paraconid (par-ạ-kō′nid), *n.* [Gr. *παρά*, near, + *κῶνος*, cone, + *-id²*.] That cusp in the lower molars and premolars of mammals which is homologous with the paracone in the upper molars. In the lower teeth the paraconid is situated on the lingual side of the tooth-crown, while in the upper jaw its homologue is on the labial side. See cut under ★*tooth*, 1.

> The second molar has the same composition as the first, except that the *paraconid* is small and connate with the protoconid.
> *W. D. Matthew*, in Bulletin Amer. Mus. Nat. Hist., [XVI. 282.

paraconine, paraconiine (par-ạ-kō′nin, par-ạ-kō′ni-in), *n.* [*para-* + *conine, coniine.*] A yellow liquid, $C_8H_{15}N$, made by heating butyric aldehyde with ammonia. It is also made from butylidene chlorid or bromide and alcoholic ammonia. It is as poisonous as conine and has a similar odor.

paracope (pa-rak′ọ-pẹ), *n.* [NL., < Gr. *παρακοπή*, infatuation, delirium.] Slight mental disturbance occurring in febrile conditions; the border-land between delirium and insanity.

paracopic (par-ạ-kop′ik), *a.* [*paracop*(*e*) + *-ic.*] Relating to, or exhibiting, paracope.

paracopulation (par″ạ-kop-ụ-lā′shọn), *n.* [*para-* + *copulation.*] A term applied to the supposed copulation of a nucleus-like body ('copulation-cell') with one of the pronuclei in the eggs of cladoceran *Crustacea.* *Weismann* and *Ischikawa.*

Paracoto bark. See ★*bark²*.

paracotoin (par-ạ-kō′tō-in), *n.* [*paracoto* + *-in²*.] A crystalline substance obtained from paracoto bark, used medicinally, in diarrhea, etc., like cotoin, but having only one half or one third the strength of the latter.

paracotol (par-ạ-kō′tol), *n.* [*paracoto* + *-ol.*] A phenol-like liquid, $C_{15}H_{24}O$ or $C_{15}H_{26}O$(?), contained in the volatile oil of paracoto bark. It boils at 220–222° C.

paracoumaric (par″ạ-kö-mar′ik), *a.* [*para-* + *coumaric.*] Designating an acid isomeric with coumaric acid.—**Paracoumaric acid,** a crystalline acid, $C_9H_8O_3 + H_2O$, found in aloes and the resins of the black fir (*Pinus laricio*) and of *Xanthorrhœa hastilis.* It is also made synthetically. Also called *parahydroxycinnamic acid.* It melts at 206° C.

para-cresalol (par-ạ-kres′ạ-lol), *n.* [*para-* + *cres*(*ol*) + *-al³* + *-ol.*] The trade-name of the product of the condensation of salicylic acid with paracresol, used medicinally in cholera, dysentery, etc.

paracresol (par-a-krē′sol), *n.* [*para-* + *cresol.*] A crystalline compound, $C_6H_4(CH_3)$-(OH), which occurs in human urine in cases of erysipelas and scarlatina, in creosote from wood-tar, and as cresyl-sulphuric acid in the urine of cows and horses. It is also formed synthetically and by the decay of animal matter, tyrosin, etc. It melts at 36° C.

paracribrum (par-ạ-krib′rum), *n.*; pl. *paracribra* (-rạ̈). [*para-* + L. *cribrum*, a sieve.] A sac secondarily developed from the embryonic cribrum. *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 42.

Paractidæ (pa-rak'ti-dē), *n. pl.* [NL., < *Paractis* + *-idæ*.] A family of zoantharians, having digitate tentacles, pedal disk, no acontia, strong mesodermal sphincter, and numerous perfect mesenteries. It includes about a dozen genera, among them being *Paractis*, *Paractinia*, and *Pycnanthus*.

Paractis (pa-rak'tis), *n.* [NL.] The typical genus of the family *Paractidæ*. *Milne-Edwards*, 1857.

Paracusis loci, inability to locate a sound.

paracyanate (par-a̤-sī'a̤-nāt), *n.* [*para-* + *cyanate*.] An old name for a fulminate. *Berzelius*.

paracyanide (par-a̤-sī'a̤-nid), *n.* [*para-* + *cyanide*.] Same as *fulminate*.

Paracyclas (par-a̤-sī'klas), *n.* [NL., < Gr. *παρά*, near, + *κυκλάς*, round.] A genus of Devonian teleodesmacean pelecypods thought to be affiliated with the *Lucinidæ*, having thin rounded concentrically striate shells without lunules and with obsolete hinge characters.

paracyclone (par-a̤-sī'klōn), *n.* [Gr. *παρά*, beside, + E. *cyclone*.] Either one of a pair of cyclones pursuing analogous paths on opposite sides of the equator.

paracyst (par'a̤-sist), *n.* [Gr. *παρά*, beside, + E. *cyst*.] Tulasne's name for one of a pair of sexual organs which occur in certain discomycetous fungi, as *Peziza*.

> The *paracyst* is a club-shaped branchlet, close to the macrocyst; the apex of the *paracyst* and the hook-like prolongation [of the macrocyst] become united.
> *H. M. Ward*, in Quart. Jour. Micros. Sci., April, 1884, [p. 280.

paracystic (par-a-sis'tik), *a.* [Gr. *παρά*, beside, + *κύστις*, bladder (cyst), + *-ic*.] Lying in the neighborhood of a bladder or of a cystic tumor.

paradactyl (par-a̤-dak'til), *n.* [Gr. *παρά*, beside, + E. *dactyl*.] In *ornith.*, the side of the toe, as distinguished in any way from the lower surface.

paradatiscetin (par″a̤-dā̤-tis'ẹ̄-tin), *n.* [*para-* + *datiscetin* (?).] A yellow crystalline compound, $C_{15}H_{10}O_6$, made by melting quercitin with caustic potash.

paradental (par-a̤-den'ta̤l), *a.* [Gr. *παρά*, beside, + E. *dental*.] Being in close proximity to a tooth.

paraderm (par'a̤-dėrm), *n.* [Gr. *παρά*, beside, + *δέρμα*, skin.] **1.** In *embryol.*, the portion of the egg-yolk which contributes cells to the formation of the embryonic body.—**2.** In *entom.*, the delicate limiting membrane surrounding the pronymph of the blow-fly. *Cambridge Nat. Hist.*, V. 164.

paradero (pä-rä-dā'rō), *n.* [Sp. *paradero*, a halting-place, < *parar*, stop.] The site of an old village, especially of one formerly occupied by the aborigines. *Keane*, Ethnology, p. 97. [Spanish America.]

paradiazin (par″a̤-dī-az'in), *n.* [*para-* + *diazin* (?).] Same as ★*pyrazin*.

paradigitaletin (par″a̤-dij-i-tā'lẹ̄-tin), *n.* [*para-* + *digital*(*in*) + *-et* + *-in*^{2}.] A compound, $C_{22}H_{34}O_7$, obtained from digitalis.

paradigmatization (par″a̤-dig″ma̤-ti-zā'-sho̤n), *n.* [*paradigmatize* + *-ation*.] The act of making into a paradigm or example.

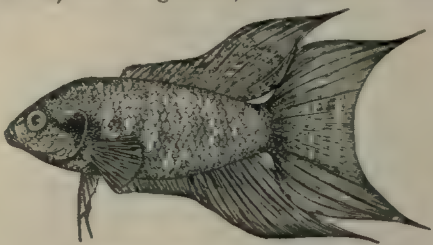
paradiplomatic (par″a̤-dip-lọ̄-mat'ik), *a.* [*para-* + *diplomatic*.] Having a meaning apart from or outside of the diplomatic or manuscript text.

paradise, *n.* **7.** In *hort.*, a dwarf apple-tree, used as a stock on which to graft other varieties for the purpose of keeping the tree small in size. There are several forms or varieties of paradise apple, most of them of unknown and early origin. They are small-stature forms of the common apple, *Pyrus Malus*.—**Fruits of paradise**, fruits always in season.

paradise (par'a̤-dīs), *v. t.*; pret. and pp. *paradised*, ppr. *paradising*. [*paradise*, *n.*] **1.** To make a paradise of.—**2.** To put into paradise; fill with supreme felicity. *N. E. D.*

paradise-duck (par'a̤-dīs-duk), *n.* *Casarca variegata*, a large, bright-colored duck of New Zealand.

paradise-fish (par'a̤-dīs-fish), *n.* A Chinese fish, *Macropodus viridi-auratus*, remarkable for its beauty and the extension of its fins. It has, like the goldfish, been made the subject of culture with reference to its beauty rather than to its food value.



Paradise-fish (*Macropodus viridi-auratus*). (From "Riverside Natural History.")

paradise-flower (par'a̤-dīs-flou″ėr), *n.* One of the cat's-claws of the southwestern United States, *Acacia Greggii*, a low tree with small bipinnate leaves, recurved spines, and fragrant creamy yellow flowers in oblong spikes.

paradise-flycatcher (par'a̤-dīs-flī″kach-ėr), *n.* See ★*flycatcher*.

paradise-grackle (par'a̤-dīs-grak″l), *n.* See *grackle*, 1.

paradise-grosbeak (par'a̤-dīs-grōs″bēk), *n.* A name loosely applied to various weaver-birds kept as cage-birds, but more particularly to one of the cutthroat finches, *Amadina erythrocephala*, of South Africa.

paradise-nut (par'a̤-dīs-nut), *n.* Same as *sapucaia-nut*.

paradise-tree, *n.* [Sp. *paraiso*, paradise.] **2.** On the isthmus of Panama and in other parts of Spanish America and the Philippine Islands, the pride-of-India, or china-tree, *Melia Azedarach*.

paradium (pa-rā'di-um), *n.* [Gr. *πα(ρά)*, near, + NL. *radium*.] A name suggested by Rutherford as a substitute for *actinium* and *ionium*. See ★*actinium*, 2. *Nature*, Oct. 31, 1907, p. 661.

paradox, *n.* **2.** The platypus or water-mole, *Ornithorhynchus paradoxus*. [Rare.]—**Thermal paradox**, an experiment in physics illustrating the lowering of the boiling-point of water by decrease of pressure. A flask of boiling water is corked, removed from the flame, inverted, and deluged with cold water. The sudden condensation of the vapor above the water within reduces the pressure, and the water boils violently, seemingly as the result of cooling; hence the name.

Paradoxical pulse. See ★*pulse*^{1}.

paradoxicality (par″a̤-dok-si-kal'ị-ti), *n.* [*paradoxical* + *-ity*.] The state or character of being paradoxical.

Paradoxides beds. See ★*bed*^{1}.—**Paradoxides horizon.** See ★*Acadian*, *n.*, 2.

Paradoxidian group. See ★*group*^{1}.—**Paradoxidian series.** Same as *Paradoxidian* ★*group*.

paradoxism (par'a̤-dok-sizm), *n.* [*paradox-* + *-ism*.] The habit of using paradox. [Rare.]

paradoxurine, *a.* **2.** Relating to or resembling the tree cats, or *Paradoxurinæ*.—**Paradoxurine section**, a division of *Viverridæ*, which comprises the genus *Paradoxurus* and other closely related forms.

paradromic (par-a̤-drom'ik), *a.* [Gr. *παράδρομος*, running alongside, + *-ic*.] Running parallel: as, a *paradromic* winding.

Paraffin paper, prosthesis. See ★*paper*, ★*prosthesis*.—**Scale paraffin**, in *petroleum-refining*, the crude mixture of solid hydrocarbons which crystallizes out from the distillates of high boiling-point, to be afterward purified, furnishing the colorless paraffin or paraffin wax of commerce.

paraffinic (par-a̤-fin'ik), *a.* [*paraffin* + *-ic*.] Derived from or related to one of the paraffins.

paraffinoid (par'a̤-fi-noid), *a.* [*paraffin* + *-oid*.] Belonging or related to the paraffin series.

paraffin-oil, *n.* In petroleum-refining, this term is specifically applied to the heavy oils of high boiling-point, used for lubrication, or from which paraffin scale may be made.

paraffin-xylol (par'a̤-fin-zī″lol), *n.* A solution of paraffin in xylol used by surgeons as a disinfectant varnish for the hands.

parafloccular (par-a̤-flok'ụ̄-lär), *a.* [NL. *paraflocculus* + *-ar*.] Of or pertaining to the paraflocculus. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 430.

paraflocculus (par-a̤-flok'ụ̄-lus), *n.*; pl. *paraflocculi* (-lī). [*para-* + *flocculus*.] A portion of the lobus flocculi, forming the greater part of the lateral pole of the cerebellum.—**Paraflocculus dorsalis**, the cerebellar folia forming the dorsal portion of the paraflocculus.—**Paraflocculus ventralis**, the cerebellar folia comprising the ventral portion of the paraflocculus.

paraform (par'a̤-fôrm), *n.* [*paraform*(*aldehyde*).] Same as ★*paraformaldehyde*.

paraformaldehyde (par″a̤-fôrm-al'dẹ̄-hīd), *n.* [*para-* + *formaldehyde*.] A polymerized formaldehyde, $(CH_2O)_n + H_2O$, formed by evaporation of an aqueous solution of formaldehyde. It is an amorphous solid that dissolves gradually in water. By heating with water at 130° C. it is reconverted to formaldehyde. It is used as an antiseptic.

parafrase, parafrast. Amended spellings of *paraphrase*, *paraphrast*.

parafumaric (par″a̤-fụ̄-mar'ik), *a.* [*para-* + *fumaric*.] Same as *maleic*.

paragalactan (par″a̤-ga-lak'ta̤n), *n.* [*para-* + *galact*(*ose*) + *-an*.] A gummy substance, $C_6H_{10}O_5$, found in the cell-membranes of the seeds of lupines: insoluble in water, but soluble in a hot solution of potassium hydroxid. It is hydrolyzed by dilute sulphuric acid, giving galactose and furfural.

paragalactin (par″a̤-ga-lak'tin), *n.* [*para-* + *galactin*.] Same as ★*paragalactan*.

paragamic (par-a̤-gam'ik), *a.* [*paragam*(*y*) + *-ic*.] Pertaining to or of the nature of paragamy.

paragamy (pa-rag'a̤-mi), *n.* [Gr. *παρά*, alongside of, + *γάμος*, marriage.] A method of cell-conjugation in which nuclear changes are suspended for vegetative growth between nuclear fusion (karyapsis) and chromatin fusion (mitapsis). The cellular structures of the higher plants and animals are built of paragamic cells, the nuclei having double sets of chromosomes. *Cook and Swingle*.

paraganglion (par-a̤-gang'gli-o̤n), *n.*; pl. *paraganglions*, *paraganglia* (-o̤nz, -ä̤). [NL., < Gr. *παρά*, beside, + *γάγγλιον*, ganglion.] One of the crescentic or oval groups of cells in the medullary portion of the adrenal bodies.

> These occur in the medullary substance of the adrenal bodies, in the so-called *paraganglia* of the same organs.
> *Med. Record*, Aug. 3, 1907, p. 188.

paragastral (par-a̤-gas'tra̤l), *a.* Same as *paragastric*.

paragenesis, *n.* **1.** In *biol.*: (*b*) Catagenesis. [Rare.]

> The term 'catagenesis' is to me objectionable, and *paragenesis* would be better.
> *Hyatt*, Biol. Lectures, 1899, p. 146.

paragerm-plasm (par-a̤-jėrm'plazm), *n.* [Gr. *παρά*, beside, + E. *germ-plasm*.] Accessory germ-plasm. See ★*germ-plasm*.

paragerontic (par″a̤-jẹ̄-ron'tik), *a.* [*para-* + *gerontic*.] Of or pertaining to the latest substage of the gerontic stage of ontogenetic development, when the individual presents the appearance of extreme senility during a short period before death. See ★*gerontic*.

> The smooth round shell of the whorl of the *paragerontic* ammonoid . . . cannot be considered as a reversion. *Hyatt*, in Proc. Boston Soc. Nat. Hist., 1893, p. 99.

paraglossitis (par″a̤-glo-sī'tis), *n.* [NL., < Gr. *παρά*, beside, + *γλῶσσα*, tongue, + *-itis*.] Inflammation at the base of the tongue.

paragluconic (par″a̤-glö-kon'ik), *a.* [*para-* + *gluconic*.] Derived from gluconic acid. (See ★*gluconic*.)—**Paragluconic acid**, a compound obtained by the action of nitric acid on gluconic acid. It was in reality impure gluconic acid.

paragnath (par'ag-nath), *n.* [Gr. *παρά*, beside, + *γνάθος*, jaw.] **1.** In crustaceans, one of the delicate unjointed processes between the mandibles and maxillæ, forming a sort of lower lip.—**2.** In some annelids, one of the horny tooth-like processes or denticles on the wall of the buccal cavity. Also *paragnathon*, *paragnathum*, and *paragnathus*.

paragnathon (pa-rag'nā̤-thon), *n.*; pl. *paragnatha* (-thä̤). [NL.] Same as ★*paragnath*.

paragnathum (pa-rag'nā̤-thum), *n.*; pl. *paragnatha* (-thä̤). [NL.] Same as ★*paragnath*.

paragneiss (par'a̤-nīs), *n.* [Gr. *παρά*, beside, + G. and E. *gneiss*.] In *petrog.*, a gneiss formed by the metamorphism of sedimentary deposits: opposed to ★*orthogneiss*. *Rosenbusch*, 1901.

paragogize (par'a̤-gọ̄-jīz), *v. t.*; pret. and pp. *paragogized*, ppr. *paragogizing*. [*paragoge* + *-ize*.] To add, as a final letter or syllable; render paragogic. See *paragoge*.

paragonimiasis (par″a̤-gon-i-mī'a̤-sis), *n.* [NL., < *Paragonimus* + *-iasis*.] A general term including all infections (cerebral as well as pulmonary) with lung-flukes (genus *Paragonimus*), such as pulmonary distomatosis or parasitic hemoptysis in man. *Stiles and Hassall*, 1900.

Paragonimus (par-a̤-gon′i-mus), *n.* [NL. (Braun, 1899), < Gr. *παρά*, beside, + *γόνιμος*, productive.] A genus of trematode worms of the family *Fasciolidæ*. These worms are from 8 to 16 millimeters long and live as parasites in the lungs of man, cats, and various other mammals. In man, especially in Asia, they cause a parasitic hemoptysis, long mistaken for tuberculosis. The type is *P. westermanii*.

paragonitic (par″a̤-gọ-nit′ik), *a.* [*paragonite* + *-ic*.] Containing paragonite; resembling paragonite.

paragraf, *n.* and *v.* An amended spelling of *paragraph*.

paragraphic, *a.* **3.** Relating to or affected with paragraphia. *Buck*, Med. Handbook, I. 410.

paragraphy (par′a̤-grȧf-i), *n.* [*paragraph* + *-y*³.] Newspaper paragraphs collectively.—**2.** The writing of brief articles or paragraphs for newspapers.

paragrene (par′a̤-grēn), *n.* [Appar. a manipulation, into a chemical-looking form, of *Paris green*.] The trade-name of an insecticide preparation consisting essentially of copper arsenite and arsenious oxid.

paraguatan (pä-rä-gwä-tän′), *n.* [Native name.] A tall rubiaceous tree of Venezuela, *Sickingia tinctoria*. It yields a rose-colored wood, easily worked and taking a fine polish, but losing its bright color on exposure to light and air. Shavings of the wood are used in Venezuela for dyeing a pale red. Also called *cucharo*.

Paraguay bur. See ★*bur*¹.

paraheliode (par-a̤-hē′li-ōd), *n.* [Gr. *παρά*, against, + *ἥλιος*, sun.] In *bot.*, an organ serving to screen underlying tissues from the sun: applied to the spines on the tubercles of *Coryphantha*. *O. V. Darbishire*, in Jour. Roy. Micros. Soc., Dec., 1904, p. 664.

parahemoglobin (par″a̤-hem-ọ-glō′bin), *n.* [*para-* + *hemoglobin*.] An altered form of hemoglobin found in the tissues in granular or crystalline form. It is of a dark brown or reddish color, and is met with in diseases which are associated with extensive blood-destruction. Also *parahæmoglobin*.

parahyal (par-a̤-hī′a̤l), *a.* [Gr. *παρά*, beside, + E. *hyal*.] Noting a slender process directed forward and slightly upward from the superior face of the posterior portion of the basihyal of some parrots, notably the lories. *Proc. Zool. Soc.* London, Jan., 1899, p. 20.

parakinetic (par″a̤-ki-net′ik), *a.* [*parakinesis* (*-et-*) + *-ic*.] Relating to or affected by parakinesis. Also *paracinetic*.

parakite (par′a̤-kīt), *n.* [Gr. *παρά*, beside, + E. *kite*¹.] A number of kites connected in series and flying tandem, used for attaining great heights and sending up instruments for meteorological observations, aërial photography, signaling, etc.

Paralabrax (par-a̤-lā′braks), *n.* [NL., < Gr. *παρά*, near, + NL. *Labrax*.] A genus of serranoid fishes, confined to the coasts of tropical America.

paralactate (par-a̤-lak′tāt), *n.* [*paralact*(*ic*) + *-ate*¹.] A salt of paralactic acid.

paralambdacism (par-a̤-lam′da̤-sizm), *n.* [Gr. *παρά*, beside, + E. *lambdacism*.] Defective pronunciation of the letter *l*, or the substitution for it of some other sound.

paralaurionite (par-a̤-lâ′ri-ọn-īt), *n.* [Gr. *παρά*, near, + NL. *Λαύριον*, Laurion, + *-ite*².] An oxychlorid of lead, PbClOH, like laurionite in composition, but monoclinic in crystallization: taken from Laurion, Greece.

paralbumin (par-al-bū′min), *n.* [*para-* + *albumin*.] A mixture of serum-albumin and pseudomucin (metalbumin) which occurs in ovarian cysts: originally thought to be a single substance.

paraldimine (par-al′di-min), *n.* [*paralde*(*hyde*) + *imine*.] Imidoparaldehyde, a mobile liquid, $C_6H_{13}NO_2$, made very indirectly from aldehyde ammonia. It boils at 140° C. Water and dilute alcohol change it into paraldehyde and ammonia.

paralexic (par-a̤-lek′sik), *a.* Relating to or affected with paralexia.

paralgesic (par-al-jē′sik), *a.* Relating to or affected with paralgesia.

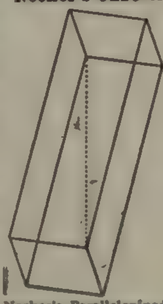
Paraliparis (par-a̤-lip′a̤-ris), *n.* [NL., < Gr. *παρά*, near, + NL. *Liparis*.] A genus of deep-sea fishes found in arctic regions and belonging to the family *Liparididæ*.

parallax, *n.*—**Binocular parallax,** the parallax of simultaneous vision with both eyes; the angle between the rays entering the right and left eye respectively when both are focused upon the same point.—**Equatorial horizontal parallax,** the diurnal or geocentric parallax of a body seen on the horizon by an observer at the earth's equator. Its measurement determines the body's distance.—**Heliocentric parallax,** the angular semidiameter of the earth's orbit as seen from a star. In no case yet found does it reach 1″. By its measurement the distance of the star is determined.—**Instrumental parallax,** the error in an angle measured on a sextant due to the fact that the horizon-glass is not on the same plane with the index-glass. It is of consequence only when the body observed is near by, and it is practically eliminated when a far-away line, such as the horizon, is employed.—**Optical parallax.** Same as *binocular* ★*parallax*.—**Parallax stereogram.** See ★*stereogram*.—**Solar parallax,** the equatorial horizontal parallax of the sun, that is, the angular semidiameter of the earth's equator as seen from the center of the sun. It is 8.80″ ± 0.02″, and determines the distance of the sun, or the *astronomical unit*, in terms of the equatorial semidiameter of the earth.—**Stellar parallax,** the heliocentric or annual parallax of a star.

parallel. I. *a.* **6.** In *archery*, having the same diameter throughout its length; cylindrical: said of an arrow.—**Parallel columns.** See ★*column*.—**Parallel iron.** See ★*iron*.—**Parallel law,** in *psychophys.*, the law, laid down by Fechner, that "if two stimuli of different intensity are applied to a sensitive organ for a certain length of time, the absolute sensations, and therefore the excitations, aroused by the stimuli are diminished by fatigue; the sensed difference, however, remains unchanged, precisely as it would, according to Weber's law, had the objective stimuli been changed in the same ratio." *E. B. Titchener*, Exper. Psychol., II. ii. xxxii.—**Parallel pencil, postulate, variation.** See ★*pencil*¹, etc.

II. *n.* **8.** In *elect.*, the connection of two or more electric circuits or pieces of apparatus such that the current divides between them, that is, that they receive or produce the same voltage but different currents. Also called *multiple*.—**Asymptotic parallels,** parallel straight lines which continually approach each other yet never meet at any finite or proper point: such are Bolyai parallels.—**Clifford parallels,** straights remaining fixed during a translation of simple elliptic space.—**Ethnographic parallels.** See ★*ethnographic*.—**Lemoine parallels** of a triangle, the parallels to its sides, through the Lemoine point.—**Limiting parallels,** in *astron.*, parallels of latitude on the earth's surface inclosing a zone outside of which a given star occultation or solar eclipse is nowhere visible.—**Ludlam's parallel postulate.** See ★*postulate*.

parallelepiped, *n.*—**Magic parallelepiped,** a generalization to three dimensions of the magic square.—**Necker's cube** or **parallelepiped,** in *exper. psychol.*, an outline drawing of a parallelepiped, with one diagonal drawn in, embodying an illusion of reversible perspective. The figure was published by Necker in 1832: the name 'cube' properly belongs to a similar figure published by Wheatstone in 1838. See ★*illusion*, 2.—**Rectangular parallelepiped,** a cuboid.



Necker's Parallelepiped.

parallelepipedoid (par-a̤-lel-e-pip′e-doid), *n.* [*parallelepiped* + *-oid*.] In *anthrop.*, a cranium the norma verticalis of which has a somewhat rectangular form. *S. Sergi* (trans.), Var. of the Human Species, p. 38.

parallelepipedous (par-a̤-lel-e-pip′e-dus), *a.* [*parallelepiped* + *-ous*.] Having the shape of a parallelepiped: a descriptive term sometimes used in entomology.

Parallelia (par-a̤-lē′li-ạ̈), *n.* [NL. (Huebner, 1816), < Gr. *παράλληλος*, parallel.] **1.** An unimportant genus of noctuid moths containing but a single American species, *P. bistriaria*, inhabiting the Atlantic States.—**2.** [*l. c.*] A moth of this genus.—**Two-lined parallelia,** an American noctuid moth, *Parallelia bistriaria*, brown in color, with each fore wing crossed by two parallel lines. Its larvæ live on maple.

parallelinervate (par-a̤-lel-i-nėr′vāt), *a.* Same as *parallelinerved*. *N. E. D.*

parallelinervous (par-a̤-lel-i-nėr′vus), *a.* Same as *parallelinerved*.

parallelism, *n.* **6.** The opinion that the relation between the brain and the mind, although it is one of concomitant variation, is not the relation of cause and effect; the opinion that mental process and brain process are parallel events, and that they do not interact. Metaphysically, parallelism may be either dualistic or monistic; in the latter case, the relation of mind and brain may be figuratively described as that of the concave and convex aspects of a circle. Psychologically, parallelism may be held to imply a special law of mental causation, or it may be content to appeal to the body for the explanation of mind without relating mental processes among themselves. Specifically called *psychophysical* ★*parallelism*, which see below.

> Acceptance of this principle of *parallelism*, as a working hypothesis in psychology, enables us to avoid all the conflicts and difficulties into which the principle of interaction plunges us. *E. B. Titchener*, Outline of Psychol., p. 364.

> The idea meant to be conveyed by the spatial figure of *parallelism* is that of the absence of causal relations, of mere concomitance.
>
> *C. A. Strong*, Why the Mind has a Body, p. 2.

7. In *evolution*, the independent development of similar species or types of animals in different regions.

> The case of the horses is often cited as suggesting that such a *parallelism* in evolution may have occurred; because the series of ancestral horses traced through the Tertiary strata of Europe is closely similar to, but not quite identical with the ancestral series found in the same order in the corresponding rocks of North America.
>
> *A. S. Woodward*, Outlines of Vertebrate Palæontology, [XXII.

Angle of parallelism. See ★*angle*³.—**Epistemological parallelism,** the opinion of some philosophers of the general following of Kant that general relations which are native forms of the understanding are at the same time dominant in the absolutely objective world, a position held by Schleiermacher, Überweg, and others. The term cannot properly be applied to a similar doctrine held by pre-Kantian writers; otherwise it must be attributed to all those before Kant who believed in innate ideas.—**Law of parallelism.** See ★*law*¹.—**Methodological parallelism.** See ★*methodological*.—**Psychophysical parallelism,** the doctrine that mental and bodily processes run their course side by side, each varying with variation of the other, but that there is no causal relation or relation of interaction between the two series of changes. Psychophysical parallelism appears in modern times both as a working hypothesis or heuristic principle within psychology and also as an ultimate metaphysical principle. It appears in both cases in a large variety of forms, but its essential features are those given above.

> The principle of *psychophysical parallelism*, then, refers always to a parallelism of elementary physical and psychical processes, and not to any parallelism of complex activities on either side or of mental function and bodily structure.
>
> *W. Wundt* (trans.), Human and Animal Psychol., p. 448.

> There must be an elementary process on the physical side, corresponding to every such process on the psychical side. This general principle is known as the principle of *psychophysical parallelism*. It has an empirico-psychological significance and is thus totally different from certain metaphysical principles that have sometimes been designated by the same name.
>
> *W. Wundt* (trans.), Outlines of Psychol., p. 318.

> The last of these [the monism of Spinoza, which reduced matter and mind to parallel attributes of the One Substance]—severed, however, from Spinoza's metaphysics—is now the prevailing theory, and to it the term *psychophysical parallelism* most properly applies.
>
> *Encyc. Brit.*, XXXII. 66.

parallelist (par′a̤-lel-ist), *n.* and *a.* **I.** *n.* An adherent of the metaphysical theory of psychophysical parallelism. See ★*parallelism*, 6. *C. A. Strong*, Why the Mind has a Body, p. 23.

II. *a.* Consonant to the doctrine of psychophysical parallelism. *C. A. Strong*, Why the Mind has a Body, p. 21.

parallelization (par-a̤-lel-i-zā′shọn), *n.* [*parallelize* + *-ation*.] The act of parallelizing or making parallel.

> It was briefly intimated . . . that combing was a method of dealing in detail with the fibres, and that its result is to effect a much greater *parallelisation* of the fibres in the carded sliver.
>
> *Nasmith*, Cotton Spinning, p. 150.

Parallelodon (par-a̤-lel′ọ-don), *n.* [NL., < Gr. *παράλληλος*, parallel, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of prionodesmacean pelecypods of the superfamily *Arcacea*. It is characterized by elongate, subquadrate, smooth or ribbed shells having an amphidetic ligament; large beaks placed well forward; 4–6 oblique anterior teeth; and 3 long posterior ridge-like teeth placed parallel to the hinge-line. The genus occurs in formations from Devonian to recent age, but is specially abundant, under its subgeneric modification *Macrodon*, in the Carboniferous. Properly *Parallelodus*.

Parallelodontidæ (par″a̤-lel-ọ-don′ti-dē), *n. pl.* [NL., < *Parallelodon*(*t-*) + *-idæ*.] A family of arciform prionodesmacean pelecypods, the shells of which have a multivincular ligament and elongated posterior teeth parallel to the hinge-line.

parallelogram, *n.*—**Heronic parallelogram,** one having rational sides, diagonals, and area.—**Newton's parallelogram,** a process for the development of a root of an algebraic equation in series.—**Parallelogram of accelerations.** See ★*acceleration*.—**Parallelogram of velocities.** See ★*velocity*.

parallelosteric (par-a̤-lel-ọ-ster′ik), *a.* [Gr. *παράλληλος*, parallel, + *στερεός*, solid.] In *phys. chem.*, exhibiting equal differences of atomic volume: said of analogous pairs of compounds. *Watts*, Dict. Chem., III. 432.

parallelosterism (par″a̤-le-los′tẹ-rizm), *n.* [Gr. *παράλληλος*, parallel, + *στερεός*, solid, + *-ism*.] In *chem.*, a term introduced by Schroeder to represent the relation assumed by him to exist between the volumes of solid compounds and their atomic composition.

paralogic, *a.* Same as *paralogical*.

paralogist (pa-ral′ọ-jist), *n.* [*paralog-ism* + *-ist*.] One who uses paralogisms; one who reasons fallaciously.

paralogistic (par″a̤-lọ̄-jis′tik), *a.* [*paralogist* + *-ic.*] Of the nature of a paralogism; fallacious; falsely reasoned.

Paralonchurus (par″a̤-long-kū′rus), *n.* [NL., < Gr. *παρά*, beside, + NL. *Lonchurus.*] A genus of fishes of the family *Sciænidæ*, found on the Pacific coast of Central and South America.

paraluminite (par-a-lū′mi-nīt), *n.* [*para-* + *aluminite.*] A hydrous aluminium sulphate, resembling aluminite and near it in composition.

paralysis, *n.*—**Ascending paralysis,** paralysis which begins in the peripheral parts and advances toward the center.—**Birth paralysis.** Same as *obstetrical paralysis.*—**Crutch paralysis,** paralysis resulting from pressure of the fork of a crutch upon the nerves in the axilla.—**Decubitus paralysis.** See ★*decubitus.*—**Diphtheritic paralysis,** paralysis which involves primarily the muscles of the throat, occurring during convalescence from diphtheria.—**Functional paralysis,** temporary paralysis seemingly not dependent upon a nerve-lesion.—**Glosso-labio-laryngeal paralysis.** Same as *chronic bulbar paralysis* (which see, under *bulbar*).—**Histrionic paralysis,** paralysis of certain of the facial muscles giving to the face a cast expressive of some emotion.—**Organic paralysis,** paralysis dependent upon actual lesion of nerve-substance.—**Pott's paralysis,** paralysis which accompanies Pott's disease, due to pressure upon the spinal cord.—**Pressure paralysis,** paralysis, usually temporary, resulting from pressure on one of the large nerve-trunks.—**Psychic paralysis.** Same as *hysterical paralysis.*—**Spinal paralysis,** paraplegia; paralysis due to a lesion of the spinal cord.

Paralytic gait. See ★*gait*[1].

paralyzant, *n.* **II.** *a.* Causing paralysis. *Buck*, Med. Handbook, I. 420.

paralyzer, *n.* **2.** In *phys. chem.*, a substance whose presence prevents or retards a chemical reaction. *Amer. Chem. Jour.*, June, 1903, p. 548.

param (par′am), *n.* [*para-* + *am*(*ide*).] Dicyandiamide, a crystalline compound, $C_2H_4N_4$, formed variously, as by evaporating an aqueous solution of cyanamide. It melts at 205° C., and is easily altered by reagents.

paramagnet (par-a̤-mag′net), *n.* [Gr. *παρά*, beside, + E. *magnet.*] A substance having paramagnetic as opposed to diamagnetic properties. [Rare.]

paramagnetic, *a.* **2.** Of higher permeability than air.

paramaleic (par″a̤-mā′lẹ̄-ik), *a.* [*para-* + *maleic.*] Related to maleic acid.—**Paramaleic acid.** Same as *fumaric acid.*

paramalic (par-a̤-mā′lik), *a.* [*para-* + *malic.*] Related to malic acid.—**Paramalic acid,** a crystalline dibasic acid, $O<\begin{matrix}CH_2-CO_2H\\CH_2-CO_2H+H_2O\end{matrix}$, made by oxidizing diethylene, or triethylene, alcohol and by boiling chloracetic acid with lime or certain other bases. It melts at 148° C.

paramandelic (par″a̤-man-del′ik), *a.* [*para-* + *mandelic.*] Same as ★*mandelic.*

paramastitis (par″a̤-mas-tī′tis), *n.* [NL., < Gr. *παρά*, beside, + *μαστός*, breast, + *-itis.*] Inflammation in the neighborhood of the breast.

Paramecina (par″a̤-mẹ̄-sī′nä̤), *n. pl.* [NL., < *Paramecium* + *-inä.*] A family of ciliate infusorians which contains the single genus *Paramecium* (which see).

parameconic (par″a̤-mẹ̄-kon′ik), *a.* [*para-* + *meconic.*] Same as ★*comenic.*

paramedian (par-a̤-mē′di-a̤n), *a.* [*para-* + *median.*] Situated on one side of, but near, the median line.—**Paramedian dorsal sulcus.** See *sulcus.*

paramelaconite (par′a̤-me-lak′ọ̄-nīt), *n.* [*para-* + *melaconite.*] An oxid of copper which occurs in black tetragonal crystals. Its exact composition is uncertain. It is found in Arizona.

paramenispermine (par″a̤-men-i-spėr′min), *n.* [*para-* + *menispermine.*] A volatile crystalline alkaloid, $C_{18}H_{24}O_2N_2$ (?), obtained from Indian berries, *Cocculus Indicus.* It dissolves in acids, but does not appear to form salts with them.

Paramera (pa-ram′ẹ-rä̤), *n. pl.* [NL.] A grade of zoantharian *Anthozoa* in which the primitive bilateral symmetry of the zoöid is retained, or at most is only partially obscured by the secondary development of mesenteries in some of the primary intermesenterial chambers. It includes the orders *Antipathidea*, *Cerianthidea*, *Zoanthidea*, *Edwardsiidea*, and *Proactiniæ*: contrasted with ★*Cryptoparamera.*

paramesial (par-a̤-mes′i-a̤l), *a.* [Gr. *παρά*, beside, + E. *mesial.*] Lying at one side of and near the median line.

parametaphysical (par″a̤-met-a̤-fiz′i-ka̤l), *a.* [*para-* + *metaphysical.*] Of the nature of false metaphysics; erroneous from the metaphysical point of view.

> Physical or paraphysical; logical or paralogical; nay even metaphysical or *parametaphysical*; nothing comes amiss to a German romancer.
>
> *Blackwood's Mag.*, XX. 853.

Parameter of a conic, the line drawn through the focus perpendicular to the major axis and terminated at both extremities by the curve. See *parameter*, 1 (*a*).

parametrium (par-a̤-mē′tri-um), *n.* [NL., < Gr. *παρά*, beside, + *μήτρα*, uterus.] Connective tissue beneath the peritoneum at the side of the uterus.

paramic (pa-ram′ik), *a.* [*param*(*ide*) + *-ic.*] Derived from paramide.—**Paramic acid,** a crystalline acid, $CO_2HC_6<\begin{matrix}(C_2O_2NH)_2\\CONH_2\end{matrix}$ (?), whose ammonium salt is formed by the action of a cold solution of ammonia on paramide.

paramide (pa-ram′id), *n.* [*para-* + *amide.*] A compound, $C_6\left(\begin{matrix}CO\\CO\end{matrix}>NH\right)_3$, made by heating ammonium mellitate. It is a powder, insoluble in water and alcohol.

paramidophenol (pa-ram″i-dọ̄-fē′nol), *n.* A crystalline, sublimable compound, C_6H_4-$(NH_2).OH$, obtained by the reduction of paranitrophenol, $C_6H_4(NO_2).OH$, with tin and hydrochloric acid, whereby the nitro group is changed to the amido group: a strong reducing agent.

paramimia (par-a̤-mim′i-ä̤), *n.* [Gr. *παρά*, beside, + *μιμία*, imitation.] In *pathol.*, want of agreement in signification between a gesture and the spoken word which it accompanies.

paramo, *n.* According to Schimper ("Plant-Geog." (trans.), p. 743), the paramos, lying in the alpine region of the equatorial Cordilleras in Colombia, Ecuador, and Venezuela, are essentially steppes, and are distinguished in character from the punas by their moisture. They begin at the limit of dwarf forest and shrub wood, are either treeless or bear isolated gnarled individuals, and are covered with a vegetation of grass and low herbs, with a peculiar taller growth of composite plants, called ★*frailejon* (which see). Compare *puna.*

paramucin (par-a̤-mū′sin), *n.* [Gr. *παρά*, beside, + L. *mucus*, mucus, + *-in*[2].] A special kind of ovarian colloid.

paramusia (par-a̤-mū′si-ä̤), *n.* [NL., < Gr. *παρά*, beside, + *μοῦσα*, muse.] Disorder of the musical sense, the power of distinguishing musical notes, or of singing correctly, being lost.

paramylum (pa-ram′i-lum), *n.* [NL., < Gr. *παρά*, beside, + *ἄμυλον*, starch.] A colorless granular carbohydrate, $(C_6H_{10}O_5)_n$, which is found in certain infusoria, as *Euglena viridis.* It is related to starch (whence the name), but is not acted on by diastase or turned blue by iodine.

paramyosinogen (par″a̤-mī-ọ̄-sin′ọ̄-jen), *n.* [*para-* + *myosin* + *-gen.*] Same as *myosin.*

paramyotone (par-a̤-mī′ọ̄-tōn), *n.* [*paramyotonus.*] A condition marked by paramyotonus.

paramyotonia (par″a̤-mī-ọ̄-tō′ni-ä̤), *n.* [NL., < Gr. *παρά*, beside, + *μῦς* (*μυ-*), muscle, + *τόνος*, tension.] A condition marked by tonic muscular spasm.—**Paramyotonia congenita,** a disease resembling in its general features Thomsen's disease.

paramyotonus (par-a̤-mī-ot′ọ̄-nus), *n.* [See ★*paramyotonia.*] A tendency to tonic muscular spasm.

paranal (par-ā′na̤l), *a.* [Gr. *παρά*, beside, + L. *anus*, anus.] About or beside the anus: as, the *paranal* pores of certain scale-insects.—**Paranal lobes.** See ★*lobe.*

paranaphthalene, paranaphthalin (par-a̤-naf′tha̤-lēn, -lin), *n.* [*para-* + *naphthalene.*] Same as *anthracene.*

paranasty (par′a̤-nas-ti), *n.* [Gr. *παρά*, beside, + *ναστός*, close-pressed, solid, + *-y*[3].] In *bot.*, accelerated growth, due to a diffused stimulus, on the side of a dorsiventral organ, inducing lateral curvature. *Pfeffer* (trans.), Physiol. of Plants, II. 73.

paranatellon (pa̤-ran-a̤-tel′on), *n.* [NL., < Gr. *παρανατέλλων*, ppr. of *παρανατέλλειν*, rise beside, < *παρά*, beside, + *ἀνάτελλειν*, rise.] A star which rises at the same time as another star or object.

paranephric (par-a-nef′rik), *a.* [Gr. *παρά*, beside, + *νεφρός*, kidney, + *-ic.*] **1.** Situated near or surrounding the kidney.—**2.** Relating to the suprarenal capsule.

paranephritic (par-a̤-nef-rit′ik), *a.* [*paranephritis* (*t-*) + *-ic.*] Pertaining to or affected with paranephritis.

paranepionic (par-a̤-nep-i-on′ik), *a.* [*para-* + *nepionic.*] Of or pertaining to the close of the larval or young stage of an organism, immediately preceding the neanic, or adolescent, stage. *Hyatt.*

paranesthesia (par″an-es-thē̆′si-ạ̈), *n.* Same as *para-anæsthesia.*

parangi (pa-räng′gē), *n.* [Cingalese?] A skin-disease of Ceylon, supposed to be the same as frambœsia or yaws.

> Jonathan Hutchinson, during his visit to the East, describes cases of *parangi* which he observed in Ceylon. He is of opinion that these cases of *parangi* are yaws, or frambœsia tropica, and he maintains that the signs and symptoms of the patients he examined confirm him in the opinion that they are merely manifestations of syphilis. *Jour. Trop. Med.*, March 16, 1903, p. 100.

paraniline (pa-ran′i-lin), *n.* [*para-* + *aniline.*] A crystalline base, $C_{12}H_{14}N_2$, found in the high-boiling residues in the preparation of aniline. It melts at 192° C. and boils at above 330° C.

paranite (pa-rä′nīt), *n.* [*Pará*, a city in Brazil, whence rubber is exported, + *-n-* + *-ite*[2].] The trade-name of a rubber-covered insulated wire.

paranitraniline (par″a̤-nī-tran′i-lin), *n.* [*para-* + *nitro-* + *aniline.*] Nitroaminobenzene in which the nitro and amino groups hold the para position in the benzene ring. It is extensively used in textile coloring, particularly in the production of para red.—**Paranitraniline red.** See ★*red*[1].

paranitrosophenol (par″a̤-nī-trō″sọ̄-fē′nol), *n.* Same as ★*quinone monoxime.*

parankerite (pa-rang′kėr-īt), *n.* [*para-* + *ankerite.*] A name given by Boricky to a variety of ankerite having a composition expressed by the formula $CaFeC_2O_6$ + *n*-$(CaMgC_2O_6)$, where *n* is equal to 2 (in normal parankerite) or some greater number.

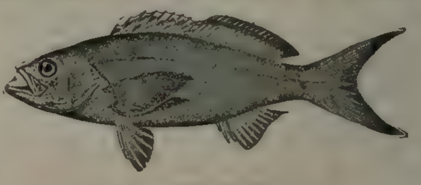
paranœac, *n.* **II.** *a.* Pertaining to or affected with paranœa.

paranœal, paranoial (par-a̤-nē′a̤l, -noi′a̤l), *a.* Same as ★*paranœac.*

paranoid[1] (par′a̤-noid), *a.* [*paran*(*œa*) + *-oid.*] Resembling paranœa.

paranoid[2] (par′a̤-noid), *n.* [*paran*(*ite*) + *-oid.*] The trade-name for a plastic material which resembles celluloid, used for dominoes, poker chips, etc.

Paranthias (pa-ran′thi-as), *n.* [NL., < Gr. *παρά*, beside, + NL. *Anthias.*] A genus of serranoid fishes, found in deep waters on both coasts of tropical America.



Paranthias furcifer.
(From Bulletin 47, U. S. Nat. Museum.

paranthracene (pa-ran′thra̤-sēn), *n.* [*para-* + *anthracene.*] A white, crystalline, polymeric anthracene, $(C_{14}H_{10})_2$, which crystallizes from a saturated solution of anthracene in xylene when exposed to sunlight. Other solvents, as benzene or alcohol, can be used. It melts at 244° C., and is much more stable than anthracene.

paranucleic (par-a̤-nụ̄-klē′ik), *a.* [*paranucle*(*in*) + *-ic.*] Of or pertaining to paranuclein; specifically, noting an acid of unknown composition which combines with proteid to form paranuclein.

paranuclein (par-a̤-nū′klẹ̄-in), *n.* [*para-* + *nucleus* + *-in*[2].] **1.** A phosphorized complex which is split off and thrown down at a certain stage in the process of digesting nucleoalbumins with pepsin and hydrochloric acid. It subsequently becomes dissolved. Chittenden's dyspeptone, obtained from casein, is probably a paranuclein. Unlike the true nucleins the paranucleins do not yield xanthin bases on decomposition. Also called *pseudonuclein.*—**2.** In *cytol.*, the pyrenin of Schwarz; the substance of plasmosomes, or true nucleoli: said to consist of compounds of albumin and paranucleic acid. *O. Hertwig*, 1878.

paranucleinic (par-a̤-nū-klẹ̄-in′ik), *a.* Noting an acid radical which is apparently contained in the paranucleins: analogous to the presence of a nucleinic acid complex in the nucleoproteids. Such acids have been obtained from casein and from the yolk of eggs.

paranucleo-albumin (par-a̤-nū″klẹ̄-ọ̄-al-bū′min), *n.* A compound of paranuclein with proteid. The most common are the caseins and vitellins.

parao[1] (pä-rä′ọ̄), *n.* [Sp., ‹ Malay *prāhu*: see *proa.*] A native boat of about 40 tons or less. [Philippine Is.]

parao[2] (pä-rä′ō), *n.* [Tahitian name. See ★*pago.*] In Tahiti, *Pariti tiliaceum*, a tree belonging to the mallow family, which supplies the natives with timber for their boats, outriggers for their canoes, sidings for their dwellings, and a very strong and valuable rope, twisted from the inner bark of its branches. The latter are divested of their leaves, cut into suitable lengths, and soaked in water for a week or ten days. The outer bark is then easily stripped off, leaving the layer of fibrous bast beneath it, which is dried and twisted into cordage. Also called *parau.* See ★*pago*, ★*balibago*, *corkwood*, and *mahoe*, 1.

Parapaguridæ (par″a̤-pā̤-gū′ri-dē), *n. pl.* [NL., ‹ *Parapagurus* + *-idæ.*] A family of deep-sea crustaceans having the characteristics of the *Paguridæ*, except that the branchial plumes are filamentous. It includes about six genera, among them being *Parapagurus*, *Paguropsis*, and *Pylocheles.*

Parapagurus (par″a̤-pā̤-gū′rus), *n.* [NL.] The typical genus of the family *Parapaguridæ. P. pilosimanus* occurs at various depths in the Atlantic. *S. I. Smith*, 1879.

parapathia (par-a̤-path′i-ä̤), *n.* [Gr. παρά, beside, + πάθος, disease.] Moral insanity.

parapathy (par-ap′a̤-thi), *n.* Same as ★*parapathia.*

parapectic (par-a̤-pek′tik), *a.* [*para-* + *pectic.*] Noting an amorphous acid, $C_{24}H_{34}O_{23}$, made by boiling pectic acid or its salts for a long time with water.

parapectin (par-a̤-pek′tin), *n.* [*para-* + *pectin.*] An amorphous compound, $C_{32}H_{48}O_{32}$, formed by boiling pectin a long time with water. It acts in all respects like pectin, except that it is precipitated by lead acetate.

parapedesis (par″a̤-pe-dē′sis), *n.* [NL., ‹ Gr. παρά, beside, + πέδησις, a bending.] The giving off of a secretion into the wrong channel, as when the liver cells (hypothetically) secrete bile into the blood-vessels, instead of into the bile-ducts.

paraperiodate (par-a̤-pē′ri-ọ̄-dāt), *n.* [*para-* + *periodate.*] A salt of periodic acid having the composition M_5IO_6, a monad metal being represented by M.

paraperitoneal (par″a̤-per″i-tọ̄-nē′al), *a.* [*para-* + *peritone(um)* + *-al*[1].] Situated near the peritoneum.

Parapetalifera (par-a̤-pet-a̤-lif′ẹ-rä̤), *n.* [NL. (Wendland, 1808), ‹ Gr. παρά, beside, + πέταλον, petal, + L. *ferre* (*fer-*) (Gr. φέρειν), bear. The allusion is to the presence of staminodia.] A genus of heath-like heavy-scented shrubs of the family *Rutaceæ.* See *Barosma* and *buchu.*

parapetalum (par-a̤-pet′a̤-lum), *n.*; pl. *parapetala* (-lä̤). [Gr. παρά, beside, + πέταλον, leaf, petal.] Any appendage to a corolla, consisting of several pieces. *Moench.*

paraphase (par′a̤-fāz), *n.* [Gr. παρά, alongside, + φάσις, phase.] One of similar correlated phases of development in the growth stages of allied species of a single genus or race.

paraphasic (par-a̤-fā′zik), *a.* [*paraphas(ia)* + *-ic.*] Relating to or affected by paraphasia. *Buck*, Med. Handbook, I. 410.

paraphenetidin (par″a̤-fẹ̄-net′i-din), *n.* [*para-* + *phenetidin.*] A para-amidophenol derivative, for example para-acetophenetidin, which is popularly known as *phenacetin*, C_6H_4-$(O.C_2H_5).(NH.C_2H_3O)$.

paraphenylene (par-a̤-fē′ni-lēn), *n.* [*para-* + *phenylene.*] An organic radical derived from benzene by the removal of two hydrogen atoms that are located in the para position. It has a valence of two and the composition $(C_6H_4 =)$.—**Paraphenylene blue.** See ★*blue.*

paraphonic (par-a̤-fon′ik), *a.* [*paraphon(y)* + *-ic.*] In *anc. Gr. music*, of or pertaining to the intervals of the fourth and fifth: opposed to ★*antiphonic*, 2.

paraphony (pa-raf′ọ̄-ni), *n.* Same as *paraphonia.*

paraphosphate (par-a̤-fos′fāt), *n.* [*para-* + *phosphate.*] Same as *pyrophosphate.*

paraphosphoric (par″a̤-fos-for′ik), *a.* Same as *pyrophosphoric.*

paraphrasable (par′a̤-frā″za̤-bl), *a.* [*paraphrase, v.*, + *-able.*] That can be paraphrased: as, the *paraphrasable* psalms.

paraphrasia (par-a̤-frā′ziä̤), *n.* [NL., ‹ Gr. παρά, beside, + φράσις, phrase.] In *pathol.*, incoherence in speech.

paraphrenia (par-a̤-frē′ni-ä̤), *n.* [NL., ‹ Gr. παρά, beside, + φρήν, mind.] In *pathol.*, disorder of the mind.

paraphrenitis (par″a̤-frẹ̄-nī′tis), *n.* [NL., ‹ Gr. παρά, beside, + φρήν, diaphragm, + *-itis.*] **1.** Inflammation of the diaphragm and contiguous structures.—**2.** [Gr. φρήν, mind.] Delirium.

paraphronesis (par″a̤-frọ̄-nē′sis), *n.* [NL., ‹ Gr. παραφρόνησις, wandering of mind, ‹ παραφρονεῖν, be beside oneself.] Same as ★*paracope.*

paraphrosyne (par-a-froz′i-nē), *n.* [NL., ‹ Gr. παραφροσύνη, wandering of mind.] Same as ★*paracope.*

Paraphthalic acid. Same as ★*terephthalic acid.*

paraphysical (par-a̤-fiz′i-ka̤l), *a.* [Gr. παρά, beside, + E. *physical.*] Aside from or subsidiary to what is physical. [Rare.]

paraphysis, *n.* **2.** An outgrowth of the roof of the fore-brain, developed in front of the epiphysis, in the hinder region of the prosencephalon.

parapicoline (par-a̤-pik′ọ̄-lin), *n.* [*para-* + *picoline.*] A polymeric form of *a*-picoline, $(C_5H_4N.CH_3)_x$, made by allowing it to stand a long time in contact with sodium.

parapineal (par″a-pin′ẹ̄-a̤l), *a.* [Gr. παρά, beside, + E. *pineal.*] Beside or near the pineal.—**Parapineal eye.** See ★*eye*[1].

paraplasis (pa-rap′lā̤-sis), *n.* [NL. formally ‹ Gr. παράπλασις, transformation, ‹ παραπλάσσειν, transform, ‹ παρά, beside, + πλάσσειν, form.] Catagenesis. [Rare.]

paraplasm, *n.* **2.** The non-vital contents of living protoplasm, such as yolk-granules, oil-drops, etc. [Rare.] See ★*metaplasm*[2], 2.

paraplasmic (par-a̤-plaz′mik), *a.* [*paraplasm* + *-ic.*] Of or pertaining to paraplasm. *C. S. Minot*, in Science, March 29, 1901, p. 491.

Paraplectic weevil. See ★*weevil.*

paraplegia, *n.*—**Pott's paraplegia,** a form of pressure paralysis occurring in Pott's disease.—**Reflex paraplegia,** paralysis of the lower extremities, caused by some peripheral irritation acting upon the nerve-centers, the latter, as well as the affected muscles, being themselves healthy, in the beginning of the trouble, at least.

parapleuritis (par″a̤-plọ̄-rī′tis), *n.* [NL., ‹ Gr. παρά, beside, + πλευρά, side, + *-itis.*] **1.** Pleurisy of slight extent.—**2.** Same as *pleurodynia.*

paraplexia (par-a̤-plek′si-ä̤), *n.* [NL., ‹ Gr. παραπληξία, ‹ παρά, beside, + πλῆξις, stroke.] Same as *paraplegia.*

paraplexus (par-a̤-plek′sus), *n.* [NL., ‹ *para-* + *plexus.*] Same as *choroid plexus. Buck*, Med. Handbook, II. 139.

parapodal (par-a̤-pō′da̤l), *a.* Same as *parapodial.*

Parapodial groove. See ★*groove.*

parapodiate (par-a̤-pō′di-āt), *a.* [NL. *parapodi(um)* + *-ate*[2].] Bearing parapodia; relating to or characteristic of the *Parapodiata.*

parapodium, *n.* **3.** In gastropods, a fin-like expansion of the foot; an epipodium.

parapophysis, *n.* **2.** In fishes, a transverse process of the abdominal vertebræ. These processes usually bear ribs.

parapraxia (par-a̤-prak′si-ä̤), *n.* [Gr. παρά, beside, + πρᾶξις, doing.] In *pathol.*, irrational conduct.

paraproctitis (par″a-prok-tī′tis), *n.* [NL., ‹ Gr. παρά, beside, + πρωκτός, anus, + *-itis.*] Inflammation of the loose connective tissue around the rectum, usually resulting in the formation of an abscess.

paraprotaspis (par″a̤-prọ̄-tas′pis), *n.* [NL., ‹ *para-* + *protaspis.*] The latest substage of the protaspis stage in the ontogeny of the trilobite. See ★*protaspis.*

Parapsettus (par-ap-set′us), *n.* [NL., ‹ Gr. παρά, beside, near, + NL. *Psettus* (‹ Gr. ψῆττα, flounder).] A genus of fishes of the family *Ephippiidæ*, found about Panama.

parapycnomorphous (par-a̤-pik-nọ̄-môr′fus), *a.* [Gr. παρα, beside, + πυκνός, thick, + μορφή, form, + *-ous.*] Staining moderately well, but not intensely: noting certain cells in histological preparations.

parapyramidal (par-a̤-pi-ram′i-dal), *a.* [Gr. παρα, beside, + E. *pyramidal.*] To one side of, or near, a pyramid.—**Parapyramidal sulcus.** See *sulcus.*

pararabin (pa-rar′a̤-bin), *n.* [*para-* + *arabin.*] An amorphous powder, $C_{12}H_{22}O_{11}$ (?), found in sugar-beets and carrots, and apparently also in agar-agar. It forms a gelatinous mass with water.

pararachidial (par″a̤-rā̤-kid′i-a̤l), *a.* [*pararachis* (*-id-*) + *i-* + *-al*[1].] Relating or pertaining to the pararachides: as, the *pararachidial* zoöids of a sea-pen.

pararachis (par-a̤-rā′kis), *n.*; pl. *pararachides* (-ki-dēz). [Gr. παρά, near, beside, + ῥάχις, the spine.] In some anthozoans, as the sea-pens, the lateral surface of the rachis of bilaterally symmetrical forms. Compare ★*metarachis* and ★*prorachis.*

parareducin (par″a̤-rẹ̄-dū′sin), *n.* [*para-* + *reducin* (?).] A ptomaïne which has been found in the urine.

pararhotacism (par-a̤-rō′ta̤-sizm), *n.* [*para-* + *rhotacism.*] Defective pronunciation of the letter *r* or the substitution for it of some other sound.

parasacral (par-a̤-sā′kra̤l), *a.* [Gr. παρά, near, + NL. *sacrum* + *-al*[1].] Situated near the sacrum.

parasagittal (par-a̤-saj′i-ta̤l), *a.* [Gr. παρά, near, + E. *sagittal.*] Parallel with and to one side of the median plane: as, a *parasagittal* section of an embryo.

parasalicyl (par-a̤-sal′i-sil), *n.* [*para-* + *salicyl(ic).*] A crystalline condensation-product of salicylic aldehyde, $C_{14}H_{10}O_3$, made by the dry distillation of cuprous salicylate, or by the action of certain acid chlorids, etc., on salicylic aldehyde. It melts at 128–130° C.

Parascorpis (par-a̤-skôr′pis), *n.* [NL., ‹ *para-* + NL. *Scorpis.*] A genus of serranoid fishes living off the South African coast.

paraseptal (par-a̤-sep′ta̤l), *a.* [Gr. παρά, beside, + E. *septal.*] Near by or parallel with the nasal septum: as, the *paraseptal* cartilages of monotremes and lizards.

parasha (pa-rä′shä̤), *n.*; pl. *parashioth* (-shi-ōt). [Heb., ‹ *parash*, separate.] A section; specially applied to the subdivisions or weekly portions of the Pentateuch which are read in the synagogue on the Sabbath. See ★*sedra.*

parasigmatism (par-a̤-sig′ma̤-tizm), *n.* [*para-* + *sigmatism.*] Defective pronunciation of the letter *s*, or the substitution for it of some other sound.

parasitaster (par″a̤-si-tas′tėr), *n.* [L. *parasitaster*, ‹ *parasitus*, parasite, + dim. *-aster.*] An insignificant parasite.

> *Parasitaster*, Or The Fawne, As It Hath Bene Divers times presented at the blacke Friars by the Children of the Queenes Maiesties Revels. Written by Iohn Marston. (Title of play, 1606.) *Marston.*

parasite, *n.*—**Accidental parasite,** an organism which is usually free-living, and only occasionally parasitic on or in another organism.—**Beaver parasite.** See ★*beaver* 1.—**Estivo-autumnal parasite,** a variety of the malarial organism characterized by the formation of crescentic bodies during the sexual type of its reproduction, the cause of the common type of malarial fever which prevails during the late summer and fall months, especially in subtropical and tropical regions.—**Obligatory parasite,** a parasite that is compelled to live in or upon a living body. As most parasitic bacteria, as well as some parasites belonging to other groups of organisms, for example protozoans, have been grown artificially outside the bodies of their natural hosts, the distinction between obligatory and facultative parasites and saprophytes is difficult, if not impossible to maintain. Also called *obligate* and *obligative parasite.*—**Tertian malarial parasite,** a variety of the malarial parasite which is recognized as the cause of the common form of tertian malarial fever. Double infection with the same organism will produce the quotidian form of ague. See ★*malaria.*—**Tropical malarial parasite.** Same as *estivo-autumnal* ★*parasite.*—**Wound parasite,** an organism which can only act as a parasite when gaining entrance to the host through a wound, as in the case of many fungi that produce decay in trees.

parasitic, *a.* **4.** In *ornith.*, applied to birds which place their eggs in the nests of other birds.

> A group of *parasitic* birds which place their eggs in the nests of other species and leave their young to be brought up by the foster-parents.
> *Guide to the Gall. of Birds*, Brit. Mus., p. 199.

5. Having the characters of the *Parasitica.*—**Parasitic cone.** See ★*cone.*—**Parasitic theory of disease.** Same as *germ theory.*

parasitism, *n.*—**Social parasitism,** parasitism between societies of organisms considered as units or individuals of a higher order, as, for example, the parasitism of the criminal class on human society in general, or of one colony of ants on a colony of a different species.

Parasol acacia, skirt. See ★*acacia*, ★*skirt*[1].

parasol-fern (par′a̤-sol-fėrn″), *n.* Same as *coral-★fern.*

parasoma (par-a̤-sō′mä̤), *n.*; pl. *parasomata* (-ma̤-tä̤). [NL., < Gr. *παρα*, beside, + *σῶμα*, body.] In *cytol.*, a paranucleus.

parasorbic (par-a̤-sôr′bik), *a.* [*para-* + *sorbic.*] Isomeric with sorbic acid.—**Parasorbic acid**, an unsaturated lactone acid, $C_6H_8O_2$, found in unripe mountain-ash berries, *Sorbus aucuparia.* It boils at 221° C. and is a strong emetic.

paraspermatozoid (par″a̤-spėr″ma̤-tọ-zō′id), *n.* [*para-* + *spermatozoid.*] A (hypothetical) somatic cell of a female organism, that is, one that produces ova as germ-cells. *Nature*, Sept. 4, 1902, p. 437.

parastata (pa-ras′ta̤-tä̤), *n.* [Gr. *παραστάτης*, in pl. *παραστάται*, the testicles.] Same as *prostate.*—**Parastata adenoides** or **glandula.** Same as *epididymis* or as *Fallopian tube.*

parastatic (par-a̤-stat′ik), *a.* [Gr. *παραστατικός*, presentative, commemorative, manifesting, arousing, < *παριστάναι*, place before the mind, set up, present.] Relating to the mimicry of one species by another in the same general locality or faunal region, as in many insects of different orders.

parasternum (par-a̤-stėr′num), *n.*; pl. *parasterna* (-nä̤). [Gr. *παρά*, beside, + L. *sternum.*] The abdominal ribs considered collectively; the arrangement of slender bones, running along the ventral side of many reptiles from the sternum to the pelvis: found in crocodiles and *Hatteria*, and in many extinct forms.

parastremma (par-a̤-strem′ä̤), *n.* [Gr. *παρά*, beside, + *στρέμμα*, a wrench, strain.] A convulsive contraction of the muscles of the face.

parastyle (par′a̤-stīl), *n.* [Gr. *παρά*, near, + *στῦλος*, style.] **1.** The antero-external rib present on the upper molar teeth of many ungulate mammals.—**2.** The enamel-covered fold, buttress, or pillar at the anterior external angle of an upper molar tooth: typically present in the tooth of a horse. See cut under ★*tooth*, 1.—**3.** In *bot.*, a rudimentary or abortive style: used chiefly in connection with trimorphic plants. Compare ★*mesostyle* and ★*metastyle.*

parasynetic (par″a̤-si-net′ik), *a.* [*parasynesis* (*-et-*) + *-ic.*] Arising from, or of the nature of, parasynesis.

Such *parasynetic* forms as sparrer-grass for asparagus, due to misunderstanding or misconception of a word, are common enough in Negro; but the African, from the absence of books and teaching, had no principle of analepsy in his intellectual furnishing by which a word, once become obscure from a real or supposed loss of parts or meaning, can be repaired, amended, or restored to its original form.
Proc. Amer. Philol. Ass'n, July, 1885, p. xxxii.

parasyphilis (par-a̤-sif′i-lis), *n.* [NL., < *para-* + *syphilis.*] A morbid condition supposed to result from syphilis, but not marked by the ordinary symptoms of this disease. *Buck*, Med. Handbook, II. 428.

parasyphilitic, *a.* **2.** Of the nature of parasyphilis.

That they are *parasyphilitic* or quaternary manifestations and are seldom amenable to treatment as usually exhibited. *Med. Record*, Dec. 21, 1907, p. 1037.

parasyphilosis (par-a̤-sif-i-lō′sis), *n.* [*parasyphil*(*is*) + *-osis.*] A parasyphilitic disease, such as general paralysis is said to be.

parasystole (par-a̤-sis′tọ-lẹ̄), *n.* [Gr. *παρά*, beside, + *συστολή*, systole.] The period of time intervening between the systole and diastole of the heart.

paratacamite (par-a̤-tak′a̤-mīt), *n.* [*para-* + *atacamite.*] An oxychlorid of copper having the same percentage composition as atacamite, but losing its water at a higher temperature. It occurs in pseudorhombohedral crystals, and is found at Sierra Gorda, Chile.

paratactic, *a.* **2.** Arranged without any logical connection, as in disconnected literary or artistic composition. A frieze made up of independent and separate subjects may be said to be *paratactic.*

The pursuit of Troilos again, as analysed by Schneider, suggests by its '*paratactic*' composition a Peloponnesian origin. *H. S. Jones*, in Jour. Hellenic Studies, XIV. 50.

parataloid (pa-rat′a̤-loid), *n.* [Origin uncertain.] Same as *Koch's* ★*lymph* or *tuberculin*, 1. Also *paratoloid.*

paratangential (par-a̤-tan-jen′sha̤l), *a.* Near to being tangent.

Outer surface provided with small conical papillæ, from which bundles of pentact pleuralia project radially, the *paratangential* rays of the spicules forming a veil about 1·5 centim. from the surface.
Annals and Mag. Nat. Hist., May, 1901, p. 458.

paratartaric, *a.* **2.** Same as ★*racemic*, 2.

paratartramide (par-a̤-tär-tram′id), *n.* [*para-* + *tartramide.*] Same as ★*racemamide.*

paraterminal (par-a̤-tėr′mi-na̤l), *a.* [Gr. *παρά*, beside, + E. *terminal.*] Noting those bodies which form the inner or mesal walls of the anterior portion of the lateral ventricles. They are well-developed in the reptilian and amphibian brains, and are connected across the median line by the lamina terminalis.

Paratheliaceæ (par-a̤-thē-li-ā′sẹ-ē), *n. pl.* [NL., < *Parathelium* + *-aceæ.*] A family of pyrenocarpous, crustaceous lichens, so named from the genus *Parathelium.*

Parathelium (par-a̤-thē′li-um), *n.* [NL. (Nylander), < Gr. *παρά*, beside, + *θηλή*, nipple, in allusion to the lateral ostiole.] A genus of pyrenocarpous, crustaceous lichens having perithecia with lateral ostioles. The spores are 4- to 10-celled and brown. The species are tropical, and occur on the bark of trees.

Paratheria (par-a̤-thē′ri-ä̤), *n. pl.* [NL., < Gr. *παρά*, beside, + *θηρίον*, beast.] A name proposed by Oldfield Thomas for the edentate mammals, on the ground that they constitute a group of equal value to the *Prototheria*, *Metatheria*, and *Eutheria.* [Rare.]

paratherian (par-a̤-thē′ri-a̤n), *a.* [NL. *Paratheri*(*a*) + *-an.*] Relating to or characteristic of the *Paratheria*, or edentates considered as a subclass of mammals. *Philos. Trans. Roy. Soc.* (London), 1887, ser. B, p. 462.

parathermic (par-a̤-thėr′mik), *a.* [Gr. *παρά*, beside, + E. *thermic.*] Noting invisible rays supposed by Herschel to exist in the red and orange regions of the spectrum, to which he ascribed certain chemical effects now recognized as due to the visible rays of the wave-lengths in question.

parathyroid (par-a̤-thī′roid), *a.* and *n.* [Gr. *παρά*, beside, + E. *thyroid.*] **I.** *a.* Lying in the vicinity of the thyroid; specifically, noting several small masses of glandular tissue similar in appearance, but not in function, to the thyroid gland and situated in close proximity to it.

It has been suggested that paralysis agitans is due to insufficiency of the *parathyroid* glandules.
Jour. Med. Research, Dec., 1906, p. 399.

II. *n.* One of the parathyroid glands. *Lancet*, April 4, 1903, p. 939.—**Parathyroid body,** a ductless gland which arises in the vertebrate embryo on each side of the thyroid gland.

parathyroidal (par-a̤-thī′roi-da̤l), *a.* [*parathyroid* + *-al*¹.] Relating to a parathyroid gland. *Lancet*, April 4, 1903, p. 939.

parathyroidectomize (par″a̤-thī-roi-dek′tọ-mīz), *v. t.*; pret. and pp. *parathyroidectomized*, ppr. *parathyroidectomizing.* [*parathyroidectomy* + *-ize.*] To remove the parathyroid glands from.

The action of this proteid on dying *parathyroidectomized* dogs was marvelous.
Med. Record, Nov. 9, 1907, p. 795.

parathyroidectomy (par-a̤-thī-roi-dek′tọ-mi), *n.* [*parathyroid* + Gr. *ἐκτομή*, excision.] Excision of the parathyroid glands.

He emphasizes the tetanic symptoms that arise in animals after *parathyroidectomy.*
Jour. Med. Research, Dec., 1906, p. 412.

paratoluidine (par″a̤-tọ-lū′i-din), *n.* [*para-* + *toluidine.*] Para-aminotoluene, $C_6H_4(NH_2)$-CH_3, a crystalline compound made by reducing paranitrotoluene. It melts at 45° C. See ★*toluidine.*

paratolyl (par-a̤-tol′il), *n.* See ★*tolyl.*

paratonic, *a.* **2.** Due to the influence of an external stimulus, such as light, gravity, or humidity: thus used by Strassburger in the phrase *paratonic movements*, opposed by him to *autonomic movements.*

paratransversan (par″a̤-trȧns-vėr′sa̤n), *a.* [Gr. *παρά*, beside, + E. *transversan.*] Lying parallel to the transversan plane of a diatom frustule. *O. Müller.*

paratreme (par′a̤-trēm), *n.* [Gr. *παρά*, beside, + *τρῆμα*, hole.] An irregular sclerite in the prothorax of dipterous insects bound above and internally by the præscutum and the prophragma, below by the extremity of the prodorsal arch, and externally by the spiracle.

paratripsis (par-a̤-trip′sis), *n.* [Gr. *παρά*, beside, against, + *τρῖψις*, rubbing.] **1.** Rubbing; friction; chafing.—**2.** The prevention of waste of the tissues of the body.

paratriptic (par-a̤-trip′tik), *a.* and *n.* [*paratripsis* (*-tript-*) + *-ic.*] **I.** *a.* **1.** Relating to or producing chafing.—**2.** Retarding waste of the tissues of the body.

II. *n.* Any substance which tends to prevent or retard waste of the tissues of the body.

Tea, coffee, and tobacco come under the heading to which scientific men have given the name of *Paratriptics.* The demand for them is based upon their power to prevent waste in the body, so that by their help and stimulus men can do more work and endure more privation with a smaller amount of actual food. Tea, coffee, and tobacco are not food, although temporarily and continuously they supplement it. The physiologist Moleschott calls them the "savings-banks" of the tissues.
T. Child, Delicate Feasting, xii.

paratrium (pa-rā′tri-um), *n.*; pl. *paratria* (-ä̤). [Gr. *παρά*, beside, + L. *atrium.*] In certain annelids, a diverticulum of the atrium.

paratroch (par′a̤-trok), *n.* [Gr. *παρά*, beside, + E. *troch*(*ophore*).] A band of locomotor cilia surrounding certain annelid trochophores behind and in addition to the prototroch.—**Perianal paratroch.** Same as ★*perianal circlet.*

paratrophia (par-a̤-trō′fi-ä̤), *n.* Same as ★*paratrophy.*

paratrophic (par-a̤-trof′ik), *a.* [Gr. *παρά*, beside, + *τροφή*, nourishment, + *-ic.*] **1.** Of or pertaining to, or exhibiting, paratrophy.—**2.** Existing only as a parasite within the living tissues of other organisms: a term used by A. Fischer to designate a group of bacteria which he believed to possess such requirements. Compare ★*prototrophic* and ★*metatrophic.*

paratrophy (pa-rat′rọ-fi), *n.* [Gr. *παρά*, beside, + *τροφή*, nourishment, + *-y*³.] Abnormal or misdirected nutrition.

paratuberculosis (par″a̤-tṳ̄-bėr″kṳ̄-lō′sis), *n.* [NL., < *para-* + *tuberculosis.*] An affection due seemingly to the toxins of tuberculosis but in which the living bacillus cannot be found.

paratuberculous (par″a̤-tṳ̄-bėr′kṳ̄-lus), *a.* [*paratubercul*(*osis*) + *-ous.*] Relating to or affected with paratuberculosis.

paratungstate (par-a̤-tung′stāt), *n.* [*para-* + *tungstate.*] A salt of paratungstic acid. Sodium paratungstate, known in commerce as *tungstate of soda*, is used in mordanting cloth by dyers and calico-printers, and in rendering cotton and linen goods uninflammable.

paratungstic (par-a̤-tung′stik), *a.* [*para-* + *tungstic.*] In *chem.*, noting a hypothetical acid having the composition $H_{10}W_{12}O_{41}$, which is not itself known, but of which the corresponding sodium salt (when crystallized, $Na_{10}W_{12}O_{41}.(H_2O)_{28}$) is the tungstate of soda of commerce.

paratype (par′a-tīp), *n.* [Gr. *παρά*, beside, + *τύπος*, type.] In *zoöl.*, a specimen of the original series from which a single specimen, or *holotype*, has been selected as the type of a species. In forming part of the original series of specimens it may differ from a topotype, which is a specimen from the same locality, or same locality and horizon, and may be collected at any time subsequent to the description of the species.

paratyphoid (par-a̤-tī′foid), *a.* and *n.* [Gr. *παρά*, near, + E. *typhoid.*] **I.** *a.* Noting a fever resembling typhoid fever in its general features, but usually following a mild course, and distinguished from typhoid fever by absence of the Widal reaction.

Bacteriologic study of the blood in thirty cases of clinical typhoid fever, two of which proved to be *paratyphoid* and one doubtful. *Med. Record*, May 9, 1903, p. 739.

Paratyphoid bacillus, a micro-organism believed to be the cause of paratyphoid fever.—**Paratyphoid fever,** a disease resembling, in its course and general symptoms, typhoid fever, but caused by the presence of the paratyphoid bacillus which is distinct from the micro-organism of typhoid.

II. *n.* Paratyphoid fever.

It is desirable in the investigation of suspected colonies by means of agglutination to employ the so-called 'end-dilution' (*Wassermann*). If there is suspicion of *paratyphoid* (or dysentery) the agglutination of the colonies in question must be investigated with the specific serum of this disease.
Jour. Roy. Micros. Soc., June, 1904, p. 369.

paratypic (par-a̤-tip′ik), *a.* [Gr. *παρά*, beside, + *τύπος*, type, + *-ic.*] Not conforming strictly to the type.

paratypical (par-a̤-tip′i-ka̤l), *a.* Same as ★*paratypic.* *Buck*, Med. Handbook, V. 508.

para-uterine (par-a̤-ū′tẹ-rin), *a.* [*para-* + *uterine.*] Situated in the immediate neighborhood of the uterus.

A large number of the *parauterine* cysts, as well as papillomatous cysts of the hilum, parovarian cysts of the broad ligaments, have their origin in these unobliterated ducts and the remains of the Wolffian bodies.
Med. Record, Oct. 19, 1907, p. 647.

paravaginal (par-a̤-vaj′i-na̤l), *a.* [*para-* + *vaginal.*] Situated in the immediate neighborhood of the vagina.

paravaginitis (par-a̤-vag-i-nī′tis), *n.* [Gr. *παρά*, beside, + E. *vaginitis.*] Same as *paracolpitis.*

paravent (par-a̤-voṅ′), *n.* [F. *paravent*, < It. *paravento*, < *parare*, prevent, ward off, + *vento*, wind.] A wind-screen; a shelter from wind.

> The belfry proves a fortress of a sort, . . .
> Turns sunscreen, *paravent* and ombrifuge
> To whoso seeks a shelter in its pale.
>
> *Browning*, Ring and Book, x. 466.

paravertebral (par-a̤-vėr′tē̤-bra̤l), *a.* and *n.* [Gr. *παρά*, beside, + L. *vertebra*, vertebra, + -*al*^{1}.] **I.** *a.* Relating to the parapophysis or transverse process given off from the centrum of a vertebra. The term was used by Geoffroy St. Hilaire and R. Grant.—**Paravertebral elements**, the parapophyses or processes developed from the body of the vertebra; more rarely, the chevron bones.

II. *n.* Same as ⋆*parapophysis*, 2. *Starks*, Synonymy of the Fish Skeleton, p. 525.

paravesical (par-a̤-ves′i-ka̤l), *a.* [Gr. *παρά*, beside, + E. *vesical.*] Situated in the immediate neighborhood of the bladder.

paraxanthin (par-a̤-zan′thin), *n.* [*para-* + *xanthin.*] A poisonous crystalline base, 1, 7-dimethylxanthin, $C_7H_8O_2N_4$, which occurs in human urine. It can be made from theobromine and changed into caffein. It melts at 284° C.

paraxially (pa-rak′si-a̤l-i), *adv.* [Gr. *παρά*, beside, + L. *axis*, axis, + -*al*^{1} + -*ly.*] In *zoöl.*, in such a way as to lie on each side of the long axis (of the body). *Proc. Roy. Soc.* (London), Feb., 1905, p. 318.

paraxon (pa-rak′son), *n.* [Gr. *παρά*, beside, + E. *axon.*] A collateral branch of the axon.

paraxonic (par-ak-son′ik), *a.* [Gr. *παρά*, near, + *ἄξων*, axis, + -*ic.*] Having the third and fourth digits of the foot equally, or almost equally, developed, so that the center or axis of the foot passes between them, as in the artiodactyl ungulates: contrasted with ⋆*mesaxonic.*

paraxylene (pa-rak′si-lēn), *n.* [*para-* + *xylene.*] An oily hydrocarbon of the benzene series, $C_6H_4(CH_3)_2$; paradimethylbenzene. It is found in tar-oil and Galician petroleum, and is also made synthetically. It boils at 138° C. It can be solidified in a freezing mixture, and then melts at 15° C.

parcel-carrier (pär′sel-kar″i-ėr), *n.* **1.** One who carries parcels.—**2.** A device for carrying parcels, as on a bicycle.

parcel-gilder (pär′sel-gil″dėr), *n.* One whose trade is ⋆parcel-gilding (which see).

parcel-gilding (pär′sel-gil″ding), *n.* The gilding of silver or other ware in part, as the interior of a cup, or an external design; now, specifically, the production of decorative effects by gilding, with the aid of an electric current, a metallic object, as of silver, parts of the surface having in advance been coated with a non-conducting varnish, which is removed when the work is finished, so that the design is presented in gold deposited only on the unvarnished parts of the surface.

parcel-gilt (pär′sel-gilt), *a.* and *n.* **I.** *a.* Gilded in part. See ⋆*parcel-gilding.*

> A standing cup *parcell guilt*, of thirty-two ounces, eleven pound seven shillings, the first of July. Good plate—good man—good day—good all.
>
> *Marston*, Dutch Courtezan, iii. 1.

II. *n.* Silver or other ware partly gilded.

parcelment (pär′sel-me̤nt), *n.* [*parcel* + -*ment.*] The act of dividing into parcels.

parcels-delivery (pär′se̤lz-dē̤-liv″ėr-i), *n.* The business of delivering parcels; express: as, to receive a package by *parcels-delivery.* [Great Britain.]

parcelwise (pär′sel-wīz), *adv.* Piecemeal; piece by piece.

> Looking at life *parcel-wise.*
>
> *George Eliot*, Daniel Deronda, xxi.

parching-bowl (pär′ching-bōl), *n.* A bowl used for parching grain, especially maize: used by a number of Indian tribes. *Haddon*, Evolution in Art, p. 105.

parchment, *v. t.* **2.** To cause to become hard, tough, and wrinkled, as the skin in certain diseases. *Syd. Soc. Lex.*

parchment-coffee (pärch′me̤nt-kof″ē̤), *n.* Same as *parchment*, 2.

parchment-size (pärch′me̤nt-sīz), *n.* A size or glue used in manufactures, made from the scrapings and cuttings of parchment. Also *parchment-glue.* See *size*^{2}.

parded (pär′ded), *a.* [*pard*^{1} + -*ed*^{2}.] Spotted like a pard.

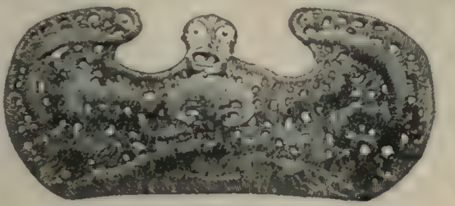
> Even the meadow flood is *parded*, of various patches of color. Ever and anon the wind seems to drop down from over the hills in strong puffs.
>
> *Thoreau*, Early Spring in Massachusetts, p. 44.

pardessus (pär-de-sü′), *n.* [F., < *par-dessus*, in subst. use, an overcoat, < *par*, on, upon, + *dessus*, over, above.] **1.** A woman's cloak, formerly worn in full dress, for receptions, etc. The word is confined to fashion papers. —**2.** The old French name of the violin or treble viol. See *dessus.*

pardner (pärd′nėr), *n.* A dialectal pronunciation of *partner.* [U. S.]

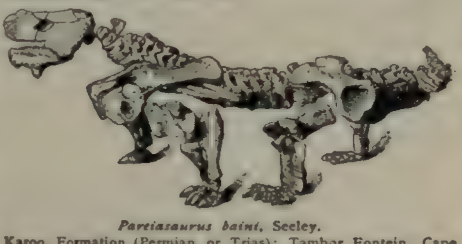
> "Thet 's it," said Tennessee's Partner, in a tone of relief. "I come yar as Tennessee's *pardner*, knowing him nigh on four year, off and on."
>
> *Bret Harte*, Tennessee's Partner, p. 140.

pare^3 (pä′rā), *n.* [Maori.] Among the Maoris of New Zealand, the carved ornament or ornamentation about a door. *Nature*, May 14, 1903, p. 36.



Pare.

Pareiasauria (pa-rē-a̤-sâ′ri-ä), *n. pl.* [NL., < Gr. *παρειά*, cheek, + *σαῦρος*, lizard.] An order of extinct reptiles comprising heavily built animals of Permian and Triassic age. The type-genus *Pareiasaurus* is represented by animals about 8 or 10 feet long, standing 4 feet high. Four or five species of this genus are known from the Karoo formation of South Africa. In northern Russia a species of even larger dimensions than the South African forms has been found, and in central Europe a small allied species with horns. Another small, horned species is found in Scotland, and in North America there are numerous genera possibly belonging to this order but not very nearly related to *Pareiasaurus.* Also *Pariasauria.*



Pareiasaurus baini, Seeley.

Karoo Formation (Permian or Trias); Tambor Fontein, Cape Colony. Skeleton; $\frac{1}{40}$ natural size. (After Seeley.)

(From Zittel's "Palaeontology.")

pareiasaurian (pa-rē-a̤-sâ′ri-an), *a.* and *n.* **I.** *a.* Relating to or having the characters of the *Pareiasauria.*

II. *n.* One of the *Pareiasauria.*

Pareiasaurus (pa-rē a̤-sâ′rus), *n.* [NL., < Gr. *παρειά*, cheek, + *σαῦρος*, lizard.] A genus of extinct reptiles. See ⋆*Pareiasauria.* Also *Pariasaurus.*

parelectronomic (par-ē̤-lek-trō̤-nom′ik), *a.* [*parelectronom(y)* + -*ic.*] Of or pertaining to, or exhibiting, parelectronomy.

parelectronomy (par-ē-lek-tron′ō-mi), *n.* [Gr. *παρά*, against, + E. *electro-* + Gr. *νόμος*, law, + -*y*^{3}.] A condition in which there is a weakening of an electric current passed through a muscle.

parellic (pa-rel′ik), *a.* [*par(a-)* + (*Rocc*)*ella* + -*ic.*] Noting an acid, $C_{21}H_{16}O_9$, found in *Roccella intricata* and other lichens. The same acid was obtained from certain species of *Stereocaulon*, and called *psoromic acid.* It crystallizes in needles which melt at 262–265° C., with decomposition.

paremango (pä-rā-mäng′gō), *n.* [Maori, < *pare* (see ⋆*pare*^{3}) + *mango*, shark.] A scroll pattern in wood-carving of the natives of New Zealand.

par éminence (pär ā-mē̤-noṅs′), *adv. phr.* [F.] By eminence; by reason of eminence; pre-eminently.

parenchymale (pa-reng-ki-mā′lē), *n.*; pl. *parenchymalia* (-li-ä̤). [NL. See *parenchyma.*] In sponge-spicules, a parenchymalium.

parenchymalium (pa-reng-ki-mā′li-um), *n.*; pl. *parenchymalia* (-ä̤). [NL. See *parenchyma.*] In sponges, one of the spicules supporting the general parenchyma and the chambers between the dermal and gastral membranes. Also *parenchymale.*

parenchymella (pa-reng-ki-mel′ä̤), *n.* [NL. dim. of *parenchyma.*] An embryonic stage between the blastula and gastrula stages, especially in the *Cœlenterata.* It may be defined as a blastula of which the blastocœle is filled with entoderm cells. *Metchnikoff*, 1887.

parentalism (pā̤-ren′ta̤l-izm), *n.* [*parental* + -*ism.*] Same as *paternalism.*

parenthesist (pā̤-ren′the-sist), *n.* [*parenthes(is)* + -*ist.*] One who parenthesizes. [Rare.]

parenticide^2 (pā̤-ren′ti-sīd), *n.* [L. *parens* (*parent-*) + -*cidium*, < *cædere*, kill.] The killing of one's parent. *Phillips.*

parent-rock (pãr′e̤nt-rok), *n.* In *geol.*, the rock in which a mineral or ore is or was originally contained and from which it may be freed in processes of weathering or erosion.

Pareora series. See ⋆*series.*

parepicele (pa-rėp′i-sēl), *n.* [Also *parepicœle*; *para-* + *epicele* (?).] A recess in one side of the fourth ventricle of the brain. Also written *parepicœle.* *Buck*, Med. Handbook, II. 158.

parepicœle, *n.* See ⋆*parepicele.*

parepigastric (pa-rep-i-gas′trik), *a.* [Gr. *παρά*, beside, + E. *epigastric.*] Near the epigastrium.

parergal (pa-rėr′ga̤l), *a.* [*parergon* + -*al*^{1}.] Pertaining to or of the nature of a parergon; incidental.

parergetic, parergetical (par-ėr-jet′ik, -i-ka̤l), *a.* Same as ⋆*parergal.*

parergic (pa-rėr′jik), *a.* [*parerg(on)* + -*ic.*] Same as ⋆*parergal.*

parethmoid (pa-reth′moid), *n.* [*para-* + *ethmoid.*] In *ichth.*, the prefrontal; a bone in front of the frontal and beside the ethmoid in fishes. *Starks*, Synonymy of the Fish Skeleton, p. 509.

par exemple (pär eg-zoṅ′pl), *adv. phr.* [F.] By way of example; for instance.

Parexocœtus (pa-rek-sō̤-sē′tus), *n.* [NL., < Gr. *παρά*, near, + NL. *Exocœtus.*] A genus of flying-fishes of tropical coasts, widely distributed.

parfait (pär-fā′), *a.* [F.] Perfect: used in names of preparations of frozen cream: as *café parfait, vanilla parfait*, which are frozen without being stirred.

parfocal (pär-fō′ka̤l), *a.* [L. *par*, equal, + NL. *focus* + -*al*^{1}.] With the lower focal points all in the same plane: said of interchangeable eyepieces, for microscopes or telescopes, so mounted that whichever one is used the focus remains the same. See ⋆*eyepiece.*

parge (pärj), *v. t.* Same as *parget*, *v. t.*, 1.

pargo (pär′gō), *n.* [Sp. *pargo*, also *pagro* = Pg. *pargo* = It. *pagro*, *parago*, < L. *pagur*, *pager*, *pagrus*, name of a fish: see *Pagrus.*] A common name given by Spanish-speaking Americans to the snappers and related fishes.

parhedral (pär-hē′dra̤l), *a.* [Gr. *πάρεδρος*, sitting beside, associate.] Associate; adjunct; subsidiary. [Rare.]

> Besides the principal gods, inferior or *parhedral* gods. *Guide to Exhib. Gall. Brit. Mus.*, 1884, p. 94. *N. E. D.*

parhelium, *n.* **2.** A name given by Runge and Paschen to a supposed distinct gas which, on the ground of certain spectroscopic observations, they believed to be present in helium. It has since been shown that the helium examined is but a single substance, the spectroscopic differences being due to change of pressure.

> Clevite gas was accordingly regarded as a mixture of two solar elements, distinguished as "helium" and "*parhelium*," the rays of the former, like D_3, being all double, those of the latter single. Each set of three series was, in fact, "analogous to the complete spectrum of a distinct element." Yet *parhelium* has failed to make good its footing in either cosmical or terrestrial chemistry.
>
> *A. M. Clerke*, Problems in Astrophysics, p. 58.

Paria (pā′ri-ä̤), *n.* [NL., < geographic̣ name (Leconte, 1858).] **1.** A small genus of leaf-beetles of the family *Chrysomelidæ* of North American and eastern Asiatic distribution. The larva of *P. aterrima* is the strawberry root-borer of the United States.—**2.** [*l. c.*] A beetle of this genus.—**3.** A genus of mollusks. *Gray*, 1867.—**Spotted paria**, an American chrysomelid beetle, *Paria sex-notata*, which feeds on strawberry leaves. It is now known as *Typophorus canellus*, and bears also the popular name of *spotted strawberry leaf-beetle.*

Pariah kite. See ⋆*kite*^{1}.

Parian. I. *a.*—**Parian cement.** See ★*cement.*
II. *n.* 2. A native of Paros.

pariasaurian (pa-rī-ạ-sâ′ri-ạn), *a.* See ★*Pareiasaurian.*

Paricelinus (par″i-se-lī′nus), *n.* [NL., ‹ Gr. *παρά*, near, + NL. *Icelinus.*] A genus of cottoid fishes found off the coast of California.

parichnos (pa-rik′nos), *n.*; pl. *parichnoi* (-noi). [Gr. *παρά*, beside, + *ἴχνος*, track, trace.] Either of the two small circular prints or traces representing parenchymatous strands in the scars of *Lepidodendron*, standing one on each side of the print or trace of the vascular bundle.

paricine (pär′i-sin, -sēn), *n.* [Also *paracine;* ‹ *Pará*, a city of Brazil, + *cin*(*chona*).] An alkaloid, $C_{16}H_{18}ON_2 + \frac{1}{2}H_2O$, found in the bark of *Cinchona succirubra.* It is a yellow powder which melts at 130° C. Its alcoholic solution tastes bitter and is slightly alkaline.

paridin (par′i-din), *n.* [*Paris* (see def.) (*parid-*) + *-ine*^{2}.] A glucoside, $C_{16}H_{28}O_7 + 2H_2O$, found in the leaves of *Paris quadrifolia.* It is a crystalline compound which yields paridol and sugar when boiled with alcoholic hydrochloric acid.

paridol (par′i-dol), *n.* [*parid*(*in*) + *-ol.*] A resinous substance, $C_{26}H_{46}O_9$, formed by boiling paridin with alcoholic hydrochloric acid.

paries, *n.* 3. The central thickened portion of a valve of the acorn-barnacle (*Balanus*). The anterior overlapping edge of the valve is the 'radius,' the posterior underthrust edge the 'ala.'

parietal. I. *a.*—**Parietal cell,** in *histol.*, one of the cells in the gastric glands of vertebrates, as distinguished from the *peptic cells* in the same organs.—**Parietal fissure.** Same as *intraparietal* ★*fissure.*—**Parietal index.** See ★*index.*—**Parietal shield.** See ★*shield.*
II. *n.* 2. Specifically, in fishes, a superior lateral bone of the cranium. In some forms it articulates with its fellow of the opposite side in front of the supraoccipital; in others it lies on one side of the latter bone remote from its fellow. Posteriorly it overlies the epiotic; at its outer edge it articulates with the pterotic.—3. Same as *parietal* ★*shield.*

parietic (pā-ri-et′ik), *a.* [L. *paries* (*pariet-*), wall, + *-ic.*] Obtained from the wall-lichen: noting an acid, the same as *chrysophanic acid.*

parietin (pā-rī′e-tin), *n.* [*pariet*(*ic*) + *-in*^{2}.] Same as *chrysophanic acid.*

parietosphenoidal (pạ-rī″e-tō-sfẹ-noi′dạl), *a.* [*parietal* + *sphenoid* + *-al*^{1}.] Relating to the parietal and sphenoid bones.

parigenin (pa-rij′e-nin), *n.* [*pari*(*llin*) + *-gen* + *-in*^{2}.] A flocculent insoluble compound, $C_{28}H_{42}O_4$, formed when parillin is hydrolyzed by dilute acids. See ★*parillin.*

parillic (pa-ril′ik), *a.* [(*sarsa*)*parilla* + *-ic.*] Related to sarsaparilla.—**Parillic acid.** Same as ★*parillin.*

parillin (pa-ril′in), *n.* [(*sarsa*)*parilla* + *-in*^{2}.] A crystalline glucoside, $C_{40}H_{70}O_{18}$, found in sarsaparilla root, of which it is the active principle. It melts, with decomposition, at 210° C., and yields sugar and parigenin when hydrolyzed with dilute acids. It slows the action of the heart. Also called *parillic* or *parillinic acid, saliseparin, salseparisin.*

parillinic (par-i-lin′ik), *a.* Derived from sarsaparilla.—**Parillinic acid.** Same as ★*parillin.*

pari mutuel (pä-rē′ mü-tü-el′). [F., 'mutual bet': *pari*, a bet, ‹ *parier*, bet, pair, ‹ L. *pariare*, make equal, ‹ *par*, equal: see *par* and *pair*^{1}.] A mutual bet; in France, a system of betting in which each bettor places a sum specified (on the horse or contestant he chooses) in a pool. Those who bet on the winners divide the stakes, less a small percentage for expenses. Usually in the plural, *paris mutuels.*

> The *pari-mutuel*, by which most of the betting is carried on in France, though bookmakers pursue their business there as in England, except that they are relegated to the backs of the stands.
> *Encyc. Brit.*, XXIX. 337.

> An owner only lays £20 or so at the *pari-mutuel*, when he would have staked £100 with the bookmakers.
> *Daily Telegraph* (London), Oct. 5, 1905.

paring-bee (pãr′ing-bē), *n.* In New England, a social gathering for the purpose of paring apples, which are then dried and preserved for winter use. See *bee*^{1}, *n.*, 3.

paring-machine, *n.* 2. A parer; a machine for paring fruit.

Paris foot, a unit of length, formerly used in France, equal to 1·065 British feet.—**Paris granite, inch, line, measure.** See ★*granite*, etc.

parish. I. *n.* 5. In the game of curling, the ring in the center of which the tee is placed.

> He has plenty of running to win into the *parish.*
> *An. of Roy. Caledonian Curling Club*, 1893–4, p. 104.

II. *a.*—**Parish council.** See ★*council.*

parish-rigged (par′ish-rigd), *a.* Rigged cheaply. [Sailors' use.]

Parisian, *n.* 2. In *geol.*, in D'Orbigny's classification of the Tertiary of France, the upper stage of the Eocene lying above the basal or Suessonian, and comprising the Lutetian and Bartonian stages of De Lapparent's classification. It consists of sands, marls, clays, and limestones containing marine Eocene fossils below, with intercalated limestones and shales in its upper portion containing fresh-water shells and plants. Above these latter lie the Paris gypsum beds of Oligocene age.

parison, *n.* (*b*) In *glass-manuf.*, the mass of molten glass gathered on the end of the pontil before it is blown.

paristhmic (pa-rist′mik), *a.* [Gr. *παρίσθμιον*, tonsil, + *-ic.*] In *anat.*, of or pertaining to the tonsils.

paristhmiotome (pa-rist′mi-ọ-tōm), *n.* [Gr. *παρίσθμιον*, tonsil, + *-τόμος*, cutting.] An old instrument for cutting the tonsils.

paristhmitic (par-ist-mit′ik), *a.* [*paristhmit*(*is*) + *-ic.*] Relating to or affected by paristhmitis.

paristhmitis (par-ist-mī′tis), *n.* [Gr. *παρίσθμιον*, tonsil, + *-itis.*] Tonsillitis; inflammation of the tonsils. *Mayne.*

paristyphnin (par-is-tif′nin), *n.* An amorphous glucoside, $C_{38}H_{64}O_{18}$, which occurs in the leaves of *Paris quadrifolia.* It yields sugar and paridin when boiled with dilute sulphuric acid.

parity^1, *n.* 4. In *banking* and *com.*: (*a*) An equivalence in the currency of another country. See *mint par*, under *par*^{2}. (*b*) Equivalence in or between money of different metals as legal tender, in the proportions of weight and quality fixed by law. (*c*) Same as *par*^{2}, 3.

parivincular (par-i-ving′kū-lä̤r), *a.* [L. *par*, equal, + *vinculum*, a bond, + *-ar*^{3}.] In *conch.*, noting that type of ligament of the pelecypod shell the axis of which coincides with or is parallel to the axis of motion between the valves: contrasted with *alivincular*, in which the axis of ligament is normal to the axis of motion.

park, *n.*—**National park,** a tract of government land withdrawn by special act of Congress from settlement, occupancy, or sale, under the laws of the United States, for the benefit and enjoyment of the people.

> While the *national parks*, speaking strictly, do not at present form a part of the forest system of the United States, still, since one of their prime objects is the protection of the forests within their boundaries, they fall naturally within the sphere of the present paper. They differ from forest reserves chiefly in the fact that no lumbering can be carried on within them, that the mining laws, except in the case of the Mount Rainier National Park, do not apply to them, that their game animals are fully protected, and that they are under the care of the troops of the Regular Army, assigned to that duty by the Secretary of War, but under the orders, for that purpose, of the Secretary of the Interior, and reporting to him. The best known and the largest of the *national parks* is the Yellowstone, with an area of 2,142,720 acres, located in Wyoming, with small portions in Montana and Idaho. The others are the Yosemite National Park (967,680 acres), the Sequoia National Park (161,280 acres), and the General Grant National Park (2,560 acres), all in California, and the Mount Rainier National Park (207,360 acres) in Washington.
> *Yearbook, U. S. Dept. Agr.*, 1899, p. 298.

> The *national parks* are not only withdrawn from sale and entry like the forest reservations, but are efficiently managed and guarded by small troops of United States cavalry, directed by the Secretary of the Interior.
> *Muir*, Our National Parks, ii.

parkee (pär-kē′), *n.* Same as *parka*^{1}.

parkesine (pärk′sin), *n.* [*Parkes* (see def.) + *-ine*^{2}.] The name given by the inventor, Alex. Parkes, to a plastic material, with properties like those of horn or ivory, obtained by evaporating a solution of pyroxylin to which other substances had been added. Its manufacture was not commercially successful, but it was a precursor of the better-known celluloid.

Parkinsonia^2 (pär-kin-sō′ni-ä̤), *n.* [NL., named after James *Parkinson.*] A genus of pachycampylous Jurassic ammonites of the family *Reineckidæ*, section *Morphoceratida* of Hyatt's classification. The shells are discoidal, widely umbilicate, ornamented with strong radial ribs which are simple on the flattened sides and which bifurcate on the outer margins of the whorls, and with a deep, narrow, smooth furrow on the medial line of the venter. The genus is specially characteristic of the lower Jurassic beds of Europe and North Africa.

park-wagon (pärk′wag″ọn), *n.* A four-wheeled carriage with two seats for passengers, and a higher seat at the back for the driver.

parky (pär′ki), *a.* [*park*, *n.*, + *-y*^{3}.] Cold; penetrating; chilly. [Slang.]

> 'Morning, William; cold s' morning?' . . . 'It is a bit *parky*,' assented William.
> *Pink 'un & Pelican*, 1898, p. 273. *N. E. D.*

Parl. Agt. An abbreviation of *Parliamentary agent.*

parlay (pär′lā), *v. t.* See ★*parley*^{3}.

parley^3 (pär′li), *v. t.* and *i.* [Also *parlay:* appar. a perversion of *paroli.*] In the United States, in faro and similar games, and in horse-racing, to stake (one's money, together with that won by it on another bet): as, to *parley* one's bet. See ★*paroli.* [Slang.] *N. E. D.*

parley^3 (pär′li), *n.* [*parley*^{3}, *v.*] The act of leaving as a stake the money staked on a previous bet, together with that won by it. See ★*paroli.* [Slang.]

parliament, *n.*—**Long Parliament.** (*b*) The Parliament in the reign of Charles II., which assembled in 1661 and lasted until 1679. Also called *Pensionary Parliament.*—**Parliament hinge.** See ★*hinge.*—**Pensionary Parliament.** See *Long* ★*Parliament* (*b*).

parliamentarianism (pär″li̤-men-tā′ri-an-izm), *n.* The system of legislation by parliament; adherence to parliamentary system.

parliamentary, *a.* II. *n.* 1. A member of Parliament.—2†. A Cromwell man; a parliamentarian.—3. A parliamentary train.—4. [F. *parliamentaire.*] One sent to treat or parley with the enemy.

parliamenteer (pär″li̤-men-tēr′), *v. i.* [*parliamenteer, n.*] To engage in parliamentary affairs; run for parliament.

par-line (pär′līn), *n.* The line of averages or normal values; the zero or base-line from which departures are calculated or charted.

parlor-jump (pär′lọr-jump), *v. i.* To commit the crime of parlor-jumping. [Slang.]

parlor-jumping (pär′lọr-jum″ping), *n.* The robbery of rooms, where entrance is effected by means of a window. [Slang.]

parlor-maid (pär′lọr-mād), *n.* A maid-servant whose duties are usually confined to the dining- and reception-rooms of a house, sometimes taking the place of a butler in simple establishments.

parlor-maiding (pär′lọr-mā″ding), *n.* The duties of a parlor-maid; the act of performing those duties. [Colloq.]

parlor-match (pär′lọr-mach″), *n.* See ★*match*^{2}.

parma (pär′mä̤), *n.* [It. *Parma:* compare ★*piedmont.*] 1. One of the low east and west ranges which project from the western side of the north and south Urals, and die out in the plains. They are due to gently folded strata. *E. Suess*, Das Antlitz der Erde, I. 645.—2. In general, following the above usage, any low anticlinal fold, forming a ridge. Such ridges often, in the past, constituted barriers to the migrations of faunas.

> This may mean that no true axis or "*parma*" was in existence during Richmond time, but it does seem to show that the Wabash *parma* at least indicates the strike for the then highest land.
> *Amer. Jour. Sci.*, Dec., 1904, p. 469.

Parma sandstone. See ★*sandstone.*

parmeliine (pär-mē′li-in), *a.* Pertaining to or resembling the lichen family *Parmeliaceæ.*

parmelin (pär′mẹ-lin), *n.* [*Parmel*(*ia*) + *-in*^{2}.] A crystalline compound, $C_{16}H_{16}O_7$, occurring in the lichen *Parmelia perlata*, from which it is extracted by chloroform. It melts at 187° C.

parnas, *n.* Same as ★*parnes.*

Parnassian. I. *a.*—**Parnassian school.** (*a*) In France, a school of poets founded about the middle of the nineteenth century by L. Xavier de Ricard and Catulle Mendes who chose as their tetrarchs and judges Théophile Gautier, Leconte de Lisle, Baudelaire, and Banville. They were joined by Coppée, Sully-Prudhomme, Verlaine, and Heredia, with others less distinguished. They emphasized form or the technical side of the art, and repressed emotion, in reaction against the influence of de Musset. They took their name from that of their first volume of poems, collected in 1866, *Parnasse Contemporain.* (*b*) In England, see the extract.

> The name of the "*Parnassian School*" has been given to a group of poets who belonged to the generation succeeding that of the Rossettis and William Morris, and who were more in sympathy, perhaps, with Arnold. In this title, which has no other recommendation, there seems to be a reference to the French poets who were the contemporaries of these particular writers, and who made their first appearance together in Parnasse Contemporain. The poets of this group had not the ample flight of their predecessors, and attempted smaller effects. . . . Whether in the lighter or the graver mood, they aimed at exactitude of verbal expression, the careful record of shades of emotion, delicate phenomena, avoidance of hackneyed or rhetorical phrases. *Encyc. Brit.*, XXVIII. 256.

II. *n.* **2.** A member of the Parnassian school.

In other words, the excessive attention to form, to technical perfection, which had been carried so far by the *Parnassians*, failed to please, and broader modes of expression were aimed at. *Encyc. Brit.*, XXVIII. 256.

Parnassianism (pär-nas′i-an-izm), *n.* [*Parnassian* + *-ism.*] In *literature*, the style and theories of the school of poets known as the Parnassians. See ★*Parnassian school.*

When he [de Heredia] came back to Paris at 18 it was in order to enter the École des Chartes. He began to write the sonnets which attracted the attention of the most expert connoisseurs in *Parnassianism*. One after another at long intervals these perfectly minted masterpieces of literary art were put into circulation in Paris. *Times* (London), Oct. 4, 1905.

parnes (pär′nes), *n.* [Aram., < Syr. *parnoso*, a leader, a nourisher.] Among the Jews, an officer of a synagogue whose duties are to attend to the temporal welfare of the indigent members of the synagogue, as well as to the general affairs of the congregation. It is an honorary office, generally given to the most respected and well-to-do member of the community.

parnid (pär′nid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Parnidæ*.

II. *a.* Having the characters of or belonging to the family *Parnidæ*.

Parochial chapel. See ★*chapel.*

parode² (par′ōd), *n.* [Gr. πάροδος. See *parodos.*] **1.** Same as parodos.—**2.** In *anc. Gr. drama*, the first song sung by the chorus after its entrance.

parodiable (par′ọ-di-ạ-bl), *a.* Capable of being parodied.

parodial (pa-rō′di-ạl), *a.* [*parody*¹ + *-al*¹.] Of the nature of parody.

parodyn (par′ọ-din), *n.* [Gr. παρά, against, + ὀδύνη, pain.] Same as *antipyrin.*

parœmia (pa-rē′mi-ạ̈), *n.* [Gr. παροιμία, a byword.] In *rhet.*, a proverb; a byword.

parœmiac (pa-rē′mi-ak), *a.* and *n.* [Gr. παροιμιακός, proverbial.] **I.** *a.* Proverbial.

II. *n.* In *Gr. prosody*, an anapæstic dimeter catalectic, occurring commonly at the end of an anapæstic system. *Liddell* and *Scott.*

paroli (pä-rō-lē′), *n.* [F., < It. *paroli*; origin unknown.] In faro and similar games, and in the United States in horse-racing also, the act of applying the money staked and the money won on a bet in continuing to bet or as a further stake; also, the staking of double the sum just staked. In the United States usually called *parley.* See ★*parley*³.

paroli (pä-rō-lē′), *v. t.* and *i.* [*paroli*, *n.*] To stake (one's money, together with that won by it, on another bet); also, double one's stake. See ★*parley*³.

parolist, *n.* **2.** A paroled man.

Parolists . . . admit . . . that further resistance signifies daily increasing misery for all. *Scotsman*, April 16, 1901, p. 8. *N. E. D.*

paromœon (par-ọ-mē′ọn), *n.* [Gr. παρόμοιον, resembling.] Alliteration.

paronomasial (par″ọ-nọ-mā′si-ạl), *a.* [*paronomasi(a)* + *-al*¹.] Pertaining to or of the nature of paronomasia.

parophite (par′ọ-fīt), *n.* [Gr. παρά, near, + E. *ophite.*] A hydrous silicate allied to pinite. It forms a schistose rock in Canada and in northern New England.

parophthalmia (par-of-thal′mi-ạ̈), *n.* [NL., < Gr. παρά, beside, + ὀφθαλμός, the eye.] Inflammation of the connective tissue around the eye.

parore (pä′rō-rā), *n.* [Maori *parore*, the black perch.] A popular name of *Incisidens simplex*, a fish of the family *Pimelepteridæ*, found in New Zealand.

parorexia (par-ọ-rek′si-ạ̈), *n.* [NL., < Gr. παρά, beside, + ὄρεξις, appetite.] A perversion of the appetite.

Parosela (par-ō-sē′lạ̈), *n.* [NL. (Cavanilles, 1802), an anagram of *Psoralea.*] A genus of plants of the family *Fabaceæ*. There are about 110 species, extending from the central and southwestern United States to Central America, and in the Andes to Chile. Two species are also known from the Galapagos Islands. See *Dalea.*

parosteal (pa-ros′tẹ-ạl), *a.* [Gr. παρά, beside, + ὀστέον, bone, + *-al*¹.] **1.** Relating to the outer surface of the periosteum.—**2.** Relating to bone formed in abnormal parts, as the muscles.

parosteotic (par-os-tẹ-ot′ik), *a.* [*parosteosis.*] Pertaining to or characterized by parosteosis.

parostic (pa-ros′tik), *a.* [NL. *parostia* + *-ic.*] Pertaining to or marked by parostia or defective ossification.

parostitis (par-os-tī′tis), *n.* [NL., < Gr. παρά, beside, + ὀστέον, bone, + *-itis.*] Inflammation of the outer surface of the periosteum.

parostotic (par-os-tot′ik), *a.* [*parostosis* (*-tot-*) + *-ic.*] Same as ★*parosteotic.*

parotideal (par-ọ-tid′ẹ-ạl), *a.* Same as ★*parotidean.*

parotidean (par-ọ-tid′ẹ-ạn), *a.* [*parotid* + *-e-an.*] Relating to the parotid gland.

parotidectomy (pa-rot-i-dek′tọ-mi), *n.* [Gr. παρωτίς (-τιδ-), parotid, + ἐκτομή, excision.] Excision of the parotid gland.

parous (par′us), *a.* [L. *parere*, in comp. *-para*, bring forth, + *-ous.*] Having brought forth offspring; specifically, noting a woman during the child-bearing period who has already had one or more labors. *Buck*, Med. Handbook, I. 785.

parousia, *n.* See *parusia.*

parovoid (pa-rō′void), *n.* [Gr. παρά, near, + L. *ovum*, egg, + *-oid.*] A (purely hypothetical) somatic cell of a male organism, that produces spermatozoa as germ-cells.

paroxysmal, *a.* Specifically—**2.** In *geol.*: (*a*) Relating to or produced by a violent convulsion of nature. (*b*) Catastrophic or relating to the catastrophic theory.

These examples [the upheavals and subsidences resulting in the formation of the mountain ranges west of the Rocky Mountains] show that the elevation of mountains has been occasional and, so to speak, *paroxysmal.* *Encyc. Brit.*, X. 372.

paroxysmalist (par-ọk-siz′mạl-ist), *n.* Same as ★*paroxysmist.*

paroxysmist (par-ọk-siz′mist), *n.* [*paroxysm* + *-ist.*] In *geol.*, one who believes that violent or catastrophic changes occurred in past geologic time.

Parra, *n.* **2.** [*l. c.*] A member of the genus *Parra.*—**Australian parra, comb-crested parra,** *Hydralector gallinacea*, the wattled species found in Australia.

parrakeet, *n.*—**Racquet-tailed parrakeet,** a parrot of the genus *Prioniturus*, found in the Philippine Islands, having the median tail feathers expanded at the ends.—**Rose Hill parrakeet,** an Australian lory, *Platycercus eximius*, gorgeously marked with red, blue, green, and yellow; common in southeastern Australia: named from being numerous about Rose Hill, Paramatta district. The name has been corrupted to *rosella.*

parrel, *n.*—**Main parrels,** the leather-covered iron collars which belong to and confine respectively the main upper topsail, topgallant, and royal yards to the main topmast and topgallant mast, and by means of which these yards are kept steady while being hoisted and lowered. The main yard and the main lower topsail yard are not hoisting yards, but are kept permanently confined to the mast by trusses.

parricide¹, *n.* **3.** Figuratively, one who commits treason against his country. *N. E. D.*

parricide², *n.* **2.** Figuratively, the crime of treason against one's country. *N. E. D.*

parrot, *n.* **1.** About 500 species have now been described, but no new forms of special interest have been discovered. The tendency is to consider them as having their nearest relatives among the hawks and owls.—**Parrot's disease.** See ★*disease.*—**Parrots' plague** or **rinder-pest.** See ★*plague.*—**Pygmy parrot,** *Nasiterna pusio*, a diminutive species found in New Guinea.—**Quaker-parrot,** *Myiopsittacus monachus*, so named from its gray throat and breast. It is a native of Brazil, remarkable as being the only parrot that builds nests in tree-tops. *Nature*, Jan. 29, 1903, p. 304.—**Vasa parrot,** one of several species of the genus *Coracopsis*, particularly *C. vasa*, found in Madagascar, characterized by a black or somber plumage.

parrot-fish, *n.* (*f*) A name given in Australia and elsewhere to *Scarus pseudolabrus*: called in the Australian tropics *parrot-perch.* In Victoria and Tasmania the name is also given to several species of *Labrichthys.* In New Zealand, the parrot-fish is *Pseudolabrus miles psittacula.* (*g*) Same as *blue* ★*groper.*—**Rainbow parrot-fish,** a common name of *Sparisoma viride*, a scaroid fish of the West Indies. **Red parrot-fish,** *Scarus abildgaardi* of the family *Scaridæ.*

parrotism (par′ọt-izm), *n.* [*parrot* + *-ism.*] Imitation without understanding or reason, after the fashion of parrots. [Rare.] *N. E. D.*

parrotlet (par′ọt-let), *n.* [Dim. of *parrot.*] A book-name of the South American parrots of the genus *Brotogerys*, the smallest of American parrots.

parrot-mouth (par′ọt-mouth), *n.* A condition of a horse's mouth in which the upper incisor teeth become long and overlap the lower incisors: seen usually in old horses.

parrot-perch (par′ọt-pėrch), *n.* See ★*parrot-fish* (*f*).

parrot's-bill, *n.* **2.** Same as *parrotbeak.* See ★*kowhai.*

parrot's-corn (par′ọts-kôrn″), *n.* The seeds of the *Carthamus tinctorius*, or bastard saffron.

parrot's-food (par′ọts-föd), *n.* In Tasmania, *Goodenia ovata*, a small yellow-flowered Australian shrub.

parrot-toed (par′ọt-tōd), *a.* Pigeon-toed; having the toes turned in.

parrot-tulip (par′ọt-tū″lip), *n.* See *tulip.*

Pars cystica, in *embryol.*, the rudiment of the gall-bladder and ventral pancreas, as distinguished from the ★*pars hepatica.*—**Pars hepatica,** in *embryol.*, the liver-forming portion of the diverticula developed from the ventral wall of the intestine in vertebrates.—**Pars olfactoria.** See *precommissural* ★*fibers.*—**Pars temporalis.** See *precommissural* ★*fibers.*

parsemé (pär-se-mā′), *a.* [F., pp. of *parsemer*, sow over, < *par-* + *semer*, < L. *seminare*, sow: see *seminate.*] In *embroidery*, sprinkled, strewn, or sowed over the surface of: said of small figures, as bees, flowers, etc.

The rise of a new conception of design, with figures and ornaments *parsemé* on a velvet ground, . . . in the fifteenth century. *Athenæum*, June 17, 1905, p. 760.

Parsic (pär′sik), *a.* Same as *Parsee.*

But the number seven neither presupposes the dogma of the seven archangels, nor is copied from the seven *Parsic* amschaspands.
C. F. Keil (trans.), Biblical Commentary on the Prophecies of Ezekiel, I. 126.

parsimony, *n.*—**Law of parsimony.** (*b*) See ★*law*1.

parsley, *n.*—**Spotted parsley,** either the poison-hemlock, *Conium maculatum*, or the water-hemlock, *Cicuta maculata.*

parsley-elder (pärs′li-el″dėr), *n.* See ★*elder*².

parsley-frog (pärs′li-frog), *n.* A small toad, *Pelodytes punctatus*, of southwestern Europe: of variable color, sometimes a brownish green. Known also as *mud-diver.* *Proc. Zool. Soc. London*, 1887, p. 577.

parsley-worm (pärs′li-wėrm), *n.* Same as ★*celery-caterpillar.*

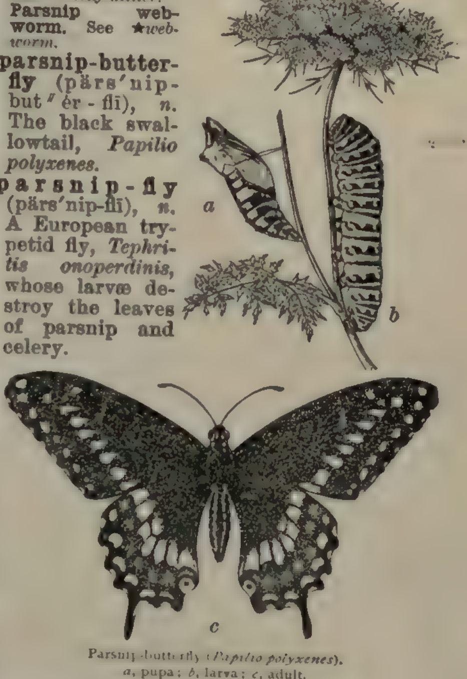
parsleywort (pärs′li-wėrt), *n.* Any plant of the *Apiaceæ* or parsley family; an umbellifer.

It has consisted in cultivating one of our *parsleyworts* (*Anthriscus sylvestris*). *Yearbook U. S. Dept. Agr.*, 1898, p. 369.

Parsnip leaf-miner. See ★*leaf-miner.*—**Parsnip web-worm.** See ★*web-worm.*

parsnip-butterfly (pärs′nip-but″ėr-flī), *n.* The black swallowtail, *Papilio polyxenes.*

parsnip-fly (pärs′nip-flī), *n.* A European trypetid fly, *Tephritis onoperdinis*, whose larvæ destroy the leaves of parsnip and celery.



Parsnip-butterfly (*Papilio polyxenes*).
a, pupa; *b*, larva; *c*, adult.

parsondom (pär′sn-dum), *n.* **1.** The state of being a parson.—**2.** The clergy. [Rare.]

parsoness (pär′sn-es), *n.* A female parson. [Rare.]

part, *n.*—**Accessory parts.** See ★*accessory.*—**Added part** or **voice.** See ★*add.*—**Dead's part.** In *Eng. law*, the part of the personal estate of a decedent which, by the custom of London, York, and some other jurisdictions, became the property of the administrator or executor. Originally the Church filled these offices, and the portion was used in charities. The amount varied according as the deceased left a widow and next of kin. It was abolished in the reign of James II., when the property was made subject to the statute of distributions.—**Homogeneous parts.** (*b*) Sing. In *geom.*, a part of the same dimensionality as its whole.—**Outer parts** or **voices,** in *music*, the extreme parts or voices in the harmony, usually the treble and bass.—**Part of fortune,** in *astrol.*, the lunar horoscope; the point which by oblique ascension is as far distant from the ascendant as the moon is from the sun. It was supposed to influence the pecuniary affairs of the native.— **Reasonable part**, in *old Eng. law*, that part of a man's estate that fell to either the widow or children of the deceased. Under Henry II. the widow had one third and the issue had one third. The remainder could be disposed of by will. If only the wife or only the issue survived him, the legator could dispose of one half the estate by will. See *reasonable dower*, under *dower*^{2}, 2.—**Speaking part**, on the stage, the part of an actor who has words to utter, no matter how few.

part, *v.* I. *trans.* 9. Technically, in assaying, to separate (silver from its alloy with gold) by dissolving out (the silver) with nitric acid.

II. *intrans.* 6. To give up; part with; pay (money); shell out: as, he *parted* well. [Slang.]

part. [*l. c.* or *cap.*] An abbreviation of *participle.*

part. adj. An abbreviation of *participial adjective.*

partan, *n.* 2. A crabbed, sour, cross-looking person. *N. E. D.*

partan-full (pär'tạn-fůl), *a.* Entirely full; full as a crab is of meat. *N. E. D.*

partan-handed (pär'tạn-han″ded), *a.* Stingy; mean. *N. E. D.*

part-book (pärt'bůk), *n.* In *music*, a book in which the notes for any one voice in part-music are given. In early times all part-music was thus separately written or printed.

parted, *p. a.* 5. Having a part or character in a play allotted to (one): as, the leading man was badly *parted.*

> I have seen Sir Henry better '*parted*' a score of times, and Miss Ellen Terry a hundred times.
> *Mod. Newspaper. N. E. D.*

parter, *n.* 2. A finer; a purifier of gold and silver: so called because, by fire and water, the gold or silver was 'parted' from baser metals.

Parterre d'eau, a body of water with or without fountains, arranged as a part of a scheme for a park or garden: as, the two *parterres d'eau* of the upper terrace at Versailles.

partes infidelium (pär'tēz in-fi-dē'li-um). [L. *partes*, pl. of *pars*, part, region; *infidelium*, gen. pl. of *infidelis*, unbelieving, infidel.] Regions where the Christian faith is not known; heathen or pagan countries; figuratively, uncivilized or uncultured countries.

> Men yet living can remember when in the eyes of the universal church of learning all cisatlantic countries, our own included, were *partes infidelium.*
> *S. Newcomb*, in Smithsonian Rep., 1897, p. 89.

parthenian (pär-thē'ni-ạn), *a.* [Gr. *παρθένιος*, maidenly, virgin, + *-an.*] Of or pertaining to a virgin or to virginity.

parthenic (pär-then'ik), *a.* [Gr. *παρθενικός*, virgin.] Pertaining to, or being, a virgin; virgin; pure.

parthenicine (pär-then'i-sin), *n.* [*Parthen(ium)* + *-ic* + *-ine*^{2}.] A bitter crystalline alkaloid found in *Parthenium Hysterophorus.*

parthenion (pär-then'i-on), *n.*; pl. *parthenia* (-ạ̈). [Gr. *παρθένιον*, neut. of *παρθένιος*, < *παρθένος*, a maiden.] In *Gr. antiq.*, a song sung by girls accompanied by the flute.

parthenism (pär'the-nizm), *n.* Same as *parthenogenesis.*

Parthenocissus (pär″the-nọ-sis'us), *n.* [NL. (Planchon, 1887), < Gr. *παρθένος*, virgin, + *κισσός*, ivy: the equivalent of the French name of *Parthenocissus quinquefolia*, *vigne vierge*, and its English name, *Virginia creeper.*] A genus of about 10 species of woody climbing vines, closely related to *Ampelopsis* and belonging to the grape family. The species are natives of central and eastern North America and Asia. They have digitately compound or rarely simple leaves, mostly disk-bearing tendrils, and a compound cymose or paniculate inflorescence. The Virginia creeper, *P. quinquefolia*, and the Japanese ivy, *P. tricuspidata*, are well known in cultivation. See cut under *creeper*, 3.

parthenogenesis, *n.* 3. Alternation of generations; metagenesis.

> The word *Parthenogenesis* . . . was first used by Owen in the sense of Alternation of Generations.
> *E. F. Phillips*, in Proc. Amer. Philos. Soc., Oct. 16, 1903, [p. 276.

Artificial parthenogenesis, the artificial initiation of the process of development in an egg by something else than a male cell. See *artificial* ★*fertilization.*

> These results, at first contested and even scouted, have been obtained by other workers in many lands. There is no longer a shadow of doubt that *artificial parthenogenesis*, as the process is technically termed, is an established fact. *C. Snyder*, New Conceptions in Sci., p. 212.

Complete parthenogenesis. (*a*) The complete development of an unfertilized egg into an adult animal. Complete parthenogenesis may be *tychoparthenogenesis* or exceptional parthenogenesis, or *isoparthenogenesis* or normal parthenogenesis. (*b*) The type of parthenogenesis in which the fertilized eggs produce only one sex. [Rare.] —**Gynogenetic parthenogenesis.** See ★*gynogenetic.* —**Normal parthenogenesis**, isoparthenogenesis; the occurrence of parthenogenesis as part of a normal life-history. Two types of normal parthenogenesis are to be distinguished: (*a*) The parthenogenetic, and usually viviparous, development of all the eggs of certain females, as in the *Aphidæ* and *Cladocera*. Parthenogenesis of this sort accompanies an alternation of generations between a generation or generations of parthenogenetic females and a generation consisting of males and of females that lay fertilized eggs. In the *Aphidæ*, no males are found during the summer and all the individuals are females incapable of fertilization. They give birth viviparously to females like themselves, and this process of viviparous parthenogenetic reproduction goes on, generation after generation, as long as the conditions of life are favorable. In a hothouse where there is a uniformly high temperature and plants grow throughout the year, it may continue for several years, with fifty or more generations which consist of females exclusively. The eggs that undergo parthenogenetic development into embryos within the bodies of these females are known as *summer eggs.* As the autumn approaches, a generation of *sexupara*, or viviparous females which give birth parthenogenetically to a generation which consists of males and of females that are not parthenogenetic or viviparous, the so-called *sexuales*, is produced. The females to which the sexupara give birth unite sexually with the males and lay the fertilized *winter eggs*, which usually have a long dormant period, lasting through the winter; and they hatch, in the spring, into the first generation of viviparous parthenogenetic females. The life-histories of the different species of plant-lice, and of the *Cladocera*, differ somewhat, in details, from this description, but they all present an alternation between viviparous females that produce parthenogenetic summer eggs and a generation of males and of females that lay fertilized winter eggs. The terms *heteroparthenogenesis*, *heterogeny*, and *pseudoparthenogenesis* have been proposed by different writers to designate this sort of normal parthenogenesis. (*b*) The normal development of some of the eggs laid by a female animal without fertilization, as in the honey-bee. After the nuptial flight the queen bee returns to the hive with the spermatic receptacle filled with spermatozoa, which retain their vitality for the rest of her life, and fertilize some of the eggs, but not all, as they pass through the oviduct past the duct of the spermatic receptacle. The eggs that are not fertilized develop into male bees or drones, while the fertilized eggs produce females, which may become queens or perfect females, or workers or arrested females, according to the treatment which they receive from the workers after they have been laid. The workers, which make no nuptial flight and are incapable of sexual union, sometimes lay eggs which give rise to males.—**Occasional parthenogenesis**, the development without fertilization of a few of the eggs produced by an organism the eggs of which do not usually develop without fertilization; tychoparthenogenesis.—**Partial parthenogenesis**, the incomplete or partial development of unfertilized eggs.

> The question whether there is parthenogenetic development among any of the Vertebrates is one which has been much discussed. If there are any cases at all they are cases of *partial parthenogenesis*, since in no case is it claimed that development goes farther than the first few cleavage stages.
> *E. F. Phillips*, in Proc. Amer. Philos. Soc., Oct. 16, [1903, p. 304.

parthenogenitive (pär″then-ọ̄-jen'i-tiv), *a.* Same as *parthenogenetic.* [Rare.]

parthenogonidium, *n.* 2. In protozoans, as *Volvox*, an asexual cell capable of reproducing another cell or a colony.

parthenolatry (pär-the-nol'ạ̈-tri), *n.* [Gr. *παρθένος*, virgin, + *λατρεία*, worship.] Worship of a virgin or of the Virgin.

Partho-Greek (pär″thọ-grēk'), *a.* Parthian and Greek; pertaining to Greek civilization in Parthia: as, a *Partho-Greek* city; a *Partho-Greek* coin.

Partho-Greek Coin.

> The *Partho-Greek* city of Seleucia is represented on coins as seated in the same way on a rock with a river at her feet. *P. Gardner*, in Jour. Hellenic Studies, IX. 77.

parti (pär-tē'), *n.* [F., side, means, match, marriage: see *party*^{1}.] A person considered with reference to his means or position as related to marriage: as, a good *parti* (F. *un bon parti*), a good match in regard to pecuniary and social status.

partial. I. *a.*—**Partial bulkhead.** See ★*bulkhead.* —**Partial indulgence**, in the *Rom. Cath. Ch.*, an indulgence which takes away a part only of the temporal punishment due to sin. *Cath. Dict.*

II. *n.*—**Upper partial**, in *acoustics*, an overtone of high pitch, not necessarily in harmonic relation to the fundamental tone.

partialist, *n.* 3. One whose views are partial; one who knows or sees only a part of anything.

partialistic (pär-shạ̈-lis'tik), *a.* Pertaining to or characteristic of a partialist or of partialism.

participatory (pär-tis'i-pạ̄-tọ̄-ri), *a.* Participating.

particle, *n.* 4. In a document of any kind, a very small part of any statement or proposition; a clause. *N. E. D.*—5. In the *Rom. Cath. Ch.*, the host given to each lay communicant.—6. In *mech.*, a body or portion of matter so minute that, while it possesses mass, it may be treated as a geometrical point.—**Alpha particles**, inactive particles projected from the radio-elements, such as radium, during the changes which these spontaneously undergo. They are held to be positively charged particles having a mass approximately equal to that of an atom of helium and projected with one tenth the velocity of light.—**Beta particles**, particles, projected from the radio-elements, which have a negative electric charge and an apparent mass approximately $\frac{1}{1000}$ as great as that of the atom of hydrogen. They are supposed to be identical with the particles which constitute cathode-rays.—**Central particle**, in *cytol.*, same as ★*centrosome.*

particular. I. *a.*—**Particular synod.** See ★*synod.*

II. *n.*—**London particular.** (*a*) A special quality of Madeira wine as imported for the London market. (*b*) A humorous name for a London fog. *N. E. D.*

particularist, *n.* II. *a.* Pertaining to or characterized by particularism.

> Busch, unlike most caricaturists, devotes no attention to the princes, prelates or potentates engaged in the Kulturkampf or the *particularist* movement.
> *Bookman*, Sept., 1905, p. 13.

Particulate inheritance. See ★*inheritance.*

partie^2 (pär-tē'), *n.* [F., a part, a party. See *party*^{1}.] 1. A part; a party.—2. In *music*, same as *partita.*—3. A game which requires more than one deal to decide it, such as piquet, in which there are six deals.—**Partie carré**, a party of four persons.—**Partie honteuse**, something to be ashamed of; a shameful side; a disgrace.

> The gravest of all possible complications of appendicitis still remains a "*partie honteuse*" of modern practice. *Med. Record*, June 27, 1903, p. 1005.

parting, *n.* 1. (*g*) In *geol.*, a thin stratum of foreign material separating similar superimposed beds of coal, limestone, sandstone, or slate, and serving to split the quarried seam into two parts. Partings are parallel to the bedding-planes of the rock, and they indicate temporary changes in the sedimentation, with the formation of thin bands of coarser or finer materials.

parting-acid (pär'ting-as″id), *n.* The technical name for nitric acid which is free from hydrochloric acid or chlorin, and therefore fit for use in parting gold from silver in alloys of these two metals.

parting-bead (pär'ting-bēd), *n.* Same as *parting-strip.*

parting-flask (pär'ting-flȧsk), *n.* Same as *parting-glass.*

partinium (pär-tin'i-um), *n.* [See the def.] An alloy consisting of 96 parts of aluminium, 2.4 of antimony, .8 of tungsten, .64 of copper, and .16 of tin: invented by G. H. Partin. It can be either cast or rolled. *Nature*, Oct. 2, 1902, p. 545.

parti pris (pär-tē' prē'). [F., 'a side taken': see *party*^{1} and *prize*^{1}.] The side taken; previous bias; firm prejudice; a mind made up as to a course of action.

> The requirements of his *parti-pris* sometimes carried him a long way from truth.
> *J. C. Van Dyke*, Modern French Masters, p. 120.

partitino (pär-ti-tē'nō), *n.* [It., dim. of *partita*, a part: see *party*^{1}.] In *musical notation*, a small part or score for some special instrument or voice, attached or auxiliary to a general score.

partition, *n.*—**Maxwell's law of partition.** See ★*law*^{1}.

partition, *v. t.* 3. (*a*) To separate into parts. (*b*) To make a selection of elements possessing a common characteristic: as, to *partition* a manifold.

partitionary (pär-tish'ọn-ạ̄-ri), *a.* [*partition* + *-ary.*] Relating to or of the nature of partition specifically of lands. *N. E. D.*

partitioner (pär-tish'ọn-ėr), *n.* One who partitions or partitions off; specifically, one who partitions lands.

partition-plate (pär-tish'ọn-plāt), *n.* A metal plate for dividing a chamber or compartment into two parts.

partiversal (pär-ti-vėr'sạl), *a.* [L. *pars* (*part-*), part, + *versus*, pp. of *vertere*, turn, + *-al*^{1}.] In *geol.*, varying in direction through a semicircle: specially applied to the radiating dips of a pitching anticline or syncline, and specially contrasted with *quaquaversal*, which implies dips radiating through an entire circle, as in the case of a dome.

partivity (pär-tiv′i̤-ti), *n.* The quality of being divided into a number of parts.

> A quartic having three acnodes is the limiting form of an anautotomic quartic in which the acnodes are replaced by three perigraphic curves; and if a line cutting the fourth portion in four real points be projected to infinity, the projection will be septipartite. From this it appears that the *partivity* of a curve of the *n*th degree cannot be less than $n + \frac{1}{2}(n-1)(n-2)$.
> *Nature*, Nov. 27, 1902, p. 80.

Partnach beds. See ★*bed*^{1}.

partner, *n.* 4. In an involution, the element coupled with a given element.—**Liquidating partner**, in *law*, the member of a dissolved partnership who concludes its business.—**Nominal partner**, one having no interest in the partnership, but who allows himself to be represented as a partner, and may therefore be held liable for the partnership debts.—**Secret partner.** Same as *dormant partner* and *silent partner* (which see).

partnering (pärt′nėr-ing), *n.* In the cotton-spinning trade, the practice of allowing only one piecer to every two spinners (thus, in effect, making them partners), favored by the employers but condemned and resisted by the trade-unions, which insist on two piecers to each spinner. Also called *joining*. [Trade-union cant.]

> Occasionally the employer has tried to have only one boy-piecer to two spinners. This system, called "joining" or "*partnering*," is always resisted by the union, which insists on each spinner having two piecers under him, on the ground that any other arrangement must necessarily involve a diminution of spinners' earnings.
> *Webb*, Industrial Democracy, II. 475, note.

partnership, *n.*—**Articles of partnership.** See ★*article*.

partridge, *n.* 6†. A cannon charge which consists of a number of missiles fired together; a sort of case-shot; a grenade.—**Plumed partridge**, *Oreortyx pictus*, the mountain quail of California, distinguished by a long, slender plume on each side of the head. See cut under *Oreortyx*.—**Snow partridge**, a game bird, *Lerwa lerwa*, found at high altitudes in the Himalayas. It is about the size of a ruffed grouse, black above, barred with white, and chestnut below.—**Thick-billed partridge** a common name for the gallinaceous birds of the genus *Odontophorus*, found in Central and South America.

partridge-dove (pär′trij-duv), *n.* In the West Indies, a ground-pigeon of the genus *Geotrygon*. Known also as *quail-dove*.

partridge-pigeon (pär′trij-pij″o̤n), *n.* See ★*pigeon*.

partridge-shell (pär′trij-shel), *n.* A large speckled tun-shell, *Dolium perdrix*.

partridge-vine (pär′trij-vīn), *n.* Same as *partridge-berry*.

partridge-wood, *n.* 2. In Australia, a palm, *Livistona inermis*, or its wood, which is beautifully marked and is of a light gray color.—3. In *mycol.*, the fungus *Stereum frustulosum*, which forms a crust-like growth upon the bark of various forest-trees.

partridging (pär′trij-ing), *n.* The sport of shooting partridges. *N. E. D.*

partschinite (pär′chi-nīt), *n.* [Named after Professor P. *Partsch* of Vienna.] A mineral believed to have the composition of the manganese garnet spessartite, but monoclinic in crystallization.

part-singer (pärt′sing″ėr), *n.* One who sings or is skilled in part-music or part-song.

parturience (pär-tū′ri-e̤ns), *n.* [*parturien(t)* + *-ce*.] Same as *parturition*.

Parturient canal. See *obstetric* ★*canal*.

party^1, *n.* 11. Same as ★*parti*.—**Party and party**, pertaining to or between two parties in an action at law: used adjectivally.

party-colored, *a.* 2. Figuratively, checkered; diversified; of many lights and shades: as, a *party-colored* past.

paru (pä′rö), *n.* [Braz. (Marcgraf).] A common name of *Pomacanthus paru*, a chætodontoid fish of the West Indies.

Parula, *n.* 2. [*l. c.*] The parula warbler, *Compsothlypis americana*. See *Parula*.

paruric (pa-rö′rik), *a.* [NL. *parur(ia)* + *-ic*.] Pertaining to, or affected with, paruria.

parusia, *n.* 2. (*a*) The nativity. (*b*) The second advent.

parusiamania (pa-rö″si-ạ̈-mā′ni-ạ̈), *n.* [*parusia* + *mania*.] Intense excitement with regard to the parusia or second advent.

> Men chanted, raved, spoke in unknown tongues, prophesied, gazed up into heaven all day, longed for vision, with a real *parusiamania*, straining to grasp the momentous fact that death was swallowed up in victory, that its incubus and awful inhibition was removed, so that every human faculty let itself go with abandon to excesses often riotous.
> *Amer. Jour. Relig. Psychol. and Education*, May, 1904, [p. 40.

parvenant (pär-ve-naṅ′), *a.* [F., pr. ppl. of *parvenir*. See *parvenu*.] Rising to or attaining position; "arriving." See *parvenu*.

parvenuism (pär′ve-nū-izm), *n.* [*parvenu* + *-ism*.] The character of being a parvenu.

parvifolious (pär-vi-fō′li-us), *a.* [L. *parvus*, small, + *folium*, leaf, + *-ous*.] Having small leaves.

parvipotent (pär-vip′ọ̄-tent), *a.* [L. *parvus*, small, + *potens(-t)*. See *potent*.] Having little power: opposed to *omnipotent*.

parvoline (pär′vọ̄-lin), *n.* Tetramethylpyridine, $C_5HN(CH_3)_4$. Of the several isomeric varieties, the principal one is 2,3,4,5-tetramethylpyridine, an oil which occurs in coal-tar. Other varieties are made by distilling bituminous shales, heating cinchonine with potash, or by the decay of horse-flesh or mackerel. They are basic oils which form salts with acids.

pas^2, *n.*—**Pas d'âne**, in arms and armor, a small additional guard on the hilt of a sword just above the blade.

pasa^1 (pä′sạ̈), *n.* [Sp., ‹ L. (*uva*) *passa*, dried grapes; *passa*, fem. of *passus*, ppr. of *pandere*, spread out.] A raisin, or grape dried in the sun: hence applied to other sun-dried fruits or berries.

> The "*pasas*," or half-dried grape, in whose praise too much could not be said.
> *J. G. Bourke*, On the Border with Crook, p. 60.

pasa^2 (pä′sä), *n.* [Bolivian.] A kind of kaolin or white clay eaten by the Indians of Bolivia. *Deniker*, Races of Man, p. 145.

Pascal's law of fluid pressures. See ★*law*^{1}.

pasch-day (pask′dā), *n.* Good Friday.

Paschen's law. Same as *law of* ★*displacement*. See also *laws of* ★*radiation*.

pasear (pä-sạ̄-är′), *n.* [Sp. *pasear*, take a walk, ‹ *paso*, a step. See *pass*, *n.*] A walk for pleasure; a promenade. [Southwestern U. S.]

> He is ever with me when I go on the *pasear*.
> *Bret Harte.* *Int. Dic.*

paseng (pä-seng′), *n.* The wild goat, or bezoar-goat.

paseo (pä-sā′ō), *n.* [Sp., ‹ *pasear*, *v.* See ★*pasear*, *n.*] Same as ★*pasear*. [Southwestern U. S. and Spanish America.]

pasigraph (pas′i-gråf), *v. t.* [*pasigraph(y)*.] To write in pasigraphic characters.

pasotes (pä-sō′tās), *n.* [W. Ind.] Same as ★*apasotes*.

pasquilic (pas-kwil′ik), *a.* [*pasquil* + *-ic*.] Resembling or having the character of a pasquil. [Rare.]

pass, *v.* I. *intrans.*—**To pass over.** (*b*) In *old Eng. law*, to lose a case.—**To pass over the range.** See ★*range*.

II. *trans.*—**Passed ball.** See ★*ball*^{1}.—**Passed pawn.** See ★*pawn*^{2}.

pass, *n.* 14. The act of a player in throwing a ball to another: as, that was a bad *pass*. See *pass, v. i.*, 18.—15. A shaggy, coarse, Russian hemp, the third quality. Known also as *pass-hemp*.—16. In *geom.*, the point common to a plane and a straight not on it.—**Mediterranean pass.** See *Mediterranean* ★*passport*.—**To make the pass**, in *card-playing*, to shift the two parts of the pack to their original positions after they have been cut.

passage, *n.* 15. In the *manège*, the movement of a horse when passaging; an advance sideways in obedience to the pressure of the rider's leg: a very showy movement, often executed in a march past.—**False passage**, in *surg.*, rupture of the wall of a membranous tube, such as the urethra, occurring during the passage of a sound or other instrument.—**Inferior passage.** Same as *inferior* ★*transit*.—**Method of passage.** See ★*method*.—**Tint of passage**, the grayish color observed in the field of a polariscope when the transition from red to blue occurs.—**Urinary passages**, the tubules and pelvis of the kidneys, the ureters, bladder, and urethra taken collectively.

passage-bed (pas′ạ̄j-bed), *n.* In *geol.*, a transitional bed between others which are of contrasted physical characters or contain different faunas or floras. The passage-bed in the former case exhibits intermediate characters, in the latter intermediate fossils.

> The leading characteristic of this Middle Potomac flora is the proportion of Dicotyledons. Notwithstanding this apparent *passage-bed*, there is a marked difference between the Older and the Newer Potomac floras, very few species passing from the one to the other.
> *Encyc. Brit.*, XXXI. 433.

passage-cell (pas′ạ̄j-sel), *n.* Same as ★*transfusion-cell*.

passage-form (pas′ạ̄j-fôrm), *n.* In *biol.*, a form which is transitional or intermediate between two species, genera, or other groups of organisms; a connecting-link.

passaggio (pa-säj′ọ̄), *n.* [It.] In *music*, a modulation or a bravura ornament or flourish.

passalid (pas′a̤-lid), *n.* and *a.* I. *n.* A member of the coleopterous family *Passalidæ*.

II. *a.* Of or pertaining to the family *Passalidæ*.

Passalora (pas-a̤-lō′rạ̈), *n.* [NL. (Fries, 1849), ‹ Gr. πάσσαλος, a nail, from the general appearance. The second part (*-ora*) is quite obscure; perhaps a mere fancy or for euphony.] A genus of hyphomycetous fungi having erect, simple, pluriseptate conidiophores which bear elongate, uniseptate, colored conidia. *P. bacilligera* is a common species parasitic on the leaves of alder (*Alnus*) in Europe.

passant, *n.* 3. In *numis.*, a figure on a coin in a walking position from right to left or from left to right. *W. C. Hazlitt.*

pass-boat (pås′bōt), *n.* A small boat of the style of a punt.

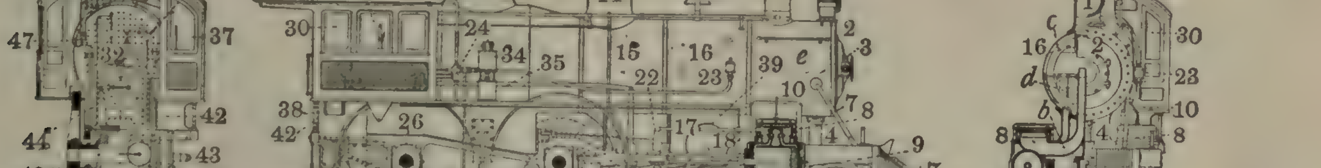
pass-door (pås′dōr), *n.* In a theater, the door of communication between the stage and the house.

passe^2 (päs), *n.* [F., ‹ *passer*, pass: see *pass*, *v.*] In *roulette*, a bet that the number will be one of those from 19 to 36. *Amer. Hoyle*, p. 376.

passecaille (päs-käy′), *n.* [F., ‹ It. *passacaglia*.] Same as *passacaglia*.

passenger, *n.* 5. In a boat-race, one of the crew who adds to the weight of the boat without doing his share of the work; hence, an ineffective member of a football-team, etc. *N. E. D.* [Colloq.]

passenger-engine (pas′en-jėr-en″jin), *n.* A locomotive engine constructed specially for passenger traffic. While capable of higher speed, its tractive power is less than that of a freight-engine. See *locomotive*.



Passenger-Engine.

1, headlight; 2, front end; 3, signal-lamp; 4, spark-pipe; 5, smoke-stack; 6, pilot; 7, pilot draw-bar; 8, steam-chest; 9, cylinder; 10, oil-pipe; 11, cylinder-cock; 12, engine-truck; 13, bell; 14, sand box; 15, sand-pipe; 16, jacket; 17, valve-stem; 18, guide-cup; 19, cross-head; 20, guides; 21, link; 22, rocker-arm; 23, injector-check; 24, injector; 25, driver-spring; 26, back driving-axle; 27, driving-wheel brake; 28, steam-dome; 29, whistle; 30, cab; 31, throttle-lever; 32, boiler-head; 33, gage-cocks; 34, donkey-pump; 35, reach-rod; 36, equalizer; 37, reverse-lever; 38, auxiliary reservoir; 39, main air-reservoir; 40, back driving-wheel; 41, front driving-wheel; 42, cab bracket; 43, crank-pins; 44, fire-door; 45, steam-gage; 46, sight feed-lubricator; 47, steam heat-reducing valve; 48, driving-wheel tire; 49, auxiliary air-reservoir. *a*, cylinder (same as No. 9); *b*, exhaust-passage; *c*, steam-pipe; *d*, exhaust-pipe; *e*, smoke-arch.

passenger-kilometer (pas′ẹn-jėr-kil″ọ-mē-tėr), *n.* A unit of railroad accounts which represents the transportation for one kilometer of one passenger: used instead of the passenger-mile wherever distances are measured in kilometers.

> The number of passengers carried in 1898 was 126 millions, the number of *passenger-kilometres* amounting to 4439 millions. *Geog. Jour.* (R. G. S.), XVI. 221.

passenger-mile (pas′ẹn-jėr-mīl″), *n.* A unit of railroad accounts which represents the transportation of one passenger for the distance of one mile.

passepartout (pas-pär-tö′), *v. t.* [*passe-partout, n.*] To place in a passe-partout frame.

passglas (pȧs′glȧs), *n.* [Also *paszglas*; G., < *pass* (*pasz*), measure, peg (= E. *pass*^{1}, *pace*), + *glas* = E. *glass*.] A tall, cylindrical drinking-glass, decorated in enamel colors and divided by horizontal lines into equal sections: formerly used in Germany. See the extract.

> These glasses belong to the eighteenth century, and were used at drinking parties; whoever failed to drink down to the mark when a toast was proposed was compelled to drink to the next mark.
> *C. H. Wilde*, in The Connoisseur, Sept., 1904, p. 29.

pass-hemp (pȧs′hemp), *n.* See ★*pass*, *n.*, 14.

passifloraceous (pas″i-flọ-rā′shius), *a.* Having the characters of the *Passifloraceæ*.

passing-penny (pȧs′ing-pen″i), *n.* See ★*pass-penny*.

passing-stroke (pȧs′ing-strōk), *n.* In *lawn-tennis*, a stroke by which the ball is driven past and out of reach of the opponent as he is coming toward the net.

passion, *n.* **9.** In *religious art*, a representation of the passion of Christ: as, the greater and lesser *passions* of Albrecht Dürer.

passionate, *a.* **II.** *n.* One who is strongly moved by passion, especially the passion of love. *N. E. D.*

passion-fruit (pash′ọn-fröt), *n.* The edible fruit of some species of passion-flower. *N. E. D.*

passionful (pash′ọn-fůl), *a.* Full of passion; having capacity for intense feeling.

> The savage man conceived the diverse bodies collectively constituting his environment to possess inherently mystic potence, and to be living, thinking, willing, *passionful* beings who lived, thought, willed, became angry or pleased, like himself under like conditions.
> *Amer. Anthropologist*, Jan.–March, 1902, p. 33.

passion-lettuce (pash′ọn-let″is), *n.* An early kind of spring lettuce. *N. E. D.*

passion-tree (pash′ọn-trē), *n.* A species of passion-flower cultivated for its fruit. *N. E. D.*

passival (pas′i-vạl), *a.* [*passive* + *-al*^{1}.] In *gram.*, of or pertaining to the passive voice. [Rare.]

> Our ears are still familiar in Bible English with this *passival* "of." *J. Earle*, Philol. Eng. Tongue, p. 482.

Passive state, in *chem.*, a condition brought about in metallic iron by immersion in concentrated nitric acid, the metal ceasing to be attackable by nitric acid or by solutions of copper or silver nitrate. It is probably due to the formation of a thin film of oxid of iron which acts as a protective coating. This phenomenon has been observed with other metals and other reagents, a similar explanation probably being applicable.

> The iron electrode in the fused sodium hydrate is gradually covered with a protecting layer or skin of oxid. As soon as this has been produced, the iron is no longer attacked, while previously it went into solution in the fused salt as iron oxid, with the development of hydrogen gas. This protecting skin can be produced rapidly if the iron is dipped for a short time into fused saltpeter, and subsequently, carefully freed from the saltpeter by means of water. The iron thus coated with this protecting skin, is called "*passive*" because the fused sodium hydrate produces no further changes on it.
> *Electrochem. Industry*, Oct., 1904, p. 401.

passometer (pa-som′e-tėr), *n.* [L. *passus*, step, + Gr. *μέτρον*, measure.] A pedometer.

pass-out (pȧs′out), *a.* Used in, or permitting, passing out.—**Pass-out check**, a check which enables the holder to leave or pass out of a place of entertainment and return. *N. E. D.* [Eng.]

pass-penny (pȧs′pen″i), *n.* In *ancient Greece*, an obolus, intended to pay the soul's ferriage over the Styx. The coin was placed on the tongue of the dead. Also *passing-penny*.

passport, *n.*—**Mediterranean passports**, passports issued by the British admiralty, and by the United States during their early history, which, according to treaties with the Barbary States, secured to the ships to which they were granted free passage in the Mediterranean, unmolested by the Barbary pirates.—**Passport Bureau.** See ★*bureau*.

passulate (pȧs′ụ-lāt), *v. t.*; pret. and pp. *passulated*, ppr. *passulating*. [LL. *passulatus*, < It. *passolato*, dried in the sun.] To dry (grapes) into raisins. *N. E. D*

passulation (pȧs-ụ-lā′shọn), *n.* [*passulate* + *-ion*.] The process of passulating or drying in the sun, as grapes into raisins.

pass-woman (pȧs′wům″ạn), *n.* In the Universities of Great Britain, a woman who passes for her degree without honors. *N. E. D.*

paste^{1}, *n.*—**Arsenical paste of Frère Côme.** See ★*arsenical*.—**Bougard's paste**, a caustic paste composed of 60 parts of wheat flour, 1 of arsenic, 5 of cinnabar, 5 of sal ammoniac, ½ part of corrosive sublimate, and 245 parts of solution of zinc chlorid. It is used in the treatment of cancer.—**Carbosulphuric paste**, a paste made with sulphuric acid and carbon, such as charcoal.—**Caustic paste**, chlorid of zinc made into a paste with flour and water.—**Esmarch's paste**, a caustic paste composed of 1 part of arsenic, 1 of morphine sulphate, 8 of calomel, and 48 of acacia: used in the treatment of cancerous and other growths.—**Paste dye.** See ★*dye*^{1}.—**Propiolic paste**, the trade-name of a pasty mass which contains about 25 per cent. of ortho-nitrophenyl-propiolic acid. In the presence of an alkali and a reducing agent it yields artificial indigo identical with the purified product from the indigo-plant. This process represents the first commercially successful synthesis of the important dye in question, and was for a time in use by calico-printers.—**Scar paste**, paste for covering scars or cuts in making harness leathers. *Modern Amer. Tanning*, p. 226.—**Tin paste**, a mass of pasty or pulp-like consistence, chiefly stannic hydroxid obtained by adding caustic soda to a solution of stannic chlorid, used in some processes of calico-printing.

paste-fitter (pāst′fit″ėr), *n.* In *shoemaking*, the man who fits together with paste the parts of the boot-uppers for the machine. *N. E. D.*

pastel, *n.* **3.** Figuratively, a short prose study, poetic, picturesque, but sketchy.—**4.** In *textiles*, a soft half-faded tint in fabrics used for dress-materials: so called from its resemblance to the tones of old pastel drawings. [Recent.] *Dry Goods Economist*, June 13, 1908.

pastel-paper (pas′tel-pā″pėr), *n.* Paper coated with a very fine sandy material to form a surface that will catch and hold the colored chalks used in pastel-work. See *pastel*.

pastern, *n.* **3.** That part of a dog's foot just above the toes, or the metacarpals and metatarsals. Anatomically this corresponds to the palm of the hand and sole of the foot in man, or to the cannon-bone in a horse.

> Limit dogs was won by St. Elvan, flat in ribs, head good, but not clean cut, not first rate in *pasterns*; head ordinarily good. Royal Grand, second, excelled the winner in every way, as did Duke of Gloucester, third.
> *Forest and Stream*, Feb. 21, 1903, p. 151.

pasteurellosis (pas-tėr-e-lō′sis), *n.*; pl. *pasteurelloses* (-sēz). [F. *pasteurellose*; < *Pasteur* + *-elle* + *-osis*.] A generic name including a group of highly fatal infectious diseases in different species of animals, characterized by sudden onset, rapid course, marked hyperthermia, accelerated breathing and pulse, and caused by bacilli of the hemorrhagic septicemia group. For instance, the pasteurellosis of birds is the same as fowl-cholera; of rabbits the same as rabbit septicemia; of wild animals, the same as game and cattle disease; of cattle, the same as hemorrhagic septicemia; of buffalo, the same as barbone; of swine, the same as swine-plague, etc.

> The vaccination against *pasteurelloses*, by MM. Joseph and Marcel Lignières. The name *pasteurelloses* is applied to a group of diseases of the same type, including typhoid fever and pneumonia of the horse, chicken cholera and hæmorrhagic septicæmia of the sheep, ox, and pig. It has been proved by experiment that it is possible to prevent these diseases by a process of vaccination.
> *Nature*, May 29, 1902, p. 120.

Pasteurizer (pas-tėr′ī-zėr), *n.* An apparatus for sterilizing a fluid by the method of Pasteurization.

paste-water (pāst′wâ″tėr), *n.* In *bookbinding*, same as *paste-wash*.

pastiness (pās′ti-nes), *n.* Pasty consistence, feeling, or appearance.

pastor, *n.* **5.** A fish, *Nomeus gronovii*, which lives in the tropical parts of the Atlantic and Pacific oceans and swims near the surface in rather deep water. It is often found among the tentacles of the Portuguese man-of-war.

pastor (pȧs′tọr), *v. t.* [*pastor*, *n.*] To shepherd, literally or figuratively.

pastoral, *n.* **6.** A treatise on the duties of a pastor. *N. E. D.*

pastoralist (pȧs′tọr-ạl-ist), *n.* [*pastoral* + *-ist*.] **1.** A shepherd; a sheep- or cattle-farmer and -breeder. The squatters in Australia have taken this name as less invidious than *squatter*.

> The great dispute of 1890 [Australia] originated in a difference between the *pastoralists* and shearers, which caused a deadlock between the *Pastoralists'* Association and the Shearers' Union, and the consequent engagement of a number of non-union shearers for the season.
> *Encyc. Brit.*, XXXIII. 27.

> It so happens that the plants on which the *pastoralist* relies grow or are grown on soil of inferior value to the agriculturist.
> *G. L. Goodale*, in Smithsonian Rep., 1891, p. 641.

2. One who writes pastorals.

> The pretty fancies of sonnetteers, song-writers, and *pastoralists* he [John Donne] passed on one side, and witched les jeunes with a new and poignant lyric.
> *The Academy*, Dec. 15, 1900, p. 608.

3. One who leads a pastoral, rural life.

pastorality (pȧs-tọ-ral′ị-ti), *n.* [*pastoral* + *-ity*.] Pastoral quality in literature or landscape.

> Take . . . a glance at some other peculiarities of this school of 1850— . . . as the admixture of sharp political and personal satire with the fantastic *pastoralities* of the style. *G. Saintsbury*, in Social England, III. 478.

pastorium (pȧs-tō′ri-um), *n.*; pl. *pastoria* (-ạ̈). [NL., < *pastor* + *-ium* (after *auditorium*, etc.).] A parsonage. [Southern U. S.]

pastose (pas-tōs′), *a.* [It. *pastoso*, pasty.] In *painting*, charged with paint or color.

> Luminous shadows and *pastose* lights.
> *J. Barry*, in Lectures on Painting, vi.

pastosity (pas-tos′ị-ti), *n.* [*pastose* + *-ity*.] The character of being pastose. The quality of being charged with paint or color: said of a painting.

past-president (pȧst′prez″i-dẹnt), *n.* One who has been president; an ex-president.

> He was also a *past-president* of the Royal Meteorological Society. *Nature*, Feb. 12, 1903, p. 348.

pastural (pȧs′tụ̄r-ạl), *n.* and *a.* [*pasture* + *-al*^{1}.] **I.** *n*†. Pasture.

> Nocht far frome this is a toune named Ekilis, and thair lykwyse ane ample and plesand *pastural* called the forest in quhilke baith the gret and smal beistes of the Prince vses to feid.
> *J. Dalrymple*, tr. Leslie, Hist. Scotland, I. 19.

II. *a.* Of or pertaining to pasture; yielding pasture. Sometimes erroneously for *pastoral*.

> The *pastural* eminence of Primrose Hill.
> *Clough*, Poems, I. 221. *N. E. D.*

pasture, *n.* **5.** A rocky shore where codfish resort to spawn.—**Stinted pasture**, in *law*, pasturage in common, limited in the use.

> All these species, of pasturable common, may be and usually are limited as to number and time; but there are also commons *without stint*, and which last all the year. *Blackstone*, Com., II. 34.

> In Benson v. Chester it was decided that a right of common *without stint* could not exist in the law
> *J. M. Cooley*, note on foregoing.

pasul (pä′söl), *a.* [Heb.] In Jewish use, disqualified; defective. According to Hebrew tradition, the torah, as well as the megilloth, mezuzah, etc., must be written on parchment according to voluminous, strict rabbinical rules and regulations: the omission of even a single letter or an improperly spaced word or line renders it *pasul*, that is, unfit for ritual purposes. The term is also applicable to persons.

pat^{2}, *adv.* **2.** Just at the present point; just there; without acting or moving: used in the following phrase.—**To stand pat.** (*a*) In *poker*, to play a hand just as it is, without drawing other cards. Hence—(*b*) In *politics*, to adhere obstinately to an existing status or policy, refusing to consider proposals of change or reform; stand still, in a blind or stubborn refusal to disturb existing conditions when they are profitable to one's party or one's self.

Pata. An abbreviation of *Patagonia*.

pataca, *n.* **2.** A Portuguese coin of the seventeenth and eighteenth centuries, equal to 320 reis.—**3.** A Portuguese coin of Mozambique, equal to 6 crusados.—**4.** A silver coin of Macao and Timor, equivalent to 100 avos or 41.63 cents.—**5.** A copper coin of Portugal, equal to 2 cuartos.

patacon (pä-tä-kōn′ or -kôṅ′), *n.* [See *patacoon*.] **1.** A name common to Brabantine and Portuguese coins from the fifteenth to the eighteenth century. The silver dollar so known was worth from 600 to 640 reis.—**2.** A heavy Portuguese copper coin worth 40 reis, issued early in the nineteenth century.—**3.** A Spanish silver coin of the value of 4*s.* 3*d.*

patagon^{1}†, *n.* Same as *patacoon*.

Patagon^{2}† (pat′ạ-gon), *n.* [Sp. *patagon*, clumsy foot.] A member of a tribe of South American Indians, whence Patagonia received its name. *N. E. D.*

Patagonian formation. See ★*formation*.

patagorang (pat-ạ-gō′rang), *n.* [Native Australian.] An aboriginal name for the kangaroo. *E. E. Morris*, Austral English.

pataka^{1} (pä-tä′kä), *n.* [*pataca*, *patacca*. See *pataca*.] An old coin and money of Abyssinia; the dollar, worth two fifths of a sequin.

pataka^{2} (pä′ta-kä), *n.* [Maori.] A storehouse erected on piles. [Australia.]

patao (pä-tä′ō), *n.* [Cuban Sp., from an aboriginal name.] A fish, *Gerres brasilianus*, found in the West Indies and southward.

Patapsco group. See ★*group*[1].

Patarinism (pat′a̤-rin-izm), *n.* [*Patarine* + *-ism.*] The teachings of the Patarines.

pat-ball (pat′bâl), *n.* In *games*, the same as *rounders*.

patch, *n.* **11.** (*a*) A piece of court-plaster used to protect a small wound. (*b*) A piece of cloth, or the like, sewed on a coat or gown as a badge or ornament. In the extract it refers to the band on the cap.

One juvenile wearer of the "*patch*" belonging to H. M. S. Aurora, was in the thick of the fire, carrying messages to and fro.

Daily News (London), Aug. 22, 1900. *N. E. D.*

(*c*) A piece of stiffened cloth, or the like, or a pad, worn over an eye, to protect it.— **Hard patch**, a patch riveted on a boiler-shell or fire-box; one which can be calked by upsetting the edge of the plate into the joint: so called to distinguish it from a soft patch. See *soft* ★*patch*.— **Mucous patch**, a moist whitish tubercle of syphilitic nature, at the anus or on the mucous membrane of the vagina or in the buccal cavity.— **Patch method**, in *forestry*, the clean cutting of small patches to invite reproduction by self-sown seed from the surrounding forest.— **Patch sowing.** See ★*sowing*.— **Purple patch.** See ★*purple*.— **Soft patch**, a patch of boiler-plate put on over a defective place or a hole in the shell or other surface of a boiler and held in place by bolts and not by rivets. The impossibility of bolting the patch so as to make a joint tight enough to calk with the metal of the patch, as in the case of riveted work (see *hard* ★*patch*), compels the insertion of some elastic material, such as red lead or putty, on a fibrous core between the two plates: hence the softness of the joint. Rubber-sheet packing or asbestos sheet may be used; but whatever is used, the joint is not reliable when exposed to heat and internal pressure.

patch-bolt (pach′bōlt), *n.* **1.** A bolt which has a flaring head to fit a countersunk hole: used for bolting a patch on a boiler.—**2.** A bolt which has a flaring head from the top of which projects a square knob for turning the bolt into place, after which the knob is cut off; a tap-bolt.

patchoulene (pa-chö′lēn), *n.* [*patchouli* + *-ene.*] In *chem.*, a hydrocarbon ($C_{15}H_{24}$) obtained by the action of dehydrating agents upon patchouli alcohol. It has an odor like that of cedar, a specific gravity of .939, and a boiling-point of 254–256° C.

Patchouli alcohol, one of the constituents of patchouli oil, from *Pogostemon Patchouli*. It is a transparent, colorless, crystallizable substance, melting at 56° C., with the composition $C_{15}H_{26}O$; a sesquiterpene alcohol. It does not possess the odor of patchouli oil.— **Patchouli camphor.** See ★*camphor*.

patch-piece (pach′pēs), *n.* Same as ★*patch-plate*.

patch-plate (pach′plāt), *n.* A foot-casting; a casting bolted to a structure to form a base or seat for another part; a patch-piece; a packing-piece; a liner.

patch-up (pach′up), *n.* The act of repairing or mending, usually a clumsy temporary performance; the repair so made. [Colloq.]

patchwise (pach′wiz), *adv.* In the manner of a patch; as a patch.

pate[1], *n.* **5.** The flesh split obtained in splitting or leveling a side of leather. *Modern Amer. Tanning*, p. 162.

Pâte changeante, a variety of porcelain which appears to change color in different lights.

M. Regnault, who succeeded M. Ebelman in the directorate of Sevres, was the inventor, while at the Sevres manufactory, of *pâte changeante*. The ware appears, during the day, like gray céladon, and at night, under artificial light, changes to a beautiful pink, whence its name. *Jennie J. Young*, The Ceramic Art, p. 325.

Pâte dure, hard-paste, or natural, porcelain.

patel (pä′tel), *n.* [Marāthī *patil*, Hindustānī *patel*.] In *India*, the head-man of a village. The office is hereditary, and is often held under a government grant. *Yule and Burnell.*

patela, *n.* Same as *puteli*.

Patella ulnaris, a sesamoid found at the elbow-joint of some birds: most conspicuous in penguins.— **Riders' painful patella**, pain and tenderness on pressure of the patella, especially its inner border, occurring in riders who wear stiff and unyielding breeches.

Patellaria (pat-e-lā′ri-ä), *n.* [NL. (Fries, 1823), < L. *patella*, a little dish.] A genus of discomycetous fungi, type of the family *Patellariaceæ*. It has black, superficial, gregarious corneous ascocarps and 4- or more celled hyaline spores. About 30 species are known, occurring on dead wood and stems. *P. atrata* is a common and widely distributed species.

Patellariaceæ (pat-e-lā-ri-ā′sē-ē), *n. pl.* [NL., < *Patellaria* + *-aceæ*.] A family of discomycetous fungi, which has black coriaceous or corneous ascocarps.

patellaric (pat-e-lar′ik), *a.* [*Patellar*(*ia*) + *-ic.*] Derived from the lichen *Patellaria* (or *Parmelia*) *scruposa*.— **Patellaric acid**, a crystalline acid, $C_{17}H_{20}O_{10}$, with a bitter taste, extracted by means of ether. It melts above 100° C., yielding oxalic acid and orcinol.

patellaroid (pa̤-tel′a̤-roid), *a.* [*patellar* + *-oid.*] Shaped like a small, shallow dish.

patellidian (pat-e-lid′i-a̤n), *n.* A member of the *Patellidæ* or limpets.

patellofemoral (pa̤-tel-ō-fem′ọ-ra̤l), *a.* Relating to both the patella and the femur. *Buck*, Med. Handbook, I. 553.

paten[1], *n.* **4.** An iron plate used in making plate-armor. *Meyrick*, Ancient Armour, III. Glossary.

patency, *n.* **3.** Specifically, in *pathol.*, the state of being open or pervious, as a tube or canal.

The retention of vesicular quality depended upon *patency* in some of the tubes, and its amount varied with the proportion of tubes involved.

Med. Record, March 7, 1903, p. 394.

patent[1]. **I.** *a.*— **Patent blue.** See ★*blue*.— **Patent medicine.** (*b*) In England, a medicine which is not protected by letters patent, but is merely a proprietary medicine bearing a government stamp.

II. *n.*— **Lapse patent**, a land patent issued to another by reason of the neglect of the first patentee to perfect his title. It relates back to the date of the original patent, but renders void all conveyances by the ousted patentee.

patentably (pat′e̤n-ta̤-bli), *adv.* Made so that it can be patented; made in such a way that it is patentable.

As many of our readers are aware, patents have been granted in Great Britain under the old patent law, without any inquiry to learn whether the inventions were *patentably* new, according to the law and practice of that country. *Sci. Amer.*, Feb. 28, 1903, p. 159.

pater (pā′tėr), *n.* [L.] Father: used in certain compound words: as, *pater*familias, *pater*noster, etc.; also, colloquially, among schoolboys, as a term of address or mention, like *mater*.

pateraite (pat′e̤-rä̤-īt), *n.* [Named after A. *Patera*, who first examined it.] A black, massive mineral from Joachimsthal, Bohemia, supposed to be essentially cobalt molybdate, but known only in a very impure state.

paterfamiliar † (pā″tėr-fa̤-mil′yä̤r), *adj.* [*paterfamilias*, on the analogy of *familiar*.] Of or pertaining to the paterfamilias; paternal. *N. E. D.*

Paterina stage. See ★*stage*.

paternality (pa̤-tėr-nal′i̤-ti), *n.* Fatherhood; the personality of a father. *N. E. D.*

paternalize (pa̤-tėr′na̤l-īz), *v. t.*; pret. and pp. *paternalized*, ppr. *paternalizing*. [*paternal* + *-ize.*] To treat paternally; especially, to support and control so as to make dependent instead of self-reliant: used of governmental action.

There have been "popular" meetings in support of the measure [a municipal electric light plant for New York], it is true, but none that have any claim or right to be regarded as representative of anything but the socialistic spirit which pervades a certain portion of the population here as everywhere else, and that would have every man on the pay roll of the State or the municipality in a vast series of *paternalised* institutions.

Elect. World and Engin., April 11, 1903, p. 597.

Paternoster while, as long as it takes to say a paternoster.

paternoster (pā″tėr-nos′tėr), *v. i.* [*paternoster*, *n.*] To fish with a paternoster. See *paternoster*, 4.

When *paternostering* on the bottom, and the tidal current is slight, it may be found necessary to use small wire booms 3 inches or 4 inches in length to extend the hook-links from the vertical portion of the paternoster, which they might otherwise foul.

Encyc. Brit., XXXII. 487.

paternoster-work (pā″tėr-nos′tėr-wėrk), *n.* In *naval arch.*, the framing belonging to a chain-pump.

patesi (pä-tā′sē), *n.* [Sumerian.] The native title of the local rulers of the ancient cities of Babylonia. They were at first probably independent, but later were usually subject to the ruler or king of some more powerful city, such as Babylon, which acquired control over the others. The term is usually translated as *priest-prince*, since both functions were combined in the one person.

We have, then, a presentment of the famous viceroy or *patesi* of Lagash, if not in his habit as he lived, at least in the shape in which it pleased the sculptors of his time to represent him. *Athenæum*, March 18, 1905, p. 344.

path, *n.*— **Germinal path.** See ★*germinal*.— **Short path**, in *physiol.*, a short spinal reflex.

path., pathol. Abbreviations of *pathology*, *pathological*.

pathematology (path″ē̤-mā-tol′ọ̄-ji), *n.* [Gr. *πάθημα*(-τ-), suffering, + *-ology*.] In *psychol.*, the doctrine of the emotions or passions.

pathetic, *a.* and *n.* **I.** *a.* **3.** (*b*) Trochlear: in reference to the superior oblique muscle.

II. *n.* **2.** Same as ★*patheticus*, 2.

patheticus, *n.* **2.** The superior oblique muscle of the eye.

pathetize (path′e-tīz), *v. t.*; pret. and pp. *pathetized*, ppr. *pathetizing*. [Gr. *παθητικός*, passive, + *-ize*.] To make passive, under hypnotic influence; hypnotize.

pathetogenetic (path″e-tō-jē̤-net′ik), *a.* In *psychol.*, productive or provocative of pity.

The cry of a child or a cat, a minor key, the downfall of stage snow, . . . may have very peculiar *patheto-genetic* efficacy.

Saunders and Hall, in Amer. Jour. Psychol., XI. 586.

pathfinder, *n.* **2.** In *surg.*, a very slender whalebone sound which is insinuated through a tortuous and strictured urethra, a larger sound being then passed over or alongside it. —**3.** In *bot.*, same as ★*honey-guide*, 2.

The *pathfinders* of the purple-red *L. maculatum* are dark red with white markings.

Amer. Nat., June, 1903, p. 378.

4. Same as *gay* ★*cat*.

The third prisoner described himself as Edward James, but Dougherty said he was James Casey, a thief of the "gay cat," or "*pathfinder*" class.

N. Y. Times, Jan. 2, 1905.

pathmaker (pȧth′mā″kėr), *n.* One who makes paths; a pioneer.

pathoamine (path-ọ̄-am′in), *n.* [Gr. *πάθος*, disease, + E. *amine*.] A term suggested by Selmi to denote any basic substance found in urine in disease as a product of the morbid process.

pathogeneity (path″ọ̄-jē̤-nē′i̤-ti), *n.* Same as ★*pathogenicity*.

pathogenesy (path-ọ̄-jen′e-si), *n.* Same as *pathogenesis*.

pathogenicity (path″ọ̄-jē̤-nis′i̤-ti), *n.* [*pathogenic* + *-ity*.] The state or character of being pathogenic.

Pathogenicity may be taken as a type of those powers of the organism which are easily and profoundly modified by external conditions. On the other hand, there are numerous characters which appear to be extremely constant. *Science*, April 28, 1905, p. 669.

pathognomic (path-og-nom′ik), *a.* Same as *pathognomonic*.

pathognomy, *n.* **2.** The study of the symptoms or signs of particular diseases. *Goode.*

Pathologic regeneration, variation. See ★*regeneration*, ★*variation*.

pathologico-anatomical (path-ọ̄-loj″i-kō-an-a̤-tom′i-ka̤l), *a.* Of or pertaining to pathological anatomy.

pathology, *n.* **4.** The science of the feelings, passions, and emotions. *Bentham.*— **Experimental pathology**, scientific knowledge of morbid processes based upon the study of disease artificially induced in the lower animals.

pathometer (pa̤-thom′e-tėr), *n.* [Irreg. < E. *path* + Gr. *μέτρον*, measure.] An instrument for recording the distance traveled by a vehicle. It also indicates the directions followed and the altitudes ascended and descended.

pathonomy (pa̤-thon′ō-mi), *n.* [Gr. *πάθος*, disease, + *νόμος*, law.] The science of the laws of diseases.

pathopoietic (path″ọ̄-poi-et′ik), *a.* [Gr. *πάθος*, disease, + *ποιητικός*, < *ποιεῖν*, make.] Same as *pathogenic*.

pathosocial (path-ọ̄-sō′sha̤l), *a.* [Gr. *πάθος*, disease, + E. *social*.] Of or pertaining to social pathology or to the subject-matter of social pathology, that is, to any abnormal or diseased social condition.

Social pathology . . . seeks to analyze the causes of these abnormal or diseased social conditions, and in this respect it is a necessary preliminary to the prevention or amelioration of *patho-social* conditions.

Rep. U. S. Comm. Education, 1889–90, xviii.

path-racer (pȧth′rā″sėr), *n.* A bicycle used for racing on a cinder-path.

His prettiest machine being a fine *path-racer*.

Westminster Gazette, Nov. 7, 1896. *N. E. D.*

patiency (pā′she̤n-si), *n.* [L. *patiens* (-*t*-) + *-cy*. See *patient*.] In *logic*, the quality of being passive; the condition of being acted upon by another: the opposite of *agency*. [Rare.]

patient, *a.* **6.** Receiving impressions; being the subject of external agents; passive. [Rare.]

This motion betwixt the agent spirit, and *patient* matter, produceth an actual heat.

Howell, Familiar Letters, I. 293. *N. E. D.*

patiki (pä′ti-ki), *n.* [Maori *patiki* = Tahitian *patii* = Hawaiian *pakii*.] A common Maori name of a flounder, *Rhombosolea monopus*, found in the waters of New Zealand and Tasmania.

patiné (pă-ti-nā′), *a.* [F., pp. of *patiner*, < *patine*, *n.*] Patined.

patined (pat′ind), *a.* [*patine* + *-ed*2.] Covered with a patina; patinated.

> Numerous chipped flints, mostly oval or almond-shaped. . . . Since their manufacture many have been deeply *patined* and rusted sometimes even right through, in red, yellow, or chalky white colours by physical or chemical agency, implying great age.
>
> *Keane*, Ethnology, p. 84.

patinize (pat′i-nīz), *v. t.*; pret. and pp. *patinized*, ppr. *patinizing*. [*patine* + *-ize*.] To coat articles not made of bronze with a bronze or patinated coating. *Sci. Amer. Sup.*, Feb. 27, 1904, p. 23548.

patinous (pat′i-nus), *a.* [*patina* + *-ous*.] Covered with a patina; patinated.

pâtisserie (pä-tēs-rē′), *n.* [F., < *pâtissier*, pastry-cook, < *pâtisser*, knead paste to make cakes, < *pâte*, OF. *paste*, paste. See *paste*1.] 1. A pastry-cook's shop; a place where a light luncheon of cakes, pastry, etc., may be obtained; a confectioner's.

> One of the most doleful sights I have seen in Paris was a sad-looking gentleman in black sitting at a cold marble-topped table of an expensive *patisserie* lunching on a weak cup of tea and a plate of cream-puffs.
>
> *F. B. Smith*, How Paris Amuses Itself, p. 48.

2. Pastry; the delicacies sold at a pastry-cook's shop or pâtisserie.

Patlander (pat′lan″dėr), *n.* [*Pat*, dim. of *Patrick*, + *land* + *-er*.] An Irishman. [Slang.] *N. E. D.*

Pat. Off. An abbreviation of *Patent Office*.

patola (pä-tō′lä̤), *n.* [Burmese?] A Burmese guitar with three strings, two of silk and one of copper.

patolli (pä-tōl′ẹ), *n.* [Also *patole*; < Nahuatl *patolli*.] A game something like backgammon, common among the ancient Mexicans.

Patoot series. See ★*series*.

patrial, *a.* 2. Relating to one's fatherland.

patriarch, *n.*—**Ecumenical patriarch**, universal bishop, the title assumed by John, the Patriarch of Constantinople, at the end of the sixth century. The claim of the title rested on the civil supremacy of Constantinople, and implied supremacy over the Christian world.

patriarchate, *n.* 5. The state of social organization, in which the child is a member of the social division to which its father belongs.

patriarchium (pā-tri-är′ki-um), *n.*; pl. *patriarchia* (-ä̤). [ML. *patriarchium*, patriarchal residẹnce or dignity.] 1. In the *Gr. Ch.*: (*a*) The residence of the patriarch adjoining the church; (*b*) the council of the patriarch.—2. In Rome, the residence in the Lateran Palace which was founded by Gregory the Great and used for the instruction of young priests.

patrick2 (pat′rik), *n.* A base coin, the eighth of a denier, authorized for Ireland in 1460, under Henry VI.

patrilineal (pat-ri-lin′ẹ-a̤l), *a.* [L. *pater* (*patr-*), father, + *linealis*, < *linea*, a line.] Relating to descent on the paternal side.—**Patrilineal descent**, paternal descent.

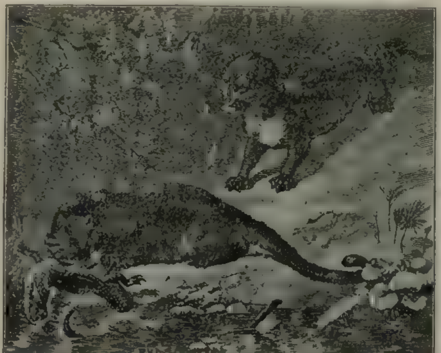
> All the phratry names so far recorded indicate that *patrilineal* descent is the rule in the north.
>
> *Nature*, Aug. 1, 1907, p. 334.

patrin (pat′rin), *n.* [Romany *patrin*, orig. leaf.] In Gipsies' cant, the marking of a trail by handfuls of grass or leaves dropped at intervals. Also *patteran*.

patrinia (pa-trin′i-ä̤), *n.* [From *Patrinia* (named in honor of E. L. M. *Patrin*, 1742–1815, a French naturalist and traveler in Siberia); an untenable genus name of these plants.] A name used in horticulture for plants of the genus *Fedia*, belonging to the family *Valerianaceæ*, and distinguished from other genera of the valerian family by the four stamens. They are hardy herbaceous perennials with mostly pinnate leaves and cymose clusters of yellow or, rarely, white flowers. There are about 15 species, natives of central and eastern Asia southward to the Himalayas. A few, as *Fedia Sibirica* and *F. scabiosæfolia*, are sometimes cultivated as ornamentals.

patrinite (pat′rin-īt), *n.* [G. *patrinit* (1845); named after E. L. M. *Patrin*. See ★*patrinia*.] A mineral from Berezof, in the Ural Mountains, a sulphid of bismuth, lead, and copper: better known as *aikinite*.

Patriofelis (pā-tri-ọ-fē′lis), *n.* [NL.] A genus of creodonts from the Middle Eocene (Wind River and Bridger) of North America. The animal was about as large as a jaguar and massively proportioned, with short heavy limbs and blunt-clawed feet. It has been thought that *Patriofelis* was of aquatic habits and more or less ancestral to the seals; but it was more probably terrestrial, since its teeth indicate adaptation to flesh food, not to fish eating. *Matthew.*



Patriofelis.
(From a skeleton in the American Museum of Natural History, New York.)

patristic, *a.*—**Patristic Chapters**, one of the tractates of the Mishnah, containing maxims, aphorisms, and moral precepts of the early Jewish sages from about 250 B.C. to 200 A.D. The chapters are six in number. They have been inserted in the Jewish prayer-book. A chapter is read every Saturday afternoon during the summer months from Passover to New-Year's day. Hebrew, *Pirke aboth* or simply *Aboth*. See ★*Aboth*.

II. *n.* One who studies or adheres to the doctrines of the fathers of the Christian church.

> The . . . system of the schoolmen . . . was . . . opposed by the old-fashioned Biblicists and *Patristics*.
>
> *G. S. Faber*, Prov. Letters, II. 149. *N. E. D.*

patrix (pā′triks or pat′riks), *n.*; pl. *patrices* (-tri-sēz). [NL., formed from L. *pater*, father, on a supposed analogy with *matrix* as related to L. *mater*, mother.] The reverse of *matrix*; in *calico-printing*, the steel roller, or molette, on which a design is formed in relief and then transferred by pressure to the printing-roller of a cylinder printing-machine.

patrologic (pā-trọ-loj′ik), *a.* [*patrolog*(*y*) + *-ic*.] Of or pertaining to patrology.

patrologist (pa̤-trol′ọ-jist), *n.* [*patrolog*(*y*) + *-ist*.] One who is versed in patrology.

patrol-wagon (pa̤-trōl′wag″ọn), *n.* 1. A large, covered, two-horse wagon belonging to the police force, used to carry prisoners to and from jail and for various other purposes.—2. A long, uncovered, two-horse wagon used by the fire-insurance patrol to carry men, with tarpaulins, etc., to fires, for the protection of insured goods.

patron, *n.* 9. The festival held on a saint's day.

patronage, *n.* 5. In *ancient Rome*, the relation borne by a patron to his client. See *patron*, *n.*, 1 (*b*).

> The client was regarded as a minor member (*gentilicius*) of his patron's gens . . . and . . . the *patronage* and the clientage were alike hereditary.
>
> *Encyc. Brit.*, XVIII. 413.

Disturbance of patronage. See ★*disturbance*.

patronym (pat′rọ-nim), *n.* [Gr. πατρώνυμος, named for the father. See *patronymic*.] A paternal name; a name derived from one's father or from one's ancestors in the male line.

> Objections may be raised . . . to the acceptance of metronyms in the genealogies as proofs of female kinship, while *patronyms* are rejected.
>
> *Nature*, Sup., May 5, 1904, p. xiii.

patronymic, *a.* 2. In *anthrop.*, relating to that form of society in which the child takes its name from the father's family, or in which the child is reckoned as a member of the paternal family.

patronymy (pa-tron′i-mi), *n.* [*patronym* + *-y*3.] The stage of social evolution in which family and clan names descend in the male line from father to son: in distinction from the metronymic stage. See ★*metronymic*, 2. *Giddings*, Elem. of Sociol., p. 187.

patruity (pa̤-trö′i̤-ti), *n.* [L. *patruus*, a paternal uncle.] The relationship of an uncle. [Rare.]

> Visible signs of paternity or *patruity*.
>
> *T. J. Hewlett*, Parsons and Widows, xxxvi. *N. E. D.*

patte, *n.* 3. Cleverness; skill in execution; genius. [French art slang.]—**Patte d'oie**, a coin, the gros blanc, struck under Jean le Bon (1350–1364) of France.

patten2, *n.* 4. A skate. [Local Eng.]

> Skates are termed *patines* in the Fens.
>
> *Baring-Gould*, Cheap Jack Zita, I. 184. *N. E. D.*

5. A round wooden plate fastened under the foot of a horse, to prevent it from sinking in marshy and soft ground. *N. E. D.*

patter2, *n.* 4. Rapid phrases introduced into a song in a speaking voice: sometimes applied to the whole text of a comedy. [Theatrical cant.]

> Mozart and many other composers often introduce bits of '*patter*' into buffo solos, as for instance the middle of 'Madamina' in 'Don Juan,' etc.
>
> *Grove*, Dict. Music, III. 654.

patteran (pat′ėr-a̤n), *n.* See ★*patrin*.

pattern, *n.* 11. A templet; a guide; a gage.—**Fitzhugh pattern**, a painted pattern on old Nankin porcelain, consisting of a central disk inclosing four pomegranates split in half and four hand-of-Buddha citrons, surrounded by four groups of flowers and symbolic figures. The border is a band of dull color with trellis-work of a darker shade. This pattern occurs in blue and occasionally in red or green. The porcelain on which it is found is usually of a whiter paste than that of the ordinary Nankin ware.—**Linen pattern**, in carved woodwork of the fifteenth and sixteenth centuries, a relief pattern resembling a folded napkin, the folds being often ingeniously imagined and combined, so that the surface of the panel is agreeably fluted. Also called *linen-fold pattern* and *napkin pattern*. See *linen-scroll*, with cut.—**Metric** or **metrical, rhythmic** or **rhythmical pattern**, in *music*. See ★*metric*2, ★*rhythmic*.—**Napkin pattern.** Same as *linen* ★*pattern*.—**Prunus pattern.** Same as ★*hawthorn decoration*. *N. Y. Times*, May 18, 1905.—**Reserve pattern**, in *ceram.*, a style of decoration in which the design is formed by the uncolored surface of the ware surrounded by a colored ground. The term is often applied to silver luster-ware in which the decorative design is reserved in white by applying a resist preparation to the glazed ware before the luster ground is put on. See *resist style*, under *resist*.—**Spade pattern.** See ★*spade*2.

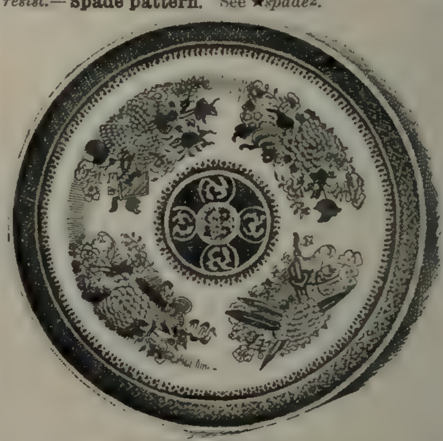


Plate with Fitzhugh Pattern.
(In Pennsylvania Museum, Philadelphia.)

patternable (pat′ėrn-a̤-bl), *a.* That can be used as a pattern.

patterner (pat′ėr-nėr), *n.* One who composes patterns; one who decorates or covers (a surface) with patterns or designs.

> Human emotion—the force which a mere *patterner* of spaces, a mere contemner of "subjects," would banish from pictorial art—plays a great part in the piece.
>
> *The Standard* (London), May 13, 1889, p. 3. *N. E. D.*

pattern-piece (pat′ėrn-pēs), *n.* A trial or experimental coin, not intended for circulation.

pattern-plate (pat′ėrn-plāt), *n.* A thin sheet of metal upon the surface of which designs are painted with an insulating varnish: used for operating the shedding mechanism of an electric Jacquard. This method was tried about 1860.

pattern-wheel, *n.* 3. A tracing-wheel (which see).

pattinsonization (pat″in-sọn-i-zā′shọn), *n.* The process of desilverizing lead by the Pattinson method. See *process*.

patu (pä′tö), *n.* [Maori.] A striking-weapon, such as a club. *E. E. Morris*, Austral English.

pau2 (pä′ö), *n.* [Hawaiian.] Formerly, the principal garment of the women of Hawaii, consisting of a number of pieces of tapa, generally five, wound around the waist and reaching to about the knee. *Jour. Amer. Folk-lore*, Oct.–Dec., 1900, p. 246.

paua (pou′ä̤), *n.* [Maori.] The Maori name of the mutton-fish: also used as the name for Maori fish-hooks, made of the paua-shell, the same word being adopted for fish, shell, and hook. *E. E. Morris*, Austral English.

paucine (pâ′sin), *n.* [*pauco* + *-ine*2.] A yellow crystalline alkaloid, $C_{27}H_{39}O_5N_5 + 6\frac{1}{2}\ H_2O$, found in pauco-nuts, the fruit of *Pentaclethra macrophylla*.

pauciplicate (pâ′si-pli-kāt), *a.* [L. *paucus*, few, + *plicatus*, folded. See *plicate*.] Having few folds or plications: said of certain shells which are provided with transverse ridges or plications.

> *Pauciplicate* Neanic Stage.—In this stage new striæ are introduced by implantation and not by bifurcation of the older ones. The striæ are strong, simple, and separated by spaces as wide as the striæ themselves. The number of plications is not great.
> *Amer. Jour. Sci.*, April, 1904, p. 290.

pauciramous (pâ-si-rā'mus), *a.* [L. *paucus*, few, + *ramus*, branch, + *-ous.*] Having few branches; sparsely branched.

pauco-nut (pâ'kō-nut), *n.* The fruit of *Pentaclethra macrophylla.*

pauhagen (pâ-hā'gen), *n.* [Also *paughaden*, *poghaden*, *porhagen*, *pauhaugen*; from an Algonkian form answering to Abenaki *pookagen* (Rasles), from a verb meaning 'grease the ground.' The fish was used by the Indians to manure their cornfields.] The menhaden. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 252. [Maine, etc.]

pauhaugen, *n.* Same as ★*pauhagen.*

paukatea (pâ-ka-tē'ä), *n.* Same as ★*broadleaf*, 2.

Paulianite (pâ'li-an-īt), *n.* Same as *Paulianist.*

Paulicianism (pâ-lish'an-izm), *n.* [*Paulician* + *-ism.*] The doctrines professed by the Paulicians.

paulie (pâ'li), *a.* and *n.* [Also *pawlie*, *pallie*, *paley*, etc.; origin uncertain.] **I.** *a.* Weakly; sickly: used especially of lambs.

II. *n.* A very small, weak, or crippled lamb. [Scotch in all uses.]

paulin (pâ'lin), *n.* [Abbr. from *tarpaulin.*] The plain, unsurfaced canvas used in the army for covering stores, etc. [U. S.]

Pauline, *a.* **II.** *n.* 1. A member of one of the various religious orders of St. Paul.—2. A scholar of St. Paul's School, London.

> When in December, 1835, he returned to London, bringing with him the 'blue ribbon' of Oxford, an honour which no *Pauline* had at that time won, young Jowett at St. Paul's was a distinguished figure.
> *Abbott and Campbell*, Life and Letters of B. Jowett, I. 41.

Paulinian (pâ-lin'i-an), *a.* and *n.* [See *Pauline.*] **I.** *a.* Pertaining to, or characteristic of, St. Paul and his teachings.

II. *n.* A Paulinist.

Paulinistic (pâ-li-nis'tik), *a.* Pertaining to, or characteristic of, Paulinism or of a Paulinist.

Paulinize (pâ'lin-īz), *v. t.* and *i.*; pret. and pp. *Paulinized*, ppr. *Paulinizing.* [*Pauline* + *-ize.*] **I.** *trans.* To render Pauline; conform to the doctrines of St. Paul.

II. *intrans.* To imitate, obey, or follow St. Paul's teachings; become Pauline.

Paulism (pâ'lizm), *n.* Same as *Paulinism.*

Paulista (pou-lēs'tä), *n.* [Pg. *Paulista*, < *Paulo* (see def.).] A Portuguese and Indian half-breed, especially one from the state of São Paulo, Brazil. During the seventeenth century they ranged as freebooters through central Brazil, and by their extensive raids assisted in the spread of the Portuguese dominion.

> In Brazil the famous "*Paulistas*" (so called from the province of São Paulo), a cross between the first Portuguese immigrants and the aborigines, have always been the most vigorous and enterprising section of the community. Mainly to them is due the extension of the Portuguese domain from the Atlantic seaboard to the eastern slopes of the Cordilleras.
> *Keane*, Ethnology, p. 152.

Paulite (pâ'līt), *n.* [ML. *Paulites* (?); as *Paul* + *-ite*^{2}.] A member of the monastic order of the Hermits of St. Paul, founded in 1215. See *Paulist.*

paullinitannic (pâ″lin-i-tan'ik), *a.* [*Paullinia* + *tannic.*] Derived from *Paullinia sorbilis.*—**Paullinitannic acid**, a variety of tannin prepared from the seeds of *Paullinia sorbilis.*

paulo-post-future, *a.* 2. Pertaining to the near future: as, a *paulo-post-future* effect.

II. *n.* A future very near to the present.

> Here comes Dana, abstractedly loitering along,
> Involved in a *paulo-post-future* of song,
> Who 'll be going to write what 'll never be written
> Till the Muse, ere he thinks of it, gives him the mitten.
> *Lowell*, Fable for Critics, l. 939.

paulospore (pâ'lọ-spōr), *n.* [L. *paulus*, little, + E. *spore.*] A resting-spore or detached bud that is not motile.

paulotome (pâ'lọ-tōm), *n.* [NL. *Paulotome(a).*] A member of the genus *Paulotomea* of Haeckel.

Paulotomea (pâ-lọ-tō'mọ-ä), *n.* [NL.] One of the genera included by Haeckel in his family *Algariæ*, unicellular algæ without nuclei and without cilia.

Paulsen's defense. See ★*defense.*

pauper (pâ'pėr), *v. t.* [*pauper*, *n.*] Same as *pauperize. Tennyson*, The Falcon, i. 1.

pauperage (pâ'pėr-āj), *n.* [*pauper* + *-age.*] Pauperdom; pauperism.

pauperate (pâ'pėr-āt), *v. t.*; pret. and pp. *pauperated*, ppr. *pauperating.* To pauperize.

> It has *pauperated* many a lawful heir.
> *J. Rogers*, Antipopopriestian, XIV. 306. *N. E. D.*

pauperdom (pâ'pėr-dum), *n.* 1. The condition of a pauper; pauperism.—2. Paupers collectively.

Paurodontidæ (pâ-rọ-don'ti-dē), *n. pl.* [NL., < Gr. παῦρος, small, + ὀδούς (ὀδοντ-), tooth, + *-idæ.*] A family of small polyprotodont marsupial mammals, based on teeth and jaws from the Jurassic of Wyoming. *Marsh*, 1887.

Paurometabola (pâ″rọ-me-tab'ọ-lä), *n. pl.* [Gr. παῦρος, little, + μεταβολή, transformation.] In Brauer's system of classification, those insects in which the metamorphoses are slow, inconspicuous, and very incomplete, as the *Orthoptera.*

paurometabolous (pâ″rọ-me-tab'ọ-lus), *a.* [Gr. παῦρος, little, + μεταβολή, change, + *-ous.*] Characterized by incomplete metamorphosis; of or belonging to the *Paurometabola. Cambridge Nat. Hist.*, V. 199.

pauropod (pâ'rọ-pod), *n.* and *a.* **I.** *n.* A member of the *Pauropoda.*

II. *a.* Having the characters of or belonging to the *Pauropoda.*

pauropodous (pâ-rop'ọ-dus), *a.* Resembling or pertaining to the *Pauropoda.*

pausal, *a.* 2. In *Heb. grammar*, noting the form which a word receives in the pause of a sentence, in which in certain cases a vowel is changed (usually lengthened), or a weakened vowel reappears in full. *N. E. D.*

pause, *n.*—**General pause**, in *music*, a silence or rest on the part of all the voices or instruments, often marked by the sign

Its duration is entirely indeterminate, depending on the conductor's taste.

pause-rhythm (pâz'riᴛʜm), *n.* In *phonet.*, a rhythm of sound and pause; a rhythm produced, for example, by the sounding of a tone for a definite time at definite intervals. *E. W. Scripture*, Exper. Phonetics, p. 517.

pausimenia (pâ-zi-mē'ni-ä), *n.* [NL., < Gr. παῦσις, ceasing, + μήν, month.] In *physiol.*, the menopause. *Dunglison.*

paussid (pâ'sid), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Paussidæ.*

II. *a.* Having the characters of or belonging to the family *Paussidæ.*

pavé (pä-vā'), *n.* [F., < *paver*, pave.] 1. A pavement; a paved road or street; the street.

> He has walked the Pall Mall *pavé* long enough.
> *Thackeray*, Pendennis, II. xxxi.

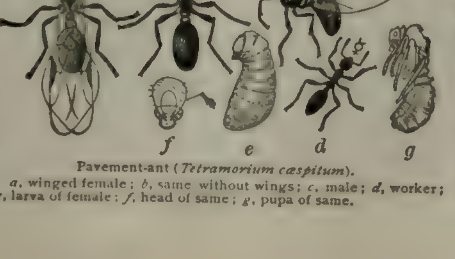
2. In *jewelers' work*, a setting in which the jewels are placed close together like a pavement, showing none of the gold.

pavement, *n.*—**Golden pavement.** Same as *king's* ★*land.*—**Nicholson pavement**, a kind of street pavement formed of sawed wooden blocks placed with the grain vertical on a platform of thin boards laid on the graded foundation of the road-bed. The interstices between the wooden blocks are filled with a mixture of coal-tar and gravel.—**Pavement cells.** See ★*cell.*—**Tessellated pavement**, a pavement formed of small square blocks (tesseræ); by extension, any mosaic pavement: but the pieces of such pavements are generally foursquare.

pavemental (pāv-men'tal), *a.* [*pavement* + *-al.*] Resembling a pavement; specifically, furnished with pavement-teeth.

> The dentition is typically *pavemental* in the Monœcious and ribbon-like in the Diœcious Gasteropoda; and, with certain exceptions, even admitting of explanation, the auditory sacs contain otoconia in the former case and single spherical otoliths in the latter.
> *J. D. Macdonald*, in Jour. Linnean Soc., XV. 166.

pavement-ant (pāv'ment-ȧnt), *n.* An ant, *Tetramorium cæspitum*, common to Europe and the United States. In Europe it is a common meadow-ant, but in the eastern United States it is a frequent resident of cities and towns, very often making its colonies under pavements.



Pavement-ant (*Tetramorium cæspitum*).
a, winged female; *b*, same without wings; *c*, male; *d*, worker; *e*, larva of female; *f*, head of same; *g*, pupa of same.

pavement-artist (pāv'ment-är″tist), *n.* One who sketches scenes and figures, in colored chalks, on a smooth stone pavement, with the view of extracting money from those passing by. *N. E. D.*

pavement-light (pāv'ment-līt), *n.* An arrangement of thick glass set in a metal frame which can be used as part of the flooring or of the pavement above a cellar or vault. There are many forms, mostly of private ownership. See *patent* ★*light.*

pavement-tooth (pāv'ment-töth), *n.*; pl. *pavement-teeth* (-tēth). A tooth which, with others, forms a structure like a pavement, as in certain sharks. See *pavement*, *n.*, 4.

pavement-toothed (pāv'ment-tötht), *a.* Having large rounded closely-set teeth, or pavement-teeth. See *pavement*, *n.*, 4.

> The second part of the first volume of *Records* of the Albany Museum contains five notes by Dr. R. Broom on South African anomodont reptiles. In one of these he discusses the affinities of the *pavement-toothed* genus Endothodon, which was placed by Mr. Lydekker among the dicynodonts, but transferred by Prof. Seeley to the theriodonts.
> *Nature*, May 5, 1904, p. 13.

paver, *n.* 4. In *porcelain making*, the bedstone of the grinding-mill.

> The particles are abraded . . . between the runners and *pavers.*
> *Guide Worcester Porcelain Works*, 1881, p. 12. *N. E. D.*

Pavia (pā'vi-ä), *n.* [NL., named in honor of Peter *Paaw* (1564–1617), a Dutch botanist.] A section or subgenus of *Æsculus*, the buckeye and horse-chestnut genus, still used by horticulturists as a generic name. Its members have four long-clawed petals, leaflets stalked, and winter buds not resinous. They are North American shrubs or small trees, of which the best known are *Æ. glabra*, *Æ. octandra* (*Pavia lutea*), and *Æ. Pavia* (*P. rubra* or *P. Michauxii*), with horticultural varieties.

Pavia pottery. See ★*pottery.*

pavie (pā'vi), *n.* [Sc.] A nimble, adroit movement of the body, as that of a juggler performing a trick; hence, a trick. *N. E. D.*

> For some of such had play'd a *pavie.*
> *Colvil*, Whig's Supplication, i. 72. *N. E. D.*

paviin (pā'vi-in), *n.* [*Pavia* + *-in*^{2}.] Same as *fraxin.*

pavilion, *n.* 7. In *anat.*: (*b*) The flaring extremity of a canal, as the external ear or the ovarian end of the Fallopian tube.—**Justices of the pavilion.** See ★*justice.*

paving-roller (pā'ving-rō″lėr), *n.* A paving-machine; a roller for pavements.

paving-set (pā'ving-set), *n.* A block of slag to be used for paving. *Phillips and Bauerman*, Elements of Metallurgy, p. 220.

pavonated (pav'ọ-nā-ted), *p. a.* [L. *pavo(n-)*, peacock, + *-ate*^{2}.] Colored like the neck of a peacock; of a brilliant bluish green.

> Very beautifully *pavonated* copper pyrites.
> *G. Mitchell*, tr. Karsten's Min. in Leskean Mus., p. 291. [*N. E. D.*

pavonazzo (pä-vō-nȧt'zō), *a.* and *n.* [It., peacock-colored.] Colored like a peacock: noting a marble like pavonazetto. See *marble*, 1.

pavor (pā'vôr), *n.* [L., fear, < *pavere*, fear.] Fear.—**Pavor diurnus**, daymare; day-terrors.—**Pavor nocturnus**, nightmare; night-terrors.

paw^3† (pâ), *a.* [Perhaps a variant of *pah!*] Improper; nasty; obscene. *N. E. D.*

> Lau. . . . I 'll tell him how often this Tarquin-steward would have kist me by force.
> Steph. Kiss you! fye, that 's a *paw*-word.
> Bet. No, no, he 's a cleanly man.
> *Sir W. Davenant*, Man 's the Master, iv. 1.

pawari (pa-wä'ri), *n.* [Guiana.] An intoxicating drink made by the natives of British Guiana.

pawky, *a.* 2. Crafty; shrewd; clever.—**Pawky play**, in *golf*, play conducted with shrewdness and full knowledge of one's limitations.

pawl-rim (pâl'rim), *n.* A ring of ratchet-teeth at the base of a capstan.

pawl-ring (pâl'ring), *n.* Same as ★*pawl-rim.*

pawn^1, *v. t.* 3. To put up as collateral: hypothecate, as stock for a loan. [Colloq.]

> Formerly it was possible for the jobbers in all important markets on the Stock Exchange to form a good idea, by comparing notes in each settlement, of what the condition of the speculative account really was, but it is less easy to do so now, because so much stock is "*pawned*" with banks that the conclusions arrived at by the jobbers from examining only what they are carrying over themselves are liable to be falsified.
> *Encyc. Brit.*, XXXII. 866.

pawn^2, *n.*—**Clear pawn,** in *chess,* the possession of one pawn more than the opponent, the extra pawn being not on the same file with any of the others in his position: an advantage obtained by a chess-player, in the course of the game, for which his adversary has no equivalent.—**Gambit pawn,** in *chess,* the pawn the sacrifice of which constitutes the gambit.—**Isolated pawn,** in *chess,* a pawn detached from support by other pawns, those on the adjacent rows being already removed from the board.—**Passed pawn,** in *chess,* a pawn that may be advanced without being obstructed by a pawn of the adversary either on the same file or either of the two adjacent files.—**Pawn-and-move opening.** See ★*opening.*—**To pass a pawn,** to establish a passed pawn. [Rare.]—**To queen a pawn,** to advance a pawn, in a game of chess, to its eighth square and thereupon make it a queen.

pawnage (pân′ạ̄j), *n.* [*pawn*^{1} + *-age.*] The act of depositing in pledge; the condition of being pledged or pawned. [Rare.]

pawnbrokerage (pân′brō″kėr-ạ̄j), *n.* [*pawnbroker* + *-age.*] The business of a pawnbroker.

pawnee^3 (pâ′nē), *n.* [Hind. *pānī.*] See *brandy-pawnee.*

paw-paw (pâ′pâ), *a.* [Redup. of *paw*^{3}.] Improper; naughty; indecent; obscene: a nursery word.

paxilliferous (pak-si-lif′ẹ-rus), *a.* [NL. *paxilla* + Gr. *-φορος,* < *φέρειν,* bear.] Bearing paxillæ.

paxilliform (pak-sil′i-fôrm), *a.* [NL. *paxilla* + *-form.*] Resembling or having the shape of paxillæ.

paxillose, *a.* **2.** Paxillate.

> The abactinal surface is *paxillose,* each paxillus having a circular crown of about eight papillæ, the centre being usually smooth. [Echinoderms.]
>
> *Proc. Zool. Soc. London,* 1900, p. 290.

pay^1, *v. i.*—**Paying-out leg,** the height of telegraph cable which is held at the bows of a cable-laying vessel; the leg (or side) which is allowed to run, in distinction from the opposite leg, which is held.

pay^1, *n.* **4.** In *gold-mining,* sufficient metal in a vein or bed to pay for working it.—**Longevity pay,** additional pay given to officers for long service in the United States army and navy. *Army and Navy Register,* XXIV. 290.

payable, *a.* **3.** Profitable; likely to be profitable or to pay: as, *payable* rock, gravel, quartz, etc., meaning yielding or likely to yield gold; a *payable* enterprise, one yielding or likely to yield profit.

pay-boarder (pā′bōr″dėr), *n.* A paying scholar who boards on the premises; opposed to day-scholar or free scholar.

> Among the *pay-boarders* . . . numbering in all thirty, there were six Non-conformists.
>
> *Rep. Com. on Welsh Education,* 1899. *N. E. D.*

pay-envelop (pā′en-vel″up), *n.* An envelop intended to contain the pay or wages of an employee on pay-day.

paying-out (pā″ing-out′), *n.* The act or operation of allowing a cord, cable, or rope to be pulled or drawn out; specifically, the operation of passing or running out a submarine cable from a ship which is laying it.

paym't, payt, pay't. Abbreviations of *payment.*

pay-rock (pā′rok), *n.* Any metal-bearing rock rich enough to pay for working.

paysanne (pā-zȧn′), *n.* [F.] A French peasant woman; hence, any countrywoman.

> Their only servant is a mere West Country *paisanne.*
>
> *Charlotte Smith,* Celestina, I. 190. *N. E. D.*

P. B. An abbreviation (*b*) of the Latin *Philosophiæ Baccalaureus,* Bachelor of Philosophy; (*c*) of *Primitive Baptist.*

pc. An abbreviation of *piece,* in the dry-goods trade.

P. C. An abbreviation (*c*) of the Latin *Patres Conscripti,* Conscript Fathers; (*d*) of *Perpetual Curate;* (*e*) [*l. c.*] of the Latin *per centum,* by the hundred; (*f*) of the Latin *pondus civile,* avoirdupois weight; (*g*) of *Post Commander;* (*h*) [*l. c.*] of *post-* or *postal-card;* (*i*) [*l. c.*] of the Latin *post consulatum,* after the consulship; (*j*) of *Principal Conductor;* (*k*) of *Privy Council.*

P. C. M. O. An abbreviation of *Principal Colonial Medical Officer.*

P. C. P. An abbreviation of *Past Chief Patriarch.*

P. C. S. An abbreviation of *Principal Clerk of Session.*

P. C. U. An abbreviation of *pound-centigrade-unit.* [Rare in U. S.]

P. D. An abbreviation (*b*) of *potential difference;* (*c*) of the Latin *Philosophiæ Doctor,* Doctor of Philosophy.

Pd. B. An abbreviation of the Latin *Pedagogiæ Baccalaureus,* Bachelor of Pedagogy.

Pd. D. An abbreviation of the Latin *Pedagogiæ Doctor,* Doctor of Pedagogy.

Pd. M. An abbreviation of the Latin *Pedagogiæ Magister,* Master of Pedagogy.

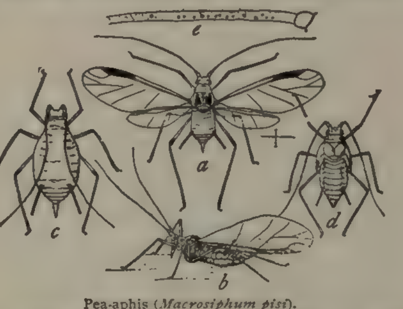
pe (pā), *n.* The seventeenth letter (פ) of the Hebrew alphabet, corresponding to the Greek *pi* (*π*) and the English *pe* (*p*). Its numerical value is 80.

Pe. In *chem.,* the symbol for *pelopium.*

P. E. An abbreviation (*c*) of *Presiding Elder.*

pea^1, *n.* **3.** In the manufacture of sulphuric acid, the workman's name for a fragment of iron pyrites, from an eighth to a half inch in diameter.—**4.** The balance or sliding weight used on a steelyard.—**Black-eyed pea.** (*a*) A cultivated form of the cow-pea, *Vigna Sinensis.* See ★*cow-pea.* (*b*) In the West Indies, *Dolichos sphærospermus.* Both of the plants bear white beans having a black spot around the hilum.—**Canada field-pea.** See *field-*★*pea.*—**Canada pea.** See *field-*★*pea.*—**Chaparral-pea,** a spiny leguminous bush, *Xylothermia montana,* of high altitudes in the Coast Range of middle and southern California, sometimes forming impenetrable thickets. It bears rose-purple pea-like flowers in the axils near the ends of the branches.—**Clay pea,** a cultivated form of the cow-pea, *Vigna Sinensis,* having buff-colored beans. This was the form originally called *cow-pea.*—**Coffee-pea,** the chick-pea, sometimes used as a substitute for coffee.—**Corn-field pea,** the cow-pea. See ★*cow-pea.*—**Darling pea,** *Swainsona galegifolia,* an Australian plant. Also called *native indigo, poison-pea,* and *poison-bush.* See *Swainsona.*—**Field-pea,** see *pea*^{1}, 1. The field-pea exists in many varieties, proving long cultivation. In northern latitudes it is a valuable forage-plant, furnishing hay and pea-meal. It is extensively raised in Canada, whence the varieties there grown are in the United States called *Canada field-pea,* or *Canada pea.*—**Flat pea.** (*b*) An Old World perennial, *Lathyrus sylvestris Wagneri,* related to and resembling the common sweet pea. It has been highly recommended as a forage-plant but has not met with much approval in the United States.—**Glory pea,** a plant of the genus *Clianthus.* [Australia.]—**Heart pea,** the balloon-vine. [Australia.]—**Lady-pea,** a variety of the cow-pea. See ★*cow-pea.*—**Leaf-spot of pea.** See ★*leaf-spot.*—**Mexican rosary pea,** *Dolicholus phaseoloides,* a twining trifoliate plant bearing small, hard, red-and-black seeds resembling the common crabs'-eyes (*Abrus Abrus*) of the West Indies. *Abrus,* however, has pinnate leaves. In Spanish-speaking countries the seeds of both are called *peronia.* See ★*colorin chiquito.*—**Monkey's pea,** in the West Indies, a cosmopolitan climber of the tropics, *Vigna lutea.*—**Purple-eyed pea.** See ★*cow-pea.*—**Red-pottage pea,** the lentil, supposed to have formed the material of the red pottage of Genesis xxv. 30.—**Southern pea,** the cow-pea. See ★*cow-pea.*—**Stinking pea,** in the Bahamas, *Cassia Bahamensis.*—**Texas** or **Texan pea,** a perennial bushy legume, *Astragalus Nuttallianus,* with bladdery pods, valuable for grazing in central and northern Texas.—**Whippoorwill-pea,** a variety of the cow-pea. See ★*cow-pea.*—**Wild pea,** in California, any native species of *Lathyrus,* southward mostly *L. vestitus.*—**Yellow pea,** the prairie false lupine, *Thermopsis rhombifolia.* See *false* ★*lupine.*

pea-aphis (pē′ā″fis), *n.* *Macrosiphum pisi,* an aphidid which has caused great loss in pea-plantations in the Eastern United States by puncturing and blighting the young shoots.



Pea-aphis (*Macrosiphum pisi*).

a, b, winged female; *c,* apterous female; *d,* nymph in last stage; *e,* third joint of antenna of winged form; *a, d,* enlarged, *e,* highly magnified. (Chittenden, U. S. D. A.)

pea-ballast (pē′bal″ạst), *n.* Coarse sand or very fine gravel used as ballast.

Peabody bird (pē′bọ-di bėrd). [From the *Peabody* Glen, White Mountains.] The white-throated sparrow, *Zonotrichia albicollis.*

peacemonger (pēs′mung″gėr), *n.* One who talks much, but impractically, of peace and peacemaking. *Southey.*

> Southey seems to have coined the useful "*peacemonger*" to distinguish unpractical praters about peace from true peacemakers. *Athenæum,* May 13, 1905, p. 587.

peace-warrant (pēs′wor″ạnt), *n.* In *Eng. law,* a warrant for the arrest of a person, issued by a justice of the peace. Same as *justice's warrant* (which see, under *warrant*) in the United States.

peach^1, *n.* **3.** A person or thing of a very high order; one who or that which is very nice. [Slang.]—**Little-peach,** a disease of peach-trees probably due to a fungus which attacks the very young trees. It causes the fruit to ripen while quite small, and in a few years kills the tree.—**Mountain-peach,** a spiny, branching shrub of the soapberry family, *Stocksia Brahuica,* or its edible fruit, which resembles in appearance a peach. It is found in Beluchistan, Afghanistan, and eastern Persia.—**Native peach.** (*b*) In Australia, the emu-apple, *Rancooria acidula.* (*c*) In Sierra Leone, the Guinea peach, *Sarcocephalus sambucinus.* See *Sarcocephalus.*—**Peach fruit-worm.** See ★*fruit-worm.*—**Peach-kernel oil.** See ★*oil.*—**Peach leaf-beetle.** Same as *plum* ★*leaf-beetle.*—**Peach leaf-roller.** See ★*leaf-roller.*—**Peach-oil.** Same as *peach-kernel* ★*oil.*—**Peach twig-borer.** See ★*twig-borer.*—**Vine-peach.** See ★*vine-peach.*

peach-aphis (pēch′ā″fis), *n.* Any one of several species of *Aphididæ* found on peach-trees.—**Black peach-aphis,** an American aphidid, *Aphis persicæ-niger,* which feeds on both roots and twigs, leaves and buds of peach. Also called *peach-louse.*

peach-berry (pēch′bėr-i), *n.* A Tasmanian shrub, *Styphelia strigosa,* of the family *Epacridaceæ;* or its fruit, a small, fleshy berry.

peach-bloom (pēch′blöm), *n.* **1.** The soft down of the peach-skin; hence, the delicate flush of a healthy complexion.—**2.** In *ceram.,* a glaze of Oriental porcelain of the color of the skin of a peach ripening in the sun, shading from pale red to pink. Compare *peach-blow,* 1.

peach-curculio (pēch′kėr-kū″li-ō), *n.* Same as *plum-curculio.*

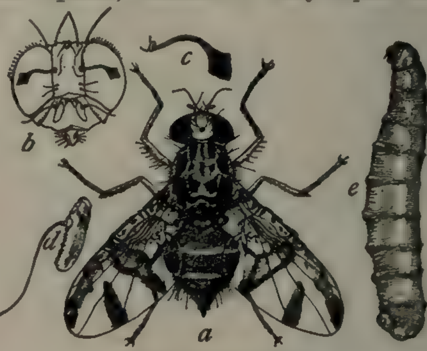
peach-curl (pēch′kėrl), *n.* Same as *curl,* 4.

pea-cheese (pē′chēz), *n.* A gelatinous preparation of pea-flour which is treated with a solution of gypsum: used for food by the Chinese.

peachen (pē′chẹn), *a.* Of or resembling a peach.

> Wrinkles mar a *peachen* cheek.
>
> *L. Wingfield,* Abigel Rowe, I. 171. *N. E. D.*

peach-fly (pēch′flī), *n.* A trypetid fly, *Ceratitis capitata,* abundant in many tropical and subtropical countries. Its larvæ bore into peaches and other fruits.



Peach-fly (*Ceratitis capitata*).

a, fly; *b,* head from front; *c,* spatula-like hair from face of male; *d,* antenna; *e,* maggot; *a* and *e,* enlarged; *b, c,* and *d,* greatly enlarged. (Insect life, U. S. D. A.)

peachiness (pē′chi-nes), *n.* The character of being peachy.

peachka (pēch′kạ), *n.* [Russian *pechka,* an oven, dim. of *pechŭ,* oven, stove.] A Russian stove, such as is used in Alaska.

peach-louse (pēch′lous), *n.* See *black* ★*peach-aphis.*

peach-maggot (pēch′mag″ọt), *n.* The larva of a cosmopolitan trypetid fly, *Ceratitis capitata.* It affects peaches as well as oranges and other fruit. See ★*peach-fly.*

peach-mildew (pēch′mil″dū), *n.* See ★*mildew.*

peach-moth (pēch′môth), *n.* Any one of several moths whose larvæ attack the peach, as the blue-spangled peach-moth, *Haploa lecontei,* of the family *Arctiidæ.*

peach-pit (pēch′pit), *n.* A peach-stone; the hard covering inclosing the kernel of the fruit.

peach-rosette (pēch′rọ-zet″), *n.* A contagious disease of peach-trees of unknown origin. The leaves form characteristic compact bunches which soon fall off, and the death of the tree takes place within a short time.

peach-rust (pēch′rust), *n.* See ★*rust*^{1}.

peach-scab (pēch′skab), *n.* See ★*scab.*

peach-scale (pēch′skāl), *n.* A brown naked scale-insect, *Eulecanium persicæ,* occurring on peach-trees and also on plum, quince, and other plants, and found in Europe, Canada, the United States, and Australia.—**West Indian peach-scale,** a diaspine scale-insect, *Diaspis pentagona,* occurring in many parts of the world and on a great variety of food-plants.

peach-tree, *n.*—**Blue-spangled peach-tree caterpillar.** See ★*caterpillar.*—**Pacific peach-tree borer.** See ★*borer.*—**Peach-tree bark-louse.** See ★*bark-louse.*—**Peach-tree borer.** (*b*) See ★*borer.*

peach-weevil (pēch′wē″vl), *n.* Same as *New-York weevil* (which see, under *weevil*).

peachy, *a.* **II.** *n.* A fermented drink made from peaches. [Rare.] *N. E. D.*

The inhabitants have a method of purifying cyder by frost, and separating the watery part from the spirit. . . . They make *peachy* and perry; grape, cherry, and currant wines; and good beer of pumkins, molasses, bran of wheat, spruce and malt.
S. Peters, A General Hist. of Conn., p. 245.

peacock, *n.* **2.** [*cap.*] In *astron.*, the constellation Pavo.—**Peacock throne**, a celebrated work of art, now in the possession of the Shah of Persia. It was one of the treasures of the King of Delhi, but was carried off as plunder in 1739 by the Persians when, under Nádir Shah, they took the city. The back of the throne is a peacock's tail of natural size, fully expanded and made of jewels.

peacock, *v. i.* **2.** To pick the 'eyes' out of the laud by selecting of buying up the choice pieces and waterfrontages so that the adjoining territory is practically useless to any one else. *E. E. Morris*, Austral English. [Australian slang.]

When the immediate advent of selectors to a run became probable, the lessees endeavoured to circumvent them by dummying all the positions which offered the best means of blocking the selectors from getting to water. This system, commonly known as "*peacocking*," was assisted by the use of Volunteer Land Orders.
W. Epps, Land Systems of Australasia, iii.

peacock-coal (pē′kok-kōl), *n.* See ★*coal*, 2.

peacock-copper (pē′kok-kop″ėr), *n.* A name given to bornite from its iridescent colors. Also called *peacock-ore*.

peacockery (pē′kok-ẹ-ri), *n.* Vainglorious display; the state of being puffed up with vanity. *N. E. D.*

peacock-fly (pē′kok-flī), *n.* Any one of a number of true flies of the family *Trypetidæ* or *Ortalidæ*, which have the habit of elevating their wings and strutting about.

peacock-heron (pē′kok-her″ọn), *n.* Same as *peacock-bittern* (which see).

peacock-moth (pē′kok-môth), *n.* A British collectors' name for *Opisthograptis notata*, a European geometrid moth which extends into northern Asia.

peacock-ore (pē′kok-ōr), *n.* Same as ★*peacock-copper*.

peacocky (pē′kok-i), *a.* **1.** Like the peacock in having a vain jauntiness of manner; self-conceited; showing off: said of a person.

It is love of adventure, of excitement, of fine dress and the pride of fame, all which are sentimental motives, which chiefly make a boy like going into the Guards better than into a counting-house. You fancy, perhaps, that there is a severe sense of duty mixed with these *peacocky* motives? And in the best of you there is.
Ruskin, Crown of Wild Olive, iii. 118.

2. Having a spirited, showy, high action: said of a horse.

pea-huller (pē′hul″ėr), *n.* A machine for threshing pea-plants and hulling the peas. It is fitted with the threshing machinery and all the accessories of a bean-thresher and is adapted to pea-plants. It has also hulling machinery, a recleaner, a bagger or bagging-machine for delivering the clean hulled peas into bags, and a bag-register.

peai (pē-ī′), *n.* [Carib *piai.*] Same as ★*peaiman*.

peai (pē-ī′), *v. i.* and *t.* [*peai*, *n.*] To practise the arts of a peaiman upon; treat with the peaiman's magic. *N. E. D.*

peaiism (pē-ī′izm), *n.* [*peai* + *-ism.*] The practices and sorcery of the *peaiman*.

To explain the system of *peaiism* here would take too long. All that need now be said is that it is based upon the belief that all illness and all other bodily evil is the work of hostile beings.
E. F. im Thurn, in Jour. Anthrop. Inst., XI. 366.

peaiman (pē-ī′man), *n.* [*peai* + *-man.*] In French and British Guiana, a witch-doctor; a soothsayer; a medicine-man; a conjurer. See ★*piache*.

peak¹, *n.* **4.** The maximum of a load-curve.

A plate properly constructed for even moderate rates, should not greatly depreciate when discharged at eight times the normal for short duration *peaks*, and at twelve times for "instantaneous" *peaks*.
Elect. World and Engin., May 21, 1904, p. 977.

5. In *mech.*, a heavy load; the heaviest load (on an engine or generator): so called because a peak or protruding point is formed in the line traced by the point of a recording dynamometer at the time of the heavy load or of a maximum load. See ★*load*², 8, and ★*peak-load*.

There are two combined sets; that is, engine, alternator, and tramway generator coupled on the same shaft. Other and larger alternators are in use during the "*peak*" of the load. *Encyc. Brit.*, XXV. 35.

6. In *turpentining*, the angle formed by the meeting of the two streaks on the face.—**7.** [*cap.*] A name applied to a village at one of the corners or extreme boundaries of a township: as, Derry *Peak*, on the eastern boundary of Derry. *Dialect Notes*, III. iii. [New Hampshire.]—**Instantaneous peak**, in *elect.*, a sudden increase in the load of a power station, which disappears again abruptly: so called from the form of the load-curve indicating such fluctuations.—**Peak of the load**, that portion of the load of a power station which corresponds to the peak of the load-curve.—**Short-stay peak**, the situation of the anchor when it is on the bottom, but about under the hawse-hole—when the cable is nearly up and down.—**Stay-peak**, the position when the cable and the fore-stay are parallel to one another—when the trend of the cable is such that it is parallel to the line of the fore-stay.

II. *a.* Pertaining or relating to the high point in the diagram from a recording meter, due to a peak or heavy load. See ★*peak*¹, *n.*, 4 and 5.

The direct-current ends of these rotary converters are often worked in multiple with an old generating station, at least during the *peak* hours of one or two months in the early winter.
Elect. World and Engin., May 9, 1903, p. 789.

peak¹, *v. t.* **2.** To accentuate.—**3.** Of a whale, to raise (the tail or flukes) high in the air when making a perpendicular dive: this act is called by the whalers *peaking the flukes*. *T. Beale*, Nat. Hist. Sperm Whale, p. 44. *N. E. D.*—**To peak the mizzen**, to cant the mizzen-yard so that it makes a sharp angle with the mast.

peak-bulkhead (pēk′bulk″hed), *n.* In *naval arch.*, a bulkhead fitted in the extreme forward part of a vessel, and generally referred to as the 'forward collision bulkhead.'

peaker (pē′kėr), *n.* **1.** A load of logs narrowing sharply toward the top, and thus shaped like an inverted V.—**2.** The top log of a load.

peak-load (pēk′lōd), *n.* That portion of the load of a power station which coincides with the time of greatest demand. The term is due to the fact that the variation of the load with time is shown graphically by means of a curve, the load-curve, the maximum peak of which indicates the time and amount of the greatest load or *peak-load*. See ★*load*², 8, and ★*peak*¹, *n.*, 4.

It is necessary at times of fall and winter *peak loads* to operate the steam plants in the three combination substation and subsidiary steam plants which the company was operating three years ago.
Elect. World and Engin., May 23, 1903, p. 866.

peak-tank (pēk′tangk), *n.* A compartment in the extreme forward part of a vessel for holding either fresh or ballast water, or a supply of turpentine, etc.

peaky-blinder (pē′ki-blīn″dėr), *n.* One of a class of hoodlums or hooligans in the Midlands, England: so called from their custom of wearing the peaks of their caps drawn down over their eyes when at their nefarious practices. *N. and Q.*, 9th Ser., VII. 94.

peal¹, *n.*—**Dumb peal**, a muffled peal of bells.—**Muffled peal**, in *bell-ringing*, a peal, or its sound, when the clappers are partly covered with leather so that half of the strokes are dull or indistinct: used on occasions of mourning.

peal⁵ (pēl), *n.* A name used in England for different species of the genus *Salmo*, as *S. salar*, the salmon, or *S. cambricus*, a trout found in England, Ireland, and Norway. The latter is also called *sewin*.

The growth and migrations of salmon (including sea-trout, salmon-trout, *peal*, sewin, etc.).
Science, Sept. 16, 1904, p. 383.

pea-louse (pē′lous), *n.* An aphidid found on the pea-vine.

Peanut butter, peanuts ground and generally mixed with a little water.—**Peanut methods**, the methods of peanut politics; petty or tricky methods. [Colloq.]—**Peanut-oil.** See ★*oil*.—**Peanut politics**, the petty ways and tricks of small-minded politicians; petty partizan action. [Colloq.]

pea-oil (pē′oil), *n.* See ★*oil*.

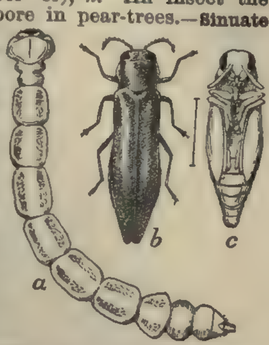
pea-plant (pē′plant), *n.* **1.** Any plant that bears peas.—**2.** In Australia, any one of several plants belonging to the pea or bean family, *Fabaceæ*.

pear¹, *n.*—**Bachelor's pear**, in Barbadoes, either of two tropical species of the genus *Solanum*, *S. mammosum* and *S. xanthocarpum*.—**Black rot of pear.** See *black* ★*rot*.—**Grape-pear.** (*b*) The shad-bush, *Amelanchier Botryapium*. Also called *swamp sugar-pear*.—**Native pear**, in Australia, same as *wooden pear* (which see, under *pear*¹).—**Oil of pear.** See ★*oil*.—**Pear ambrosia-beetle.** See ★*beetle*².—**Pear fruit-borer.** See ★*fruit-borer*.—**Pear-leaf blister.** See ★*blister*.—**Pear leaf-bug.** See ★*leaf-bug*.—**Pear leaf-miner.** See ★*leaf-miner*.—**Pear twig-girdler.** See ★*twig-girdler*.—**Vegetable pear.** Same as *cheyote*.

pear-aphis (pãr′ā″fis), *n.* An undetermined plant-louse that infests the leaves of the pear-tree in June.

Pear-blight beetle. (*b*) Same as *apple-tree* ★*shot-borer*.

pear-borer (pãr′bōr″ėr), *n.* An insect the larvæ of which bore in pear-trees.—**Sinuate pear-borer**, a buprestid beetle, *Agrilus sinuatus*, accidentally introduced from Europe into the United States. Its larvæ feed between the bark and wood of pear-trees, making very long zigzag galleries, finally girdling and killing the tree.

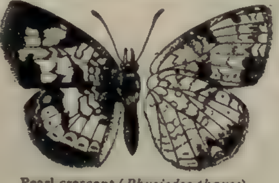


Sinuate Pear-borer (*Agrilus sinuatus*). *a*, larva; *b*, beetle; *c*, pupa. Enlarged. (Banks, U. S. D. A.)

pearceite (pērs′īt), *n.* [Named after Dr. Richard *Pearce* of Denver.] A sulpharsenite of silver, Ag_9AsS_6, analogous to the sulphantimonite polybasite, to which it is also related in crystallization: found in Montana and also in Colorado and Utah.

pear-conch (pãr′kongk), *n.* A pear-shell, or fig-shell: a species of *Pyrula*.

pearl, *n.* **15.** In *ship-rigging*, one of the bull's-eye rollers strung on the round iron band which spans the forward part of the gaff on fore-and-aft vessels, and which assist in the smooth hoisting of the spar, as well as confining it to the mast.—**Cyst-pearl**, a pearl formed in the ordinary manner, that is, in a cuticular cyst or sac.—**Fantasy pearl**, a name applied to the irregular, sometimes hollow, form of pearls, not formed loose and free as are the perfect pearls, but produced on the pearl shell, usually by the inclosure of some foreign substance, such as clay, a parasite, or even a liquid. These are detached from the shell and do not possess the value of the more perfect pearls.—**Pearl luster, ware.** See ★*luster*², ★*ware*².



Pearl-crescent (*Phyciodes tharos*). Natural size.

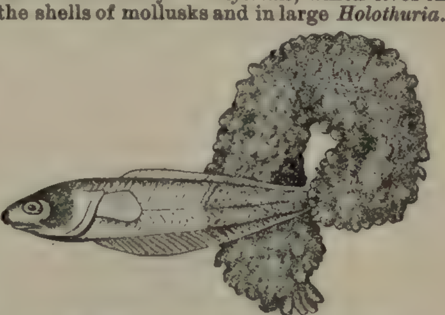
pearl-crescent (pėrl′kres″ẹnt), *n.* An American nymphalid butterfly, *Phyciodes tharos*, found practically throughout North America. Its larvæ feed on asters.

pearl-diabase (pėrl′dī″ạ-bās), *n.* Same as *variolite*.

pearler (pėrl′ėr), *n.* [*pearl* + *-er*¹.] A pearl-diver; one who is engaged in pearl-fishing.

In cases where a *pearler* has one boat, only sufficient room will be found for the storage of shell of one month's work (this should average three-fourths of a ton), but a plant of two or more boats has generally a schooner of from 30 to 75 tons as a storeship for shell and provisions, etc. *Sci. Amer. Sup.*, March 28, 1903, p. 22766.

pearl-fish (pėrl′fish), *n.* **1.** A common name of *Fierasfer affinis*, a fish found in the Bay of Panama, in the shells of the pearl-oyster; any fish of the family *Fierasferidæ*, which lives in the shells of mollusks and in large *Holothuria*.



Pearl-fish (*Fierasfer acus*) issuing from a Holothurian. (From Jordan's "Guide to the Study of Fishes.")

—**2.** A minnow, *Alburnus lucidus*, and other allied species, ranging over Europe and western Asia. The pearly matter from their scales is used in the manufacture of artificial pearls.

pearl-hardening (pėrl′härd″ning), *n.* In *paper-making*, gypsum prepared and used to give the appearance of body to a thin, sleazy paper.

pearlite, perlite (pėrl′īt), *n.* [*pearl* + *-ite*².] The eutectoid of steel. All slowly cooled steel containing 0.90 per cent. of carbon consists entirely of pearlite. With more than this amount of carbon, steel consists of pearlite associated with microscopic crystals of cementite; with less than 0.90 per cent. of carbon, it consists of pearlite and microscopic crystals of ferrite. Pearlite has a laminated structure, and consists of 86.5 per cent. of ferrite and 13.5 per cent. of cementite, in microscopic flakelets or crystals in the form of thin plates or scales, intimately mixed, and usually requiring a magnification of a thousand diameters to disclose it.

> The best condition for rail-steel is that in which the ferrite and *pearlite* appear in a closely-interlocking relation, while, if the ferrite appears in large enclosed polyhedrons, it indicates that the temperature before rolling was too high. *Engin. Mag.*, March, 1899, p. 1011.

> Steels containing 0.2 percent carbon show a *pearlite* structure until the tungsten content exceeds 10 percent. When they contain 0.8 percent carbon the *pearlite* structure holds only up to 5 percent tungsten. The *pearlite* steels are stronger the more tungsten they contain. *Jour. Phys. Chem.*, March, 1905, p. 272.

pearl-lightning (pėrl′līt″ning), *n.* A lightning-flash in disjointed sparks resembling a row of pearls or glistening drops.

pearl-organ (pėrl′ôr″gan), *n.* A small spine-like tubercle developed by many of the male fishes of the order *Plectospondyli.* The organs are present only during the breeding-season and are particularly well developed about the head and along the sides of the caudal peduncle and the anal fin.

> The males of certain species of North American fishes develop during the breeding season what are known as "*pearl-organs.*" These are hard spine-like thickenings of the epidermis, sometimes forming rows on the sides of the tail and on the anal fin. Their use long remained unknown. Mr. J. Reighard, of Michigan University, finds, however, that they are employed by the males of some species for fighting and in building their nests, while in all the species they are used for holding the spawning female. *Knowledge*, May, 1904, p. 96.

pearl-perch (pėrl′pėrch), *n.* See *perch*¹.

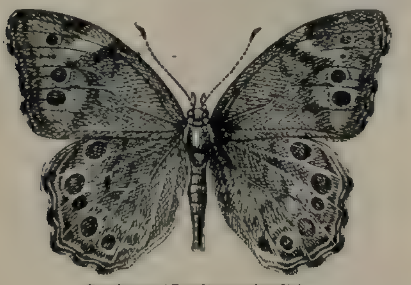
pearly, *a.*— **Pearly disease.** See ★*disease.*— **Pearly necklace-shell.** See ★*necklace-shell.*

II. *n. pl.* Clothes with large pearl buttons, worn by costermongers. *N. E. D.* [Slang.]

pearly (pėr′li), *adv.* In the manner of a pearl; like a pearl.

> Here is a shell; 't is *pearly* blank to me,
> Nor mark'd with any sign or charactery.
> *Keats*, Endymion, iii. 761.

pearly-eye (pėr′li-ī), *n.* An American agapetid butterfly, *Enodia portlandia*, which occurs from the southern United States to Nova Scotia and Manitoba. Its larvæ feed on grass.



Pearly-eye (*Enodia portlandia*).
Natural size.

pearlylite (pėr′li-līt), *n.* Same as ★*pearlyte.*

pearlyte (pėrl′īt), *n.* [*pearl* + *-yte.*] A kind of rock, a variety of quartz-trachyte, graduating into obsidian. Also known as *pearlstone* or *lithoidal rhyolyte.*

pear-midge (pãr′mij), *n.* See ★*midge.*

pear-oil (pãr′oil), *n.* See ★*oil of pear.*

pear-rust (pãr′rust), *n.* See ★*rust*¹.

pear-scale (pãr′skāl), *n.* Any one of several scale-insects found on pear-trees, as the two diaspine scales, *Aspidiotus pyri* and *Diaspis pyri*, and the naked scale, *Eulecanium pyri.*

Pearson's law of ancestral inheritance. See *ancestral* ★*inheritance.*

pear-stone (pãr′stōn), *n.* A nodule found in the pulp of the pear, composed of cells with strongly thickened walls which are penetrated by numerous fine branched canals. Compare ★*sclereid* and *sclerotic parenchyma*, under *sclerotic. Strasburger* (trans.), Manual of Histology, p. 47.

pear-thorn (pãr′thôrn), *n.* See *thorn*¹.

Pear-tree blister-beetle. See ★*blister-beetle.*— **Pear-tree borer.** See ★*borer.*

peasant, *n.*— **Peasants' revolt**, in *Eng. hist.*, a little-used name for the Wat Tyler rebellion of 1381.

peasantism (pez′ant-izm), *n.* [*peasant* + *-ism.*] The cult that "seeks to rescue art from the exclusive control of the leisure class and place it at the disposal of all mankind." *L. F. Ward*, Pure Sociol., p. 454. [Rare.]

peasantize (pez′ant-īz), *v.*; pret. and pp. *peasantized*, ppr. *peasantizing.* [*peasant* + *-ize.*] **I.** *trans.* To make peasant-like; reduce to the peasant class. [Rare.]

> Those who escape bondage to past and present alike and who are best fitted for life want . . . to go out into the world and make careers for themselves. They go West, to the colonies, the slums; devise new enterprises, sometimes almost want to *peasantize* themselves and fall in love with wheel-grease and the smell of the barnyard. *G. S. Hall*, Adolescence, II. 513.

II. *intrans.* To become clownish or peasant-like. [Rare.]

pea-scar (pē′skär), *n.* Same as ★*button-scar.*

peat-auger (pēt′â″gėr), *n.* A hollow tube having a sharp end, used for taking samples of peat from a peat-bog. It has a sharp-pointed piston for use in closing the tube temporarily when it is desired to take a sample below the surface. When the auger has been sunk to the point at which the sample is to be taken, the piston is drawn back, and the tube can then be forced down enough farther to get the sample.

peat-coal, *n.* **2.** Same as *peat-charcoal.*

peatery (pēt′ė-ri), *n.* [*peat*¹ + *-ery.*] A place where peat is dug; a peat-bog.

peat-mull (pēt′mul), *n.* A form of peat-straw, used as a disinfecting absorbent for purifying the air of closets and stables, for protecting trees from frost, as a filling between walls to render them warm and dry, for stuffing beds, etc.

peat-press (pēt′pres), *n.* A machine for compressing peat into blocks suitable for burning.

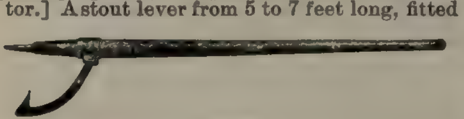
peat-straw (pēt′strâ), *n.* The cleansed, dried fiber of peat.

peau-de-cygne (pō-dė-sēn′), *n.* [F., swan's skin.] A weave of soft, highly-finished silk, closely resembling peau-de-soie. *Dry Goods Economist*, June 13, 1908.

peau-de-soie (pō-dė-swo′), *n.* [F., skin of silk.] A thick, soft silk, at one time much in vogue. The best grades are satin-finished on both sides.

pea-urchin (pē′ėr″chin), *n.* A very small species of sea-urchin of rounded form, *Echinocyamus pusillus. N. E. D.*

peavey (pē′vi), *n.* [Named from the inventor.] A stout lever from 5 to 7 feet long, fitted at the larger end with a metal socket and pike, and a curved steel hook which works on a bolt: used in handling logs, especially in driving. A peavey differs from a cant-hook in having a pike instead of a toe-ring and lip at the end.



Peavey.

Pe. B. An abbreviation of the Latin *Pedagogiæ Baccalaureus*, Bachelor of Pedagogics.

pebble, *n.* **7.** In Australia, a hard, obstinate person; a tough; also said of animals.

pebble-dash (peb′l-dash), *n.* Same as *pebble-dashing.*

> A cheap frame construction was used, the sides of which were treated with *pebble-dash* and the roof made of asphalted felt covered with crushed slag. *Smithsonian Rep.*, 1901, p. 106.

pebbling-jack (peb′ling-jak), *n.* In *leather-stamping*, a jack with a roller which makes a small round impression or print. *Modern Amer. Tanning*, p. 109.

Pebidian (pē-bid′i-an), *n.* In *geol.*, a series of volcanic beds of early Cambrian age in Pembrokeshire, Wales, originally described as of Precambrian age. They consist of tuffs, schists, and olivin-diabase and andesite sheets with intruded quartz-porphyries.

peca (pā′kä), *n.* A fruit-bat.

pecan, *n.*— **Bitter pecan.** (*b*) *Hicoria Texana*, of the Brazos River region, allied to the pecan, but with a very bitter seed.

pecego (pā′sā-gō), *n.* [Port., peach.] The fruit of a small tree of the soapberry family, *Chytranthus Mannii*, native to tropical West Africa. It is edible and is prized by the natives, but its seeds are poisonous.

pecilonomy, *n.* See *pæcilonymy.*

peck¹, *v.* **I.** *trans.*— **Pecked implement**, in *prehistoric archæol.*, a stone implement made of a tough stone which is shaped by being pecked and battered with another hard stone.

II. *intrans.* **2.** To fall or pitch forward: said in particular of a horse when he touches the ground with his toe first in a stride, instead of stepping on the whole foot.

> "Perhaps" . . . flew over [the last hurdle] but "Dandy Jim," who was rather blown, *pecked*, blundered and fell. *B. M. Croker*, Diana Barrington, xxiii.

peckiness (pek′i-nes), *n.* The state or condition of being pecky.

pecking-arm (pek′ing-ärm), *n.* A short staff or stick, operated by a cam, for throwing the shuttle in a loom. Also called *picker-stick. R. Marsden*, Cotton Weaving, p. 84.

pecking-cord (pek′ing-kôrd), *n.* A cord which connects the pecking-arms of a loom. *R. Marsden*, Cotton Weaving, p. 77.

Pecksniffery (pek-snif′ė-ri), *n.* [See *Pecksniffian.*] A hypocritical display of benevolence, resembling that of Pecksniff; Pecksniffianism.

Pecksniffianism (pek-snif′i-an-izm), *n.* [*Pecksniffian* + *-ism.*] A hypocritical display of benevolence resembling that of Pecksniff; the habit of such hypocrisy. See *Pecksniffian.*

pecky¹ (pek′i), *a.* [*peck*¹ + *-y*¹.] Decayed in such a manner that holes or pockets are formed: applied especially by lumbermen to cypress timber affected in this manner, and also to a similar decay of cedar (*Libocedrus*) and other timber. The specific fungus which produces the decay in most cases is not known.

pecky² (pek′i), *n.* The palmated sandpiper. *Stand. Dic.* [Cape Cod.]

pecorella (pe-kō-rel′ä), *n.* [It. *pecorella*, foam, white cloud, also a lamb, < *pecoro*, fem. *pecora*, a sheep, < L. *pecus* (*pecor-*), sheep, cattle.] A prepared chicken-skin, used by miniaturists.

> He painted upon card, chicken-skin (*pecorella*), or vellum, and on rare occasions upon rough bone. *Encyc. Brit.*, XXX. 762.

pectase (pek′tās), *n.* [*pect*(*ose*) + *-ase.*] A coagulating ferment found in various fruits and berries, which by its action upon pectose causes the formation of jellies in the juices of the corresponding fruits.

pectenoid (pek′te-noid), *a.* [NL. *Pecten-* + *-oid.*] Having the characters of, or related to, the pelecypod genus *Pecten.*

pectinaceous, *a.* **2.** Same as *pectic.*

pectinate (pek′ti-nāt), *v. i.*; pret. and pp. *pectinated*, ppr. *pectinating.* In *bot.*, to form an interdigitated arrangement (see *pectinated*, 2): said of fibrovascular bundles.

> The bundles of the trace of successive pairs all *pectinate* with one another. *De Bary* (trans.), Compar. Anat. Phanerogams and Ferns, [p. 248.

pectinatory (pek′ti-nā-tō-ri), *a.* [*pectinat*(*e*) + *-ory.*] In *bot.*, exhibiting, or relating to, pectination in sense 3; pectinated. See *pectinated*, 2.

> The word *pectinatory* will be used subsequently in describing the course of the vascular bundles. *De Bary* (trans.), Compar. Anat. Phanerogams and Ferns, [p. 128.

pectine, *n.* **2.** One of a pair of comb-like structures on the under side of the thorax of scorpions, just behind the hind legs.

pectinirhomb (pek-tin′i-romb), *n.* [L. *pecten* (*pectin-*), comb, + *rhombus*, rhomb.] In the *Echinodermata*, one of the rhombic areas of parallel stereome folds on the outer surfaces of certain thecal plates in some cystideans. New areas overlap the edges of adjoining plates and often exhibit a suppression of the folds along their diagonals, which coincide with the suture-lines, resulting in a division of the individual areas. They are similar to the pore-rhombs. Also termed *pectinated rhombs.*

pectinous (pek′ti-nus), *a.* [*pectin* + *-ous.*] Of or relating to pectin; pectic.

pectoid (pek′toid), *a.* [L. *pect*(*en*), comb, + *-oid.*] A term suggested by A. D. Cushman to describe the peculiar property possessed by some constituents of rocks of developing a colloidal film about their particles during decomposition. The property is of importance in understanding the bond or cementing power of macadam and the consolidation of sediments.

> This effect seems to be accompanied with direct decomposition of certain constituents of the rock magma, which results in forming colloidal films on the particles. The word '*pectoid*' is suggested to describe this condition. *Science*, Feb. 17, 1905, p. 260.

pectoral, *a.* **3.** Figuratively, proceeding from the breast, as of the heart; from the inner consciousness.— **Basal pectoral radius**, a brachial ossicle or an actinost. See *actinost.*

pectoriloquy, *n.*—**Aphonic** or **whispering pectoriloquy,** transmission of the whisper so that it is heard through the chest-wall on auscultation.

pectosinase (pek-tō'si-nās), *n.* [*pectose* + *-in* + *-ase.*] A ferment which converts pectose into pectin, and pectin into various sugars which undergo fermentation, with the production of hydrogen, carbon dioxid, and butyric acid.

Pectus carinatum. Same as *pigeon-breast*, 2.—**Pectus excavatum,** a deformity of the chest marked by a depression of the breast-bone.

pecudiculture (pek″ụ̄-di-kul'tụ̄r), *n.* [L. *pecus* (*pecud-*), cattle, sheep, + *cultura*, culture.] The raising of cattle; the keeping of flocks and herds; stock-raising.

> The Navaho also were modified for their betterment by contact with the Rio Grande culture and by racial mixture with some of the clans, through whom, no doubt, they received sheep and their first lessons in *pecudiculture.* *Rep. U. S. Nat. Mus.*, 1901, p. 351.

peculiar, *n.* **6.** In Oxford, a nickname for an Evangelical. *N. E. D.*

pecuniosity (pẹ̄-kū-ni-os'i̤-ti), *n.* [L. *pecuniosus*, wealthy.] The state of having plenty of money. [Rare.]

ped. **2.** An abbreviation of *pedestrian.* [Slang.]

pedagog, *n.* and *v. t.* A simplified spelling of *pedagogue.*

pedagogal (ped-a̤-gō'ga̤l), *a.* [*pedagog*(*ue*) + *-al*^{1}.] Of or pertaining to a pedagogue.

> He sat in the *pedagogal* chair, but not with the majesty of his predecessor. *S. Mayne*, A Tramp, v.

pedagogist (ped'a̤-gō-jist), *n.* [*pedagog*(*ue*) + *-ist.*] One who is expert in the science of pedagogics.

pedagoguery (ped'a̤-gog-ėr-i), *n.* **1.** A school or school-house.

> The children are . . . lodged in immense *pedagogueries.* *Sydney Smith*, Essays, p. 209. *N. E. D.*

2. The system of pedagogy; the office of a pedagogue.

> In his *pedagoguery* he was pessimistic. The boys learned self-repression. *T. Wainright*, Overland, ii.

3. A petty instructiveness; a dogmatic and narrow-minded method of dealing with things.

> If I decline to descant on [such] critics . . . it is not because of any poverty of matter for remark in the headlong sciolism of the one and in the piddling *pedagoguery* of the other. But hasty and shallow philologizing is everywhere common.
> *F. Hall*, Recent Exemplifications False Philol., p. 31.

pedagoguish (ped'a̤-gog-ish), *a.* Pedantic; like a pedagogue; narrow-minded.

> There is, however, a pitch of surpassing absurdity beyond what the most indulgent partiality can tolerate — a climax of *pedagoguish* vanity which the pride of grown men and women cannot stand.
> *Blackwood's Mag.*, XXVII. 482.

pedagogy, *n.* **3.** An establishment for instructing youth; a college. [Obsolete or rare.]

> An incredible number of colleges, gymnasia, *pedagogies.* *Geog. Mag.*, II. 151.

pedal, *a.* and *n.* **I.** *a.* **3.** (*b*) In *geom.*, pertaining to the feet of transversals on to the sides of a triangle through a given point and the vertices.—**Pedal gland,** in gastropods, one of the glands which secrete a mucous substance that lubricates the surface upon which the animal crawls, or, in certain cases, hardens on contact with air or water to form a thread which suspends the animal, or entangles bubbles of air to form a float for the eggs (*Ianthina*). The secreting cells of the gland may occur as isolated unicellular glands or may be aggregated in special invaginations of the skin.—**Pedal lobe.** See ★*lobe.*—**Pedal rod.** (*b*) In *pianoforte-making*, a rod which transmits the motion of a pedal to the action.—**Pedal triangle.** See ★*triangle.*

II. *n.* **5.** In *geom.*, a pedal triangle (which see, under ★*triangle*).—**Janissary pedal,** in old keyboard instruments, a pedal that brought into play little drums and cymbals, producing a quaint suggestion of martial music.—**Pedal of P with respect to A B C,** the triangle whose vertices are the feet of transversals on to the sides of A B C through P from the vertices of A B C.—**Piano pedal.** (*b*) In *pianoforte-making*, one of the foot-levers by which certain general effects are produced, including the damper-pedal, the soft pedal, the sustaining pedal, and sometimes others.—**Shifting pedal,** in *pianoforte-making*, that form of soft pedal, as in a grand pianoforte, that moves the whole action, including keyboard and hammers, slightly to one side, so that the hammers strike only one or two strings, instead of three. In old instruments this pedal was capable of two degrees of action, the smaller being called a *one-string shift*, the larger a *two-string shift*. The former is now rare. Hence, the direction *una corda* signifies simply the use of this pedal. Also *soft pedal.* See *pianoforte* and *pedal*, *n.*, 2.—**Swing-back pedal,** a bicycle pedal which can be rotated independently of the rest of the mechanism of the running-gear, or which will stay at rest while the remainder of the mechanism is moving; a coaster-brake pedal.

pedale^1, *n.* **3.** In *Scyphomedusæ*, one of the projections of the margin of the umbrella, which forms an enlarged base carrying a tentacle.

pedaliaceous (pẹ̄-dā-li-ā'shius), *a.* Belonging to or characteristic of the plant family *Pedaliaceæ.*

Pedalion (pẹ̄-dā'li-on), *n.* [NL.] The typical genus of the family *Pedalionidæ.* *Hudson*, 1871.

Pedalionidæ (pẹ̄-dā-li-on'i-dē), *n. pl.* [NL. *Pedalion* + *-idæ.*] A family of rotifers, of the order *Scirtopoda*, having six hollow limbs, the head truncate, corona with two concave lobes, velum as in the *Philodinidæ*, and the trophi malleoramate. It includes the genera *Pedalion* and *Hexarthra.*

pedalism (ped'a̤l-izm), *n.* [*pedal* + *-ism.*] Action of the feet, considered with reference to the communication of power of some kind. [Rare.]

> Mrs. Hayden was seated at some distance from the table, and her feet were watched by their believers until faith in *pedalism* slowly evaporated.
> *De Morgan*, From Matter to Spirit, pref. p. 41. *N. E. D.*

pedal-lever (ped'a̤l-lev″ėr), *n.* A part of the device for feeding cotton into the scutching- or picking-machine, the important function of which is to equalize the delivery of the cotton to the beater.

pedal-motion (ped'a̤l-mō″sho̤n), *n.* A mechanism attached to the feeding arrangement of a cotton-scutching machine, to produce good and even laps or work.

pedanticism, *n.* **2.** Same as *pedantry.*

pedantocrat (pẹ̄-dan'tō-krat), *n.* [*pedantocrat*(*ic*).] One who rules the people on unpractical, bookish theories; a pedantic ruler.

pedantocratic (pẹ̄-dan-tọ-krat'ik), *a.* [*pedantocracy* (*-crat-*) + *-ic.*] Pertaining to or of the nature of pedantocracy.

pedate, *a.* **2.** In *zoöl.*: (*c*) Relating or pertaining to the *Pedata.*

pedation (pẹ̄-dā'sho̤n), *n.* **1**†. "A staking, propping, or setting up of vines." *Blount*, Glossographia.—**2.** In *entom.*, the manner in which the feet of insects grow or are developed; the shape, etc., of all the parts of the feet; the general condition of the feet. *Mayne*, Expos. Lex. *N. E. D.* [Rare.]

pedatrophia, pædatrophia (pē-da̤-trō'fi-ä), *n.* [NL. *pædatrophia*, ‹ Gr. παῖς (παιδ-), child, + ἀτροφία, atrophy.] Marasmus or any wasting disease of childhood.

pedatrophy (pẹ̄-dat'rọ-fi), *n.* Same as ★*pedatrophia.*

peddler, *n.* **2.** In *entom.*, the larva of any one of the tortoise-beetles.

pedententous (ped-en-ten'tus), *a.* Same as *pedetentous.*

pedestal, *n.* (*d*) In *bridge-building*, that portion of an abutment or pier which furnishes the immediate support for an end of a bridge truss or girder.

pedestal-coil (ped'es-ta̤l-koil), *n.* A radiator made from a coil of steam-pipe wound about a vertical axis.

pedestal-gear (ped'es-ta̤l-gēr), *n.* A running-gear for a carriage or wagon, which has an inverted U to straddle the axle and carry the load to springs located below the axle, thus permitting the body to be set very low.

pedgery (pej'ėr-i), *n.* See ★*pituri.*

pediad (ped'i-ad), *a.* [*pedion* + *-ad*^{3}.] Pertaining to a pedion; characterized by the symmetry of the class of crystals of which the pedion is the typical form. See ★*symmetry*, 6.

pedialgia (ped-i-al'ji-ạ̈), *n.* [NL., ‹ L. *pes* (*ped-*), foot, + Gr. ἄλγος, pain.] Same as *podalgia.*

pediatrician (ped″i-a̤-trish'a̤n), *n.* [*pediatric* + *-an.*] Same as ★*pediatrist.* *Med. Record*, March 28, 1903, p. 513.

pediatrist (ped-i-at'rist), *n.* [*pediatr-y* + *-ist.*] A physician who treats especially diseases of children. *Trans. Amer. Pediatric Soc.*, IX. 44.

pedicellar (ped-i-sel'ạ̈r), *a.* [*pedicel* + *l-* + *-ar.*] Relating to or connected with pedicellariæ or pedicels: as, *pedicellar* pores.

Pedicellaster (ped″i-se-las'tėr), *n.* [NL.] The typical genus of the family *Pedicellasteridæ.* *Sars*, 1860.

Pedicellasteridæ (ped″i-sel-as-ter'i-dē), *n. pl.* [NL. *Pedicellaster* + *-idæ.*] A family of starfishes of the order *Cryptozonia*, which have opposite ambulacral ossicles, a small disk, narrow subcylindrical rays, biserial podia, and the abactinal skeleton consisting of narrow plates forming a quadrangular network. It includes the genera *Pedicellaster*, *Coronaster*, *Gastraster*, and *Lytaster.*

Pedicellina (ped″i-se-lī'nä), *n.* [NL., ‹ *pedicellus*, pedicel, + *-ina.*] The typical and only genus of the family *Pedicellinidæ.* *Sars*, 1835.

Pedicellinidæ (ped″i-se-lin'i-dē), *n. pl.* [NL. *Pedicellina* + *-idæ.*] A family of entoproctous polyzoans, which consists of stalked colonial forms attached to a creeping stolon and budding at the growing point of the stolon. The family is marine and contains the single genus *Pedicellina.*

pedicle, *n.* **2.** (*c*) In *ichth.*, the tapering posterior portion of the body lying just anterior to the caudal fin. Sometimes called *caudal pedicle.* (*d*) In brachiopods, the fleshy arm by which the entire animal is attached, as in *Lingula*: usually atrophied in later-growth stages of certain progressed forms like *Spirifer.*

pedicled (ped'i-kld), *a.* Having a pedicle; attached by means of a pedicle, as a tumor.

pedicle-muscle (ped'i-kl-mus″l), *n.* In brachiopods, one of the muscles attached to the base of the pedicle, which have their proximal ends inserted in the posterior portions of both valves and serve to retract the pedicle and to rotate the shell upon the pedicle as an axis.

pedicle-slit (ped'i-kl-slit), *n.* The foramen or passage for the pedicle in the ventral valve of some neotrematous brachiopods, which has the form of a long, narrow slit.

pediculated (pẹ̄-dik'ụ̄-lā-ted), *a.* Same as ★*pedicled.*

pediculid (pẹ̄-dik'ū-lid), *n.* and *a.* **I.** *n.* A member of the *Pediculidæ*; a louse.

II. *a.* Louse-like; having the characters of or belonging to the family *Pediculidæ.*

pediculophobia (pẹ̄-dik″ū-lọ-fō'bi-ạ̈), *n.* [NL. *pediculo*(*sis*) + Gr. φόβος, fear.] A morbid dread and false feeling of being afflicted with pediculosis. *Syd. Soc. Lex.*

pedicure (ped'i-kūr), *v. t.*; pret. and pp. *pedicured*, ppr. *pedicuring*. [*pedicure*, *n.*] To care for the feet of (some one), and to treat minor ailments of the feet, such as corns.

pedigraic (ped-i-grā'ik), *a.* [Irreg. ‹ *pedigree* + *-ic.*] Relating to, or of the nature of, a pedigree. [Rare.]

> The late Mr. . . . commenced the compilation of a *pedigraic* account which, if completed, would doubtless have removed most of the difficulties in the somewhat involved and complicated descent of this historical family.
> *N. and Q.*, 9th ser., IX. 480.

pedigree (ped'i-grē), *v. t.*; pret. and pp. *pedigreed*, ppr. *pedigreeing*. [*pedigree*, *n.*] To breed (animals) with reference to pedigree (chiefly). [Rare.]

> Necessity, it is said, knows no law, and necessity demanded that in Short-horn line breeding an outcross was essential, that the milk should not be *pedigreed* away.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 5.

pediluvial (ped-i-lū'vi-a̤l), *a.* [NL. *pediluvi*(*um*) + *-al*^{1}.] Of or pertaining to pediluvium or the washing of feet.

pedimanous, *a.* **2.** Pertaining to or having the characteristics of the *Pedimana*: a term applied to both lemurs and opossums.

pedinaxon (ped-in-ak'son), *n.* [Gr. πεδινός, flat, + ἄξων, axis. See *axon.*] In sponge-spicules, a monaxon whose ideal axis lies in a plane, though the line may be straight or curved. Compare ★*spiraxon.*

> G. C. J. Vosmaer endeavours to introduce some improvements in the classification of siliceous sponge spicules. Thus in the group of monaxons, two fundamental divisions may be distinguished, according to the fact whether the ideal axis lies in a plane or not. In the former case the line may be straight, curved, bent, etc.; in the latter case the line is a screw helix (approximately, as all vital structures are). The spicules of the first set are called "*pedinaxons,*" those of the second "spiraxons."
> *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 503.

pediococcus (ped″i-ọ̄-kok'us), *n.*; pl. *pediococci* (-sī). [Gr. πεδίον, a plain, + κόκκος, berry. See *coccus.*] A form of *Micrococcus* in which the cocci divide into four parts by the formation of two septa intercepting each other at right angles.

pedion (ped'i-o̤n), *n.*; pl. *pedia* (-ạ̈). [Gr. πεδίον, a plain, ‹ πέδον, ground, earth, plain.] A form, belonging to the asymmetric or pediad class of the triclinic system, consisting of a single face only. *W. J. Lewis*, Crystallography, p. 148.

pedionomite (ped-i-on'ọ̄-mit), *n.* [Gr πεδιονόμος, one who dwells on a plain, + *-ite*2.] One who lives on a plain. [Rare.]

They would first occupy the eastern and afterwards the western slopes of the Apennines; and thence, emboldened by strength and security, they would overspread the surrounding lowlands; and become *pedionomites*.
R. F. Burton, Etruscan Bologna, ii.

Pedipalpa (ped-i-pal′pä̤), *n. pl.* [NL., neut. pl. of *pedipalpus*. See *pedipalp*.] The order of *Arachnida* of which the scorpion-spiders are examples.

pedipalpal (ped-i-pal′pa̤l), *a.* [*pedipalp* + *-al*1.] Concerning or pertaining to the pedipalps, or the appendages which, in the *Arachnida*, carry the large claws. *Huxley*, Anat. Invest., p. 384.—**Pedipalpal gland.** See ★*gland*.

peditis (pē-dī′tis), *n.* [NL., < L. *pes* (*ped-*), foot, + *-itis*.] Inflammation of the pedal bone of the horse, a complication of severe founder. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 423.

pedograph (ped′ọ̄-gráf), *n.* [L. *pes* (*ped-*), foot, + Gr. *γράφειν*, write.] An instrument for making automatically a topographical record of the ground traversed by a pedestrian. *Sci. Amer.*, May 28, 1904, p. 421.

pedological, pædological (pē-dọ̄-loj′i-ka̤l), *a.* Pertaining to pedology or to its methods. Also *paidological*.

They need to be individually studied by every *paidological* method, physical and psychic.
G. S. Hall, Adolescence, I. 407.

pedologically, pædologically (pē-dọ̄-loj′i-ka̤l-i), *adv.* In a pedological manner, or by pedological methods.

pedology, pædology (pē-dol′ọ̄-ji), *n.* [Gr. παῖς (*παιδ-*), child, + *-λογια*, < *λέγειν*, speak.] The science of the child, theoretical and applied; child-study in its widest sense. The term was apparently introduced by O. Chrisman in 1896. Also *paidology*. *Amer. Jour. Psychol.*, XII. 268.

pedomesoblast, pædomesoblast (pē-dọ̄-mes′ọ̄-blást), *n.* [(?) Gr. *παῖς* (*παιδ-*), child, + E. *mesoblast*.] The mesenchyme or ectomesoblast of certain marine larvæ, such as those of the annelids: distinguished from the *definitive* or *somatic mesoblast*.

pedomorphic, pædomorphic (pē-dọ̄-môr′fik), *a.* [Gr. *παῖς* (*παιδ-*), a child, + *μορφή*, form.] Of a juvenile character. The absence of a beard, the slight development of the larynx, and the shortness of the legs as compared with the arms, in the human male, are accounted pedomorphic traits.

pedomorphism, pædomorphism (pē-dọ̄-môr′fizm), *n.* [*pedomorph*(*ic*) + *-ism*.] The retention by the adult organism of infantile or juvenile characters. See ★*pedomorphic*. *Harrison Allen*, Jour. Acad. Nat. Sci., Philad., N. S., X. 432.

pedoparthenogenesis, pædoparthenogenesis (pē″dọ̄-pär″the-nọ̄-jen′e-sis), *n.* [NL., < Gr. *παῖς* (*παιδ-*), a child, + NL. *parthenogenesis*.] The reproduction of larval or immature animals by unfertilized eggs; pedogenesis.

This group (Diptera) furnishes some excellent examples of pædogenesis or *pædoparthenogenesis*, and the phenomena as shown in various genera grade into each other in such a manner that it becomes evident that no line of demarcation can be drawn between parthenogenetic development from eggs laid by adult females and pædogenesis.
E. F. Phillips, Proc. Amer. Philos. Soc., May–Dec., [1903, 299.

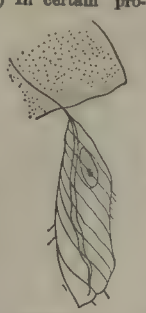
pedotribe, pædotribe (pē′dọ̄-trīb), *n.* [Gr. *παιδοτρίβης*, a teacher of gymnastics.] In *Gr. antiq.*, a teacher of wrestling and other athletic exercises; a teacher of gymnastics.

pedrail (ped′rāl), *n.* [Irreg. < L. *pes* (*ped-*), foot, or *ped*(*estrian*), + E. *rail*1.] A form of traction-engine, so constructed that the wheels rest their weight not on the ground-surface but on the units or links of a jointed chain, fed in front of the machine as it advances, and laid by it on the ground for the wheels to run on. These block- or link-rails are picked up by the wagon after it passes over them. The wheels do not sink in soft earth, as the track gives a greater bearing-surface for support. Great unevenness of surface is overcome by this plan, and the wheels can mount over logs and considerable obstacles.

The Diplock walking machine — called by the inventor the "*Pedrail*" — give[s] promise of a successful result. In this invention supports carrying rollers are placed on the ground, and the motor or traction engine may be said to be rolled over them so that a rail fixed to the waggon moves along while the wheels themselves are temporarily supported on the ground and picked up when the load has passed over them. *Encyc. Brit.*, XXXI. 18.

pedro, *n.* 2. In the game of cinch, the five of trumps and also the five of the same color.—**Double pedro.** See ★*cinch*, 4.—**Draw pedro,** a variety of cinch in which only six cards are dealt to each player and there is no left pedro. Twenty-one points is game. See ★*cinch*, 4.

peduncle, *n.*, 2. In *zoöl.*: (*e*) In certain protozoan parasites, a long and very delicate process, possibly a highly modified cilium, by which the organism is attached to the intestinal epithelium of its host, as in *Pyrsonympha vertens* and *Blepharocorus uncinata*.—**Caudal peduncle,** that part of a fish which is behind the anal and dorsal fins and which supports the caudal fin.—**Olfactory peduncle,** the stem or constricted portion of the brain, which bears the olfactory lobe.



Peduncle of *Pyrsonympha*.

Pyrsonympha vertens Leidy, attached by a delicate filament to the epithelium of the intestine of Termes flavipes. The filament appears to be continuous with a specialized (muscular?) band running through the whole length of the medulla. (After Porter) x 400.
(From Lankester's "Zoology.")

peebeen (pē′bēn), *n.* [Aboriginal name.] A myrtaceous tree of northern Queensland, *Syncarpia Hillii*, which yields a tough, close-grained wood of a dark pink color, useful for building purposes. It is often called *turpentine-tree* by the colonists.

peechi (pē′chi), *n.* Burchell's zebra.

peeke, *n.* See *peag*.

peeling-machine (pē′ling-ma̤-shēn″), *n.* Same as ★*cutting-machine*.

peen-to (pēn-tō′), *n.* [Canton *pīn t'o*, Mandarin Chinese *pien t'ao*, flat peach: *pīn*, *pien*, flat, + *t'o*, *t'ao*, peach, nectarine.] A peach of the South China race, *Prunus Persica*, var. *platycarpa*, now somewhat grown in the extreme southern part of the United States: characterized by a very flat fruit, as flat, in some cases, as a watch.

peeoy (pē-ō′i), *n.* [Scotch.] A firework; a small pyramid of damp powder squeezed into shape and lighted at the top. Also called *spitting-devil*.

Puttin' poother in [the man's] fire and *peeoys* in his window.
R. L. Stevenson, Master of Ballantrae, ii. *N. E. D.*

peer2, *n.*—**Peers of the realm,** the members of the House of Lords.—**Representative peers.** See *Peer of Ireland* and *Peer of Scotland*.

peet (pēt), *n.* [Native name.] In British Columbia, *Cristivomer namaycush*, the Great Lake trout.

pee-wee (pē′wē), *n.* 1. The magpie-lark. [New South Wales.]—2. Same as *pewee*.

peg, *n.* 7. One of the cells or natural divisions into which an orange may be separated after removing the skin. [West Indies.]

peg, *n.*—**King's peg,** a drink or 'peg' made of liqueur brandy and champagne.

Cranze kept up a steady soak on *king's peg*—putting in a good three fingers of the liqueur brandy before filling up the tumbler with champagne—and was naturally inclined to be argumentative.
Cutcliffe Hyne, A Master of Fortune, xi.

peg, *v. t.* 4. To pith (a frog); destroy the brain of, previous to certain experiments.—5. Same as *to* ★*peg out* (*a*).

"All the draf' was out av their tents watchin' Barney bein' *pegged*."
R. Kipling, The Big Drunk Draf', in Soldiers Three, [p. 62.

Pegged splint, in *farriery*, a special form of splint in which the bony enlargement passes across the posterior face of the cannon-bone. *U. S. Dept. of Agr.*, Rep. on Diseases of the Horse, 1903, p. 281.—**To peg out.** (*a*) To fasten down with (tent-) pegs, as an unruly soldier, as a punishment.

"'*Peg* him *out*, Sorr,' sez I, in a whisper.
"'*Peg* him *out!*' sez me orf'cer bhoy, up loud, . . .
"The non-coms tuk Peg Barney — a howlin' handful he was — an' in three minutes he was *pegged out* — chin down, tight-dhrawn — on his stummick, a peg to each arm an' leg, swearin' fit to turn a naygur white."
R. Kipling, The Big Drunk Draf', in Soldiers Three, p. 62.

(*b*) To mark out by pegs, as a miner's claim, each peg bearing the owner's name. [Australia.]

He was in high hopes that he might be one of the first to *peg out* ground on the goldfield.
G. Sutherland, Tales of Goldfields, p. 58, in E. E. [Morris, Austral English.

(*c*) In *croquet*, to put out by driving against the winning peg: said of a ball.

pega (pā̤′gä̤), *n.* [Sp. *pega*, the art of cementing or gluing, < *pegar*, join, unite, glue.] A name of the remora, *Echeneis naucrates*, a fish which is universally distributed over warm seas. It is interesting from the fact that it attaches itself to large fishes and turtles, but particularly to sharks, by a sucking-disk on top of its head. See ★*shark-sucker*, and cut under *Echeneis*.

pegall (pe-gâl′), *n.* [Carib *pegalla*.] In Guiana, a very light, closely woven basket of square or oblong form, with a cover which slips over it. It is made of strips of the hard outer portion of the leaf-stems of palms. Some of them are dyed and others are left the natural color. By means of twilled weaving elaborate patterns are produced. Called *Carib baskets* in the West Indies.

pegall-work (pe-gâl′wėrk), *n.* Woven basketry work made in checkered or twilled weave, generally with patterns in black and light, such as is used by the natives of Guiana.

pegamoid (peg′a̤-moid), *n.* [L. *pe*(*r*)*gam*(*ena*), parchment, + *-oid*.] A patented material made on a muslin back and embossed in imitation of leather: used especially in the binding of books and in upholstering.

The exterior of the balloon is made of *pegamoid*, which protects it both from sun and rain.
T. E. Curtis, in Strand Mag., Sept., 1900, p. 309.

peg-and-socket (peg′a̤nd-sok″et), *a.* Noting a method of articulation of the scales, confined entirely to ganoid fishes. The scales of these fishes develop from one to three tooth-like, bony processes on the upper or anterior border which fit into corresponding depressions in the scale next adjacent thereto.

pega-palma (pā-gä-päl′mä), *n.* [Sp. *pega-palma*, < *pegar*, to adhere to, + *palma*, palm-tree.] In Porto Rico, either *Marcgravia Sintenisii* or *M. rectiflora Jacquini*, climbing shrubs with simple leaves and long-stemmed umbels of flowers, which adhere to the trunks of palms and other forest-trees by rooting lateral branches. They are closely allied to the West Indian ivy, *Marcgravia umbellata*, of Jamaica and the Windward Islands. See *Marcgravia* and *West Indian* ★*ivy*.

pega-palo (pā-gä-pä′lō), *n.* [Sp. *pega-palo*, < *pegar*, to stick to, + *palo*, a tree or pole.] In Porto Rico, the cat's-claw liana, *Bignonia Unguis-cati*, a shrubby climber with claw-like tendrils by means of which it holds fast to the trunks of trees. See *cat's-claw*, 1 (*a*).

pega-pega (pā-gä-pā′gä), *n.* [Sp. *pegar*, to adhere, or stick to.] In Spanish America, the common name of a number of plants bearing fruit which readily adheres to other objects. In Porto Rico it is especially applied to the velvet-bur, *Priva echinata*, and to *Æschynomene Americana*, a leguminous plant with jointed pods. In Mexico it is applied to *Mentzelia adhærens*, a plant belonging to the *Loasaceæ*, armed with hooked hairs.

pega-pollo (pā″gä-pōl′yō), *n.* [Sp. *pega-pollo*, < *pegar*, to stick to or adhere, + *pollo*, chicken.] In Porto Rico, *Boerhaavia scandens*, a trailing weed belonging to the *Nyctaginaceæ*. The perianth-tubes inclosing the fruit are glutinous and easily detach themselves from the plant. They adhere to other objects, and young chickens and turkeys sometimes die in consequence of their eyes becoming sealed up by them.

pegasoid (peg′a̤-soid), *a.* [*Pegasus* + *-oid*.] Of or pertaining to the *Pegasidæ*, a family of fishes with wide-spreading pectoral fins.

peg-box (peg′boks), *n.* In musical instruments of the lute or viol families, the open part of the head in which the tuning-pegs are placed.

peg-circuit (peg′sėr-kit), *n.* On a telephone switchboard, a circuit between different lines made by inserting the pegs at the two ends of a connector into the requisite switch-holes.

pegged (pegd), *a.* Of a conical or peg shape, noting certain deformed teeth.

pegging. *n.* 6. In harvesting tobacco, the driving of a peg into the cut stalk to hang it upon while curing. For other methods see ★*spearing*, ★*splitting*.

pegman (peg′ma̤n), *n.* In *shoemaking*, see the extract.

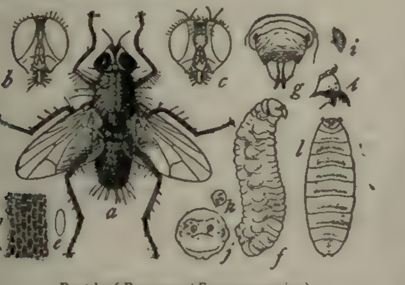
"Lasters," men or boys who place the closed uppers over the last and attach the bottom material (in hand-sewn work these are known as "makers," in "pegged work," now nearly obsolete, they are called "*pegmen*" or "rivetters"). *Webb*, Indust. Democracy, I. 418.

Pegmatitic texture. Same as *graphic* ★*texture*.

pegmatization (peg″ma̤-ti-zā′shọn), *n.* [*pegmatite* + *-ize* + *-ation*.] In *petrog.*, the filling of a rock with veins of pegmatite.

pegology (pē-gol′ọ̄-ji), *n.* [Gr. *πηγή*, water, spring, + *-ology*.] The science which treats of the origin and character of springs.

Pegomya (peg-ọ̄-mī′ä̤), *n.* [NL., < Gr. *πηγή*, water, + *μυῖα*, a fly (Desvoidy, 1830).] An important genus of anthomyiid flies which contains a number of European and American species injurious to agriculture, as the seed-corn maggot, *Pegomya fusciceps*, the beet-leaf miner, *P. vicina*, and others. Also called *Pegomyia.*—**Beet-leaf pegomya**, an American anthomyiid fly, *Pegomya vicina*, whose larva mines the leaves of the sugar-beet.



Beet-leaf Pegomya (*Pegomya vicina*).

a, fly; *b*, head of male fly; *c*, head of female; *d*, surface of egg, highly magnified; *e*, egg; *f*, maggot; *g*, *h*, head and cephalic hooks of maggot; *i*, prothoracic spiracles; *j*, anal segment; *k*, anal spiracles; *l*, puparium, all enlarged. (Howard, U. S. D. A.)

peg-pole (peg′pōl), *n.* A piece of gymnasium apparatus which consists of an upright pole having holes at regular intervals in which pegs may be inserted. It may be ascended by lifting the body by one peg while another is placed in the hole above.

peg-pot (peg′pot), *n.* Same as *peg-tankard.*

In 1873 a *peg-pot* . . ., and said to have been given by Capt. John Conolly in commemoration of the visit to Norwich of James, Duke of York, in March, 1681.
Athenæum, Jan. 24, 1903, p. 122.

pegroots (peg′rötz), *n.* See *setterwort.*

peg-tooth (peg′töth), *n.* 1. An undersized, cone-shaped tooth.—2. In *mech.*, a tooth having, in section, the shape of an isosceles triangle; a fleam-tooth.

Peg-top form. (*b*) In *naval arch.*, the form of a vessel whose midship-section outline is roughly that of a peg-top or a wide V with the upper ends rounded in.

In vessels with "*peg-top*" *forms* of cross-sections—such as the Symondite type of the Royal Navy—the metacentre occupies its highest position in the ship when she is at the load-draught, and falls gradually as the draught lightens. *White*, Manual of Naval Arch., p. 90.

Pegu (pe-gö′), *n.* A monosyllabic dialect of the Tibeto-Burman group: named from Pegu, a district in farther India.

pegwood (peg′wụ̈d), *n.* See *spindle-tree.*

pehla, *n.* See *pe-la.*

P. E. I. An abbreviation of *Prince Edward Island.*

peje (pā′hā), *n.* [Native name.] A small tree, *Iodina rhombifolia*, of the sandalwood family, found in Argentina, Uruguay, and southern Brazil. It yields a useful wood, and its leaves and bark, as well as the oil obtained from its seeds, are used in native medicine.

pejorate (pē′jọ-rāt), *v. t.*; pret. and pp. *pejorated*, ppr. *pejorating*. [L. *pejoratus*, pp. of *pejorare*, make worse.] To cause to deteriorate; depreciate the value of.

You do not appear to me to recognise the gravity of your situation, or you would be more careful not to *pejorate* the same by words which glance upon the purity of justice. *R. L. Stevenson*, Catriona, iv.

pejorism (pē′jō-rizm), *n.* [L. *pejor*, worse, + *-ism.*] The theory that the world is deteriorating or growing worse. [Rare.]

The future cannot be worse than the past. Man has believed in pessimism, he has hardly ever believed in *pejorism*, and that much decried philosophy of evolution, if it teaches us anything, teaches us a firm belief in a better future.
Max Müller, Lectures on the Origin and Growth of Religion, vii.

Pekin (pē-kin′), *n.* [*Pekin*, properly *Peking*, the capital of China.] 1. A silk fabric originally made in China.—2. A civilian; a contemptuous nickname originally bestowed in France by the soldiers of the first Napoleon. It is occasionally used in English. *N. E. D.* —**Pekin stripes**, in fabrics, a design in stripes of alternating colors, the stripes usually being of equal width. *Dry Goods Economist*, June 13, 1908.

pekoe, *n.* Pekoe tea (unqualified) is that made from the three pekoe leaves together (see below). It is of a black or grayish black color dotted with grayish or yellowish pekoe ends, and yields a strong dark liquor of fine flavor, technically described as "piquant."—**Flowery pekoe**, tea consisting of the terminal unexpanded leaf of the shoot, known as the *flowery pekoe leaf*. Practically, however, this tea contains the first two pekoes so far as they cure of a greenish or silvery gray tint. Also (incorrectly) a tea with an extra amount of pekoe ends. The tea flower is not used except for scenting.—**Hyson pekoe.** Same as *Dragon's-pool* ★*tea*.—**Orange pekoe**, tea corresponding theoretically to the orange pekoe leaf (second from the tip). Practically this tea includes the first and second pekoes so far as they cure yellowish or orange, as happens increasingly with advance of season.—**Pekoe end**, the downy summit of a pekoe leaf or the leaf as characterized by this; when very small called *pekoe tip*. The presence of pekoe ends adds greatly to the value of black tea.—**Pekoe leaf**, specifically, the third leaf from the tip on a shoot of the tea plant; more broadly, one of the first three.

pel, *n.* and *v. t.* A simplified spelling of *pell.*

pelagial (pẹ̄-lā′ji-ạl), *a.* [Gr. *πελάγιος*, pertaining to the open sea, + *-al*¹.] Of or belonging to the open sea; more recently, living on or near the surface of the ocean, at some distance from land; pelagic.

pelagian¹, *a.* 2. Inhabiting islands in the open sea.

Pelagian Negroes have long been well known inhabitants of the interior of the Penang islands, in the Archipelago of the Philippines, where they occupy rocky and mountainous tracts in the inland parts.
J. C. Prichard, Nat. Hist. of Man, p. 460.

pelagic, *a.* 1. Specifically, in *marine biol.*: (*a*) Living at the surface of the high sea at a distance from land. (*b*) Living at the surface of the sea. See the extract.

I . . . limit the meaning of the *pelagic* fauna and flora to those actively swimming or passively floating animals and plants, which are taken swimming at the surface of the ocean.
Haeckel (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 581.

(*c*) Living at the surface of the water, either salt or fresh. (*d*) Floating or swimming in the water, either at the surface or at any depth below it.

To a third quite different meaning has the conception of the *pelagic* living world been widened by Chun who extends it from the surface of the ocean down to the greatest depths.
Haeckel (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 577.

2. In *geol.* and *geog.*, of or pertaining to the deep ocean; far from land.

The investigation of the composition of the sea-bottom brought out some interesting facts. *Pelagic* deposits—using Sir J. Murray's nomenclature—are naturally little represented, as compared with those classed as terrigenous, which are derived from the land.
Geog. Jour. (R. G. S.), XVI. 551.

Pelagic fishery, a fishery on the high sea, three miles or more from land.—**Pelagic plankton.** See ★*plankton.* —**Pelagic sealing**, the killing of seals on the high seas.

Pelagothuria (pel″ạ-gọ̄-thū′ri-ä), *n.* [NL.] The typical and only genus of the family *Pelagothuriidæ*. *Ludwig*, 1893.

Pelagothuriidæ (pel″ạ-gọ̄-thụ̄-rī′i-dē), *n. pl.* [NL. *Pelagothuria* + *-idæ.*] A family of echinoderms having no tube-feet, the mouth and anus terminal, body cylindrical and around the crown of tentacles widened out into a thin disk, the edge of which is prolonged into a number of long flexible rays. There are no respiratory trees, ciliated organs, Cuvier's organs, or traces of a calcareous skeleton. The animal's shape recalls that of a medusa. It is pelagic, swimming by means of the disk and arms. The single species, *Pelagothuria natatrix*, is found in the Gulf of Panama and around the Galapagos Islands.

pelamis, *n.* 2. [*cap.*] A genus of sea-snakes of the family *Hydrophidæ*. *P. bicolor* is a common species recognizable by its black upper and yellowish lower parts. It is found widely distributed from Madagascar to the Gulf of Panama.—**Black-backed pelamis**, the black-backed sea-snake of India, *Pelamis bicolor*.

pelargonic, *a.* 2. Derived from *Pelargonium*. —**Pelargonic acid**, nonylic acid; an oily acid, $C_9H_{18}O_2$, of the fatty series. It melts, after cooling, at 12.5° C., and boils at 253–254° C. It occurs in the volatile oil of *Pelargonium roseum* and in the fusel-oil from sugar-beets. Also made synthetically.

Pelargonium, *n.* 2. [*l. c.*] A plant of the genus *Pelargonium*.—**Pelargonium oil.** See *geranium* ★*oil* (*a*).

pelecanine (pel′e-kạ̄-nin), *a.* [*Pelecan*(*us*) + *-ine*².] Pertaining to or having the characters of the genus *Pelecanus*.

pelecinid (pel-e-sin′id), *n.* and *a.* I. *n.* A member of the hymenopterous family *Pelecinidæ*.

II. *a.* Having the characters of or belonging to the family *Pelecinidæ*.

Pelecyornis (pel″e-sī-ôr′nis), *n.* [Gr. *πέλεκυς* (?), ax, + *ὄρνις*, bird.] A genus of extinct birds which resembled *Phorusrhacos*, but were smaller and more slenderly built, and had comparatively longer legs.

pelekus (pel′e-kus), *n.* [Gr. *πέλεκυς*, ax.] A Greek ax or battle-ax.

There can be no doubt I think that the giant is Procrustes, the *pelekus* being the characteristic weapon used for lopping him.
J. E. Harrison, in Jour. Hellenic Studies, X. 232.

pelele (pạ̄-lā′lạ̄), *n.* [South African.] A labret worn in the upper lip by some of the native tribes of South Africa. See ★*botoque* and *labret*.

Their [Baluana, tribe of Rhodesia] women wear the *pelele*, a metal disk inserted in a hole made in the upper lip, which is common to many tribes living east of the Loangwa river. *Geog. Jour.* (R. G. S.), XVIII. 73.

pelélith (pe-lā′lith), *n.* [*Pelé*(*e*), a volcano in Martinique, + *-lith.*] A specific name suggested for that form of eruptive rock presented by the spine of Mount Pelée, Martinique. Compare ★*cumulo-volcano*.

In view of the frequency of this form of volcanic plug it is proposed to apply the term *pelélith* to such peaks, the type illustration being the peak of Mont Pelé on the island of Martinique. *Amer. Geol.*, May, 1904, p. 319.

pelélithic (pe-lā′lith-ik), *a.* [*pelélith* + *-ic.*] Pertaining to, or of the nature of, a pelélith. Also *pelélitic*.

It is not necessary to multiply these illustrations of possible *pelélitic* roots. It is not intended to apply the new term to other rock masses than those that can be shown to have ascended bodily above the crater rim of an active volcano; and to suggest that perhaps there are more than have been supposed of the same kind.
Amer. Geol., May, 1904, p. 325.

pelerine, *n.* 2. A form of ladies' neckwear. *Dry Goods Economist*, June 13, 1908.

Pelican in her piety. (*b*) In *eccles. art*, the conventional representation of the pelican feeding her young from her breast, used as an emblem of Christ shedding his blood for mankind.

"*The Pelican in her Piety*" embroidered in white, shaded with grey, on a ground of red.
Maud R. Hall, Eng. Church Needle-work, p. 41.

Roseate pelican, *Pelecanus onocrotalus*, the great white pelican of southern Europe, whose plumage has a rosy tint in the breeding season. It breeds in large numbers in the marshes at the mouth of the Danube.—**Spotted-billed pelican**, *P. manillensis*, a white species of Southern Asia that makes its nest in the tops of tall trees.

pelican-ibis (pel′i-kạn-ī″bis), *n.* The East Indian *Pseudotantalus leucocephalus*, a bird related to the wood-ibis of North America. See *wood-ibis*.

pelicometer (pel-i-kom′e-tėr), *n.* [Gr. *πελίκα* (beside *πέλυξ*, stem *πελυκ-*), dial. form of *πέλλα*, a bowl (used in sense 'pelvis'), + *μέτρον*, measure.] Same as *pelvimeter*.

pelion² (pel′i-on), *n.*; pl. *pelia* (-ạ̈). [Gr. *πελιός, -όν*, livid, discolored.] In echinoderms, one of the rings of plates which support the suckers. Also *pellion*.

pelionite (pel′i-ọ̄-nīt), *n.* [*Pelion* (see def.) + *-ite*².] A bituminous coal which resembles English cannel-coal, from Monte Pelion, Tasmania.

peliosis (pel-i-ō′sis), *n.* [NL., < Gr. *πελιός*, livid, + *-osis.*] Purpura hæmorrhagica.—**Peliosis rheumatica.** Same as *purpura rheumatica*.

pelite-gneiss (pē′līt-nīs″), *n.* [*pelite* + *gneiss.*] In *petrog.*, a gneiss formed by the metamorphism of argillaceous deposits or pelites. *Rosenbusch*, 1898.

pellagrosein (pel-ạ-grō′sẹ̄-in), *n.* [It. *pellagroso* (< *pellagra*) + *-e-in*².] A basic substance found in an alcoholic extract of powdered maize, which had been allowed to ferment for 24–36 hours: supposed by Lombroso to be responsible for the clinical symptoms of pellagra.

pellet, *n.* 6. The indigestible part of the food of hawks and owls, consisting of bones, hair, feathers, etc., which is cast up or regurgitated in the shape of elongated balls.

Hawks and owls often swallow their smaller victims entire and tear the larger ones into several pieces, swallowing each fragment as it is detached. After the nutritious portion of the food has been absorbed, the indigestible parts, such as hair, feathers, scales, bones, and other hard parts, are rolled into a solid ball by the action of the muscles of the stomach. These masses, known as "*pellets*" are regurgitated before fresh food is taken. *Yearbook, U. S. Dept. of Agr.*, 1894, p. 217.

pellicle, *n.* 4. In *entom.*, the skin of the subimago of an ephemerid.—**Proligerous pellicle.** Same as *zoöglœa*. *Nature*, Feb. 25, 1904, p. 385.—**Surface pellicle**, in *biol.*, a thin film formed by vast colonies of bacteria or other micro-organisms on the surface of infusions and other liquids; the zoöglœa.

pellicula, *n.* 2. In infusorians, the cuticle.

pellin (pel-yēn′), *n.* [Native name.] In Chile, the wood of the roble (*Nothofagus obliqua*), a straight deciduous tree belonging to the *Fagaceæ*. The wood is heavy and durable, and is used for posts, joists, rafters, etc., but not for flooring.

pellitorin (pel′i-tō-rin), *n.* [*pellitor*(*y*) + *-in*².] A compound, soluble in alcohol, contained, in small quantity, in the resin from pellitory (pyrethrum).

pellitory-of-the-wall (pel′i-tọ̄-ri-ov-thẹ̄-wâl′), *n.* Same as *pellitory*, 1. *R. C. A. Prior*, Pop. Names of British Plants.

pell-mell^1 (pel′mel′), *a.* and *n.* [See *pell-mell, adv.*] **I.** *a.* Tumultuous; promiscuous; disorderly.

> And never yet did insurrection want
> Such water-colours to impaint his cause;
> Nor moody beggars, starving for a time
> Of *pellmell* havoc and confusion.
> *Shaks.*, I Henry IV., v. 1.

II. *n.* A mêlée; a confused fight; disorder.

> The Church in the *pell-mell* of Stephen's time
> Hath climb'd the throne and almost clutch'd the crown;
> But by the royal customs of our realm
> The Church should hold her baronies of me,
> Like other lords amenable to law.
> *Tennyson*, Becket, Prol. 1. 13.

pell-mell^1 (pel′mel′), *v. t.* [*pell-mell, adv.*] To mix up promiscuously; pile in confused heaps.

> Lyke these Herodians that mingled their sacrifices with the bloode, . . . they *pel-mell* the dead with the liuing all in one Kirk.
> *W. Birnie*, The Blame of Kirk-bvriall, p. 31.

pellote (pāl-yō′tā̤), *n.* See ★*peyote.*

pellotine (pel′ọ̄-tin), *n.* A crystalline alkaloid, $C_{13}H_{19}O_3N$, which occurs in *Lophophora Williamsi.* It melts at 110° C. See ★*mescal-button.*

pellucent (pe-lū′sẹnt), *a.* Same as *pellucid.*

pelmatozoic (pel″ma̤-tọ̄-zō′ik), *a.* [*Pelmatozoa* + *-ic.*] Pertaining to the *Pelmatozoa*; having the characters of the sessile *Pelmatozoa*; that is, having the body inclosed in a calyx or theca of many calcareous plates, elevated with its oral surface uppermost upon a column of calcareous plates, and with the mouth, arms, and madreporic plate lying in the sagittal plane of pentamerous radial symmetry, as in the typical *Cystoidea, Blastoidea, Crinoidea,* and *Edrioasteroidea.*—**Pelmatozoic theory,** a theory of the origin of the echinoderms according to which they are all remotely descended from a common ancestral ciliate floating organism, dipleurula, of small size, which is now represented by the pelagic bilateral ciliate larvæ of many echinoderms. The dipleurula, becoming adapted for life upon the bottom of the ocean, increasing in size, and acquiring a calcareous skeleton, became converted into a radiate organism whose structure is illustrated, with modifications, in the *Pelmatozoa,* which are considered to be the most primitive of the true echinoderms, while the *Eleutherozoa* are considered to have passed through a pelmatozoic stage. See ★*calycinal theory,* ★*pentactæa theory,* and ★*dipleurula.*

pelmatozoön (pel″ma̤-tọ̄-zō′on), *n.*; pl. *pelmatozoa* (-ä̤). Same as *pelmatozoan. Encyc. Brit.,* XXVII. 622.

pel-mel, *adv.* and *n.* A simplified spelling of *pell-mell.*

pelobatoid (pẹ̄-lob′a̤-toid), *a.* [NL. *Pelobat(es)* + *-oid.*] Resembling, or having the characters of, the frogs of the family *Pelobatidæ. Proc. Zool. Soc. London,* 1896, p. 553.

pelogenous (pē-loj′e-nus), *a.* [Gr. πηλός, clay, + -γενης, -producing, + *-ous.*] In *phytogeog.,* of fine-grained, earthy consistence: said of soils. Thurmann, the author of the term (1849), further distinguished pelogenous soils, from more to less subdivided, as perpelic, hemipelic, and oligopelic. Compare ★*psammogenous.*

pelolithic (pẹ̄-lọ̄-lith′ik), *a.* [Gr. πηλός, clay, + λίθος, stone, + *-ic.*] Noting a rock which is formed from clay.

> The Coral Rag is only an episode in the *pelolithic* series.
> *Geol. Mag.,* new ser. I. 526. *N. E. D.*

pelopium (pẹ̄-lō′pi-um), *n.* [NL.] The name given by H. Rose to a supposed new chemical element which he believed that he had detected in the mineral columbite from Bavaria. He afterward recognized its identity with niobium.

pelopsammic (pel-op-sam′ik), *a.* [Gr. πηλός, clay, + ψάμμος, sand, + *-ic.*] In *phytogeog.,* of a consistence between clayey and sandy. See ★*psammogenous.*

pelorian (pẹ̄-lor′i-a̤n), *a.* [*peloria* + *-an.*] Characterized by, or pertaining to, peloria; peloriate.

pelosine (pel′ọ̄-sin), *n.* Same as *bebeerin.*

pelota (pā-lō′tä), *n.* [Sp., a ball. See *pellet.*] A Spanish game played in a court with a ball and a curved device attached to the player's arm by which the ball can be hurled with great force and accuracy.

pelotage (pe-lō-täzh′), *n.* [F., lit. 'baling,' < *peloter,* put into balls or bales, < *pelot,* a ball: see *pellet, platoon.*] Spanish wool packed in bales.

pelt^2 (pelt), *v. t.* [*pelt*^{2}, *n.*] To skin; fleece; pluck the pelt from.

Peltastes (pel-tas′tēz), *n.* [NL., < Gr. πελταστής, a shield-bearer. See *peltast.*] A genus of diadematoid regular sea-urchins of the family *Saleniidæ,* which have tuberculate, spheroidal tests with large apical plates and the dorsocentral plate united to the large basals. The species are found in Upper Jurassic and Cretaceous formations.

peltecleis (pel′tē-klīs), *n.* [Gr. πέλτη, light shield, + κλείς, key.] In decapod crustaceans, a tubercle or nodule on the posterior margin of the carapace. Compare ★*pereicleis.*

pelter^3 (pel′tėr), *n.* [Origin obscure.] In *poker,* a hand which has no card higher than a nine and no chance for a flush or straight: sometimes called *Chicago pelter.* Also, *kilter.*

pelterer (pel′tėr-ėr), *n.* [*pelt*^{2}, *n.*] A dealer in skins; a furrier. *N. E. D.*

peltiferous (pel-tif′e̤-rus), *a.* [Gr. πέλτη, a shield, + φέρειν, bear.] In *bot.,* shield-bearing.

Peltigeraceæ (pel-tij-e̤-rā′sē-ē), *n. pl.* [NL., < *Peltigera* + *-aceæ.*] A family of frondose lichens, named from the genus *Peltigera,* which have the apothecia without a distinct margin. See *Peltigera.*

peltigerous (pel-tij′e̤-rus), *a.* [L. *pelta,* shield, + *gerere,* carry.] Shield-bearing.

peltinervate (pel-ti-nėr′vāt), *a.* Same as *peltinerved.*

Peltocaris (pel-tok′a̤-ris), *n.* [NL., < Gr. πέλτη, a shield, + καρίς, a shrimp.] A genus of phyllocarid crustaceans based upon circular bivalved shields found in the Silurian rocks of Great Britain.

pelure^2 (pe-lür′), *n.* [F. *pelure,* lit. peeling.] In *paper-making,* a crisp, hard paper, as thin as an onion peeling. Also *pelure paper.*

pelvicellulitis (pel-vi-sel-ụ̄-lī′tis), *n.* [NL., < *pelvis* + *cellulitis.*] Pelvic cellulitis.

pelviferous (pel-vif′e̤-rus), *a.* [L. *pelvis,* pelvis, + *-ferous.*] Having a pelvis.

pelvigraph (pel′vi-gråf), *n.* [NL. *pelvis* + Gr. γράφειν, write.] A device for recording the outline and dimensions of the pelvic cavity.

pelvigraphy (pel-vig′ra̤-fi), *n.* [*pelvigraph* + *-y*^{3}.] The graphic presentation of a series of measurements outlining the contours of the pelvis. *Lancet,* June 18, 1904, p. 1728.

pelvimetry, *n.* **2.** In *zoöl.,* the determination of the form of the pelvis by means of measurement. *Durkworth,* Morphology and Anthropology, p. 291.

pelvirectal (pel-vi-rek′ta̤l), *a.* [NL. *pelvis* + *rectum* + *-al*^{1}.] Pertaining to both the pelvis and the rectum.

pelvis, *n.*—**Conjugate diameter of the pelvis.** See ★*diameter.*—**Dynamic pelvis,** the human female pelvis considered in its relation to parturition.—**Funnel-shaped pelvis,** the human female pelvis with inlet of normal size but markedly narrowed outlet.—**Infantile pelvis.** Same as *funnel-shaped* ★*pelvis.*—**Justomajor pelvis,** one whose diameters are increased in equal proportions.—**Kyphotic pelvis,** a deformity of the pelvis due to kyphosis of the lumbar spine. The anteroposterior diameter of the inlet is increased and the transverse diameter of the outlet is shortened.—**Pelvis spinosa** a pelvis narrowed by a bony growth projecting from the inner surface.—**Rostrate pelvis,** one in which the sacrum and last lumbar vertebra project forward, narrowing its cavity.

pelvitrochanterian (pel-vi-trō-kan-tē′ri-a̤n), *a.* [*pelvis* + *trochanter* + *-ian.*] Relating to the pelvis and to the great trochanter of the femur.

pelycodoid (pel-i-kō′doid), *a.* [NL. *Pelycod(us),* a generic name, + *-oid.*] Resembling, or having the characters of, the extinct mammal *Pelycodus*; specifically, having molar teeth resembling those of *Pelycodus. Forsyth Major,* in Proc. Zool. Soc. London, 1893, p. 208.

pelycography (pel-i-kog′ra̤-fi), *n.* [Gr. πέλυξ (πελυκ-), a basin (pelvis), + γράφειν, write, + *-y*^{3}.] A written account of the pelvis. *Syd. Soc. Lex.*

pelycology (pel-i-kol′ọ̄-ji), *n.* [Gr. πέλυξ (πελυκ-), a collateral form of πέλλα, a bowl (used in sense of 'pelvis'), + -λογια, < λέγειν, speak.] The sum of knowledge regarding the pelvis in its various relations.

Pelycosauria, *n. pl.* **2.** In more recent use, a group, considered by Osborn an order, of reptiles, comprising extinct species having biconcave vertebræ, perforated by the notochord and with very long spinous processes. The ribs are two-headed; the interclavicle T-shaped; the humerus with an entepicondylar foramen. The order contains some remarkable forms, such as *Dimetrodon* and *Embolophorus* from the Trias of New Mexico. They were formerly included in the *Theromorpha,* but are quite distinct.

pembina (pem′bi-nä̤), *n.* [Chippewa *anepeminan* (with intrusive *b*), < Chippewa *nepsin,* summer, + *minan,* berry: now the name of a locality on the Red River, in North Dakota.] The cranberry-tree, *Viburnum Opulus.* See *cranberry-tree* and *Viburnum.* Also *pembina-berry.*

> Of the plants observed in this neighbourhood, besides the *pembina.*
> *S. H. Long,* Exped. to Source of St. Peter's River, II. 48.

Pemphigus contagiosus, an acute vesicular eruption which occurs as an endemic disease in the Philippines and other parts of the tropical East. The vesicles are situated chiefly in the axilla and groin, and cause much local irritation; there is, however, no constitutional disturbance. The disease is probably of microbic origin. *Jour. Trop. Med.,* July 15, 1903, p. 235.—**Pemphigus foliaceus,** a form of pemphigus in which the blisters are only partly filled with fluid, their walls therefore being flaccid.—**Pemphigus hemorrhagicus,** a variety of pemphigus in which the contents of the bullæ are bloody.—**Pemphigus pruriginosus,** a form of pemphigus in which the eruption is circumscribed in extent, resembling herpes, and is the seat of intense itching.—**Pemphigus vegetans,** a severe and usually fatal disease in which fungous growths follow the rupture of the vesicles.

pemphix (pem′fiks), *n.* Same as *pemphigus.*

pemphredonid (pem-frẹ̄-don′id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Pemphredonidæ.*

II. *a.* Having the characters of or belonging to the family *Pemphredonidæ.*

pen^1, *n.* **5.** A weir or dam for penning up the water in a stream, canal, or river of any kind, to form a head.

pen^2, *n.*—**Hydraulic pen,** a form of fountain-pen having a cylinder and piston for forcing down the ink: sometimes applied to drawing-pens in which a thick, quick-drying ink is used.—**Inking-in pen.** See *to* ★*ink in.*—**Oblique pen,** a pen having the nibs so bent as to lie flat on the paper in writing.—**Pneumographic pen,** in *physiol.* and *psychophys.*: (*a*) The writing lever of a Marey tambour. *Harvard Psychol. Studies,* I. p. 312. (*b*) A pen or pencil used to record the various degrees of pressure employed in writing. A metal spring, which holds the writing point of metal or graphite, plays against a rubber air-capsule contained in the penholder and connected by rubber tubing to the ordinary recording apparatus.

pen. An abbreviation of *peninsula.*

peña, *n.* A misspelling of *piña*^{2}.

penacute (pēn-a̤-kūt′), *a.* and *n.* [*pen(ultimate)* + *acute.*] **I.** *a.* Having an acute accent on the penultimate syllable; paroxytone. *N. E. D.*

II. *n.* A word so accented. *N. E. D.*

penacute (pēn-a̤-kūt′), *v. t.*; pret. and pp. *penacuted,* ppr. *penacuting.* [*penacute, a.*] To accent acutely on the penultimate syllable. *N. E. D.*

penæaceous (pen-ē-ā′shius), *a.* [NL. *Penæace(æ)* + *-ous.*] Belonging to or characteristic of the plant family *Penæaceæ.*

penal, *a.*—**Bill penal.** See ★*bill*^{3}.—**Penal clause.** See ★*clause.*

penalization (pē″na̤l-i-zā′sho̤n), *n.* The act of penalizing.

penalize, *v. t.* **2.** To affix what amounts to a penalty to some act that is not in itself a penal offense; to subject to a disadvantage; handicap.

> To *penalize* improvements [is] what the proposed Mortgage Tax Law would amount to.
> *N. Y. Times,* April 1, 1905.

Penalty stroke. See ★*stroke*^{1}.

Penang rubber. See ★*rubber.*

Penarth beds. See ★*bed*^{1}.

pen-bearing (pen′bãr″ing), *p. a.* Noting those cephalopods in which the internal skeleton consists of a horny or chitinous structure, as in the squid.

pencatite (pen′ka-tīt), *n.* [Count J. Marzari-*Pencati* + *-ite*^{2}.] A massive granular rock from the neighborhood of Predazzo in southern Tyrol, described at first as a mineral species. It was later shown to be a mixture of calcite and brucite or hydromagnesite. The rock is similar to and is associated with predazzite.

pencil^1, *n.*—**Bearer of a pencil.** Same as ★*vertex of a pencil.*—**Chisel-point pencil,** a painters' pencil with the bristles graduated to a bevel like a chisel.—**Conic pencil,** in *geom.,* the pencil formed by the joins of correlated points of two coplanar non-costraight ranges, projective but not perspective.—**Parallel pencil,** in *geom.,* one whose bearer is at infinity.—**Pencil of conics,** in *geom.,* the assemblage of conics on which are the dots of a given tetrastigm.—**Pencil point,** in *geom.,* the bearer of a pencil.—**Perspective axial pencils,** in *geom.,* such pencils as are ejects of the same flat pencil.—**Perspective flat pencils,** in *geom.,* such pencils as are cuts of the same axial pencil, or ejects of the same range.—**Plane pencil.** Same as *flat pencil.*—**Vertex of a pencil.** See ★*vertex.*

pencil^1, *v. t.* **3.** In *med.,* to apply a remedy to (an inflamed spot, etc.) with a fine brush: as, to *pencil* a wound with lunar caustic.

pencil-cedar, *n.*—**Florida pencil-cedar,** *Juniperus Barbadensis,* a tree with fine foliage and small berry-like cones, sometimes attaining a height of 50 feet and a diameter of 2 feet, having a light, straight-grained, dull red, fragrant wood, formerly exclusively used in the manufacture of the best lead-pencils. It is chiefly West Indian, but occurs quite abundantly in western Florida and extends north to southern Georgia and west to Louisiana. It is called by Sargent "the most beautiful of the junipers," and is considerably cultivated in Europe, but more especially along the Gulf coast as far west as Texas, where it is known as *salt cedar.*—**Tasmanian pencil-cedar.** See *King William* ★*pine.*

penciler, penciller (pen′sil-ėr), *n.* A draughtsman; one who uses a pencil in any way, as a writer or a reporter: specifically, in *racing slang*, a bookmaker's clerk. *N. E. D.*

pencil-movement (pen′sil-mö̈v″ment), *n.* The parallel motion which carries the recording pencil on an engine-indicator.

pencil-ore (pen′sil-ōr), *n.* See ★*ore*1.

pencil-stone (pen′sil-stōn), *n.* Pyrophyllite.

pendant, *n.* 8. The cylindrical stem on a watchcase to which the guard-ring is attached. —9. A corollary.

> As a new experimental principle, forming a *pendant* to Carnot's principle.
> *E. Buckingham*, Theory of Thermodynamics, p. 153.

pendant-winding (pen′dant-wīn″ding), *a.* In *English watch-making*, same as ★*stem-winding.*

pendecagon (pen-dek′a-gon), *n.* [For **pentedecagon*, < Gr. πέντε, five, + δέκα, ten, + -γωνος, angled.] In *geom.*, a plane figure having fifteen angles and fifteen sides; a quindecagon. *N. E. D.* [Rare.]

pendency, *n.* 3. The state of being impending or threatening.

> Some will be surprised to know that the evident *pendency* of the American Civil War was the immediate occasion for the writing of this volume.
> *Living Church*, Oct. 17, 1903, p. 850.

pendent, *a.* 4. Grammatically incomplete. Also *pendant.* [Rare.]

> Though there be in the holy scriptures some *pendent* sentences, and inversions, and apparent solecisms, and other things of that kind, yet the same may be found in the most eloquent and approved authors.
> *W. Fitzgerald*, tr. Whitaker's Disputation on Holy Scrip- [tures, p. 150.

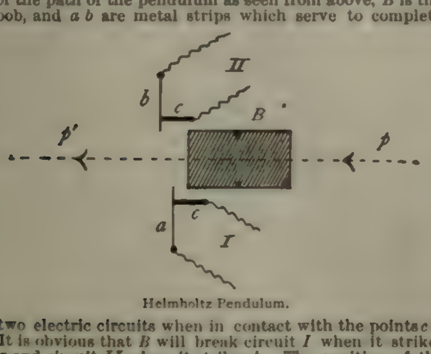
pendentes (pen-den′tēz), *n. pl.* [L. pl. of *pendens*, ppr. of *pendere*, hang.] In *civil law*, ungathered crops or fruits.

pendentive, *n.* **II.** *a.* Having pendentives; of the shape of or pertaining to pendentives.

> Strictly speaking, *pendentives* are the spandrels or triangular spaces between the arches or arch-headed walls, as the case may be, supporting a dome, which is continued down to the springing of such arches.
> *Penny Cyc.*, XVII. 402.

pendulograph (pen′dū-lō-grȧf), *n.* [NL. *pendulum* + Gr. γράφειν, write.] A tracing made by an instrument in which the movements of two or more pendulums are combined so as to trace a compound curve which represents a musical tone.

pendulum, *n.*—**Bifilar pendulum,** a pendulum suspended by two threads or wires so as to oscillate about a vertical axis in the plane of the suspension and lying midway between the threads.—**Complication pendulum.** See ★*complication.*—**Control pendulum,** in *psychophys.*, a physical pendulum, used to test the correctness or the constancy of the times recorded by the Hipp (or other) chronoscope. *E. B. Titchener*, Exper. Psychol., II. i. 205.—**Defforges's pendulum,** two convertible pendulums of the Repsold type, of equal weight, of different lengths, and having a single pair of knife-edges which can be transferred from the one to the other. This eliminates the effect of the yielding of the support. —**Helmholtz pendulum,** an apparatus devised by Helmholtz for the study of phenomena involving the determination of very short intervals of time. It consists of a heavy pendulum which in the course of its swing breaks successively two electrical circuits, thus putting into action one relay or other electrical device at the beginning of the time interval and another at its end. The principle upon which the instrument is constructed may be seen from the diagram in which *pp′* is a portion of the path of the pendulum as seen from above, *B* is the bob, and *a b* are metal strips which serve to complete two electric circuits when in contact with the points *c c.* It is obvious that *B* will break circuit *I* when it strikes *a* and circuit *II* when it strikes *b.* The position of the contact devices is adjustable along the path of the bob and with reference to each other, and the time interval may thus be varied through a considerable range. When *a* and *b* are exactly opposite one another the interval is zero and by slightly displacing one of them very small intervals may be obtained. For any setting of the contacts the interval may readily be computed from the angular distance between them and the speed of the bob. The Helmholtz pendulum is used in a great variety of physical experiments involving very short intervals of time. If, for example, it is desired to charge a condenser for one thousandth of a second and then discharge it, the contacts are set so as to give an interval of a thousandth of a second, the relay in circuit *I* is arranged so as to close the charging circuit, and the relay in circuit *II* so as to break that circuit and close the discharging circuit. —**Horizontal pendulum,** a pendulum mounted upon a vertical axis and free to swing in a horizontal plane only. Such pendulums are not put in motion by gravity, but afford a sensitive means for indicating and recording certain types of earth tremor.



Helmholtz Pendulum.

> The instrument of which he [Milne] now makes most use is called a *horizontal pendulum.*
> *G. H. Darwin*, The Tides, p. 131.

Kater's convertible pendulum, a pendulum having two knife-edges turned inward on opposite sides of the center of gravity so that it can be swung from either, and arranged to be so adjusted that the time of swing shall be the same in each case: constructed by Captain Kater in 1817.—**Optical pendulum,** in *psychophys.*, a pendulum so constructed that it admits the passage of a flash of light at the same moment that it makes or breaks an electrical circuit. *E. B. Titchener*, Exper. Psychol., II. i. 156.—**Pendulum bracket.** See ★*bracket*1.—**Pendulum chronoscope.** See ★*chronoscope.*—**Pendulum observation,** in *phys.*, an observation of the rate of oscillation of a standard pendulum, made for the determination of the acceleration of gravitation in the locality where the pendulum is mounted.—**Spherical pendulum,** a pendulum that is not confined to moving in one plane, but is so arranged that the bob can move in any circle on a given spherical surface.—**Von Sterneck's half-second pendulum,** a pendulum about 10 inches long swinging in half seconds: used in the determination of minute local variations in gravity. The instrument can be placed in a chamber which can be exhausted of air and maintained at any desired temperature.

pendulum-saw (pen′dū-lum-sâ), *n.* A cross-cutting or cutting-off saw, mounted in a swinging frame, which can be brought to its work by swinging the saw and frame in a vertical plane round the axis of the driving shaft. It is used to cut up long logs into short lengths when it is easier to move the saw to its work than to move the work to the saw.

pendulum-wheel (pen′dū-lum-hwēl), *n.* The escapement-wheel of a clock; the balance-wheel of a watch.

peneplain (pē′nē-plān), *n.* [L. *pæne, pene*, almost, + E. *plain.*] In *geol.*, a surface reduced by erosion nearly to the condition of a plain. There are many examples of once lofty mountains, now reduced to peneplains.

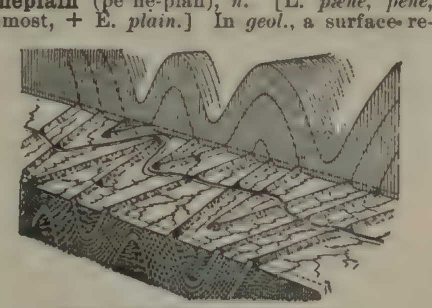


Diagram of peneplain, with residual ridges.

> "We saw unmistakable traces of a *peneplain.*"
> *G. K. Gilbert*, Harriman Alaska Exped., iii. 130.

peneplain (pē′nē-plān), *v. t.* [*peneplain, n.*] To reduce by erosion to a peneplain. *Chamberlin and Salisbury*, Geology, I. 83.

peneplanation (pē″nē-plā-nā′shon), *n.* [L. *pæne, pene*, almost, + E. *planate* + *-ion.*] The process of erosion which results in the production of a peneplain.

> There were numerous halts in the general movement and the Mesozoic and youngest Paleozoic beds here are completely stripped off the mountain summits. Several times the staying process has enabled partial *peneplanation* to take place. But the mountain blocks have become more and more tilted.
> *Amer. Geol.*, Sept., 1904, p. 162.

peneropline (pē-ner′ō-plin), *a.* [NL. *Peneroplis* + *-ine*2.] Characteristic of or pertaining to milioloid foraminifers; resembling foraminifers of the genus *Peneroplis*, which have the chambers undivided and either planispiral throughout or spiral only at the commencement, subsequently becoming rectilinear or cyclical.

penetralian (pen-ē-trā′li-an), *a.* [*penetralia* + *-an.*] Pertaining to or of the nature of penetralia.

penfieldite (pen′fēld-īt), *n.* [Named for Professor S. L. *Penfield* (1856–1906) of New Haven, Connecticut.] An oxychlorid of lead, $PbO.2PbCl_2$, found in the ancient lead slags of Laurion, Greece.

Penfield solution. See ★*solution.*

penfish, *n.* 2. A squid, as *Loligo.*

penicillus (pen-i-sil′us), *n.*; pl. *penicilli* (-ī). [L. *penicillus*, tuft of hair. See *pencil.*] **1.** One of the hair-like cells borne at the end of the smaller branches of *Dasya elegans* and similar algæ: usually in the plural.—**2.** Same as *penicil*, 2.—**3.** In *anat.*, one of the tufts formed by the ramifications of the portal vein in the liver and of the minute arteries in the spleen. *N. E. D.*

peniform (pē′ni-fôrm), *a.* [L. *penis* + *-form.*] Having the shape of or resembling a penis. *Proc. Zool. Soc. London*, 1901, p. 280.

Peniophora (pē-ni-of′ō-rä), *n.* [NL. (Cooke, 1879), < Gr. πηνίον, a shuttle, probably in allusion to the shape of the cystidea.] A genus of resupinate hymenomycetous fungi of the family *Thelephoraceæ*, which have the hymenium furnished with cystidia. About 50 species are known. They are widely distributed and occur chiefly on dead trunks and branches. *P. quercina* is a common species in Europe and America.

penitente (pā-ni-tān′tā), *n.*; pl. *penitentes* (-tās). [Sp. See *penitent.*] A penitent, especially in the ecclesiastical sense; specifically, one of a group of flagellants in New Mexico, who are said to submit themselves to crucifixion.

penitentiary, *a.* and *n.* **I.** *a.* 3. Liable to punishment by imprisonment of the offender in a penitentiary: said of an offense: as, a *penitentiary* offense.

II. *n.* 6. A member of the Penitents, certain religious orders. See *penitent*, 2.

> Recollects, *Penitentiaries*, Capuchins.
> *Weever*, Ancient Funeral Monuments, p. 139. *N. E. D.*

Penjdeh sore. Same as *Aleppo ulcer* (which see, under *ulcer*).

pen-keeper (pen′kē″pėr), *n.* In the West Indies, the keeper of the farm and animals on a plantation; one who has care of the estate or pen. See *pen*1, *n.*, 4, and the extract under ★*pen-keeping.*

pen-keeping (pen′kēp-ing), *n.* [*pen*1, *n.*, 4, + *keeping.*] See the extract.

> The rearing of cattle, horses, and mules is an important industry in Jamaica. This is known as "*pen-keeping*," the pens varying in size from 200 to 2,000 acres, and embracing for a pen of 1,000 acres about 350 to 400 head of cattle. Cattle raising is most largely engaged in by the pen-keepers, who rear both beef and draft animals.
> *Daily Cons. and Trade Rep.*, Oct. 19, 1907, p. 5.

Penn. An abbreviation of *Pennsylvania.*

Pennant2 (pen′ant), *n.* [A Welsh place-name.] In *geol.*, a local name for a series of sandstones, barren of coal, which are found between the upper and lower coal-measures of South Wales: as, *Pennant* grit, *Pennant* stone.

pennant-bar (pen′ant-bär), *n.* In *musical notation*, the bar connecting the stems of two or more notes which, if written separately, would have pennants, that is, eighth-notes, etc., as,  or .

pennant-ship (pen′ant-ship), *n.* The flagship of a squadron or fleet: so called because it carries the commander's or admiral's flag.

Pennaria (pe-nā′ri-ä), *n.* [NL.] The typical genus of the family *Pennaridæ.* *Goldfuss.*

Pennaridæ (pe-nā′ri-dē), *n. pl.* [NL. *Pennaria* + *-idæ.*] A family of tubularian hydromedusans in which the polyps have filiform and capitate tentacles. It includes *Pennaria, Cladonema, Heterostephanus*, and other genera. Also *Pennariidæ.*

pennated, *a.* 2. In medieval armor, having side-pieces which are pressed out by a spring: as, a *pennated* dagger or sword.

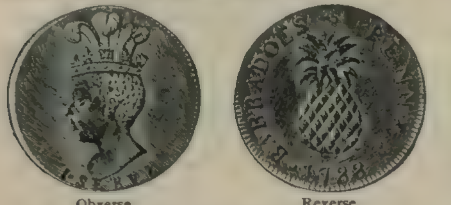
Pennatula, *n.* 2. [*l. c.*] A polyp of the genus *Pennatula*; a sea-pen.

penni (pen′i), *n.*; pl. *pennia* (-ä). A copper coin of Finland.

Pennine system. See ★*system.*

penny, *n.* 7. In *archery*, a measure of weight for arrows, equal to one twelfth of the weight of a new (British) silver shilling: as, a 4*s.* 6*d.* arrow.—**Anglesea penny,** a copper token, struck in England in 1784.—**A pretty penny,** a large sum of money. [Ironical.]—**Down pennies,** a local name of Roman coins found in Dorsetshire.—**Gold penny,** an

English coin of Henry III., issued in 1257.—**Irish penny**, a silver coin authorized for Ireland in 1304, in the reign of Edward I.—**Manx penny**, a coin bearing a device consisting of three legs arranged equidistantly about a circle or at the angles of a triangle.—**Pineapple penny**, a copper coin struck in Barbados in 1788.



Obverse. Reverse.

Pineapple Penny.
(Four fifths original size.)

penny-ante (pen′i-an′tē), *n.* The game of poker when the amount of the ante is limited to one penny (one cent).

penny-poise (pen′i-pois), *n.* A coin used in England in the reign of John (1199–1216), wanting an eighth of a penny and used as a weight for detecting light or clipped coins.

pennyroyal, *n.*—**Native pennyroyal**, in Australia, a native species of mint, *Mentha diemenica*, which is more acrid than the common pennyroyal. It is much used for medicinal purposes and for keeping away insects, especially fleas.

pennyweight, *n.* **2.** A proportional measure of one-twelfth, used in stating the fineness of silver. See *carat*. *N. E. D.*

> If the mass of silver be pure, it is called silver of 12 *penny-weights*; if it contain 1-12th of its weight of alloy, it is called silver of 11 *penny-weights*.
> *John Nicholson*, Operative Mechanic, II. 329.

Penokee (pen-ọ̄-kē′), *n.* [*Penokee* Iron Range in Wisconsin.] In *geol.*, a member of the Precambrian series of northern Wisconsin, comprising slates, cherts, quartzites, and iron ores, and equivalent to the Animikie group of the Huronian.

Penopus (pen′ọ̄-pus), *n.* [NL., < Gr. *πήνη*, thread, + *πούς*, foot.] A brotuloid genus of fishes found in the deep sea.

penoscrotal (pē-nō-skrō′ta̤l), *a.* [L. *penis* + E. *scrotal.*] Relating to both the penis and the scrotum. *N. E. D.*

pen-point (pen′point), *n.* A pen (apart from the holder). *Dialect Notes*, II. vi. [Local, U. S.]

Pensauken formation. See ★*formation*.

pense, *n.* An amended spelling of *pence*.

penserose (pen′se-rōs), *a.* An Anglicized form of ★*penseroso*. [Rare.]

penseroso (pen-se-rō′sō), *a.* and *n.* [Old Italian *penseroso*, late *pensieroso*, pensive. *Il Penseroso*, the title of a poem by Milton.] **I.** *a.* Meditative; melancholy; pensive.

> But the *penseroso* humour lasted not long.
> *Society*, I. 78. *N. E. D.*

II. *n.* One who is melancholy, meditative, or pensive.

> How I should like to see that pair of *penserosos* together, looking as grave as two sailors' wives of a stormy night. *R. Tyler*, The Contrast, ii. 1.

pensil², *a.* A simplified spelling of *pensile*.

pensile, *a.* **2.** Building a hanging nest: as, the *pensile* warbler.

pensionary, *n.* **3.** A house in which pensioners reside; formerly, at Cambridge, England, a residence for undergraduates not on the foundation of a college. *N. E. D.*

pensioner, *n.* **4**†. One who lives in a pension or boarding-house; one who lives in any institution as a boarder; a boarder.

> Hip. . . . Who goes there?
> Lau. We are the two new *Pensioners*, Laura and Violetta.
> Hip. Go in, to your Devotion.
> *Dryden*, The Assignation, iv. 4.

pensionnaire (poṅ-syo-nãr′), *n.* [F.] **1.** One who lives in a pension; a boarder.—**2.** One who receives a pension.—**3.** One of the two classes of actors at the *Comédie Française*, engaged yearly at a fixed salary and, after a certain number of years as a probationer, nominated and usually admitted ★*sociétaire* (which see).

pensionnat (poṅ-syo-nä′), *n.* [F., < *pension*, a payment, a boarding-school. See *pension*, *n.*, 5.] A boarding-school.

pensiv, *a.* A simplified spelling of *pensive*.

pen-staff (pen′stȧf), *n.* A penholder. *Dialect Notes*, II. vi. [Local, U. S.]

pent (pent), *n.* A penthouse; an overhanging shelter.

> But the man was already running; and together the three floundered back to the hangar. Behind them blows were already sounding above the howl of the wind; blows of musket-butts hammering on the wooden palisade. "Steady, men," grunted McQuarters as he reached the *pent*. "Give them time to break an opening—their files will be nicely huddled by this."
> *A. T. Quiller Couch*, Fort Amity, xxvii.

Pent. An abbreviation of *Pentecost*.

pentabasic (pen-ta̤-bā′sik), *a.* [*penta-* + E. *basic.*] Noting an acid containing five atoms of hydrogen readily replaceable by metals or electropositive radicals.

pentacarbon (pen-ta̤-kär′bon), *n.* [*penta-* + *carbon.*] Pertaining to or containing five atoms of carbon.

pentachlorid (pen-ta̤-klō′rid), *n.* [*penta-* + E. *chlorid.*] A chlorid containing five atoms of chlorin, as phosphorus *pentachlorid*, PCl_5.

pentachromic (pen-ta̤-krō′mik), *a.* [Gr. *πέντε*, five, + *χρῶμα*, color, + *-ic.*] Relating to five colors; noting a partially color-blind person who can distinguish five colors.

> Normal-sighted persons see six colours, some even seven; but the second class of the colour-blind see five colours, four, three, two, or one, according to the degree of their defect. For these five degrees the names *pentachromic*, tetrachromic, &c., were suggested.
> *Athenæum*, Nov. 14, 1903, p. 655.

pentacid (pen-tas′id), *a.* [Gr. *πέντε*, five, + E. *acid.*] Noting a base containing five combining units of the radical hydroxyl, HO, or one equivalent to a pentabasic acid, molecule for molecule.

pentacompound (pen-ta̤-kom′pound), *n.* [*penta-* + *compound.*] A compound containing five atoms of carbon.

pentacrinin (pen-tak′ri-nin), *n.* [NL. *Pentacrin(us)* + *-in*².] A pigment formed in *Pentacrinus* and other crinoids.

pentacron (pen-tak′ron), *n.*; pl. *pentacra* (-rä̤). [Gr. *πέντε*, five, + *ἄκρον*, peak.] A polyhedron with 5 summits.

pentactæa (pen-tak-tē′ä̤), *n.* [NL. < Gr. *πέντε*, five, + *ἀκτή*, point (?).] A hypothetical ancestor of the echinoderms which is supposed to be recapitulated in the pentactula larval stage of *Synapta*.—**Pentactæa theory**, a theory of the origin of the echinoderms which regards them as the divergent descendants of a pentactæa, or floating ciliate ancestral form without a calcareous skeleton or radial canals or radial nerves, these structures being held to have been independently acquired, and not to be homologous in all echinoderms. See ★*calycinal theory*, ★*pelmatozoic theory*.

pentactine (pen-tak′tin), *n.* and *a.* [Gr. *πέντε*, five, + *ἀκτίς* (*ἀκτιν-*), ray.] **I.** *n.* In the morphology of the sponge-skeleton, a spicule of triaxial form having the arms intersecting one another, with one ray atrophied.

> Dermal skeleton composed of hexactinic dermalia, the proximal ray of which is as a rule much longer than any other in the same spicule; no hypodermal *pentactins*; hexasters various.
> *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 502.

II. *a.* Having the characters of or relating to a pentactine sponge-spicule.

pentactinid (pen-tak′ti-nid), *a.* Same as *pentactinal*.

pentactula (pen-tak′tụ̄-lä̤), *n.*; pl. *pentactulæ* (-lē). [NL., < Gr. *πέντε*, five, + *ἀκτή*, a point, + *-ula.*] A free, ciliate, larval stage of *Synapta*, with five oral tentacles which contain water-tubes connected with the water-ring, but without a calcareous skeleton, radial tubes, or radial nerves.

pentacycle (pen′ta̤-sī-kl), *n.* [*penta-* + *cycle.*] A set of five circles.

pentad, *n.* **4.** A period of five days, introduced by Dove for use in climatological study. The pentads begin January 1–5, and continue in groups of five days each throughout the ordinary year. The twelfth pentad, from February 25–March 1, may be increased by one day, namely, February 29th, without disturbing the calendar dates of the subsequent pentads.

pentadactylate (pen-ta̤-dak′ti-lāt), *a.* [*pentadactyl* + *-ate*¹.] Having five fingers or toes; pentadactyl.

pentadactyloid (pen-ta̤-dak′ti-loid), *a.* [*pentadactyl* + *-oid.*] Resembling a structure with five digits, such as a typical vertebrate limb.

pentadecane (pen-ta̤-dek′ān), *n.* [*penta-* + *decane.*] A hydrocarbon, $C_{15}H_{32}$, of the paraffin series. Normal pentadecane melts at 10° C., yielding an oily liquid which boils at 270.5° C. It is made synthetically.

pentadecatoic (pen-ta̤-dek-a-tō′ik), *a.* [*pentadec(ane)* + *-at-* + *-o-ic.*] Derived from pentadecane.—**Pentadecatoic acid.** Same as ★*pentadecylic acid*.

pentadecine (pen-ta̤-dē′sin), *n.* Same as ★*benylene*.

pentadecylic (pen″ta̤-de-sil′ik), *a.* [Gr. *πέντε*, five, + *δέκα*, ten, + *-yl* + *-ic.*] Containing fifteen atoms of carbon in the molecule.—**Pentadecylic acid.** (*a*) A crystalline acid, $C_{14}H_{29}.COOH$, of the fatty series, which is made synthetically. It melts at 59–60° C. (*b*) A crystalline acid, $C_{14}H_{29}.COOH$, of the fatty series, which is made synthetically. It melts at 51° C. and is commonly called *quindecylic acid*.

pentadic (pen-tad′ik), *a.* [*pentad* + *-ic.*] In *chem.*, pentavalent.

pentadiene (pen-ta-dī′ēn), *n.* A hydrocarbon, $CH_2{=}CH{-}CH_2{-}CH{=}CH_2$, formed by the distillation of trimethylpiperidine. It boils at 42° C. Also called 1,4-*pentadiene* and *piperylene*.

pentadodecahedron (pen″ta̤-dō″dek-a̤-hē′dro̤n), *n.*; pl. *pentadodecahedra* (-drä̤). [*penta-* + *dodecahedron.*] A pentagonal dodecahedron; a dodecahedron whose 12 faces are pentagons.

pentadrachm (pen′ta̤-dram), *n.* [Gr. *πεντάδραχμον*, < *πέντε*, five, + *δραχμή*, drachma.] A Greek silver coin of the value of five drachmas.

pentaglucose (pen-ta̤ glö′kōs), *n.* [*penta-* + *glucose.*] Same as ★*pentose*.

pentagonal, *a.*—**Élie de Beaumont's pentagonal system**, a theory of the origin of the form of the earth based upon a supposed conformity of its main features with the pentagonal dodecahedron. The theory was presented in 1852 by Élie de Beaumont in his "Notice sur les systèmes de montagnes." A later theory of similar nature is the Lowthian Green tetrahedral theory.—**Pentagonal réseau.** See ★*réseau*.

II. *n.* In echinoderms, the nerve-ring which connects the five ambulacral nerves.

Pentagonaster (pen″ta̤-gọ̄-nas′tėr), *n.* [NL., < Gr. *πεντάγωνος*, five-angled, + *ἀστήρ*, a star.] The typical genus of the family *Pentagonasteridæ*. *Linck*, 1733.

Pentagonasteridæ (pen″ta-gon-as-ter′i-dē), *n. pl.* [NL. *Pentagonaster* + *-idæ.*] A family of starfishes, of the order *Phanerozonia*, which have the body generally pentagonal, the arms short, ambulacral plates opposite, large marginal plates, and tessellate abactinal skeleton. It includes more than 20 genera, among which are *Pentagonaster*, *Chitonaster*, *Comptonia*, and *Odontaster*.

pentagonohedron (pen-tag-ọ̄-nō-hē′dro̤n), *n.*; pl. *pentagonohedra* (-drä̤). [Gr. *πεντάγωνος*, five-angled, + *ἕδρα*, base, side.] A solid figure contained by pentagons. *N. E. D.*

pentagonoid (pen-tag′ọ̄-noid), *a.* and *n.* [*pentagon* + *-oid.*] **I.** *a.* Resembling a pentagon.

II. *n.* In *anthrop.*, a cranium the norma verticalis of which has the form of a pentagon with rounded corners. *G. Sergi* (trans.), Var. of the Human Species, in Smithsonian Misc. Coll., XXXVIII. 28.

pentagram, *n.* **2.** In *geom.*, a five-sided polygram.

pentahaloid (pen-ta̤-hā′loid), *a.* [*penta-* + *haloid.*] Containing five atoms of one or more of the halogen elements, chlorin, bromine, and iodine.

pentahedroid (pen-ta̤-hē′droid), *a.* [*pentahedr(on)* + *-oid.*] In *math.*, a four-dimensional body bounded by 5 tetrahedra. *Stringham*, 1880.

pentahydrated (pen-ta̤-hī′drạ̄-ted), *a.* [Gr. *πέντε*, five, + *ὕδωρ* (*ὑδρ-*), water, + *-ated.*] Containing five molecules of water in combination, as crystallized cupric sulphate or common blue vitriol, $CuSO_4.5H_2O$.

pentakisdodecahedron (pen″ta̤-kis-dō″dek-a̤-hē′dro̤n), *n.*; pl. *pentakisdodecahedra* (-drä̤). [Gr. *πεντάκις*, five times, + E. *dodecahedron.*] A reciprocal Archimedean solid having 60 faces, 12 regular pentapleural summits, and 20 regular hexapleural summits. All the faces are triangular and the solid is reciprocal to the truncated icosihedron. It is in fact a bossed dodecahedron.

pental (pen′ta̤l), *n.* [Gr. *πέντε*, five, + *-al*³.] A trade-name of trimethylethylene,

$\begin{matrix}CH_3\\CH_3\end{matrix}\!>C=CHCH_3$. It is prepared by the action of zinc chlorid on amyl alcohol or fusel-oil. It boils at 38° C. and has been used as an anesthetic. Also called *amylene*.

pentalepton (pen-ta̤-lep′ton), *n.*; pl. *pentalepta* (-tä̤). [Gr. *πέντε*, five, + *λεπτόν*, a small coin.] A small Greek copper coin equal to five lepta, or about one cent.

pentalobate (pen-ta̤-lō'bāt), *a.* [Gr. *πέντε*, five, + *λοβός*, lobe, + *-ate*¹.] Having five equal or similar radial lobes, as the axial canals of certain crinoids and the constricted apertures of certain orthoceratites.

pentalogic (pen-ta̤-loj'ik), *a.* [*pentalog-y* + *-ic.*] Relating to or characterized by pentalogy; specifically, fivefold, from the point of view of scientific classification.

> The end in view is to exhibit the logical necessity of making a *pentalogic* classification of all the sciences of demonomy.
> *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1898–99, p. lx.

pentalogue (pen'ta̤-log), *n.* [Gr. *πέντε*, five, + *λόγος*, word, speech.] A series of five laws or rules (after the style of *decalogue*).

pentalogy (pen-tal'ọ̄-ji), *n.* [Gr. *πέντε*, five, + *-λογια*, ‹ *λέγειν*, speak.] Five mutually connected parts or principles; a pentad; specifically, a fivefold classification; the doctrine of the fivefoldness of the universe.

> It is easy to see that the desire to find a *pentalogy* in everything has led to somewhat fanciful distinctions, that there will necessarily be much overlapping in the practical application of a scheme of anthropology so formed. *Athenæum*, June 18, 1904, p. 788.

pentameral (pen-tam'e̤-ra̤l), *a.* [*pentamer(ous)* + *-al*¹.] Having the five-radial plan of symmetry, in which the body or organ consists of five subequal segments, as in the echinoderms, certain corals, jellyfishes, etc. Same as *pentamerous* or *quinqueradiate*.

pentamere (pen'ta̤-mēr), *n.* [Gr. *πέντε*, five, + *μέρος*, part.] 1. Any one of the five antimeres which compose the body of a pentamerous organism. Specifically—2. In hexactinellid sponges, especially the extinct *Dictyospongidæ*, one of the quadrules of the reticulate surface bounded by the smallest spicules of the fifth degree.

pentamerism (pen-tam'e̤-rizm), *n.* [*pentamer(ous)* + *-ism.*] The state or condition of being pentamerous, or composed of five antimeres.

pentamerously (pen-tam'e̤-rus-li), *adv.* In a pentamerous manner; dividing by fives.

> The nepiastic colony of *Unitrypa* is an object of exquisite beauty, consisting of a delicate translucent cup wherein is lodged the *pentamerously* branching trunk or stalk of the zoarium, with its slender arching carinæ and diamond-shaped incipient scalæ.
> *Cumings*, in Amer. Jour. Sci., Jan., 1904, p. 67.

pentamery (pen-tam'e̤-ri), *n.* [*pentamer(ous)* + *-y*³.] The character or condition of being pentamerous.

> Whilst in the *pentamery* and dimery of Dicotyledones there is usually a posterior sepal. *Encyc. Brit.*, XXV. 433.

pentamethylene (pen-ta̤-meth'i-lēn), *n.* [*penta-* + *methylene.*] Same as ⋆*cyclopentane.*

Pentane standard, in *photom.*, a standard of intensity consisting in the light from a lamp of specified form in which the fuel is the petroleum product pentane. The best-known forms of pentane standard lamp are those of Harcourt and of Dibdin. See ⋆*light standard.*

pentanediacid (pen"tān-dī-as'id), *n.* Same as ⋆*glutaric acid.*

Pentapetes (pen-tap'e-tēz), *n.* [NL. (Linnæus, proposed in 1747, established in 1753), ‹ Gr. *πενταπετές*, the name of some unidentified pentamerous or pentaphyllous plant.] A genus of trees or shrubs of the family *Sterculiaceæ*. See *Pterospermum* and ⋆*bayok.*

pentaphonic (pen-ta̤-fon'ik), *a.* Same as *pentatonic.*

pentaphyletic (pen"ta̤-fī-let'ik), *a.* [*penta-* + *phyletic.*] Having five strains in its heredity: said of some hybrid plants. *Jackson*, Glossary.

pentarch¹ (pen'tärk), *n.* [Gr. *πέντε*, five, + *ἀρχός*, ruler.] A member of a pentarchy.

pentarch² (pen'tärk), *a.* [Gr. *πέντε*, five, + *ἀρχή*, beginning.] Growing from five separate points; in *bot.*, having five centripetally developed xylem plates: said of some radial vascular cylinders.

> The xylem is triarch to *pentarch* and octarch.
> *De Bary* (trans.), Compar. Anat. Phanerogams and Ferns, p. 348.

pentarsic (pen-tär'sik), *a.* [Gr. *πέντε*, five, + *ἄρσις*, arsis.] In *prosody*, having five stresses. *N. E. D.*

pentasomic (pen-ta-sō'mik), *a.* [Gr. *πέντε*, five, + E. *som(ite)* + *-ic.*] Pertaining to, or comprising, five somites.—**Pentasomic vesicle.** See the extract.

> E. Herouard states what he calls the "Pentasomœa" theory of the echinoderm body, according to which somites arise in groups of fives, each of the groups forming a "*pentasomic vesicle.*" The five somites potentially included in a *pentasomic vesicle* do not begin to be individualised until the vesicle has been liberated into the blastocœle cavity. He compares the *pentasomic vesicle* of Echinoderms with the enterocœlic vesicle in Amphioxus. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 534.

pentastigm, pentastim (pen'ta̤-stim), *n.* [Gr. *πέντε*, five, + *στίγμα*, mark.] In *geom.*, a system of 5 coplanar points, with all the ranges they determine.

pentastyle, *a.* **II.** *n.* A structure having five columns; also, a portico of five columns.

pentasulphid (pen-ta̤-sul'fid), *n.* [*penta-* + *sulphid.*] A compound containing five atoms of sulphur united to a more electropositive element or radical: as, calcium *pentasulphid*, CaS_5.

pentasulphuret (pen-ta̤-sul'fụ̈-ret), *n.* Same as ⋆*pentasulphid.*

pentasyllabism (pen-ta-sil'a̤-bizm), *n.* [*pentasyllab(ic)* + *-ism.*] The character of being pentasyllabic.

pentasyllable (pen-ta-sil'a̤-bl), *n.* [Gr. *πέντε*, five, + *συλλαβή*, syllable.] A word having five syllables.

pentathionate (pen-ta̤-thī'ọ̄-nāt), *n.* [*pentathion(ic)* + *-ate*¹.] A salt of pentathionic acid: as, potassium *pentathionate*, $K_2S_5O_6$.

pentathionic (pen"ta̤-thī-on'ik), *a.* [Gr. *πέντε*, five, + *θεῖον*, sulphur, + *-ic.*] Noting a rather unstable, colorless acid obtained in solution by the interaction of sulphureted hydrogen and sulphurous acid. Its composition is $H_2S_5O_6$.

Pentathlon bars, apparatus of the nature of horizontal bars used in gymnasiums for exercising and for tests of strength.

pentatomic (pen-ta̤-tom'ik), *a.* [Gr. *πέντε*, five, + *ἄτομος*, atom, + *-ic.*] Containing in a single molecule five atoms altogether of the same or of different elements, as stannic chlorid, $SnCl_4$; or, containing in a single molecule five atoms of some one element, as a pentose, which is an aldehyde alcohol or a ketone-alcohol containing five atoms of carbon. Frequently used in the same sense as *quinquevalent.*

pentatomid (pen-tat'ọ̄-mid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Pentatomidæ.*

II. *a.* Having the characters of or belonging to the family *Pentatomidæ.*

pentatriacontane (pen-ta̤-trī-a-kon'tān), *n.* [Gr. *πέντε*, five, + *τριάκοντα*, thirty, + *-ane.*] A solid hydrocarbon of the paraffin series, $C_{35}H_{72}$. Normal pentatriacontane is the only variety known. It melts at 74.7° C. and boils at 331° C. at 15 millimeters pressure. It is made synthetically.

pentavalence (pen-tav'a̤-le̤ns), *n.* [*pentavalen(t)* + *-ce.*] The character of being pentavalent; the degree of combining power exhibited by an element of which one atom is capable of combining with five atoms of hydrogen or chlorin; quinquevalence.

pentavalency (pen-tav'a̤-le̤n-si), *n.* Same as ⋆*pentavalence.*

pentaxial (pen-tak'si-a̤l), *a.* [Gr. *πέντε*, five, + L. *axis* + *-al*¹.] Consisting of or having five arms intersecting one another, two being in a single axis and the other three lying in a plane at right angles to that axis: seen in hexactinellid sponges as the result of atrophy of one ray of an hexactinellid spicule.

pentazane (pen-taz'ān), *n.* [Gr. *πέντε*, five, + *azo-* + *-ane.*] Same as ⋆*pyrrolidine.*

penteconter² (pen'tẹ̄-kon-tėr), *n.* [Gr. *πεντηκοντήρ.*] In *Gr. antiq.*, a commander of fifty men. *N. E. D.*

pentene (pen'tēn), *n.* [Gr. *πέντε*, five, + *-ene.*] Same as *amylene.*—**R-pentene.** Same as ⋆*cyclopentane.*

pentenediacid (pen"tēn-dī-as'id), *n.* See ⋆*glutaconic.*

penthemimeris (pen-thẹ̄-mim'e̤-ris), *n.* [Gr. *πενθημιμερής*, consisting of five halves.] In *anc. pros.*, a group of two and a half feet.

Penthoraceæ (pen-thọ̄-rā'sẹ̄-ē), *n. pl.* [NL. (Van Tieghem, 1898), ‹ *Penthorum* + *-aceæ.*] A family of dicotyledonous choripetalous plants of the order *Rosales*, closely related to the *Crassulaceæ*, in which it is included by some authors. It consists of the single genus *Penthorum* (which see).

penthouse, *n.* 3. In *artillery*, a frame structure sometimes used to protect a sea-coast gun-carriage from continuous severe weather: so made that it can quickly be put in place or removed.

pentine (pen'tin), *n.* [Gr. *πέντε*, five, + *-ine*².] An oily, unsaturated hydrocarbon, C_5H_8, of the acetylene series. The true pentines contain the acetylene grouping $-C\vdots C-$, but certain isomeric hydrocarbons contain two ethylene groupings, $=CH-CH=$. They are all made synthetically. Also called *pentinene* and *pentylene.*

pentinene (pen'ti-nēn), *n.* [Gr. *πέντε*, five, + *-ine*² + *-ene.*] Same as ⋆*pentine.*

pentite (pen'tīt), *n.* [Gr. *πέντε*, five, + *-ite*².] A pentacid alcohol, as arabite, xylite, and adonite, $C_5H_7(OH)_2$, and rhamnite, $CH_3.C_5H_6(OH)_5$.

pentobolus (pen-tob'ọ̄-lus), *n.*; pl. *pentoboli* (-lī). [Gr. *πεντώβολος*, ‹ *πέντε*, five, + *ὀβολός*, obolus.] An Attic silver piece of five oboli.

pentoic (pen-tō'ik), *a.* [Gr. *πέντε*, five, + *-o-* + *-ic.*] Containing five carbon atoms.—**Pentoic acid.** Same as ⋆*pentadecatoic* or *valeric acid.*

pentone (pen'tōn), *n.* [Gr. *πέντε*, five, + *-one.*] An unsaturated hydrocarbon, C_5H_6. Valylene, pirylene, and pyropentylene are pentones.

pentosan (pen'tọ̄-san), *n.* [*pentose* + *-an.*] One of a class of complex carbohydrates which yield pentoses when hydrolyzed. They occur in most plants, in many gums, in turf, humus, and lignite.

pentosazone (pen-tōs-az'ōn), *n.* [*pentose* + *azone.*] An osazone derived from a pentose.

pentose (pen'tōs), *n.* [Gr. *πέντε*, five, + *-ose.*] One of a group of monosaccharides containing five atoms of carbon. They occur widely distributed in both the animal and the vegetable world. Well-known representatives are *arabinose*, *xylose*, and *rhamnose.*

pentosoid (pen'tọ̄-soid), *n.* [*pentose* + *-oid.*] A group of carbohydrates including true pentosans, as well as lignocelluloses and oxycelluloses which have not been hydrolyzed into pentoses.

pentosuria (pen-tọ̄-sū'ri-ạ̈), *n.* [NL., ‹ *pentose* + *-uria.*] A form of glycosuria in which the excreted sugar is a pentose.

Pentremital limestone. See ⋆*limestone.*

pent-road (pent'rōd), *n.* [*pent, p. a.,* + *road.*] A road open to the public but which may be closed or barred at its terminals. 30 *Atlantic Reporter*, p. 998.

Pentstemon, *n.* 2. [*l. c.*] A plant of this genus.—**Climbing pentstemon**, *Pentstemon cordifolius*, a species, woody below, climbing by long sarmentose branches which are thickly clothed with ovate leaves and bear at the tips clusters of bright scarlet blossoms. It is found from Santa Barbara to San Diego in California.

pentylene (pen'ti-lēn), *n.* [Gr. *πέντε*, five, + *-yl* + *-ene.*] Same as ⋆*pentine.*

pentylic (pen-til'ik), *a.* [*pentyl* + *-ic.*] Containing the radical *pentyl.*—**Pentylic alcohol**, normal amyl alcohol or pentanol-1, $C_5H_{11}(OH)$. A liquid, boiling at 137° C., which is formed by the fermentation of glycerol. It probably occurs in fusel-oil, and is also made synthetically.

penuchle (pē'nuk-l), *n.* [Also written *pinochle*, *pinuchle*, *pinocle*, *binocle*: said to be of German-American origin, but the original form and meaning are unknown.] A game of cards; a variety of bezique. The game is played by two, three, or four persons, with two packs of 24 cards each, the 9-spot being the lowest. The cards rank A, 10, K, Q, J, 9. The dealer gives twelve cards to each player, four at a time, turning up the last for trumps. If this is the lowest, called *dix*, it counts 10 for him immediately. When only two play the eldest hand leads, and as each trick is won a fresh card is drawn from the stock to refill the hand. As long as any cards remain in the stock it is not necessary to follow suit to anything, but when the stock is exhausted the second player must follow suit and win the trick if he can. When identical cards are played to the same trick, the one led wins. Before the stock is exhausted, and before drawing from it after winning a trick, a player may meld or announce anything he has in his hand that is of counting value by laying it on the table. Marriages (K and Q of any plain suit) count 20, in trumps, 40; the five highest trumps together, 150; four aces of different suits, 100; four kings, 80; four queens, 60; and four jacks, 40. Eight cards of one denomination count double; for example, 200 for eight aces. The spade queen and diamond jack are penuchle, worth 40. Double penuchle is worth 80. The dix may be exchanged for the trump card, counting 10 for it, provided the exchange is made after winning a trick and before drawing from the stock. After the last card is drawn from the stock, no further melds are allowed. At the end of the hand, each player counts the pip value of the cards he has taken in tricks, reckoning each ace as 11, tens as 10, kings as 4, queens as 3 and jacks as 1, regardless of suit. The last trick is worth 10. Game is 1,000 points, but the player first reaching that number should claim it in the course of play, because when the hands are counted at the end, if both are 1,000 the game must be continued to 1,250. Mental count is kept of the value of the tricks taken in, the melds being put down on a slate or pegged on a cribbage-board. When four play there is no stock and all melds are made before a card is led. The winning of a trick at any time makes these melds good; otherwise they are lost. In *auction penuchle*, the whole pack is dealt out, four cards at a time, to three or four players, but no trump is turned. Four may form partnerships. The highest bidder names the trump suit and leads for the first trick. If he fails to make good his bid in melds and tricks combined, he is set back the amount bid, the others scoring what they get. All melds are made before a card is played but are not good until the melder wins a trick. There must be at least one fresh card from the hand for each separate part of a meld containing cards that count in two or more ways; so that four kings and queens are worth 220, and the trump sequence 190. The winner is the player with the highest score at the end of an agreed number of deals, usually three rounds. *Widow penuchle* is the auction game for three players. When four play, the dealer takes no cards. Fifteen cards are dealt to each and three, face down, to the widow. The highest bidder turns the widow face up and shows what it contains. Then he takes it into his hand and discards three cards, which count for him at the end. He then names the trump suit, and leads for the first trick.

penult, *n.* **II.** *a.* Next to the last; penultimate.

> A new genus, Oregonia, from the Oregon coast, is so closely related to Eurypodius, that but for the *penult* joint of the eight posterior legs they would form the same genus. *Dana*, Crust., I. 76. *N. E. D.*

penultimate, *n.* **2.** In *whist* and *bridge*, the lowest but one of a suit.

penumbra, *n.* **4.** A surrounding fringe or border, as in the distribution of metamorphic effects produced by an igneous mass.

> A *penumbra* of hydromica and chlorite schists.
> *Dana*, Manual of Geology (4th ed.), p. 325.

penwithite (pen′with-īt), *n.* A hydrated manganese silicate (perhaps $MnSiO_3 + 2H_2O$) from the district of Penwith, Cornwall, England.

Pen-y-glog beds. See ★*bed*[1].

peo. An abbreviation of *people*.

peonage, *n.* **2.** The holding, by illegal methods, of free negroes or whites in a condition of semi-slavery, specifically in the southern part of the United States: also applied to the abuse of the convict lease system in the South.—**3.** In *India*, service or employment of peons as messengers, etc. *N. E. D.*

peonia[2] (pā-ọ-nē′ạ̈), *n.* [Amer. Sp., < *peon*, a pawn, a man, as in playing checkers. See *pawn*[2].] In Spanish-American countries, a small bright-colored seed of several plants, especially of *Abrus Abrus*, *Dolicholus phaseoloides*, and *Erythrina coralloides*, often used for playing games of chance, such as draughts. See ★*colorin*.—**Peonia de botica**, in Mexico, the tubers of *Cyperus esculentus*. See *earthnut*, 3.

peonia[3] (pā-ō′nẹ-ä), *n.* [Sp. *peonia*, peony.] In Mexico, a name applied to several plants with tuberous roots, especially to two composites, *Perezia runcinata* and *Zexmenia podocephala*, because of the resemblance of their roots to those of *Pæonia officinalis*. *Perezia runcinata*, which occurs in the southern United States and northern Mexico, is reputed to be a specific for epilepsy, and is sold in the drug markets of several Mexican cities. This virtue was attributed by the ancients to *Pæonia officinalis*, a plant used medicinally in Greece four centuries before the Christian era, and celebrated by Galen as a remedy for epilepsy and lunacy.—**Peonia de botica**, in Mexico, the tubers of a sedge, *Cyperus esculentus*.—**Peonia de la sierra**, in the state of Sonora, the tubers of *Zexmenia podocephala*.

people, *n.*—**Little people**, fairies.

peperino (pep-ẹ-rē′nō), *n.* Same as *peperine*.

peperite (pep′ẹ-rīt), *n.* [*peper*(*ine*) + *-ite*[2].] Same as *peperine*.

pepinillo (pā-pẹ-nēl′yō), *n.* [Sp. diminutive of *pepino*, cucumber.] In Porto Rico, *Melothria fluminensis*, a climbing plant of the cucumber family, the small fruits of which are made into pickles when green. In Mexico an allied species, *M. scabra*, is used for the same purpose.

pepino (pā-pē′nō), *n.* [Sp.] **1.** In Spain and in countries settled by the Spanish, the cucumber, *Cucumis sativus*.—**2.** In Peru and Central America, a cultivated plant, *Solanum muricatum*, which bears fruit resembling a melon or a papaw, used extensively in Peru as a vegetable but rather insipid and inferior to a melon in flavor.

peplum, *n.* **2.** In recent use, a long and pointed overskirt draped over the underskirt of a dress, slightly in the fashion of the ancient Greek robe.

pepper, *n.*—**Climbing pepper**, in Australia. Same as *native* ★*pepper* (*b*).—**Native pepper**, in Australia. (*a*) A tree of the magnolia family, *Drimys aromatica*, the aromatic drupes of which are used as a substitute for allspice or pepper. The leaves and bark have also a hot, biting, cinnamon-like taste. See *pepper-tree*, 2. (*b*) A tall shrub of the pepper family, *Piper Novæ-Hollandiæ*, found in dense forests where it climbs to the tops of the tallest trees. It is used in the treatment of catarrhal affections. Called also *native pepper-vine*.

pepper-brand (pep′ėr-brand), *n.* A disease of oats and other grasses due to the fungus *Tilletia caries*.

pepper-clam (pep′ėr-klam), *n.* An edible bivalve, *Scrobicularia piperata*, found in European seas.

peppercorn. I. *n.* **3.** See the extract and *peppercorn* ★*hair*.

> The black hair [of the Bushmen] has earned by its method of growth the name of "*pepper-corns*," for though it is distributed normally and evenly over the surface of the head, the little short black tufts cling together in tight spirals, leaving bare spaces between, and suggesting a sprinkling of pepper-corns over the scalp.
> *Knowledge*, July, 1905, p. 172.

II. *a.*—**Peppercorn hair.** See ★*hair*[1].—**Peppercorn rent**, a trifling nominal rent: formerly often an actual peppercorn specified as the nominal consideration. [Eng.]

pepper-oil (pep′ėr-oil), *n.* See ★*oil*.

pepper-vine, *n.*—**Native pepper-vine.** See *native* ★*pepper* (*b*).

pepper-worm (pep′ėr-wėrm), *n.* The larva of any one of those ptinid beetles which affect stored products. All feed on pepper, as the cigarette-beetle, the drug-store beetle, the brown spider-beetle, and others.

pepsinhydrochloric (pep-sin-hī-drọ-klō′rik), *a.* Peptohydrochloric.

pepsinogen (pep-sin′ọ-jen), *n.* [*pepsin* + *-o-gen*.] The inactive mother-substance of pepsin. It is transformed into the latter by the hydrochloric acid of the gastric juice.

Pepsis, *n.* **2.** [*l. c.*] Digestion.

peptase (pep′tās), *n.* [*pept*(*ic*) + *-ase*.] Any ferment which converts albumins into peptones.

peptenzym (pep-ten′zim), *n.* [*pept*(*ic*) + *enzym*.] A remedy for dyspepsia, said to be a mixture of all the digestive ferments.

peptic, *a.* and *n.* **I.** *a.*—**Peptic ulcer.** See ★*ulcer*.

II. *n.* **2.** *pl.* The organs of digestion. [Humorous and rare.]

> But tho' the port surpasses praise,
> My nerves have dealt with stiffer.
> Is there some magic in the place?
> Or do my *peptics* differ?
> *Tennyson*, Will Waterproof's Lyrical Monologue, st. x.

peptid (pep′tid), *n.* [*pept*(*ic*) + *-id*[1].] A hydrolytic decomposition-product of albuminous origin which contains one or more amino acids in combination (as dipeptids, tripeptids, tetrapeptids, polypeptids, etc.). The peptids stand on a lower scale of complexity of composition than the albumoses. See also ★*tryptic digestion*.

peptohydrochloric (pep-tọ-hī-drọ-klō′rik), *a.* Containing in admixture both pepsin and hydrochloric acid. Thus the gastric juice has been spoken of as a peptohydrochloric solvent of proteid substances.—**Peptohydrochloric acid**, a hypothetical compound of pepsin and hydrochloric acid which supposedly brings about the digestion of albumins in the stomach. Also called *pepsin-hydrochloric acid* and *chloropeptic acid*.

peptoid (pep′toid), *n.* [*pept*(*ic*) + *-oid*.] A product of proteolytic digestion which does not give the biuret reaction and probably stands very close to the end-products.

peptolysis (pep-tol′i-sis), *n.* [Gr. πέπτειν, cook, digest, + λύσις, a loosing.] Peptic digestion.

> When thus introduced in dogs, crude elastose, obtained by *peptolysis* of ligament elastin prepared by Richards and Gies's method, not only promptly appears in the urine, but may be identified in it by the heat-precipitation test. *Science*, Oct. 11, 1907, p. 476.

peptone, *n.*—**Witte's peptone**, a commercial peptone preparation, in the dry state, obtained from fibrin. It is largely composed of albumoses.

peptonemia (pep-tō-nē′mi-ạ̈), *n.* [*peptone* + Gr. αἷμα, blood.] The occurrence of peptone in the circulating blood.

peptonephridium (pep″tọ-nef-rid′i-um), *n.*; pl. *peptonephridia* (-ạ̈). [NL., < Gr. πέπτειν, digest, + NL. *nephridium*.] In some oligochætous worms, one of the nephridia situated in the anterior or posterior part of the body, opening into the alimentary canal instead of to the exterior and having apparently the function of a digestive gland. *Parker and Haswell*, Zoology, I. 441.

peptonizer (pep′tọ-nī-zėr), *n.* Something which peptonizes or predigests; hence anything, as mirth, which aids digestion.

> A good comedy is the best of *peptonizers*.
> *National Observer*, Aug. 5, 1893, p. 303. *N. E. D.*

pepton-water (pep′ton-wâ″tėr), *n.* In *bacteriol.*, a liquid medium used for cultivating bacteria.

Pepuzian (pe-pū′ziạn), *n.* A member of a sect of Montanists in the second century: so called from Pepuza in Phrygia. *N. E. D.*

> They had their name *Pepuzians* from a pretence that Jesus Christ appeared to one of their prophetesses in the city Pepuza in Phrygia, which was their holy city.
> *Chambers' Cyclo.* (1727–41).

Per and cui ('through [whom] and to whom'), in *law*, said of a writ of entry when it is directed against a second vendee or descendant from the disseizor. For example, A desseizes B and then sells to C, who sells to D. D's title is through (*per*) C, to whom (*cui*) A conveyed it, having wrongfully taken it from B.—**Per corpus**, by the body, or through an attachment.—**Per minas** ('through threats'), in *law*, a phrase used with reference to contracts which one party seeks to avoid because his assent was obtained by threats or improper coercion.—**Per primam intentionem**, by first intention: noting the healing of a wound without suppuration. Commonly, by abbreviation, *per primam*.—**Per quod** ('by which'), the title of a clause introducing in a pleading the legal conclusions from facts already stated.—**Per secundam intentionem**, by second intention: noting the healing of a wound by granulation. Commonly, by abbreviation, *per secundam*.—**Per totam curiam**, in *law*, by the entire court.—**Per universitatem**, in *civil law*, completely: applied to the disposal of property as an entirety, not by parcel.

per-. **3.** In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*[1]), a prefix used to form adjectives, and showing that the factor or component indicated is present in any division of igneous rocks, alone or in extreme amount—that is, that its ratio to another factor is greater than $\frac{7}{1}$: as, *peralkalic*, *perfelic*, *perfemane*, *perfemic*, etc.

per. An abbreviation of *period*.

peracid (pėr-as′id), *n.* [*per-* + *acid*.] An acid containing more than the usual amount of oxygen, as acetperacid ($CH_3CO_2.OH$), and benzoperacid ($C_6H_5.CO_2.OH$). Many of the peracids are extremely powerful germicides.

peradrenalone (pėr-ad-ren′ạ-lōn), *n.* [*per-* + *adrenalone*.] A compound, $(HO)_2C_6H_3CO\text{-}CONHCH_3$, prepared by the oxidation of adrenalone.

peræon (pe-rē′on), *n.*; pl. *peræa* (-ạ̈). Same as *pereion*.

> Rostral point small. *Peraeon* depressed. Very broad at the center; first segment short, seventh unusually long.
> *Trans. Linnæan Soc.*, Zool., May, 1897, p. 42.

peræopod (pe-rē′ọ-pod), *n.* Same as *pereiopod*.

> The term *peræopod* is here used to designate the thoracic legs behind the first two pairs, or gnathopods.
> *Amer. Nat.*, April, 1903, p. 269.

peralkalic (pėr-al-kal′ik), *a.* [*per-*, 3, + *alkalic*.] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*[1]), extremely alkalic: said of salic minerals, or of magmas in which they preponderate, when the ratio of the salic K_2O and Na_2O to salic CaO is greater than 7:1. It is applied to femic minerals, or to magmas in which they preponderate, when the ratio of the femic K_2O and Na_2O to femic CaO, MgO, and FeO is greater than 7:1.

perambulant (pėr-am′bụ-lạnt), *a.* [See *perambulate*.] Strolling; rambling; perambulating. [Rare.]

> The poor found congenial recreation in bear-baiting, bull-fighting, and countless similar amusements — in fairs, dances, *perambulant* musicians, sham fights, and rude games.
> *Lecky*, Hist. Rise and Influence of the Spirit of Rationalism in Europe, II. 291.

perameloid (pẹ-ram′e-loid), *a.* [NL. *Perameles* + *-oid*.] Resembling bandicoots of the genus *Perameles*.

Peramium (pe-rā′mi-um), *n.* [NL. (Salisbury, 1812), of unexplained derivation.] A genus of orchidaceous plants. See *Goodyera*.

per an., per ann. [*l. c.* or *cap.*] Abbreviations of the Latin *per annum*, by the year.

Peranema (per-ạ-nē′mạ̈), *n.* [NL.] The typical genus of the family *Peranemidæ*. *Dujardin*, 1841.

Peranemidæ (per-ạ-nem′i-dē), *n. pl.* [NL. *Peranema* + *-idæ*.] A family of *Mastigophora*, of the order *Euglenida*, which have the body either stiff or plastic and usually symmetrical, one or two disimilar flagella at the anterior end, and a distinct mouth at the base of the flagella. The nutrition is holozoic. It contains about a dozen genera, among which are *Peranema*, *Zygoselmis*, *Petalomonas*, and *Anisonema*.

perbromate (pėr-brō′māt), *n.* [*perbrom*(*ic*) + *-ate*[1].] A salt of perbromic acid—if such a substance exists.

perbromic (pėr-brō′mik), *a.* [*per-* + *bromic*.] Noting an acid, a compound having the formula $HBrO_4$, analogous to perchloric acid, supposed by Kämmerer to be produced by acting on the latter in a dilute state with bromine. Its existence is very doubtful.

Percalates (pėr-ka̤-lā'tēz), *n.* [NL.] A genus of serranoid fishes living in fresh and brackish waters of southeastern Australia.

percalcic (pėr-kal'sik), *a.* [*per-*, 3, + *calcic.*] In *petrog.*, extremely calcic: said of salic minerals, or of the rocks in which they preponderate, when salic CaO is more than seven times the salic K_2O and Na_2O, and of femic minerals, or of the rocks in which they preponderate, when femic CaO is more than seven times the MgO and FeO. See ★*per-*, 3, and ★*rock*^{1}.

percarbide (pėr-kär'bid), *n.* [*per-* + *carbide.*] A compound of carbon with a more electropositive element or radical containing a maximum proportion of carbon.

percarbonate (pėr-kär'bo̤-nāt), *n.* [*percarbon(ic)* + *-ate*^{1}.] A salt of percarbonic acid. Potassium percarbonate has been obtained by the electrolysis of a solution of potassium carbonate at —15° C. It is an energetic oxidizing agent, readily giving off oxygen and reverting to the condition of carbonate.

percarbonic (pėr-kär-bon'ik), *a.* [*per-* + *carbonic.*] Noting an acid, $H_2C_2O_6$, of which the potassium salt has been obtained by the electrolysis of a solution of potassium carbonate.

percarburet (pėr-kär'bṳ̄-ret), *n.* [*per-* + *carburet.*] Same as ★*percarbide.*

Percarina (pėr-ka̤-rī'nä), *n.* [NL., < L. *perca*, perch, + *-ar(ius)* + *-ina*^{1}.] A genus of percoid fishes inhabiting the mouths of rivers which empty into the northern part of the Black Sea and the Sea of Azof.

per cent., per ct. [*l. c.* or *cap.*] Abbreviations of the Latin *per centum*, by the hundred.

percentage, *n.*—**Wake percentage,** in *naval arch.*, the ratio (expressed as a percentage) of the mean velocity of the water flowing forward in the wake of a vessel in the immediate vicinity of the stern to the speed of the vessel itself.

> This mean velocity of the wake is usually expressed as a percentage of the speed of the ship, and termed the "*wake percentage.*"
> *White*, Manual of Naval Arch., p. 456.

percentaged (pėr-sen'tā̤jd), *p. a.* Expressed or stated as a percentage. *New Eng. Jour. Education*, June 12, 1884, p. 376. *N. E. D.*

percental (pėr-sen'ta̤l), *a.* and *n.* [*per cent.* + *-al*^{1}.] **I.** *a.* Pertaining to, or of the nature of, percentage; expressed as a percentage; in percentage.

> A map showing, by means of six colours distinguishing different *percental* proportions, the distribution of German-speaking people. *Geog. Jour.* (R. G. S.), IX. 319.

II. *n.* In *com.*, same as *percentage:* as, at a ruinous *percental.* [Incorrect use.]

percentile. I. *a.*—**Percentile grades.** See ★*grade*^{1}.

II. *n.* **2.** In *math.*, a point upon a curve of errors which corresponds to a certain percentage of the total number of observations under discussion.

perception, *n.*—**Facial perception,** the faculty of judging of the proximity, direction, etc., of objects by the sensation felt in the skin of the face, a faculty especially developed in the blind. Also termed *facial vision. Buck*, Med. Handbook, III. 493.

perception-limen (pėr-sep'sho̤n-lī"men), *n.* In *psychophys.*, the stimulus-limen of perception, as of visual, cutaneous, or articular movement, of dual impression on the skin, etc. *E. B. Titchener*, Exper. Psychol., II. ii. 20.

perception-reflex (pėr-sep'sho̤n-rē"fleks), *n.* In *psychol.*, a reflex movement or group of movements (or a reflex readjustment of muscular tone) occurring in the organism when a perception is set up in consciousness. *Amer. Jour. Psychol.*, XIII. 97.

perception-time (pėr-sep'sho̤n-tīm), *n.* In *psychophys.*, the time required for the act or process of perception, as distinguished from the more complex intellectual processes of successive association, counting, etc.

> The time measured was, therefore, a single *perception-time* instead of a recognition-time.
> *Amer. Jour. Psychol.*, XIII. 258.

Perceptive economy. See ★*economy.*

perceptomotor (pėr-sep-to̤-mō'to̤r), *a.* Of or pertaining to a movement that follows directly upon, or is immediately released by, a perception: opposed to *ideomotor, sensorimotor.* [Rare.]

perch^1, *n.* **3.** Applied, with various epithets, to many fishes in Australia, none of which belong to the family *Percidæ.* The same fishes are called by various names in different localities. See *barramunda*, *bidyan* ★*ruff*, *black* ★*perch* (*g*), *fresh-water* ★*perch* (*b*), *golden perch*, ★*mado*, *Murray* ★*perch*, ★*parrot-fish* (*f*), *pearl perch*, ★*poddly*, *red-gurnet* ★*perch*, *red* ★*perch*, ★*rock-perch*, and ★*sea-perch*, 5 and 6.—**Black perch.** (*g*) A river-fish, *Therapon niger*, of the family *Hæmulidæ.* [New South Wales.]—**Fresh-water perch.** (*b*) The name given in Tasmania to a small perch called *Microperca tasmaniæ:* but the name *Microperca* was earlier given to an American fish.—**Murray perch,** a fresh-water fish, *Oligorus mitchelli*, closely allied to *Oligorus macquariensis*, the Murray cod, which belongs to the family *Percidæ. E. E. Morris.*—**Red-gurnet perch,** the name given in Victoria to a fish, *Sebastapistes percoides*, of the family *Scorpænidæ.* Also called *poddly*, *red gurnard* or *gurnet*, *kelp-fish*, and, in New Zealand, *pohuikaroa.* See ★*perch*^{1}, 3.—**Red perch.** (*c*) Same as ★*barber*^{1}, 3. (*d*) In Australia, *Caprodon longimanus.*—**Ringed perch.** Same as *ring-perch.*—**Silver perch.** (*e*) A fresh-water fish of New South Wales, the bidyan ruff. See ★*ruff*^{3}.—**Speckled perch.** (*b*) A common name of *Pomoxis annularis*, one of the sunfishes, found in the eastern United States. See *crappie*, with cut.—**Stone-wall perch,** a fish of the family *Oplegnathidæ*, found on the tropical Pacific coasts and north to Japan. The family is of doubtful relationship.—**Trumpeter perch.** Same as *trumpeter*, 6.

perch^2, *n.* **9.** In *leather-manuf.*, a frame on which a skin is stretched flat so that it may be worked smooth and soft. *Modern Amer. Tanning*, p. 201.—**10.** In *textile-manuf.*, a frame, usually with two overhead rolls, over which cloth is drawn to be examined for imperfections.—**11.** In *car-building*, a draft-timber.

perch^2, *v. t.* **3.** In *leather-manuf.*, to soften or draw out by means of a perch. See ★*perch*^{2}, *n.*, 9. *Modern Amer. Tanning*, p. 82.—**Perched rock.** See ★*rock*^{1}.

perching^1, *n.* **2.** In *leather-manuf.*, the process of stretching, as skins, on a perch. *C. T. Davis*, Manuf. of Leather, p. 362.

perchlorate, *n.*—**Potassium perchlorate,** a salt of potassium distinguished from the chlorate by being less soluble and more stable. It has been proposed for use in firework compositions as safer than the chlorate.

perchlorid (pėr-klō'rid), *n.* [*per-* + *chlorid.*] **1.** The chlorid of any particular element or radical with maximum proportion of chlorin.—**2.** Specifically, an abbreviation of *mercury perchlorid*, mercuric chlorid or corrosive sublimate, when used as an antiseptic in surgery.

perchlorinate (pėr-klō'ri-nāt), *v. t.*; pret. and pp. *perchlorinated*, ppr. *perchlorinating.* To combine or saturate (a substance) with the largest amount of chlorin which it is capable of holding.

perchlorination (pėr-klō-ri-nā'sho̤n), *n.* The process of perchlorinating; the saturation of an element or compound with the largest amount of chlorin which it is capable of holding.

perchromic (pėr-krō'mik), *a.* [*per-* + *chromic.*] Noting an acid, a substance known only in solution, produced by the interaction of chromic acid and hydrogen dioxid. It is very unstable, of an intense blue color, and probably has the composition $H_2Cr_2O_8$, analogous to that of persulphuric acid.

Percichthys (pėr-sik'this), *n.* [NL., < L. *perca*, perch, + Gr. ἰχθύς, fish.] A genus of serranoid fishes inhabiting fresh waters of the southwestern coast of South America.

Percilia (pėr-si.'i-ä̤), *n.* [NL., < L. *perca*, perch.] A genus of serranoid fishes found in fresh waters of Chile.

percoidean (pėr-koi'dẹ̄-a̤n), *a.* and *n.* **I.** *a.* Pertaining or belonging to the family *Percidæ.*

II. *n.* Any fish of the family *Percidæ. Science*, Jan. 3, 1902, p. 30.

Percoidei (pėr-koi'dē-ī), *n. pl.* Same as *Percoidea.*

percolative (pėr'ko̤-lā-tiv), *a.* [*percolate.*] Filtrative or allowing percolation or filtration: as, *percolative* soil.

percolator, *n.* **4.** A perforated plate or gauze partition through which a liquid, in passing, will become finely divided, or descend in a shower or mist.

percontation (pėr-ko̤n-tā'sho̤n), *n.* [L. *percontatio(-n-)*, an interrogation, < *percontare*, interrogate.] Interrogation; inquiry. [Rare.]

percur (pėr-kėr'), *v. t.*; pret. and pp. *percurred*, ppr. *percurring.* To traverse; run through. *N. E. D.* [Rare.]

percussion, *n.*—**Coin-percussion sound,** a sound of a metallic character heard, in cases of pneumothorax, by the ear placed against the back of the chest when two coins are clinked in contact with the anterior wall. *Med. Record*, June 13, 1903, p. 955.

percussion (pėr-kush'o̤n), *v. t.* **1.** To arrange (a firearm) by fitting it with a percussion-lock, so that it may be fired by percussion.

> When *percussioned*, the gun is shot at a target, and altered till it makes the required pattern.
> *W. W. Greener*, The Gun, p. 250.

2. In *med.*, to treat by means of percussion massage.

> The part being *percussioned* should become accustomed . . . to the manipulation.
> *Maguire*, Art of Massage, p. 47. *N. E. D.*

percussion-cartridge (pėr-kush'o̤n-kär"trij), *n.* A cartridge in which the primer is exploded by a blow: all modern cartridges are of this kind. See cut under *percussion-fuse.*

percussion-drill (pėr-kush'o̤n-dril), *n.* See ★*drill*^{1}.

percussion-sieve (pėr-kush'o̤n-siv), *n.* In *mining*, a machine, consisting of two screens to which a jarring motion is given, used for rapidly sorting ores, etc., according to the size of the pieces.

percute (pėr-kūt'), *v. t.*; pret. and pp. *percuted*, ppr. *percuting.* [See *percuss.*] To percuss, particularly in massage.

> After having . . . frictioned and *percuted* the muscles of the neck. *Maguire*, Art of Massage, p. 98. *N. E. D.*

perduction (pėr-duk'sho̤n), *n.* [L. *perductio (-n-)*, the act of leading through, < *perducere*, lead through.] The act of leading or bringing through; in recent use, the process of oxidation, as opposed to *reduction.*

> Whether or not there can be true decomposition, such as reduction and oxidation (or *perduction*) which takes place at all electrodes, is quite a different matter.
> *Trans. Amer. Inst. Elect. Engin.*, Jan.-July, 1902, [p. 315.

pereicleis (per'ī-klīs), *n.* [NL. *perei(on)* + Gr. κλείς, key.] In crustaceans, a tubercle or nodule of the posterior segment of the carapace, securing the latter behind. Compare ★*peltecleis.*

pereirine (pẹ̄-rā'rin), *n.* [*Pereira* (*Geissospermum læve*) + *-ine*^{2}.] An amorphous powdery alkaloid, $C_{19}H_{24}ON_2$, which occurs in Pereira (Pao-Pereira) bark from species of *Geissospermum.* The bark also contains other alkaloids, and is used as a febrifuge.

Peremptory rule. See ★*rule*^{1}.

perendinate (pėr-en'di-nāt), *v. t.* and *i.* [ML. *perendinare*, procrastinate.] **I.** *trans.* To defer till the day after to-morrow; put off for a day. *Blount*, Glossographia.

II. *intrans.* To defer going from day to day; to make an indefinitely long visit. [Rare.]

> The Master and scholars are not to permit any one to *perendinate* within their walls for a longer period than a fortnight.
> *Willis and Clark*, Arch. Hist. of the University of Cam-[bridge, I., introd., p. 89. *N. E. D.*

Perennial herb, a plant which dies to the ground each year but has a persistent root.

perennialize (pe-ren'i-a̤l-īz), *v. t.*; pret. and pp. *perennialized*, ppr. *perennializing.* To make perennial; make perpetual and never-failing.

> Welling springs, converging to a hollow, have *perennialized* a wide shallow pool.
> *Speaker*, Sept. 3, 1898, p. 287.

perfect, *a.* **11.** In the *Echinodermata*, having the entire series of ambulacral plates perforated from pole to pole, that is, from base to summit of corona.—**Perfect aggregate of points.** See ★*point*^{1}.—**Perfect series** or **set.** See ★*set*^{1}.

perfect, *v. t.*—**To perfect judgment.** See ★*judgment.*

perfectibilian (pėr-fek-ti-bil'ya̤n), *n.* A perfectionist; a perfectibilist.

perfectibilism (pėr-fek'ti-bil-izm), *n.* [*perfectible* + *-ism.*] The doctrine of the perfectibilists. See *Order of the Illuminati*, under *illuminati.*

perfectibility, *n.* **2.** The doctrine that historical religion will gradually lose its temporary and local character and be perfected according to the ideal formed by reason. This idea was suggested by Lessing.

perfectionism, *n.* **2.** The belief and system of the Perfectionists of the Oneida Community (which see, under *community*).

perfectionize (pėr-fek'sho̤n-īz), *v. t.*; pret. and pp. *perfectionized*, ppr. *perfectionizing.* To make perfect; to perfectionate. [Rare.]

perfectism (pėr'fek-tizm), *n.* Same as *perfectionism.*

perfectist (pėr'fek-tist), *n.* Same as *perfectionist.*

perfective, *a.* **2.** In *gram.*, expressing completed or perfected action, as a verb.

> In this system a clear distinction is drawn in nearly all verbs between those which express a process (durative verbs) and those which express a completed action (*perfective* verbs). . . . To strike is durative; to strike dead is *perfective.* *Encyc. Brit.*, XXXI. 676.

perfelic (pėr-fel'ik), *a.* [*per-*, 3, + *fel(dspar)* + *-ic.*] In *petrog.*, in the quantitative system (see ★*rock*^{1}), extremely felic; normative feldspar being more than seven times the normative quartz. See ★*per-*, 3.

perferrous (pėr-fer'us), *a.* [*per-*, 3, + *ferrous.*]

In *petrog.*, in the quantitative system (see ★*rock*^{1}), extremely ferrous; having more than seven times as much ferrous iron, FeO, as magnesia. See ★*per-*, 3.

perfluent (pėr′flö̤-ẹnt), *a.* [L. *perfluent*(*em*), ppr. (acc. sing. mas.) of *perfluere*, flow through.] Flowing through.—**Perfluent battery,** a voltaic battery within which a flow of the electrolyte is maintained.

perfoliation (pėr-fō-li-ā′shọn), *n.* [*perfoliate*, *a.*, + *-ion*.] The state of being perfoliated.

perforate, *a.* (*e*) Of the shells of gastropod mollusks, having a tubular cavity extending through the columella from the umbilicus to the apex: contrasted with *imperforate*, in which case the columella is solid.

Perforated zinc. See ★*zinc*.

perforating-press (pėr′fọ-rā-ting-pres″), *n.* A press having punches for making perforations in sheet-metal. The punches or dies are usually arranged in lines, and the press is fitted with feed-rolls which have a slight lateral motion after each stroke of the press to produce a staggered or alternating arrangement of the perforations, or a variable speed which causes a variation in the spacing of the lines of perforations. Gangs or groups of punches are also used for special work in making small perforated articles such as lamp-burners. See *perforating dies*, under ★*die*^{3}.

perforator, *n.* (*d*) The keyboard of the monotype type-setting and -casting machine; more precisely, the mechanism of the monotype keyboard which perforates the paper ribbon so that it will control the movements of the casting mechanism.

> From the *perforator* the spool passes to the casting and setting machine, an intricate piece of mechanism about 4 feet high.
> *Census Bulletin* 216, June 28, 1902, p. 58.

(*e*) In *archæol.*, a small chipped stone implement with a rather long and slender point and usually a broad base, supposed to have been used for drilling or boring holes. The name is also sometimes applied to other implements which have been evidently used for making holes, such as bone awls, etc. (*f*) A device for rapidly producing the perforations of a tape corresponding to the Morse code of signals and used in machine telegraphy.

perforatory (pėr′fọ-rā-tọ-ri), *a.* Same as *perforative*.

performance, *n.*—**Coefficient of performance.** See *admiralty* ★*coefficients*.

perfume, *v. t.* 2. Literally, to impregnate with the fumes or smoke of some burning object; fumigate, as with a disinfectant. *N. E. D.*

perfume, *n.*—**Concrete perfume,** a waxy, cerate-like mass obtained by extracting flowers with some special volatile solvent and completely removing the latter by distilling in vacuo. The odorous principles may be separated from the plant-wax by digesting with deodorized alcohol, subjecting to refrigeration, and then filtering: used in the manufacture of perfumes.

Perfumers' spirit. Same as ★*spirits of cologne*.

perfumery, *n.* 3. A perfumer's establishment.

perfusion, *n.* 2. In baptism, the act of pouring or sprinkling water over: the opposite of *immersion*. Occasionally used for the water which has been poured over.

> That this Rite was wont to be perform'd by Immersion, and not by *Perfusion*, appears both by the Propriety of the Word, and the Places chosen for its Administration.
> *J. Gale*, Reflections on Wall's Hist. of Infant-Baptism, [p. 134.

3. Irrigation of the tissues by the local subcutaneous transfusion of a saline solution.

> Tuesday, August 6, was devoted to a discussion upon a much more technical subject, the value of *perfusions*.
> *Nature*, Sept. 19, 1907, p. 534.

Perfusion solution, a solution used in perfusion experiments.

perhalide (pėr-hal′id), *n.* [*per-* + *halide* (?).] A compound of one or more of the halogen elements, chlorin, bromine, and iodine, with maximum proportion of the halogen or halogens.

perhorresce (pėr-ho-res′), *v. t.*; pret. and pp. *perhorresced*, ppr. *perhorrescing*. [L. *perhorrescere*, tremble or shudder greatly.] To feel a growing horror at; shudder at.

> It is not necessary to ask here whether this language be not really identifiable with the subjective idealism Mr. B. elsewhere *perhorresces*. It is more to the point to note that such language—if it be literally interpreted—will hardly satisfy the friends of religion.
> *W. Wallace*, in Fortnightly Rev., April, 1895, p. 544.

peri-acinal (per-i-as′i-nạl), *a.* Same as ★*peri-acinous*.

peri-acinous (per-i-as′i-nus), *a.* [Gr. περί, around, + NL. *acin*(*us*) + *-ous*.] Surrounding an acinus. *Buck*, Med. Handbook, II. 803.

periactus (per-i-ak′tus), *n.*; pl. *periacti* (-tī). [NL., < Gr. περίακτος, rotating.] In the Greek theater, a revolving prismatic apparatus with a different scene painted on each of the three sides in some simple way. There were two, one on each side of the stage. By turning the periactus the topos or locality of the action was changed.

perial (per′i-ạl), *n.* [Gr. περί, around, + *-al*^{1}.] The neurapophysis; the arch above the centrum of a vertebra through which the spinal cord runs. *Starks*, Synonymy of the Fish Skeleton, p. 524.

Perianal circlet, in *embryol.*, a circumanal band of cilia in the larvæ of certain marine worms: sometimes called the *perianal paratroch*.

periangiocholitis (per-i-an″ji-ọ-kọ-lī′tis), *n.* [NL., < Gr. περί, around, + ἀγγεῖον, vessel, + χολή, bile, + *-itis*.] Inflammation of the tissue surrounding a bile-duct.

periangioma (per″i-an-ji-ō′mạ̈), *n.*; pl. *periangiomata* (-mạ-tạ̈). [NL., < Gr. περί, around, + ἀγγεῖον, vessel, + *-oma*.] A tumor surrounding a blood-vessel.

periaortic (per″i-ạ̄-ôr′tik), *a.* [Gr. περί, around, + NL. *aorta* + *-ic*.] Surrounding the aorta.

periappendicitis (per″i-ạ-pen-di-sī′tis), *n.* [NL., < Gr. περί, around, + NL. *appendix* (*-dic-*) + *-itis*.] Inflammation of the parts surrounding the vermiform appendix. *Med. Record*, Aug. 17, 1907, p. 274.

periarterial (per″i-är-tē′ri-ạl), *a.* [Gr. περί, around, + ἀρτηρία, artery, + *-al*^{1}.] Surrounding an artery.

> White corpuscles of clot, wandering cells from arterial coats, and rarely also *peri-arterial* tissues . . . are attached to the frayed ends of the media which have been cut by the ligature.
> *Buck*, Med. Handbook, I. 540.

Periaxial wood, in stems of *Bignoniaceæ*, a zone of wood outside of the normal axial wood, interpenetrated by deep wedges of bast.

Peribranchial cavity, in ascidians, the space between the body-wall and the contained organs, communicating with the exterior through the atrial aperture. Also called the *atrial cavity*.

peribulbar (per-i-bul′bạ̈r), *a.* [Gr. περί, around, + L. *bulbus*, bulb, + *-ar*^{3}.] Surrounding a bulb, usually the eyeball.

peribursal (per-i-bėr′sạl), *a.* [Gr. περί, around, + NL. *bursa* + *-al*^{1}.] Extending around a bursa.

pericapsular (per-i-kap′sụ̄-lạ̈r), *a.* [Gr. περί, around, + NL. *capsula*, capsule, + *-ar*^{3}.] Surrounding any capsule. *Buck*, Med. Handbook, I. 108.

Pericardial cell, gland, sinus. See ★*cell*, ★*gland*, ★*sinus*.

pericardiothyroid (per-i-kär″di-ọ-thī′roid), *a.* [*pericardium* + *thyroid*.] Relating to the pericardium and the thyroid gland: noting a band of muscular tissue connecting these two structures.

pericardiotomy (per″i-kär-di-ot′ọ-mi), *n.* [Gr. περικάρδιον, pericardium, + Gr. -τομια, < ταμεῖν, cut.] Incision of the pericardium for the removal of a foreign body or for any other purpose.

pericardotomy (per″i-kär-dot′ọ-mi), *n.* Same as ★*pericardiotomy*.

pericaryoplasm, *n.* See ★*perikaryoplasm*.

pericaulome, pericaulom (per-i-kâ′lōm), *n.* [Gr. περί, around, + καυλός (= L. *caulis*), stem. See *caulome*.] In Potonié's theory of plant structure, the peripheral tissues, regarded by him as not axile but foliar in origin.

> Prof. Potonié, in a small work published by Gustav Fischer, gives an explanatory account of his *pericaulom* theory of the structure of plants. Probably the author would hardly accept as a description of his position the suggestion that it is an attempt to combine the views of Goethe and of Alex. Braun, but it seems nevertheless very much like it. The plant is conceived of as primarily originating from a dichotomising thallus, which gradually becomes, by unequal development of the two limbs, a sympodium.
> *Nature*, Feb. 12, 1903, p. 351.

pericecitis (per″i-sẹ̄-sī′tis), *n.* [Gr. περί, around, + E. *cecitis*.] Inflammation of the connective tissue and peritoneum in relation to the cecum. *Med. Record*, Aug. 17, 1907, p. 274.

pericellular (per-i-sel′ū-lạ̈r), *a.* [Gr. περί, around, + NL. *cellula*, cell, + *-ar*^{3}.] In *biol.*, surrounding or enveloping a cell or cells: as, the *pericellular* spaces or the *pericellular* accumulations of leucocytes, connective tissue, etc., in certain diseases.

pericementitis (per″i-sem-en-tī′tis), *n.* [*pericement*(*um*) + *-itis*.] Inflammation, usually followed by caries, of the pericementum.

pericementum (per″i-sẹ̄-men′tum), *n.* [NL. *pericæmentum*, < Gr. περί, around, + NL. *cæmentum*, cement.] A layer of bone-like substance covering the root of a tooth immediately beneath the periodontal membrane.

pericenter (per′i-sen″tėr), *n.* [NL. *pericentrum*, *pericentron*, < Gr. περί, around, + κέντρον, center.] That point in the path of a body having orbital motion in which it is at its least distance from the center of gravity of the system. In the case of the solar system the pericenter of an orbit is called the *perihelion*. Compare ★*apocenter*.

> In the matter of nomenclature some objection may fairly be raised to the apparently needless introduction of new terms in place of the familiar old ones, such as the logically inappropriate apocenter, *pericenter*, for apastron, periastron, in connection with double star orbits, and the rechristening of the Fraunhofer lines of the solar spectrum as Wollaston lines. *Science*, Feb. 7, 1902, p. 221.

pericentric (per-i-sen′trik), *a.* 1. Of or pertaining to a pericenter; pericentral.—2. In *geol.*, deposited around a center, as lava-flows or tuffs around a crater.

> In the volcanic mountain the stratification is *pericentric*, more completely so than in the alluvial cone.
> *Dana*, Manual of Geol. (4th ed.), p. 99.

pericentron, pericentrum, *n.* Same as ★*pericenter*.

pericephalic (per-i-se-fal′ik), *a.* [Gr. περί, around, + E. *cephalic*.] Surrounding the head; specifically, noting the external carotid artery.

Pericera (per-i-sē′rạ̈), *n.* [NL.] The typical genus of the family *Periceridæ*. *Latreille*, 1829.

pericerebral (per-i-ser′ẹ̄-brạl), *a.* [Gr. περί, around, + E. *cerebral*.] Surrounding the brain.

Periceridæ (per-i-ser′i-dē), *n. pl.* [NL. *Pericera* + *-idæ*.] A family of brachyurous podophthalmous crustaceans having eyes which are retractile within small circular orbits, and the basal joint of the second antennæ well-developed. The family contains about 20 genera, among which are *Pericera*, *Macrocœloma*, and *Libinia*. *L. emarginata* is said to occur in such numbers on the oyster-beds of Long Island as to interfere occasionally with the work of the steam oyster-dredgers.

Perichætidæ (per-i-kē′ti-dē), *n. pl.* [NL. *Perichæta* + *-idæ*.] A family of oligochætous worms of which the typical genus is *Perichæta*. It contains a larger number of species than any other family of earthworms.

perichondroma (per-i-kon-drō′mạ̈), *n.*; pl. *perichondromata* (-mạ-tạ̈). [NL., < *perichondr*(*ium*) + *-oma*.] A tumor springing from the perichondrium.

perichordal, *a.* 2. Noting a type of vertebra found in some *Batrachia*, in which the cartilaginous elements from which the centra develop are present on both the dorsal and the ventral faces of the notochord.—**Perichordal tube.** See ★*tube*.

perichylous (per-i-kī′lus), *a.* [Gr. περί, around, + χυλός, juice, + *-ous*.] In *bot.*, placed outside of the chlorenchyma and next to the epidermis: said of aqueous tissue which serves as a protection against drought, as in many *Bromeliaceæ* and in *Rhizophora*. Compare ★*endochylous*. *A. F. W. Schimper* (trans.), Plant-Geog., p. 11.

periclasite (per-i-klā′zīt), *n.* [*periclase* + *-ite*.] Same as *periclase*.

periclinal, *a.* 2. In *geol.*, sloping on every side from a common center; quaquaversal.

pericline, *n.* 2. In *bot.*, a periclinal cell-wall. *Jackson*, Glossary.—**Pericline law.** See *pericline twin*, under *twin*^{1}.

pericœlous (per-i-sē′lus), *a.* [Gr. περί, around, + κοῖλος, hollow, + *-ous*.] In *ornith.*, noting that condition of the intestine in which the second loop is left-handed, its sides not in contact, and inclosing the third loop: generally it is straight and its parts are in contact with each other.

pericolonitis (per″i-kọ-lọ-nī′tis), *n.* [Gr. περί, around, + NL. *colon* + *-itis*.] An improper form for *pericolitis*.

Pericolpa (per-i-kol′pạ̈), *n.* [NL., < Gr. περί, around, + κόλπος, bosom.] The typical genus of the family *Pericolpidæ*. *Haeckel*, 1880.

Pericolpidæ (per-i-kol′pi-dē), *n. pl.* [NL. *Pericolpa* + *-idæ*.] A family of *Peromedusæ* having 4 perradial tentacles, 4 interradial rhopalia, and 8 adradial marginal lobes. It contains the genera *Pericolpa* and *Pericrypta*.

pericopic (per-i-kop′ik), *a.* [*pericope* + *-ic*.] Pertaining to, or of the nature of, a pericope.

pericoxitis (per″i-kok-sī′tis), *n.* [NL., < Gr. περί, around, + L. *coxa*, hip-joint, + *-itis*.] Inflammation of the parts about the hip-joint.

pericranitis (per″i-krạ̄-nī′tis), *n.* [NL., < *pericran*(*ium*) + *-itis*.] Inflammation of the periosteum of the skull.

pericycle (per′i-sī-kl), *n.* [Gr. περί, around, + κύκλος, circle.] The outermost zone of cells of the stele immediately within the endodermis. *Jackson*, Glossary.

> In the *pericycle* around the central cylinder of the embryo at the cotyledonary node. *Encyc. Brit.*, XXVII. 338.

pericyclic (per-i-sik′lik), *a.* [*pericycle* + *-ic.*] Pertaining to, or of the nature of, the pericycle: as, *pericyclic* sclerenchyma.

Pericyclidæ (per-i-sik′li-dē), *n. pl.* [NL., < Gr. *περί*, around, + *κύκλος*, circle, + *-idæ.*] In Hyatt's classification, a family of magnosellarian eurycampylous ammonoid cephalopods having involute shells with ribs on the venter, broad hyponomic sinus, and with the broad inner lateral saddles of the suture-line divided by short lobes into two subequal saddles. The two principal genera are *Dimeroceras* of the Upper Devonian and *Pericyclus* of the Carboniferous limestone.

pericycloid (per-i-sī′kloid), *n.* [Gr. *περί*, around, + *κύκλος*, circle, + *-oid.*] The curve traced out by a point on the circumference of a circle which rolls without sliding upon a smaller circle within it. The contact is internal and the rolling circle touches the outside of the fixed circle.

pericyclone (per-i-sī′klōn), *n.* [*peri-* + *cyclone.*] A belt of high pressure which should surround a cyclone, according to Ferrel's theory: not identical with the areas of high pressure ordinarily shown on the weather-map.

pericyclonic (per″i-sī-klon′ik), *a.* [*pericyclone* + *-ic.*] Pertaining to or of the nature of a pericyclone.

pericystic (per-i-sis′tik), *a.* [Gr. *περί*, around, + *κύστις*, bladder (cyst), + *-ic.*] Surrounding a bladder of any sort, or a cyst.—**Pericystic space**, in siphonophorans, the space around the pneumatocyst.

pericystium (per-i-sis′ti-um), *n.*; pl. *pericystia* (-ä). [NL., < Gr. *περί*, around, + *κύστις*, bladder (cyst).] The outer wall of a cyst, containing blood-vessels.

pericystomatitis (per″i-sis-tō-ma-tī′tis), *n.* [Gr. *περί*, around, + NL. *cystoma* (-*t*-) + *-itis.*] Inflammation of the capsule surrounding a cystic tumor, especially an ovarian cyst.

pericytial (per-i-sī′ti-al), *a.* [Gr. *περί*, around, + *κύτος*, a hollow (a cell).] Same as ★*pericellular.*

peridermis (per-i-dėr′mis), *n.* Same as *periderm.*

Peridermium (per-i-dėr′mi-um), *n.* [NL. (Link, 1816), < Gr. *περί*, around, + *δέρμα*, skin.] A genus of rust-fungi parasitic on conifers, producing spermagonia and æcidia. Some of the species are known to be the early stages of other genera, as *P. oblongisporium*, which is the æcidial form of *Coleosporium Senecionis* and *P. Cornui* and is connected with *Cronartium Asclepiadeum*. *P. cerebrum* occurs on the trunks and branches of pines in the eastern United States, producing large rough bur-like swellings.

peridesm (per′i-desm), *n.* [Gr. *περί*, around, + *δεσμός*, a band.] In *bot.*, the investment of tissue which surrounds the individual strands of a stele after it breaks up into several. See ★*polystele.*

peridesmic (per-i-des′mik), *a.* [*peridesm* + *-ic.*] Forming or pertaining to a peridesm.

peridiastole (per″i-dī-as′tō-lē), *n.* [Gr. *περί*, around, + *διαστολή*, expansion, diastole.] The brief interval of time which intervenes between the diastole and the succeeding systole of the heart.

peridieine (pē-rid′i-in), *a.* [Irreg. < *peridi(um)* + *-e-* + *-ine*^{1}.] Like or resembling a peridium. *Encyc. Brit.*, XIV. 562.

peridinine (pe-rid′i-nin), *n.* A brown vegetable coloring-matter allied to chlorophyl.

peridot, *n.*—**Ceylonese peridot.** See *Ceylonese chrysolite*, under ★*chrysolite.*

peridotitic (per-i-dō-tit′ik), *a.* Same as *peridotic.*

periductal (per-i-duk′tal), *a.* [Gr. *περί*, around, + E. *duct* + *-al*^{1}.] Surrounding a duct or ducts. *Buck*, Med. Handbook, II. 470.

periecians (per-i-ē′shianz), *n. pl.* [Gr. *περίοικοι*, neighbors.] 1. Persons living in the same latitude but on opposite meridians.—2. In *Greek hist.*, in Laconia, the free inhabitants of the towns, with the exception of Sparta; provincials.

perifery, *n.* An amended spelling of *periphery.*

perifollicular (per″i-fo-lik′ū-lär), *a.* [Gr. *περί*, around, + NL. *folliculus*, follicle, + *-ar*^{3}.] Surrounding a follicle or follicles. *Buck*, Med. Handbook, I. 74.

perifolliculitis (per″i-fo-lik-ū-lī′tis), *n.* [NL., < Gr. *περί*, around, + NL. *folliculus*, follicle, + *-itis.*] Inflammation of the tissues surrounding a follicle.

perifrase, perifrastic. Amended spellings of *periphrase, periphrastic.*

perigalacteum (per″i-ga-lak′tē-um), *n.*; pl. *perigalactea* (-ä). [NL. **perigalactæum*, < Gr. *περί*, about, + *γαλαξίας* (*γαλακτ-*), the Milky Way, + *-æum*, as in *perigæum*, perigee.] The point of nearest approach to the Milky Way in the orbit of a star supposed to be revolving in an orbit within the galactic ring. *Amer. Jour. Sci.*, Aug., 1903, p. 137.

perigalactic (per″i-ga-lak′tik), *a.* [*perigalact(eum)* + *-ic.*] At a minimum distance from the Milky Way ring. See ★*perigalacteum*. *Amer. Jour. Sci.*, Aug., 1903, p. 136.

perigeal (per-i-jē′al), *a.* [*perige(um)* + *-al*^{1}.] Same as *perigean.*

periglandular (per-i-glan′dū-lär), *a.* [Gr. *περί*, around, + NL. *glandula*, gland, + *-ar*^{3}.] Surrounding a gland or glands. *Buck*, Med. Handbook, I. 128.

periglial (per-i-glī′al), *a.* [Gr. *περί*, around, + *γλία*, glue (NL. *glia*), + *-al*^{1}.] Surrounding the glia cells of the brain. *Buck*, Med. Handbook, II. 264.

periglœa (per-i-glē′ä), *n.* [Gr. *περί*, around, + *γλοία*, glue.] The gelatinous investment of certain diatoms.

periglossitis (per-i-glo-sī′tis), *n.* [NL., < Gr. *περί*, around, + *γλῶσσα*, tongue, + *-itis.*] Inflammation of the tissues about the tongue.

periglyph (per′i-glif), *n.* [Gr. *περί*, around, + *γλύφειν*, carve, scratch.] An instrument used for tracing orthogonal outlines of objects, placed under a varnished glass plate, by means of a sharp point which scratches the outlines in the plate: used particularly in craniography.

perigonadial (per″i-gō-nad′i-al), *a.* [Gr. *περί*, about, + NL. *gonadium*, gonad, + *-al*^{1}.] Of or pertaining to the spaces around the gonads or reproductive glands of an animal. *Lankester*, Nat. Sci., April, 1897, p. 268.

peri-insular (per-i-in′sū-lär), *a.* [Gr. *περί*, around, + L. *insula*, island, + *-ar*^{3}.] In *anat.*, surrounding an insula or island, specifically the island of Reil. *Amer. Anthropol.*, Oct.–Dec., 1903, p. 627.

peri-intestinal (per″i-in-tes′ti-nal), *a.* [Gr. *περί*, around, + E. *intestinal.*] Lying about or around the intestine. In insects, the peri-intestinal region of the cœlum is the second of the three regions into which it is divided by Graber, the others being the pericardial and the perineural.

perikaryon (per-i-kar′i-on), *n.*; pl. *perikarya* (-ä). [NL., < Gr. *περί*, around, + *κάρυον*, nut (nucleus).] The cell-body or cytoplasm of a nerve-cell, or neurone, as distinguished from its nucleus and its processes, the dendrites and neuraxon. The perikaryon consists of a twofold substance—an achromatic, fibrillar spongioplasm, regarded as conductive in function, and a trophoplasmic ground-substance, regarded as the seat of metabolic chemical changes.

perikaryoplasm (per-i-kar′i-ō-plazm), *n.* [Gr. *περί*, about, + *κάρυον*, nut, + *πλάσμα*, a molded form.] A zone of granular protoplasm seen in *Rosenbergia scandens*, in the cytoplasm of the resting pollen mother-cell on its approaching division. Also *pericaryoplasm*. *A. A. Lawson.*

> Lawson ('98 and :00) found that the nuclei of Cobea and Gladiolus previous to mitosis were surrounded by a zone of granular kinoplasm which he named *perikaryoplasm*. This zone developed a felted envelope of fibrillæ from which projections extended to form the cones of a multipolar figure. *Amer. Nat.*, Oct., 1904, p. 738.

Peril of death. See ★*death.*—**Yellow Peril**, a phrase applied to a possible and disastrous overflow of the Eastern yellow races into regions now dominated by Western civilization.

> The far-seeing statesmen of Europe . . . have dreaded the approach, in the not very distant future, of a coming "*Yellow Peril*"; for in the life of nations centuries, they argue, count but as days. The very thought that a compact mass of humanity, like the Chinese, comprising four hundred million units, might become seized with the modern idea of progress and conquest in industrial, commercial, and political domains, . . . was too dreadful to contemplate. *The Forum*, Jan.–March, 1904, p. 460.

White Peril, a dreaded possible incursion of the combined Western races into the countries of the East, with the complete subjugation of the races of the latter.

> The Japanese, quick-witted as they are, soon perceived in this European apprehension of a coming "Yellow Peril" an ominous symptom of a fast-approaching "*White Peril*," fraught with far-reaching consequences upon the fate of the yellow race.
> *The Forum*, Jan.–March, 1904, p. 460.

perilecithal (per-i-les′i-thal), *a.* [Gr. *περί*, around, + E. *lecithal.*] Of or pertaining to eggs, such as those of arthropods, in which the germinal vesicle or nucleus lies in the center surrounded with yolk on all sides: opposed to *telolecithal.*

perilenticular (per-i-len-tik′ū-lär), *a.* [Gr. *περί*, around, + E. *lenticular.*] Surrounding a lens, especially the crystalline lens of the eye.

perilobular (per-i-lob′ū-lär), *a.* [Gr. *περί*, around, + NL. *lobulus*, lobule, + *-ar*^{3}.] Surrounding a lobule or lobules.

perilogy (pē-ril′ō-ji), *n.* [Gr. *περί*, about, + *λόγος*, word, discourse.] The branch of biological science which deals with chorology, or the geography, distribution, migrations, etc., of living beings. *Haeckel* (trans.), Wonders of Life, p. 96. [Rare.]

periloph (per′i-lof), *n.* [Gr. *περί*, about, + *λόφος*, tuft.] A frill or collar encircling the truncated base of a hexactinellid sponge and serving as an organ of support and of attachment to the sea-bottom.

perilymphadenitis (per″i-lim-fad-e-nī′tis), *n.* [Gr. *περί*, around, + NL. *lymphadenitis.*] Inflammation of the tissues surrounding a lymph gland. *Med. Record*, Aug. 10, 1907, p. 219.

perilymphatic, *a.* 2. Situated around the lymphatic vessels.

> This *perilymphatic* inflammation is found in the thickness of the capsule of Glisson, and is observed in many [illegible]
> *Bumstead and Taylor*, Venereal Diseases (4th ed.), p. 612.

perimastitis (per″i-mas-tī′tis), *n.* [NL., < Gr. *περί*, around, + *μαστός*, breast, + *-itis.*] Inflammation of the connective tissue covering a mammary gland.

perimedullary (per-i-med′ū-lā-ri), *a.* [Gr. *περί*, around, + L. *medulla*, pith, + *-ary.*] 1. In *bot.*, immediately surrounding the medulla or pith, as the perimedullary zone of a stem which is outwardly bounded by the protoxylem.—2. Surrounding more or less completely the spinal cord, the medulla oblongata, or the marrow of a bone.

perimeningitis (per″i-men-in-jī′tis), *n.* [NL., < Gr. *περί*, around, + *μῆνιγξ*, membrane, + *-itis.*] Same as *pachymeningitis.*

perimeter, *n.*—**Wundt's perimeter**, in *exper. psychol.*, a large perimeter, having a steel quadrant of 1.1 meters radius, which can turn freely about its axis, and which is fitted with electric-motor color-mixers for daylight work and with gelatin lanterns for work in the dark room. *E. B. Titchener*, Exper. Psychol., I. ii. 26.

perimetrium (per-i-mē′tri-um), *n.* [NL., < Gr. *περί*, around, + *μήτρα*, uterus.] The layer of peritoneum covering the uterus.

perimorphism (per-i-môr′fizm), *n.* [*perimorph* + *-ism.*] The phenomenon, or kind of structure, exhibited by a perimorph.

perimyelitis (per″i-mī-e-lī′tis), *n.* [NL., < Gr. *περί*, around, + *μυελός*, marrow, + *-itis.*] Inflammation of the membrane which covers the spinal cord.

Perineal gland. See ★*gland.*

perineoplastic (per-i-nē″ō-plas′tik), *a.* Pertaining to, or of the nature of, perineoplasty.

perineorrhaphy, *n.* 2. An operation for uniting the edges of the wound in a case of ruptured perineum.

perineotomy (per″i-nē-ot′ō-mi), *n.* [Gr. *περίνεον*, perineum, + *-τομια*, < *ταμεῖν*, cut.] Incision into the perineum.

perineovaginal (per-i-nē-ō-vaj′i-nal), *a.* Relating to both the perineum and the vagina.

perineovulvar (per-i-nē-ō-vul′var), *a.* Relating to both the perineum and the vulva.

perineptunium (per″i-nep-tū′ni-um), *n.* [Gr. *περί*, about, + L. *Neptunus*, Neptune.] The point nearest Neptune in the orbit of its satellite.

perineural (per-i-nū′ral), *a.* [Gr. *περι*, around, + *νεῦρον*, nerve, + *-al*^{1}.] 1. Surrounding a nerve or nerves. *Buck*, Med. Handbook, II. 676.—2. Specifically, in insects, lying around the nerves. See ★*peri-intestinal.*

perineuritic (per″i-nū-rit′ik), *a.* [*perineurit(is)* + *-ic.*] Relating to or suffering from perineuritis.

perinuclear (per-i-nū′klẹ̄-ä̤r), *a.* [Gr. *περί*, around, + NL. *nucleus*, nucleus, + *-ar*³.] Surrounding, inclosing, or enveloping the cell-nucleus: as, the *perinuclear* cytoplasm.—**Neusser's perinuclear granules.** See ★*granule.*

period, *n.* 12. *pl.* The menses.—13. In *phys.*, the time of one complete oscillation or cycle of a periodic motion; the reciprocal of the frequency of a periodic motion.—14. In *astron.*, the time of the revolution of a planet or satellite around its primary. Also *orbital period.*—15. In *geol.*, technically, one of the larger divisions of geologic time of either the second or the third order, measured by the time of deposition of a 'group' or 'system' of formations, and characterized by the presence of a number of allied and similar faunas which as a whole differ from those of other periods. In Dana's classification the term is applied to the third order of time-division, while the more generally adopted scheme of the International Geological Congress accords it second rank. The relation between the two usages of this and other terms of time-nomenclature and the correlated structural and faunal equivalents is shown in the following table:

DANA'S CLASSIFICATION

		STRUCTURAL	CHRONOLOGIC
1	Paleozoic	Series	Eon or Time
2	Devonian	System	Era
3	Helderbergian	Group	Period
4	Coeymans	Stage	Epoch

INTERNATIONAL GEOLOGICAL CONGRESS

		STRUCTURAL	CHRONOLOGIC
1	Paleozoic	Group	Era
2	Devonian	System	Period
3	Helderbergian	Series	Epoch
4	Coeymans	Stage	Age
		Zone	Phase

Canicular period. See ★*canicular cycle.*—**Cave period,** the period of cave-dwellers: used particularly in the prehistoric archæology of Europe. The cave period is subdivided by De Mortillet into the Mousterian, Solutrian, and Madelenian periods.—**Cavern period.** Same as *cave* ★*period.*—**Champlain period.** See ★*Champlain.*—**Christiania period,** in *geol.*, the period of general submergence of the continent following the glacial period in northern Europe, essentially coincident in time and activity with the Champlain period of American glacialists.—**Effusive period.** See ★*effusive.*—**Eleven-years period,** the period of sun-spot frequency: more accurately, according to Newcomb, 11.13 years.—**Fluvial period,** in *geol.*, the time which succeeded the glacial period and which was marked by great floods from the melting ice-sheet.—**Glacial, glyptic period.** See ★*glacial*, ★*glyptic.*—**Hallstatt period.** See ★*Hallstattian.*—**Human period.** See ★*human*, 3.—**Lacustrine period.** Same as *Lacustrine* ★*age.*—**La Tène period,** a period of prehistoric culture characterized by the extended use of iron, and different from the earlier prehistoric culture of Hallstatt: so called from the shallows named La Tène at the end of the Lake of Neuchâtel.—**Monthly period,** the menses.—**Natural period,** in *physics*, the period of free vibration of a vibrating particle. See the extract.

> When the vibrating particle moves without being affected by external forces, its period *T* is said to be its 'period of free vibration' or its '*natural period.*'
>
> *Scripture*, Exper. Phonetics, p. 2.

Period of compression, a certain interval until the end of which the compression of two bodies in collision continues to increase.—**Period of restitution,** the interval in which the recovery of form takes place after the period of compression of two bodies in collision. *Poisson.*—**Pluvial period,** in *geol.*, the Champlain period of Pleistocene time. [Rare.]—**Primitive period,** a period no part of which is a period.—**Reproduction period,** in *forestry*, the space of time required for the renewal of a stand.—**Solar magnetic period,** a period of 26.67928 days, as computed by F. H. Bigelow, assumed to be identical with the period of rotation of the nucleus of the sun around its own axis, with corresponding periods in the phenomena of terrestrial magnetism and meteorology, and with the appearance of the solar corona.—**Terrace period.** See ★*terrace*¹.

periodate (per-ī′ọ̄-dāt), *n.* [*period*(*ic*)² + *-ate*¹.] A salt of periodic acid.

periodic¹, *a.* 5. In *math.*, with values which recur as the value of the independent variable continuously increases.—**Periodic decimal, motion, working.** See ★*decimal*, etc.

periodic² (pėr-ī-od′ik), *a.* [*per-* + *iodic.*] Noting an acid, a substance produced by the interaction of iodine and aqueous perchloric acid, known only in crystals which contain two molecules of water: $HIO_4.2H_2O$. Its solution has a strong acid reaction and it forms several distinct series of salts.

periodicity, *n.* 2. In *phys.*, the number of recurrences of a periodic motion, such as a vibration, in a unit of time; specifically, in *elect.*, the number of complete periods or cycles per second of an alternating or oscillating current: same as *frequency*. The usual electrical frequencies are 25 and 60 in the United States and 50 in Europe.

> In this country the first commercial alternators had smooth-core armatures with flat pancake coils, external yoke and radial internal poles. The *periodicities* used were 125 and 133 cycles.
>
> *Elect. World and Engin.*, March 5, 1904, p. 459.

3. In *bot.*, the habit in a plant of adjusting its growth or the movements of its organs to regular changes in conditions (of light, heat, etc.), either annual or diurnal. Periodicity is also exhibited in some spontaneous movements not correlated with time of day or season. See *phenology*, *sleep*, 5, *sensitive-plant*, and *periodic* ★*movement.*—**Factorial periodicity.** See ★*factorial.*—**Filarial periodicity,** the periodical nightly recurrence of filariæ in the blood of one who has become infected.—**Law of periodicity.** See ★*law*¹.—**Modulus of periodicity.** See ★*modulus.*

periodide (pėr-ī′ọ̄-did or -dīd), *n.* [*per-* + *iodide.*] An iodide with the maximum proportion of iodine, as potassium periodide, KI_3.

periodograph (pē-ri-od′ọ̄-graf), *n.* [Gr. *περίοδος*, a going round, + *γράφειν*, write.] The curve which connects the intensity with the period. See the extract.

> I believe that the curve which connects the intensity with the period will play an important rôle in meteorology. It is a curve which ought to have a name, and for want of a better one I have suggested that of '*periodograph.*' To take once more barometric variations as an example, it is easy to see that just as in the case of white light the *periodograph* would be zero for very short, and probably also for very long periods. There must be some period for which intensity of variation is a maximum. Where is that maximum? And does it vary according to locality? The answer to these questions might give us valuable information on the difference of climate. Once the *periodograph* has been obtained, the question of testing the reality of any special periodicity is an extremely simple one.
>
> *A. Schuster*, in Rep. Brit. Ass'n Advancement of Sci., [1902, p. 518.

periodontium (per″i-ọ̄-don′ti-um), *n.* [NL., < Gr. *περί*, around, + *ὀδούς* (*ὀδοντ-*), tooth.] The lining membrane of the tooth-sockets.

periodoscope (pē-ri-od′ọ̄-skōp), *n.* [Gr. *περίοδος*, a circuit (see *period*), + *σκοπεῖν*, view.] In *obstetrics*, a dial for calculating the period at which labor will probably occur.

Periœcians, *n. pl.* Same as ★*periecians.* See *Periœci.*

Periœcic (per-i-ē′sik), *a.* [*Periœc*(*i*) + *-ic.*] Of or pertaining to the Periœci or to Periecians.

periogue (per-i-ōg′), *n.* Same as *periagua.*

perionychia (per″i-ọ̄-nik′i-ä̤), *n.* [NL., < Gr. *περί*, around, + *ὄνυξ* (*ὀνυχ-*), nail.] Same as *paronychia*¹, 1.

perionychium (per″i-ọ̄-nik′i-um), *n.* [NL. See ★*perionychia.*] The border of skin which grows over the root of the nail.

perionyx (per-ī′ọ̄-niks), *n.* [NL.] 1. Same as ★*perionychium.*—2. In *embryol.*, a vestige or remnant of the epitrichial layer of the epidermis persisting at the base of a nail or claw.

periophthalmia (per″i-of-thal′mi-ä̤), *n.* [NL., < Gr. *περί*, around, + *ὀφθαλμός*, eye.] Inflammation of the cellular tissue within the orbit of the eye.

periophthalmitis (per-i-of-thal-mī′tis), *n.* [NL., < Gr. *περί*, around, + *ὀφθαλμός*, eye, + *-itis.*] Same as ★*periophthalmia.*

periople (per′i-ọ̄-pl), *n.* [Gr. *περί*, around, + *ὅπλον*, weapon (hoof).] The thin varnish-like layer on the outer surface of the hoofs of animals, which prevents excessive evaporation of moisture from the horny tissue.

perioplic (per-i-op′lik), *a.* [*periople* + *-ic.*] Of or pertaining to the periople.—**Perioplic band,** a narrow layer of secretory cells at the upper border of the hoofs of animals, the function of which is to secrete the periople.

periopticon (per-i-op′ti-kon), *n.*; pl. *perioptica* (-kä̤). [NL., < Gr. *περί*, around, + *ὀπτικός*, of seeing (see *optic*).] The third of the ganglionic swellings which compose the optic tract in the brain of an insect.

perioptometry (per″i-op-tom′e-tri), *n.* [Gr. *περί*, around, + *ὀπτ*(*ικός*), of seeing, + *-μετρια*, < *μέτρον*, measure.] See *optometry*, 2.

periorbitis (per″i-ôr-bī′tis), *n.* [NL., < Gr. *περί*, around, + L. *orbis*, orbit, + *-itis.*] Inflammation of the periosteal lining of the orbit.

periorchitis (per″i-ôr-kī′tis), *n.* [NL., < Gr. *περί*, around, + *ὄρχις*, testis, + *-itis.*] Inflammation of the parts about the testicles, specifically of the tunica vaginalis testis.

periorthocœlous (per-i-ôr-thọ̄-sē′lus), *a.* [Gr. *περί*, around, + E. *orthocœlous.*] In *ornith.*, having the second loop of the intestine coiled and the other loops straight and closed. *Proc. Zool. Soc. London*, 1892, p. 246.

periosteitis (per-i-os-tẹ̄-ī′tis), *n.* [NL., < *perioste-um* + *-itis.*] Same as *periostitis.*

periosteoma (per-i-os-tē-ō′mä̤), *n.*; pl. *periosteomata* (-mạ-tä̤). [NL., < *perioste*(*um*) + *-oma.*] A tumor of the periosteum which becomes transformed into bone.

periosteomedullitis (per-i-os″tẹ̄-ọ-med-ụ̄-lī′tis), *n.* [NL. *periosteum* + L. *medulla*, marrow, + *-itis.*] Inflammation of both the periosteum and the bone-marrow.

periosteophyte (per-i-os′tẹ̄-ọ̄-fīt), *n.* [NL. *periosteum* + Gr. *φυτόν*, a growth.] An osseous tumor which springs from the periosteum.

periosteotomy (per-i-os-tẹ̄-ot′ọ̄-mi), *n.* [NL. *periosteum* + Gr. *-τομια*, < *ταμεῖν*, cut.] Incision into the periosteum, usually to relieve tension when the subjacent bone is inflamed.

periostosis (per″i-os-tō′sis), *n.* [NL., < Gr. *περί*, around, + *ὀστέον*, bone, + *-osis.*] 1. Inflammatory enlargement of a bone.—2. [pl. *periostoses* (-sēz).] Same as ★*periosteoma.*

periovaritis (per″i-ō-vā-rī′tis), *n.* [NL., < Gr. *περί*, around, + NL. *ovarium*, ovary, + *-itis.*] Same as *perioöphoritis.*

peripachymeningitis (per-i-pak-i-men-in-jī′tis), *n.* [NL., < Gr. *περί*, around, + NL. *pachymeningitis.*] Inflammation of the connective tissue which surrounds the dura mater of the spinal cord.

peripancreatic (per-i-pan-krē-at′ik), *a.* [Gr. *περί* + E. *pancreatic.*] Surrounding the pancreas.

peripancreatitis (per-i-pan″krē-ạ-tī′tis), *n.* [NL., < Gr. *περί*, around, + NL. *pancreas* + *-itis.*] Inflammation of the peritoneum which covers the pancreas.

peripatetic, *n.* 4. *pl.* Journeyings here and there; a continual going to and fro. [Humorous.]

> J—— established an elaborate system of *peripatetics* through the galleries, with the hope of killing time.
>
> *N. Y. Times*, June 12, 1894.

Peripateticism, *n.* 2. [*l. c.*] The practice of walking to and fro; pedestrianism.

> The rest had turned in, after much of that sham *peripateticism* that the old traveller affects on board ship.
>
> *All the Year Round*, June 4, 1859, p. 133.

peripatid (pe-rip′ạ̄-tid), *n.* and *a.* **I.** *n.* A member of the family *Peripatidæ.*

II. *a.* Having the characters of or belonging to the family *Peripatidæ.*

peripatoid (pe-rip′ạ̄-toid), *a.* [NL. *Peripatus* + *-oid.*] Resembling myriapods of the genus *Peripatus.*

Peripharyngeal ridge. Same as *peripharyngeal band* (which see, under *peripharyngeal*). *Parker and Haswell*, Textbook of Zoology, II. 15.

peripheral, *a.*—**Peripheral theory of emotion.** See *James-Lange* ★*theory.*

II. *n.* One of the outer bony plates of the carapace of a turtle: commonly termed *marginal.*

peripherale (pe-rif-ẹ-rā′lē), *n.*; pl. *peripheralia* (-li-ä̤). Same as ★*peripheral.*

peripheroneural (pe-rif″ẹ-rọ̄-nū′rạl), *a.* [Irreg. < Gr. *περιφέρ*(*εια*), periphery, + *νεῦρον*, nerve, + *-al*¹.] Of or pertaining to the nerves which lie at the surface of the body.

> External psychic and autopsychic impressions transmitted *periphero-neural* impressions and similar exciting intestinal sources of peripheral irritation such as those which cause infantile convulsions, superadded to other forms of intestinal toxicity.
>
> *Alien. and Neurol.*, Aug., 1904, p. 326.

periphery, *n.* **II.** *a.* Pertaining to a periphery.—**Periphery angle,** an inscribed or a tanchord angle.

Periphractic region, a region which incloses others within itself.

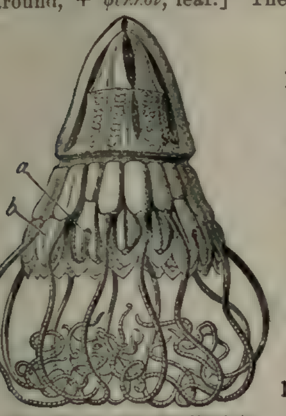
periphratic (per-i-frat′ik), *a.* Same as *periphractic.*

periphraxis (per-i-frak′sis), *n.* [NL., < Gr. *περίφραξις*, fencing about. See *periphraxy.*] A number associated with a place of two or more dimensions and indicating how many independent places it contains for simple closed pellicules, or bags, that have not room in the place to shrink indefinitely toward lines by an ordinary motion.

periphraxy, *n.* 2. In *geom.*: (*a*) The state of being periphractic. (*b*) The reduction of a periphractic surface or region to one that is not periphractic by cutting it across.

periphyll (per′i-fil), *n.* [See *periphyllum.*] 1. Same as *periphyllum.*—2. A gland, so called because it occurs chiefly near the margin of leaves. *Lindley*, Introd. Bot. (4th ed.), II. 307. *N. E. D.*

Periphylla (per-i-fil′a̤), *n.* [NL., < Gr. περί around, + φύλλον, leaf.] The typical genus of the family *Periphyllidæ*. *Haeckel.*



Periphylla mirabilis (after Haeckel).
The division of the exumbral surface into pedalia is well shown. *a*, tentaculocyst (interradial); *b*, subradial pedalia; four perradial and eight adradial tentacles are present.
(From Lankester's "Zoology.")

Periphyllidæ (per-i-fil′i-dē), *n. pl.* [NL. *Periphylla* + *-idæ.*] A family of *Peromedusæ* having 12 tentacles, 4 rhopalia, and 16 marginal lobes. It contains the genera *Periphylla* and *Peripalma*.

periplasm, *n.* 2. In ferns, the residuum of the dissolved tapetal walls, which forms a mucilaginous protoplasmic mass in which the spores eventually lie embedded. *Strasburger*, Text-book of Bot., p. 441.

periplast, *n.* 2. The peripheral or cytoplasmic portion of the cell, as distinguished from the endoplast, or nucleus: same as *periblast*. *Huxley*, 1853.—3. An indefinite term for the attraction-sphere of the cell. *Vejdovský*, 1888. — **Daughter periplast.** Same as ★*centrosome.*

periplegmatic (per″i-pleg-mat′ik), *a.* [Gr. περι, about, + πλέγμα, anything twined, < πλέκειν, twine, plait. See *plait.*] Noting an orbit of a kind met with in the problem of three or more bodies. According to the definition of Gyldén, who introduced the term, it is "a curve which keeps within the space between two concentric spheres, and at every point turns its concavity towards a straight line drawn through the center in such a way that a perpendicular dropped upon that line from the point under consideration shall pass through the inner sphere." Orbits of this kind may intertwine with each other; hence the name. *Science*, May 6, 1904, p. 720.

peripleural (per-i-plö′ral), *a.* [Gr. περί, around, + NL. *pleura* + *-al*^{1}.] Surrounding the pleura; noting the connective tissue on the attached surface of the pleura. *Buck*, Med. Handbook, II. 108.

peripneumonia (per″i-nū-mō′ni-a̤), *n.* [NL., < Gr. περί, around, + πνεύμων, lung.] 1. Pleuropneumonia.—2. Lobar pneumonia.

peripneumonitis (per-i-nū-mọ-nī′tis), *n.* [NL., < Gr. περί, around, + πνεύμων, lung, + *-itis.*] Same as ★*peripneumonia.*

peripneustic (per-ip-nū′stik), *a.* [Gr. περί, around, + πνευστός, < πνεῖν, breathe, + *-ic.*] Having prothoracic and a complete set of abdominal spiracles, the mesothoracic pair being atrophied or closed. This condition is found in the larvæ of *Neuroptera*, *Mecoptera*, *Trichoptera*, *Lepidoptera*, most *Diptera* and most of the *Hymenoptera*, as well as most *Coleoptera*.

peripodal (pe-rip′ọ-da̤l), *a.* [Gr. περί, around, + πούς (ποδ-), foot, + *-al*^{1}.] Surrounding the feet. — **Peripodal cavity,** in *insect embryol.*, the cavity formed by the invagination in which the appendages are situated.

peripolar (per-i-pō′lär), *a.* [Gr. περί, around, + πόλος, pole, + *-ar*^{3}.] In *electrotherap.*, surrounding the polar (zone).—**Peripolar zone,** the area which encircles the polar zone in the therapeutic application of electricity.

periproctal (per-i-prok′ta̤l), *a.* [Gr. περί, around, + πρωκτός, anus, + *-al*^{1}.] Surrounding the anus or rectum; specifically, of or pertaining to the periproct or anal region of echinoderms.

periproctic (per-i-prok′tik), *a.* Same as ★*periproctal.*

periproctitic (per″i-prok-tit′ik), *a.* [*periproctitis* + *-ic.*] Noting inflammation of the tissues which surround the rectum; affected with periproctitis.

peripteral, *a.* II. *n.* Any peripteral building, especially a Greek or Roman temple with columns on every side. Also *peripteros.* See cut at *opisthodomus.*

Periptychidæ (per-ip-tik′i-dē), *n. pl.* [NL.] A family of extinct mammals, belonging to the suborder *Condylarthra*, having a bunodont dentition, simple premolars, and five digits on each foot. The type genus, *Periptychus*, is from the Lower Eocene of New Mexico.

peripyema (per″i-pī-ē′ma̤), *n.* [NL., < Gr. περιπύημα, surrounding suppuration.] Suppuration surrounding a tooth or other parts.

peripylarian (per-i-pī-lā′ri-a̤n), *a.* [NL. *Peripylaria* + *-an.*] Having the characteristics of the *Peripylaria*; having the central capsule uniformly perforated by numerous fine pores, as in certain radiolarians.

peripyloric (per″i-pī-lor′ik), *a.* [Gr. περί, around, + NL. *pylorus* + *-ic.*] Surrounding the pylorus.

perique (pe-rēk′), *n.* [F. in Louisiana: said to be named from *Pierre* Chenet, who introduced tobacco culture among the Acadians of Louisiana.] 1. A tobacco produced in limited quantity in Louisiana by the descendants of the Acadians, mostly in St. James Parish. It is cured by subjecting it to intense pressure for twenty-four hours, thus forcing the juice to the surface, and then exposing it to the air for a few minutes during which the juices are reabsorbed. This process, which is many times repeated, calls the oxidizing enzyms into the fullest activity. The product is black but not strong, the nicotine being partly destroyed, and possesses a rich spirituous flavor which has given it great fame. It is marketed in the form of carrots.
2. The variety of tobacco-plant from which perique tobacco is made.

perisarcal (per-i-sär′ka̤l), *a.* Same as *perisarcous.*

perisark, *n.* Same as *perisarc.*

Perischoëchinoidea (pe-ris″kọ-ek-i-noi′dẹ-a̤), *n. pl.* [NL., < Gr. περίσχ(εσις) (irreg. < περιέχειν, encompass) + NL. *Echinoidea.*] In *zoöl.*, an order of regular echinoids having more than two series of interambulacral plates and more than two series of uniparous ambulacral plates. Their tests are spherical or ovoid, with plates either thick and rigid or thin and overlapping. The order includes a number of genera, *Archæocidaris*, *Palechinus*, *Oligoporus*, *Melonites*, etc., and all its representatives except one are of Paleozoic age.

perisclerium (per-i-sklē′ri-um), *n.* [NL., < Gr. περί, around, + σκληρός, hard. See *sclere.*] Fibrous tissue, surrounding ossifying cartilage as periosteum surrounds bone.

> The *perisclerium* is continuous with the periost of the pedicel portion [of the horn].
> *Proc. Zool. Soc. London*, 1902, I. p. 212.

periscope, *n.* 3. In *photog.*, a photographic lens having a wide angle (90° or more).

Periscopic eyepiece. See ★*eyepiece.*

perish^{1} (per′ish), *n.* [*perish*^{1}, *v. i.*] The act of perishing: in the following slang phrase.—**To do a perish,** to come near perishing; to do the act of perishing; to do a risky thing. [Australian slang.]

> I *did a* little *perish* for you, Helen; but the beast [exhausted horse] held out, and here is the charm.
> *J. L. Stanley*, Through Deep Waters, iii.

perisher (per′ish-ėr), *n.* An extreme action; the worst thing that could be done, under the circumstances: also, when applied to a person, a 'bounder'; a 'blighter'; a thoroughly unacceptable person. [Slang.]

> He went a tremendous *perisher*, backed the wrong horse and was cleaned out.
> *E. Browne*, Benton's Luck, iii.

perisigmoiditis (per-i-sig-moi-dī′tis), *n.* [Gr. περί, around, + E. *sigmoid* + *-itis.*] Inflammation of the tissues about the sigmoid flexure. *Med. Record*, Aug. 17, 1907, p. 274.

perisinuitis (per-i-sin-ụ̄-ī′tis), *n.* [NL., < Gr. περί, around, + L. *sinus* (*sinu-*), a hollow (sinus), + *-itis.*] Inflammation of the tissues which lie immediately about one of the venous sinuses of the brain.

perisinuous (per-i-sin′ū-us), *a.* [Gr. περί, around, + L. *sinus* (*sinu-*), a hollow (a sinus), + *-ous.*] Situated about one of the sinuses of the brain.

perisinusitis (per-i-sin-ụ̄-sī′tis), *n.* An improper form for ★*perisinuitis.*

Perisiphonia (per″i-sī-fō′ni-a̤), *n.* [NL., < Gr. περί, around, + σίφων, a tube, siphon.] The typical genus of the family *Perisiphonidæ*. *Allman*, 1888.

Perisiphonidæ (per″i-sī-fon′i-dē), *n. pl.* [NL. *Perisiphonia* + *-idæ.*] A family of campanularian hydroids having the hydrocaulus enveloped by peripheral tubes and the hydrothecæ never adnate and carried by the axial tube only. It includes the genera *Perisiphonia*, *Lafoëa*, *Cryptolaria*, and *Lictorella*. Also *Perisiphoniidæ.*

perisperm, *n.* 2. The pericarp or even the integuments of a seed. *Jackson*, Glossary.

perispermal (per-i-spėr′ma̤l), *a.* [*perisperm* + *-al*^{1}.] Same as *perispermic.*

perisphalsis (per-i-sfal′sis), *n.* [NL., < Gr. περίσφαλσις, a causing to slip around (used as in def.), < περισφάλλεσθαι, slip around.] Manipulation by rotation for the purpose of reducing a dislocated bone.

perisphere (per′i-sfēr), *n.* [Gr. περί, around, + σφαῖρα, sphere.] The outer zone or region of the attraction-sphere of a nerve-cell: opposed to *centrosphere*. *Von Lenhossék*, 1895.

Perisphinctes (per-i-sfingk′tēz), *n.* [NL., < Gr. περί, around, + σφιγκτός, bound.] A genus of pachycampylous *Ammonoidea* with discoid shells. They have rounded or subquadrate whorls, ornamented by non-tuberculated ribs, simple on the sides and bi- or trifurcating on the venter, which they completely traverse. The suture-line is very complex. The genus is abundantly represented in the middle part of the Upper Jurassic of Europe and western America.

perisplenic (per-i-splen′ik), *a.* [Gr. περί, around, + σπλήν, the spleen, + *-ic.*] Surrounding the spleen.

perisporiaceous (per-i-spō-ri-ā′shius), *a.* Having the characters of or resembling fungi of the family *Perisporiaceæ.*

Perisporiales (per-i-spō-ri-ā′lēz), *n. pl.* [NL., < *Perisporium* + *-ales.*] An order of pyrenomycetous fungi named from the genus *Perisporium*, having superficial perithecia frequently accompanied by a black aërial mycelium.

Perisporium (per-i-spō′ri-um), *n.* [NL. (Fries, 1821), < Gr. περί, around, + σπόρος, seed.] A genus of pyrenomycetous fungi of the order *Perisporiales*, having black superficial perithecia and elongate, dark-colored, 4-celled spores. About 10 species are included in the genus. *P. Kunzei* occurs on old paper, twine, etc.

Perissias (pe-ris′i-as), *n.* [NL., < Gr. περισσός, excessive, extraordinary.] A genus of flounders found in the deep sea in the Gulf of California and off the west coast of Lower California.

peristaphyline (per-i-staf′i-lin), *a.* [Gr. περί, around, + σταφυλή, bunch of grapes, swollen uvula.] About or encircling the uvula: noting two muscles, the external and the internal peristaphyline, or, respectively, the tensor palati and the levator palati muscles.

Peristediidæ (per″i-stẹ-dī′i-dē), *n. pl.* [NL., < *Peristedion* + *-idæ.*] A family of fishes, commonly known as the deep-water gurnards, found in the deep sea.

Peristedion (per-i-stē′di-on), *n.* [NL., an error for **Peristethion*, < Gr. περί, around, + στηθίον, dim. of στῆθος, breast.] A genus of deep-sea fishes of the family *Peristediidæ.*

peristeromorphous (pe-ris″tẹ-rọ-môr′fus), *a.* Same as *peristeromorphic.*

peristeronic (pe-ris-tẹ-ron′ik), *a.* [Gr. περιστερών, dove-cote, + *-ic.*] Pertaining to or concerned with pigeons: as, The National *Peristeronic* Society. *N. E. D.*

peristerophily (pe-ris-tẹ-rof′i-li), *n.* [Gr. περιστερά, a pigeon, + φιλεῖν, love.] The rearing of pigeons; specifically, the training of carrier-pigeons for military service. [Rare.]

peristylium (per-i-stil′i-um), *n.*; pl. *peristylia* (-a̤). [L.: see *peristyle.*] An unroofed space inclosed, or nearly inclosed, by a peristyle.

perisystole (per-i-sis′tọ-lē), *n.* [NL., < Gr. περί, around, + συστολή, systole.] The interval of time between the cardiac systole and diastole.

peritendineum (per″i-ten-din′ẹ-um), *n.*; pl. *peritendinea* (-a̤). [NL., < Gr. περί, around, + L. *tendo* (*tendin-*), tendon.] The sheath of a tendon.

peritestis (per-i-tes′tis), *n.* [NL., < Gr. περί, around, + L. *testis*, testis.] The tunica albuginea testis. See *albuginea.*

peritheca (per-i-thē′ka̤), *n.*; pl. *perithecæ* (-sē). [Gr. περί, around, + θήκη, a case.] The epitheca surrounding a compound group of stony corals.

perithecal (per-i-thē′ka̤l), *a.* [*peritheca* + *-al*^{1}.] Pertaining to or resembling a peritheca. *Proc. Zool. Soc. London*, 1900, p. 125.

perithelial (per-i-thē′li-a̤l), *a.* [*perithelium* + *-al*^{1}.] Relating to the perithelium. *Buck*, Med. Handbook, I. 354.

perithelioma (per-i-thē-li-ō′ma̤), *n.*; pl. *peritheliomata* (-ma̤-ta̤). [NL., < *peritheli(um)* + *-oma.*] A tumor originating from the outer wall of a blood-vessel. *Jour. Med. Research*, March, 1907, p. 138.

perithelium (per-i-thē′li-um), *n.*; pl. *perithelia* (-a̤). [NL., < Gr. περί, around, + (*epi*)*thelium.*] The sheath or outer coat of a small blood-vessel.

peritomize (pe-rit′ọ̄-mīz), *v. t.*; pret. and pp. *peritomized*, ppr. *peritomizing*. [*peritom*(*y*) + *-ize*.] To perform the operation of peritomy upon.

> The cornea recovers its transparency more completely in those cases which have been *peritomised* than in those in which other methods have been adopted.
> *Lancet*, May 30, 1903, p. 1516.

peritomy (pe-rit′ọ̄-mi), *n.* [Gr. *περιτομή*, circumcision, < *περί*, around, + *-τομος*, < *ταμεῖν*, cut.] 1. Excision of a strip of the conjunctiva, usually encircling the cornea, for the cure of pannus. *Lancet*, June 6, 1903, p. 1615. —2. Same as *circumcision*.

Peritoneal hernia. Same as ★*gut-tie*, 1.

peritoneomuscular (per″i-tọ̄-nē″ọ̄-mus′kụ̄-lạ̈r), *a.* Relating to or composed of peritoneum and muscular tissue. *Buck*, Med. Handbook, I. 18.

peritonism (per′i-tō-nizm), *n.* [*periton*(*eum*) + *-ism*.] 1. A pathological condition marked by the symptoms of peritonitis without actual inflammation of this membrane.—2. A condition which resembles shock, sometimes accompanying serious disease of some of the viscera having a peritoneal covering.

peritonsillar (per-i-ton′si-lạ̈r), *a.* [Gr. *περί*, around, + L. *tonsillæ*, tonsils, + *-ar*³.] Surrounding a tonsil. *Buck*, Med. Handbook, III. 332.

peritonsillitis (per-i-ton-si-lī′tis), *n.* [NL., < Gr. *περί*, around, + L. *tonsillæ*, tonsils, + *-itis*.] Inflammation of the tissues about a tonsil.

peritrichan, *n.* **II.** *a.* Same as *peritrichous*.

peritrichic (per-i-trik′ik), *a.* [Gr. *περί*, around, + *θριξ* (*τριχ-*), hair.] In *bacteriol.*, surrounded by flagellæ: said of micro-organisms.

peritrochoid (per-i-trō′koid), *n.* [Gr. *περί*, around, + E. *trochoid*.] The curve traced out by a point on the radius, or on the radius produced, of a circle which rolls without sliding upon a smaller circle within it. The contact is internal and the rolling circle touches the outside of the fixed circle.

peritrophic (per-i-trof′ik), *a.* [Gr. *περί*, around, + *τροφή*, nourishment.] Around the food, as the peritrophic membrane of an insect's alimentary canal.

periungual (per-i-ung′gwạl), *a.* [Gr. *περί*, around, + E. *ungual*.] Situated about the nail.

periuranium (per″i-ụ̄-rā′ni-um), *n.*; pl. *periurania* (-ạ̈). [Gr. *περί*, about, + NL. *Uranus*, Uranus.] The point which is nearest to Uranus in the orbit of any one of its satellites.

periureteral (per″i-ụ̄-rē′tẹ-rạl), *a.* [Gr. *περί*, around, + *οὐρητήρ*, ureter, + *-al*¹.] Surrounding a ureter.

periureteritis (per″i-ụ̄-rē-tẹ-rī′tis), *n.* [Gr. *περί*, around, + NL. *ureter* + *-itis*.] Inflammation of the connective tissue surrounding a ureter. *Med. Times*, Aug., 1907, p. 234.

periurethral (per″i-ụ̄-rē′thrạl), *a.* [Gr. *περί*, around, + *οὐρήθρα*, urethra, + *-al*¹.] Surrounding the urethra. *Buck*, Med. Handbook, I. 654.

periurethritis (per-i-ū-rẹ̄-thrī′tis), *n.* [NL., < Gr. *περί*, around, + *οὐρήθρα*, urethra, + *-itis*.] Inflammation of the tissues about the urethra.

perivaginal (per-i-vaj′i-nạl), *a.* [Gr. *περί*, around, + NL. *vagina* + *-al*¹.] Surrounding the vagina. *Buck*, Med. Handbook, I. 655.

perivaginitis (per-i-vaj-i-nī′tis), *n.* [NL., < Gr. *περί*, around, + NL. *vagina* + *-itis*.] Inflammation of the connective tissue about the vagina.

perivertebral (per-i-vėr′tē-brạl), *a.* and *n.* [Gr. *περί*, around, + L. *vertebra*, vertebra, + *-al*¹.] **I.** *a.* Surrounding a vertebra.

II. *n.* In *ichth.*, the neural arch above the centrum of each vertebra; the neurapophysis. *Starks*, Synonymy of the Fish Skeleton, p. 524.

perivesical (per-i-ves′i-kạl), *a.* [Gr. *περί*, around, + L. *vesica*, bladder, + *-al*¹.] Surrounding the bladder: as, *perivesical* cellulitis. *Buck*, Med. Handbook, I. 20.

periwinkle², *n.* 3. In Australia, a name given to the gastropod *Turbo undulatus*.

perjink (pėr-jingk′), *a.* [Origin uncertain.] Trim; exact; precise; prim. [Scotch.]

> Hendy had left home glumly, declaring that the white collar Jess had put on him would throttle him; but her feikieness ended in his surrender, and he was looking unusually *perjink*.
> *J. M. Barrie*, Window in Thrums, xiv.

perjinkety (pėr-jing′kẹ-ti), *a.* Same as ★*perjink*.

Perkinsia (pėr-kin′zi-ạ̈), *n.* [NL., named after George C. *Perkins*, a governor of California.] A genus of clupeoid fishes found on the California coast.

perknite (pėrk′nīt), *n.* [Gr. *περκνός*, dark, + *-ite*².] In *petrog.*, a name given by H. W. Turner (1901) to phanerocrystalline igneous rocks composed chiefly of monoclinic amphibole and monoclinic pyroxene. Chemically they are distinguished by being lime-magnesia-silicate rocks.

perl, *n.* and *v.* A simplified spelling of *pearl*.

perlate (pėr′lāt), *n.* Acid phosphate of sodium.—**Salt perlate**, disodium orthophosphate or common phosphate of soda.

perlatin (pėr′lạ̄-tin), *n.* [NL. *perlata* (see def.) + *-in*².] A pale-yellow crystalline compound, $C_{21}H_{20}O_7$, occurring in the lichen *Parmelia perlata*.

perlèche (pėr-lāsh′), *n.* [F.: origin uncertain.] A disease of the mouth in children, the chief symptom of which is a thickening with cracks at the angles of the mouth.

perlenic (pėr-len′ik), *a.* [*per-*, 3, + *le*(*ucite*) + *n*(*ephelite*) + *-ic*.] In *petrog.*, extremely lenic; having the normative lenic minerals (leucite, nephelite, sodalite) more than seven times the normative feldspars. See ★*per-*, 3, and ★*rock*¹.

perlid (pėr′lid), *n.* and *a.* **I.** *n.* A member of the plecopterous family *Perlidæ*.

II. *a.* Having the characters of or belonging to the family *Perlidæ*.

perling (pėr′ling), *n.* Same as *purlin*.

perlite², *n.* See ★*pearlite*.

perlon (pėr′lon), *n.* [Origin not ascertained.] A name used in New Zealand for *Notorhynchus indicus*, a notidanoid shark.

perlsucht (perl′sŏŏ̆cht), *n.* [G., < *perle*, pearl, + *sucht*, sickness.] Pearl-disease or tuberculosis in cattle.

> The case obviously shows that inoculation with *perlsucht* may lead to lupus and the subcutaneous formation of tuberculous pus. *Lancet*, April 4, 1903, p. 998.

permagnesic (pėr-mag-nē′sik), *a.* [*per-*, 3, + *magnesic*.] In *petrog.*, in the quantitative system of classification, extremely magnesic; having seven times as much MgO as FeO. See ★*per-*, 3, and ★*rock*¹.

Permanent sample plot. See ★*experiment area*.—**Permanent set.** See ★*set*¹.

Permanganate of lime. See ★*lime*¹.

permeability, *n.*—**Gravitational permeability**, the property of gathering in the lines of the earth's force as a mass of iron gathers in the lines of a magnetic field.

> The effect of gravitational permeability, if any form of matter possessed such a property, would be to modify the strength and direction of the earth's field in the neighborhood of the body; but no such effect has been detected even by the most delicate experiments. *J. H. Poynting*, in Smithsonian Rep., 1901, p. 208.

permeameter (pėr-mẹ̄-am′e-tėr), *n.* [*permea*(*bility*) + Gr. *μέτρον*, measure.] An instrument for the determination of the magnetic induction in iron, or the permeability, by means of the tractive force across a gap or joint in the magnetic circuit. The name was first applied to a simple apparatus devised by S. P. Thompson for the testing of samples of iron. It consisted of a rectangular block of wrought iron *b*, Fig. 1, with a central opening or slot into which a magnetizing-coil *c* is inserted. Through a cylindrical hole in the iron, which is in line with and forms a continuation of the axial opening of the coil, the specimen to be tested is inserted. The lower end of the specimen, which is an iron rod, is ground smooth and rests upon the polished surface of the iron block within the slot at *s*. When the magnetizing current is sent through the coil the base of the rod clings to the iron block and the force necessary to remove it, which is determined by means of a spring balance *w*, affords a measure of the permeability of the rod. The name is likewise applied to more refined instruments for the determination of permeability by means of the tractive force, the best known of which is the magnetic balance of Du Bois in which the test-piece *t*, Fig. 2, is clamped between two wrought-iron blocks $a_1 a_2$. The magnetizing-coil *c* which surrounds the middle of the test-piece has 100 turns of wire. A yoke of iron *y y*, which completes the magnetic circuit, is balanced above the blocks a_1 a_2 upon a knife-edge and is free to oscillate through a small range between the contact points c_1 c_2. The tractive force due to the magnetic flux is measured by means of weights on the horizontal scale attached to the yoke.

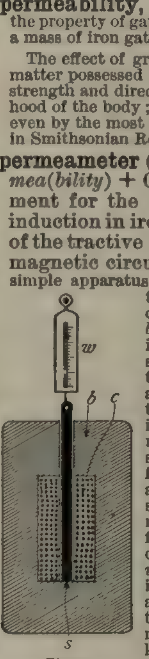


Fig. 1.

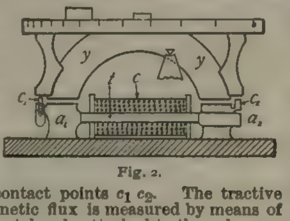

Fig. 2.

> Instruments of this kind for determining the flux density corresponding to a given magnetizing force in a complete magnetic circuit formed in part or in whole of a particular material are called *permeameters*.
> *Encyc. Brit.*, XXVIII. 119.

Drysdale's permeameter, an instrument for testing the magnetic qualities of the castings of generators or motors. The magnetizing- and exploring-coils are wound on a hollow plug which is inserted in an annular hole drilled in the casting by means of a special tool. The core left by this drill serves as a test-piece and the surrounding iron of the casting completes the magnetic circuit.—**Esterline's permeameter**, an instrument of the same general form as Koepsel's permeameter (see below), but with an armature in place of the moving coil. The voltage obtained, when the armature is driven at a given speed and a known current traverses the magnetizing-coil, gives the permeability of the yoke.—**Ewing's permeameter**, a permeameter the magnetic circuit of which consists of two bars surrounded by magnetizing-coils and two heavy yokes of soft iron. The bars are the samples to be tested.—**Koepsel's permeameter**, a permeameter the magnetic circuit of which consists of two pole-pieces like those of a voltmeter with a moving coil, as in such instruments, mounted in the cylindrical air-space between them. The test-piece, in the form of a rod surrounded by a magnetizing-coil, constitutes the yoke between the pole-pieces. The deflection of the moving coil when a known current traverses the magnetizing-coil indicates the permeability of the yoke.—**Picou's permeameter**, a permeameter in which the test-piece is in the form of a rectangular bar clamped between two massive U-shaped yokes of soft iron. The yokes are provided with windings the magnetizing power of which is adjusted so as precisely to overcome the reluctance of the joints, while a third coil serves to magnetize the test-piece.—**Torsion-permeameter**, an apparatus for the measurement of magnetic permeability in which the deflection of a suspended horse-shoe magnet is balanced by the torsional force of the suspending wire.

permeance (pėr′mẹ̄-ạns), *n.* [*perme*(*ate*) + *-ance*.] 1. The act or fact of permeating; permeation.—2. In *phys.*, the reciprocal of the reluctance of a magnetic circuit; magnetic conductance. *Trans. Amer. Inst. Elect. Engin.*, 1900, p. 680.—**Magnetic permeance**, the conducting power for flux, or lines of force, of a magnetic circuit: the reciprocal of reluctance.—**Specific permeance**, the magnetic permeance of a material compared with that of air; permeability.

permeation, *n.*—**Magnetic permeation**, magnetic flux through any medium which permits the passage of lines of force.

Permic (pėr′mik), *a.* [*Perm* + *-ic*.] Same as *Permian*.

permineralization (pėr-min″ẹ-rạl-i-zā′shọn), *n.* [*per-* + *mineralization*.] That change of character, exhibited by most fossil remains, in which the gradual removal of the animal substance has been accompanied by the replacement by mineral matter.

> The term *permineralization* applies to that condition of fossil remains of animals which differ least from their original condition as parts of living animals.
> *C. A. White*, in Smithsonian Rep. (Nat. Mus.), 1892, [p. 264.

permiric (pėr-mir′ik), *a.* [*per-*, 3, + *miric*.] In *petrog.*, extremely miric; having more than seven times as much MgO + FeO as femic CaO. See ★*per-*, 3, and ★*rock*¹.

permirific (pėr-mi-rif′ik), *a.* [*per-* + *mirific*.] Very wonderful of its kind. [Rare.]

> When the vein of the heart is touched by the grace of the Holy Spirit, forthwith, by the *permirific* sweetness of the harmony, an exceeding operation of sacred virtue is perceived more manifestly to spring forth. With this sweetness of spirit, Godric, the man of God, was filled from the very time of his boyhood.
> *Kingsley*, The Hermits, p. 314.

permirlic (pėr-mėr′lik), *a.* [*per-*, 3, + *mirlic*.] In *petrog.*, extremely mirlic; having seven times as much of MgO + FeO and the femic CaO as of femic $K_2O + Na_2O$. See ★*per-*, 3, and ★*rock*¹.

permissory (pėr-mis′ọ̄-ri), *a.* Pertaining to or of the nature of permission; permissive.

permit², *n.*—**Indian River permit.** Same as *round* ★*pampano*.

permitic (pėr-mit′ik), *a.* [*per-*, 3, + *mitic*.] In *petrog.*, extremely mitic; having more than seven times as much of mitic minerals (magnetite, hematite, ilmenite, titanite, perovskite, rutile, etc.) as of polic minerals (pyroxene, olivin, akermanite). See ★*per-*, 3, and ★*rock*¹.

permittance, *n.* 2. In *elect.*, the power of a dielectric to permit or aid induction.

permitted (pėr-mit′ed), *p. a.* Allowed; allowed expressly, as by law.—**Permitted islands, permitted ports**, ports in which it is permissible to trade.

permittivity (pėr-mi-tiv′i-ti), *n.* [*permit*¹ + *-ive* + *-ity*.] In *elect.*, degree of permittance; the ratio of permittance of a dielectric to that of air.

permutate (pėr-mū′tāt), *v. t.*; pret. and pp. *permutated*, ppr. *permutating*. [L. *permutatus*, pp. of *permutare*, change throughout.] It.

To interchange the substance of.—2. To exchange.—3. In *math.*, to subject to permutation or change of order. See *permute*, 3.

permutation, *n.*—**Cyclic permutation.** Same as *cyclical permutation.*—**Direct permutation,** one resulting from an even number of interchanges.—**Exponent of irregularity of a permutation.** See ★*exponent.*—**Odd permutation,** one resulting from an odd number of interchanges.

permutational (pėr-mų̈-tā′shọn-al̤), *a.* [*permutation* + *-al*^{1}.] Pertaining to, or of the nature of, permutation.

> These numerators are found in the 7th line of a table of figures which I call the *Permutational* Triangle.
> *J. T. Gulick*, in Jour. Linn. Soc., Zool., XX. 250. [*N. E. D.*

Perna (pėr′nä̤), *n.* [NL., < Gr. πέρνα, a ham.] A genus of prionodesmacean pelecypods typical of the family *Pernidæ.* They have equivalve shells with terminal beaks, edentulous hinge, and numerous ligamentary grooves. The genus ranges from the Trias to the Recent, and is specially abundant in the Jurassic and Tertiary formations.

pernavigate (pėr-nav′i-gāt), *v. t.*; pret. and pp. *pernavigated*, ppr. *pernavigating.* [L. *pernavigatus*, < *pernavigare*, sail through.] To navigate or sail through: as, he *pernavigated* the Straits of Magellan; they *pernavigated* the ocean.

Pernidæ (pėr′ni-dē), *n. pl.* [NL., < *Perna* + *-idæ.*] A family of prionodesmaceous mollusks characterized by a very broad multivincular ligament, and typified by the recent genus *Perna.*

pernyi-moth (pėr′ni-ī-môth″), *n.* A Chinese saturniid moth, *Antheræa pernyi.* Its larva is one of the tusser silkworms.

pero (pē′rō), *n.* [NL., < L. *pero*, a rawhide boot. It covers a part of the brain called the *pes* (‘foot’).] The outer layer of the olfactory lobe of the brain from which arise the olfactory nerves. *Buck*, Med. Handbook, II. 279.

perodactylism (pē-rọ-dak′ti-lizm), *n.* [Gr. πηρός, maimed, + δάκτυλος, finger, + *-ism.*] A condition of deficiency or absence of the fingers.

perodynia (pē-rọ-din′i-ạ̈), *n.* [NL., < Gr. πήρα, a pouch, + ὀδύνη, pain.] Pain in the stomach.

Peromedusæ (pē″rọ-mē-dū′sē), *n. pl.* [NL., < Gr. πήρα, pouch, + NL. *Medusæ.*] An order or suborder of *Scyphomedusæ.* They are medusiform, with 4 interradial tentaculocysts, the tentacles perradial and adradial in position, the 4 radial gastral pouches separated from one another by very short septa, and there is no alternation of generations. See cut under ★*Periphylla.*

peromelous (pē-rom′e-lus), *a.* [Gr. πηρομελής, with maimed limbs.] Resembling or having the characters of the *Peromela*, or limbless labyrinthodonts. *Huxley.* [Rare.]

Peromyscus (per-ọ-mis′kus), *n.* [NL.] A genus of rodents, typified by the common white-footed deer-mouse, *Peromyscus leucopus*, containing those small species formerly included in *Hesperomys.* It includes more species than any other North American genus.

peroneum, peronæum (per-ọ-nē′um), *n.* [NL., neut. sing. of *peronæus.* See *peroneus.*] A small ossicle, imbedded in the tendon of the peroneus longus and articulating with the cuboid in the little insectivore, *Limnogale.* *Trans. Linn. Soc.* (London), Nov., 1899, p. 510.

peronia^3 (pē-rō-nē′ạ), *n.* A corruption of ★*peonia*^{2}, which see.

peronine (pe-rō′nin), *n.* A finely crystalline compound which consists of the hydrochlorid of benzyl morphine. Its action is midway between that of morphine and codeine.

peronium (pe-rō′ni-um), *n.*; pl. *peronia* (-ạ̈). Same as *peronia*^{1}.

peronosporaceous (per-ọ-nos-pọ-rā′shius), *a.* Belonging to the *Peronosporaceæ*, a family of fungi.

Peronosporales (per-ọ-nos-pọ-rā′lēz), *n. pl.* [NL., < *Peronospora* + *-ales.*] An order of fungi of the class *Oömycetes*, so named from its principal family, *Peronosporaceæ.* Called *Peronosporineæ* by Engler and Prantl and some other authors.

Peronosporineæ (per-ọ-nos-pọ-rin′ẹ-ē), *n. pl.* See ★*Peronosporales.*

pero-olfactorius (per-ọ-ol-fak-tō′ri-us), *n.*; pl. *pero-olfactorii* (-ī). [NL.: see ★*pero* and *olfactory.*] The outer portion of the olfactory bulb.

perorational (per-ọ-rā′shọn-al̤), *a.* [*peroration* + *-al*^{1}.] Pertaining to, or of the nature of, a peroration.

perosseous (pėr-os′ẹ-us), *a.* [*per-* + *osseous.*] Transmitted through bone: noting especially the passage of sound-waves to the internal ear through the bones of the head and face.

peroxid, *n.*—**Hydrogen peroxid.** Same as ★*hydrogen dioxid.*

peroxidase (pėr-ok′si-dās), *n.* [*per-* + *oxidase.*] Same as ★*oxidase.* Also *peroxydase.*

peroxidizable (pėr-ok′si-dī-zạ̈-bl), *a.* Capable of forming a peroxid.

perpelic (pėr-pel′ik), *a.* [L. *per-*, very, + Gr. πηλός, clay, + *-ic.*] In *phytogeog.*, of very fine clayey consistency. See ★*pelogenous.*

perpendicular, *n.* 4. In *ship-building*, one of the three conventional lines perpendicular to the line of the keel, used as reference lines from which measurements in the fore-and-aft direction are taken. The conventional points through which these perpendiculars are passed vary. The *forward perpendicular* in old wooden vessels was at the intersection of the bottom line of the rabbet of the stem with the line of the lower deck. In modern practice in iron vessels it is usually at the intersection of the forward side of the stem with the normal load water-line, and this is its prescribed position in the United States navy. The *after perpendicular*, in wooden vessels, was at the intersection of the bottom line of the rabbet of the stern-post with the line of the lower deck. In modern vessels it is usually taken at the intersection of the after side of the rudder-post with the normal load-line, though it is sometimes taken through the axis of the rudder-stock. In the United States navy, however, it is taken at the intersection of the normal load water-line with the contour of the stern. The *middle perpendicular*, much less used than the other two, is midway of the length between the forward and after perpendiculars. The *length between perpendiculars* is the length of the vessel measured parallel to the keel between the forward and the after perpendiculars.—**To erect a perpendicular,** to construct from a given point a perpendicular to a given straight line when the point is on the line.—**To let fall a perpendicular,** to construct or drop from a given point a perpendicular to a given straight line when the point is not on the line.

perpend-stone (pėr′pend-stōn), *n.* Same as *perpend*^{3}.

perpetual, *a.* **II.** *n.* A perennial plant, especially a rose which blooms every month of the year.

perplication (pėr-plī-kā′shọn), *n.* [*per-* + *plication.*] A method of occluding the end of a divided artery. An incision is made in the side of the artery and the cut end is then drawn back through this opening.

perpolar (pėr-pō′lạ̈r), *n.* [L. *per*, through, + E. *polar.*] A perpendicular through the pole to the polar.

perpole (pėr′pōl), *n.* [L. *per*, through, + E. *pole*^{2}.] In *geom.*, as the pole (x_1, y_1) glides along a straight line, the perpolar will not in general turn about a point, but about some curve. But in three cases, when x_1 is constant, when y_1 is constant, when $y_1 : x_1$ is constant, that is, when the pole moves on a straight line parallel to either axis or through the center, the perpolar turns about a point, the *perpole* of the straight line.

perpolic (pėr-pol′ik), *a.* [*per-*, 3, + *polic.*] In *petrog.*, extremely polic; having more than seven times as much of polic minerals (normative pyroxene, olivin, akermanite) as of mitic minerals (magnetite, hematite, ilmenite, titanite, etc.). See ★*per-*, 3, and ★*rock*^{1}.

perpotassic (pėr-pọ-tas′ik), *a.* [*per-*, 3, + *potassic.*] In *petrog.*, extremely potassic; having more than seven times as much salic K_2O as salic Na_2O. See ★*per-*, 3, and ★*rock*^{1}.

perpsammic (pėr-sam′ik), *a.* [*per-* + Gr. ψάμμος, sand, + *-ic.*] In *phytogeog.*, coarsely sandy. See ★*psammogenous.*

perquaric (pėr-quä′rik), *a.* [*per-*, 3, + *quaric.*] In *petrog.*, extremely quaric; having more than seven times as much normative quartz as normative feldspar. See ★*per-*, 3, and ★*rock*^{1}.

perradially (pėr-rā′di-al̤-i), *adv.* In the direction or manner of a perradius. *E. T. Browne*, in Biometrika, Oct., 1901, p. 101.

perrico (pe-rē′kō), *n.* [Sp., dim. of *perro*, a dog.] A common name of *Pseudoscarus perrico*, a parrot-fish of the Pacific coast of Mexico.

perrovanter (per′ọ-van-tėr), *n.* [From the native name.] A thrush, *Mimocichla verillorum*, a native of the island of Dominica.

perruthenate (pė-rö′then-āt), *n.* [*perruthen*(*ic*) + *-ate*^{1}.] A salt which corresponds to the hypothetical perruthenic acid, as potassium perruthenate ($KRuO_4$). Sometimes written *perrutheniate.* Such a salt was formerly called a ruthenate.

perruthenic (pė-rö-then′ik), *a.* [*per-* + *ruthenic.*] Noting a hypothetical acid of the composition represented by the formula $HRuO_4$, corresponding to the acid oxid Ru_2O_7. Neither this oxid nor the acid is known, but one or two corresponding salts have been obtained, as, for instance, potassium perruthenate.

Pers. An abbreviation (*a*) of *Persia* or *Persian*; (*b*) [*l. c.* or *cap.*] of *person*; (*c*) of *personal*; (*d*) [*l. c.*] of *personally.*

persalane (pėr-sal′ān), *n.* See ★*per-*, 3, and ★*salane.*

persalt (pėr′sâlt), *n.* [*per-* + *salt*^{1}.] A salt of which the basic element or radical presents a higher degree of apparent valence than the corresponding protosalt. Thus ferric sulphate ($Fe_2(SO_4)_3$) is spoken of as one of the *persalts* of iron, in contrast to ferrous sulphate ($FeSO_4$), the corresponding protosalt of the same metal.

per saltum (pėr sal′tum). [L.] At a leap; without passing through intermediate stages or steps.

perscrutate (pėr-skrö′tāt), *v. t.*; pret. and pp. *perscrutated*, ppr. *perscrutating.* [L. *perscrutatus*, pp. of *perscrutare*, examine minutely.] To investigate or scrutinize (something) minutely. [Rare.]

> We might reply . . ., urging that the collectors of the savage myths were well acquainted with the savage languages, and that the evidence yielded by institutions was plain to the naked eye. But as long as he held that myth was a by-product of language, Mr. Max Müller seemed to think that, till we had all savage languages *perscrutated* by new Bopps and Kuhns, we could not move. *A. Lang*, in Contemporary Rev., Dec., 1900, p. 789.

Persea, *n.* 2. [*l. c.*] A plant of the genus *Persea.*—3. An unidentified tree, probably the peach-tree, sacred in ancient Egypt. See *Persea* (in etymology), and cut at *Avocado.*

> Such naturalness is unusual in the art of this period, when the conventional *persea* and the equally conventional lotus are almost the only vegetable forms which appear on the walls of the temples.
> *A. B. Edwards*, A Thousand Miles up the Nile, xiv.

Perseid, *n.* The flock of Perseids is of great extent and moves in a path apparently coincident with that of Tuttle's comet of 1862, and now forms almost a complete oval ring around the sun. It gives us, therefore, more or less of a shower each year, beginning in the latter part of July and lasting till late in August, but most abundant about August 12. The Perseids are for the most part yellowish, and move with medium velocity, not as swiftly as the bluish Leonids, but more swiftly than the Bielids.

perseite (pėr′sẹ-īt), *n.* [NL. *persea* (see def.) + *-ite*^{2}.] A crystalline heptacid alcohol, $C_7H_9(OH)_7$, which occurs in *Laurus persea*; it may be made synthetically. Also called *mannoheptite.*

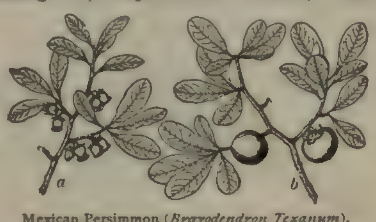
Persian bug. See ★*bug*^{2}.—**Persian dye-plant,** *Delphinium Zalil.* See ★*asbarg* and ★*zalil.*—**Persian yellow.** See ★*yellow.*

Persianize (pėr′shạ̈n-īz), *v. t.*; pret. and pp. *Persianized*, ppr. *Persianizing.* [*Persian* + *-ize*^{2}.] To make Persian in sentiments, ideas, or habits, as by imitation.

> This . . . kind of external imitation, this so-called literary cultivation of a language, frequently occurs in history. . . . Thus at Rome in the time of the Scipios, the young nobles not only studied Greek, they Hellenised the style of their own tongue. . . . To go farther back into the past, it is probable that the Persian *Persianised* in this way neighbouring tongues.
> *Tarde* (trans.), Laws of Imitation, p. 258.

persicleis (pėr′si-klīs), *n.* [*persi*(?) + Gr. κλείς, key.] A tubercle or nodule on the posterior margin of a macrurous crustacean.

persimmon, *n.*—**Mexican persimmon,** a small, branching tree, *Brayodendron Texanum*, common in central and western Texas, but attaining its maximum development in Nuevo Leon, Mexico. It is closely related to the true persimmons (*Diospyros*) and is included with them by most authors as *Diospyros Texana*, but it differs by several generic characters (united styles, anthers opening by nearly apical pores, glabrous filaments, and the absence of staminodia in the pistillate flowers). Also called *black persimmon* and *chapote.* See *chapote* and *persimmon*, 1.



Mexican Persimmon (*Brayodendron Texanum*).
a, flowering branch; *b*, fruiting branch.
(From Sargent's "Manual of the Trees of North America.")

> Next is the central Texas hill zone, with a rainfall of from over 30 to less than 25 inches, where occur mountain cedar, mountain oaks (five or six species), cedar elm, gum elastic, *Mexican persimmon*, and numerous others.
> *U. S. Dept. Agr.*, Bur. Forestry, Bulletin 47, p. 12.

persistence, *n.* **3.** In *elect.*, the time-constant of a circuit in which current is beginning to flow; the time required for an electric current to rise to $\frac{e-1}{e}$ or .634 of its final value.

persodic (pėr-sō′dik), *a.* [*per-*, 3, + *sodic.*] In *petrog.*, in the quantitative system, extremely sodic; having more than seven times as much salic soda as salic potash. See ★*per-*, 3, and ★*rock*¹.

persodine (pėr-sō′din), *n.* [*per-*, 3, + *sod*(*ium*) + *-ine*².] A trade-name for a solution of sodium persulphate which contains 12 in 1000 parts of water: used as an antiseptic.

persolution (pėr-sǫ-lū′shǫn), *n.* [*per-* + *solution.*] In *chem.*, solution of a persalt of a metal, as, for instance, a solution of perchlorid of tin (stannic chlorid) or persulphate of iron (ferric sulphate). The term is not in general use or to be commended.

person, *n.*—**Acceptance of persons.** See ★*acceptance.*—**Diligence against the person.** See ★*diligence.*—**Perpetual person,** in *law*, a corporation the duration of which is perpetual or undefined.

Personal selection. See ★*selection.*

personalist, *n.* **2.** An advocate of personalism in any sense.

personality, *n.* **Double** or **alternating personality,** in *psychol.* and *mental pathol.*, a more or less radical change of disposition, involving lapse of memory, alteration or reversal of emotion, etc., which may be induced by suggestion in the hypnotic state, and occurs spontaneously under certain (as yet very imperfectly understood) abnormal conditions; a change of behavior so marked as to suggest the housing of two different selves or persons in the same organism. See *double consciousness*, under *consciousness*.

> In the pathological cases known as those of *double* or *alternate personality* the lapse of memory is abrupt, and is usually preceded by a period of unconsciousness or syncope lasting a variable length of time.
> *W. James*, Prin. of Psychol., I. 379.

Personality classes. See ★*class.* **Secondary, tertiary,** etc., **personality,** in *abnormal psychol.*, a group of experiences, split off or dissociated from the normal or primary personality of an individual, which become systematized and organized, and thus constitute a second, third, etc., independent (though imperfect) personality, appearing in alternation with the normal. The phenomena are sometimes termed those of double (triple, etc.) consciousness, or of double (triple, multiple) personality.

> Cases of this kind are commonly known as "double" or "multiple personality," according to the number of persons represented, but a more correct term is disintegrated personality, for each *secondary personality* is a part only of a normal whole self.
> *M. Prince*, Dissociation of a Personality, p. 3.

persona non grata (pėr-sō′nạ̈ non grä′tạ̈). [L. See *persona grata.*] One who is not acceptable; one who is not in favor.

personeity, *n.* **2.** Same as *animism.* [Rare.]

> In order to obtain an intelligent grasp of the religion of tribes in their several culture provinces, it must be understood: (1) That the form of belief called animism by Tylor (more correctly speaking, *personeity*), was universal: everything was somebody, alive, sentient, thoughtful, wilful. This *personeity* lifts the majority of earthly phenomena out of the merely physical world and places them in the spirit world. Theology and science are one. All is supernatural.
> *Encyc. Brit.*, XXV. 379.

personifiable (pėr-son′i-fī-ạ-bl), *a.* Capable of being personified.

> And if in Fenwick's unoccupied chair there did not plainly sit all the time a silently upbraiding ghost, clad in a fog-dampened mourning veil, it was because outraged domesticity is not a *personifiable* quality. However, there was something in the nothing before us wonderfully potent and depressing.
> *G. A. Hibbard*, Harper's Mag., June, 1890, p. 48.

persp. [*l. c.* or *cap.*] An abbreviation of *perspective.*

perspectartigraph (pėr-spek-tär′ti-gráf), *n.* [L. *perspectus*, a looking through, + *ars* (*art-*), art, + γράφειν, write.] An instrument by means of which a true perspective drawing of the objects viewed through a movable telescope may be mechanically made. *Sci. Amer.*, April 2, 1904, p. 268.

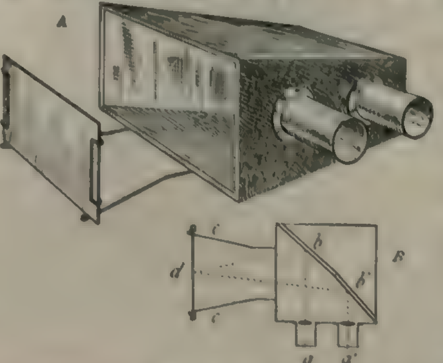
perspective. **I.** *a.* **4.** In *geom.*, said of two figures when each point of one can be so paired with a point of the other that the joins of all the pairs concur in one point.—**Perspective planes,** in *geom.*, planes which are correlated by projection from an outside vertex.—**Perspective ranges, sect, sheaves.** See ★*range*, ★*sect*¹, ★*sheaf*¹.—**Perspective view,** a view or drawing on a flat surface which shows an object in perspective, as distinguished from a view which shows an object in plane projection.

II. *n.* **Complete perspectives.** See ★*complete.* **Illusions of reversible perspective.** See ★*illusion*, 2.

perspectograph, *n.* **2.** An instrument for drawing the perspective of an object from its orthogonal projections, that is, its plan and elevations. Some forms of the instrument are also capable, by reversal, of representing the orthogonal projections of an object from its perspectives or photographs. The latter forms are used in photographic surveying (which see, under ★*surveying*). *Rep. U. S. Coast and Geodetic Surv.*, 1897, p. 729.

perspectometer (pėr-spek-tom′e-tėr), *n.* [L. *perspectus*, a looking through, + Gr. μέτρον, measure.] In *photographic surveying*, a plate of glass or other transparent material containing a diagram of convergent perspective lines with scales. The instrument is used to facilitate the reproduction of the plan and elevation of an object or of topographical points, by placing it over a perspective drawing or a photograph of the object or points.

perspectoscope (pėr-spek′tō-skōp), *n.* [L. *perspectus*, a looking through, + Gr. σκοπεῖν, view.] The trade-name of an instrument which enhances the perspective suggestion of a photograph, outline-drawing, etc., and thus simulates a stereoscopic effect. The instrument consists essentially of two observation-tubes, fitted with magnifying lenses, and of two boxed mirrors, so arranged that a picture held in a frame at right angles to the tubes is reflected through these to the two eyes. *Science*, May 6, 1898, p. 617.



Perspectoscope.

A, general view of the instrument, card-holder to the left; *E*, explanatory diagram: *a*, *a′*, viewing tubes with lenses; *b*, *b′*, mirrors; *c*, *c′*, card-holder; *d*, photograph.

perstriction (pėr-strik′shǫn), *n.* [LL. *perstrictio*(*n-*), < L. *perstringere*, bind together. See *perstringe.*] Arrest of hemorrhage by ligation or compression of the blood-vessels.

persulphid (pėr-sul′fid), *n.* [*per-* + *sulphid.*] A compound of sulphur with a more electropositive element or radical with the maximum proportion of sulphur.

persulphocyanate (pėr-sul-fō-sī′ạ-nāt), *n.* [*persulphocyan*(*ic*) + *-ate*¹.] A salt of persulphocyanic acid.

persulphocyanic (pėr-sul′fǫ-si-an′ik), *a.* [*per-* + *sulphocyanic.*] Containing more sulphur than sulphocyanic acid. **Persulphocyanic acid,** an acid, $H_2C_2N_2S_3$, existing in two forms: (*a*) *Isopersulphocyanic acid*, a yellow crystalline compound formed by the action of concentrated acids on sulphocyanic acid or its salts. Also called *xanthane hydrid*, *hydropersulphocyanic acid*, *hydroxanthic acid*, *persulphocyanhydric acid*, and *sulphureted hydrosulphocyanic acid*. (*b*) *Normal persulphocyanic acid*, which is not known in the free state. Its salts are made by the action of alkalies on isopersulphocyanic acid.

persulphocyanogen (pėr-sul′fǫ-si-an′ǫ-jen), *n.* [*per-* + *sulphocyan*(*ic*) + *-gen.*] A yellow amorphous powder, $C_3HN_3S_3$, formed by oxidizing sulphocyanic acid with nitric acid, chlorin, or hydrogen peroxid. Also called *cyanoxysulphid*, *perthiocyanogen*, *pseudosulphocyanogen*, and *cyanogen sulphid*. Probably identical with the yellow dye canarin.

persulphuret (pėr-sul′fụ-ret), *n.* [*per-* + *sulphuret.*] Same as a ★*persulphid.*

persulphuric (pėr-sul-fū′rik), *a.* [*per-* + *sulphuric.*] Noting an acid known only in aqueous solution, as produced, with escape of oxygen, when sulphur heptoxid is brought into contact with water. It is believed to have the composition $H_2S_2O_8$.

pertainment (pėr-tān′mẹnt), *n.* That which pertains or belongs; a belonging. [Rare.]

> The men of the United States possess some of the finest *pertainments* of the human race, but they are failures where women are concerned.
> *G. Atherton*, in Contemporary Rev., Sept., 1897, p. 415.

pertenencia (per-te-nen′thẹ-ä), *n.* [Sp., < ML. *pertinentia*, belonging: see *pertinence.*] **1**†. Appurtenance; a possession; property.—**2.** A mining claim, or the extent of such a claim. [Mexico.]

perthiocyanogen (pėr-thī′ǫ-sī-an′ǫ-jen), *n.* [*per-* + *thiocyanic* + *-gen.*] Same as ★*persulphocyanogen.*

perturbation, *n.* **4.** The dictum (see def. 4) that "all perturbations due to gravitation are, strictly speaking, periodical" has lately been demonstrated by Poincare to be at least questionable and very likely untrue. He has shown that the assumptions made as to the convergence of the mathematical series used hitherto in the calculations of perturbations are unwarranted and require proof which cannot be given. His work therefore invalidates the hitherto accepted conclusion that the planetary system is permanently stable as against gravitational actions. The demonstrations that have been given to prove it are inconclusive, but the result is not necessarily false; it is not proved that the system is self-destructive. **Magnetic perturbation,** the disturbance of the magnetic needle or magnetic elements by a magnetic storm; a deviation from the ordinary and normal magnetic oscillations. **Perturbation of seat,** in *Eng. eccles. law*, a violation of property rights in a pew.

perturbator, *n.* **2.** In *Eng. eccles. law*, a violator of property rights in a pew.

perturbatory, *n.* **II.** *a.* Perturbative; having the property of perturbing.

> Not to continue *perturbatory* measures with a view to promote . . . absorption too long.
> *Flint*, Prin. and Prac. of Med., p. 189. *N. E. D.*

perturbd, *p. a.* A simplified spelling of *perturbed.*

peruscabin (pe-rus′kạ-bin), *n.* [Formation uncertain.] A trade-name for benzyl benzoate, $C_6H_5CO_2O_7H_7$, a crystalline compound found in Peru balsam and also made synthetically. It is used in medicine. A solution of it in oil is called *pernol.*

Peruv. An abbreviation of *Peruvian.*

Peruvian. **I.** *a.* **Peruvian bluebell, carrot,** see ★*bluebell*, ★*carrot.* **Peruvian pottery.** See ★*pottery.*—**Peruvian slabs,** a trade-name for crude india-rubber from Peru in flat slabs, very dark in color on the outside, the product of species of *Hevea*, in quality about equal to Peruvian ball-rubber.

II. *n.* **2.** *pl.* A name applied to cob-money (formless lumps of stamped bullion), from the fact that it was struck in Peru, although frequently in other colonies also.

pervagate (pėr′vạ-gāt), *v. t.*; pret. and pp. *pervagated*, ppr. *pervagating.* [L. *pervagari*, wander through.] To wander through.

> Lord Waynflete, who, as we have seen, was in the habit of *pervagating* the neighborhood, . . . of course came across Mr. Mowbray soon after that gentleman's advent.
> *Mortimer Collins*, Marquis and Merchant, ii.

pervasiveness (pėr-vā′siv-nes), *n.* The character of being pervasive.

> The traditions of the two deities intermingle, and both under certain circumstances carry the cow's head. The *pervasiveness* of the idea of Sun-worship in Egypt supplies the link which Herodotus does not furnish by the mere names of these goddesses.
> *Gladstone*, Homeric Synchronism, p. 258.

perviability (pėr′vi-ạ-bil′i-ti), *n.* [*pervi*(*ous*) + *-ability.*] In *elect.*, specific inductive capacity.]

> The specific inductive capacity or *perviability* of the medium.
> *Nipher*, Electricity and Magnetism, p. 372.

perviance (pėr′vi-ạns), *n.* [*pervi*(*ous*) + *-ance.*] A name proposed for that property of a dielectric which admits of electrostatic flux or the conductance of lines of force.

perviset, *n.* See *parvis.*

pes³, *n.* **2.** In *music*: (*a*) Same as *ground bass* (which see, under *bass*³). (*b*) Same as ★*podatus.*—**3.** In *pros.*, either of the two quatrains which form the first part of a sonnet. *N. E. D.* **Pedes copulativi,** in *Diplopoda*, the copulatory appendages on the seventh segment of the body in the males: gonopods.

> The modified appendages of the seventh segment in the males of the Helminthomorphous Diplopods are commonly spoken of as "*pedes copulativi*," "gonopods," or, more simply, as "male genitalia."
> *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 515.

Pes gigas, a condition of congenital hypertrophy of the foot.—**Pes olfactorius,** the inner layer of the olfactory bulb. **Pes planus,** flatfoot.

pescadito (pes-kä-dē′tō), *n.* [Sp., dim. of *pescado*, a fish, < L. *piscatus*, ppr. of *piscari*, fish, < *piscis*, a fish.] A common name of *Leuciscus nigrescens*, a minnow of the Rio Grande basin.

peseta, *n.* **3.** A silver coin struck by Christian VII. of Denmark for Iceland, Greenland, and the Faroe Islands. **Cent de peseta.** See ★*cent.*

peshkush (pesh′ kush), *n.* [Also *peshcush*, *peshkash*, *paishkush*, etc.; < Pers. *peshkash*, a present, lit. first-fruits, < *pēsh*, before, in front,

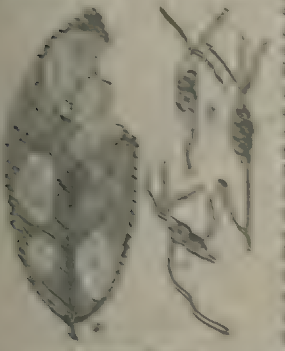
+ *kash*, < *kashan*, draw.] 1. A present, particularly in acknowledgment of a government appointment or favor.—2. A tribute or fine. [India.]

peso, *n.* 2. A silver siege-piece struck for Gerona in Spain, in 1808, during the Peninsular war.—**[illegible] de peso.** See [illegible].—**Peso duro** ('hard peso'), the Spanish or Mexican peso or dollar. The term is used in Mexico to distinguish the silver from the current [illegible].—**Peso gordo** ('thick peso'), a local name for the Spanish dollar among the French creoles of Louisiana.

pest, *n.*—**Tin pest**, an electrolytic change in tin by which white tin is transformed into gray tin. Also called *disease of tin*.

> When the process of transformation from white to gray tin is once started, the process goes on progressively; hence the name "tin pest."
> Elect. Review, July 9, 1908, p. 57.

Pestalozzia (pes-ta-lot'si-ä), *n.* [NL. (De Notaris, 1841), < *Pestalozzi* (Giuseppe Pestalozzi), an Italian physician and botanist.] A large genus of melanconiaceous fungi having black acervuli with 3- or more-septate spores, the two terminal cells being generally hyaline and the colored end provided with one or more hyaline appendages. Over 175 species have been described, some of which are parasitic, producing diseases of cultivated plants. *P. Guepini* is very destructive to leaves of the tea plant.



Pestalozzia Guepini.
a, [illegible] of tea plant showing the [illegible]; b, [illegible] spores, highly magnified. (From Massee's 'Plant Diseases.')

pesticemic (pes-ti-sē'mik), *a.* [Irreg. < L. *pestis*, pest, + Gr. αἷμα, blood.] Noting one of the forms of plague, usually called the septicemic form. Also *pestisemic*.

> The classification of plague cases under three heads—(1) bubonic, (2) pneumonic, (3) septicæmic. . . . The word 'pesticemic' is an even better [illegible] of 'septicæmic,' and though etymologically objectionable, it is adhered to herein as 'septicæmic' already has a specific and quite different meaning.
> [illegible] XXXV. [illegible]

Pestis minor. See *plague*, 2.

pestle, *n.*—**Knight of the pestle.** See *knight*.

petaliferous (pet-a-lif'e-rus), *a.* [Gr. πέταλον, petal, + L. *ferre*, to bear, + *-ous*.] In *bot.*, petal-bearing: often opposed to *apetalous*.

petaligerous (pet-a-lij'e-rus), *a.* Same as *petaliferous*.

petalobacteria (pet'a-lō-bak-tē'ri-ä), *n. pl.* [NL., < Gr. πέταλον, leaf (membrane), + NL. *bacterium*.] In *bacteriol.*, any bacteria which produce zoogloeæ in the form of a membrane on the surface of a liquid. *Billroth.*

petalococcus (pet'a-lō-kok'us), *n.*; pl. *petalococci* (-sī). [NL., < Gr. πέταλον, leaf (membrane), + NL. *coccus*.] In *bacteriol.*, any member of the *Coccus* bacteria which produces zoogloeæ in the form of a membrane on the surface of a liquid. *Billroth.*

petaloid, *a.* 3. Having the general form of a leaf.

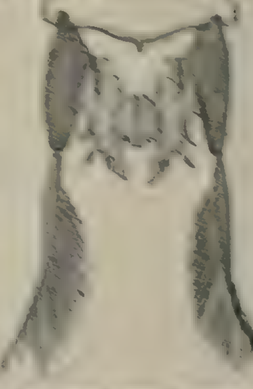
> A collection of Jamaican antiquities by MacCormack, including six specimens of petaloid celts, [illegible], etc., and 30 [illegible] implements.
> Smithsonian Rep., 1895, p. 46.

petanelle (pet-a-nel'), *n.* [Appar. trade-French in England, based on E. *peat*.] A fabric made of prepared peat fibers and wool, used for various articles of clothing, as shirts, [illegible], etc. *Hannan*, Textile Fibres of Commerce, p. 85.

petard, *n.* 2. A small paper cartridge used in ornamental fireworks, generally at the end of a [illegible], so arranged that the flame terminates with an explosion.

Petasidæ (pe-tas'i-dē), *n. pl.* [NL., < *Petasus* + *-idæ*.] A family of Trachomedusæ having 4 radial canals and 4 gonads, the stomach without a stalk, and the sense-tentacles either free or in vesicles. It includes several genera, among which are *Petasus*, *Gossea*, and *Aglauropsis*.

petasma (pe-tas'mä), *n.*; pl. *petasmata* (-ma-tä). [Gr. πέτασμα, something spread out.] In some macrurous crustaceans, a large membranous appendage attached to the base of the first pleopod in the male. In the female it is rudimentary.



Petasma of [illegible]. [illegible] of the male with [illegible] (See text.)

> The petasma is remarkably like that in P. [illegible], but as far as I can judge from the figure by [illegible] it appears to differ slightly in the structure of its anterior surface, which, instead of bearing two pairs of [illegible] prominences, one at the base and one at its distal extremity, bears one pair at the base directed towards the median surface of the abdomen, and [illegible] prominences directed [illegible] towards each other.
> Proc. Zool. Soc. London, 1904, p. [illegible].

petasospore (pe-tas'ō-spōr), *n.* [Gr. πέτασος, a broad hat, + σπορά, seed.] In *phytogeog.*, a plant whose seeds are distributed by means of a parachute-like process surmounting the achene, as in the dandelion. *F. E. Clements.*

petasus, *n.* 3. [*cap.*] The typical genus of the family *Petasidæ*. *Haeckel*, 1879.

pet-day (pet'dā), *n.* A name given in Scotland to a day when the weather is 'too fine to last'; in New England, a 'weather-breeder.'

> It was not however my brother nor me only that such things were done [illegible] . . . In the second, however, when [illegible] to keep the peace, I [illegible].
> Galt, Ringan Gilhaize, III. 88.

petechioid (pe-tek'i-oid), *a.* [*petechia* + *-oid*.] Resembling petechiæ. *Lancet*, April 4, 1903, p. 944.

Petenia (pe-tē'ni-ä), *n.* [NL., < *Peten*, a lake in Guatemala, the original locality of *P. splendida*.] A genus of fishes, of the family *Cichlidæ*, found on the coasts of tropical America.

peter², *n.* 3. In thieves' use, a traveling-bag, portmanteau, trunk, or any piece of baggage or a parcel.

> [illegible] brought it their [illegible]. People [illegible] luggage [illegible] and there was [illegible] to [illegible]. All the [illegible] were empty, and there were no [illegible].
> A. Morrison, Tales of Mean Streets, p. [illegible].

Peter or **Peter Funk.** A sham auctioneer or a sham bidder at a mock auction. [U. S.]

> A capital watch—you may see by the weight—
> Which one hundred dollars is easy to get—
> Or half of that sum is well down at the price—
> (Brown hears of 'Peter,' from Peter the Great;
> But says I can't recall,
> I'm reduced [illegible]
> . . . . .
> 'Don't want it,' quoth Brown—'I don't wish to buy.'
> J. G. Saxe, How Brown Bought a [illegible], [illegible].

peterkin (pē'tėr-kin), *n.* [Dim. of *Peter*.] An unceremonious diminutive for the spiritual and temporal position of the pope, as the successor of St. Peter. [Rare.]

> It surely was a fair question, whether it was worth while, having shaken off a [illegible] and [illegible] the [illegible] . . . in the [illegible] of the [illegible], Peterkin, to the reversion of the spiritual [illegible].
> Whately, Essays upon Some Controverted Questions, p. [illegible].

Peterman, *n.* 2. [*l. c.*] A [illegible] that who steals from vehicles. [Thieves' slang.] *Barrère.*—3. [*l. c.*] A thief who uses 'knock-out drops' as an aid to robbery. [Thieves' slang.] *The Sun*, March 1, 1908.

Petiolar node. See *node*.

Petiolventres (pet'i-ō-li-ven'trēz), *n. pl.* [NL., < L. *petiolus*, petiole, + *venter*, belly.] A group of hymenopterous insects ranking as a suborder and including those forms in which the abdomen is connected with what is apparently the thorax by a slender petiole, the posterior part of the apparent thorax being really an abdominal segment.

petiolular (pet-i-ol'ū-lär), *a.* [*petiolule* + *-ar*.] Of or pertaining to a petiolule.

petiotization (pet'i-ō-ti-zā'shon), *n.* [F. *pétiotisation*.] A process, much used in France (where it was invented by Pétiot, a Burgundian landowner) for producing a sort of secondary wine by adding to the marc or residue from the expression of the juice of the grapes a solution of sugar in water and submitting the mixture to fermentation. The added sugar supplies the material for the production of alcohol, and the various flavoring substances, tartar, tannin, coloring-matters, etc., are furnished by the marc. *Sadtler*, Handbook of Indust. Chem., p. 341.

petit, *a.*—**Petits chevaux.** See *horse*.—**Petit [illegible] mal.** See [illegible].

petit bleu (pe-tē' blė), *n.* [F. *petit*, little, + *bleu*, blue.] In Paris, a closed telegraph card sent by pneumatic tube to various central stations in the city and delivered by telegraph messenger. It is of a blue color, inclosed in the mailing and sealed on three sides by means of its gummed and perforated edges.

Petit Jacques, [illegible]. A [illegible] belonging to the West India fauna.

petiteness (pe-tēt'nes), *n.* The character of being petite; smallness; in recent use, insignificance; diminutiveness, with contemptuous [illegible].

Petition crown. See *crown*.

petitionee (pe-tish-o-nē'), *n.* [*petition* + *-ee*.] In *law*, a defendant or respondent against whom a petition is brought or filed.

petitioner, *n.* 3. [illegible] A [illegible] in an action commenced by petition.—[illegible] A petitioning creditor. *N. E. D.*

petitioning (pē-tish'on-ing), *n.* The act of offering a petition.—**Tumultuous petitioning**, in *Eng. law*, a misdemeanor created by statute (13 Car. II., c. 5) consisting in the act of more than twenty persons signing any petition to Parliament [illegible] to alter any matters legally established in Church or State, unless the petition has been approved officially [illegible], and further in the presentation of a petition by more than ten persons.

peto¹ (pā'tō), *n.* [Cuban Sp. use of Sp. *peto*, a breastplate, plastron.] A common name of *Acanthocybium solandri*, a scombroid fish widely distributed and rather common in the Florida Straits and about the West Indies.

petong (pe-tong'), *n.* [Chinese *pei-tung*, 'white copper.'] Same as *paktong*.

petoskeyte (pe-tos'kē-īt), *n.* [See the def.] A name suggested by A. W. Grabau for limestones formed of fine calcareous sands, derived from coral reefs and deposited in water near their sources: illustrated by strata at Petoskey, Michigan.

> In the hydroclastic subdivision [illegible] Petoskey [illegible], and the name is applied to all hydrocalcarenites which are derived from the [illegible] reefs and deposited in the neighborhood of the reef.
> [illegible] Grabau, in Econ. Geol., April, 1906, p. [illegible].

Petrarchian (pē-trär'ki-an), *a.* Pertaining to Petrarch; imitating or resembling his style.

> The sonnets from the [illegible] of Sir Sidney and others are more interesting [illegible] Spenser [illegible] the so-called Petrarchian arrangement [illegible] England has [illegible].
> G. Saintsbury, Hist. Elizabethan Lit. p. [illegible].

petreity (pē-trē'i-ti), *n.* [ML. *petreitas*, stoniness, < L. *petra*, stone.] The state of condition of being stone. [Rare.]

petrel¹, *n.*—**Diving petrel**, any petrel of the genus [illegible].—**Jamaica petrel**, [illegible], a species of petrel which breeds in the mountainous districts of Jamaica. It is threatened with extermination by the mongoose.—**Snowy petrel**, a small white species, *Pagodroma nivea*, of Antarctic seas.—**Sooty petrel**, a name sometimes applied to the [illegible], of the southern seas.

petrical (pet'ri-kal), *a.* [Gr. πέτρα, rock, + *-ic* + *-al*.] In *petrog.*, a term [illegible] applied to the coarser structural features of rocks, as bedding, jointing, etc., in distinction from the textural.

> [illegible] a term proposed by [illegible] for the [illegible] of rocks [illegible].
> J. F. Kemp, Handbook of Rocks (Glossary), p. [illegible].

pétrir (pā-trēr'), *v. t.*; pret. and pp. *pétri*, ppr. *pétrissant*. [F. *pétrir*, to knead. See *pétrissage*.] To knead (in massage), to grasp with the fingers and work (the flesh and muscles) with a sort of circular movement, with deep or light pressure as indicated.

Grasping between his thumb and four fingers those of the patient he *pétries* all the circumference for a few minutes. *Maguire*, Art of Massage, p. 57. *N. E. D.*

Petrified corn-cobs. See *Halymenites.*

Petrinize (pē′trin-īz), *v. t.*; pret. and pp. *Petrinized*, ppr. *Petrinizing.* To give a Petrine character to; to imbue with Petrinism.

Petri plate. See *Petri* ★*dish.*

pétrissage (pāt-rẹ-säzh′), *n.* [F., < *pétrir*, knead, < ML. **pisturire*, < L. *pistura*, a pounding (of grain, etc.), < *pinsere*, beat, pound. See *pestle, piston.*] A manipulation in massage in which the deeper parts are compressed and rolled without friction of the skin.

Petrist (pē′trist), *n.* A disciple of Petrus Lombardus.

petro-basilar (pet-rọ-bas′i-lạ̈r), *a.* In *anat.*, relating to the petrous portion of the temporal bone and to the basilar portion of the sphenoid and occipital bones.

The *petro-basilar* fissures are large and visibly pervious. This condition is found occasionally; significance doubtful; it is more frequent in young subjects. *An. Rep. Bur. Amer. Ethnol.*, 1895–96, p. 147.

petroblast (pet′rọ-blȧst), *n.* [Gr. πέτρα, rock, + βλαστός, germ.] A name suggested by Di Brazza and Pirenne for a supposed nucleus believed by them to be present in a petrocellule. Compare ★*petrocellule.*

Large Petro-cellule of Quartz, showing two protoplasmic substances, and nuclear *petroblast.* *Knowledge*, Aug., 1904, p. 183.

petrocellule (pet-rọ-sel′ūl), *n.* [Gr. πέτρα, rock, + E. *cellule.*] A name suggested by Di Brazza and Pirenne for the globular germ with which they believe inorganic crystals begin their separation from solution.

According to them [di Brazza and Pirenne], at the beginning of the crystallisation a tiny globule is seen to be differentiated from the uniform mass, being easily recognisable on account of its difference in refractive power. Studied closely, this globule shows within it a slight 'petroplasmic net-work,' which shows an analogy with the formation of animal and vegetable cells. Large *petro-cellule* of Quartz, showing two protoplasmic substances, and nuclear petroblast. Enlargement 750. *Knowledge*, Aug. 1904, p. 183.

petrofracteur (pe-trō-frak-tėr′), *n.* [F., < Gr. πέτρα, rock, + L. *fractura*, fracture.] A trade-name of an explosive consisting of 67 per cent. potassium chlorate, 20 per cent. potassium nitrate, 10 per cent. nitrobenzene, and 3 per cent. antimony sulphid.

petrogenesis (pet-rọ-jen′e-sis), *n.* [Gr. πέτρα, rock, + E. *genesis.*] The origination of rocks, generally or collectively considered.

How far Hutton was in advance of his time on matters relating to *petrogenesis* is illustrated by the fact that more than half a century elapsed before his ideas found expression in systematic treatises. *Smithsonian Rep.*, 1902, p. 290.

petrogenic (pet-rọ-jen′ik), *a.* [Gr. πέτρα, rock, + -γενης, -produced, + *-ic.*] In *geol.*, relating to the origin of rocks in general or of special masses.

In a fully represented *petrogenic* cycle at a batholithic area, then, the oldest intrusion should be a rock of gabbroid (basaltic) composition and the youngest an acid granite (chemically a rhyolite or quartz porphyry). Between these two an indefinite number of intermediate rock-types varying according to their degree and kind of differentiation from the syntectic—itself continuously varying in composition—might be represented in dikes or other satellitic forms. *Amer. Jour. Sci.*, July, 1908, p. 45.

Petrographical province. See ★*province.*

petrol, *n.* **2.** The lighter hydrocarbons from petroleum which are used as fuel in the motor-engines of vehicles and dirigible balloons; gasolene.

The import of Russian oil appears to be increasing and that of American decreasing, and there was a great increase in 1901 in the import of motor-car spirit or "*petrol.*" *Athenæum*, Feb. 7, 1903, p. 179.

petrol (pe-trōl′), *v. t.*; pret. and pp. *petrolled*, ppr. *petrolling.* To fill or supply with petrol: as, to *petrol* a motor-car.

petrol. An abbreviation of *petrology.*

petrolage (pet′rọ-lạ̄j), *n.* [*petrol* + *-age.*] Same as ★*petrolization.* *Lancet*, July 18, 1903, p. 186.

petrol-car (pe-trōl′kär), *n.* A motor-car which has an internal-combustion engine consuming gasolene. [Great Britain.]

petrolene, *n.* **2.** A name, first used by Boussingault, of the liquid portion of asphalt occurring mixed in various proportions with the solid ingredient asphaltene. Both these substances are probably themselves mixtures. See ★*asphaltene.*

petrol-engine (pe-trōl′en″jin), *n.* An engine which uses gasolene directly for the generation of power. See ★*petrol*, 2.

petroleous (pẹ-trō′lẹ-us), *a.* [*petrole*(*um*) + *-ous.*] Containing, producing, or resembling petrolẹum. [Rare.]

petroleum, *n.* Of the entire product of petroleum throughout the world approximately 50 per cent. is furnished by Russia, 40 per cent. by the United States, and 10 per cent. by Canada, Austria, Rumania, the Sunda Islands, Burmah, Japan, and (in quite small proportion) Germany, South America, and Italy. California, Texas, and Kansas have of late largely increased their output, chiefly of crude fuel-oil, while in Pennsylvania, Ohio, and West Virginia there has been a diminished yield. It should be noted that American and Russian petroleum differ materially in chemical composition, the former consisting mainly of hydrocarbons of the paraffin series, while the latter represent chiefly naphthenes, isomeric but not identical with the members of the olefine series.—**Petroleum briquet.** See ★*briquet*1.—**Solidified petroleum,** an attempted solidification of petroleum for use in ordinary grates. Two methods have been resorted to, namely, the soaking up of the liquid by a porous material, preferably itself combustible, such as dry, spongy peat, and the producing of a jelly-like emulsion by the addition of soap or oil and alkali to form a soap. The products are apt to lose petroleum by oozing in hot weather, and the value of the attempts is very doubtful, since they involve a sacrifice of the special advantages presented by liquid fuel.

petroleum-burner (pẹ-trō′lẹ-um-bėr″nėr), *n.* See ★*burner.*

petroleum-engine (pẹ-trō′lẹ-um-en″jin), *n.* An internal-combustion engine using crude petroleum oil as a source of heat supply.

petroleum-jelly (pẹ-trō′lẹ-um-jel″i), *n.* Same as *mineral* ★*jelly.*

petroleum-spirit (pẹ-trō′lẹ-um-spir″it), *n.* A mixture of the lighter hydrocarbons from American petroleum. The term is variously used, but most commonly is applied to a product of a density of .71 to .74 and a boiling-point of about 90° to 140° C. It is extensively used as a solvent in scouring, cleaning printers' type, etc., forming a substitute for turpentine in many applications.

petrolic (pẹ-trol′ik), *a.* [*petrol* + *-ic.*] **1.** Relating to, resembling, or produced from petrol or petroleum: as, *petrolic* ether.—**2.** Relating to the management of petrol as used in motor-cars.

An automobile for the *petrolic* instruction of army officers. *Autocar*, July 19, 1902, p. 69. *N. E. D.*

petrolization (pet″rọ-li-zā′shọn), *n.* [*petrolize* + *ation.*] The act or process of petrolizing; specifically, the spreading of petroleum on water which contains mosquito larvæ, for the purpose of destroying them.

The *petrolization* of mosquito-breeding pools is one of the most important measures to be undertaken in the warfare against mosquitoes. *L. O. Howard*, Mosquitoes, p. 193.

petrolize, *v. t.* **2.** To treat with petroleum; specifically, to spread petroleum on (water which contains mosquito larvæ); kill by means of petroleum, as the larvæ of mosquitos.

To the Italians we are indebted for a useful expression, which we might just as well adopt, namely, to "*petrolize*," meaning to treat waters with kerosene. *L. O. Howard*, Mosquitoes, p. 193.

3. To burn (a building) by means of petroleum, as in Paris during the supremacy of the commune in 1871.

petrol-motor (pe-trōl′mō″tọr), *n.* A gas-engine; any internal-combustion engine which uses gasolene as a fuel.

petrologic (pet-rọ-loj′ik), *a.* Same as *petrological.*

Petrometopon (pet″rọ-me-tō′pon), *n.* [NL., < Gr. πέτρα, rock, + μέτωπον, forehead.] A genus of serranoid fishes.

Petromyzontes (pet″rọ-mī-zon′tēz), *n. pl.* [Pl. of *Petromyzon* (which see).] The lampreys, considered as constituting a class of vertebrates. In this case the *Marsipobranchii* or *Cyclostomata* as a whole are raised to a super-class.

petrophilous (pẹ-trof′i-lus), *a.* [Gr. πέτρα, rock, + φιλεῖν, love.] Living upon or attached to rocks, as certain gastropods.

petrosal. **I.** *a.*—**Petrosal lobule.** See ★*lobule.*

II. *n.* **2.** In *ichth.*, same as *proötic* and *opisthotic.*

petroseline (pet′rọ-sẹ-lin), *a.* [NL. *Petroselinum* (which see).] Of or pertaining to parsley: as the *petroseline* family.

petrosulfol (pet-rọ-sul′fol), *n.* [*petro*(*leum*) + *sulf*(*ur*), *sulph*(*ur*), + *-ol.*] A trade-name of a bituminous product which contains sulphur. It closely resembles ichthyol in properties and uses but has a less disagreeable odor.

petrosum (pē-trō′sum), *n.*; pl. *petrosa* (-sạ̈). [NL., neut. of *petrosus*, stony (bony), < *petra*, rock.] In *ichth.*, same as *sphenotic* and *proötic.* The petrosum of Owen is the opisthotic of Parker, while the petrosum of Hallmann, Segemehl, and Erdl is the proötic of Parker.

petrotympanic (pet″rọ-tim-pan′ik), *a.* and *n.* [Gr. πέτρα, rock, + E. *tympanic.*] Noting the cranial bone formed by the fusion of the petrosal and tympanic bones.

The canal for the internal carotid pierces the *petro-tympanic.* *Amer. Jour. Sci.*, March, 1904, p. 213.

pe-tsai (pā-tsī′), *n.* [Chin. *pei-tsai*; *pei*, white, *tsai*, vegetable.] The so-called Chinese cabbage (*Brassica Pe-tsai*), now somewhat grown in American vegetable-gardens. It resembles a gigantic Cos lettuce. The leaves and midribs are cooked and eaten.

petterdite (pet′ėr-dīt), *n.* [Named after W. F. *Petterd* of Tasmania.] An oxychlorid of lead which occurs in thin white hexagonal plates: found in Tasmania.

petticoat, *n.* **7.** In *elect.*, on an insulator for outdoor service, a downward projecting mantle intended to shed the rain-water.

The line insulators have five *petticoats*, decreasing in size from top to bottom, and are made of porcelain. *Jour. Franklin Inst.*, May, 1903, p. 326.

petticoated, *a.* **2.** In *elect.*, having a petticoat. See ★*petticoat*, 7.

The terminals should be mounted on *petticoated* porcelain insulators and all parts of the lamp cap should be strictly water-tight and no part exposed to the weather should be made of any material other than gun metal, brass, phosphor bronze, copper or similar metal. *Elect. Rev.*, Sept. 3, 1904, p. 332.

petticoat-insulator (pet′i-kōt-in″sụ̄-lā-tọr), *n.* See ★*insulator.*

petty-single (pet′i-sing″gl), *n.* A falconers' term for the toe of a hawk.

Her foot a hand with *petty singles* instead of toes. *E. B. Michell*, Art and Practice of Hawking, p. 20.

petune (pē-tōn′), *n.* [See ★*petune*, *v.*, and *petun.*] The liquid employed in petuning. In Cuba, where petuning was first practised, this liquid is prepared by the extraction of tobacco stems, sometimes, at least, in a fluid containing ammonium carbonate. A hot solution of this is similarly used in the United States, but here the liquid is frequently made of rum, sour wine, licorice, etc., without extraction of stems.

At this stage the odor of the *petune* may be noticeable. *U. S. Dept. Agr.*, Rep. No. 62, p. 18.

petune (pẹ-tōn′), *v. t.*; pret. and pp. *petuned*, ppr. *petuning.* [F. *petuner*, to smoke tobacco, < *petun* (which see).] To spray (tobacco), during or after the sweating process, with a special liquid (see ★*petune*, *n.*), for the purposes stated in the following quotation. See ★*condition*, *v. t.*, 7.

The fillers only and not the wrappers [of cigars], are *petuned*, the intention being to give them a darkẹr color, an improved flavor, and the appearance and character of a strong tobacco. *U. S. Dept. Agr.*, Rep. No. 59, p. 19.

petunzite (pe-tun′zīt), *n.* [*petuntze* + *-ite*2.] A name proposed by Collins for the granitic rock commonly called in England Cornish stone, a mixture of partially but not completely kaolinized feldspar with quartz and little or no mica: used extensively in the manufacture of chinaware.

pet-wood (pet′wůd), *n.* [A corruption of the Burmese name *petwoon.*] The wood of *Espera cordifolia.* See *halmalille.*

peucedanin, *n.* **2.** A tasteless crystalline compound, $C_{16}H_{16}O_4$, found in the root of *Peucedanum officinale* and *Imperatoria Ostruthium.*

peucil, peucyl (pū′sil), *n.* A mixture of terpene hydrocarbons prepared by the distillation of terpene hydrochlorid with quicklime.

peucites (pū-sī′tēz), *n.* [Gr. πεύκη, the pine.] Fossilized coniferous wood.

peucyl, *n.* See ★*peucil.*

peumo (pā-ö′mō), *n.* [Native name.] In Chile, *Cryptocarya Peumus*, a tree belonging to the laurel family, the bark of which is used in southern Chile for tanning.

pew1, *v. t.* **2.** To put or shut in a pew. [Rare.]

The same men who were as willingly *pewed* in the parish church as their sheep were in night folds. *Examiner*, 1831, p. 71. *N. E. D.*

pew4 (pū), *n.* A thin stream of air or smoke; a fine thin stream of breath escaping through lips almost closed. [Scotch.]

Groups of little black dots moved across the green meadows in which the farmsteading of the Shalloch-on-Minnoch was set—a cheery little house, well thatched, and with a *pew* of blue smoke blowing from its chimney, telling of warm hearts within. *Crockett*, Men of the Moss-Hags, xliv.

pewage (pū'ạj), *n.* 1. The pews in a church, collectively; the arrangement of pews.

> If any walk in the church with hat on, shall pay one pen. . . . The former *pewage* was very antient; two pews bore the inscription 1590; Lanclot Broane, c. 1621, c.
> *G. Poulson*, Hist. and Antiq. of Seigniory of Holderness, II. 288.

2. The amount paid for the use of a pew.

> A letter was read from . . . the incumbent of the district objecting on the ground that the services might damage his income, arising almost entirely from "*pewage*." This "*pewage*,' Mr. C— says, is necessarily high; whilst the services to the boys were to be entirely free.
> *Guardian*, Dec. 27, 1866, p. 1327.

pewey (pū'i), *a.* [*pew* + *-ey* for *-y*¹.] Same as *pewy*.

pewter, *n.* 5. A material made of calcined tin, used in polishing marble.

pewtery, *a.* II. *n.* 1. Pewter collectively.— 2. A pewter closet; a place for keeping pewter.

pewy, *a.* 2. Like pews in a church: said of the going in hunting, where leaps (as over fences) are frequent, as if over the back of one pew after another with little room for take-offs. [Rare.]

> The working of the pack delighted . . . him . . . "My word, the little Johnnies can go," he said. "I have n't had better fun this season. It's a bit *pewey*; I don't seem to have been on terra firma for two minutes at a time."
> *Eyre Hussey*, Miss Badsworth, M. F. H., iii.

peyote (pā-yō'tạ), *n.* [Mex. *peyote*, < Nahuatl *peyotl*, or *peyutl*.] A name applied in certain parts of Mexico to several low, fleshy, spineless plants, especially to *Lophophora Williamsii*, which is used medicinally and has narcotic properties. Also written *pellotè*. See ★*mescal-buttons*.

peyotillo (pā-yō-tēl'yō), *n.* [Mex. *peyotillo*, diminutive of *peyote*.] A small spineless cactus, *Pelecyphora aselliformis*, resembling the peyote (*Lophophora Williamsii*) in habit, which grows in arid rocky soil near San Luis Potosí, Mexico, and is offered for sale in the market as a remedy for fevers and other maladies.

pezant, pezantry. Amended spellings of *peasant*, *peasantry*.

Pezizales (pē-zi-zā'lēz), *n. pl.* [NL., < *Peziza* + *-ales*.] An order of discomycetous fungi having the apothecia fleshy, superficial, and frequently colored. It is named from the principal genus *Peziza*. Sometimes written *Pezizineæ*.

Pezizineæ (pē-zi-zin'ẹ-ē), *n. pl.* See ★*Pezizales*.

pezograph (pez'ọ-gråf), *n.* [Gr. πέζις (?), a stalkless mushroom, + γράφειν, write.] A pitting, resembling a finger-mark, often observed on the surface of a meteorite.

> *Pezographs*, or finger-mark pittings, are visible on all surfaces of the mass, yet varying notably on different sides. On two sides they are few in number, and only dim depressions—though still unmistakable in their nature. *Amer. Jour. Sci.*, April, 1903, p. 318.

pezza (pet'sä), *n.* [It.: see *piece*.] 1. A gold coin of Leghorn of the value of 4 shillings.— 2. A gold coin of the Medici family, dukes of Florence or Etruria.— 3. A Tuscan money of account. The *pezza della rosa* or *livornina* is worth 5¼ lire.

pezzetta (pet-set'tä), *n.* [It., dim. of *pezza*. See ★*pezza*.] A billon coin of Monaco in the eighteenth century, and of the Swiss canton of Fribourg.

pf. An abbreviation (*b*) of *perfect*; (*c*) of *preferred*.

p. f. An abbreviation (*a*) of the Italian *piu forte*, a little louder; (*b*) [*caps.*] of *Procurator-Fiscal*.

Pfeiffer bacillus. Same as *influenza* ★*bacillus*.

pferdekraft (pfer'de-kräft), *n.* [G., 'horse-power': *pferd*, horse (see *palfrey*): *kraft*, power (see *craft*¹).] The horse-power of German mechanical engineers; the metric horse-power, or 4,500 kilograms raised one meter in one minute, which is 1¼ per cent. smaller than Watt's horse-power of 33,000 pounds raised one foot in one minute. *C. Hering*, Conversion Tables, p. 81.

Pflüger's law of contraction. See ★*contraction*.

P. G. An abbreviation (*a*) of *Past Grand*; (*b*) of the Latin *Pharmacopœia Germanica*, German Pharmacopœia.

P. g. In *ceram.*, the abbreviation of '*Paris granite*,' a trade-name.

P. G. M. An abbreviation of *Past Grand Master*.

phacellus (fā-sel'us), *n.*; pl. *phacelli* (-ī). Same as *phacella*.

Phacidiaceæ (fạ-sid-i-ā'sẹ-ē), *n. pl.* [NL., < *Phacidi(um)* + *-aceæ*.] A family of discomycetous fungi, so-named from the genus *Phacidium*.

Phacidiales (fạ-sid-i-ā'lēz), *n. pl.* [NL., < *Phacidi(um)* + *-ales*.] An order of discomycetous fungi, so-named from the principal family *Phacidiaceæ*. Called *Phacidiineæ* by Engler and Prantl.

Phacidiineæ (fạ-sid-i-ī'nẹ-ē), *n. pl.* See ★*Phacidiales*.

Phacidium (fạ-sid'i-um), *n.* [NL. (Fries, 1815), < dim. of Gr. φακός, a lentil.] A large genus of discomycetous fungi, type of the family *Phacidiaceæ*, having ascocarps embedded in the surface of the host, the upper covering rupturing at maturity in an irregular manner. The spores are hyaline and unicellular. About 70 species are known. *P. abietinum* occurs on the fir needles in Europe and America.

phacoidal (fạ-koi'dạl), *a.* [*phacoid* + *-al*¹.] Lens-like: referring to the form assumed by certain rock masses by shearing and flowage in metamorphism.

> In like manner, when the basic dykes are obliquely traversed by lines of disruption, they are deflected, attenuated, and within the shear zones appear frequently as *phacoidal* masses amid the reconstructed gneiss.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 617.

phacometer (fạ-kom'e-tėr), *n.* [Gr. φακός, lentil (lens), + μέτρον, measure.] An instrument for determining the constants of lenses.

Phacops (fā'kops), *n.* [NL., < Gr. φακός, a lentil, a mole, + ὤψ, face.] A genus of trilobites typical of the proparian family *Phacopidæ*, with elliptical or oval carapaces, semicircular cephala with rounded genal angles, anterior lateral lobes fused with the frontal lobe to form a large swollen cranidium, and reduced posterior lateral lobes. The eyes are large, prominent, and schizochroal, the pleura rounded, and the pygidium semicircular with entire margin. The genus ranges from the Silurian to the Upper Devonian.

phacosclerosis (fak"ọ-sklẹ-rō'sis), *n.* [Gr. φακός, a lentil (lens), + σκλήρωσις, hardening.] Induration of the crystalline lens of the eye.

phacoscopic (fak-ọ-skop'ik), *a.* Pertaining to the phacoscope or to its use: as, *phacoscopic* images; *phacoscopic* experiments. *E. B. Titchener*, Exper. Psychol., I. ii. 237.

phacoscotoma (fak"ọ-skọ-tō'mä), *n.* [Gr. φακός, a lentil (lens), + σκότωμα, darkness of vision (used in sense of 'dizziness'), < σκότος, darkness.] Opacity of the crystalline lens.

Phacotidæ (fạ-kot'i-dē), *n. pl.* [NL. *Phacotus* + *-idæ*.] A family of *Mastigophora* having a greenish body surrounded by a thick shell-membrane which the body incompletely fills and which is frequently bivalved. It includes *Phacotus*, *Coccomonas*, *Chloraster*, and several other genera.

Phacotus (fạ-kō'tus), *n.* [NL.] The typical genus of the family *Phacotidæ*. *Perty*, 1852.

Phæacian (fẹ-ā'shạn), *a.* and *n.* [L. *Phæacia*, < Gr. Φαιακία, + *-an*.] I. *a.* Of or belonging to Phæacia, or Scheria, an island described by Homer, doubtfully identified with the modern Corcyra.

II. An inhabitant of Phæacia, or Scheria; hence, a gourmand, the Phæacians having been noted for their luxury.

phæism, pheism (fē'izm), *n.* [Gr. φαιός, dusky, + *-ism*.] Homœochromatism of a dusky shade. [Rare.] *Cambridge Nat. Hist.*, VI. 337.

phænozygous, *a.* Same as *phenozygous*.

phæocyst (fē'ọ-sist), *n.* [Gr. φαιός, dusky, dun, brown, + κύστις, bladder (cyst).] The nucleus of a plant cell. *Decaisne*.

Phæocystina (fē-ọ-sis-tī'nä), *n. pl.* [Gr. φαιός, dusky, + κύστις, bladder, pouch, + *-ina*.] A family of radiolarians, of the order *Tripylaria*, without skeleton or with loose skeletal structures, and with the central capsule in the center of the spherical body. It contains the genera *Phæodinia*, *Aulacantha*, and *Aulactinium*.

Phæodidymæ (fē-ọ-did'i-mē), *n. pl.* [NL., < Gr. φαιός, dusky, + δίδυμος, double.] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, designed to include the genera which have the spores brownish and uniseptate.

phæophore (fē'ọ-fōr), *n.* [Gr. φαιός, dusky, + -φορος, bearing, < φέρειν, bear.] The light-brown chromatophore of the algæ.

Phæophragmiæ (fē-ọ-frag'mi-ē), *n. pl.* [NL., < Gr. φαιός, dusky, + φράγμα, partition.] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, designed to include the genera which have the spores brownish and 2- or more septate.

Phæophyceæ (fē-ọ-fī'sẹ-ē), *n. pl.* [NL., < Gr. φαιός, dusky, + φῦκος, seaweed.] One of the four great classes of algæ containing most of those forms which are of a brown color. The vast majority of this class are marine.

phæophycean (fē-ọ-fī'sẹ-ạn), *n.* One of the *Phæophyceæ* or brown seaweeds.

phæophycean-starch (fē-ọ-fī'sē-ạn-stärch), *n.* A name given to bodies found in certain *Euphæophyceæ*, which are built up of concentric layers and attached to the chromatophores. *Encyc. Brit.*, XXV. 272.

phæoplast (fē'ọ-plåst), *n.* [Gr. φαιός, dusky, + πλαστός, < πλάσσειν, form.] One of the brown coloring-bodies or plastids in the cytoplasm of the brown algæ, *Phæophyceæ*, as distinguished from the red plastids (rhodoplasts) of the red algæ, *Rhodophyceæ*.

> The chromatophores of the higher brown Algæ (Phæophyceæ) and most of the red (Rhodophyceæ) have the discoid form characteristic of chloroplasts. They might be called *phæoplasts* and rhodoplasts if one wished to classify plastids according to their color.
> *Amer. Nat.*, May, 1904, p. 378.

phæoretin (fẹ-or'e-tin), *n.* [Gr. φαιός, dusky, + ῥητίνη, resin.] One of the resinous substances remaining after the crystalline substances have been removed from rhubarb extract. *Buck*, Med. Handbook, VI. 974.

phæosic (fẹ-ō'sik), *a.* [Gr. φαιός, dusky, + *-ose* (?) + *-ic*.] Noting an acid obtained from sweet-bay, *Laurus nobilis*.

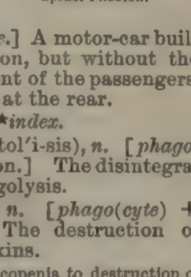
phæosin (fē'ọ-sin), *n.* [*phæos(ic)* + *-in*².] Same as ★*phæosic acid*.

Phæosporæ (fẹ-os'pọ-rē), *n. pl.* [NL., < Gr. φαιός, dusky, + σπορά, seed (spore).] A name applied by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, made to include the genera which have the spores simple, ovoid, and brown.

phæospore (fē'ọ-spōr), *n.* [Gr. φαιός, dusky, + σπορά, seed (spore).] The spore, usually a zoöspore, of the brown algæ. [Rare.]

phæosporous (fẹ-os'pọ-rus), *a.* [*phæospore* + *-ous*.] Of or pertaining to the brown seaweeds.

phaëton, *n.*—**Demi-mail phaëton**, a heavy phaëton having a platform coach-gear instead of the perch-gear which is used in the mail phaeton.—**Dicky-seat phaëton**, a carriage having a stanhope body elongated by the addition of a dicky-seat for the driver, suspended upon four C-springs.—**Dog-cart phaëton**, a dog-cart transformed into a phaëton by mounting the body on a four-wheeled gear.—**Spider phaëton.** See the cut.



Spider Phaëton.

phaëtonette (fā"e-tọ-net'), *n.* [*phaëton* + *-ette*.] A motor-car built on the lines of a phaëton, but without the driver's seat or box in front of the passengers' seat, and with no rumble at the rear.

Phagocytic index. See ★*index*.

phagocytolysis (fag"ọ-sī-tol'i-sis), *n.* [*phagocyte* + Gr. λύσις, dissolution.] The disintegration of a phagocyte; phagolysis.

phagolysis (fa-gol'i-sis), *n.* [*phago(cyte)* + Gr. λύσις, dissolution.] The destruction of phagocytes, as by cytotoxins.

> Metchnikoff ascribes the leucopenia to destruction of the cells and uses the term "*phagolysis*" to express it. . . . That there is *phagolysis* at all has been strenuously denied by some. Durham convinced himself that the leucopenia is due solely to clumping or balling of the leucocytes, in which condition they are swept by peristalsis towards the omentum and other peritoneal surfaces on which they are deposited.
> *Jour. Med. Research*, July, 1906, pp. 6, 7.

phagolytic (fag-ọ-lit'ik), *a.* [*phagolysis*.] Relating to or consisting in phagolysis or destruction of the white blood-corpuscles. *Jour. Med. Research*, Dec., 1907, p. 263.

phalænid (fa-lē'nid), *n.* and *a.* I. *n.* A member of the family *Phalænidæ*.

II. *a.* Having the characters of or belonging to the family *Phalænidæ*.

phalange, *n.* 4. Same as ★*phalangiid.*

Phalangeal formula. See ★*formula.*

phalanger, *n.*—**Pygmy phalanger.** Same as *opossum-mouse.*

phalangic, *a.* 2. In *mil.*, pertaining to or characteristic of a phalanx.

phalangid (fạ-lan′jid), *n.* and *a.* Same as ★*phalangiid.*

Phalangidæ (fā-lan′ji-dē), *n. pl.* The typical family of the *Phalangidea* (which see).

phalangigrade, *a.* **II.** *n.* One of the *Phalangigrada*, as a camel or llama.

phalangigrady (fạ-lan′ji-grā-di), *n.* [*phalangigrade* + *-y*³.] The habit of walking on the phalanges. See *phalangigrade.*

phalangiid (fạ-lan′ji-id), *n.* and *a.* **I.** *n.* A member of the family *Phalangiidæ.*

II. *a.* Having the characteristics of or belonging to the family *Phalangiidæ.*

phalangioid (fạ-lan′ji-oid), *a.* and *n.* [NL. *Phalangioid(ea).*] **I.** *a.* Having the characteristics of or belonging to the superfamily *Phalangioidea.*

II. *n.* A member of the superfamily *Phalangioidea.*

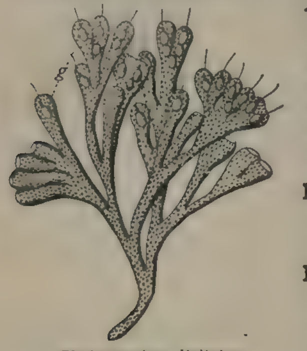
phalangitis (fal-an-jī′tis), *n.* [Gr. φάλαγξ, phalanx, + *-itis.*] Inflammation of one or more of the phalanges of the fingers or toes. *Lancet*, May 30, 1903, p. 1526.

phalangology (fal-an-gol′ọ-ji), *n.* [Gr. φάλαγξ (φαλαγ-), phalanx, + -λογια, < λέγειν, speak.] The pretended 'science' of telling fortunes by studying the fingers.

> When studying finger tips, or "*phalangology,*" as it (fortune-telling by the fingers) is called, the length of the tips above the ball of the finger must be noted.
> *Kansas City Daily Times*, June 15, 1903.

phalansteric (fal-a̤n-ster′ik), *a.* Same as *phalansterian.*

Phalansterina (fal″a̤n-stẹ̄-rī′nạ̈), *n. pl.* [NL. *Phalanster(ium)* + *-ina.*] A family of choanoflagellate infusorians, which consists of colonial animals, each individual in a granular gelatinous tube, with the collars narrow, conical, and of constant shape. The colonies form flat expansions or a dichotomously branching stock. It includes the genus *Phalansterium.*



Phalansterium digitatum (S. Kent).
g, collared cells.

Phalansterium (fal-a̤n-stē′ri-um), *n.* [NL. See *phalanstery.*] The typical genus of the family *Phalansterina.* *Cienkowsky*, 1870.

phalanstery, *n.* 2. A communal house of a primitive tribe.

phalanx, *n.* 6. In *entom.*, any one of the joints of the tarsus.—**Metacarpal phalanx,** the first phalanx of each finger which is articulated with the corresponding metacarpal bone.—**Metatarsal phalanx,** the first phalanx of each finger articulating with the corresponding metatarsal bone.

phalara (fal′a̤-rạ̈), *n. pl.* [Gr. φάλαρα, *pl.*] See ★*phalera.*

phalera (fal′e̤-rạ̈), *n.*; pl. *phaleræ* (-rē). [L., < Gr. φάλαρα, *pl.*] A metal disk or boss worn on the breast as an ornament by men, especially as a military decoration, or used to adorn the harness of horses.

phalerate (fal′e̤-rāt), *a.* [L. *phaleratus*, pp. of *phalerare*, adorn with trappings. See ★*phalera.*] Adorned with trappings; ornamented. [Rare.]

Phaleucian (fa-lū′si̤a̤n), *a.* [L. *Phaleucius* (for *Phalæcius*), pertaining to Phalæcus, + *-an.*] Same as *Phalæcean.*

Phallaceæ (fa-lā′sẹ-ē), *n. pl.* [NL., < *Phallus* (see *phallus*, 3) + *-aceæ.*] A family of basidiomycetous fungi. Same as *Phalloideæ*, which is an incorrect form.

Phallales (fa-lā′lēz), *n. pl.* [NL., < *Phallus* (see *phallus*, 3) + *-ales.*] An order of basidiomycetous fungi, which consists of the two families *Clathraceæ* and *Phallaceæ.* Many of the species have a very unpleasant odor, on account of which they are commonly known as *stinkhorns.* Sometimes called *Phallineæ.*

phallical (fal′i-ka̤l), *a.* Same as *phallic.*

phallin (fal′in), *n.* [NL. *phalloides* (see def.) + *-in*².] A toxalbumin contained in the fungi *Amanita phalloides, A. virescens, A. citrina, A. candida*, and others. Its action is similar to that of ricin and abrin.

Phallineæ (fa-lin′ẹ̄-ē), *n. pl.* See ★*Phallales.*

phalloid, *a.* **II.** *n.* A member of the fungous family *Phallaceæ.* *Nature*, Sept. 3, 1903, p. 421.

phallopod (fal′ō-pod), *n.* [Gr. φαλλός, penis, + πούς (ποδ-), foot.] In *Chilognatha*, one of the appendages, either the anterior or the posterior pair of the seventh segment, bearing the seminal pouch and duct. Compare ★*coleopod.* *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 516.

phanal, *n.* Same as *fanal.*

> He flashes like a *phanal*, all men catch
> The flame, Rome 's just accomplished!
> *Browning*, Sordello, iv. 395.

phaneric (fa-ner′ik), *a.* [Gr. φανερός, visible, + *-ic.*] In *petrog.*, visibly crystalline; phanerocrystalline: applied to crystals which are visible without the aid of a magnifying-glass.

phanerite (fan′e̤-rīt), *a.* and *n.* [Gr. φανερός, visible, + *-ite*².] **I.** *a.* Visible or exposed to observation: used in geology of rocks which outcrop.

II. *n.* In *petrog.*, a phanerocrystalline rock; a rock whose component crystals can be seen with the unaided eye.

phanerocephalous (fan″e̤-rọ-sef′a̤-lus), *a.* [Gr. φανερός, visible, + κεφαλή, head, + *-ous.*] Having an evident prostomium which sometimes bears eyes, sensory processes, tentacles, and palps, as in some polychætous annelids: contrasted with *cryptocephalous.*

Phanerodon (fạ-ner′ō-don), *n.* [NL., < Gr. φανερός, visible, + ὀδούς (ὀδοντ-), tooth.] A genus of surf-fishes (*Embiotocidæ*) inhabiting the waters of the California coast.

Phanerogamic botany. See ★*botany.*

phanerogenic (fan″e̤-rọ-jen′ik), *a.* [Gr. φανερός, visible, + -γενος, produced, + *-ic.*] In *petrog.*, formed of easily recognizable minerals, as a rock. Same as ★*phaneric* and ★*phaneromeric.* *Haüy.*

phaneromania (fan″e̤-rọ-mā′ni-ạ̈), *n.* [NL., < Gr. φανερός, visible, + μανία, mania.] An uncontrollable habit of picking at loose bits of skin, warts, hangnails, etc.

phaneromeric (fan″e̤-rọ-mer′ik), *a.* [Gr. φανερός, visible, + μέρος, part, + *-ic.*] Same as ★*phanerogenic* and ★*phaneric.*

phaneron (fan′e̤-ron), *n.*; pl. *phanera* (-rạ̈). [NL., < Gr. φανερόν, neut. of φανερός, visible, manifest, < φαίνεσθαι, appear.] Whatever is in any sense present to the mind, whatever its cognitive value may be, and whether it be objectified or not. A term proposed by C. S. Peirce in order to avoid loading 'phenomenon,' 'thought,' 'idea,' etc., with multiple meanings.

Phanerophlebia (fan″e̤-rọ-flē′bi-ạ̈), *n.* [NL. (Presl, 1836), < Gr. φανερός, visible ("free"), + φλέψ (φλεβ-), a vein, in allusion to the two lower free veins.] A genus of simply pinnate polypodiaceous ferns, closely allied to *Polystichum*, but distinguished by their habit and pinnate, more or less anastamosing venation, and by having the sori disposed in several interrupted rows. There are about 9 species, natives of continental middle America, one of which, *P. auriculata*, extends northward to Texas and New Mexico.

Phaneropleuron (fan″e̤-rọ-plū′ron), *n.* [NL., < Gr. φανερός, visible, + πλευρόν, rib.] A genus of extinct dipnoan fishes of the subclass *Dipnoi* and family *Ctenodontidæ*, characterized by triangular upper dental plates with straight and crenulated radiating ridges, a long dorsal fin continuous with the caudal or tail fin, small and separate anal fin, and very thin cycloid scales marked with delicate radiating striæ. It occurs in the Old Red Sandstone (Devonian) of Europe and Canada.

phaneropterid (fan-e̤-rop′te̤-rid), *n.* and *a.* **I.** *n.* A member of the orthopterous family *Phaneropteridæ.*

II. *a.* Having the characters of or belonging to the family *Phaneropteridæ.*

phanerozoic (fan″e̤-rọ-zō′ik), *a.* [Gr. φανερός, visible, + ζῷον, animal, + *-ic.*] Of or pertaining to animals that live in places that are exposed to the daylight.

> [The] cryptozoic fauna imperceptibly blends with what by way of contrast may be called the "*phanerozoic.*"
> *Natural Science*, July, 1896, p. 8.

phanerozonate (fan″e̤-rọ-zō′nāt), *a.* [*Phanerozon(ia)* + *-ate.*] Having the characters of the *Phanerozonia*, a division of starfishes in which the plates on the margins of the arms are well developed.

Phanerozonia (fan″e̤-rọ-zō′ni-ạ̈), *n. pl.* [NL., < Gr. φανερός, visible, + ζώνη, girdle.] An order of euasterian starfishes characterized by the prominent development of the marginal plates. The genera comprised in the order range from Devonian to recent time.

phansigar (fan′si-gär), *n.* [Hindi *phānsigār*, a strangler, < *phānsi*, a noose.] A thug.

phantascope, *n.* See *fantascope.*

phantasime (fan′ta̤-sim), *n.* [Prob. It. *fantasima*, a phantasm.] A word used by Shakspere in the following passage and in one other in the same play (v. i.; there spelled *phantasim*) probably in the sense of 'a phantastic being.' Furness suggests that he "may have had in mind the Greek meaning of [φανταστής] making a show or parade."

> This Armado is a Spaniard that keeps here in court
> A *Phantasime*, a Monarcho, and one that makes sport
> To the Prince and his Booke-mates.
> *Shak.*, Love's Labor Lost, iv. i.

phantasm, *n.* 4. In *psychol.*: (*a*) A memory-image. (*b*) An image of imagination. [Rare and obsolescent in both senses.]

> In the earlier days of the English language, the representative power was called imagination, or phantasy, and then images and *phantasms* were appropriately and literally applied to its objects.
> *N. Porter*, Human Intellect, p. 253.

phantasmagorist (fan-taz′ma̤-gō-rist), *n.* [*phantasmagor(ia)* + *-ist.*] One who produces a phantasmagoria; one who is the author of fantastic ideas. [Rare.]

> Certainly, the more you examine those arch *phantasmagorists*, the philosophers who would leave nothing in the universe but their own delusions, the more your intellectual pride may be humbled.
> *Bulwer*, A Strange Story, lxxi.

phantasmascope (fan-taz′ma̤-skōp), *n.* [Gr. φάντασμα, phantasm, + σκοπεῖν, view.] Same as *phenakistoscope.*

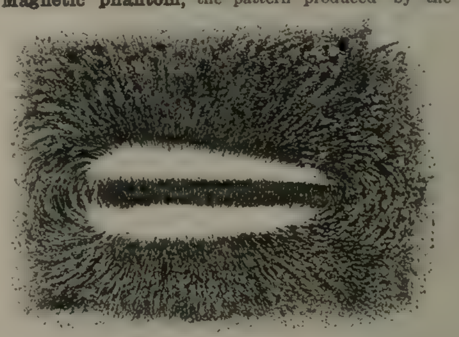
phantasmograph (fan-taz′mọ-gråf), *n.* [Gr. φάντασμα, phantasm, + γράφειν, write.] In *photog.*, an apparatus for printing lantern-slides. The negative and the lantern-plate are placed in contact at one end of a long box, while light is admitted by a hinged door at the other end. By this means extraneous light is excluded. *Stand. Dic.*

phantast, *n.* See *fantast.*

phantom. **I.** *n.* 4. A phantom crystal.—5. A map or diagram of the magnetic field made by strewing iron filings upon a plate of glass or other smooth surface and allowing them to arrange themselves along the lines of force.—**Electric phantom,** the representation of an electrostatic field in a liquid dielectric by means of suspended particles which tend to arrange themselves spontaneously along the lines of force. The phenomenon is analogous to the so-called magnetic phantom, but in three dimensions.

> The production of the *electric phantom* by conducting powders in dielectric liquids.
> *Science Abstracts*, VI., Sec. A, p. 115.

Magnetic phantom, the pattern produced by the arrangement of iron filings along the lines of force of a magnetic field.



Magnetic Phantom.

II. *a.*—**Phantom circuit.** See ★*circuit.*—**Phantom corpuscle.** See ★*corpuscle.*—**Phantom crystal,** a crystal, as of quartz or calcite, which exhibits within a distinct crystalline outline sometimes parallel to the external surface but often pertaining to a different form: it marks a stage in the growth of the complete crystal.

phantomic (fan-tom′ik), *a.* [*phantom* + *-ic.*] Of the nature of a phantom; phantomatic. Also *phantomical.*

phantoscope (fan′tọ-skōp), *n.* [Gr. φαντός, visible, + σκοπεῖν, see.] 1. A form of kaleidoscope, invented by W. S. Simpson, with an aperture in the end into which objects can be introduced.—2. A form of moving-picture machine invented by Francis Jenkins.

phar., pharm. [*l. c.* or *cap.*] Abbreviations (*a*) of *pharmaceutical*; (*b*) of *pharmacopœia*; (*c*) of *pharmacy*.

Pharaoh's corn. Same as *mummy-wheat.*

pharbitis-seed (fär-bī'tis-sēd), *n.* [*Pharbitis*, appar. of E. Indian origin, + E. *seed.*] The seed of *Pharbitis nil*, a convolvulaceous plant, growing wild in Bengal. It is in general use in India as a safe and valuable purgative, intermediate in activity between rhubarb and jalap. The native name is *kaladana.*

Phar. D. An abbreviation of the Late Latin *Pharmaciæ Doctor*, Doctor of Pharmacy.

Pharetrones (far-ẹ-trō'nēz), *n. pl.* [NL., for **Pharetreones, pl.*, < Gr. φαρετρεών, quiver.] A group of calcareous sponges having thick walls with the canal system, when present, like that of the *Lithistidæ*, and with spicules arranged in solid anastomosing fibers. They range from the Devonian to the Cretaceous.

pharisæan (far-i-sē'ạn), *a.* [L. *pharisæ*(*us*) + *-an.*] Same as *pharisaic.*

Phar. M. An abbreviation of the Late Latin *Pharmaciæ Magister*, Master of Pharmacy.

pharmacal (fär'mạ-kạl), *a.* [Gr. φάρμακον, a drug, + -*al*^{1}.] Same as *pharmaceutical.*

pharmacodynamical (fär"mạ-kọ̄-dī-nam'i-kạl), *a.* Same as *pharmacodynamic.*

pharmacol. An abbreviation of *pharmacology.*

pharmacologia (fär'mạ-kọ̄-lō'ji-ạ̈), *n.* [NL.] Same as *pharmacology.*

pharmacomania (fär"mạ-kọ̄-mā'ni-ạ̈), *n.* [NL., < Gr. φάρμακον, drug, + μανία, madness.] Excessive fondness for taking or prescribing drugs.

pharmacopedia (fär'mạ-kọ̄-pē'di-ạ̈), *n.* [Gr. φάρμακον, a drug, + παιδεία, instruction.] Instruction concerning the properties of drugs; that part of medical science which deals with the properties and preparation of drugs and medicines.

pharmacopedic (fär'mạ-kọ̄-pē'dik), *a.* [*pharmacoped*(*ia*) + *-ic.*] Pertaining to or of the nature of pharmacopedia.

pharmacopedics (fär'mạ-kọ̄-pē'diks), *n.* [Pl. of *pharmacopedic*. See *-ics.*] Same as ★*pharmacopedia.*

pharmacopœia, *n.* 3. A collection of drugs.

pharmacopœist (fär'mạ-kọ̄-pē'ist), *n.* [*pharmacopœ*(*a*) + *-ist.*] One who has compiled a pharmacopœia.

pharmacopolic (fär'mạ-kọ̄-pol'ik), *a.* [See *pharmacopolist.*] Drug-selling. [Rare.]

pharmacoposia (fär"mạ-kọ̄-pō'si-ạ̈), *n.* [NL., < Gr. φάρμακον, a drug, + πόσις, a beverage.] A medicinal liquid, usually a cathartic.

pharmacotherapy (fär"mạ-kọ̄-ther'ạ-pi), *n.* [Gr. φάρμακον, drug, + θεραπεία, medical treatment.] The treatment of disease by means of drugs.

pharmacy, *n.*—**Chemical pharmacy**, practically the same as *pharmaceutical chemistry*; that branch of chemistry which relates to pharmacy.

pharmic (fär'mik), *a.* [Gr. φάρμ(ακον), drug, + *-ic*. Cf. *alexipharmic.*] Relating to drugs or to pharmacy.

pharyngeal. I. *a.*—**Pharyngeal choke, croup, septum.** See ★*choke*^{1}, etc.

II. *n.*—**Inferior** or **lower pharyngeal**, in *fishes*, one of a pair of bones behind the fourth gill-arch. They are usually toothed and separate, though they are sometimes united into a single median bone. They are the remains of a fifth arch.—**Superior pharyngeal**, in *fishes*, one of a series of bones situated along the upper ends of the gill-arches. They usually bear teeth, and typically there is one on each side of each arch, though they are in different groups variously united and modified.—**Suspensory pharyngeal**, the superior pharyngeal of the first gill-arch in fishes. It is usually styliform and toothless, and suspends the gill-arches from the cranium.

pharyngic (fạ̄-rin'jik), *a.* Same as *pharyngeal.*

pharyngitis, *n.*—**Atrophic pharyngitis**, chronic pharyngitis marked by destruction of the glands in the mucous membrane.—**Hypertrophic pharyngitis**, chronic inflammation resulting in thickening of the mucous membrane of the pharynx: often a precursor of the atrophic form.—**Pharyngitis sicca**, inflammation of the mucous membrane of the pharynx, with atrophy of the membrane and scantiness of secretion.—**Phlegmonous pharyngitis**, acute inflammation, with abscess formation, of the mucous membrane of the pharynx.

pharyngobranchial (fạ̄-ring-gọ̄-brang'ki-ạl), *a.* and *n.* I. *a.* Same as *pharyngobranch.*

II. *n.* Same as *superior* ★*pharyngeal.*

pharyngocele (fạ̄-ring'gọ̄-sēl), *n.* [Gr. φάρυγξ (φαρυγγ-), pharynx, + κήλη, tumor.] A pouching of the wall of the pharynx near its junction with the esophagus.

pharyngo-epiglottic (fā-ring"gọ̄-ep-i-glot'ik), *a.* Pertaining to both the larynx and the epiglottis.

pharyngognathous, *a.* 2. Having the lower pharyngeals united: said of the labroid fishes.

pharyngohyal (fạ̄-ring-gọ̄-hī'ạl), *n.* [Gr. φάρυγξ (φαρυγγ-), pharynx, + E. *hy*(*oid*) + -*al*^{1}.] The most dorsal of the series of cartilages in the hyoid arch of fishes. Same as *hyomandibular.*

pharyngolaryngitis (fạ̄-ring-gọ̄-lar-in-jī'tis), *n.* [NL., < Gr. φάρυγξ (φαρυγγ-), pharynx, + λάρυγξ (λαρυγγ-), larynx, + *-itis.*] Inflammation of the mucous membrane of both the pharynx and the larynx.

pharyngopalatine (fạ̄-ring-gọ̄-pal'ạ-tin), *a.* [Gr. φάρυγξ (φαρυγγ-), pharynx, + L. *palatum*, palate, + -*ine*^{2}.] Same as *palatopharyngeal*. *Scripture*, Exper. Phonetics, p. 232.

pharyngoparalysis (fạ̄-ring"gọ̄-pạ-ral'i-sis), *n.* [NL., < Gr. φάρυγξ (φαρυγγ-), pharynx, + παράλυσις, paralysis.] Paralysis of the muscles of the pharnyx.

pharyngoplegic (fạ̄-ring-gọ̄-plē'jik), *a.* [*pharyngopleg*(*ia*) + *-ic.*] Pertaining to or suffering from pharyngoplegia.

pharyngoplegy (fạ̄-ring-gọ̄-plē'ji), *n.* Same as *pharyngoplegia.*

pharyngorrhagia (fạ̄-ring-gọ̄-rā'ji-ạ̈), *n.* [NL., < Gr. φάρυγξ (φαρυγγ-), pharynx, + -ραγια, < ῥηγνύναι, break.] Hemorrhage from the pharynx.

pharyngostenosis (fạ̄-ring"gọ̄-stẹ-nō'sis), *n.* [NL., < Gr. φάρυγξ (φαρυγγ-), pharynx, + στένωσις, narrowing.] Marked narrowing of the lumen of the pharynx.

pharyngotome (fạ̄-ring'gọ̄-tōm), *n.* [Gr. φάρυγξ (φαρυγγ-), throat, + τέμνειν, cut.] A surgical instrument for making an incision into the pharynx.

phasameter (fạ̄-sam'e-ter), *n.* Same as ★*phasemeter.*

phascaceous (fas-kā'shius), *a.* Relating to or having the characters of the *Phascaceæ.*

phascolome (fas'kọ̄-lōm), *n.* [See *Phascolomys.*] An animal of the genus *Phascolomys*; a wombat.

phase^1, *n.* 4. In *statistical mech.*, the condition of a system with respect to configuration and velocity. *J. W. Gibbs.*—5. In *math.*, the angle made with the positive ray of the x-axis by the radius vector from the origin to the point representing a complex number, taken between O and 2π or between $-\pi$ and $+\pi$; the amplitude or argument a in the trigonometric form of a complex number, $\rho(\cos a + i \sin a)$.—6. In *elect.*, the time or angle at which an electric wave reaches a certain relative value, as the maximum or zero.—7. In *phys. chem.*, one of the different homogeneous substances of which a heterogeneous thermodynamic system consists. If ice and salt are mixed there soon exist three homogeneous substances in the system, namely, brine, ice, and solid salt. All the ice existing at a given moment is one phase, all the solid salt existing at that moment is a second phase, and the brine produced up to that moment is a third phase.—**Conservation of density in phase.** See ★*conservation.*—**Conservation of extension in phase.** See ★*conservation.*—**Extension of phase.** See ★*extension.*—**In phase**, synchronous as to phase: said of two or more periodic motions or cyclic processes of whatever nature, and specifically of alternating currents or of the machines which produce them. To be permanently in phase, not only must the cyclic processes agree as to phase at a given instant, but the frequency must be the same for all. Also *in step.*—**Phase-angle**, the angle which gives the difference of phase between two harmonic or periodic motions; specifically, in *elect.*, the angle between two alternating currents or between the current and electromotive force in a circuit. **Phase converter.** See ★*converter*, 3.—**Phase-diagram**, a diagram which exhibits the phase relations in an alternating-current circuit.—**Phase difference.** See ★*difference.*—**Phase-displacement**, in *elect.*, the angle which measures the difference of phase between two alternating currents or between the current and electromotive force in a circuit.—**Phase of a complex quantity**, $x + iy$, the angle θ determined by $x = r \cos\theta$, $y = r \sin\theta$, where $r = |x + iy|$, the modulus.—**Phase rule**, in *phys. chem.*, a proposition determining the form of the law of equilibrium of a thermodynamic system, which was established by J. W. Gibbs and which states that the number of degrees of freedom of the system is equal to the number of components of the system increased by two and decreased by the number of phases in which it exists. Suppose a system composed solely of water, and existing in the three phases, liquid water, solid water or ice, and vapor of water: this system depends on pressure and temperature for its equilibrium. The number of components is one; the number of phases is three. If we put V for the number of degrees of freedom, or the variance, as it is often called, n for the number of components, and ϕ for the number of phases, we get $V = n + 2 - \phi = 0$, which indicates that the system has no degree of freedom; this agrees with the fact of observation that the system can exist at only one temperature and at only one pressure. The temperature is 0.007° C.: if we increase the temperature, the ice melts; if we decrease it, the water freezes. The pressure is 4.57 millimeters of mercury: if we increase it, the vapor phase disappears; if we diminish it, the water and ice evaporate. In case of each change the equilibrium no longer exists, and the system is replaced by a different system having fewer phases. In the case of a system consisting of liquid water and water vapor, one component and two phases give, according to the rule, one degree of freedom; accordingly, we may make the temperature what we please, but there is a given pressure corresponding to each temperature; or we may make the pressure what we please, but there is a given temperature corresponding to each pressure: we can give an arbitrary value to only one condition; if we vary, independently, two conditions we destroy the equilibrium of the system and so produce a different system. Suppose that the temperature is 20° C.; the pressure corresponding to this is 17.36 millimeters of mercury. Suppose that in this system, at this temperature, we make the pressure two hundred millimeters of mercury, the vapor is condensed to a liquid, and the equilibrium of the system and the system itself are destroyed. So also if we make the pressure less than 17.36 millimeters the water entirely evaporates, and the system is destroyed.

Furthermore, this glory is more and more resplendent every day; more and more clearly the author of the *phase rule* appears as the initiator of a chemical revolution; and many do not hesitate to compare the Yale college professor to our Lavoisier.

P. Duhem, in Jour. Phys. Chem., March, 1904, p. 214.

Solid phase, in *phys. chem.*, a phase of a thermodynamic system which consists of solid masses, or of a solid mass.

Beyond B, there is always a *solid phase* present from which we know that the temperature given on the curve cannot be that of the freezing-point and must be that of the boundary curve, along which we have already one solid phase and where tin is just beginning to separate from the solution. *Jour. of Phys. Chem.*, Feb., 1904, p. 92.

phase-indicator (fāz'in"di-kā-tọr), *n.* In *elect.*, a device for indicating when the pressures of two alternating-current circuits (as that of an alternater and that of the circuit to which it is to be connected) are in phase and in synchronism with each other.

phaselin (fā'se-lin), *n.* [*Phase*(*o*)*l*(*us*) + -*in*^{2}.] A globulin found in the kidney-bean (*Phaseolus vulgaris*).

phase-meter (fāz'mē"tėr), *n.* In *elect.*, an instrument for determining the phase of an alternating current, or for indicating differences of phase.

When a differential coil is added to a Rayleigh *phase-meter*, it is adapted to the measurement of iron losses in a loaded transformer.

Elect. World and Engin., Jan. 9, 1904, p. 88.

phaseolin (fạ̄-sē'ọ̄-lin), *n.* [*Phaseol*(*us*) + -*in*^{2}.] A globulin found in the kidney-bean, together with phaselin, but less soluble than the latter.

phaseolunatin (fạ̄-sē"ọ̄-lū-nā'tin), *n.* [L. *phaseolus*, a kind of bean. See *Phaseolus.*] A glucose ether of acetone cyanhydrin, $C_{10}H_{17}O_6N$, found in the lima bean, flax, and cassava.

phaseomannite (fā"sẹ-ọ̄-man'īt), *n.* [NL. *Phaseo*(*lus*) + *mannite.*] Same as ★*pinosite.*

phaser (fā'zėr), *n.* In *elect.*, a device for bringing alternating generators or motors into the same phase.

phase-splitter (fāz'split"ėr), *n.* In *elect.*, a device for obtaining two alternating currents differing in phase from a single-phase current. It consists essentially of a divided circuit the two branches of which differ in impedance.

phase-transformer (fāz'trȧns-fôr"mer), *n.* See ★*transformer.*

phasianic (fā-si-an'ik), *a.* [L. *phasian*(*us*), a pheasant, + *-ic.*] Of or pertaining to pheasants.

phasianoid (fā'si-ạ-noid), *a.* [L. *phasian*(*us*), pheasant, + *-oid.*] Resembling a pheasant.

phasing (fā'zing), *n.* and *a.* I. *n.* In *elect.*, the act of bringing two alternating-current circuits, as two alternaters, or a converter and its supply circuit, in phase with each other, so that their waves coincide, and they can be connected together.

II. *a.* Coinciding in phase. See *in* ★*phase.*

phasing-switch (fā'zing-swich), *n.* A switch, usually of the plug type, used for throwing in or connecting the phase-indicating apparatus for an alternating-current generator.

phasing-transformer (fā'zing-trȧns-fôr"mėr), *n.* See ★*transformer.*

phasmid (fas'mid), *n.* and *a.* I. *n.* A member of the orthopterous family *Phasmidæ.*

II. *a.* Having the characters of or belonging to the family *Phasmidæ.*

phasol (fā'sol), *n.* [*Phas*(*eolus*) + *-ol.*] A crystalline substance, $C_{15}H_{24}O$, found in the seed-coats of the bean, *Phaseolus vulgaris*. It is related to cholesterol.

phasotropy (fạ̄-sot'rọ̄-pi), *n.* [Gr. φάσις, phase, + -τροπια, < τρέπειν, turn.] In *chem.*, a name suggested by Brühl to designate that property by virtue of which certain compounds are supposed to exist as a mixture of two isomeric forms which are constantly undergoing a transformation each into the other. He distinguishes it from *tautomery*, where he supposes that the compound has a definite structure but may readily be transformed to its isomer under the influence of various reagents. The word has been little used. See *virtual* ★*tautomerism*.

phatagin (fat′a̤-jin), *n.* [Gr. *φαττάγης*, the pangolin.] The West African manis, or pangolin, *Manis tricuspis*, one of the so-called scaly ant-eaters, which has a long tail, scales with three points, and the under parts white; also any manis.

Ph. B. An abbreviation (*b*) of the Latin *Pharmacopœia Britannica*, British Pharmacopœia. Also *Ph. Br.*

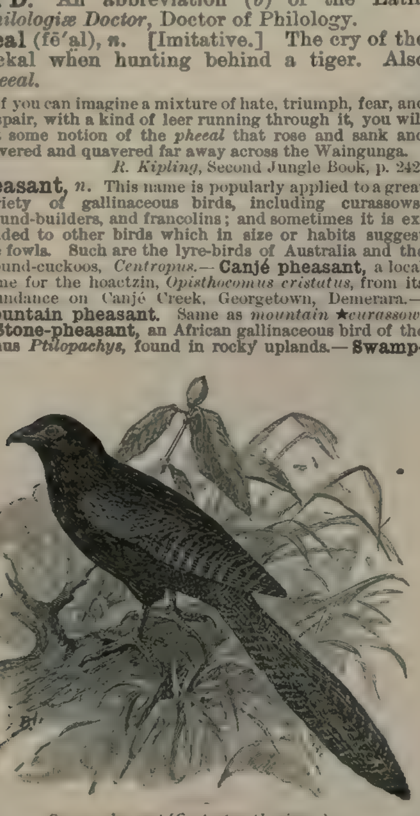
Ph. C. An abbreviation of *Pharmaceutical Chemist.*

Ph. D. An abbreviation (*b*) of the Latin *Philologiæ Doctor*, Doctor of Philology.

pheal (fē′a̤l), *n.* [Imitative.] The cry of the jackal when hunting behind a tiger. Also *pheeal.*

> If you can imagine a mixture of hate, triumph, fear, and despair, with a kind of leer running through it, you will get some notion of the *pheeal* that rose and sank and wavered and quavered far away across the Waingunga.
>
> *R. Kipling*, Second Jungle Book, p. 242.

pheasant, *n.* This name is popularly applied to a great variety of gallinaceous birds, including curassows, mound-builders, and francolins; and sometimes it is extended to other birds which in size or habits suggest the fowls. Such are the lyre-birds of Australia and the ground-cuckoos, *Centropus.*—**Canjé pheasant,** a local name for the hoactzin, *Opisthocomus cristatus*, from its abundance on Canjé Creek, Georgetown, Demerara.—**Mountain pheasant.** Same as *mountain* ★*curassow.*—**Stone-pheasant,** an African gallinaceous bird of the genus *Ptilopachys*, found in rocky uplands.—**Swamp-pheasant,** an Australian ground-cuckoo of the genus *Centropus*, which has a long tail and mottled plumage, the general appearance suggesting a hen-pheasant.



Swamp-pheasant (*Centropus phasianus*).

pheasant-duck, *n.* **2.** The pintail, *Dafila acuta*: so called on account of its long tail, which suggests that of a pheasant.

pheasant-eyed (fez′a̤nt-īd), *a.* Marked like the eye of a pheasant: applied to certain flowers. *N. E. D.*

pheasant-parrot (fez′a̤nt-par″ọt), *n.* An Australian parrakeet, *Platycercus adelaidensis.*

pheasant-wren (fez′a̤nt-ren), *n.* The emu-wren of Australia, a small bird of the genus *Stipiturus*, whose loosely webbed tail-feathers suggest the feathers of the emu, while the length of the tail is suggestive of a pheasant.

phellandral (fe-lan′dra̤l), *n.* [NL. *Phellandr(ium)* (bot. genus) + *-al*3.] In *chem.*, an aldehyde ($C_{10}H_{16}O$) isomeric with citral, found as a constituent of water-fennel oil. It readily undergoes oxidation on exposure to the air.

phellandrene (fe-lan′drēn), *n.* [NL. *Phellandr(ium)* + *-ene.*] A liquid hydrocarbon, $C_{10}H_{16}$, of the terpene series. The dextrorotatory variety occurs in fennel-oil, elemi-oil, the ethereal oil in the seeds of the water-hemlock, *Phellandrium aquaticum*, Australian eucalyptus-oil, etc. The levorotatory variety is also found in Australian eucalyptus-oil. Both varieties boil at 171–172° C. The phellandrenes from different sources are not apparently identical, since they give nitrites with different properties.

phellodermal (fel-ọ-dėr′ma̤l), *a.* [*phelloderm* + *-al*1.] In *bot.*, of or pertaining to phelloderm: as, a *phellodermal* layer.

phelloplastic (fel-ọ-plas′tik), *a.* [Gr. *φελλός*, cork, + *πλαστός*, < *πλάσσειν*, form.] Relating to or produced by the art of phelloplastics: as, a *phelloplastic* model.

phellyl (fel′il), *n.* [Gr. *φελλός*, cork, + *-yl.*] The radical of phellyl alcohol.—**Phellyl alcohol.** Same as *cerin.*

phen-. [Detached from *phen-ol.*] In *chem.*, a prefix which shows that the substance designated is derived from benzene: as, 1,2-*phendiol* or *pyrocatechol*, and *phenbutyldiol acid* or *phenyldihydroxybutyric acid.*

Phen., Phenic. Abbreviations of *Phenician.*

phenacetein (fen-as-ẹ-tē′in), *n.* [*phenacet(in)* + *-e-in.*] Same as ★*phenacetolin.*

phenacetin, *n.*—**Ethyl phenacetin.** See ★*ethyl.*

phenacetolin (fen-a-set′ọ-lin), *n.* [*phenacet(in)* + *-ol* + *-in*2.] A red amorphous powder, $C_{16}H_{12}O_2$, made by heating phenol with acetic anhydrid and zinc chlorid, or with glacial acetic acid and sulphuric acid. It is turned yellow by acids and red by alkalies. Also called *phenacetein* and *Degener's indicator.*

phenaceturic (fẹ-nas-e̥-tū′rik), *a.* [*phenacet(in)* + Gr. *οὖρον*, urine, + *-ic.*] Designating an acid found in urine.—**Phenaceturic acid,** phenylacetylglycocoll, $C_6H_5CH_2.CONH.CH_2CO_2H$, a crystalline acid which occurs in the urine of horses and in human urine after taking phenylacetic acid. It melts at 143° C. and is also made synthetically.

phenacism (fen′a̤-sizm), *n.* Same as ★*phenakism*, 2.

Phenacobius (fen-a̤-kō′bi-us), *n.* [NL., < Gr. *φέναξ* (*φενακ-*), impostor, + *βίος*, life. The fish has the deceptive appearance of an herbivorous fish with long intestines.] A genus of minnows of the eastern and southeastern United States.

Phenacodontidæ (fē″na̤-kō-don′ti-dē), *n. pl.* [*Phenacodus*, type genus, + *-idæ*, family ending.] A family of mammals belonging to the suborder *Condylarthra*, which comprises generalized forms of moderate size having affinities with the carnivores. The brain was small and smooth; teeth short-rooted and tubercular; fore and hind feet with five hoofed toes; humerus with an entepicondylar foramen; and femur with a third trochanter. Remains of these small-headed, long-tailed, subplantigrade mammals occur in the Lower Eocene of the western United States and Upper Eocene of Europe. *Cope*, 1881.

Phenacodus (fẹ-nak′ọ-dus), *n.* [Gr. *φέναξ*, an impostor, + *ὀδούς* (*ὀδοντ-*), tooth.] An extinct genus of hoofed animals of the family *Phenacodontidæ*, suborder *Condylarthra*, characterized by small elongated skull, proportionately very small brain-cavity, complete dentition, bunodont molars, and pentadactyl feet the axes of which pass through the third digit as in the *Perissodactyla*. The metapodial bones are keeled distally; the gait is digitigrade. Two species are known by nearly complete skeletons from the Wasatch formation (Lower Eocene). Related genera occur in the Lower Eocene Puerco formation of New Mexico. Teeth very similar to those of *Phenacodus* are known from the Upper Eocene of Switzerland.

phenakism, *n.* **2.** In *pathol.*, an *hallucination.*

phenakist† (fen′a̤-kist), *n.* [Gr. *φέναξ* (*φενακ-*), an impostor, cheat, + *-ist.*] An impostor; a cheat.

phenalgin (fe-nal′jin), *n.* [Gr. *φένειν*, slay, + *ἄλγος*, pain.] An acetanilid mixture similar to ammonol and antikamnia. *Buck*, Med. Handbook, VI. 607.

phenanthraquinone (fẹ-nan″thra̤-kwī-nōn′), *n.* [*phenanthr(ene)* + *quinone.*] A quinone,  $C_6H_4\begin{array}{c}\diagup CO{-}CO \diagdown\\ \overline{}\end{array}C_6H_4$, obtained by oxidizing phenanthrene with chromic acid. It crystallizes in orange needles which melt at 205° C.

phenanthrene (fẹ-nan′thrēn), *n.* [*phen-* + *anthr(acite)* + *-ene.*] A crystalline hydrocarbon,  $\begin{array}{l} C_6H_4 - CH \\ \vert \qquad\quad \Vert \\ C_6H_4 - CH \end{array}$, found in coal-tar, and formed when various hydrocarbons are passed through red-hot tubes. Its solutions have a slight blue fluorescence. It melts at 99° C., but sublimes at a lower temperature.

phenanthrene-quinone (fẹ-nan″thrēn-kwī-nōn′), *n.* [*phenanthrene* + *quinone.*] Same as ★*phenanthraquinone.*

phenanthridine (fẹ-nan′thri-din), *n.* [*phenanthr(ene)* + *-id* + *-ine*2.] A crystalline basic compound,  $\begin{array}{l} C_6H_4 - CH \\ \vert \qquad\quad \Vert \\ C_6H_4 - N \end{array}$, formed by passing the vapor of benzylidene aniline through a red-hot tube. The aqueous solution has a slight blue fluorescence. It melts at 104° C.

phenanthroline (fẹ-nan′thrọ-lin), *n.* [*phenanthr(ene)* + *-ol* + *-ine*2.] A crystalline base, $C_{12}H_8N_2 + 2H_2O$, made by heating together metaphenylenediamine, metadinitrobenzene, glycerol, and sulphuric acid. It melts at 78.5° C. when anhydrous. When paraphenylenediamine is used the product is the isomeric pseudophenanthroline, $C_{12}H_8N_2 + 4H_2O$. It melts at 173° C. when anhydrous.

phenantipyrin (fẹ-nan-ti-pī′rin), *n.* [*phen-* + *antipyrin.*] Same as ★*phenopyrin.*

phenate (fē′nāt), *n.* The same as ★*phenylate.*

phenazine (fẹ-naz′in), *n.* [*phen-* + *azo-* + *-ine*2.] A yellow crystalline base, $C_{12}H_8N_2$, made by heating calcium azobenzoate with slaked lime. It melts at 170–171° C. and dissolves in sulphuric acid with a blood-red color.

phenazone (fẹ-naz′ōn), *n.* [*phen-* + *azo-* + *-one.*] **1.** The same as *antipyrin.*—**2.** A greenish yellow crystalline base,  $C_6H_4\begin{array}{c}\diagup N{=}N \diagdown\\ \overline{}\end{array}C_6H_4$, made synthetically. It melts at 156° C. Also called *dibenzo-orthodiazin.*

phene (fēn), *n.* [*phen(ol).* Cf. ★*phen-.*] Same as *benzene.*

phenegol (fē′ne-gol), *n.* [*phen-* + *egol.*] The trade-name of potassium nitrophenol-, parasulphonate of mercury, $(C_6H_3NO_2SO_3KO)_2Hg$. It is a powerful antiseptic and is used as a substitute for mercuric chlorid. *Buck*, Med. Handbook, III. 727.

phenetidine (fē-net′i-din), *n.* [*phen-* + *-et* + *-id* + *-ine*2.] A liquid compound, $NH_2C_2H_5O.C_6H_4$, or para-aminophenetol, made by reducing paranitrophenetol with tin and hydrochloric acid. It boils at 244° C. The acetyl derivative, $C_2H_3O.NH.C_6H_4.OC_2H_5$, is called *phenacetin*, and is used as an antipyretic. It is a white, odorless, tasteless, crystalline powder which is made by boiling phenetidine with acetic acid, and which melts at 135° C.

phenin (fē′nin), *n.* [*phen-* + *-in*2.] Same as *phenacetin.*

phenix, *n.* **4.** A silver coin of modern Greece, struck in 1828 by President Capo d' Istria. Its value is rather less than that of a lira.—**5.** A southern constellation formed by Theodori below Cetus (though the Sculptor now intervenes). It is bounded by Eridanus on the west, by Toucan on the south, and by Eridanus on the east. Its brightest star is of magnitude 2½.

phenocoll (fē′nọ-kol), *n.* [*phen-* + Gr. *κόλλα*, glue.] Aminoacetylphenetidine, $NH_2C_2H_2O.NH.C_6H_4.OC_2H_5$. It is a crystalline substance used as an antipyretic. Its acetate is called *salocoll.*

phenocrystal (fē-nọ-kris′ta̤l), *n.* [Gr. *φαίνειν*, show, + *κρύσταλλος*, crystal.] Same as *phenocryst.*

phenocrystalline (fē-nọ-kris′ta̤-lin), *a.* [Irreg. < Gr. *φαίνειν*, show, + *κρύσταλλος*, crystal, + *-ine*1.] **1.** In *petrog.*, same as *phanerocrystalline.*—**2.** In *mineral.*, having megascopically visible crystals: as, *phenocrystalline* quartz.

phenocrystic (fē-nọ-kris′tik), *a.* [*phenocryst* + *-ic.*] In *petrog.*, having the characters of, containing, or relating to, phenocrysts.

phenocyanine (fē-nọ-sī′a̤-nin), *n.* [*pheno(l)* + Gr. *κύανος*, blue, + *-ine*2.] A mordant coal-tar color of the oxazin type, prepared by the action of resorcin upon the gallocyanine from diethylaniline and gallic acid. It is used in calico-printing for the production of blues.

phenoflavin (fē-nọ-flav′in), *n.* [*pheno(l)* + L. *flavus*, yellow, + *-in*2.] An acid coal-tar color of the monoazo type, prepared by combining diazotized metasulphanilic acid with amino-phenol-sulphonic acid. It dyes wool yellow in an acid bath.

phenol-bismuth (fē′nol-biz″muth), *n.* A colorless, tasteless, pulverulent compound, $C_6H_5OBi(OH)_2$. It is used in medicine as a sedative and antiseptic for the gastro-intestinal tract.

phenolic (fẹ-nol′ik), *a.* [*phenol* + *-ic.*] **1.** Derived from or related to phenol: as, *phenolic* ethers, of which anisol, $C_6H_5(OCH_3)$, is the simplest.—**2.** Analogous to phenol. A phenolic hydroxyl group is directly united with a carbon atom of the ring of a benzene nucleus, as it is in phenol, and not with a carbon atom of a side chain.

phenologic, phænologic (fē-nọ-loj′ik), *a.* Same as *phenological.*

phenolphthalein (fē-nol-thal′ẹ̄-in), *n.* [*phenol* + *phthal(ic)* + *-e-in.*] A white crystalline compound, $C_{20}H_{14}O_4$, made by heating a mixture of phthalic anhydrid and phenol with a dehydrating agent, as stannic chlorid or sulphuric acid. The dilute alcoholic solution is much used as an indicator in titrating. It can be used with weak or strong acids and strong bases. It melts at 250–253° C.

phenolphthalin (fē-nol-thal′in), *n.* [*phenol* + *phthal*(*ic*) + *-in*2.] A crystalline compound, $C_{20}H_{16}O_4$, made by reducing phenolphthalein with zinc dust and caustic soda. It melts at 225° C. and is easily oxidized to phenolphthalein.

phenolsulphonate (fē-nol-sul′fọ-nāt), *n.* [*phenolsulphon*(*ic*) + *-ate*1.] A salt of phenolsulphonic acid.

phenolsulphonic (fē″nol-sul-fon′ik), *a.* [*phenol* + *sulphonic.*] Derived from phenol and sulphuric acid.—**Phenolsulphonic acid,** a sulphonic acid made by the action of sulphuric acid. Three isomeric monosulphonic acids, $C_6H_4(OH).SO_3H$, are known. They are all crystalline. The *a*-disulphonic acid, $C_6H_3(OH)(SO_3H)_2$, crystallizes, while the *β*-acid is a syrupy mass. The trisulphonic acid, $C_6H_2(OH)(SO_3H)_3$, is crystalline. What appears to be a tetrasulphonic acid, $C_6H(OH)(SO_3H)_4$, is known only by its salts.

phenomenalism, *n.*—**Psychophysical phenomenalism,** the metaphysical opinion that there are beneath phenomena no things-in-themselves of which we can have no experiential knowledge, but that physical phenomena directly affect psychical phenomena, whether it be true that psychical phenomena really affect physical phenomena or not. *C. A. Strong,* Why the Mind has a Body, p. 298.

phenomenalistic (fẹ-nom″e-nạl-is′tik), *a.* [*phenomenalist* + *-ic.*] Of or pertaining to phenomenalism; partaking of or tending toward the opinion of phenomenalists that what is real is not experientially incognizable.

phenomenistic (fẹ-nom-e-nis′tik), *a.* [*phenomenism.*] Pertaining to, of the nature of, or believing in, phenomenism.

phenomenologist (fẹ-nom-e-nol′ọ-jist), *n.* [*phenomenolog*(*y*) + *-ist.*] One who advocates a phenomenological epistemology or metaphysics. *G. S. Hall,* Adolescence, II. 50.

phenomenology, *n.* **2.** In Kantian terminology, a division of the metaphysics of nature which determines motion and rest merely in respect to the mode of representing them as phenomena of sense.—**3.** In Hegelian philosophy, the exposition of the evolution of knowledge.—**Cenopythagorean phenomenology,** universal phenomenology as it is understood by those who recognize the categories of ★*firstness*, ★*secondness*, and ★*thirdness* (which see).—**Phenomenology of conscience,** that branch of ethics which observes, analyzes, and generalizes the judgments of consciences and formulates their principles.—**Phenomenology of mind,** that branch of psychology which observes and generalizes the phenomena of mind.—**Phenomenology of spirit,** in Hegelian philosophy, the exposition of the development of consciousness from its first contradiction to absolute knowledge.—**Universal phenomenology,** the observation, analysis, and generalization of those kinds of elements that are present in the universal phenomenon. See ★*phenomenon.*

phenomenon, *n.* **4.** Any physiological or pathological change apparent to the senses.—**Argyll-Robertson phenomena.** Same as *Argyll-Robertson pupil* (which see, under *pupil*2).—**Babinski phenomenon.** (*a*) Involuntary extension of the toes in response to tickling the sole of the foot, instead of the flexion which occurs normally. It indicates disease in the pyramidal tract of the spinal cord. (*b*) Diminution of the Achilles tendon reflex in sciatica.—**Contact phenomena.** See ★*contact*1.—**Gore's phenomenon,** the momentary elongation observed in an iron wire when cooling from a bright red heat. The effect occurs at the temperature of recalescence (775° C.).

> At a certain stage (coincident with that at which *Gore's phenomenon* occurs), the process of cooling experiences a sudden check.
>
> *J. A. Ewing,* Magnetic Induction in Iron and other Metals, p. 161.

Hall's phenomenon. Same as *Hall effect.*—**Hittorf's phenomenon,** in *phys. chem.*, the migration of ions in opposite directions during electrolysis. If copper chlorid in solution is placed between electrodes of gas-carbon the ions of copper, each carrying a definite positive electrical charge, pass through the liquid toward the cathode, while the ions of chlorin, each carrying a definite negative electrical charge, pass in the other direction. In this case the copper ions give up their charges and are deposited as electrically neutral metallic copper on the cathode, while the chlorin ions give up their charges at the anode, and are given off as electrically neutral chlorin gas. (The liquid around the anode becomes poorer in copper, and that around the cathode becomes poorer in chlorin.) See *migration of* ★*ions.*—**Kerr's phenomenon.** Same as *Kerr* ★*effect.*—**Pfeiffer's phenomenon,** the bacteriolytic destruction of organisms by means of the serum of immunized animals.—**Porret's phenomenon,** swelling of muscular tissue at the negative pole when a galvanic current is passed through it.—**Purkinje phenomenon, Purkinje's phenomenon,** in *physiol.* and *psychol.*, the fact, first recorded by Purkinje in 1825, that fields of equal brightness but different color become unequally bright if the intensity of the objective illumination is uniformly decreased, the colors of the short-wave end of the spectrum growing relatively brighter, and those of the long-wave end relatively darker. The name of Purkinje's phenomenon is now generally given to the relative lightening and fading of the blues in a faint light; the marked brightening of green, which occurs when adaptation to dark has been established, has been termed the *extended Purkinje phenomenon.* In general, if a spectrum is darkened until all colors disappear and only a band of grays is left, and if such an achromatic spectrum is observed by a dark-adapted eye, the point of maximal brightness will be found to have shifted from what was originally yellow to what was originally green; the long-wave end is thus darkened, the short-wave end lightened. This is the complete Purkinje phenomenon, one of extreme importance for theories of color vision.—**Residual phenomena,** phenomena which pertain to nigh vacua; specifically, the phenomena of the electric discharge in vacuum-tubes in which the mean free path is very long.—**Soret phenomenon,** in *phys. chem.*, the fact that, if a homogeneous solution has its parts kept at different temperatures, it gradually becomes more concentrated in the colder regions. Also *principle of Soret.*

> The *Soret phenomenon* was explained by van 't Hoff on the assumption that equilibrium is reached when the osmotic pressure of the solute is the same in both parts of the tube. Since the diffusion of the solute to the colder portion must usually be accompanied by a displacement of the solvent, the conclusion of van 't Hoff can hold only for such dilute solutions that the volume occupied by the solute can be neglected. The real conditions for equilibrium have never been formulated.
>
> *Jour. Phys. Chem.*, Nov., 1904, p. 585.

Staircase phenomenon, the successive increase, up to a certain limit, of the contractions which result when a muscle is repeatedly stimulated with stimuli of equal intensity.—**Stokes-Adams' phenomenon,** extreme slowness of pulse and shortness of breath with attacks of vertigo and convulsions, due to disturbances of the circulation from arterial disease.—**Strümpell phenomenon,** an involuntary flexion at the ankle, occurring when the patient is made to flex the hip and knee.—**Toe phenomenon.** Same as *Babinski* ★*phenomenon.*—**Universal phenomenon,** that which is in any way before the mind (as by perception, imagination, conception, emotion, desire, etc.), considered only in its most general characters.

phenopyrin (fē-nọ-pī′rin), *n.* [*pheno*(*l*) + (*anti*) *pyrin.*] A colorless liquid made by mixing antipyrin and phenol in equal parts. It is used in medicine. Also called *phenantipyrin.*

phenoquinone (fē-nō-kwin′ōn), *n.* [*pheno*(*l*) + *quinone.*] A volatile, red, crystalline addition-compound of phenol and quinone, $C_6H_4O_2.2C_6H_5.OH$. It melts at 71° C. Caustic potash changes it to a blue color.

phenosafranine (fē-nọ-saf′rạ-nin), *n.* [*pheno*(*l*) + G. *safran,* saffron, + *-ine*2.] A basic dyestuff, $C_{18}H_{16}N_4O$, made by oxidizing a mixture of paraphenylenediamine and aniline with potassium bichromate. When repeatedly crystallized from hot water it is changed into the anhydrid, $C_{18}H_{14}N_4$, from which the salts are derived, as, for instance, the hydrochlorid, $C_{18}H_{14}N_4.HCl$. Sometimes used, also, as a synonym for *safranine* ($C_{20}H_{18}N_4$).

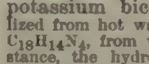
phenosal (fē′nọ-sal), *n.* [*phen*(*etidinacet*)*osal*(*icylic*).] The trade-name of phenetidinacetosalicylic acid, $C_2H_5\overset{1}{O}.C_6H_4\overset{4}{N}HCOCH_2.\overset{2}{O}.C_6H_4.COOH$. It crystallizes in colorless needles or plates and is used as an antiseptic.

phenosalyl (fē-nọ-sal′il), *n.* [*pheno*(*l*) + *sal*(*ic*)*yl*(*ic*).] An antiseptic syrupy mixture made by heating 90 parts of phenol, 10 parts of salicylic acid, and 20 parts of lactic acid to liquefaction and then adding 1 part of menthol.

phenoscopy (fẹ-nos′kọ-pi), *n.* [Irreg. < Gr. φαίνεσθαι, appear, + σκοπεῖν, contemplate, examine.] That study which observes, generalizes, and analyzes the elements that are always or very often present in, or along with, whatever is before the mind in any way, as percept, image, experience, thought, habit, hypothesis, etc. *C. S. Peirce.*

phenose (fē′nōs), *n.* [*phen*(*ol*) + *-ose.*] An amorphous, deliquescent, easily soluble compound, $C_6H_{12}O_6$, made by the electrolysis of a mixture of toluene, alcohol, and dilute sulphuric acid, or by the action of soda on the addition-product of benzene and hypochlorous acid. It has a sweet taste and reduces Fehling's solution, but is not fermentable.

phenosuccin (fē-nọ-suk′sin), *n.* [(*parethoxy*)*phen*(*yl*)*succin*(*imide*).] The trade-name of parethoxyphenylsuccinimide, $C_2H_5\overset{1}{O}C_6$-



$$H_4N\left\langle\begin{array}{l}CO.CH\\ \quad\ \ |\\ CO.CH\end{array}\right.$$

, prepared by the action of paraminophenol on succinic acid. It crystallizes in colorless needles and is used in medicine as an antipyretic and antineuralgic. Also called *pyrantin,* which is another trade-name.

phenoxy-. [*phen*(*yl*) + *oxy*(*gen*).] A prefix which shows that the compound indicated contains the group (OC_6H_5), composed of phenyl and an atom of oxygen: as, *phenoxyacetone,* $C_3H_5O(OC_6H_5)$.

phentriol (fen′tri-ol), *n.* [*phen-* + *tri-* + *-ol.*] Same as *phloroglucin.*

Phenyl carbonimide. Same as ★*carbanil.*—**Phenyl hydrate,** an incorrect name for *phenol.*—**Phenyl isocyanate.** Same as ★*carbanil.*

phenylacetic (fē″nil-a-set′ik), *a.* [*phenyl* + *acetic.*] Noting acetic acid, in which one hydrogen atom of the methyl has been replaced by a phenyl group ($C_6H_5.CH_2.COOH$).

phenylalanin (fē-nil-al′a-nin), *n.* [*phenyl* + *al*(*bumen*) + *-an* + *-in*2.] Phenyl-*a*-amino propionic acid, $C_6H_5.CH_2.CH(NH_2).COOH$: one of the essential radicals of the albuminous molecule.

phenylate (fē′ni-lāt), *n.* A salt of phenylic or phenic acid.

phenylene (fē′ni-lēn), *n.* [*phenyl* + *-ene.*] A bivalent organic radical derived from benzene by the removal of two hydrogen atoms. Its formula is $C_6H_4=$.—**Phenylene black.** Same as *anthracite* ★*black.*—**Phenylene blue.** Same as *new blue.*

phenylglucosazone (fē-nil-glö-kōs-az′ōn), *n.* [*phenyl* + *glucose* + *azo-* + *-one.*] An osazone, $C_{18}H_{22}O_4N_4$, made by the action of phenylhydrazinehydrochlorid and sodium acetate on glucose or fructose: also formed by warming cane-sugar or dextromannose with phenylhydrazine. It forms yellow, needle-like crystals which are nearly insoluble in water and melt at 204–205° C.

phenylglycin (fē-nil-glī′sin), *n.* [*phenyl* + *glycin.*] Anilidoacetic acid, $C_6H_5NH.CH_2$-CO_2H, a crystalline substance made by the action of aniline on bromacetic acid or chloracetic acid. It melts at 126–127° C., and yields indigo when fused with caustic soda.

phenylglycolic (fē″nil-glī-kol′ik), *a.* Same as ★*mandelic.*

phenylhydrazine (fē-nil-hī-draz′in), *n.* [*phenyl* + *hydr*(*ogen*) + *azo-* + *-ine*2.] A colorless crystalline mass, $C_6H_5.NH.NH_2$, which melts at 23° C. and then appears as an oily liquid which readily becomes brown from oxidation. It is extensively utilized as a reagent in the recognition of aldehydes and ketones (and hence of sugars), with which it forms characteristic compounds which in part belong to the hydrazones and in part to the osazones.

phenylon (fē′ni-lon), *n.* [*phenyl* + *-on.*] Same as *antipyrin.*

phenyloxamic (fē″nil-ok-sam′ik), *a.* [*phenyl* + *oxamic.*] Derived from phenyl and oxamic acid.—**Phenyloxamic acid.** Same as ★*oxanilic acid.*

phenyloxamide (fē″nil-oks-am′id), *n.* [*phenyl* + *oxam*(*ic*) + *-ide*1.] Same as ★*oxanilamide.*

Pherusidæ (fẹ-rū′si-dē), *n. pl.* Same as ★*Chlorhæmidæ.*

Ph. G. An abbreviation (*a*) of *Graduate in Pharmacy;* (*b*) of the Latin *Pharmacopœia Germanica,* German Pharmacopœia.

phi (fī), *n.* The Greek letter φ, corresponding to the English *ph* (*f*).

phialine (fī′ạ-lin), *a.* [Gr. φιάλη, a bowl (see *phial, vial*), + *-ine*1.] Shaped like a bowl or saucer. [Rare.]

Phidiac (fid′i-ak), *a.* Same as *Phidian.*

Phidian school, the name sometimes given to sculptors employed in the decoration of the Parthenon at Athens, who are supposed to have been pupils and assistants of Phidias, the famous Greek sculptor.

phil. An abbreviation (*a*) of *philosopher;* (*b*) of *philosophical;* (*c*) of *philosophy;* (*d*) [*cap.*] of *Philemon,* a book of the New Testament; (*e*) [*cap.*] of *Philippians,* a book of the New Testament.

Philadelphia brick. See ★*brick*2.

philander1, *n.* **3.** A flirtation; a philandering.

> Charteris. . . . Besides it was nothing but a *philander* with Julia—nothing else in the world, I assure you.
>
> Grace. So much the worse! I hate your philanderings.
>
> *G. B. Shaw,* The Philanderer, i.

philander2, *n.* Same as *filander*2.

philandering (fi-lan′dėr-ing), *n.* Flirting; "spooning."

philanthid (fi-lan′thid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Philanthidæ.*

II. *a.* Having the characters of and belonging to the family *Philanthidæ.*

philanthropine (fi-lan′thrọ-pin), *n.* [Gr. φιλανθρώπινος, philanthropic, humane.] One who advocates the educational system known as philanthropinism (which see).

philanthropize (fi-lan′thrọ-pīz), *v. i.* and *t.*; pret. and pp. *philanthropized,* ppr. *philanthropizing.* [*philanthrop*(*y*) + *-ize.*] To be or become philanthropic; practise philanthropy; also, treat with philanthropy; render philanthropic.

philatelical (fil-ạ-tel′i-kạl), *a.* Same as *philatelic.*

philatelism (fi-lat′e-lizm), *n.* Same as *philately.*

philhippic (fil-hip′ik), *a.* [Gr. φιλεῖν, love, + ἵππος, horse.] Fond of horses. [Rare.]

philhydrous (fil-hī′drus), *a.* [Gr. φιλεῖν, love, + ὕδωρ (ὑδρ-), water, + *-ous.* See *Philhydrus.*] Fond of or living in the water: said especially of aquatic insects.

Philidor's gambit. See ★*gambit.*

Philippine mahogany. See ★*asana.*

Philippino, *n.* See *Filipino.*

Philippistic (fil-i-pis′tik), *a.* Pertaining to or supporting the principles of Philippism (which see).

philippium (fi-lip′i-um), *n.* [NL.] A supposed new chemical element announced by Delafontaine as present in the mineral samarskite. Its existence has not been confirmed; what was supposed to be its oxid has been shown to be a mixture, probably, for the most part, of terbia and yttria.

philippus (fi-lip′us), *n.* [NL.] The silver crown struck by Philip II. of Spain during his occupation of the Low Countries.

philipstadite (fi-lip′sta-dīt), *n.* [Sw. *Philipstad* + *-ite*².] A variety of amphibole from Philipstad (Filipstad), in Sweden; it yields etching figures of unusual form.

Philistee†, *n.* Same as *Philistine.*

Philistine, *n.* **II.** *a.* **1.** Of or pertaining to the ancient Philistines.—**2.** Of or pertaining to or having the characteristics of Philistines in the modern social and literary sense (see the noun, def. 3.); commonplace; dully matter-of-fact and satisfied; conventional and unimaginative.

Philistinic (fil-is-tin′ik), *a.* [*Philistin(e)* + *-ic.*] Pertaining to, or exhibiting, Philistinism; Philistine.

Philistinize (fi-lis′tin-īz), *v. t.*; pret. and pp. *Philistinized,* ppr. *Philistinizing.* [*Philistine,* in senses 3 and 4, + *-ize.*] To render Philistine in character. See *Philistine,* 3 and 4.

> Children, perchance, and his hardening lawyer's head are secretly *Philistinizing* the demagogue, blunting the fine edge of his Radicalism, turning him into a slow-stepping Liberal, otherwise your half-Conservative in his convictions. *G. Meredith,* Tragic Comedians, xvi.

phillipite (fil′ip-īt), *n.* [Named (Domeyko, 1876) from some one named *Phillips.*] A hydrated sulphate of copper and iron which occurs in azure blue masses, granular and fibrous in structure: taken from the copper mines of Chile where it has been formed from the decomposition of chalcopyrite.

Phillipsia (fi-lip′si-ä̤), *n.* [NL.] A genus of opisthoparian trilobites of the family *Proëtidæ,* having small oval tuberculate carapaces with subcylindrical glabella provided with strong basal lobes, nine thoracic segments, and large multisegmented pygidium. It is the latest surviving genus of trilobites, ranging from the Lower Carboniferous into the Permian formations.

phillygenin (fi-lij′e-nin), *n.* [*philly(rin)* + *-gen* + *-in*².] A crystalline compound, $C_{20}H_{22}O_6$ (?), formed by the hydrolysis of phillyrin.

phillyrin (fil′i-rin), *n.* [*Phillyr(ea)* + *-in*².] A crystalline glucoside, $C_{26}H_{32}O_{11} + 1{}^1/_2\,H_2O$ (?), found in the bark of *Phillyrea latifolia.* When hydrolyzed with dilute acids it yields glucose and phillygenin.

philobiblic (fil-ọ-bib′lik), *a.* [Gr. φιλόβιβλος, ‹ φιλεῖν, love, + βίβλος, book.] Fond of books; bibliophilic. [Rare.]

philobiblist (fil-ọ-bib′list), *n.* [*philobibl(ic)* + *-ist.*] A lover of books; a bibliophile. [Rare.]

philocaly (fi-lok′ạ-li), *n.* [See *philocalist.*] The love of beauty. [Rare.]

philocatalase (fil-ọ-kat′ạ-lās), *n.* [*philo-* + *catalase.*] A ferment which prevents the destructive action of anticatalase upon catalase.

> The name *philocatalase* is given to a ferment which is present in many animal tissues; although without direct action on catalase it possesses the property of protecting the catalase against the destructive action of anticatalase. *Nature,* May 25, 1905, p. 96.

philocomal (fi-lok′ọ-mạl), *a.* [Gr. φιλόκομος, ‹ φιλεῖν, love, + κόμη, hair.] Paying much attention to the care of the hair. [Rare.]

philocubist (fi-lok′ụ̄-bist), *n.* [Gr. φιλόκυβος, fond of dice.] One who is fond of dice; a dice-player. [Rare.]

philocynic (fil-ọ-sin′ik), *a.* [Gr. φιλεῖν, love, + κύων, dog. See *cynic.*] Fond of dogs. [Rare.]

philocyny (fi-los′i-ni), *n.* [*philocyn(ic)* + *-y.*] Love of dogs. [Rare.]

philocytase (fi-lọ-sī′tās), *n.* [Gr. φιλεῖν, love, + κύτος, a hollow (a cell), + *-ase.*] Same as ★*amboceptor.*

Philodina (fil-ọ-dī′nä̤), *n.* [NL.] The typical genus of the family *Philodinidæ.* *Ehrenberg.*

Philodinidæ (fil-ọ-din′i-dē), *n. pl.* [NL. *Philodina* + *-idæ.*] A family of rotifers, of the order *Bdelloida,* having the corona a pair of circular lobes placed transversely, and the velum a continuous marginal curve bent on itself at the dorsal surface so as to encircle the corona twice, the mouth being between its upper and lower curves. It contains the genera *Philodina, Rotifer, Actinurus,* and *Callidina.*

philodox (fil′ọ-doks), *a.* [Gr. φιλόδοξος, ‹ φιλεῖν, love, + δόξα, fame, opinion.] Properly, loving fame or glory; in the extract, loving one's own opinions; dogmatic. [Rare.]

> A perswasion of certaintie is a manifest testimonie of foolishness and of extreame uncertaintie. And no people are lesse Philosophers and more foolish than Platoes *Phylodoxes,* or lovers of their owne opinions. *Florio,* tr. of Montaigne's Essays, ii. 12.

philodoxical (fil-ọ-dok′si-kạl), *a.* [Gr. φιλεῖν, love + δόξα, opinion, + *-ic* + *-al*¹.] In love with one's own theories or opinions. [Rare.]

philogastric (fil-ọ-gas′trik), *a.* [Gr. φιλεῖν, love, + γαστήρ, belly. See *gastric.*] Fond of one's stomach; epicurean; gluttonous. [Rare.]

philogenitive (fil-ọ-jen′i-tiv), *a.* [*philo-* + *genitive.*] Fond of begetting; having strong sexual impulses. [Rare.]

philograph (fil′ọ-gråf), *n.* [*philo-* + *-graph.*] An instrument for drawing objects in facsimile.

> He did not think that photography was suited for rapid sketches of country. The *philograph,* in which an exact picture was sketched on glass or celluloid of the objects seen through it, was useful and accurate, and excellent in its perspective. But it was the range-finder which had revolutionized topographical study. *Times* (London), March 1, 1894.

philogynous (fi-loj′i-nus), *a.* [*philogyn(y)* + *-ous.*] Fond of women. [Rare.]

Philol. An abbreviation (*a*) of *philological;* (*b*) of *philologist;* (*c*) of *philology.*

philomuse (fil′ọ-mūz), *a.* [Gr. φιλόμουσος, loving the Muses.] Loving the Muses or music and the other arts. [Rare.]

philonatural (fil-ọ-nạt′ụ̄-rạl), *a.* Loving the natural or the naturalistic method. [Rare.]

> The second method, the familiar philo-real or *philonatural,* hardly may be said to be a method for writing a novel: it is a mode of writing what you will. *H. D. Sedgwick,* Essays on Great Writers, p. 48.

Philonexidæ (fil-ọ-nek′si-dē), *n. pl.* [NL. *Philonexis* + *-idæ.*] A family of octopodous cephalopods having the hectocotylized arm autotomous, the other arms all alike in the two sexes, and large aquiferous pores near the head and funnel. It contains the genera *Philonexis* and *Tremoctopus.*

Philonexis (fil-ọ-nek′sis), *n.* [Gr. φιλεῖν, love, + νῆξις, a swimming.] The typical genus of the family *Philonexidæ.* *D'Orbigny.*

Philonian (fi-lō′ni-an), *a.* Same as *Philonic.*

Philonism (fī′lọ-nizm), *n.* [*Philon(ic)* + *-izm.*] The doctrines of the Jewish philosopher Philo.

Philonist (fī′lọ-nist), *n.* A follower of the Jewish philosopher Philo.

Philonize (fī′lọ-nīz), *v. i.*; pret. and pp. *Philonized,* ppr. *Philonizing.* [*Philon(ic)* + *-ize.*] To adopt the views of the Jewish philosopher Philo; imitate Philo's mode of thought.

philonoist (fi-lon′ọ-ist), *n.* [Gr. φιλεῖν, love, + νοῦς, mind.] A lover of intelligence or knowledge. [Rare.]

philopator (fil-ọ-pā′tộr), *a.* [Gr. φιλοπάτωρ, loving one's father; φιλόπατρις, loving one's fatherland.] Loving one's father or one's native country: applied as a surname to one of the Ptolemies and to other kings.

philopogon (fil-ọ-pō′gōn), *n.* [Gr. φιλεῖν, love, + πώγων, beard.] One who loves beards. [Rare.]

> Whatever absurdity in hair may be demanded by the trichotomists *philopogons* of Europe, I can at once supply it to any extent from Africa—gratis. *R. F. Burton,* Two Trips to Gorilla Land, I. 205.

philopornist (fil-ọ-pôr′nist), *n.* [Gr. φιλόπορνος, ‹ φιλεῖν, love, + πόρνη, harlot.] One who loves, or consorts with, harlots. [Rare.]

> To the mealy-mouthed modern *philopornist* the homely and hardy method of the old poet who first discovered or invented the penitent prostitute may seem rough and brutal in its lifelike straightforwardness. *Swinburne,* Studies in Prose and Poetry, p. 122.

philoprogenitive (fil″ọ-prọ-jen′i-tiv), *a.* [See *philoprogenitiveness.*] Fond of offspring; inclined to beget offspring; of or pertaining to fondness for offspring.

> As among brutes the *philoprogenitive* instinct is occasionally suppressed by the desire to kill, and even to devour, their young ones; so among primitive men this instinct is now and again over-ridden by impulses temporarily excited. *H. Spencer,* Prin. Sociol., iii. 11.

philopterid (fi-lop′tẹ-rid), *n.* and *a.* **I.** *n.* A member of the mallophagous family *Philopteridæ.*

II. *a.* Having the characters of or belonging to the family *Philopteridæ.*

philos. An abbreviation (*a*) of *philosophical;* (*b*) of *philosophy.*

philosophastry (fi-los′ọ-fas-tri), *n.* [See *philosophaster.*] The philosophy of philosophasters; pseudophilosophy. [Rare.]

philotechnist (fil-ọ-tek′nist), *n.* [*philotechn(ic)* + *-ist.*] One who is devoted to the study of the arts, especially of the industrial arts.

> In the following then I distinguish, first, those whom you indeed may call philotheorists, or *philotechnists,* or practicians, and secondly those whom alone you may rightly denominate philosophers, as knowing what the science of all these branches of science is, which may prove to be something more than the mere aggregate of the knowledge in any particular science. *Plato,* quoted in Coleridge, The Friend, vii.

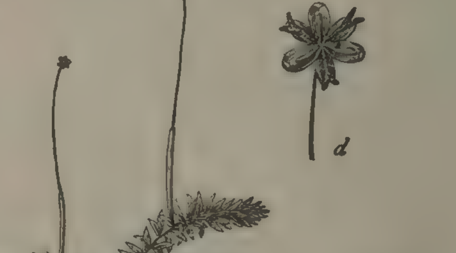
philotheism (fil-ō-thē′izm), *n.* [*philo-* + *theism.*] Love of God. *N. E. D.* [Rare.]

philotheist (fil-ọ-thē′ist), *n.* [★*philothe(ism)* + *-ist.*] One who loves God. *N. E. D.* [Rare.]

philothion (fil-ọ-thī′on), *n.* [Gr. φιλεῖν, love, + θεῖον, sulphur.] An enzyme discovered by De Rey-Pailhade, characterized by its power of forming hydrogen sulphid from free sulphur.

> De Rey-Pailhade gave the name "*philothion*" to the enzyme discovered by him. In 1885, in an investigation undertaken to determine the mechanism of the elimination, in the organism, of free sulphur taken into the gastro-intestinal tract, he was led to the conclusion that there is direct combination of this sulphur with nascent hydrogen of fermentation with the formation of hydrogen sulphide. *Amer. Chem. Jour.,* June, 1903, p. 517.

Philotria (fi-lō′tri-ä̤), *n.* [NL. (Rafinesque, 1818), probably incorrectly derived from φύλλον, leaf, + τρεῖς (τρι-), three, in allusion to the situation of the leaves in whorls of three.] A genus of perennial submerged water-plants belonging to the family *Vallisneriaceæ.* They have slender elongated branching stems with crowded opposite or whorled leaves, and solitary diœcious or polygamous flowers arising from an axillary, tubular, two-cleft spathe. The sterile flowers are small and have a perianth of six segments, the three inner of which are petal-like, while the fertile flowers have a perianth extended into a long slender tube with a six-parted limb. The staminate flowers usually break off and rise to the surface, where they shed their pollen around the stigmas of the fertile flowers raised to the surface by the elongated calyx-tube, which varies in length according to the depth of the water. About 10 species are recognized, found in fresh-water ponds and streams in temperate and tropical America. *P. Canadensis* is the *water-weed* or *choke-pondweed.* See *Babington's-curse.*



Philotria Canadensis.

a, a plant, reduced in size; *b,* diagram of flower; *c,* longitudinal section of ovary with four ovules; *d,* flower.

philoxenist (fi-lok′sẹ-nist), *n.* [*philoxen(y)* + *-ist.*] One who is hospitable to strangers. [Rare.]

philoxeny (fi-lok′sẹ-ni), *n.* [Gr. φιλοξενία, ‹ φιλόξενος, loving strangers, hospitable, ‹ φιλεῖν, love, + *ξένος*, stranger, guest.] Good will toward strangers; hospitality. [Rare.]

philozoism (fil-ǫ-zō'ism), *n.* [*philozo*(*ic*) + *-ism.*] The love of mankind for animals. *L. F. Ward*, Pure Sociol., p. 429.

philozoist (fil-ǫ-zō'ist), *n.* [*philozo*(*ic*) + *-ist.*] A lover of animals; one who has sympathy for the sufferings of animals.

The first in the field were the *philozoists*, commonly known as anti-vivisectionists. *Science*, Jan. 10, 1902, p. 45.

philtrum, *n.* **2.** The groove running from the septum of the nose down the central line of the upper lip.

It [Chimpanzee] has a widely grooved *philtrum* on the middle part of margin of lip.
Proc. Zool. Soc. London, 1899, p. 310.

phimotic (fī-mot'ik), *a.* [*phimosis* (*-ot-*) + *-ic.*] Pertaining to or characteristic of phimosis. *Buck*, Med. Handbook, I. 722.

phlebangioma (fleb″an-ji-ō'mä), *n.*; pl. *phlebangiomata* (-ma-tä). [NL., < Gr. *φλέψ* (*φλεβ-*), vein, + *ἀγγεῖον*, vessel, + *-oma.*] A tumor which consists chiefly of dilated veins.

phlebectasis (flę-bek'tą-sis), *n.* [NL.] Same as *phlebectasia.*

phlebectasy (flę-bek'tą-si), *n.* Same as *phlebectasia.*

phlebectomy (flę-bek'tǫ-mi), *n.* [Gr. *φλέψ* (*φλεβ-*), vein, + *ἐκτομή*, excision.] Excision of a portion of a vein.

phlebin (fleb'in), *n.* [Gr. *φλέψ* (*φλεβ-*), vein, + *-in*^{2}.] The hemoglobin present in venous blood.

Phlebodium (flę-bō'di-um), *n.* [NL. (J. Smith, 1841), < Gr. *φλέψ* (*φλεβ-*), a vein, + *ὀδούς*, a tooth; so called from the tooth-like junction of the veins in the areolæ.] A small genus of usually epiphytic middle-American ferns, allied to *Polypodium*, having broadly ovate, deeply pinnatifid fronds from 1 to 3 feet long, with veins copiously anastomosing to form one or more regular series of areolæ in which the sori are borne, each upon the united ends of two or more excurrent veinlets of the same areola. The type species of the genus, *P. aureum*, is abundant in the West Indies and extends to Florida, where it occurs uniformly on the trunks of the palmetto.

phlebœdesis (fleb-ę-dē'sis), *n.* [Gr. *φλέψ* (*φλεβ-*), vein, + *οἴδησις*, a swelling.] A swelling up or increase in the size of the peripheral vessels of the blood-vascular system, such as is found in *Arthropoda.*

These additional features include the ostiate heart and the "*phlebœdesis,*" that is to say, the peripheral portions of the blood-vascular system are swollen so as to obliterate to a large extent the cœlom, whilst the separate veins entering the dorsal vessel or heart coalesced, leaving valvate ostia, by which the blood passed from a pericardial blood-sinus formed by the fused veins into the dorsal vessel or heart.
Jour. Roy. Micros. Soc., Oct., 1904, p. 524.

phlebogenous (flę-boj'e-nus), *a.* [Gr. *φλέψ* (*φλεβ-*), vein, + *-γενης*, -producing.] Of venous origin.

phlebograph (fleb'ǫ-gräf), *n.* [Gr. *φλέψ* (*φλεβ-*), vein, + *γράφειν*, write.] A sphygmograph adapted to recording the movements of pulsation in a vein.

phlebosclerosis (fleb″ǫ-sklę-rō'sis), *n.* [NL., < Gr. *φλέψ* (*φλεβ-*), vein, + *σκλήρωσις*, hardening.] Fibrous thickening and hardening of the veins. *Buck*, Med. Handbook, II. 105.

phlebosclerotic (fleb″ǫ-sklę-rot'ik), *a.* Pertaining to or affected with phlebosclerosis.

phlebostenosis (fleb″ǫ-stę-nō'sis), *n.* [NL., < Gr. *φλέψ* (*φλεβ-*), vein, + *στένωσις*, narrowing.] Stricture of a vein; general narrowing of the veins.

phlegma, *n.* **2.** In making whisky or other spirits, the vinasse or residue left in the still after the alcohol has been practically removed as vapor. *Census Bulletin* 190, June 16, 1902, p. 12.

phlegmon, *n.*—**Gas phlegmon,** localized inflammation of the subcutaneous tissue accompanied by the formation of gas, due usually to the presence of a special micro-organism, *Bacillus aërogenes.*

phlegmonic (fleg-mon'ik), *a.* Same as *phlegmonous.*

Phlegmonous laryngitis. See ★*laryngitis.*

phlein (flē'in), *n.* [Gr. *φλοιός*, bark, membrane, + *-in*^{2}.] Same as ★*irisin.*

phlobaphene (flob'ą-fēn), *n.* [Irreg., < Gr. *φλο*(*ιός*), bark, + *βαφή*, dipping, + *-ene.*] One of a class of amorphous red compounds, insoluble in water but soluble in alcohol and caustic alkalies, obtained by boiling tannins with dilute mineral acids or caustic alkalies. It occurs also to some extent in the tannin-bearing plants, owing to oxidation by the air. Also called *cinchona-red*, *kino-red*, etc.

phlobaphenic (flob-ą-fē'nik), *a.* [*phlobaphene* + *-ic.*] Pertaining to or derived from phlobaphene.

phlœophagous (flę-of'ą-gus), *a.* [Gr. *φλοιός*, bark, + *φαγεῖν*, eat, + *-ous.*] Bark-eating: said of the *Scolytidæ* and other insects of similar food-habits.

phlœoterma (flē-ǫ-tėr'mą̈), *n.* [Gr. *φλοιός*, bark, + *τέρμα*, a limit.] The innermost layer of the primary cortex, usually not distinctly differentiated, but in the stems of land plants recognizable as a starch-sheath, and in those of aquatics forming the endodermis. An external as well as an internal phlœoterma is sometimes spoken of. *Strasburger.*

phlogistical (flǫ-jis'ti-kąl), *a.* Same as *phlogistic.*

phlogogenetic (flog″ǫ-ję-net'ik), *a.* Same as *phlogogenous.*

phlogosed (flō'gōst), *p. a.* [See *phlogosis.*] Inflamed.

phlogosin (flō-gō'sin), *n.* [Gr. *φλόξ* (*φλογ-*), flame, + *-ose* + *-in*^{2}.] A compound said to be obtained from the pus-bacterium *Staphylococcus pyogenes aureus.*

phloramine (flǫ-ram'in), *n.* [*phlor*(*izin*) + *amine.*] A compound, $NH_2.C_6H_3(OH)_2$ or 5-aminoresorcinol, which is formed by the action of ammonia on phloroglucinol. It forms silky, needle-like crystals which melt at 146–152° C.

phloretic (flǫ-ret'ik), *a.* [*phloret-in* + *-ic.*] Derived from phloretin.—**Phloretic acid,** a white crystalline acid, $C_9H_{10}O_3$, made by boiling phloretin with caustic potash. It melts at 129° C.

phloretin (flor'e-tin), *n.* [*phlor*(*izin*) + *-et* + *-in*^{2}.] A crystalline substance, $C_{15}H_{14}O_5$, made by hydrolyzing phlorizin with dilute acids. It melts at 253–255° C., and is changed into phloretic acid and phloroglucinol by boiling with caustic potash. It is a febrifuge.

phlorhizin, phloridzin, *n.* Same as *phlorizin.*

phlorizinize (flor'i-zin-īz), *v. t.*; pret. and pp. *florizinized*, ppr. *florizinizing.* [*phlorizin* + *-ize.*] To bring under the influence of phlorizin, the action of which induces glucosuria. Also *phlorhizinize*, *phlorrhizinize*, and *phloridzinize.*

phloroglucinol (flō-rǫ-glö'si-nol), *n.* Same as *phloroglucin.*

phloroglucite (flō-rǫ-glö'sīt), *n.* [*phloroglu-c*(*in*) + *-ite*^{2}.] A sweet crystalline compound, $C_6H_{12}O_3+2H_2O$ or 1,3,5-cyclohexanetriol, formed by reducing phloroglucinol with sodium amalgam.

phlorol (flor'ol), *n.* [*phlor*(*izin*) + *-ol.*] A liquid, $C_8H_9(OH)$ or 2-ethylphenol, found in creosote from wood-tar and also made synthetically, as by the distillation of barium phloretate with lime. It boils at 206.5–207.5° C.

phlorone (flor'ōn), *n.* [*phlor*(*izin*) + *-one.*] A yellow crystalline substance, $C_8H_8O_2$ or 1, 4-dimethylquinone, formed by distilling cresol from coal- or beech-tar with sulphuric acid and pyrolusite. It is also made by oxidizing certain amino compounds. Also called *p-xyloquinone.*

phlorose (flor'ōs), *n.* [*phlor*(*izin*) + *-ose.*] The sugar, probably glucose, which is formed when phlorizin is hydrolyzed by boiling with dilute acids.

phlorrhizin, *n.* Same as *phlorizin.*

Phlox, *n.*—**Alpine phlox,** a low tufted species, *Phlox Douglasii*, with pink, lilac, or white flowers, found in the Sierras of California.—**Prickly phlox,** a polemoniaceous woody herb, *Leptodactylon Californicum*, of the Californian chaparral, the stems densely covered with prickly leaves, the showy, phlox-like corollas pink and of a silky texture.

phloxin, *n.* **2.** A coal-tar color of the xanthene type. It is the sodium salt of tetrabrom-tetrachlor-fluorescein. It dyes wool and silk bluish pink and red in a slightly acid bath. Also called *phloxin TA* and *eosin 10B.*—**Phloxin P,** a coal-tar color of the xanthene type. It is the sodium or potassium salt of tetrabrom-dichlor-fluorescein. It dyes wool and silk bluish pink and red in a slightly acid bath. Also called *new pink* and *erythrosin BB.*

phlyctenophthalmia (flik″ten-of-thal'mi-ą̈), *n.* [NL., < Gr. *φλύκταινα*, a blister, + *ὀφθαλμός*, eye.] Same as *phlyctenular ophthalmia* (which see, under *phlyctenular*).

phlyctenosis (flik-te-nō'sis), *n.* [NL., < Gr. *φλύκταινα*, blister, + *-osis.*] Any skin-disease characterized by an eruption of small vesicles.

phlyzacious (flī-zā'shius), *a.* [*phlyzaci*(*um*) + *-ous.*] Of the nature of a phlyzacium, or pustule.

Ph. M. An abbreviation (*a*) of the Latin *Philosophiæ* (or *Philologiæ*) *Magister*, Master of Philosophy (or Philology); (*b*) of the Late Latin *Pharmaciæ Magister*, Master of Pharmacy.

phobia (fō'bi-ą̈), *n.* [NL., detached from *hydrophobia* and other words containing *-phobia*, < Gr. *-φοβια*, < *φοβεῖν*, fear.] Any morbid uncontrollable dread or fear.

The psychologist should also be thankful to the author for discarding the bewildering nomenclature of manias and *phobias*, and offering a simple and intelligible classification of mental diseases. *Nature*, May 1, 1902, p. 5.

There are many first hand investigators into the Subliminal who, not having themselves met with anything super-normal, would probably not hesitate to call all the reports of it erroneous, and who would limit the Subliminal to dissolutive phenomena of consciousness exclusively, to lapsed memories, subconscious sensations, impulses and *phobias*, and the like.
W. James, in Proc. Soc. Psychical Research, XVII. 18.

Phobian (fō'bi-ąn), *a.* [*Phob*(*os*) + *-ian.*] Of or pertaining to Phobos, a moon of Mars.

It would be only necessary to divide by one thousand the dimensions of any earthly object to ascertain its dimensions as modeled on a *Phobian* scale. . . . A ship of the size of the Great Eastern sailing on a *Phobian* ocean would be less than 7½ inches long. . . . A United States postage stamp would cover a space of nearly three *Phobian* city lots. *Sci. Amer.*, Aug. 20, 1892, p. 112.

phobic (fō'bik), *a.* [*phobia* + *-ic.*] Of or pertaining to a phobia; of the nature of morbid fear. *Ribot* (trans.), Psychol. of Emotions, p. 215.

phocenic (fǫ-sen'ik), *a.* [Also *phocænic*; < Gr. *φώκαινα*, a dolphin, + *-ic.*] Contained in porpoise- or dolphin-oil.—**Phocenic acid,** isovaleric acid. See ★*isovaleric.*

phocenin (fǫ-sē'nin), *n.* [*phocen*(*ic*) + *-in*^{2}.] An oil obtained from two species of dolphin, *Delphinum phocæna* and *D. globiceps.* It contains phocenic or isovaleric acid.

phocid (fō'sid), *n.* [*Phocid*(*æ*).] A member of the family *Phocidæ*; a seal.

Phocoidea, *n. pl.* **2.** In a more restricted sense, the earless seals, *Phocidæ*, raised to the rank of a superfamily. Correlative with *Otarioidea* and *Rosmaroidea.*

phocomelia (fō-kǫ-mē'li-ą̈), *n.* [NL., < Gr. *φώκη*, seal, + *μέλος*, limb.] In *teratol.*, a condition in which the hands and feet, one or all, are seemingly attached directly to the trunk, the intervening bones of the extremities being extremely short.

phocomelous (fǫ-kom'e-lus), *a.* [*phocomel*(*us*) + *-ous.*] Of the nature of a phocomelus or monster with very short extremities; exhibiting phocomelia.

phocomely (fǫ-kom'ę-li), *n.* Same as ★*phocomelia.* *W. Bateson*, Study of Variation, p. 399.

Phœbe^1, *n.* **2.** [*l. c.*] (*b*) A serranoid fish, *Prionodes phœbe*, of the West Indian fauna.— **3.** The ninth satellite of Saturn, announced and named by Professor W. H. Pickering, in 1899, as having been found on photographic plates made at Arequipa, in the South American branch of the observatory of Harvard University. The discovery remained unconfirmed until 1904, when the satellite was rediscovered upon a large number of more recent Arequipa plates, which furnish data for a complete determination of its orbit. According to Pickering, its distance from the planet is 8,000,000 miles (more than 2½ times as great as that of Iapetus, the most remote of the satellites previously known) and its period 546.5 days. Its motion appears to be retrograde—a most surprising result. It is extremely faint (sixteenth magnitude) and is probably beyond the reach of visual observation with any existing telescope. Its diameter is estimated at 200 miles.

Phœnicaceæ (fē-ni-kā'sę-ē), *n. pl.* [NL. (W. P. Schimper, 1871), < *Phœnix* (see *Phœnix*^{2}) + *-aceæ.*] The palm family. See *Palmæ*^{2}.

Phœnicantha (fē-ni-kan'thą̈), *n.* [NL. (Wight, 1906), < Gr. *φοῖνιξ*, red, + *ἄνθη*, blossom.] A genus of leguminous plants belonging to the family *Fabaceæ.* See *Sutherlandia.*

phœnicious (fę-nish'us), *a.* Same as *phenicious.*

phœnicite (fē'ni-sīt), *n.* [Gr. *φοῖνιξ* (*φοινικ-*), purple, + *-ite*^{2}.] Same as *melanochroite.*

phœnicochroite (fē-ni-kok'rǫ-īt), *n.* [Gr. *φοῖνιξ* (*φοινικ-*), purple, + *χρόα*, color, + *-ite*^{2}.] Same as *melanochroite.*

pholadian (fǫ-lā'di-ąn), *a.* and *n.* **I.** *a.* Of or pertaining to the *Pholadidæ.*

II. *n.* A pholad.

pholadid (fol'ą-did), *n.* Same as *pholad.*

pholadoid (fol'ą-doid), *a.* [*pholad* + *-oid.*] Resembling a pholad or the *Pholadidæ.*

pholcid (fol′sid), *n.* and *a.* **I.** *n.* A member of the family *Pholcidæ*.

II. *a.* Having the characteristics of or belonging to the family *Pholcidæ*.

Pholidapus (fọ-lid′ạ-pus), *n.* [NL., < *Pholis* (*-lid-*) + Gr. ἄπους, footless.] A genus of blennioid fishes found in the Okhotsk Sea.

Pholidichthys (fol-i-dik′this), *n.* [NL., < *Pholis* (*-lid-*) + Gr. ἰχθύς, fish.] A genus of blennioid fishes inhabiting tropical parts of the Pacific Ocean.

pholidolite (fọ-lid′ọ-līt), *n.* [Gr. φολίς (φολιδ-), scale, + λίθος, stone.] A hydrous silicate of aluminium, iron, magnesium, and potassium, occurring in minute grayish-yellow crystalline scales: found in Sweden.

pholidosis (fol-i-dō′sis), *n.* [Gr. φολίς (φολιδ-), scale, + *-osis.*] In *zoöl.*, the arrangement or pattern of the scales.

> An individual anomaly in the mental *pholidosis*.
> *Proc. Zool. Soc. London*, 1896, p. 927.

Pholiota (fō-li-ō′tạ̈), *n.* [NL. (Fries, 1821), < Gr. φολίς, scale, in allusion to the scaly pileus, + οὖς (ὠτ-), ear.] A large genus of rusty-spored agarics having a fleshy pileus and a continuous annulus. Over 120 species are reported by Saccardo. Some grow on the ground and some on decaying wood. *P. squarrosa* is common on decaying wood in Europe and North America.

Pholis (fō′lis), *n.* [NL., < Gr. φολίς, a scale.] A genus of elongate blennioid fishes inhabiting the shores of northern seas.

pholque (folk), *n.* [F., < NL. *Pholcus.* See *Pholcus.*] A spider of the genus *Pholcus.* [Rare.]

phon., phonet. [*l. c.* or *cap.*] Abbreviations of *phonetics*.

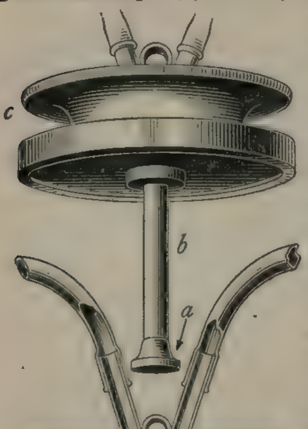
phonascus, *n.* **2.** A former name for a composer of melodies, as distinguished from ★*symphoneta*, a composer of part-music.

phonautograph, *n.*—**Hensen's phonautograph.** Same as *Hensen* ★*recorder*.

phoneme (fō′nēm), *n.* [Gr. φώνημα, a sound made, a voice, < φωνεῖν, make a sound, speak.] **1.** Same as *phone*^{1}, *n.*—**2.** A voice-sound imagined by the insane; a hallucination of voices. *C. Wernicke* (trans.), in Alien. and Neurol., Aug., 1904, p. 317.

phonendoscope (fọ-nen′dọ-skōp), *n.* [Gr. φωνή, sound, + ἔνδον, within, + σκοπεῖν, view.] A modification of the stethoscope in which the sounds transmitted to the ear are increased in intensity by means of two interposed disks of vulcanite or other material having similar physical properties.

> In regard to percussion, I would emphasize the value of auscultatory percussion, using the *phonendoscope* or a stethoscope of the Bowles' type.
> *Amer. Jour. Clinical Med.*, Oct., 1907, p. 1201.



Phonendoscope, with sectional view.

a, hard rubber cap on metal tube, *b*: this cap is placed in contact with the part to be auscultated and the sound-waves are transmitted to the two vulcanite disks, *d*. These sound-waves, intensified by the vibration of the inner disk, are collected in the hollow of the metal plate, *c*, and conveyed through the hollow tubes opening from it to the ears.

phonesis (fọ-nē′sis), *n.* [NL. *phonesis*, < Gr. φώνησις, < φωνεῖν, utter sounds, speak, < φωνή, a sound.] Articulation of sound; enunciation; pronunciation; phonetic character.

> Now, however, it is easily seen by anthropologists that language, like man himself, had a very humble beginning, and has reached its present marvellously perfect state sensim sine sensu, slowly improving in its *phonesis* and structure hand in hand with the slow improvement of the physical organs in virtue of which man has become a speaking animal. *Keane*, Ethnology, p. viii.

Phonetic complement, element, law. See ★*complement*, etc.

phonetico-ideographic (fọ-net″i-kọ-ī″dẹ-ọ-graf′ik), *a.* Pertaining or belonging to a kind of writing characterized by a mixture of ideograms and phonetic elements.

> This mixture of letters, hieroglyphics, and figurative signs, constitutes a kind of writing recalling the *phonetico-ideographic* stage through which primitive peoples (the Mexicans and Chinese certainly) passed, before the discovery of alphabetic writing.
> *C. Lombroso* (trans.), Man of Genius, p. 189.

phonetism, *n.* **2.** Phonetic status; the use of symbols with a definite phonetic value.

> At certain points in their [alphabets'] history all but one became crystallized, and remained to show us the steps by which the progress to *phonetism* can be made.
> *Encyc. Brit.*, I. 602.

Phonic explosives, wheel. See ★*explosive*, ★*wheel*^{1}.

phonism (fō′nizm), *n.* [*phone*^{1} + *-ism.*] In *psychol.*, a reproduced sensation of tone, regularly accompanying the arousal of sensation in certain other departments of sense: a form of synæsthesia. See ★*photism*.

> At the same period he noted *phonisms* of pain. These, however, were not prominent until the summer of 1899, when a badly injured finger gave occasion for a series of determinations of the 'pitch' of the pain.
> *Amer. Jour. Psychol.*, XI. 392.

phonocard (fō′nọ-kärd), *n.* [*phono*(*graphic*) + *card.*] Same as ★*phonopostal.* [Recent.]

phonog. An abbreviation of *phonography*.

phonoglyph (fō′nọ-glif), *n.* [Gr. φωνή, sound, + γλυφή, a carving.] An incised picture, figure, or sign representing a certain sound. Compare *phonogram*, 1. *Keane*, Man, Past and Present, p. 25.

phonogramic (fō-nọ-gram′ik), *a.* [*phonogram* + *-ic.*] Pertaining to or of the nature of a phonogram.

phonogrammatic (fō″nọ-gra-mat′ik), *a.* Same as ★*phonogramic*.

phonol. An abbreviation of *phonology*.

phonomassage (fō″nọ-ma-säzh′), *n.* [Gr. φωνή, sound, + E. *massage.*] Action upon the drum membrane and ossicles of the ear of sound-waves systematically directed against them, in the treatment of deafness resulting from ankylosis of the ossicles. *Buck*, Med. Handbook, III. 606.

phonometer, *n.* **2.** In *psychophys.*, an instrument for the production of accurately graded intensities of sound. The simplest form of phonometer is the ★*sound-pendulum* (which see). In Wundt's gravity-phonometer, ivory balls are dropped by electromagnetic releases from varying heights upon hard-wood plates. *E. B. Titchener*, Exper. Psychol., II. ii. 221. **3.** A clockwork instrument swung in gimbals, so that its face is always horizontal, and on whose dial are certain marks indicating intervals at which a whistle or other signal should be made to announce the compass course of the vessel.

phonometric (fō-nọ-met′rik), *a.* [*phonometr*(*y*) + *-ic.*] Of or pertaining to the measurement of acoustic pitch or intensity, specifically by the graphic method. See *phonometer*.

phonometry (fọ-nom′e-tri), *n.* [Gr. φωνή, sound, + -μετρια, < μέτρον, measure.] The measurement of the pitch or the intensity of sound; the scientific use of the phonometer.

phonomime† (fō′nọ-mīm), *n.* [Gr. φωνόμιμος, imitating voice.] A musical instrument imitating a chorus of voices. *N. E. D.*

phonomimic (fō-nọ-mim′ik), *a.* [*phonomim*(*e*) + *-ic.*] Noting a system of teaching in which each of the elementary sounds of speech is associated with an appropriate onomatopœic gesture. *N. E. D.*

phonopathy (fọ-nop′ạ-thi), *n.* [Gr. φωνή, sound, + -παθεια, < πάθος, disease.] Any disease of the organs concerned in voice-production.

phonophobia (fō-nọ-fō′bi-ạ̈), *n.* [Gr. φωνή, sound, + -φοβια, < φοβεῖν, fear.] Morbid dislike or dread of sounds.

phonophote (fō′nọ-fōt), *n.* [Gr. φωνή, sound, + φῶς (φωτ-), light.] An instrument for the production of luminous effects by means of sound-waves.

phonoplex, *n.* **II.** *a.* Of or pertaining to a system of telegraphy in which interrupted and undulatory currents are used simultaneously in signaling over the same wire.

phonopostal (fō′nọ-pōs-tạl), *n.* [*phono*(*graph*) + *postal.*] A postal card upon which a message has been recorded by a form of phonograph.

> The phonocard: The *phonopostal*, says La Nature, is an apparatus which registers and afterward reproduces the human voice, by means of a sheet of pasteboard, shaped like a postal card. Jules Verne conceived the idea of replacing the old wax cylinder used in other phonographs by a sheet of paper, which could be posted like a letter.
> *Sci. Amer.*, Sept. 23, 1905, p. 235.

phonotype (fō′nọ-tīp), *v. t.*; pret. and pp. *phonotyped*, ppr. *phonotyping*. [*phonotype*, *n.*] To print in phonotype or phonetic characters.

phonotypographic (fō-nọ-tip-ō-graf′ik), *a.* Of or pertaining to printing with a phonetic alphabet.

phonozenograph (fō-nọ-zēn′ọ-gråf), *n.* [Gr. φωνή, sound, + ξένος, foreign, + γράφειν, write.] An electrical device for determining the direction from which a sound comes. It consists of a microphone connected with a Wheatstone bridge, a battery, galvanometer, and telephone.

phony (fō′ni), *a.* [*phone* + *-y*^{1}.] Of the character of a 'phone' or of the talk heard over a 'phone'; unsubstantial; imitational; spurious. [Slang.]

> When the District Attorney's men destroyed the paraphernalia found in the palatial gambling den the articles proved to be what the detectives oddly styled "*phony*." That is a curious word and implies that, as regards merit, a thing so qualified has no more substance than a telephone talk with a supposititious friend.
> *Evening Telegram*, Dec. 9, 1904.

phooka, *n.* See ★*pooka*.

phorid (for′id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Phoridæ*.

II. *a.* Having the characters of or belonging to the family *Phoridæ*.

phormine (fôr′min), *n.* [A metathesis of *morphine.*] Same as ★*oxydimorphine*.

phorometer (fọ-rom′e-tėr), *n.* [Gr. -φορος, bearing, + μέτρον, measure.] An instrument for determining the presence and degree of insufficiency of the extrinsic eye-muscles.

> Then with the lenses on the patient which correct the error of refraction, if there is one, I place a Steven's *phorometer* just in front of the eyes, base of the prisms in the instrument up and down. One should be careful to have the instrument perfectly level. This brings them into position to test the lateral muscles, the esophoria or exophoria, if either is present.
> *Optical Jour.*, July 14, 1904, p. 250.

phorometry (fọ-rom′e-tri), *n.* [*phorometer* + *-y*^{3}.] Measurement of the amount of insufficiency of the external muscles of the eye; the scientific use of the phorometer. *Optical Jour.*, June 23, 1904, p. 77.

phorone (for′ōn), *n.* An unsaturated ketone, $C_9H_{14}O$ or diisopropylidene-acetone, made by the action of quicklime on acetone, and also in other ways. It forms large yellowish-green crystals that melt at 28° C. Its odor somewhat resembles that of the geranium.

phoronic (fọ-ron′ik), *a.* [*phoron*(*e*) + *-ic.*] Noting an acid, $C_{11}H_{18}O_5$, derived from camphic acid.

Phoronis, *n.* **2.** [*l. c.*] A worm of the genus *Phoronis*. See cut at ★*Actinotrocha*.

phoronomy, *n.* **3.** That branch of science which treats of the movements of organisms in space; that branch of science which treats of the vital movements of organisms.

> The science of motion, or mechanics, is now taken . . . in the biological sense as *phoronomy*, the science of the movements of organisms in space.
> *Haeckel* (trans.), Wonders of Life, p. 259.

> It would be best to . . . restrict the name *phoronomy* to the science of the vital movements which are peculiar to organisms, in contrast to kinematics, the exact science of the inorganic movements of all bodies.
> *Haeckel* (trans.), Wonders of Life, p. 259.

Phororhacos (fọ-ror′ạ̈-kos), *n.* [NL., < Gr. φώρ, thief, + ῥάκος, rag.] A giant extinct flightless carinate bird, supposed to be wholly or partly carnivorous in habits, found in the Miocene deposits of the Santa Cruz formation in Patagonia. The feet are armed with powerful claws, and the head is provided with an enormous curved beak. The vertebræ of the neck are as large as those of a horse. The skull of one large species measures 27 inches in length by 7 inches in depth, exceeding in size the skull of a horse. From the sole of the foot to the top of the head this bird had a height of between 7 and 8 feet. *Phororhacos* is believed to be more or less distantly related to the herons.

phorotone (for′ọ-tōn), *n.* [Gr. -φορος, bearing, + τόνος, tension.] A device for strengthening the ocular muscles, by means of prisms, in cases of heterophoria.

phorozoöid (for-ọ-zō′oid), *n.* [Gr. -φορος, bearing, + E. *zoöid.*] In some ascidians, as the *Doliolidæ*, a foster form or nurse, which consists of a free-swimming sexually immature zoöid, having a ventrical outgrowth on which sexual zoöids, known as gonozoöids, are produced. Compare *gonozoöid* and *trophozoöid*.

phorozoön (for-ǫ-zō′on), *n.*; pl. *phorozoa* (-ạ̈). [NL. < φορά, motion, + ζῷον, animal.] Among the lower *Metazoa*, a member of the asexual generation which bears, in the form of buds or otherwise, the members of the sexual generation. *Med. Record*, Oct. 19, 1907, p. 636.

Phorusrhacos, *n.* Same as ★*Phororhacos*. *Phorusrhacos* is to be preferred under the law of priority.

phosote (fō′sōt), *n.* [*phos*(*phate*) + *-ote*.] A trade-name of creosote phosphate, a colorless, syrupy liquid. It is used as a remedy in tuberculosis where creosote is not readily tolerated.

phosphamic (fos-fam′ik), *a.* [*phosph*(*orus*) + *-amic*.] Noting an acid, a substance forming minute colorless crystals of sweetish taste, having the composition $(HO)_2.NH_2.PO$ or orthophosphoric acid with one hydroxyl group replaced by amidogen. Also called *phosphamidic acid* or *amidophosphoric acid*.

phosphamide (fos′fam-id), *n.* [*phosph*(*orus*) + *amide*.] A white substance, insoluble in water, said to be obtainable by the interaction of ammonia and phosphorus oxychlorid, of the composition $(NH_2)_3PO$. Its existence is doubtful.

phosphamidic (fos-fạ-mid′ik), *a.* [*phosphamide* + *-ic*.] Same as ★*phosphamic*.

phosphammonium (fos-fạ-mō′ni-um), *n.* [NL., < *phosph*(*orus*) + *ammonium*.] Same as ★*phosphonium*.

phosphane (fos′fān), *n.* [*phosph*(*orus*) + *-ane*.] A light white powder obtained by the interaction of ammonia and phosphorus pentachlorid. Its composition is somewhat doubtful, but is probably represented by the formula $P_3H_3N_6$.

phosphate, *n.*—**Dibasic phosphate**, usually understood as a salt of orthophosphoric acid in which two of the three hydrogen atoms are replaced by a metal or an electropositive radical, or by two different metals or radicals, as in the common phosphate of soda of the shops (Na_2HPO_4), or in microcosmic salt ($Na(NH_4)HPO_4$).—**Insoluble phosphate.** See *insoluble* ★*phosphoric acid*.—**Land phosphate**, a trade-name of that part of the South Carolina phosphatic deposits which is obtained by digging. Compare *river* ★*phosphate*.—**Monobasic phosphate**, usually understood as a salt of orthophosphoric acid in which but one of the three hydrogen atoms is replaced by a metal or an electropositive radical, as in monosodium phosphate (NaH_2PO_4).—**Monocalcium phosphate.** Same as *monocalcic phosphate*. See ★*calcium phosphate*.—**Navassa phosphate**, a phosphate of lime which occurs as a large deposit on the West Indian island of Navassa, whence it is exported for the manufacture of fertilizers. It contains a good proportion (from 60 to 70 per cent.) of tricalcic phosphate, but this is accompanied by a considerable amount of aluminium and iron compounds, so that the material is not well suited for the production of superphosphate of lime of high grade.—**Normal phosphate**, usually understood as a salt of orthophosphoric acid in which all three of the hydrogen atoms are replaced by a metal or electropositive radical, or by different metals or radicals, as in normal sodium phosphate (Na_3PO_4), or in sodio-diammonium phosphate ($Na(NH_4)_2PO_4$).—**Odorless phosphate**, basic slag; a light slag which contains enough phosphate to make a fertilizer.—**Phosphate rock.** See *phosphorite*.—**Redonda phosphate**, a phosphatic deposit from the island of Redonda in the West Indies. This material consists chiefly of aluminium phosphate, and is therefore not fit for use in the manufacture of superphosphate of lime. Phosphoric acid has been made from it to some extent.—**Reverted phosphate**, that portion of a superphosphate of lime for agricultural use which has become insoluble in water as the result of chemical change. See ★*phosphoric acid*.—**River phosphate**, a trade-name of that part of the South Carolina phosphatic deposits which is obtained from the river-beds by dredging. Compare *land* ★*phosphate*.—**Sodium phosphate.** See ★*sodium*.—**Soluble phosphate.** See *soluble* ★*phosphoric acid*.—**Thomas' phosphate**, the slag produced in the manufacture of steel from cast-iron containing much phosphorus by means of the basic or Thomas and Gilchrist process, in which lime is used as a lining for the converter or hearth. The slag contains a large proportion of calcium phosphate. In a finely ground condition it is extensively used as a manure.—**Tricalcium phosphate.** Same as *tricalcic phosphate*. See ★*calcium phosphate*.

Phosphatic slag. See ★*slag*¹.

phosphation (fos-fā′shọn), *n.* The union of phosphoric acid with a base, or the substitution of phosphoric acid for another combined acid, in either case producing phosphates. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. p. 206.

phosphatol (fos′fạ-tol), *n.* [*phosphate* + *-ol*.] A trade-name of a thick reddish-yellow liquid prepared by the action of phosphorus trichlorid on creosote. Chemically it resembles phosote.

phosphene, *n.*—**Accommodation phosphenes**, phosphenes sometimes observed, when in a dark room, following attempts at accommodation.

Phosphide of copper, a compound of phosphorus and copper, used to toughen commercial copper, and in admixture with sulphid of copper and potassium chlorate to fill Abel's magneto-electric fuses.—**Phosphide of tin.** Same as ★*phosphor-tin*.

phosphine, *n.* **2.** A coal-tar coloring matter related to acridine. It is a by-product in the manufacture of magenta, and is used chiefly for dyeing leather a reddish yellow. Also known as *leather-yellow* and *Philadelphia yellow G*.—**New phosphine**, a basic coal-tar color of the monoazo type. It dyes leather and tannin-mordanted cotton.

phosphinic (fos-fin′ik), *a.* [*phosphin*(*e*) + *-ic*.] Derived from phosphine.—**Phosphinic acid**, an acid, $R_2PO(OH)$, formed by the oxidation of a secondary phosphine, as, diethylphosphinic acid ($(C_2H_5)_2PO(OH)$).—**Phosphinic oxid**, a compound, R_3PO, formed by the oxidation of a tertiary phosphine.

phospho-albumin (fos″fō-al-bū′min), *n.* [*phospho*(*rus*) + *albumin*.] An albuminous substance containing phosphorus, as the nucleo-albumins (phosphoglobulins) and the nucleoproteids.

phosphocarnic (fos-fō-kär′nik), *a.* [*phospho*(*rus*) + L. *caro* (*carn-*) + *-ic*.] Noting an acid, a complex organic substance which was isolated by Siegfried from muscle-tissue. Its iron salt he calls *ferratin*. On decomposition it yields, among other bodies, a crystallizable acid, carnic acid, $C_{10}H_{15}O_5N_3$, which Siegfried regards as pure antipeptone.

phosphoferroproteid (fos-fō-fer-ō-prō′tē-id), *n.* An iron-containing proteid, such as the vitellin of the yolk of eggs.

phosphoglobulin (fos-fǫ-glob′ụ̄-lin), *n.* Same as ★*nucleo-albumin*.

phosphoglucoproteid (fos-fǫ-glö-kǫ-prō′tẹ-id), *n.* A proteid containing a largely developed carbohydrate group. Such bodies have been found in the pancreas and the mammary gland. The ichthulin found in the sperm of certain fishes also belongs to this order.

phosphomolybdate (fos″fō-mǫ-lib′dāt), *n.* [*phosphomolybd*(*ic*) + *-ate*¹.] A salt of phosphomolybdic acid.—**Ammonium phosphomolybdate**, $(NH_4)_3PO_4 12MoO_3$, is a bright canary-yellow crystalline powder, precipitated from a solution of an orthophosphate in moderately strong nitric acid on the addition of ammonium molybdate. It is used for the detection and determination of phosphorus and the radical of phosphoric acid in the course of chemical analysis of steel, fertilizers, etc.

phosphomolybdic (fos″fō-mǫ-lib′dik), *a.* [*phospho*(*rus*) + Gr. *μόλυβδος*, lead, + *-ic*.] Noting a complex acid, $H_3PO_4.12MoO_3$, which is used as a test for the vegetable alkaloids.

phosphonic (fos-fon′ik), *a.* [*phosph*(*orus*) + *-one* + *-ic*.] Derived from phosphorus.—**Phosphonic acid**, an organic acid of phosphorus, which may be regarded as phosphorous acid in which the hydrogen atom directly united with the phosphorus is replaced by an organic radical, as ethyl-phosphonic acid, $C_2H_5.PO_3H_2$.

phosphonium (fos-fō′ni-um), *n.* [NL., < *phosph*(*orus*) + *-on-ium*.] A hypothetical compound, analogous to ammonium, formed by the union of four atoms of hydrogen and one of phosphorus (PH_4). This, as well as the compounds in which from one to four of the hydrogen atoms are replaced by organic radicals, forms salts, as phosphonium iodide (PH_4I), phenylphosphonium iodide ($C_6H_5PH_3I$), tetrethylphosphonium chlorid ($(C_2H_5)_4PI$), etc.

phosphoproteid (fos-fǫ-prō′tẹ-id), *n.* [*phospho*(*rus*) + *proteid*.] An albumin containing a phosphorized radical, such as the nucleo-albumins and the nucleoproteids.

phosphoprotein (fos-fō-prō′tẹ-in), *n.* [*phospho*(*rus*) + *protein*.] A compound protein in which an albuminous radical exists in combination with a phosphorus-containing substance other than nucleic acid or lecithin.

phosphoptomaine (fos-fǫ-tō′mạ-in), *n.* [*phospho*(*rus*) + *ptomaine*.] One of a group of toxic substances found in the blood in cases of phosphorus-poisoning. They are supposedly basic products formed in the metabolism of the body, in combination with phosphorus.

phosphoreal (fos-fō′rẹ-ạl), *a.* [*phosphor*(*us*) + *-e-* + *-al*¹.] Pertaining to, or of the nature of, phosphorus; resembling phosphorus; phosphorescent.

phosphoret (fos′fǫ-ret), *n.* Same as *phosphuret*.

phosphoretic (fos-fǫ-ret′ik), *a.* [*phosphoret* + *-ic*.] Of the nature of a phosphoret; combined with phosphorus. *N. E. D.*

Phosphoric acid. In connection with the manufacture, analysis, and use of fertilizers this term is commonly used to signify, not the orthophosphoric acid of the scientific chemist (H_3PO_4), but phosphorus pentoxid (P_2O_5), which by the earlier chemists was called *phosphoric acid*. *Water-soluble* or simply *soluble phosphoric acid* is phosphorus pentoxid equivalent to the monocalcic phosphate (see ★*calcium phosphate*) present in a fertilizer, which is soluble in cold water. *Citrate-soluble phosphoric acid* is phosphorus pentoxid equivalent to the dicalcic phosphate (see ★*calcium phosphate*) or the aluminium or iron phosphate present in a fertilizer, which is insoluble in cold water but soluble in a cold aqueous solution of ammonium citrate; it represents the 'reverted phosphate' which is liable to form during storage of a fertilizer originally containing only monocalcic phosphate. *Insoluble phosphoric acid* is phosphorus pentoxid equivalent to the tricalcic or normal phosphate (see ★*calcium phosphate*) present in a fertilizer, which does not dissolve to a sensible extent either in water or in ammonium-citrate solution. Water-soluble phosphoric acid has the highest and insoluble phosphoric acid the lowest agricultural value.—**Phosphoric anhydrid.** See ★*anhydrid*.—**Phosphoric pig.** See ★*pig*¹.—**Reverted phosphoric acid**, the equivalent in phosphorus pentoxid (P_2O_5) of that portion of a superphosphate of lime which has become insoluble in water. See *reverted* ★*phosphate*.

phosphoriferous (fos-fō-rif′ẹ-rus), *a.* Bearing or containing phosphorus.

phosphorism (fos′fǫ-rizm), *n.* [*phosphor*(*us*) + *-ism*.] **1.** Chronic phosphorus-poisoning; necrosis of the jaw due to poisoning by phosphorus.

2†. Phosphorescence.

phosphorite, *n.*—**Quercy phosphorites**, in *geol.*, deposits of phosphates of lime at Quercy, central France, of lower Oligocene age, occupying depressions in Jurassic limestones and containing large numbers of vertebrate remains of types similar to those of the Paris gypsum beds.

phosphoritic (fos-fǫ-rit′ik), *a.* [*phosphorite* + *-ic*.] Pertaining to, of the nature of, or containing, phosphorite.

phosphornecrosis (fos″fọr-nek-rō′sis), *n.* Same as *phosphorus* ★*necrosis*.

phosphorochalcite (fos′fǫ-rǫ-kal″sīt), *n.* Same as *phosphochalcite*.

phosphor-tin (fos′fọr-tin), *n.* An alloy consisting of 94 parts of tin-sponge and 6 parts of phosphorus, heated together. It is used in the production of phosphor-bronze.

phosphorus, *n.* **3.** [With a pl. *phosphori* (-rī).] In early use, a substance which emits light otherwise than as the result of ordinary combustion. Thus mention is made of the phosphori of Canton, Homberg, Baldwin, etc. The principal causes of such emission of light are previous exposure to light (insolation), to heat, to mechanical violence (friction, percussion, etc.), to electrical discharge, and to slow surface oxidation, as also the vital processes in the bodies of animals and plants.—**Baldwin's phosphorus**, dried calcium nitrate when sufficiently heated to produce phosphorescence.—**Canton's phosphorus**, calcium sulphid, originally made by heating in a crucible lime from oyster-shells with flowers of sulphur. After exposure to bright light it glows or phosphoresces in the dark. See *Balmain's* ★*paint*.—**Homberg's phosphorus**, calcium chlorid prepared by Homberg by heating together sal ammoniac and slaked lime, and fusing the product, which he found to shine in the dark after exposure to light.—**Kunckel's phosphorus**, the element phosphorus, of modern chemistry, discovered by Brand of Hamburg in 1669 and independently by Kunckel of Wittenberg in 1670. Obtained by ignition of the solid residue from the evaporation of urine, it was for a time distinguished from the Bologna phosphorus (already known as a substance luminous in the dark) by attaching the name of Brand or Kunckel, or by the term *phosphorus urinæ*.—**Phosphorus necrosis.** See ★*necrosis*.—**Phosphorus oxychlorid.** See ★*oxychlorid*.—**Phosphorus pentachlorid**, a yellowish-white crystalline solid, of composition PCl_5, reacting upon water to form hydrochloric and phosphoric acids.—**Phosphorus steel.** See ★*steel*1.—**Phosphorus suboxid**, a substance of red color, produced in small quantity along with the higher oxids of the element when phosphorus is burned with a limited supply of air, and obtainable also by other processes. The formula assigned to it is P_4O. It is doubtful whether this substance is other than impure red phosphorus. A more definite compound, P_2O, can be obtained as a yellow powder by the interaction of phosphorus trichlorid and phosphorus acid.—**Phosphorus trichlorid**, a colorless liquid, produced by the direct action of chlorin on phosphorus, of composition PCl_3, reacting upon water to form hydrochloric and phosphorous acids.—**Red phosphorus.** This form of phosphorus has been shown to be only partly amorphous, a part consisting of microscopic crystals of a red-violet color. It has been recently stated that by heating to the boiling-point a solution of ordinary phosphorus in phosphorus tribromide a scarlet powder is obtained resembling red phosphorus, but of notably greater chemical activity, fitting it for use in the manufacture of friction-matches to ignite by striking on any rough surface. See *phosphorus*, 2.—**Salt of phosphorus.** Same as *microcosmic salt*.—**Wach's phosphorus**, calcium sulphid which has been strongly heated in a crucible after addition in small quantity of a compound of arsenic, antimony, zinc, cadmium, or tin. Such a preparation phosphoresces brightly after exposure to bright light. The sulphids of barium and strontium may be similarly treated.

phosphorus-steel (fos′fǫ-rus-stēl), *n.* See ★*steel*¹.

phosphoryl (fos′fǫ-ril), *n.* The radical PO. Thus phosphorus oxychlorid is sometimes called *phosphoryl chlorid*, $POCl_3$.

phosphosiderite (fos-fọ-sid′ẹ-rīt), *n.* [Gr. *φωσφόρος*, in NL. sense 'phosphorus,' + *σίδηρος*, iron, + *-ite*^{2}.] A hydrous ferric phosphate, $2FePO_4+3\frac{1}{2}H_2O$, occurring in red orthorhombic crystals: found in cavities in iron ore in the Siegen district, Germany.

phosphotage (fos′fọ-tạj), *n.* An anglicized form of a French term applied to a modification of the process of 'plastering' wine in which calcium diphosphate is substituted for calcium sulphate. *Sadtler*, Handbook of Indust. Chem., p. 205.

phosphotungstic (fos-fọ-tung′stik), *a.* [*phospho*(*rus*) + *tungst*(*en*) + *-ic.*] Noting a complex acid of which there are several forms. That best known has the composition H_3PO_4.-$12WO_3$. It is used in connection with stains for histological preparations to be examined under the microscope.

phosphuranylite (fos-fụ-ran′i-līt), *n.* [*phosph*(*orus*) + *uran*(*ium*) + *-yl* + *-ite*^{2}.] A hydrous uranium phosphate, occurring as a deep lemon-yellow pulverulent incrustation: found in North Carolina.

phossy (fos′i), *a.* [*phos*(*phorus*) + *-y*^{3}.] Produced by phosphorus poisoning. [Colloq.]—**Phossy jaw**, necrosis of the jaw caused by poisoning with phosphorus, as among match-makers. See ★*phosphorism.*

phot (fōt), *n.* [Gr. *φῶς* (*φωτ-*), light.] A proposed photometric unit equal to an illumination of one lux for one second; one lumen of light-flux applied to a surface of one square meter for one second of time.

phot., photog. Abbreviations (*a*) of *photographic*; (*b*) [*l. c.* or *cap.*] of *photography.*

photanamorphosis (fọ-tan″a-môr′fō-sis) *n.* [Gr. *φῶς* (*φωτ-*), light, + LGr. *ἀναμόρφωσις*, forming anew. See *anamorphosis.*] A distorted picture, obtained photographically, which if viewed in a cylindrical mirror properly placed thereon will have a normal appearance.

photechy (fō′tek-i), *n.* [Irreg. ‹ Gr. *φῶς* (*φωτ-*), light, + *ἔχειν*, hold.] The property of holding, developing, and giving off secondary rays sufficient to affect a photographic plate: a property possessed by paper and other substances, especially when affected by ink or a saline solution, after exposure to sunlight. *Sci. Amer. Sup.*, April 8, 1905, pp. 24, 467–8.

photee (fō-tē′), *n.* [E. Indian.] A fine variety of cotton grown in India for making Dacca muslins.

photeolic (fō-tẹ-ol′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + *αἰόλος*, moving, motile.] In *bot.*, assuming different positions with the presence or absence of light; affected with nyctitropism. See *sleep*, 5.

photerythrous (fọ-te-rith′rus), *a.* [Gr. *φῶς* (*φωτ-*), light, + *ἐρυθρός*, red, + *-ous.* The formation does not express the meaning assigned.] Sensitive especially to the red rays of the spectrum: noting a partial color-blindness.

> He began to notice colors at once, and, except in the case of green, could always recognize a color after having been told its name. With green he had more difficulty. and it may be that he is somewhat *photerythrous.*
> *Jour. Philos., Psychol. and Sci. Methods*, Aug. 18, 1904, [p. 468.

photic (fō′tik), *a.* [Gr. *φῶς* (*φωτ-*), light, + *-ic.*] **1.** Of or pertaining to those forms of radiation which are productive of luminous effects; relating to light.

> It is not at all likely that the differences in reaction-time here noted for electric and *photic* stimuli are due to the same conditions. *Biol. Bulletin*, Jan., 1904, p. 88.

2. In *phytogeog.*, well-lighted: designating the upper bright region of bodies of water in which the light is sufficiently intense for the normal development of microphytes. Correlated with ★*dysphotic* and ★*aphotic.* *Schimper* (trans.), Plant-Geog., p. 782.

Photinian, *n.* **II.** *a.* Of or pertaining to Photinus or to his doctrines.

photism (fō′tizm), *n.* [Gr. *φωτισμός*, illumination, ‹ *φῶς* (*φωτ-*), light.] In *psychol.*, a reproduced sensation of color regularly accompanying the arousal of sensation in certain other sense departments, especially in that of hearing: the commonest form of synæsthesia.

> In order to differentiate the *photisms* from the retinal light, several series of tests were made, in which M was seated in a noiseless dark room.
> *Amer. Jour. Psychol.*, XI. 379.

photistic (fọ-tis′tik), *a.* [Gr. *φωτιστικός*, illuminating, ‹ *φωτίζειν*, illuminate.] Pertaining to, or of the nature of illumination, physical or mental; illuminating; enlightening.

> When from the dull sense . . . the *photistic* thrill disengages itself as something different from the rest, it will not be denied that this is a perceptive gain, i. e. an accession not only to the creature's sensory store, but to his life-relations with reality.
> *J. Martineau*, Types of Ethical Theory, II. 356. *N. E. D.*

photo-actinic (fō″tọ-ak-tin′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + *ἀκτίς* (*ἀκτιν-*), ray, + *-ic.*] Capable of producing luminous effects, by exciting luminescence, and also actinic affects: said of certain rays.

> The *photo-actinic* rays proceeding from the bacteria which had been exposed to radium were capable of affecting a photographic plate through a double layer of lead foil. *Nature*, May 19, 1904, p. 69.

photo-aquatint (fō″tọ-ak′wạ-tint), *n.* A process of printing pictures from intaglio copperplates, similar to but simpler than photogravure. *Woodbury*, Encyc. Dict. of Photog., p. 345.

photo-autographic (fō-tọ-â-tọ-graf′ik), *a.* Of or pertaining to a telegraphic apparatus, for the transmission of messages in the handwriting of the sender, in which the receiving instrument makes its record photographically.

photoauxesis (fō″tọ-âk-zē′sis), *n.* [Gr. *φῶς* (*φωτ-*), light, + *αὔξησις*, growth.] In *bot.*, the production of leaves on a dorsiventral stem chiefly on one side, in response to the stimulus of diffused light. *Pfeffer* (trans.), Physiol. of Plants, II. 73.

photobacterium (fō″tō-bak-tē′ri-um), *n.*; pl. *photobacteria* (-ạ̈). [Gr. *φῶς* (*φωτ-*), light, + NL. *bacterium.*] A bacterium which emits phosphorescent light. *Salter*, tr. of Lafar, Tech. Mycol., I. 160.

photobathic (fō-tọ-bath′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + *βάθος*, depth, + *-ic.*] Of or pertaining to the greatest depths of the ocean to which light penetrates: as, the *photobathic* zone. *Chamberlin and Salisbury*, Geol., I. 361.

photocalque (fō′tọ-kalk), *n.* [Gr. *φῶς* (*φωτ-*), light, + F. *calque*, a counterdrawing.] A photographic reproduction from a non-photographic original design. *Woodbury*, Encyc. Dict. of Photog., p. 303.

photocaustic (fō-tọ-kâs′tik), *a.* [Gr. *φῶς* (*φωτ-*), light, + E. *caustic.*] Noting a photolithographic image in half-tone, obtained from a veiled negative.

photocauterization (fō″tọ-kâ″tėr-i-zā′shọn), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *cauterization.*] Cauterization by means of any form of radioactivity, such as light rays, X-rays, radium rays, etc.

photocautery (fō-tọ-kâ′tėr-i), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *cautery.*] **1.** An instrument for effecting photocauterization.—**2.** Same as ★*photocauterization.*

photoceramic (fō″tọ-se-ram′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + E. *ceramic.*] Noting ceramic work decorated by photographic processes. *N. E. D.*

photoceramics (fō″tọ-se-ram′iks), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *ceramics.*] A process of producing burnt-in photographic images on porcelain, glass, or similar materials. Tessié du Motay's method consists in carefully removing a collodion positive from its glass support and floating it in a toning-bath containing iridium and gold chlorids. The film is next carefully floated to the surface of the enameling-tablet, and after drying is heated in a muffle-furnace. At a certain stage of the baking an enamel composition, suspended in collodion, is poured over the picture and burned on. This must be repeated five or six times until the glaze is of sufficient thickness and the picture of the desired color. By this process an image is obtained which consists of pure metallic silver, gold, and iridium in an extremely fine state of division, fixed to the surface of an imperishable tablet, and protected by an equally hard, permanent, and impermeable glaze. Ceramic colors may be applied and burnt in during the making of such an enamel picture.

photoceramist (fō-tọ-ser′ạ-mist), *n.* [*photoceram*(*ic*) + *-ist.*] One who does photoceramic work.

Photochemical climate, engraving. See ★*climate*, ★*engraving.*

photochemigraphy (fō″tọ-ke-mig′rạ-fi), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *chem*(*ic*) + Gr. *-γραφια*, ‹ *γράφειν*, write.] The process of making, in a photographic way, zinc clichés from line-drawings (without half-tones) for printing from in a press. *E. L. Wilson*, Cyclopædic Photog., p. 275.

photochrome (fō′tọ-krōm), *n.* [See *photochromy.*] A colored picture produced by photochromy.

photochromic (fō-tọ-krō′mik), *a.* Same as *photochromatic.*

photochromography (fō″tọ-krọ-mog′rạ-fi), *n.* [Gr. *φῶς* (*φωτ-*), light, + *χρῶμα*, color, + *-γραφια*, ‹ *γράφειν*, write.] The art of producing prints in colors from originals that have been photographed on metal plates or on lithographic stone. *Woodbury*, Encyc. Dict. of Photog., p. 303.

photochromoscope (fō-tọ-krō′mọ-skōp), *n.* [Gr. *φῶς* (*φωτ-*), light, + *χρῶμα*, color, + *σκοπεῖν*, view.] A device so arranged that three transparent photographs can be placed within it, each one illuminated by a colored light, one by red, one by green, and one by blue-violet light. A system of reflectors combines the three images, so that the eye sees but one picture in the natural colors. See ★*chromascope*, 2.

> Mr. Ives has devised a special form of camera by which the three elementary negatives are taken simultaneously, and also an instrument, the *photochromoscope*, in which a system of mirrors and lenses brings to the eye a combination similar to that projected with the triple lantern. A double instrument of this kind forms the most perfect type of stereoscope, bringing out with great vividness from the prepared stereographs the combined effect of color, form, and binocular perspective.
> *Smithsonian Rep.*, 1895, p. 128.

photochromotype (fō-tọ-krō′mọ-tīp), *v. t.*; pret. and pp. *photochromotyped*, ppr. *photochromotyping.* [*photochromotype*, *n.*] To produce (prints or plates) in colors by means of photographic engraving. See *photochromotype, n.*

photochromotypy (fō-tọ-krō′mọ-tī-pi), *n.* [*photochromotyp*(*e*) + *-y*^{3}.] The art or process of making photochromotypes.

photochronograph, *n.* **3.** An instrument for the observation of star-transits by photography.—**4.** A chronograph in which the tracing or record is made by the action of a pencil of light on a sensitized surface.

photochronographically (fō-tọ-kron-ọ-graf′i-kạl-i), *adv.* By means of the photochronograph.

photoclistogamic (fō-tọ-klīs-tọ-gam′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + E. *clistogamic.*] Clistogamous as a result of photohyponasty. *Jackson*, Glossary.

photoclistogamy (fō″tọ-klīs-tog′ạ-mi), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *clistogamy.*] **1.** Clistogamy due to photohyponasty.—**2.** That type of pseudoclistogamy in which the flower remains closed under adverse conditions of light. *Pound and Clements*, Plant Life of Nebraska.

photocollograph (fō-tọ-kol′ọ-gråf), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *collograph*(*ic*).] A picture or print produced by a collographic process.

photocollographic (fō″tọ-kol-ọ-graf′ik), *a.* Pertaining or relating to photocollography.

photocollography (fō″tọ-ko-log′rạ-fi), *n.* [*photocollograph* + *-y*^{3}.] The art of producing a printing-surface, by aid of photography, upon a collotype plate of glass after it has received preparatory treatment. See ★*collotype* and *gelatin process*, under *gelatin.*

photocollotype (fō-tọ-kol′ọ-tīp), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *collotype.*] See ★*collotype.*

photocopy (fō′tọ-kop-i), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *copy.*] A copy made by some photographic process, as of an architectural or mechanical drawing. A common form is the blue-print.

photodecomposition (fō″tọ-dẹ-kom″pọ-zish′ọn), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *decomposition.*] In *photog.*, chemical change effected by light; specifically, the action of light on a sensitive surface or in a film.

> For the colored product as a whole, i. e., the product of *photo-decomposition* with its combined unchanged haloid, Carey Lea has proposed the convenient term "photo-salt." *Smithsonian Rep.*, 1890, p. 383.

photodermatism (fō-tọ-dėr′mạ-tizm), *n.* [Gr. *φῶς* (*φωτ-*), light, + *δέρμα* (*-τ-*) skin, + *-ism.*] Sensitiveness to light in epithelial cells, independently of connection with a nervous system.

> Nor should we deny that empirical methods, whether they have yet done so or not, are quite capable of giving sufficient evidence for the existence of psychic powers as radically different from our own as those claimed for *photodermatism* or the topochemical sense of the antennae of ants. *Science*, Oct. 14, 1905, p. 487.

photodoscope (phọ-tod′ọ-skōp), *n.* Same as *photoscope.*

photodromy (fọ-tod′rọ-mi), *n.* [Gr. *φῶς* (*φωτ-*), light, + *-δρομος*, < *δραμεῖν*, run.] The movement of suspended particles in a medium under the influence of light. Under certain conditions the movement is from shaded to illuminated regions of the medium, which constitutes *positive photodromy.* A movement toward shaded regions is *negative photodromy.*

> I think that the negative *photodromy* may also be explained by the heating effect of the light.
> *G. Quincke*, in Rep. Brit. Ass'n Advancement of Sci., [1901, p. 63.

Photo-electric fatigue, the decay, with time, of the photo-electric activity of a substance. *Phys. Rev.*, Jan., 1908, p. 21.

photo-electricity (fō″tọ-ē-lek-tris′i-ti), *n.* The effect of light upon electric phenomena, such as the discharge of an electrified body or the modification of the sparking distance between charged terminals.

photo-electrograph (fō″tō-ẹ-lek′trọ-gråf), *n.* An instrument for photographically registering the variations of the electrical conditions of the atmosphere. *Woodbury*, Encyc. Dict. of Photog., p. 346.

photo-electrolytic (fō″tọ-ẹ-lek″trọ-lit′ik), *a.* Of or pertaining to electrolytic effects produced by light, as in certain photographic films.

> A series of apparent resemblances between the retinal currents described by physiologists and *photoelectrolytic* changes in sensitised metal plates.
> *Nature*, March 5, 1903, p. 410.

photo-engraver (fō″tọ-en-grā′vėr), *n.* One who, by photography and etching, makes plates in relief for a type-printing press; also, the operator who retouches plates so prepared. *Scripture*, Exper. Phonetics, p. 53.

photo-engraving, *n.* 2. A print or plate made by photography and developed by etching for use on a type-printing press.—**Relief photo-engraving**, the process of making a plate for relief-printing by photographic processes.

photo-esthetic (fō″tọ-es-thet′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + E. *esthetic.*] Having or pertaining to the sensation of light.

> In seeking the possible nature of the two fundamental actions we are led to the view that the former or *photo-æsthetic* action (being photochemical) is due to the visual purple. *Smithsonian Rep.*, 1898, p. 194.

photo-etch (fō-tọ-ech′), *v. t.* To produce (a printing-surface) upon a photographed plate by etching with acids. When the printed surface is in relief, for use on the typographic press, the plate so made is known as a *photo-engraving* or a *process plate*; when the subject is below the surface, or in intaglio, it is known as *photogravure.*

photofiligrain (fō-tọ-fil′i-grān), *n.* In *photog.*, a method of producing designs on paper by pressure with a photographic relief. *Woodbury*, Encyc. Dict. of Photog., p. 348.

photofluoroscopy (fō″tọ-flö-ọ-ros′kọ-pi), *n.* [Gr. *φῶς* (*φωτ-*), light, + E. *fluoroscopy.*] The photography of the image obtained on a fluoroscopic screen. *Houston*, Dict. Elect.

photogalvanographic (fō″tọ-gal″va-nọ-graf′ik), *a.* [*photogalvanograph*(*y*) + *-ic.*] Pertaining to, or produced by means of, photogalvanography.

photogastroscope (fō-tọ-gas′trọ-skōp), *n.* [Gr. *φῶς* (*φωτ-*), light, + *γαστήρ* (*γαστρ-*), stomach, + *σκοπεῖν*, view.] An apparatus for photographing the interior of the stomach. It consists of a small water-cooled electric light which illuminates the interior, and of a series of mirrors which act as reflectors and bring the image to the lens-tube and camera. The stomach may be inflated by an arrangement through which air is forced.

photogelatin (fō-tọ-jel′a̤-tin), *a.* Noting a photographic process in which gelatin is used.

photogen, *n.* 2. A light-producing organ, as in some invertebrates.

> In Tomopteris there is on each parapodium, above and below, a brightly-coloured spherical organ, which for a long time was regarded as an eye, but from its structure appears to be a "*photogen.*"
> *Cambridge Nat. Hist.*, II. 296.

photogene, *n.* 2. A trade-name of naphtha distilled from bituminous shale, of specific gravity from .72 to .81 and boiling-point from 145 to 150° C. It is used as an illuminating oil and in the removal of grease from bones to prepare them for use instead of ivory.

photogenetic (fō″tọ-jẹ-net′ik), *a.* [Gr. *φῶς* (*φωτ-*), light, + E. *genetic.*] Producing light; emitting light; luminiferous; photogenic.

photogenic, *n.* 3. In general, light-producing; luminous.

> Experiments with a ctenophore, Mnemiopsis leidyi, show similar results with oxygen. Tissue in alkaline solutions becomes brilliantly *photogenic* under the influence of oxygen. The light is wholly extinguished when tissue is placed in acid solutions and does not reappear when oxygen is introduced. When the acid solution is made alkaline, the tissue again becomes *photogenic.*
> *Science*, Feb. 17, 1905, p. 267.

photoglyph (fō′tọ-glif), *n.* [Gr. *φῶς* (*φωτ-*), light, + *γλυφή*, carving, engraving.] A photo-engraving. *Wall*, Dict. of Photog., p. 485.

photoglyptic (fō-tọ-glip′tik), *a.* Same as *photoglyphic.*

photoglyptography (fō″tọ-glip-tog′ra̤-fi), *n.* [Gr. *φῶς* (*φωτ-*), light, + *γλυπτός*, engraved, + *-γραφια*, < *γράφειν*, write.] The art of producing an engraving of a photograph: usually by etching. Now generally called *photogravure.*

photogrammeter (fō-tọ-gram′e-tėr), *n.* [Gr. *φῶς* (*φωτ-*), light, + *γράμμα*, a writing, + *μέτρον*, measure.] A photographic camera adapted for use in surveying. It is commonly mounted accurately on altitude and azimuth circles, with arrangements for determining all instrumental corrections. The angular distance of any point on the photographic plate from the center of the plate is measured by a micrometer, whence the altitude and azimuth of any point of a cloud or of the landscape may be determined. Two photogrammeters operating simultaneously at neighboring stations give the data for determining the location and motion of any part of a cloud.

photogrammetric (fō″tọ-gra-met′rik), *a.* Of, pertaining to, or produced by means of a photogrammeter.

photogrammetry, *n.* 2. The scientific use of the photogrammeter; the taking of photographs for the purpose of constructing therefrom the plan and elevation of the points photographed: sometimes loosely used to cover the entire science of constructing the plan and elevation of an object or of a series of points from photographs. See ★*photogrammeter.*

photograph, *n.*—**Boudoir photograph**, a photographic print 5¼ by 8½ inches in size. **Cabinet photograph.** See ★*cabinet picture.*—**Caricature photograph**, a photograph representing the person or object in a distorted or grotesque manner. It is generally secured by rephotographing portions of other photographs ingeniously put together, or by the use of screens or of special cameras.—**Cathode photograph.** Same as *sciagraph*, 2.—**Diamond photograph**, a photograph 4⅛ by 4⅝ inches in size.—**Imperial photograph**, a size of photograph measuring 6⅞ by 9⅞ inches.—**Magic photograph**, a photographic print bleached by mercuric chlorid and redeveloped by a solution of sodium hyposulphite; also, a print developed by ammonia or tobacco-smoke. In the latter case the paper is inserted in a cigar- or cigarette-holder. *Woodbury*, Encyc. Dict. of Photog., p. 274.—**Spirit photograph**, a photograph on which there appears, beside or behind the ordinary image of the sitter, an indistinct or partial image of another person, taken before or after on the same plate. These indistinct images are due to accident or to manipulation. They were at one time imposed upon the credulous as actual photographs of spirits.

photograph-board (fō′tọ-gråf-bōrd), *n.* In photographic surveying, a special form of drawing-board containing a permanent diagram and lines on which photographs are mounted while being reduced or measured.

photographic, *a.* Hence—2. In *lit.*, imitated or imitating with precise and minute detail, indicating lack of artistic feeling and originality in the writer.—**Photographic chemistry.** Same as *photochemistry.*—**Photographic doublet.** See ★*doublet.*—**Photographic reflecting telescope.** See ★*telescope.*—**Photographic surveying.** See ★*surveying.*

photographist (fọ-tog′ra̤-fist), *n.* [*photograph* + *-ist.*] A photographer. [Rare.]

photographophone (fō-tọ-graf′ọ-fōn), *n.* [Gr. *φῶς* (*φωτ-*), light, + *γράφειν*, write, + *φωνή*, sound.] An instrument for the reproduction of sound by the aid of photography. The apparatus, devised by E. Ruhmer, concentrates the rays of light from a speaking arc or other sensitive flame, by means of a cylindrical lens, on a moving film. When light is projected through this developed and fixed film, upon a selenium cell in circuit with a battery and a telephone, every variation of the light impinging on the selenium cell produces a sound in the telephone. Prints may be taken of the film and are of equal value. The sounds are reproduced with great distinctness.

photographotype (fō-tọ-graf′ọ-tīp), *n.* [*photograph* + *type.*] A method of producing blocks for letter-press printing by the aid of photography and electrotyping. *N. E. D.*

photography, *n.*—**Animal photography**, the art of photography applied to the portraiture of animals in their natural surroundings or under conditions such as to convey that effect, at the same time showing their characteristic traits.—**Architectural photography**, the photographing of edifices and exteriors by the use of lenses which give the least distortion.—**Automatic photography**, photography by means of a slot machine which takes and delivers a finished ferrotype portrait of the person who starts the instrument and then poses before it.—**Cathode photography**, the process of taking sciagraphs.—**Ceramic photography.** See ★*photoceramics.*—**Color photography**, a series of photographic and mechanical operations by which a picture is produced which, in color, more or less resembles the original object: strictly, it is the process of photographing any object and producing a picture in the correct colors; generally it includes those processes in which several negatives, separate or combined, of the same object are taken, using different color-screens or ray-filters, and then printing the picture in the corresponding colored inks. The Lippmann process is the only one which produces an approximately correctly colored picture by purely photographic processes. The apparent color of an object is determined by the wave-length of the light which reaches the eye from it. (See *color*, 1.) Lippmann placed a photographic dry-plate film down upon the surface of mercury and exposed it through the glass back to a colored object (spectrum) and then developed the plate in the usual way. The negative thus produced, when viewed at the proper angle, appeared in approximately the same colors as the original object. The waves of light passing through the sensitive film of the dry plate fall upon the mercury and are reflected back through the film, forming with the advancing waves a series of nodes and loops. (See cuts under *nodal lines.*) The distance apart of these nodes is determined by the wave-length (color) of the light; hence their distribution in the film will depend upon the color of the light which falls upon that particular portion of the plate. The negative thus obtained is really devoid of color, in the usual sense, but viewed at the proper oblique angle, it will appear colored owing to the interference produced by the lines of opaque silver deposited at the nodal lines. (See *interference*, 5.) The best example of the other class of processes is that developed by Ives. Three negatives are taken through three colored screens—orange-red, blue-green, and blue. Each of these will give, by its gradations of density, a direct measure of the amount of light of that particular kind which falls upon the plate at that point. A positive transparency is made from each negative, and when viewed in the appropriate light, each will reproduce the object so far as that light is concerned. For example, the blue negative will show the object as it appears to a person blind to red and green, or when viewed through blue glass. If three lanterns so project these three positives in their appropriate color that they register perfectly on the screen, the combined image will appear in nearly its natural colors. Ives has made such an arrangement of mirrors that the three positives may be viewed subjectively, and the same result obtained. The Joly-Macdonough process does not use three screens and three negatives as above described, but one screen of three colored lines and one corresponding negative. The screen is ruled in transparent lines of the three colors, about 1/200 to 1/300 of an inch wide, adjoining each other so that every third line is orange-red, every third blue-green, etc. The negative obtained by placing such a screen immediately in front of the plate really corresponds to the three Ives negatives on one plate, each set of lines constituting a negative for its color. A positive made from this negative is viewed through a lined screen similar to the taking screen, except that the colors are red, green, and blue, so adjusted that the blue lines are superimposed upon those parts of the positive which were taken behind the blue lines, and similarly with the red and green. These lines are so narrow that they become blended to the eye and only their combined effect is perceived, and appears colored like the original. A mechanical device permits of covering two sets of lines of such a negative and of moving the negative during the printing by twice the line width, thus obtaining a positive similar to that one of the plates of the Ives process which corresponds to the color of the exposing line. It is very difficult to rule the color-screens for the above process without overlapping or leaving clear spaces. The Powrie-Waner process obviates this difficulty. A glass plate is coated with a thin film of bichromated colloid (albumin, gelatin, glue) and exposed under a negative of opaque lines twice as wide as the intervening spaces. On washing the resulting plate in warm water a set of fine lines of insoluble colloid, corresponding to the open spaces of the screen, is left. These lines are dyed green and set with formalin and chrome alum. A second coating of colloid is applied to the plate and it is again exposed so that the screen covers the green lines and half the spaces. Washing, dyeing red, and fixing give the second set of lines (red). A third coating of colloid is applied and the exposure is now from the back through the glass, the green and red lines now acting as the protecting negative. Washing, dyeing blue, and fixing fill all the remaining spaces with blue colloid, and no overlaps or open spaces are possible. Powrie obtains a negative similar to the Ives process by setting his line-negative a little way in front of the plate and exposing with oblique and normal illumination in the appropriate colored light. Lumière has produced a color-screen in dots or stipples by using colored grains of starch. Three lots of fine starch-grains are dyed red, green, and blue, respectively, and are mixed in the proportions proper to produce a gray. A plate is prepared with a layer of tacky material (gelatin, glue) and the starch-grains are dusted over it, the loose excess being removed and any possible open spaces filled by dusting on powdered carbon. Over this stippled colored screen is placed the ordinary dry-plate emulsion. The plate is exposed in the camera with the glass side toward the lens and developed in the usual way, but not fixed in the hypo. It is then placed in permanganate of potash and sulphuric acid to dissolve the metallic silver, leaving the undeveloped bromide. The plate is next exposed to light, and again developed, appearing now as a positive. The starch-grains finally serve as a viewing-screen. The pinatype process takes three negatives through color-screens and exposes under each a coating of sensitized gelatin. These coatings are dyed, stripped, and superimposed. The success depends upon the fact that only those portions of the gelatin which have been protected from the light take the dye.—**Meteorological photography**, photography applied either in the making of meteorological records in instruments or in recording phenomena.—**Pinhole photography**, photography by means of a camera having a minute circular aperture (pinhole) instead of a lens. The pinhole is made in cardboard by a red-hot needle.—**Psychic photography**, the alleged photography of spirits. See *spirit* ★*photograph.*—**Three-color photography.** See *color* ★*photography.*

photograver (fō-tọ-grā′vėr), *n.* One who practises photo-engraving; a photo-engraver.

photogravure, *n.* **2.** A print taken from a photograph upon copper, etched with acid, and produced by the copperplate process.

photogravurist (fō″tọ-grạ-vūr′ist), *n.* [*photogravur*(*e*) + *-ist.*] One who practises the art of photogravure.

photogyric (fō-tọ-jī′rik), *a.* [Gr. φῶς (φωτ-), light, + γῦρος, a turn, + *-ic.*] Relating to the behavior of a substance toward polarized light. See *optically active substance,* under *active.*

In the case of lactic fermentations, the *photogyric* nature of the resulting acids is given.
Nature, Feb. 5, 1903, p. 316.

photoheliography (fō-tọ-hē-li-og′rạ-fi), *n.* [*photoheliograph* + $-y^3$.] The art of using the photoheliograph; solar photography.

photohelioscope (fō-tọ-hē′li-ọ-skōp), *n.* Same as *photoheliograph.*

photohyalography (fō″tọ-hī-ạ-log′rạ-fi), *n.* [Gr. φῶς (φωτ-), light, + E. *hyalography.*] Same as *hyalography.*

photohyalotype (fō″tọ-hī′ạ-lọ-tīp), *n.* [Gr. φῶς (φωτ-), light, + E. *hyalotype.*] Same as ★*hyalotype.*

photohyponastical (fō″tọ-hī-pọ-nas′ti-kạl), *a.* Same as *photohyponastic.*

photo-impression (fō″tọ-im-presh′ọn), *n.* The effect, as of light, upon a photographic film; a photographic impression. *Smithsonian Rep.,* 1899, p. 158.

photo-ink (fō′tọ-ingk), *a.* Produced by photography so as to be printed in ink. *N. E. D.*

photo-intaglio (fō″tọ-in-tal′yō), *n.* [Gr. φῶς (φωτ-), light, + E. *intaglio.*] A photographed copperplate or print on which the subject has been developed below the surface, for printing by the copperplate process. Also used adjectively.

photolinol (fō-tọ-lin′ol), *n.* [Gr. φῶς (φωτ-), light, + L. *linum,* flax, + *oleum,* oil (see *linoleum*).] A trade-name of a linen fabric upon which photographs may be printed. The fabric is waterproof, and the photograph does not fade in the sun. Picturesque effects are obtained by coloring the photograph, which then appears as an oil-painting on canvas. The picture is visible by both transmitted and reflected light. *Sci. Amer.,* June 18, 1904, p. 475.

photolithotype (fō-tọ-lith′ọ-tīp), *n.* [*photo*(*graphic*) + *lithotype.*] A photolithographic print.

photolongitude (fō-tọ-lon′ji-tūd), *n.* [Gr. φῶς (φωτ-), light, + E. *longitude.*] A method of determining the geographical longitude of a place on the earth's surface by the astronomical method of lunar distances, in which the distance of the given star from the moon's limb is measured from a photographic plate, made with a telescope as a camera, instead of by direct telescopic measurements, as usually employed in the method of lunar distances.

Time observations by the Commission (meridian distance from Freetown), and from a *photo-longitude* plate.
Geog. Jour. (R. G. S.), X. 399.

photoluminescence (fō″tọ-lū-mi-nes′ẹns), *n.* [Gr. φῶς (φωτ-), light, + E. *luminescence.*] See ★*luminescence.*

photoluminescent (fō″tọ-lū-mi-nes′ẹnt), *a.* [Gr. φῶς (φωτ-), light, + E. *luminescent.*] Luminescent as the result of exposure to light. See ★*luminescence.*

photom. An abbreviation (*a*) of *photometrical;* (*b*) [*l. c.* or *cap.*] of *photometry.*

photomagnetic (fō″tọ-mag-net′ik), *a.* [*photomagnet*(*ism*) + *-ic.*] Pertaining to or exhibiting photomagnetism.

photomagnetograph (fō″tọ-mag-net′ọ-gråf), *n.* [Gr. φῶς (φωτ-), light, + E. *magnetograph.*] Same as *magnetograph,* 1.

photomania (fō-tọ-mā′ni-ạ̈), *n.* [NL., < Gr. φῶς (φωτ-), light, + μανία, madness.] A form of mania induced by exposure to prolonged light of great intensity, such as occurs in the arctic summer.

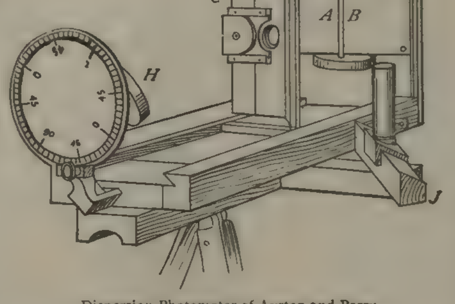
photomapper (fō-tọ-map′ėr), *n.* In *astron.,* an instrument adapted for mapping the heavens photographically.

photomapping (fō-tọ-map′ing), *n.* [*photo*(*graphic*) + *mapping.*] In *astron.,* the process of mapping the stars by means of photographs of the heavens.

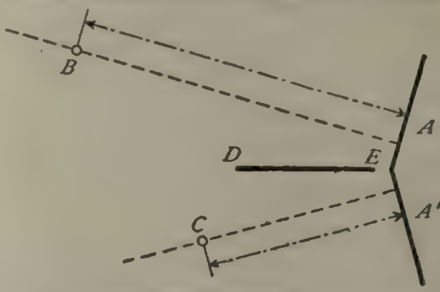
photometallograph (fō″tọ-me-tal′ọ-gråf), *v. t.* To photo-engrave by photometallography.

photometallography (fō-tọ-met-ạ-log′rạ-fi), *n.* [Gr. φῶς (φωτ-), light, + μέταλλον, metal, + -γραφια, < γράφειν, write.] Same as *photozincography.*

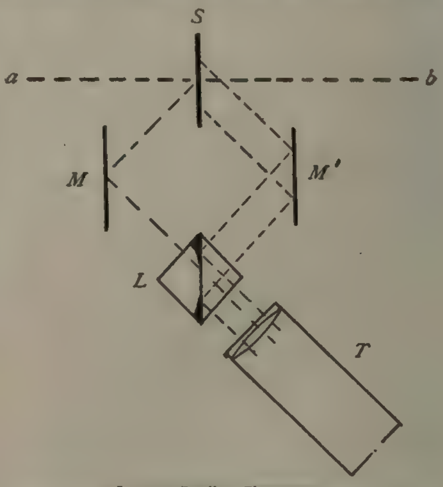
photometer, *n.* **2.** In *photog.,* a device for determining the proper length of time for exposure. See ★*actinometer.*—**Actinic photometer,** a photometer for measuring the actinic intensity of a light, or its power to produce actinic effects, which is often very different from the visual intensity of the same light. Sometimes a sensitive film is exposed to the light for a fixed time and the effect is compared with that produced by a standard light in the same time, or the time is determined which is necessary to produce the same effect as that produced by the standard light in a standard time.—**Arago-Davy photometer,** an actinometer in which one observes the temperature of two thermometers (black-bulb and bright-bulb, respectively), each in its own vacuous inclosure, and from the difference of their readings deduces, by Ferrel's formula, the relative intensity of the sunshine.—**Becquerel's electrochemical photometer,** an actinometer in which an electrometer shows the existence of an electric current in a wire connecting two plates of silver chlorid immersed in a jar of water. One of the plates is exposed to the sunlight and the current is due to the differential condition of the two plates.—**Blondel's photometer,** an integrating photometer for incandescent and arc-lamps. The instrument is given different forms in the two cases. When used for incandescent lamps it consists of a hollow sphere the inner surface of which is white and matte. The lamp to be tested is placed in the center of the sphere and a small translucent screen in an aperture in the sphere receives the diffusely reflected light from the inner walls but is protected from the direct rays of the lamp. The illumination of the screen is proportional to the mean spherical intensity of the lamp. Blondel's photometer for arc-lamps has a diffusing screen in the form of a portion of a hollow truncated cone in the horizontal axis of which the lamp is placed. The photometer disk, which is mounted on a bar in the usual manner, receives illumination from the surface of the cone but is shielded from the direct light of the lamp.—**Bouguer photometer,** a form of photometer devised prior to 1760. It is based on the law of inverse squares. An opaque screen is illuminated, on parts separated by a thin partition, by two sources of light. The lights are moved perpendicularly to the screen until equal illumination of the parts is secured; their distances from the screen are then measured and the calculation made. A translucent screen of matte glass was substituted for the opaque screen by Potter.—**Bunsen's and Roscoe's photometer,** a photographic actinometer in which sensitive chlorid-of-silver paper is blackened by daylight. For many reasons this is the form recommended for standard measurement relative to the special wave-lengths that effect the silver chlorid.—**Chemical photometer.** (*a*) An instrument designed to measure the intensity of light by the amount of chemical change produced. It is really an actinometer. (*b*) An instrument for determining the length of time proper for photographic exposures.—**Daylight photometer,** an instrument devised by A. H. Munsell for the comparison of the brightness of various colored surfaces illuminated by daylight or by artificial light. It consists essentially of two 'cat's-eye' shutters placed symmetrically toward a source of diffused light. Through one of these the light falls on the colored surface to be tested, through the other upon a standard white surface. The second shutter is then gradually closed until the resulting gray produced on the white screen just matches the colored surface in intensity, while a dial connected with this shutter shows, in percentage, how much darkening has been necessary to match the colored surface under test. The instrument has also been applied to the testing of light transmitted through colored media. *Nature,* Feb. 5, 1903, p. 332.—**Dispersion photometer of Ayrton and Perry,** a photometer in which the intensity of illumination of a screen varies inversely with the amount of the dispersion of the light tested. The apparatus consists of a Lambert screen *AB* illuminated by light reflected from the mirror *H* (fixed at an inclination of 45°) and dispersed by the action of the biconcave lens at *C,* and also by the light of a standard candle placed in a case and moved along *J.* The comparison of intensity is obtained by measuring the distances of the mirror *H,* of the lens, and of the standard candle from the screen.—**Flicker photometer,** an instrument for the comparison of sources of light in which the field of view is illuminated alternately by the two sources. When the illumination from the two lights is equal there is a cessation of flickering and this is the criterion upon which the use of the photometer depends. It has been shown by Rood, Whitman, and others that consistent results are obtainable with the flicker photometer, even when the differences in the color of the two sources are such as to render comparisons by other methods impossible. See *flicker* ★*photometry.*—**Foucault photometer,** a photometer whose sight-box contains two reflecting surfaces inclined to the observer and forming an obtuse angle. The lights examined are placed along normals to the surfaces, and a Lambert translucent screen is used to receive the reflected rays. A movable partition forms a line of separation for the two sets of reflected rays and secures a sharper contrast.—**Illumination photometer,** a photometer designed for the determination of the illuminating effect of light as distinguished from an instrument for measuring the candle-power or intensity of a source of light; an illuminometer. Such photometers usually consist of a test surface placed at the point at which the illumination is to be determined and some photometric device for comparing the brightness of this surface with that of a screen illuminated by a standard source of light under known conditions.—**Integrating photometer,** a photometer so constructed as to give from a single reading the mean spherical, or mean hemispherical, intensity of a source of light.—**Jet photometer,** an indicator of the light-giving power of gas. It consists essentially of a delicate pressure-gage for adjusting a pointed flame 7 inches in height. The pressure read in tenths of an inch is the approximate measure of the illuminating power.—**King's photometer,** an adaptation of Bunsen's photometer in which the bar, 100 inches long, is so graduated that the position of the movable screen, when equally illuminated on both sides, gives the intensity of the light tested in terms of the lesser source, usually a standard candle.—**Kirschmann's photometer,** a photometer constructed of cardboard disks of black (or gray) and white, rotating before a dark chamber: used for preliminary determinations of the photometric values of black, gray, and white papers or cards in psychophysical work. *E. B. Titchener,* Exper. Psychol., II. i. 35.—**Lambert photometer,** a shadow photometer devised by Lambert in 1760; later used by Rumford and known by his name.—**Lummer-Brodhun photometer,** a device for comparing the brightness of a light with that of a standard. One form of the optical train consists of an opaque diffusing-screen whose opposed surfaces are illuminated by the source of light and by the standard lamp respectively. The diffused light from each side is then reflected by mirrors, the two sets of rays falling on two juxtaposed right-angled prisms of such construction that the emergent rays appear to the observer looking through the monocular telescope as a central disk of light surrounded by a circle of light. By moving the screen an equal illumination of these two parts may be obtained and measurements of the distances of the lights from the screen taken. In an improved form the prism is so constructed that the rays impinging normally on each side of the prism are in some cases transmitted, in others totally reflected, and a composite field is secured. This form is known as the *contrast train.* This optical train in one form or the other is the screen adopted by the Reichsanstalt. In the newer form thin strips of glass are introduced next the faces of the prism to reduce the illumination when lights differing in color are tested.—**Marshall's photometer,** an illumination photometer consisting of a screen of the Bunsen type (see *Bunsen photometer*) mounted on the top of a closed box. The screen is lighted from below by an incandescent lamp within the box, and is exposed from above to the illumination to be tested. The box also contains a rheostat for regulating the lamp, a galvanometer, and a slide-wire bridge of which the lamp forms one arm. Measurements are made by adjusting the brightness of the lamp until the screen shows photometric equality and balansing



Dispersion Photometer of Ayrton and Perry.

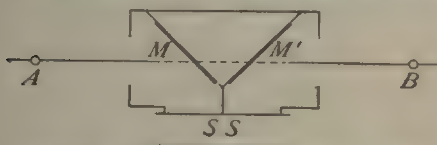


Foucault Photometer.
A, A′, reflecting surfaces; *B, C,* lights; *DE,* partition.

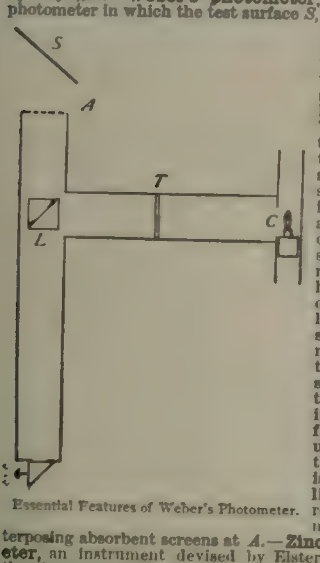


Lummer-Brodhun Photometer.
S, opaque screen in the line *ab* joining the lights to be compared; *M, M′,* mirrors reflecting light diffusely reflected from *S* to the Lummer-Brodhun prism, *L*; *T,* the observing telescope.

the bridge with the slide-wire. The position of the sliding contact then gives the illumination.—**Mascart's photometer,** a device for the study of illumination, consisting of two parallel tubes one of which contains a translucent screen illuminated by a gasolene flame. Light enters the other tube through a similar screen, illuminated from without, which forms the test surface. The two screens are viewed simultaneously through an eyepiece and their brightness is adjusted to equality by means of two iris diaphragms.—**Matthews' photometer,** an integrating photometer in which a set of plane-mirrors are so grouped around the arc of a semicircle, at the center of which the lamp to be tested is placed, as to direct the reflected light simultaneously to the photometer disk. The disposition of the mirrors is such that the illumination of the disk will always be proportional to the mean spherical intensity of the lamp. *Trans. Amer. Inst. Elect. Engs.*, 1902.—**Photometer bar,** a graduated wooden bar between the standard candle and the light to be tested. A Bunsen screen or other device is moved along this bar until equal luminous effects are obtained.—**Preece and Trotter's photometer,** an illumination photometer based on Lambert's law of the variation in the intensity of diffusely reflected light with the angle. The test surface, the illumination of which is to be measured, forms part of the cover of a closed box. Through slots in this surface a sheet of cardboard within the box may be seen and its brightness contrasted with that of the test surface. The cardboard is illuminated by a lamp within the box and adjustments of brightness are made by varying the angle of incidence of the light that falls upon it.—**Radial photometer,** an instrument for testing the value of the angular rays emitted by a flame, from the horizontal to the vertical, either above or below the former position. The disk is movable that its inclination to the standard light and the one tested may be the same. The apparatus consists of two standards, one fixed to the other, movable along a baseboard. A radial arm connects the two and insures that the lamp tested and the screen shall be equidistant no matter what the angle of the incident light. The standard lamp is adjustable to get equality of illumination.—**Reichsanstalt photometer,** a photometer provided with a Lummer-Brodhun optical train or sight-box.—**Relief photometer,** a photometer in which the two sides of the screen are placed at an angle of forty-five degrees with the incident beams, so that they may be viewed simultaneously without the aid of mirrors.—**Ritchie photometer,** a form of photometer in which the sight-box contains two mirrors placed vertically and dihedrally in the box, and at an angle of 45° to the photometrical axis. An opening in front of the apex of the mirrors is covered with a translucent screen, such as tissue-paper. Prisms may be substituted for the mirrors.—**Selenium photometer,** a photometer in which intensities of illumination are estimated by means of the decrease in the electric resistance of a selenium film upon which the light is allowed to fall.—**Spherical candle-power photometer.** Same as *integrating* ★*photometer.*—**Steinheil prism photometer,** a photometer in which the rays from two stars to be compared are brought by total reflection from two right-angled prisms through the two halves of a divided object-glass, and their light compared by changing the distances of the two half-objectives from the eyepieces until the diffuse star-images are equally intense.—**Translucent-disk photometer,** a photometer having a screen which is partly translucent and partly opaque, like a Bunsen screen.—**Varley's photometer,** a photometer in which the illumination of the screen is regulated by means of adjustable diaphragms placed in the path of the light.—**Vogel's chemical photometer,** a photometer in which sensitive chrome-paper is acted on by daylight.—**Weber's photometer,** an illumination photometer in which the test surface *S*, the brightness of which is to be measured, is viewed through a tube containing a Lummer-Brodhun cube *L*. This cube serves to introduce into the field of view a translucent screen *T* mounted in a tube at right angles to the line of sight and this screen is illuminated from behind by means of a benzin lamp *C*. Measurements are made by shifting the translucent screen within the tube, thus varying its distance from the lamp, until equality of the field of view is secured. The light from *S* is reduced when necessary by interposing absorbent screens at *A*.—**Zinc-ball photometer,** an instrument devised by Elster and Geitel for the determination of the intensity of the ultra-violet rays in sunlight. It depends upon the rate at which a negatively electrified ball of zinc with amalgamated surface loses its charge when exposed to ultra-violet radiation.—**Zöllner's photometer,** an early form of polarization-photometer in which the light of a star viewed through a small telescope is compared with that of an artificial star the brightness of which can be varied by means of a pair of Nicol prisms.



Ritchie Photometer.
A, B, lights to be compared; *M, M′*, mirrors; *SS*, translucent screen.



Essential Features of Weber's Photometer.

photometer-bench (fọ-tom′e-tėr-bench), *n.* The track or train along which the sight-box of a photometer may be moved in a plane parallel with the photometrical axis, while the lights to be compared are mounted at each end; or the bench supports a fixed sight-box and the lights are movable. In either form the bench is provided with appropriate scales giving the distances between the lights and the screen. *W. M. Stine*, Photometrical Measurements, p. 104.

photomethemoglobin (fō-tọ-met″hem-ọ-glō′-bin), *n.* [Gr. φῶς (φωτ-), light, + E. *methemoglobin.*] A substance closely related to methemoglobin, from which it results on exposure of its neutral solutions to sunlight.

photometric, *a.* **2.** In *biol.*, exhibiting phototometry; governed as to position by the varying intensity of light.—**Photometric scale.** See *absolute* ★*scale.*

photometrograph (fō-tọ-met′rọ-gråf), *n.* [*photometric* + Gr. γράφειν, write.] An instrument for registering the intensity of light at various depths beneath the surface of a body of water.

> I have here a graphic representation of the results of experiments I made to the south of Madeira with a *photometrograph* invented by my friend Dr. Regnard, which shows how rapidly light loses its intensity in penetrating below the surface [of the sea].
>
> *Geog. Jour.* (R. G. S.), XII. 453.

photometry, *n.* **2.** In *biol.*, the reactional movement, positive and negative, with an indifference point between, of organisms under changing intensity of illumination. *Oltmanns.*—**Flicker photometry,** the determination of the luminosity or brightness-value of a color (for instance, of the reflecting power of a colored paper) by determination of that intensity of colorless light which, when presented to the eye in fairly rapid alternation with the color, does not give rise to the phenomenon of flicker. (See *flicker* ★*photometer.*) The postulate underlying flicker photometry is that the flickering of intermittent visual stimuli depends not at all upon difference of color, but solely upon that of the luminosities of the stimuli. Suppose, then, that we have a series of cardboard disks, ranging by small differences of reflecting power between the limits black and white, and that we also have a red disk, the brightness-value of which is to be determined. All that we have to do is to mount the red and a gray disk together upon a color-mixer, so that the combined disk shows 180° of gray and 180° of red, to rotate the combined disk at a speed less than that required for complete fusion of the red and gray, and to observe whether or not the disk flickers. If it does, the brightness-values of the two partial disks are different; if it does not, these brightness-values are the same. The reflecting power of the gray is then determined by one or another of the regular photometric methods; and, knowing this, the reflecting power of the red paper also is known. The method was introduced by O. N. Rood in 1893, and has of late years been extended and refined by various investigators.—**Heterochromatic photometry,** the photometric comparison of light-sources which differ in color.—**Photographic photometry,** photometry in which the intensities of light-sources are compared by means of their photographic effects. Photographic photometry is confined, in practice, to the determination of stellar magnitudes.

photomezzotype (fō-tọ-mez′ọ-tīp), *n.* [*photo(graphic)* + *mezzo(tint)* + *type.*] A photomechanical printing process similar to collotype; also a print produced by it. *N. E. D.*

photomicrogram (fō-tọ-mī′krọ-gram), *n.* Same as *photomicrograph.*

photomicrography, *n.*—**Stereoscopic photomicrography,** in *photog.*, the process of obtaining photomicrographs that show stereoscopic effects. Two plates are exposed in quick succession in a photomicroscope, the condenser diaphragm being decentered to the right for one and to the left for the other, and the plates are developed together.

photomicroscope (fō-tọ-mī′krọ-skōp), *n.* [Gr. φῶς (φωτ-), light, + E. *microscope.*] A microscope combined with a camera.

photomicroscopic (fō″tọ-mī-krọ-skop′ik), *a.* [*photomicroscop(y)* + *-ic.*] Of or pertaining to the photography of minute objects enlarged by means of the microscope.

> *Photomicroscopic* investigation is made of metals and alloys, and especially of steel rails.
>
> *Nature*, Sept. 24, 1903, p. 506.

photomicroscopy (fō″tọ-mī-kros′kọ-pi), *n.* [Gr. φῶς (φωτ-), light, + E. *microscopy.*] The photography of enlarged images of minute objects by means of a photomicroscope or combination of microscope and camera.

> *Photomicroscopy* of Metals as practised by Steel Companies.
>
> *Jour. App. Micr.*, 1902, p. 1920.

photomorphosis (fō″tọ-môr′fọ-sis), *n.* [Gr. φῶς (φωτ-), light, + μόρφωσις, a shaping. See *morphosis.*] In *biol.*, the taking on of form so far as this is governed by the stimulus of light.

> The terms *photomorphosis*, chemomorphosis, photonasty, heliotropism, indicate the external agency which produces the reaction.
>
> *Pfeffer* (trans.), Physiol. of Plants, II. 137.

photonastic (fō-tọ-nas′tik), *a.* [*photonast(y)* + *-ic.*] Exhibiting or pertaining to photonasty: as, *photonastic* movements. *Pfeffer* (trans.), Physiol. of Plants, II. 104.

photonasty (fō′tọ-nas-ti), *n.* [Gr. φῶς (φωτ-), light, + ναστός, close-pressed, solid.] In *bot.*, the occurrence of curvature in a dorsiventral organ under the stimulation of diffused light. Compare *photo-epinasty. Pfeffer* (trans.), Physiol. of Plants, II. 73.

Photonectes (fọ-tọ-nek′tēz), *n.* [NL., < Gr. φῶς (φωτ-), light, + νήκτης, swimmer.] A genus of stomiatoid fishes found in deep seas.

photopapyrograph (fō″tọ-pạ-pī′rọ-gråf), *n.* A print produced by photopapyrography.

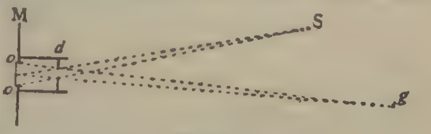
photopathic (fō-tọ-path′ik), *a.* [*photopath(y)* + *-ic.*] Of or pertaining to the movements of organisms in relation to intensity of illumination; exhibiting photopathy.

> In strong and moderate intensities of light it may be first negatively and later positively *photopathic;* to very weak intensity of light it may be positively *photopathic.* Some evidences of phototaxis are found under strong light, the aboral end being directed toward the light.
>
> *Biol. Bulletin*, May, 1904, p. 324.

photopathy (fọ-top′ạ-thi), *n.* [Gr. φῶς (φωτ-), light, + πάθος, affection.] The influence of light upon an organism, especially as causing the migration of the organism from a region of greater to one of less illumination (*negative photopathy*), or the reverse (*positive photopathy*), in relation to the intensity and not to the direction of the light.

> Phototaxis we defined as migration in the direction of the light rays and *photopathy* as migration toward a region of greater or less intensity of light.
>
> *C. B. Davenport*, Exper. Morphol., p. 203.

photoped (fō′tọ-ped), *n.* [Gr. φῶς (φωτ-), light, + L. *pes* (*ped-*), foot.] A photometric device used in the testing of gas flames. It is a perfected form of shadow-photometer consisting of a vertical screen of metal (M), with a square opening over which is stretched a sheet of paper. This opening (*o,o*), which forms the field of view, is illuminated by the two sources to be compared; a diaphragm (*d*) being so placed that the light from S illuminates one side of the opening, that from *g* the other. The two contiguous fields thus formed are viewed from behind the screen. *W. J. Dibdin*, Public Lighting, p. 53.



Photoped.

photophane (fō′tō-fān), *n.* [Gr. φῶς (φωτ-), light, + -φανης, < φαίνειν, show.] Same as ★*collotype.*

> The collotype process is worked universally, and is known by a variety of names; the Germans call it "Lichtdruck," the French "Phototypie," the Americans "Phototype," and we English have given it the titles of "Photo-print," "Heliotype," "Autotype," "*Photophane,*" "Photo-mezzo-type," "Graphotone," etc.
>
> *Jour. Soc. of Arts*, quoted in Sci. Amer. Sup., March 28, [1903, p. 22,767.

photophil (fō′tọ-fil), *a.* and *n.* [Gr. φῶς (φωτ-), light, + φιλεῖν, love.] **I.** *a.* Loving light; specifically, pertaining to the movement of organisms toward a more intensely illuminated area or exhibiting such movement; exhibiting positive photopathy or phototaxis.

> And it can be shown that it is an advantage to Hydra to be *photophil*, since many of the Entomostraca upon which it feeds are phototactic.
>
> *C. B. Davenport*, Exper. Morphol., p. 184.

II. *n.* A micro-organism or cell which exhibits positive phototaxis.

photophilous (fọ-tof′i-lus), *a.* [*photophil* + *-ous.*] In *phytogeog.*, thriving in full light; heliophilous. *Pound and Clements.*

photophobe (fō′tọ-fōb), *a.* and *n.* [G. *photophob*, < Gr. φῶς (φωτ-), light, + φοβεῖν, fear.] **I.** *a.* Fearing light; specifically, pertaining to the movement of organisms toward a less intensely illuminated area; exhibiting negative photopathy or phototaxis; photophobic.

II. *n.* A photophobic organism, or one that turns away from the light.

photophobous (fō̤-tof′ō̤-bus), *a.* [*photophobe* + *-ous.*] Avoiding light; photophobic.

Only when accidentally growing in the shade do they assume the bright red tints that distinguish their *photophobous* allies.
A. F. W. Schimper (trans.), Plant-geog., p. 793.

photophore (fō′tō̤-fōr), *n.* [Gr. φῶς (φωτ-), light, + -φορος, ‹ φέρειν, bear.] 1. A luminous spot which has connection with the nervous system in fishes, especially in deep-sea species. *Science*, March 20, 1908, p. 454.—2. An apparatus for illuminating any accessible internal part of the body for the purpose of inspection. —3. In *microscopy*, an apparatus, including a mirror, for finding sections when immersed in a staining fluid; a section-finder.

A little apparatus to which Ranvier has given the name *photophore* (light-bearer), but which may better be called with Obersteiner, section-finder.
Zimmermann (trans.), Bot. Microtechnique, p. 25.

photopile (fō′tō-pīl), *n.* [Gr. φῶς (φωτ-), light, + E. *pile*^{2}.] An apparatus, as the selenium-cell in a photophone, that is sensitive to light. See *photophone.*

photoplagiotropy (fō-tō̤-plā-ji-ot′rō̤-pi), *n.* [Gr. φῶς (φωτ-), light, + E. *plagiotropy.*] Plagiotropy due to the influence of light.

I was the first to show in some very striking examples that in habitually anisophyllous shoots we have to deal with *photo-plagiotropy.*
K. E. Goebel (trans.), Organography of Plants, I. 100.

photoplastography (fō″tō̤-plas-tog′ra̤-fi), *n.* [Gr. φῶς (φωτ-), light, + πλαστός, formed, + -γραφια, ‹ γράφειν, write.] In *photog.*, any process in which a plastic substance changes its form because of the action of light and returns to a thickness suitable for a colored gelatinous ink. *Woodbury*, Encyc. Dict. of Photog., p. 303.

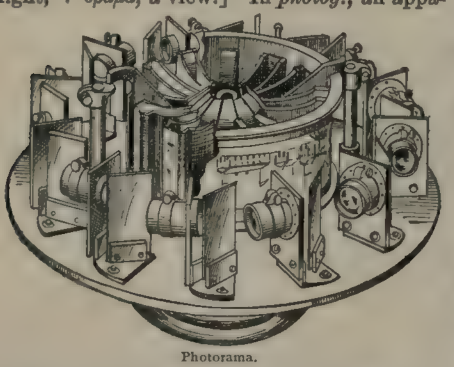
photopography (fō-tō̤-pog′ra̤-fi), *n.* A reduced form (by haplology) of ⋆*phototopography.*

photopolarigraph (fō″tō̤-pō̤-lar′i-gráf), *n.* [Gr. φῶς (φωτ-), light, + E. *polari*(*zation*) + Gr. γράφειν, write.] An instrument for the photographic study of the polarization of light from the sky or from celestial objects. It consists of a camera with a Nicol prism mounted in front of the objective.

photoprint (fō′tō̤-print), *n.* [Gr. φῶς (φωτ-), light, + E. *print.*] Any process of printing in which photography is the principal feature. *Trans. Amer. Inst. Elect. Engin.*, Feb. 26, 1904, p. 337.

photoptometry (fō-top-tom′e-tri), *n.* [Gr. φῶς (φωτ-), light, + ὀπτ(ικός), of vision, + -μετρια, ‹ μέτρον, measure.] Measurement of the acuteness of vision by means of varying degrees of illumination. *Buck*, Med. Handbook, VI. 392.

photorama (fō-tō̤-rä′mä), *n.* [Gr. φῶς (φωτ-), light, + ὅραμα, a view.] In *photog.*, an apparatus for exhibiting panoramic pictures.



Photorama.

It consists, as devised by Messrs. Lumière, of a circular photographic film, which, when illuminated by rays from a powerful search-light, is projected on the screen of a circular building. Twelve lenses on a revolving base serve to focus the picture on the screen. *Sci. Amer.*, May 17, 1902.

photoreceptive (fō-tō̤-rē̤-sep′tiv), *a.* [Gr. φῶς (φωτ-), light, + E. *receptive.*] Receptive or sensitive to light.

The evolution of the *photoreceptive* apparatus of planarians stands at such a low stage of differentiation that the light environment of these worms is of slight importance to them. *Science*, Feb. 7, 1908, p. 220.

photorefractor (fō″tō-rē̤-frak′to̤r), *n.* [Gr. φῶς (φωτ-), light, + E. *refractor.*] A photographic telescope, with lenses specially corrected for the purpose.

An exposure of twelve hours, spread over four nights, with the thirteen-inch *photo-refractor* of the International Survey, yielded the remarkable picture which forms our frontispiece.
A. M. Clerke, Problems in Astrophysics, p. 507.

photoregression (fō″tō̤-rē̤-gresh′o̤n), *n.* [Gr. φῶς (φωτ-), light, + E. *regression.*] The fading out of a photographic image, due to certain chemical reactions in the emulsion.

The *photo-regression* of the latent image is favoured by the presence of chromium salts in the emulsions, and is most troublesome with emulsions of bromide prepared in centrifugal apparatus. *Engineering*, July 24, 1903, p. 109.

photoret (fō′tō̤-ret), *n.* [*photo*(*graphic*) (*came*)*r*(*a*) + *-et*^{1}.] A miniature photographic camera. *Stand. Dict.*

photo-salt (fō′tō̤-sâlt), *n.* A salt so affected by light that it can be used in photography.

photosantonic (fō″tō̤-san-ton′ik), *a.* [Gr. φῶς (φωτ-), light, + E. *santon*(*in*) + *-ic.*] Formed by the action of light on santonin.—**Photosantonic acid**, a yellow crystalline acid, $C_{15}H_{22}O_5$, formed when a solution of santonin in acetic acid is allowed to stand in sunlight.

photoscopic (fō-tō̤-skop′ik), *a.* [*photoscop*(*e*) + *-ic.*] Pertaining to the photoscope or its use.

photosculptural (fō-tō̤-skulp′tṳ̄-ra̤l), *a.* [*photosculptur*(*e*) + *-al*^{1}.] Pertaining to, or of the nature of, photosculpture.

photosensitive (fō-tō̤-sen′si-tiv), *a.* [Gr. φῶς (φωτ-), light, + E. *sensitive.*] Sensitive to the action of light.

If the word "photography" be interpreted literally as writing or inscribing by light, without any reference to the subsequent permanence of the inscription, then the person who first intentionally caused a design to be imprinted by light upon a *photo-sensitive* compound must be regarded as the first photographer.
Smithsonian Rep., 1890, p. 377.

photospectroheliograph (fō-tō̤-spek-trō̤-hē′li-ō̤-gráf), *n.* Same as ⋆*spectroheliograph* (which see).

photospectroscope (fō-tō̤-spek′trō̤-skōp), *n.* [Gr. φῶς (φωτ-), light, + E. *spectroscope.*] A spectroscope fitted with photographic apparatus.

photospectroscopic (fō-tō̤-spek-trō̤-skop′ik), *a.* [*photospectroscop*(*e*) + *-ic.*] Of or pertaining to the photospectroscope or to photospectroscopy.

photospectroscopy (fō″tō-spek-tros′kō̤-pi), *n.* [*photospectroscop*(*e*) + *-y*^{3}.] The scientific use of the photospectroscope; the application of photography to spectroscopy.

photosphæria (fō-tō̤-sfē′ri-ä̤), *n. pl.* [NL., ‹ Gr. φῶς (φωτ-), light, + σφαῖρα, sphere.] The luminous or phosphorescent organs which are present in the *Euphausiidæ* and some other *Crustacea.*

photosurvey (fō″tō̤-sėr-vā′), *n.* A survey conducted by the method of photographic surveying (which see, under ⋆*surveying*).

photosurveying (fō″tō̤-sėr-vā′ing), *n.* The process of making a photosurvey.

On the other hand, "considerable outlay is saved in *photo-surveying* by drafting the map in office, at the expense of only the individual draughtsman. . . ."
Encyc. Brit., XXXIII. 95.

photosyntax (fō-tō̤-sin′taks), *n.* [Gr. φῶς (φωτ-), light, + E. *syntax.*] The original but less used term for ⋆*photosynthesis.*

photosynthesis (fō-tō̤-sin′the-sis), *n.* [NL., ‹ Gr. φῶς (φωτ-), light, + σύνθεσις, synthesis.] A chemical combination brought about by the action of light, as in the formation of carbohydrates in living plants from the carbon dioxid and water of the air under the influence of sunlight. *Jour. Roy. Micros. Soc.*, Feb., 1904, p. 73.

photosynthetic (fō″tō̤-sin-thet′ik), *a.* [*photosynthesis* (*-thet-*) + *-ic.*] Of or pertaining to photosynthesis or the power of certain wavelengths of light to promote chemical combination.

The relation between the *photosynthetic* activity of different parts of the spectrum and the absorption bands of the chlorophyll spectrum.
Nature, Sept. 24, 1903, p. 493.

photosynthometer (fō″tō̤-sin-thom′e-tėr), *n.* [*photosynth*(*esis*) + Gr. μέτρον, measure.] An instrument for measuring the amount of photosynthesis occurring in plants.

A new *photosynthometer*, by which the exchange of gases in photosynthesis may be exactly and conveniently measured, either for demonstration of the processes to classes, or in investigation for particular plants.
Science, March 11, 1904, p. 424.

phototachometric (fō-tō̤-tak-ō̤-met′rik), *a.* Same as *phototachometrical.*

phototactic, *a.* 2. In *biol.*, of or pertaining to the locomotion of organisms in relation to direction of light; exhibiting phototaxis or photopathy.

'The Theory of *Phototactic* Response' is a clarifying paper by Holt and Lee. They aim to show that organisms do not react to direction of light as well as to intensity of rays. The conditions of the organism itself must be more closely regarded. *Science*, Jan. 18, 1901, p. 111.

phototaxis, *n.* 2. In *biol.*, active migration of organisms, or of cells, in the line of rays of light affecting them—*positive phototaxis* if toward the source of light, and *negative phototaxis* if away from it. Compare ⋆*photopathy.*

By phytophysiological experiments, Sachs, Pfeffer, and many other trained experimenters have enlightened us . . . concerning *phototaxis*, chemotaxis, and similar interesting phenomena.
O. Hertwig (trans.), in Smithsonian Rep., 1900, p. 469.

phototelegraph (fō-tō̤-tel′ē̤-gráf), *n.* [Gr. φῶς (φωτ-), light, + E. *telegraph.*] 1. A device for the transmission of intelligence by means of light. See *heliograph* and *photophone.*—2. An instrument for the electric transmission to a distance of facsimiles of photographs or diagrams; a facsimile telegraph.

phototelegraphy (fō-tō̤-tel′ē̤-graf-i or -tē̤-leg′ra̤-fi), *n.* [*phototelegraph* + *-y*^{3}.] 1. The transmission of signals to a distance by means of light.—2. The electric transmission of facsimiles of photographs, drawings, etc.; facsimile telegraphy.

phototelescope (fō-tō̤-tel′e-skōp), *n.* [*photo*(*graphic*) + *telescope.*] A telescope fitted with apparatus for photographing the objects viewed.

phototelescopic (fō-tō̤-tel-e-skop′ik), *a.* [*phototelescop*(*e*) + *-ic.*] Of or pertaining to telescopic photography; of or pertaining to the phototelescope or its use.

phototest (fō′tō̤-test), *n.* [Gr. φῶς (φωτ-), light, + E. *test*^{1}.] The test of the existence and action of various rays, such as cathode rays, X-rays, or N-rays, by their effect upon a phosphorescent screen.

Inasmuch as M. Le Roux has lately advised investigators that before attempting to compare effects on the phosphorescent screen—which he proposes to call in future the "*phototest*"—they should avoid all brilliant light and remain in a dimly lighted room for a quarter of an hour, to be followed by five minutes in the dark before looking at the screen, the proportion seems fairly high.
Athenæum, Sept. 3, 1904, p. 324.

phototheodolite, *n.* Specifically, a photographic surveying instrument or photogrammeter in which a photographic field-camera and its accessories are combined with a theodolite, enabling both topographical photographs and topographical angular measurements to be made by the same instrument.

phototherapeutic (fō-tō̤-ther-a̤-pū′tik), *a.* [Gr. φῶς (φωτ-), light, + E. *therapeutic.*] Of or relating to phototherapy.

Facilities for hydrotherapeutic and *phototherapeutic* work and of such other accessories as may be necessary for carrying out the plans of the institution.
Phil. Med. Jour., Jan. 31, 1903, p. 208.

phototherapeutics (fō-tō̤-ther-a̤-pū′tiks), *n.* Same as ⋆*phototherapy.*

phototherapy (fō-tō̤-ther′a̤-pi), *n.* [Gr. φῶς (φωτ-), light, + θεραπεία, medical treatment.] Treatment of disease by rays derived from the sun or an electric lamp; Finsen treatment; light treatment. It is really a form of radiotherapy, for the rays employed are the non-luminous ultra-violet rays and not those of light.

Phototherapy is a new name covering new treatment of certain skin diseases by concentrated sunlight, or where sunlight is not bright enough, by electric light.
Amer. Inventor, Dec. 15, 1903, p. 299.

photothermic (fō-tō̤-thėr′mik), *a.* [Gr. φῶς (φωτ-), light, + E. *thermic.*] Of or pertaining to the thermic effects of light.

phototirage (fō-tō̤-ti-räzh′), *n.* [F., ‹ Gr. φῶς (φωτ-), light, + F. *tirage*, drawing.] Same as ⋆*photoprint.* *Woodbury*, Encyc. Dict. of Photog., p. 303.

phototopographic (fō″tō̤-top-ō̤-graf′ik), *a.* [*phototopograph*(*y*) + *-ic.*] Of or pertaining to phototopography, or the method of making topographical surveys and maps by the aid of photography. Also *phototopographical.*

The field work of a *photo-topographic* party consists primarily in execution of a triangulation by the usual methods which would be adapted to any ordinary topographical survey. *Encyc. Brit.*, XXXIII. 95.

phototopographical (fō-tō̤-top-ō̤-graf′i-ka̤l), *a.* Same as ⋆*phototopographic.*

phototopographically (fō-tō̤-top-ō̤-graf′i-ka̤l-i), *adv.* In a phototopographic manner; by means of phototopography.

phototopography (fō-tō̤-tō-pog′ra̤-fi), *n.* [Gr. φῶς (φωτ-), light, + E. *topography.*] Topographical surveying based on perspective views of the terrene obtained by means of the camera. *U. S. Coast and Geodetic Survey Report*, 1893, II. 38.

phototropic (fō-tọ-trop'ik), *a.* [*phototrop(y)* + *-ic.*] Of, pertaining to, or exhibiting phototropism or phototropy. *Philos. Trans. Roy. Soc.*, 1902, ser. B, p. 344.

phototropism (fọ-tot'rọ-pizm), *n.* [Gr. φῶς (φωτ-), light, + τρόπος, a turning, + *-ism.*] 1. The growth or the bending of organisms or of parts of organisms in relation to light; heliotropism.

> Not only plants, but also animals show the effects of heliotropism (*phototropism*) — that is, the tendency to turn toward or away from the light.
> *Smithsonian Rep.*, 1899, p. 379.

2. Same as ★*phototaxis*, 2.— 3. Same as ★*phototropy*, 2.

phototropy (fọ-tot'rọ-pi), *n.* [Gr. φῶς (φωτ-), light, + -τροπια, < τρέπειν, turn.] 1. Same as ★*phototropism*, 1 and 2.— 2. Change of color, due to exposure to light, of compounds otherwise unaltered in composition or structure. *Sci. Amer.*, Feb. 24, 1900, p. 123.

phototype, *n.* 3. A photomechanical process; phototypy.

phototypography (fō'tọ-tī-pog'ra-fi), *n.* [Gr. φῶς (φωτ-), light, + E. *typography.*] A general term designating a large number of photographic processes in which printing-surfaces are made by the aid of light.

photovisual (fō-tọ-viz'ū-al), *a.* [Gr. φῶς (φωτ-), light, + E. *visual.*] Having the same focal length for the ultra-violet and for the visible rays of the spectrum: said specifically of an objective the color-correction of which is such that when focused by the eye it is likewise in focus for the photographic plate.

photovitrotype (fō-tọ-vit'rọ-tīp), *n.* [Gr. φῶς (φωτ-), light, + L. *vitrum*, glass, + Gr. τύπος, type.] A photograph printed on a vitreous base, as glass, porcelain, or enameled ware. *Stand. Dict.*

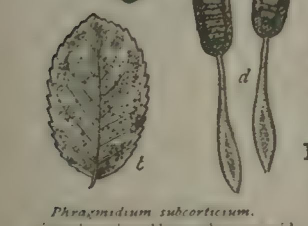
photoxylin (fọ-tok'si-lin), *n.* [Gr. φῶς (φωτ-), light, + E. (*pyr*)*oxylin.*] The trade-name of a nitrocellulose, similar to pyroxylin, but prepared from wood-pulp instead of cotton. It is used as a substitute for collodion.

photozincograph (fō-tọ-zing'kọ-gráf), *v. t.* To photo-engrave by photozincography. Same as ★*photometallograph.*

phoxocephalic (fok'sọ-se-fal'ik), *a.* [Gr. φοξός, pointed, + κεφαλή, head, + *-ic.*] In *craniom.*, having a hypsicephalic skull running up to an elevated point at the bregma. *Aitken Meigs.*

phr. An abbreviation of *phrase.*

Phragmidium (frag-mid'i-um), *n.* [NL. (Link, 1816), < dim. of Gr. φράγμα, partition.] A genus of rust-fungi, of the order *Uredinales*, having æcidia of the *Cæoma* type, uredospores with numerous germ-pores, and several-celled teleutospores. About 30 species are known, some of which cause serious diseases of cultivated plants. *P. subcorticium* attacks the leaves and stems of roses. See *rose*-★*rust.*



Phragmidium subcorticium.

a, rose branch and leaves showing æcidial stage of the fungus, reduced; *b*, leaf with sori of teleutospores, reduced; *c*, uredospores highly magnified; *d*, teleutospores, highly magnified.
(From Massee's "Plant Diseases.")

Phragmoceras (frag-mos'e-ras), *n.* [NL., < Gr. φραγμός, a partition, + κέρας, horn.] A genus of nautiloid cephalopods with compressed, rapidly expanding, strongly curved shells having large apertures which are much contracted laterally and have long hyponomic sinuses. Several species are known in Silurian and Devonian formations.

phragmocone (frag'mọ-kōn), *n.* Same as *phragmacone.*

Phragmocyttares (frag-mọ-sit'a-rēz), *n. pl.* [NL. (prop. F. pl.), < Gr. φραγμός, a partition, + κύτταρος, a cell (of a wasps' nest, etc.).] A group of social wasps founded by Saussure upon the structure of their nests, in which the layers of the comb are supported by the nest-envelop, each layer having a hole for communication.

phragmoid (frag'moid), *a.* [Gr. φραγμός, a partition, + εἶδος, form.] Having transverse septa, as the spores of many fungi.

Phrasal adverb. See ★*adverb.*

phrase, *n.*— **Adjectival phrase.** See ★*adjectival.*

phraseographic (frā'zē-ọ-graf'ik), *a.* [*phraseograph-y* + *-ic.*] Of or pertaining to phraseography; set down in the shorthand characters of that process.

> The *phraseographic* combinations are found to be quite as legible as the ordinary Phonography.
> *Pitman*, Phonographic Phrase Book, p. 4.

phraseological, *a.* 2. Indicating a tendency to coin phrases and to rely on mere wording for effect. [Rare.]

> It is hard to say which is worse—the light weekly journalism with its straining for *phraseological* smartness . . . or the serious sort with its inanimate verbosity.
> *Bookman*, May, 1905, p. 235.

phraser (frā'zėr), *n.* [*phrase*, *v.*, + *-er*¹.] 1. One who phrases or words a notion; one who puts ideas or feelings into words.—2. One who is gifted in making smart or imposing phrases.

phrase-sign (frāz'sīn), *n.* See *phrase-mark.*

phrasing-lever (frā'zing-lev'ėr), *n.* In mechanical piano-players, a lever or handle by which variations of tempo or touch can be made.

phrator (frā'tọr), *n.* [Gr. φράτωρ, by-form of φράτηρ, a clansman. See *brother.*] A member of a phratry. *Giddings*, Prin. of Sociol., p. 282.

phratral (frā'tral), *a.* [Gr. φράτρα, a clan, + *-al*¹.] Pertaining or belonging to a phratry.

> The kiva worship is controlled by the *phratral* unit; that is, by the brotherhood.
> *An. Rep. Bur. Amer. Ethnol.*, 1898–99, p. cix.

phratriac (frā'tri-ak), *a.* Same as *phratric.*

phreatic (frẹ-at'ik), *a.* [F. *phréatique*, < Gr. φρέαρ (φρεατ-), an artificial well.] Subterranean, as the sources of wells.

phren., phrenol. Abbreviations (*a*) of *phrenological*; (*b*) [*l. c.* or *cap.*] of *phrenology.*

phrenasthenia (fren-as-thē'ni-ä), *n.* [NL., < Gr. φρήν, diaphragm, heart, mind, + ἀσθένεια, weakness.] 1. Weakness of the diaphragm.—2. Mental exhaustion to the point of mild insanity.

> On the borderland between the psychoses proper, as mentioned before, and the neuroses a number of cases variously called neurasthenia and *phrenasthenia* were treated at the clinic. *Lancet*, June 18, 1904, p. 1737.

phrenesia (frẹ-nē'siạ̈), *n.* [NL.] Same as *phrenesis.*

phrenhypnotic (fren-hip-not'ik), *a.* [*phren*(*ology*) + *hypnotic.*] Relating to or combining phrenology and hypnotism.

Phrenic center. See ★*center*¹.

phrenogram (fren'ọ-gram), *n.* [Gr. φρήν, diaphragm, + γράμμα, a writing.] A graphic tracing of the movements of the diaphragm.

phrenograph (fren'ọ-gráf), *n.* [Gr. φρήν, diaphragm, + γράφειν, write.] An apparatus for recording the movements of the diaphragm during respiration. *Buck*, Med. Handbook, VI. 950.

phrenography, *n.* 2. The recording of the movements of the diaphragm.

phrenohepatic (fren'ọ-hẹ-pat'ik), *a.* [Gr. φρήν, diaphragm, + ἧπαρ (ἡπατ-), liver, + *-ic.*] Relating to both the diaphragm and the liver.

phrenologize (frẹ-nol'ọ-jīz), *v. t.*; pret. and pp. *phrenologized*, ppr. *phrenologizing.* [*phrenolog*(*y*) + *-ize.*] To subject to a phrenological examination; study or analyze phrenologically.

phrenonarcosis (fren'ọ-när-kō'sis), *n.* [Gr. φρήν (φρεν-), mind, + νάρκωσις, a benumbing. See *narcosis.*] In *pathol.*, stupor.

phrenopathy (frẹ-nop'a-thi), *n.* Same as *phrenopathia.* *Lancet*, Aug. 29, 1903, p. 619.

phrenosin (fren'ọ-sin), *n.* [Gr. φρήν, mind, + *-ose* + *-in*².] Same as *cerebrin.*

phrenotype (fren'ọ-tīp), *n.* [Gr. φρήν, mind, + τύπος, impression.] A set of symbols arranged in a way to impress the memory; a word, sentence, list of figures, etc.; spelled or arranged according to some mnemonic system.

phrenotype (fren'ọ-tīp), *v. t.*; pret. and pp. *phrenotyped*, ppr. *phrenotyping.* [*phrenotype*, *n.*] To cast into a form that shall impress the memory; reduce to a system of mnemonics: as, a *phrenotyped* French grammar.

phrenotypic (fren-ọ-tip'ik), *a.* [*phrenotype* + *-ic.*] 1. Noting an impression on the memory; associative; suggestive. See the extract.

> The rapidity and strength with which two given notions stick together is in the inverse ratio of their *phrenotypic* distance, . . . by which I mean the time that elapses between the two notions that are to be connected together acting upon the brain.
> *Major Beniowski*, in D. Kay, Memory, What It Is and [How to Improve It, p. 278, note.

2. Pertaining to phrenotypics or a system of mnemonics: as, a *phrenotypic* alphabet and orthography.

phrenotypics (fren-ọ-tip'iks), *n. pl.* [Pl. of **phrenotypic*, *n.*] A system of mnemonics; an artificial method of studying and committing to memory.

> *Phrenotypics*, a . . . description of the . . . feats of memory . . . performed by Major Beniowski . . . and . . . his pupils. [Title.] London, 1842.

Phreoryctes (frē-ọ-rik'tēz), *n.* [NL.] The typical genus of the family *Phreoryctidæ.* *Hoffmeister*, 1845.

Phreoryctidæ (frē-ọ-rik'ti-dē), *n. pl.* [NL. *Phreoryctes* + *-idæ.*] A family of limicolous annelids having a slender form, usually much elongated, with sigmoid setæ in four rows of single setæ or of couples, two pairs of spermducts opening separately without spermiducal glands, and no genital setæ. It contains the genera *Phreoryctes* and *Pelodrilus*, the former found in North America, Europe, and New Zealand.

phronema (frọ-nē'mạ̈), *n.* [Gr. φρόνημα, mind.] Haeckel's term for that part of the cerebral cortex which is occupied by the association-centers or thought-centers: opposed to and correlated with *sensorium.*

> The remarkable progress which has been made in the last few decades . . . does not yet, it is true, enable us to make a clear delimitation of the region of the *phronema.*
> *Haeckel* (trans.), Wonders of Life, p. 18.

phronetal (frọ-nē'tal), *a.* [*phronet*(*um*) + *-al*¹.] Of or pertaining to thought; having thought as its function; of or pertaining to the phroneta, in Haeckel's sense: as, *phronetal* elements; *phronetal* cells. Opposed to ★*æsthetal.* *Haeckel* (trans.), Wonders of Life, p. 14.

phronetic (frọ-net'ik), *a.* Same as ★*phronetal.* *Haeckel* (trans.), Wonders of Life, p. 330.

phronetum (frọ-nē'tum), *n.*; pl. *phroneta* (-tạ̈). [NL., < Gr. φρονεῖν, think, < φρήν, mind.] Haeckel's term for the subdivisions or 'thought-organs' of the phronema of the cortex.

> The instruments which form and link together the presentations are the organs of thought (*phroneta*).
> *Haeckel* (trans.), Riddle of the Universe, p. 298.

phrontist (fron'tist), *n.* [Gr. φροντιστής, a thinker, < φροντίς, thought.] A profound thinker: applied ironically to Socrates by Aristophanes. [Rare.]

phryganeid (frig-a-nē'id), *n.* and *a.* I. *n.* A member of the trichopterous family *Phryganeidæ.*

II. *a.* Having the characters of or belonging to the family *Phryganeidæ.*

Phrygania limestone. See ★*limestone.*

Phrygian, *n.* 3. An ancient language spoken in Phrygia, of which no record remains except some isolated words and proper names preserved in Greek literature. Upon these evidences the language is now classed as one of the Indo-European family. *Keane*, Ethnology, p. 412.

Phrygianize (frij'i-an-īz), *v. t.*; pret. and pp. *Phrygianized*, ppr. *Phrygianizing.* [*Phrygian* + *-ize.*] To render Phrygian in character; figuratively, frizzle. *N. E. D.*

> We really have at present in our city more good poets than we ever had; and the queer might be among the best if they pleased. But whenever an obvious and natural thought presents itself, they either reject it for coming without imagination, or they *phrygianize* it with such biting and hot curling-irons, that it rolls itself up impenetrably. They declare to us that pure and simple imagination is the absolute perfection of poetry.
> *Landor*, Letters of Pericles and Aspasia, liii.

Phrygionic (frij-i-on'ik), *a.* [L. *Phrygionius*, < *Phrygia*, Phrygia.] Relating to Phrygia or its productions.

> Pliny says that the Phrygians invented embroidery, and that garments so ornamented were called *Phrygionic.*
> *D. Rock*, S. K. Handbook, Textile Fabrics, p. 79.

phrynid (frin'id), *n.* and *a.* I. *n.* A member of the family *Phrynidæ.*

II. *a.* Having the characteristics of or belonging to the family *Phrynidæ.*

phrynin (frī′nin), *n.* [Gr. *φρύνη*, a toad, + *-in*^{2}.] A substance of poisonous character extracted from the skin of certain species of toads.

phrynium (frī′ni-um), *n.* [NL. *Phrynium*, an untenable name for the genus *Phyllodes*, in which these plants were formerly included.] Any one of a number of tropical West African marantaceous plants belonging to several related genera, especially *Sarcophrynium*, *Trachyphrynium*, and *Afrocalathea*. They have broad leaves resembling those of the canna or banana.

phrynolysin (frī-nol′i-sin), *n.* [Gr. *φρύνη*, a toad, + *λύσις*, dissolution, + *-in*^{2}.] The hemolytic poison of *Bombinator igneus*.

phthalazine (thal-az′in), *n.* [*phthal*(*ic*) + (*hydr*)*azine*.] A crystalline base, $C_8H_6N_2$, made by boiling phthalic aldehyde with an aqueous solution of hydrazine. It melts at 90–91° C.

phthalein (thal′ẹ-in), *n.* [*phthal*(*ic*) + *-e-in*.] One of the group of coloring-matters formed by the condensation of phthalic anhydrid with phenols. Some of the phthaleins have a purgative action when taken internally. They are of particular importance in the color-chemistry, and certain of their derivatives are valuable dyestuffs. See ★*phenolphthalein* and ★*phthalic anhydrid*.

phthalic (thal′ik), *a.* [(*na*)*phthal*(*ene*) + *-ic*.] Derived from naphthalene.—**Phthalic acid**, a colorless crystalline acid, $C_6H_4(COOH)_2$, made by the oxidation of naphthalene or alizarin, and in many other ways. It is made commercially by heating a mixture of naphthalene, concentrated sulphuric acid, and mercuric sulphate, and is used in large quantities in the manufacture of synthetic indigo. Formerly called *naphthalic acid* and *alizaric acid*. It is benzene-orthodicarbonic acid. The isomeric meta- and paradicarbonic acids are called *isophthalic* and *terephthalic acid*, respectively.—**Phthalic anhydrid**, a crystalline compound in the form of long needles, $C_8H_4O_3$, made by distilling phthalic acid. It readily yields condensation-products, and is much used in organic synthesis. It is employed in the preparation of an important group of artificial dyestuffs, sometimes called the *phthalic-anhydrid colors*. See ★*phthalein*.

phthalid (thal′id), *n.* [*phthal*(*ic*) + *-id*^{2}.] A crystalline compound, $C_8H_6O_2$, made variously, as by the reduction of phthalyl chlorid with zinc and hydrochloric acid. It is the anhydrid of orthomethylolbenzoic acid, $C_6H_4(COOH)(CH_2OH)$.

phthalimide (thal′i-mid), *n.* [*phthal*(*ic*) + *imide*.] A crystalline substance, $C_8H_5NO_2$, made by the action of dry ammonia gas on heated phthalic anhydrid, and in other ways. It melts at 233.5° C., and acts as a monobasic acid toward alkalis.

phthalin (thal′in), *n.* [*phthal*(*ic*) + *-in*^{2}.] A substance formed by the reduction of a phthalein. See ★*phenolphthalin*.

phthanite (than′īt), *n.* [Irreg. < Gr. *φθάνειν*, anticipate, + *-ite*^{2}.] In *petrog.*, a dense, compact metamorphic rock composed chiefly of cryptocrystalline quartz. It includes rocks called Lydian stone or lydite, hornfels, and jasper.

phthinode (thin′ōd), *n.* [Gr. *φθινώδης*, consumptive. See *phthisis*.] One who is suffering from phthisis; a consumptive.

phthinoid (thin′oid), *a.* [Gr. **φθινοειδής*, *φθινώδης*, consumptive, < *φθίνειν*, *φθίειν*, waste away (see *phthisis*), + *εἶδος*, form.] Presenting the symptoms or other characteristics of phthisis; phthisical. *Buck*, Med. Handbook, II. 811.—**Phthinoid chest.** See ★*chest*^{1}.

phthiriosis (thir-i-ō′sis), *n.* [NL., < Gr. *φθείρ*, a louse or similar parasite, + *-i-osis*.] A root-disease of the grape, primarily due to a cochineal insect, *Dactylopus vitis*, but considerably aggravated by the universal presence of the fungus *Bornetina corium*.

phthirophagous (thi-rof′a̤-gus), *a.* [Gr. *φθείρ*, a louse, + *φαγεῖν*, eat.] Eating lice.

phthisergate (thi-zėr′gāt), *n.* [Gr. *φθίσις*, a wasting away, + E. *ergate*.] A peculiar form of worker-ant pupa with very small head and eyes, produced by neglect of the larva and consequent precocious pupation. *Wheeler.*

phthisiogenetic (thiz″i-ọ-jẹ-net′ik), *a.* [Gr. *φθίσις*, a wasting away, + E. *genetic*.] Relating to the causation of phthisis. Also *phthisiogenic*.

> Prof. Behring, as had been anticipated, gave no exact details as to the method of obtaining or administering his latest therapeutic discovery, but the earlier stages of his work are to be explained in a forthcoming book entitled "Modern Problems of *Phthisiogenetic* and Phthisiotherapeutic Physiology illuminated by History."
>
> *Nature*, Oct. 12, 1905, p. 581.

phthisiogenic (thiz-i-ọ-jen′ik), *a.* Same as ★*phthisiogenetic*.

phthisiotherapeutic (thiz″i-ọ-ther″a̤-pū′tik), *a.* [Gr. *φθίσις*, phthisis, + E. *therapeutic*.] Of or pertaining to the treatment of phthisis.

phthisiotherapeutist (thiz″i-ọ-ther-a̤-pū′tist), *n.* [Gr. *φθίσις*, consumption, + *θεραπευτής*, medical attendant, + *-ist*.] One who devotes special attention to the treatment of phthisis. *Buck*, Med. Handbook, II. 555.

phthisiotherapist (thiz-i-ō-ther′a̤-pist), *n.* [Gr. *φθίσις*, a wasting, + E. *therapist*.] One who is skilled in the treatment of pulmonary tuberculosis. *Med. Record*, Nov. 9, 1907, p. 758.

phthisiotherapy (thiz″i-ọ-ther′a̤-pi), *n.* [Gr. *φθίσις*, consumption, + *θεραπεία*, medical treatment.] The medical treatment of phthisis or pulmonary tuberculosis. *Med. Record*, May 2, 1903, p. 719.

phthisis, *n.*—**Abdominal phthisis.** See ★*abdominal*.—**Black phthisis**, anthracosis.—**Mammary phthisis**, atrophy of the breasts.—**Phthisis anterior**, phthisis bulbi, which affects especially the anterior portion of the eyeball.—**Phthisis bulbi**, wasting and partial collapse of the eyeball.—**Potters' phthisis**, disease of the lung caused by the inhalation of dust, as in potters.—**Stonecutters' phthisis**, a chronic inflammation of the lungs excited by the irritation of inhaled dust and fine particles of stone; a form of pneumonoconiosis.

phthongal (thong′ga̤l), *a.* [Gr. *φθόγγος*, sound, + *-al*^{1}.] Of or pertaining to sound; vocal; sonant.

> Along with k, t, p, in the first place, go their nearest kindred, g, d, b. These are their sonant (or vocal, *phthongal*, intonated) counterparts. In the former, namely, there is no audible utterance, but complete silence, during the continuance of the closures.
>
> *Whitney*, Life and Growth of Lang., iv.

Ph. U. S. An abbreviation of *Pharmacopœia of the United States*.

phy., phys. Abbreviations of *physical*.

phyce, *n.* A bad spelling of *fise*^{2}.

phycite (fī′sīt), *n.* [Gr. *φῦκος*, seaweed, + *-ite*^{2}.] Same as *erythrite*, 3.

phycitid (fis′i-tid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Phycitidæ*.

II. *a.* Having the characters of or belonging to the family *Phycitidæ*.

phycochrom (fī′kọ-krom), *n.* [*Phycochrom*(*aceæ*).] A seaweed of the order *Phycochromaceæ*.

phycocyanogen (fī″kọ-sī-an′ọ-jen), *n.* Same as *phycocyanin*.

phycological (fī-kọ-loj′i-ka̤l), *a.* [*phycolog*(*y*) + *-ic-al*^{1}.] Of or pertaining to the algæ; pertaining to phycology.

phycopyrine (fī-kọ-pī′rin), *n.* [Gr. *φῦκος*, seaweed, + *πῦρ*, fire, + *-ine*^{2}.] One of the substances associated with chlorophyl in the chromatophore of the *Peridineæ*.

phylactery, *n.* (*a*) See also ★*tephillin*.

phylactocarp (fi-lak′tọ-kärp), *n.* [Gr. *φυλακτικός*, guarding, + *καρπός*, fruit.] In some *Hydromedusæ*, as the *Plumularidæ*, a modified hydrocladium bearing gonangia as well as nematophores and sometimes hydrothecæ. Compare *corbula*, 1.

phylactocarpal (fi-lak-tọ-kär′pa̤l), *a.* [*phylactocarp* + *-al*^{1}.] Pertaining to, or of the nature of, a phylactocarp.

phylarchic (fī-lär′kik), *a.* [*phylarch* + *-ic*.] Of or pertaining to a phylarch or to phylarchy.

phylastic (fī-las′tik), *a.* Same as *phyletic*.

phylaxin (fī-lak′sin), *n.* [Gr. *φύλαξις*, a watching, guarding, + *-in*^{2}.] Same as ★*alexin*, in the older sense of the word; a defensive proteid.

phylembryo (fī-lem′bri-ō), *n.* [Gr. *φῦλον*, race, tribe, + *ἔμβρυον*, embryo.] That stage in the development of an embryo during which the structures characteristic of the class make their appearance. Examples are the protaspis stage of trilobites, protegulum of brachiopods, protoconch of cephalopods, and prodissoconch of pelecypods. See ★*recapitulation*, 3.

> The *phylembryo* (fig. 27) is characterized by the first appearance of the lophophore, the secretion in most types of a chitinous or calcareous investment, and the origin of the true alimentary canal.
>
> *E. R. Cumings*, in Amer. Jour. Sci., Jan., 1904, p. 54.

phylembryonic (fī-lem-bri-on′ik), *a.* [*phylembryo*(*n-*) + *-ic*.] Of or pertaining to the earliest or embryonic stage in the ancestral or phylogenetic history of a race. [Rare.]

> They are in this way enabled to designate the primitive types of the phylum as *phylembryonic*.
>
> *Hyatt*, Biol. Lect., 1899, p. 133.

phylephebic (fī-le-fē′bik), *a.* [Gr. *φῦλον*, race, tribe, + *ἔφηβος*, an adult.] Of or pertaining to the prime or highest degree of development of a race or type. [Rare.]

> They are in this way enabled to designate . . . the full-blown acme as *phylephebic*.
>
> *Hyatt*, Biol. Lect., 1899, p. 133.

phyletic, *a.* **3.** In *bot.*, relating to the divisions of the vegetable kingdom viewed genetically; phylogenetic.

phyletically (fī-let′i-ka̤l-i), *adv.* From the point of view of phylogeny; phylogenetically.

> The qualities now developed [from eight to twelve years of age] are *phyletically* vastly older than all the neo-atavistic traits of body and soul, later to be superposed like a new and higher story built on to our primal nature.
>
> *G. S. Hall*, Adolescence, I. x.

phyletism (fī′lẹ-tizm), *n.* [MGr. **φυλετισμός*, < Gr. *φυλέτης*, a tribesman, < *φῦλον*, a tribe.] Racial feeling; clannishness.

> Its [the Orthodox Eastern Church's] head, the Bulgarian Exarch, was to reside at Constantinople. Naturally, this was resented by the Patriarch Anthimus, who stigmatized the racial basis of the Bulgarian Church under the name of *Phyletism*.
>
> *Encyc. Brit.*, XXXI. 383.

phylic (fil′ik), *a.* [*phyle* + *-ic*.] Pertaining to the phyle or clan in ancient Greek politics. See *phyle*.

> The increase of the Phylae involved changes in the institutions based upon the *phylic* system.
>
> *R. W. Macan*, in Jour. Hellenic Studies, XII. 30.

phyll-, phyllo-. [Gr. *φύλλον*, leaf.] A combining element meaning 'leaf,' used in descriptive terms and systematic names, chiefly in botany.

Phyllachora (fi-lak′ọ-rä̤), *n.* [NL. (Nitschke, 1869), < Gr. *φύλλον*, leaf, + *ἄχωρ*, scurf.] A large genus of parasitic fungi of the order *Dothidiales*, having the black stroma embedded in the surface of the host. The spores are unicellular, and hyaline or yellowish. About 200 species are known, most of which are tropical. *P. graminis* is common on grass-leaves. See ★*Polythrincium*.

phyllæscitannin (fi-les-i-tan′in), *n.* [Gr. *φύλλον*, leaf, + L. *æsc*(*ulus*), horse-chestnut, + E. *tannin*.] An amorphous variety of tannin, $C_{26}H_{24}O_{13}+H_2O$, found in the leaves of the horse-chestnut (*Æsculus*) when they are still inclosed in the bud.

Phyllaurea (fi-lâ′rẹ-ä̤), *n.* [NL. (Loureiro, 1790), so called in allusion to the leaf-markings, < Gr. *φύλλον*, leaf, + L. *aureus*, golden.] A genus of 4 or 5 species of shrubs or trees of the family *Euphorbiaceæ*, which occurs in Australia, the Malay Archipelago, and other islands of the Pacific. The plants are monœcious, with axillary, long, slender racemes. There are very many cultivated kinds, known by florists as *Croton* or *Codiæum*, prized chiefly for the varied and brilliant markings of the leaves. The colors are in shades of red, yellow, orange, and purple; the markings often run into white. They are used chiefly as greenhouse subjects, but are sometimes bedded out for summer. All the cultivated varieties are considered by J. Müller to be derived from the species *P. variegata* (*Codiæum variegatum* of Blume).

phyllerythrin (fil-e-rith′rin), *n.* [Gr. *φύλλον*, leaf, + *ἐρυθρός*, red, + *-in*^{2}.] Same as *erythrophyl*.

phyllic (fil′ik), *a.* [Gr. *φυλλικός*, < *φύλλον*, leaf.] Obtained from leaves.—**Phyllic acid**, a resinous acid, $C_{36}H_{64}O_8$ (?), extracted by alcohol from the leaves of the cherry-laurel and other members of the rose family. Its salts are crystalline.

phyllidium, *n.* **2.** In cestodes, an outgrowth from the side of the scolex, probably serving as an organ of locomotion or of attachment.

phylliform (fil′i-fôrm), *a.* [Gr. *φύλλον*, leaf, + *-form*.] Having the shape of a leaf; leaf-like.

phylline (fil′in), *a.* [Gr. *φύλλινος*, < *φύλλον*, leaf.] Pertaining to or resembling a leaf.

Phyllitis (fi-lī′tis), *n.* [NL. (Ludwig, 1757), < Gr. *φυλλῖτις*, a plant, probably *Phyllitis Scolopendrium*.] A genus of north temperate polypodiaceous ferns of the tribe *Asplenieæ*, formerly known as *Scolopendrium*. The best known species is the widely distributed hart's-tongue, *P. Scolopendrium* (*Scolopendrium vulgare*), which is extensively cultivated in many odd and diverse forms. See *Scolopendrium*.

phyllocactus (fil-ọ-kak′tus), *n.* [Gr. *φύλλον*, leaf, + *κάκτος*, cactus: an untenable genus name.] A horticultural name for *Epiphyllum*, a small genus of the family *Cactaceæ* found from Mexico to South America and cultivated in numerous horticultural forms, some of which are hybrids with other genera. They have flat, two-edged crenate branches, no spines but bristles, and showy flowers borne in the crenatures of the branches. See *Epiphyllum*.

Phyllocampyli (fil-ọ̄-kam'pi-lī), *n. pl.* [NL., < Gr. *φύλλον*, leaf, + *καμπύλος*, bent.] In Hyatt's classification of ammonoid cephalopods, a suborder characterized by the phylloidal bases of the suture-saddles. This suborder contains a large number of genera distributed among several families which range from Devonian to Cretaceous formations. Typical families are the *Prolecanitidæ*, *Arcestidæ*, and *Phylloceratidæ*.

phyllocarid (fi-lok'a-rid), *n.* and *a.* **I.** *n.* A member of the *Phyllocarida*.

II. *a.* Having the characters of or pertaining to the *Phyllocarida*.

Phyllocarida (fil-ọ̄-kar'i-dạ̈), *n. pl.* [NL., < Gr. *φύλλον*, leaf, + *καρίς*, shrimp.] An order of primitive malacostracan *Crustacea*, founded by Packard, characterized by having the head and thorax covered by a chitinous or calcified bivalved carapace which is usually hinged along the median dorsal line. The head has 5, the thorax 8, and the abdomen, which is of shrimp-like form, 2-8 segments, the terminal one of which carries 3 strong spines. *Nebalia* is the only recent survivor of the group, which has abundant fossil representatives in the middle and upper Paleozoic rocks, and few in the Mesozoic and Tertiary. The principal genera are *Ceratiocaris*, *Echinocaris*, and *Pephricaris*. The order is also known under the name of *Leptostraca* of Claus.

phyllocaulon (fil-ọ̄-kâ'lon), *n.*; pl. *phyllocaula* (-lạ̈). [NL., < Gr. *φύλλον*, leaf, + *καυλός*, stem.] The leaf-like expansion of the stem of some algæ. Compare *phyllocladium*.

Phylloceras (fi-los'ẹ-ras), *n.* [NL., < Gr. *φύλλον*, leaf, + *κέρας*, horn.] A genus of phyllocampylous ammonoid cephalopods with smooth or radially striate and involute shells, which have very complex phylloidal sutures, found in Triassic to Cretaceous formations.

phyllocladioid (fil-ọ̄-klā'di-oid), *a.* [*phyllocladi(um)* + *-oid.*] Resembling or having the character of a *phyllocladium*.

phyllocladium, *n.* **2.** A granular or scale-like body which occurs on the podetia of certain lichens, especially *Stereocaulon*.

> *Phyllocladia* ashy-gray, and whitish, passing into at length crowded, short branchlets.
> *E. Tuckerman*, North Amer. Lichens, I. 230.

phyllocladous (fi-lok'lạ-dus), *a.* [*phylloclad(ium)* + *-ous.*] In *bot.*, having phyllocladia.

phyllocyanic (fil'ọ̄-sī-an'ik), *a.* [Gr. *φύλλον*, leaf, + E. *cyanic.*] Noting an acid, a decomposition-product of chlorophyl, which is a homologue of bilirubin. Its formula is given as $C_{38}H_{44}O_6N_4$ or $C_{36}H_{40}O_6N_4$.

phyllode, *n.* **2.** In some echinoids, one of the leaf-shaped areas into which the ambulacra are expanded.

phyllodial (fi-lō'di-ạl), *a.* [*phyllodi(um)* + *-al*^{1}.] Of or pertaining to a phyllodium.

phylloerythrin (fil"ọ̄-e-rith'rin), *n.* [Gr. *φύλλον*, leaf, + *ἐρυθρός*, red, + *-in*^{2}.] A derivative of chlorophyl formed in the intestinal tract of ruminants.

phyllofuscin (fil-ọ̄-fus'in), *n.* [Gr. *φύλλον*, leaf, + L. *fuscus*, yellow, + *-in*^{2}.] A yellow pigment found in certain plants.

phyllogenetic (fil"ọ̄-jẹ̄-net'ik), *a.* [Gr. *φύλλον*, leaf, + E. *genetic.*] Of or pertaining to the production of leaves.

phyllogenous, *a.* **2.** Axillary, that is, leaf-produced: applied as shown in the extract.

> Nägeli distinguished between 'acrogenous' and '*phyllogenous*' (axillary) branching, and ascribed the latter to the Equisetaceæ and Spermophyta.
> *K. E. Goebel* (trans.), Organography of Plants, II. 432.

Phyllograptus (fil-ọ̄-grap'tus), *n.* [NL., < Gr. *φύλλον*, leaf, + *γραπτός*, written (see *graptolite*).] A genus of tetraprionidian graptolites found in Lower Silurian rocks.

phylloid, *a.* **II.** *n.* In algæ and in some *Characeæ* and *Bryophyta*, an appendage of the thallus, morphologically analogous to the leaf of higher plants, but less differentiated. Compare *rhizoid*. *Sachs* (trans.), Botany, p. 211.

phylloidal (fi-loi'dạl), *a.* [*phylloid* + *-al*^{1}.] Same as *phylloid*: employed in descriptions of ammonoid suture-lines.

phyllomancy (fil'ọ̄-man-si), *n.* [Gr. *φύλλον*, leaf, + *μαντεία*, divination.] Divination by means of the movements of leaves.

> We hear of a *Phyllomancy* among the Assyrians. . . . The orthodox Hebrews held . . . to the prophetic meaning in the agitation and rustling of the leaves of trees.
> *M. Lockwood*, tr. of Lenormant, Beginnings of Hist., [ii. 94.

phyllomorph (fil'ọ̄-môrf), *n.* [Gr. *φύλλον*, leaf, + *μορφή*, form.] A decorative motive or type based on a plant form. *Haddon*, Evolution in Art, p. 126.

phyllomorphic (fil-ọ̄-môr'fik), *a.* [*phyllomorph* + *-ic.*] **1.** Having the form of a leaf.—**2.** Pertaining or belonging to phyllomorphs. *Haddon*, Evolution in Art, p. 92.

phyllomorphous (fil-ọ̄-môr'fus), *a.* Same as ★*phyllomorphic*.

phyllophyte (fil'ọ̄-fīt), *n.* [Gr. *φύλλον*, leaf, + *φυτόν*, plant.] **1.** Same as *cormophyte*, referring, however, to the leaf-bearing character of the axis. *Sachs*, Text-book of Bot., p. 130.—**2.** A plant which obtains its sustenance chiefly through its leaves. *Boulger*.

phyllopode, *n.* **2.** In *Crustacea*, a phyllopod.

phyllopodium (fil-ọ̄-pō'di-um), *n.*; pl. *phyllopodia* (-di-ạ̈). [Gr. *φύλλον*, leaf, + *πόδιον*, a little foot.] The whole chief axis of a leaf, excluding its branches. *Bower*.

Phyllopora (fi-lop'ọ̄-rạ̈), *n.* [NL., < Gr. *φύλλον*, leaf, + *πόρος*, pore.] A genus of cyclostomatous *Bryozoa* allied to *Fenestella* and having a funnel-shaped zoarium which carries the cells on the outer side and consists of anastomosing branches which form a regular round-meshed network: found in the Devonian and Permian formations.

phylloporphyrin (fil-ọ̄-pôr'fi-rin), *n.* [Gr. *φύλλον*, leaf, + *πορφύρα*, purple, + *-in*^{2}.] A dark reddish-violet crystalline coloring-matter, $C_{32}H_{34}N_4O_2$, made by heating phyllotaonin with alcoholic potash. It has the same absorption-spectrum as hematoporphyrin and is otherwise closely related to it. It appears to be derived from pyrrol.

Phyllospondyli (fil-ọ̄-spon'di-lī), *n. pl.* [NL., < Gr. *φύλλον*, leaf, + *σπόνδυλος*, vertebra.] A suborder of the extinct stegocephalian amphibians, characterized by a persistent notochord "encased in imperfect barrel-shaped vertebræ formed by a pair of delicate hypocentra and downward prolongations of the neural arch, but without pleurocentra. Teeth simple, hollow." *Zittel* (trans.), Text-book of Palæon., II. 124.

phyllospondylous (fil-ọ̄-spon'di-lus), *a.* [NL. *Phyllospondyli* + *-ous.*] **1.** Of or pertaining to the *Phyllospondyli*.—**2.** Noting a type of vertebra characteristic of certain extinct amphibians, the *Phyllospondyli*. Each vertebra consists of a neural arch and a pair of delicate ventral ossifications, the hypocentra, not fused with the neural arch. Lateral ossifications (pleurocentra) are absent. The notochord is persistent and inclosed without constriction by the elements which compose each vertebra.

phyllotaonin (fil-ọ̄-tā'ọ̄-nin), *n.* [Gr. *φύλλον*, leaf, + *ταώς* (*ταων-*), peacock, + *-in*^{2}.] A steel-blue crystalline product, $C_{40}H_{40}O_6N_6$, made by hydrolyzing phyllocyanin with acids or alkalis.

phyllotriæne (fil-ọ̄-trī'ēn), *n.* [Gr. *φύλλον*, leaf, + *τρίαινα*, trident.] In the nomenclature of the sponge-elements, a tetraxial spicule in which three of the rays are foliately expanded.

phyllozoöid (fil-ọ̄-zō'oid), *n.* In *Hydromedusæ*, a hydrophyllium.

phylocycle (fī'lọ̄-sī-kl), *n.* [Gr. *φῦλον*, race, tribe, + *κύκλος*, cycle.] The cycle of racial development or phylogeny. Compare ★*ontocycle*. [Rare.]

phylocyclic (fī-lọ̄-sik'lik), *a.* [*phylocycle* + *-ic.*] Of or pertaining to the cycle of racial development or phylogeny.

phylogenal (fī-loj'e-nạl), *a.* Same as *phylogenic*.

Phylogenetic forces, influences that cause the reproduction of an organism or organization. "If by society we mean associated men in general there is no other social reproduction [except the reproduction of its individual units], but if we regard society as a plurality of social bodies or groups, social reproduction is a sort of gemmation." *L. F. Ward*, Pure Sociol., p. 260.—**Phylogenetic psychology.** See ★*psychology*.

phylogenetical (fī"lọ̄-jẹ̄-net'i-kạl), *a.* Same as *phylogenetic*. *Buck*, Med. Handbook, II. 308.

Phylogenic variation. See ★*variation*.

phylogenist (fī-loj'e-nist), *n.* [*phylogen(y)* + *-ist.*] **1.** A student of the phylogeny or ancestral history of living things.—**2.** One who believes that it is possible to reconstruct or restore the ancestral history of living things from their ontogeny or individual development.

phylogerontic (fī"lọ̄-jẹ̄-ron'tik), *a.* [Gr. *φῦλον*, race, tribe, + E. *gerontic.*] Pertaining to or exhibiting the old age of a race or phylum, as contrasted with the old age of individuals. [Rare.]

> Whether *phylogerontic* characteristics are inherited or simply have a common origin, the facts of correspondence remain the same. *Hyatt*, Biol. Lect., 1899, p. 134.
>
> *Phylogerontic* types are furthermore to be found in the majority of series, while some groups, such as Strombus, Cypræa, etc., are represented only by *phylogerontic* forms in the modern seas. *Amer. Nat.*, Dec., 1902, p. 917.

phylography (fī-log'rạ-fi), *n.* [Gr. *φῦλον*, race, tribe, + *-γραφια*, < *γράφειν*, write.] The science which describes the physical characteristics of the races of men. *Deniker*, Races of Man, p. 10.

phylological (fī-lọ̄-loj'i-kạl), *a.* [*phylolog(y)* + *-ic-al*^{1}.] Relating to the science of phylology; relating to the evolution of races. *G. J. Romanes*.

phylology (fī-lol'ọ̄-ji), *n.* [Gr. *φῦλον*, race, tribe, + *-λογια*, < *λέγειν*, speak.] The science which treats of the laws that govern the development of different racial types; the biological study of physical anthropology. *Deniker*, Races of Man, p. 10.

phyloneanic (fī"lọ̄-nẹ̄-an'ik), *a.* [Gr. *φῦλον*, race, tribe, + E. *neanic.*] Pertaining to or exhibiting the recent stages in the ancestry or phylogenetic history of a race. [Rare.]

> They are in this way enabled to designate . . ., the nearest ancestors as *phyloneanic*.
> *Hyatt*, Biol. Lect., 1899, p. 133.

phylonepionic (fī"lọ̄-nep-i-on'ik), *a.* [Gr. *φῦλον*, *φυλή*, tribe, + E. *nepionic.*] In *biol.*, pertaining to or characteristic of the nepionic stage of development of a race or type. See ★*nepionic*.

phylotrophy (fī-lot'rọ̄-fi), *n.* [Gr. *φῦλον*, race, tribe, + *-τροφια*, < *τρέφειν*, nourish.] Race-nutrition: opposed to ★*ontotrophy*. *L. F. Ward*, Pure Sociol., p. 291.

phylum, *n.* **3.** In *bot.*, a great group or subkingdom of the vegetable kingdom, next above a class. The *Spermatophyta* or seed-bearing plants constitute a phylum, formerly known as flowering plants or phanerogams. The cryptogams, or so-called flowerless plants, are now subdivided into several phyla. The vascular cryptogams constitute the phylum *Pteridophyta*. The *Bryophyta* are usually regarded as a phylum. With regard to the lower cellular cryptogams (*Algæ*, *Fungi*, etc.) the classification into phyla is still unsettled.

phyma (fī'mạ̈), *n.*; pl. *phymata* (-mạ-tạ̈). [Gr. *φῦμα*, a growth, a tumor, < *φύεσθαι*, grow.] A tubercle of the skin.

phymacerite (fī-mas'ẹ-rīt), *n.* [Gr. *φῦμα*, a growth, + *κέρας*, horn, + *-ite*^{2}.] In crustaceans, the tubercle at the base of the second antenna containing the external orifice of the green gland.

phymatic (fī-mat'ik), *a.* [Gr. *φῦμα* (*φυματ-*), a tumor, + *-ic.*] Pertaining to or of the nature of a phyma or tumor.

phymatid (fī'mạ-tid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Phymatidæ*.

II. *a.* Having the characters of or belonging to the family *Phymatidæ*.

Phymatoceras (fī-mạ-tos'ẹ-ras), *n.* [NL., < Gr. *φῦμα(τ-)*, tumor, + *κέρας*, horn.] A genus of pachycampylous ammonoid cephalopods which have compressed discoidal costate shells: found in Jurassic rocks.

Phymatodes (fī-mạ-tō'dēz), *n.* [NL. (Presl, 1836), < Gr. *φῦμα*, a tubercle, + *εἶδος*, form.] A genus of tropical ferns of varying habit, with entire, pinnatifid or pinnate fronds, similar in most respects to *Polypodium*, and differing mainly in having irregularly anastomosing venation, the large roundish sori often deeply sunk in pustulate depressions and borne in one or more series, generally upon the free included veinlets which are commonly recurved. Several species are common in cultivation, of which the Asiatic and Polynesian *P. Phymatodes* is the best known and the type of the genus. A single delicate West Indian species, *P. exiguum* (*Polypodium Swartzii*), extends to the Florida keys.

phymatoid (fī'mạ-toid), *a.* [Gr. **φυματοειδής*, *φυματώδης*, < *φῦμα(τ-)*, tumor, + *εἶδος*, form.] **1.** Resembling a tubercle, or the lesion called 'tubercle.'—**2.** Of or belonging to the *Phymatoida*.

Phymatoida (fī-mạ-toi'dạ̈), *n. pl.* [NL., < Gr. **φυματοειδής*, *φυματώδης*, full of tumors: see ★*phymatoid*.] A group of Jurassic pachycampylous ammonoid cephalopods, in Hyatt's classification, which comprises the families *Amaltheidæ* and *Phymatoidæ*, with compressed discoidal shells which have high, keeled volutions and costate surfaces.

phymatorhusin (fī"mạ-tọ̄-rū'sin), *n.* [Gr. *φῦμα(τ-)*, a tumor, + *ῥοῦς*, sumac, + *-in*^{2}.] A black pigment belonging to the melanins, which has been found in melanotic growths in man, and in the urine of the affected individuals.

phymatosis (fī-ma̤-tō′sis), *n.*; pl. *phymatoses* (-sēz). [NL., < Gr. *φῦμα(τ-)*, a growth, + *-osis.*] Same as *tuberculosis*, especially of the skin; the occurrence of cutaneous nodules.

phymolepra (fī-mō̤-lep′rä̤), *n.* [Gr. *φῦμα*, tumor, + *λέπρα*, leprosy.] The tubercular form of leprosy.

-phyre (fīr). [(*por*)*phyr*(*y*).] In *petrog.*, a termination used to form names of rocks which have a porphyritic texture: as *vitrophyre*, *granophyre*, etc.

phyri- (fī′ri). [(*por*)*phyr*(*y*) + *-i*, a letter indicating that the texture is microscopic.] In *petrog.*, in the quantitative system of classification of igneous rocks (see ⋆*rock*1), a prefix used before the name of a rock to indicate that its texture is microscopically porphyritic, the phenocrysts being not megascopically notable, or quite insignificant.

phyro- (fī′rō). [(*por*)*phyr*(*y*) + *-o*, a letter indicating that the texture is megascopic.] In *petrog.*, in the quantitative system of classification of igneous rocks (see ⋆*rock*1), a prefix used before the name of a rock to indicate that its texture is megascopically porphyritic.

phys. An abbreviation (*a*) of *physical*; (*b*) of *physician*; (*c*) [*l. c.* or *cap.*] of *physics*; (*d*) of *physiological*; (*e*) [*l. c.* or *cap.*] of *physiology*.

Physa, *n.* **2.** [*l. c.*] A pond-snail of the genus *Physa*.—**3.** [*l. c.*; pl. *physæ* (-sē).] In some anthozoans, as *Edwardsia*, the lower end of the body. It may or may not be retractile into the scapus. Compare ⋆*capitulum*, 6, and ⋆*scapus*, 6.

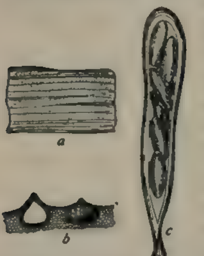
Its body is divisible into three portions, an upper capitulum bearing the mouth and tentacles, a median scapus covered by a friable cuticle, and a terminal *physa* which is rounded. *Encyc. Brit.*, XXV. 457.

physagogue (fis′a̤-gog), *n.* Practically the same as *carminative*.

physalin (fis′a̤-lin), *n.* [*Physalis* + *-in*2.] A yellowish, bitter, amorphous compound, $C_{14}H_{16}O_5$, extracted from the leaves of alkekengi, *Physalis Alkekengi*.

physaliphore (fī-sal′i-fōr), *n.* [Gr. *φυσαλλίς*, a bladder, + *-φορος* < *φέρειν*, bear.] In *biol.*, a cell containing vesicles which produce daughter-cells. *N. E. D.*

Physalospora (fis-a̤-los′pō̤-rä̤), *n.* [NL. (Niessl, 1876), < Gr. *φυσαλλίς*, bladder, + *σπορά*, seed.] A large genus of pyrenomycetous fungi having the perithecia seated beneath the epidermis of the host. The spores are unicellular, and hyaline or slightly colored. About 130 species have been described. *P. gregaria* is said to be the cause of a disease of trees called *black mauls*. *P. Festucæ* is frequently found on the leaves of various grasses, especially *Festuca*.



Physalospora Festucæ.
a, habit of growth of the fungus on a grass leaf, two thirds natural size; *b*, section through a portion of a leaf and two perithecia, enlarged; *c*, an ascus containing eight ascospores, still further enlarged.
(Drawn from Engler & Prantl's "Pflanzenfamilien.")

Physapoda (fī-sap′ō̤-dä̤), *n. pl.* Same as *Thysanoptera*.

Physaria (fī-sā′ri-ä̤), *n.* [NL. (Gray, 1848), < Gr. *φυσάριον*, a diminutive of *φῦσα*, a pair of bellows; in allusion to the shape of the pod.] A genus of spreading perennial plants of the family *Brassicaceæ*. It includes about four species of stellate-pubescent herbs with usually entire leaves and yellow flowers in terminal racemes, and is distinguished from *Lesquerella*, a near relative, by its strongly didymous fruit with a narrow partition. The species are natives of western North America. *P. didymocarpa* is the best known. See *Vesicaria*.

Physciaceæ (fis-i-ā′sē̤-ē), *n. pl.* [NL., < *Physcia* + *-aceæ.*] A family of lichens which have a foliaceous or branched thallus: typified by the genus *Physcia*.

physcianin (fi-sī′a̤-nin), *n.* [*Physcia* + *-an* + *-in*2.] Same as ⋆*atraric acid*.

physciol (fiz′i-ol), *n.* [*Physcia* + *-ol.*] Same as ⋆*atranorinic acid*.

physconia (fis-kō′ni-ä̤), *n.* [NL., < Gr. *φύσκων*, one having a fat paunch, < *φύσκη*, the large intestine, also a sausage.] Enlargement of the abdomen through corpulence or the growth of a solid tumor of one of the contained viscera.

physcony (fis′kō̤-ni), *n.* [Gr. *φύσκων*, pot-belly, < *φύσκη*, sausage, < *φυσᾶν*, blow up.] A tumor or swelling of the abdomen; parabysma. *N. E. D.*

physem (fī′sem), *n.* [Gr. *φύσημα*, a blowing, that which is blown, < *φυσᾶν*, to blow.] In *phonetics*, a name given by A. J. Ellis to "the bellows-actions of the lungs," that is, the speech-sounds so produced, including the varieties of *h* (the common aspirate).

'H. "Wheeze *Physem*."—This is a well known Arabic sound, which may be just mentioned. The wheeze is occasioned by forcing flatus, without voice, through the cartilaginous glottis. It is therefore closely related to the bleat :aayn. It occurs in the name of Mahomet Moo'haam·maad. *A. J. Ellis*, Speech in Song, p. 24.

physeter, *n.* **3.** A form of filter in which the rate of percolation of the filtrate is increased by pressure.

physic (fiz′ik), *a.* [See *physic*, *n.*] **1.** Physical.—**2.** Medicinal. [Obsolete or rare, in both uses.]

Physical chart, chemistry, doubles. See ⋆*chart*, ⋆*chemistry*, ⋆*double*, 18.—**Physical observatory, point, psychology, unit, water.** See ⋆*observatory*, etc.—**Physical rotation,** in *forestry*, same as *sylvical* ⋆*rotation*.

physicochemical, *a.* **2.** Relating to physical chemistry; due to the forces with which physical chemistry is concerned.

physicochemically (fiz″i-kō̤-kem′i-ka̤l-i), *adv.* By means of physical chemistry.

That can be comprehended which can be *physicochemically* explained. *Nature*, Sup., April 24, 1902, p. x.

physicogeographical (fiz″i-kō̤-jē″ō̤-graf′i-ka̤l), *a.* Of or pertaining to physical geography; physiographic.

Valuable material for *physico-geographical* considerations relative to the origin and life of these interesting formations. *Geog. Jour.* (R. G. S.), XV. 175.

physicologist (fiz-i-kol′ō̤-jist), *n.* [**physicolog*(*y*) (Gr. *φυσικά*, physics, + *-λογια*, < *λέγειν*, speak) + *-ist.*] A physicist. *Stand. Dict.*

physicomathematical (fiz″i-kō̤-math-ē̤-mat′i-ka̤l), *a.* **1.** Same as *iatrophysical*.—**2.** Dealing with or pertaining to both physics and mathematics: as, a *physicomathematical* problem or treatise.

The *Physico-Mathematical* Faculty of the University of Yuryeff. *Geog. Jour.* (R. G. S.), XII. 218.

physicomechanical (fiz″i-kō̤-mē̤-kan′i-ka̤l), *a.* Of or pertaining to mechanics as a branch of natural philosophy.

physicomorph (fiz′i-kō̤-môrf), *n.* [Gr. *φυσικός*, natural, + *μορφή*, form.] Any representation of an inanimate object or of an operation in the physical world, as the sun, clouds, rain, lightning, the whirlwind, etc.: applied especially to ornamental designs. *Haddon*, Evolution in Art, p. 118.

physicotherapeutic (fiz″i-kō̤-ther-a̤-pū′tik), *a.* [Gr. *φυσικός*, natural, + *θεραπευτικός*, of medical treatment.] Relating to medical treatment by physical agencies instead of drugs.

Dr. J. A. Rivière gives an account of the results achieved by him in the treatment of inoperable malignant growths by *physicotherapeutic* means, i. e. by a combination of X-rays, static electric discharges, and discharges of high frequency, together with the administration of calomel and quinine internally to promote elimination. *Nature*, Jan. 21, 1904, p. 280.

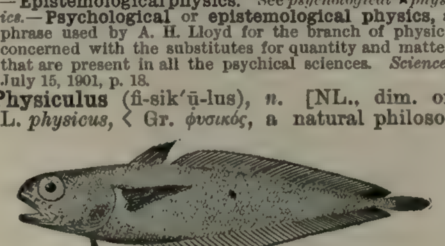
physicotherapeutics (fiz″i-kō̤-ther-a̤-pū′tiks), *n.* The treatment of disease by means of physical agencies (electricity, massage, etc.) instead of drugs.

physicotherapy (fiz″i-kō̤-ther′a̤-pi), *n.* [Gr. *φυσικός*, natural, + *θεραπεία*, medical treatment.] Same as ⋆*physicotherapeutics*.

Physicotherapy in the treatment of fibromata and prevention of neoplasms. *Med. Record*, June 27, 1903, p. 1055.

physics, *n.*—**Cosmical physics,** the physics of the heavenly bodies and of the earth's atmosphere and crust.—**Epistemological physics.** See *psychological* ⋆*physics*.—**Psychological** or **epistemological physics,** a phrase used by A. H. Lloyd for the branch of physics concerned with the substitutes for quantity and matter that are present in all the psychical sciences. *Science*, July 15, 1901, p. 18.

Physiculus (fi-sik′ṳ̄-lus), *n.* [NL., dim. of L. *physicus*, < Gr. *φυσικός*, a natural philosopher (?).] A genus of fishes of the family *Gadidæ*, found in the deep sea.



Physiculus fulvis.
(From Bulletin 47, U. S. Nat. Museum.)

physiochemical (fiz″i-ō̤-kem′i-ka̤l), *a.* [Gr. *φύσις*, nature, + E. *chemical.*] Of or pertaining to physiological chemistry.

physiognomonically (fiz-i-og-nō̤-mon′i-ka̤l-i), *adv.* Same as *physiognomically*.

physiognosy (fiz-i-og′nō̤-si), *n.* [Gr. *φύσις*, nature, + *γνῶσις*, knowledge.] Statical geognosy; that portion of the science of the earth which deals with the static relations of its constituents.

physiognotype (fiz-i-og′nō̤-tīp), *n.* A device used in making plaster casts of the face or head.

physiol. An abbreviation (*a*) of *physiological*; (*b*) [*l. c.* or *cap.*] of *physiology*.

physiolater (fiz-i-ol′a̤-tėr), *n.* [Gr. *φύσις*, nature, + *-λατρης*, worshiper. See *physiolatry*.] A worshiper of nature.

physiologer, *n.* **2.** A physiologist. [Obsolete or rare.]

physiologian (fiz′i-ō̤-lō′ji-a̤n), *n.* Same as *physiologist*. [Rare.]

physiological, *a.* **2.** Originating in normal physical conditions, as opposed to pathological.

The expression "*physiological*" albuminuria is an undesirable one, since healthy individuals ordinarily fail to show this symptom. There are, however, many other functions in the animal body where the border-line between the *physiological* and the pathological occasionally becomes obscure.
Mendel and *Hooker*, in Jour. Exper. Med., Oct. 1, 1901, [p. 647.

Physiological regeneration, rheoscope, salt solution, selection. See ⋆*regeneration*, ⋆*rheoscope*, ⋆*solution*, ⋆*selection*.—**Physiological solution.** Same as *physiological salt* ⋆*solution*.—**Physiological unit, water, zero.** See ⋆*unit*, ⋆*water*, ⋆*zero*.

physiology, *n.* **3.** A treatise on physiology or the functions of living organisms.—**Mental physiology.** See ⋆*mental*1.

physiomedical (fiz″i-ō̤-med′i-ka̤l), *a.* [Gr. *φύσις*, nature, + E. *medical.*] Of or pertaining to physiomedicalism.

physiometric (fiz″i-ō-met′rik), *a.* [*physiometr*(*y*) + *-ic.*] Of or pertaining to physiometry; conducted by definite numeration or measurements of physical objects: as, a *physiometric* investigation.

physiometry (fiz-i-om′e-tri), *n.* [Gr. *φύσις*, nature, + *μέτρον*, measure.] The accurate measurement of physical objects.

physiopathological (fiz″i-ō̤-path-ō̤-loj′i-ka̤l), *a.* Of or pertaining to physiopathology.

physiopathology (fiz″i-ō̤-pā-thol′ō̤-ji), *n.* [Gr. *φύσις*, nature, + E. *pathology.*] The sum of knowledge regarding the modification of function of living organisms caused by disease. *Buck*, Med. Handbook, III. 276.

physiophilist (fiz-i-of′i-list), *n.* [Gr. *φύσις*, nature, + *φιλεῖν*, love.] A lover of nature or of natural science. [Rare.]

physiophilosoph (fiz″i-ō̤-fil′ō̤-sof), *n.* [Gr. *φύσις*, nature, + *φιλόσοφος*, philosopher.] One versed in physiophilosophy.

physiophilosopher (fiz″i-ō̤-fi-los′ō̤-fėr), *n.* [See *physiophilosophy*.] An adherent of Oken's system of physiophilosophy.

physiophilosophic (fiz″i-ō̤-fil-ō̤-sof′ik), *a.* Same as ⋆*pysiophilosophical*.

physiophilosophical (fiz″i-ō̤-fil-ō̤-sof′i-ka̤l), *a.* Relating to or explained by physiophilosophy; specifically, pertaining to Oken's system of physiophilosophy.

physiophilosophy, *n.* **2.** Specifically, Oken's system of nature-philosophy in which he endeavored to construct nature, in thought, a priori.

physioplastic (fiz″i-ō̤-plas′tik), *a.* [Gr. *φύσις*, nature, + *πλάσσειν*, form.] Formed by nature; natural. [Rare.]

Physioplastic, anthropoplastic, by one or other of these appellatives will the condition of all beings by which any part of the field of Somatics is seen to be occupied, be found referable; *physioplastic*, the state in which being found in the bosom, they are supposed to have been formed by the hands, of nature. *Bentham*, Logic, Appendix, Works, VIII. 284.

physiopsychic (fiz″i-ō̤-sī′kik), *a.* [Gr. *φύσις*, nature, + *ψυχή*, mind, + *-ic.*] **1.** In *psychol.*, pertaining to both mind and body; psychophysical.

For certain crimes and criminals the largest influence ought to be recognized or accorded to the *physio-psychic* conditions of the individual, . . . yet this does not exclude the possible fact that . . . the *physio-psychic* anomalies of the individual are nothing but the effect of a deleterious social environment. *Smithsonian Rep.*, 1890, p. 639.

2. In *sociol.*, characterized by mental more than by bodily type: said of the social organism. See the extract.

> Many writers of late years have spoken of the social unit, the group or the nation, as an "organism." Some have further defined it as a "superorganism" or a "*physiopsychic* organism."
> *Brinton*, Basis of Social Relations, p. 39.

physiopsychology (fiz″i-ọ-sī-kol′ọ-ji), *n.* [*physio*(*logy*) + *psychology*.] The study of mind in its relations to the body, or in connection with the underlying bodily functions; psychophysiology; physiological psychology.

> In a general way, comparative *physio-psychology* has aided us in the search for the key to this great problem [of various intellectual endowment].
> *Amer. Anthropologist*, Oct.–Dec., 1903, p. 588.

physioradiogram (fiz″i-ọ-rā′di-ọ-gram), *n.* [Gr. φύσις, nature, + E. *radiogram*.] An image, upon a photographic plate, made by means of the secondary rays which emanate from some portion of the body, as the hand, upon its exposure to X-rays.

> It is only a step now to produce a "*physio-radiogram.*" . . . A record [was] made by the secondary activity emanating from my own hand stimulated by a stream of Rontgen rays.
> *Goodspeed*, Proc. Amer. Philos. Soc., May 15, 1903, [p. 101.

physioscopy (fiz-i-os′kọ-pi), *n.* [Gr. φύσις, nature, + σκοπεῖν, view.] Natural appearance; relative truth to nature in the delineation of physical objects. The term was coined by H. Spencer to express all those traits in a picture which concern the physical appearances of the objects represented: distinguished from the conception, composition, sentiment, expression, etc., of the picture. [See the extract.]

> I venture the new word just used, because there exists no word expressive of all those traits in a picture which concerns the physical appearances of the objects represented. Under "*physioscopy*" I propose to include the rendering of the phenomena of linear perspective, of aerial perspective, of light and shade, and of colour in so far as it is determined not by artistic choice, but by natural conditions — e. g. that of water as affected by the sky, the clouds, and the bottom. The conception, the sentiment, the composition, the expression, may some or all of them be good in a picture of which the *physioscopy*, in some or all of its elements, is bad; and vice versa. The characteristics included in the one group are entirely separate from those included in the other; and there needs a word by which the distinction may be conveyed without circumlocution.
> *H. Spencer*, Autobiography, II. 225, note.

physiotherapy (fiz″i-ọ-ther′ạ-pi), *n.* [Gr. φύσις, nature, + E. *therapy*.] Treatment of disease by means of physical remedies, such as massage, gymnastics, etc., instead of drugs.

> The first International Congress of *Physiotherapy* will be held at Liège from August 12 to 15 next.
> *Nature*, July 20, 1905, p. 274.

physiotype (fiz′i-ọ-tīp), *n.* [Gr. φύσις, nature, + τύπος, figure, image. See *type*.] A picture produced by developing a prepared paper which has received a mechanical impression (invisible before development) from the object itself, such as a leaf, a piece of lace, or the like; a nature-print.

physitheism, *n.* **2.** That form of religious concept in which the phenomena of nature become personified and are considered as deities. See the extract.

> In classifying Indian myths Major Powell distinguishes four stages in the growth of mythic philosophy. To the first of these he gives the name of hecastotheism, the stage in which supernatural powers are attributed to both animate and inanimate objects, an all pervading animism which answered the questions of how and why to the savage mind. In the second stage or zoötheism this attribution of extra-natural and mysterious potencies is confined to animate forms and animals, usually by reason of some special quality, as strength, swiftness, cunning, etc., become deified. In the third stage, to which he gives the name *physitheism*, the agencies of nature, sun, moon, stars, rain and wind become personified and exalted into omnipotence. The fourth stage, which includes the domain of the spiritual concept, has not yet been reached by any of the Amerindian tribes.
> *Amer. Jour. Psychol.*, Jan., 1903, p. 63.

physocarpous (fī-sọ-kär′pus), *a.* [Gr. φῦσα, bladder, + καρπός, fruit.] In *bot.*, having a bladder-like fruit.

physocarpus (fī-sọ-kär′pus), *n.* [*Physocarpus*, an untenable genus name for *Icotorus*: < Gr. φῦσα, bellows, + καρπός, fruit; in allusion to the inflated pods.] A name in horticulture for *Icotorus*, a genus of shrubs of the family *Rosaceæ*. It has white flowers in dense umbel-like clusters and is closely related botanically to *Spiræa*, differing however in its inflated pods, usually opening along both sutures, and in its shining seeds. There are four species, native to North America and eastern Asia. The common ninebark of the eastern United States is *Icotorus opulifolius* (*Spiræa opulifolia* of Linnæus). This and the similar *I. Amurensis* (*Physocarpus Amurensis* of Maximowicz) are sometimes planted as ornamental bushes.

physocephalus (fiz-ọ-sef′ạ-lus), *n.*; pl. *physocephali* (-lī). [Gr. φῦσα, bellows, + κεφαλή, head.] Tumor of the scalp due to the presence of gas in the underlying connective tissue.

physocœlia (fiz-ọ-sē′li-ạ̈), *n.* [Gr. φῦσα, bellows, + κοῖλος, hollow.] Tympanites.

physode (fī′sōd), *n.* [Gr. φῦσα, bellows, a bladder, + εἶδος, form, likeness.] A body differing from a microsome in surrounding a cavity filled with dissolved substances. *Crato.* Physodes are treated by Strassburger as merely a class of microsomes.

Physoderma (fī-sọ-dėr′mạ̈), *n.* [NL. (Wallroth, 1833), < Gr. φῦσα, bellows, + δέρμα, skin, in allusion to the pustules formed.] A genus of parasitic phycomycetous fungi of the order *Chytridiales*, having the mycelium and resting-spores intracellular. About 13 species are known, occurring in the parenchyma cells of flowering plants. *P. Menyanthis* is found in the leaves and petioles of *Menyanthes trifoliata* in America.

physodic (fī-sō′dik), *a.* [NL. *physodes* (see def.) + *-ic*.] Occurring in the lichen *Parmelia physodes*.—**Physodic acid,** a crystalline acid, $C_{20}H_{22}O_6$, which yields carbon dioxid and orcinol when boiled with baryta water. When boiled a long time with alcohol or other organic solvent it is changed into an amorphous variety.

physogastrism (fī-sọ-gas′trizm), *n.* [Gr. φῦσα, bellows, + γαστήρ, stomach, + *-ism*.] A condition of abdominal enlargement or inflation: used, in *entom.*, to describe the honey-bearers of the honey-ants and also certain symphilous beetles.

> Moreover, most symphilous beetles have a characteristic colour, namely, oily reddish-yellow or reddish-brown. They also show certain modifications of the mouth-organs, especially of the labium, as well as "*physogastrism*," accompanied by excessive development of the fat-bodies, or sexual glands. *Nature*, Feb. 12, 1903, p. 351.

physogradous (fī-sog′rạ-dus), *a.* Same as *physograde*.

Physonectæ (fī-sọ-nek′tē), *n. pl.* [NL., < Gr. φῦσα, bellows, bladder, + νήκτης, summer.] A group or section of *Siphonophora* which consists of siphonanthous forms having a pneumatocyst and several nectocalyxes and palpons, the nectocalyxes sometimes being replaced by bracts. The cormidia are ordinate or irregular.

physonectous (fī-sọ-nek′tus), *a.* [NL. *Physonectæ* + *-ous*.] Belonging to, or having the characters of, the *Physonectæ*; having an apical pneumatophore, with one or more coronæ of nectophores or bracts and no aurophore, as in certain siphonophorans.

physosterin (fī-sos′tẹ-rin), *n.* Same as ★*phytosterin*.

physostigmine, *n.* It is a powerful depressant and nerve-poison: used to counteract strychnine and atropin, also to contract the pupil. Its formula is $C_{15}H_{21}O_2N_3$. Also called *eserine*.—**Physostigmine salicylate,** $C_{15}H_{21}N_3O_2.C_7H_6O_3$, a substance used externally as a mydriatic, internally in spasmodic diseases, etc.—**Physostigmine sulphate,** $(C_{15}H_{21}O_2N_3)_2.H_2SO_4$, a substance used in medicine and by veterinary surgeons.

phytalbumin (fī-tal-bū′min), *n.* [Gr. φυτόν, plant, + E. *albumin*.] Vegetable albumin.

phytate (fī′tāt), *n.* [*phyt*(*ic*) + *-ate*²] A salt of phytic acid. *Science*, Feb. 28, 1908, p. 330.

phyteconomy (fīt-ẹ-kon′ō-mi), *n.* [Gr. φυτόν, plant, + E. *economy*.] Vegetable economy.

phyteris (fī′tẹ-ris), *n.* [Gr. φυτόν, plant, + ἔρις, strife, competition.] In *phytogeog.*, the competition of plants for the possession of the same ground. *F. E. Clements.*

phytic (fī′tik), *a.* [Gr. φυτόν, a plant, + *-ic*.] Derived from plants; specifically, noting an organic acid found in wheat; anhydroxymethylene diphosphoric acid. *Science*, Feb. 28, 1908, p. 330.

phytin (fī′tin), *n.* [Gr. φυτόν, a plant, + *-in*².] A phosphorized reserve material found in seeds, tubers, and rhizomes; a quadribasic acid of the composition $C_2H_8P_2O_9$.

phytobezoar (fī-tọ-bē′zōr), *n.* [Gr. φυτόν, plant, + E. *bezoar*.] A concretion, found in the stomachs of animals, composed of indigestible vegetable fiber, hair, etc., matted together into a spherical shape. Also called *hair-ball*.

> It is very important that crimson clover should be cut for hay not later than the time of full bloom. The calyx is covered with rough, sharp-pointed hairs, which become stiff and brittle when the clover is fully ripe. It has been found that these hairs are liable to cause the formation of intestinal concretions, *phyto-bezoars*, or hair-balls, especially when the ripe seed heads of the crimson clover are eaten by horses or cattle.
> *Yearbook, U. S. Dept. Agr.*, 1897, p. 501.

phytobiological (fī″tọ-bī-ọ-loj′i-kạl), *a.* [*phytobiolog*(*y*) + *-ic-al*¹.] Of or pertaining to phytobiology.

phytochrome (fī′tọ-krōm), *n.* [Gr. φυτόν, plant, + χρῶμα, color.] Same as *xanthophyl*.

phytocorid (fī-tok′ọ-rid), *n.* and *a.* **I.** *n.* A member of the heteropterous family *Phytocoridæ*.

II. *a.* Having the characters of or belonging to the family *Phytocoridæ*.

phytœcologist, phytecologist (fīt-ẹ-kol′ọ-jist), *n.* [*phytœcolog*(*y*) + *-ist*.] One who studies the œcology of plants.

phytœcology, phytecology (fīt-ẹ-kol′ọ-ji), *n.* [Gr. φυτόν, plant, + E. *œcology*.] The œcology of plants.

Phytoflagellida (fī-tọ-fla-jel′i-dạ̈), *n. pl.* [NL., < Gr. φυτόν, a plant, + L. *flagellum*.] An order of *Mastigophora*. It consists of flagellate unicellular organisms which may have chlorophyll and holophytic nutrition, or be without chlorophyll and saprophytic in nutrition. They are hence classed sometimes as plants and sometimes as animals. It contains the families *Chrysomonadidæ*, *Cryptomonadidæ*, *Chlamydomonadidæ*, *Phacotidæ*, and *Volvocina*.

phytogelin (fī-tọ-jel′in), *n.* [Gr. φυτόν, plant, + *gel*(*atin*) + *-in*².] The gelatinous matter of algæ. *N. E. D.*

phytogenic (fī-tọ-jen′ik), *a.* [Gr. φυτόν, plant, + -γενης, -producing, + *-ic*.] **1.** Of or pertaining to phytogenesis; phytogenetic.—**2.** Of plant or vegetable origin; specifically applied by A. W. Grabau to those rocks of which the materials are derived from plants, as coal.

> Biogenic rocks fall naturally into two groups, those in which the material is derived from the air and those in which it is derived from the water. The former are due chiefly to the activities of plants (*phytogenic*) and the latter chiefly to those of animals (zoögenic).
> *Amer. Geol.*, April, 1904, p. 231.

phytogenous (fī-toj′ẹ-nus), *a.* [Gr. φυτόν, plant, + -γενης, -producing, + *-ous*.] Same as *phytogenetic*.

phytogeographically (fī-tọ-jē-ọ-graf′i-kạl-i), *adv.* With respect to phytogeography; in a phytogeographical manner.

> Well differentiated both topographically and *phytogeographically*. *Bot. Gazette*, XXV. 387.

phytogeography, *n.* Phytogeography in its unqualified sense is plant-geography, the science of the topical distribution of plants. In this aspect it is purely descriptive, noting the locations in which a species occurs and the merely historical reason for its being there; that is, it answers the questions whether the plant is indigenous or introduced, and if the latter, whence. At this stage also the habitat (that is, the particular sort of situation in which a species grows, as mountain, bog, or seaside) is recorded; but that in the nature of the plant which determines it to its particular station is not yet investigated. Though the abundance or scarcity of a species may be noted, the interest is here in species rather than in individuals or masses, and accordingly the subject-matter of the science is the flora of the earth or of a region, the plant-content of an area taxonomically considered. Plant-taxonomy—based on morphology, which yields the *natural system* (which see, under *natural*)—is a prerequisite of plant-geography, since nothing can be said of the distribution of plants until they are separated into kinds recognizable by constant characters. The science as thus limited has in recent times (by Warming and others) been denominated *floristic plant-geography* or *floristics*, in contrast with ★*œcological phytogeography* (which see). Historically and in natural order of thought the floristic view is first, being represented by numerous floras, by the descriptions of botanical travelers, and by more systematic accounts which pass into the later point of view.

phytoglobulin (fī-tọ-glob′ụ-lin), *n.* [Gr. φυτόν, plant, + E. *globulin*.] A vegetable globulin.

phytograph (fī′tọ-gråf), *n.* [Gr. φυτόν, plant, + γράφειν, write. See *phytography*.] A nature-print of a plant.

phytolaccic (fī-tọ-lak′sik), *a.* [NL. *Phytolacca* + *-ic*.] Pertaining to or occurring in *Phytolacca*.—**Phytolaccic acid,** a light-brown, transparent, gum-like compound, of uncertain composition, found as the potassium salt in the fruit of the pokeweed, *Phytolacca Kæmpferi* and *P. decandra*.

phytolaccin (fī-tọ-lak′sin), *n.* [*phytolacc*(*ic*) + *-in*².] Same as ★*phytolaccic acid*.

phytome (fī′tōm), *n.* [Gr. φυτόν, plant, + *-ome* (*-oma*).] According to Nägeli, the plant body of unicellular plants and of pluricellular ones so long as the cells are entirely similar to each other.

> Endeavors have also been made to establish the idea of a '*phytome*' in addition to that of the thallus.
> *K. E. Goebel* (trans.), Organography of Plants, I. 21.

phytomonera (fī″tọ-mọ-nē′rạ̈), *n. pl.* [Gr. φυτόν, plant, + NL. *monera*. See *moneron*.] Vegetable organisms without nuclei. Few botanists admit the existence of plants without nuclei. Since nuclei have been demonstrated in some of the so-called *phytomonera*, failure to find them in others is no proof of their absence.

phytoparasite (fī-tọ̄-par′ạ-sīt), *n.* [Gr. *φυτόν*, plant, + E. *parasite.*] Same as *parasite*, 2 (*c*).

phytophenological (fī-tọ̄-fē-nọ̄-loj′i-kạ̈l), *a.* [Gr. *φυτόν*, plant, + E. *phenological.*] Of or relating to the phenology of plants.

phytophil (fī′tọ̄-fil), *n.* [Gr. *φυτόν*, plant, + *φιλεῖν*, love.] An animal which lives on plants, as any plant-feeding insect. Also *phytophile.*

To the few hygrophilous "*phytophiles*" given there should be added Linocephalus elegans, which species is typically halophilous in New Jersey.
Entomological News, XVI. 22.

Phytophthires (fī-tof′thi-rēs), *n. pl.* [NL.] Same as *Phytophthiria.*

phytophylogenetic (fī″tọ̄-fī″lọ̄-jẹ̄-net′ik), *a.* [Gr. *φυτόν*, plant, + E. *phylogenetic.*] Of or pertaining to phytophylogeny or the phylogeny of plants.

phytophylogeny (fī″tọ̄-fī-loj′e-ni), *n.* [Gr. *φυτόν*, plant, + E. *phylogeny.*] The phylogeny of plants.

phytoplankton (fī-tọ̄-plangk′tọn), *n.* [Gr. *φυτόν*, plant, + NL. *plankton.*] That part of the plankton of any body of water which consists of plants, usually algæ.

In the spring months there is a great development of diatoms and other *phytoplankton*, which render the water less transparent than at other times of the year.
Geog. Jour. (R. G. S.), XV. 336.

phytoplasm (fī′tọ̄-plazm), *n.* [Gr. *φυτόν*, a plant, + *πλάσμα*, something molded or formed. See *plasm.*] The living substance of plants, as contrasted with that of animals.

phytopsyche (fī′tọ̄-sī-kē), *n.* [Gr. *φυτόν*, a plant, + *ψυχή*, soul.] The plant soul or plant mind. *Haeckel* (trans.), Riddle of the Universe, p. 157.

phytoptid (fī-top′tid), *n.* and *a.* **I.** *n.* A member of the acaridan family *Phytoptidæ.*

II. *a.* Having the characters of or belonging to the family *Phytoptidæ.*

phytoptocecidium (fī-top″tō-sē-sid′i-um), *n.*; pl. *phytoptocecidia* (-ạ̈). [NL. *Phytoptus cecidium* + Gr. *κηκίς* (*κηκιδ-*), a gallnut.] The gall formed by mites of the family *Phytoptidæ.*

phytosaurian (fī-tọ̄-sâ′ri-ạn), *a.* and *n.* **I.** *a.* Pertaining to or having the characters of the genus *Phytosaurus* or *Belodon.*

II. *n.* A member of the genus *Phytosaurus.*

Phytosaurus (fī-tọ̄-sâ′rus), *n.* [NL., < Gr. *φυτόν*, plant, + *σαῦρος*, lizard.] Same as *Belodon.*

phytoscopic (fī-tọ̄-skop′ik), *a.* [Gr. *φυτόν*, plant, + *σκοπεῖν*, view, + *-ic.*] A term suggested by Poulton to describe the effect of the plant environment upon the color of insects: distinct from *phytophagic. Cambridge Nat. Hist.*, VI. 336.

phytosterin (fī-tos′tẹ-rin), *n.* [Gr. *φυτόν*, plant, + *στερεός*, solid, + *-in*^{2}.] A colorless crystalline substance of waxy or fatty appearance, closely allied to cholesterin in composition, found in many different plants, as in peas, beans, lupines, Calabar beans, maize, and the fat oils of the olive, almond, rapeseed, mustard-seed, etc. Also called *phytosterol* and *physosterin.*

phytosterol (fī-tos′tẹ̈-rol), *n.* Same as ⋆*phytosterin.*

phytostrote (fī′tọ̄-strōt), *n.* [Gr. *φυτόν*, plant, + *στρωτός*, spread.] In *phytogeog.*, a plant in which the whole organism is the unit of distribution: including both plankton and terrestrial plants such as tumbleweeds. *F. E. Clements.*

phytotechnic (fī-tọ̄-tek′nik), *a.* [Gr. *φυτόν*, plant, + *τέχνη*, art, + *-ic.*] Relating to that stage of culture in which plants play an essential part in the industries of a people; the stage to which belongs the gradual development of agriculture.

Southeastward from the Muskhogean area lie the Antilles, the Orinoco basin, the Amazon basin, the Mato Grosso and the Pampas. In them men had little to do save to hunt and fish, to fight and to sleep in their hammocks. They were zootechnic, passing into *phytotechnic.*
O. T. Mason, in Pop. Sci. Mo., Feb., 1902, p. 341.

phytotechny (fī-tọ̄-tek′ni), *n.* [*phytotechn*(*ic*) + *-y*^{3}.] The group of industries relating to plants. See ⋆*phytotechnic.*

phytoteratology (fī-tọ̄-ter-ạ-tol′ō-ji), *n.* [Gr. *φυτόν*, plant, + E. *teratology.*] That division of teratology which relates to plants; vegetable teratology. See *teratology*, 2.

phytotoxin (fī-tọ̄-tok′sin), *n.* [Gr. *φυτόν*, plant, + E. *toxin.*] A vegetable toxin, such as abrin, ricin, crotin, etc.

phytovitellin (fī″tọ̄-vī-tel′in), *n.* [Gr. *φυτόν*, plant, + L. *vitellus*, yolk of an egg, + *-in*^{2}.] A vitellin of vegetable origin. *Simon*, Physiological Chem., p. 31.

P. I. An abbreviation of *Philippine Islands.*

pia-arachnoid (pī″ạ-a-rak′noid), *n.* The pia mater and arachnoid considered as one membrane.

piache (pi-ä′chā), *n.* [Also *piace*; South American (Tamanac); Carib. *piai.*] A medicine-man or witch-doctor among the Indians of Central and South America. Also *peai.* See ⋆*peaiman. N. E. D.*

piaga (pi-ä′gä), *n.* [It. *piaga*, sore, wound.] Same as *Aleppo ulcer* (which see, under *ulcer*).

piagnone (pẹ̄-än-yō′nạ̄), *n.*; pl. *piagnoni* (-nẹ̄). [It. *piagnone*, a funeral attendant, a mourner.] A mourner: a name given to the followers of Savonarola in Florence in the latter part of the fifteenth century, from their penitential attitude and appearance.

The Sacre Rappresentazioni, so popular toward the turn of the century in *piagnone* Florence.
B. Berenson, in Burlington Mag., March, 1903, p. 19.

pialin (pī′ạ-lin), *n.* [Gr. *πιαλέος*, fat, + *-in*^{2}.] Same as ⋆*lipase.* Also *pialyn.*

pialler (pi-al′ėr), *v. i.* [A sort of Pidgin-English.] To speak. *E. E. Morris*, Austral English. [Australia.]

pianata (pē-ä-nä′tä), *n.* [It. ? < *piano.*] A street-piano.

pianic (pi-an′ik), *a.* [*pian* + *-ic.*] Pertaining to or suffering from pian or frambœsia.

pianiste (pi-a-nēst′), *n.* [F.] Same as *pianist*: sometimes used as if it were the feminine form of that word.

piano^1, *a.* **II.** *adv.* Softly; in a low tone or voice. Abbreviated *p.*

Chords of three or four notes . . . produce rather a bad effect when played *piano*; they seem rich and energetic only when played loud and boldly.
Berlioz (trans.), Treatise on Modern Instrumentation [and Orchestration, p. 5.

III. 1. *n.* A passage or series of notes sung or played softly; a soft or gentle tone.

An harpsichord, on which . . . may be performed either one or two unisons, or two unisons and one octave, either in the forts or *piano.*
Rimbault, The Pianoforte, its Origin, Progress and [Construction, p. 149.

piano^2, *n.*—**Barrel piano**, a mechanical pianoforte played by a revolving barrel, as the common street-piano.—**Enharmonic piano**, a pianoforte with more than twelve keys to the octave.—**Kafir piano.** Same as *zanze.*—**Piano feed.** See ⋆*feed.*—**Piano hand.** See ⋆*hand.*—**Piano méchanique**, a form of pianoforte, invented by Debain of Paris, which can be played either in the ordinary way or mechanically by means of a board with pins that engage levers connected with a special set of hammers.—**Piano style**, in *music*, a style of composition or of performance characterized by sharp accentuation, detached chords or notes, and rapid passages or delicate embellishments, such as are common in pianoforte music.—**Piano theory of hearing**, in *physiol.* and *psychophys.*, the resonator theory of audition proposed by Helmholtz: opposed to the *telephone* ⋆*theory* of Rutherford. *Baldwin*, Dict. of Philos. and Psychol., I. 451.—**Piano theory of the soul**, in *metaph.*, the dualistic theory which "compares the soul to a musician who plays an interesting piece (the individual life) on the instrument of the body, and then deserts it to live forever on its own account." *Haeckel* (trans.), Wonders of Life, p. 16.—**Upright grand piano**, a form of grand pianoforte, occasionally made from the middle of the eighteenth century, in which the whole body of the instrument was vertical instead of horizontal. It was superseded by the upright or cabinet piano, which is now made with a grand action, but with shorter strings.

piano^3 (pē-ä′nō), *n.*; pl. *piani* (-nẹ̄). [It. *piano*, a plane, a floor, or story. See *piano*^{1}.] In Italian, a story; a floor; the French *étage*: in English, used only in such borrowed phrases as *piano nobile*, the principal story; *pian' terreno*, a ground floor.

The next evening I descended to the *piano nobile* . . . for the annual function at the Palazzo Lugani.
A. and E. Castle, La Bella, in The House of Romance, [p. 34.

piano-action (pi-an′ō-ak″shọn), *n.* In *pianoforte-making*, the entire mechanism by which the tone is produced by the player, including the keyboard and the hammer- and damper-action. See cut under *pianoforte.*

piano-failure (pi-an′ō-fāl″ụ̈r), *n.* Pianists' cramp.

In cases of *piano-failure*, I always examine carefully the extensors of the wrist and fingers.
Allbutt's Sys. Med., VIII. 12. *N. E. D.*

pianofortist (pi-an′ō-fôr-tist), *n.* [*pianofort*(*e*) + *-ist.*] A pianist. [Rare.]

pianola (pẹ̄-ạ-nō′lạ̈), *n.* [Dim. of *piano*^{2}.] The trade-name of a form of ⋆piano-player (which see).

piano-lamp (pi-an′ō-lamp), *n.* A lamp intended for use with a piano: usually one with a firm tripod or other base and an adjustable standard by which it can be raised or lowered.

piano-machine (pi-an′ō-mạ-shēn″), *n.* A machine with pins or keys that are operated by the fingers, like those on a piano, for punching holes in the pattern-cards of a Jacquard machine.

piano-making (pi-an′ō-mā″king), *n.* The art, trade, or occupation of making pianofortes. It properly includes the making of the metal parts, especially the strings and the frame, with its braces and bridges, the making of soundboards and the wooden framework in general, the making of the key- and pedal-action in full, including the keyboard and the very complicated hammer- and damper-action, the assembling of these parts and their regulation, and the making and finishing of the case in which the instrument is inclosed. Most makers buy some or many parts ready-made. Piano-factories, however, are generally complete manufacturing establishments.

piano-organ (pi-an′ō-ôr″gạn), *n.* A mechanical piano constructed in the manner of a barrel-organ. *N. E. D.*

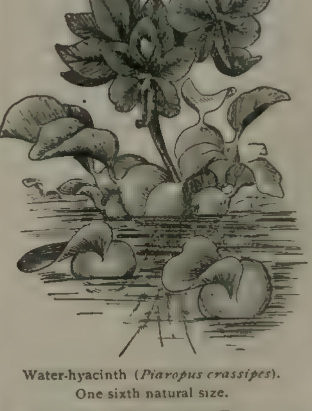
piano-player (pi-an′ō-plā″ėr), *n.* **1.** One who plays upon the pianoforte.—**2.** A mechanical device by which a pianoforte may be sounded automatically, without the action of the player's hands upon the keys. A number of such machines are now made, either in a form detachable from the piano itself or contained within the piano-case. Usually they consist of a blowing apparatus operated by treadles, like a reed-organ (occasionally by electricity), which supplies compressed air both to put in revolution a music-roll with perforations which represent the tones of a given piece, and to actuate a series of levers or 'fingers' that operate the keys of a pianoforte. The music-roll is so inserted that as it is rolled from one cylinder to another its perforations pass over a row of small orifices through which the air is admitted to or discharged from the bellows through pneumatics that control the 'fingers': when a perforation coincides with one of these orifices, its 'finger' is suddenly released and strikes the appropriate key on the keyboard. As now perfected, with various mechanisms for varying the speed of the roll and the loudness of the tones, piano-players have become distinctly important as means for the enjoyment and study of many classes of music, especially as thousands of pieces of music are available for use upon them, including transcriptions of orchestral works and the like that could not otherwise be played by a single player directly.

piano-score (pi-an′ō-skōr), *n.* See *score*^{1}, 9.

pianotype (pi-an′ọ̄-tīp), *n.* A form of electric music-recorder that can be attached to a pianoforte.

piano-wire (pi-an′ō-wīr), *n.* Steel wire such as is used for the stringing of pianos. It has great tensile strength and evenness of size and structure. Also *music-wire.*

Piaropus (pī-ar′ọ̄-pus), *n.* [NL. (Rafinesque, 1836), in allusion to the swollen petioles; < Gr. *πιαρός*, fat, + *πούς*, foot.] The genus of monocotyledonous plants of the family *Pontederiaceæ*, which includes the water-hyacinth, a choice aquatic plant in conservatories of the northern United States and a pestilent river-weed in Florida and Louisiana. The water-hyacinth is most commonly known to florists as *Pontederia azurea* or *P. crassipes*, but the recently accepted disposition is to place it in the allied genus *Piaropus*, where it is known as *P. crassipes.* The specific name *azurea* really belongs to an allied species, *P. azureus*, differing from the common water-hyacinth in not having inflated petioles. Technically, *Piaropus* differs from *Pontederia* in having the mature ovary 3-partitioned and many-ovuled. *Piaropus crassipes* (*Eichhornia speciosa* of Kunth) is a floating plant from Brazil, bearing bladder-like buoys made by the expansion of the hollow petioles. The leaf-blades are ovate and entire. The showy flowers are borne in an



Water-hyacinth (*Piaropus crassipes*).
One sixth natural size.

erect cluster, pale violet in color marked with blue and yellow. In the St. John's river, Florida, the plant has become so abundant as to impede navigation. In shallow water it roots in the mud.

piassava, *n.*—**Bahia piassava**, the fiber of *Attalea funifera.* See *piassava*, 1, *bast-palm*, and *Attalea.*—**Liberian piassava**, the thick, wiry fiber obtained from the leaf-stalks of the bamboo-palm, *Raphia vinifera.* It is largely exported and used for making stiff brooms and brushes. See *West African* ★*bass.*—**Madagascar piassava**, the fiber of *Dictyospermum fibrosum.* See ★*vonitra* and *Madagascar* ★*bass.*—**Para piassava**, the fiber of *Leopoldinia Piassaba.* See *piassava*, 1, *bast-palm*, *monkey* ★*bass*, and *Leopoldinia.*

piatak (pyä-täk′), *n.* [Russ. *pyatákŭ.*] A Russian copper coin of the value of 5 copecks.

piatti (pẹ-ät′tẹ), *n.pl.* [It., pl. of *piatto*, a dish, plate: see *plate.*] In *music*, same as *cymbals.*

piauzite (pi-ou′zīt), *n.* [*Piauze* (see def.) + *-ite.*] A fossil resin of asphalt-like appearance and very high melting-point (315° C.), found in brown coal at Piauze, near Neustädtel, in Carniola, and near Tüffer in Styria.

piazin (pi-az′in), *n.* [Gr. πί(ων), fat, + *azo-* + *-in*².] Same as ★*pyrazin*, 1.

pibcorn (pib′kôrn), *n.* [Gael. *piob*, pipe, + *corn*, horn.] Same as *hornpipe*, 1.

piblockto (pi-blok′tō), *n.* [Greenland Eskimo.] In Greenland, a frenzied condition of dogs which results from continued exposure to extremely cold weather.

> I pushed on until the "*piblockto*," or Greenland dog madness, induced by the continued exposure, got such a hold of my dogs as to make it absolutely impracticable for me to go further, and I cached most of my provisions and turned back. *Geog. Jour.* (R. G. S.), XI. 228.

pic³ (pēk), *n.* [F.] A peak.

picadura (pik-ạ-dö′rạ̈), *n.* [Sp. *picadura*, pricking, puncture.] The scraps which accumulate in making "book d" fillers for cigars.

> These scraps, or *picadura*, as they are called by the trade, etc. *U. S. Dept. Agr.*, Rep. No. 62, p. 18.

picapica (pẹ-kä-pē′kä), *n.* [Sp. *picar*, to sting or prick.] In countries settled by the Spanish, a name of several stinging or prickly plants: in Porto Rico, especially, *Schychowskya æstuans* (*Fleurya æstuans*, of Gaudichaud), a common weed of the nettle family, and *Stizolobium pruriens*, belonging to the *Fabaceæ*, the pods of which are covered with minute stinging hairs.

picarel (pi-kä-rel′), *n.* [F.: see *pickerel.*] A common name of fishes of the family *Mænidæ*, shore-fishes chiefly of the Old World.

picaroon¹, *n.* **3.** A small pirate ship; a privateer or corsair. *N. E. D.*

piccadilly (pik′a-dil-i), *n.* [See *piccadill.*] **1.** Same as *piccadill.*—**2.** A standing collar with the point turned over, worn in London about 1870.—**Piccadilly weepers**, long side-whiskers such as were worn about the middle or third quarter of the nineteenth century. [Slang.]

piccaninny, *n.* **II.** *a.* Little; small: as, a *piccaninny* handful. [Southern U. S. and Australia.]

Piccinnist (pi-chē′nist), *n.* [*Piccinni* (see def.) + *-ist.*] An admirer of the style of Piccinni as an operatist in opposition to that of Gluck: a term much used in the later eighteenth century.

picciolo (pē′chọ̄-lọ̄), *a.* and *n.* [It., small, < *piccolo*, small.] **I.** *a.* Of musical instruments, small: as, a violino *picciolo*, a small violin or pochette.

II. *n.* A small copper coin of Malta, equal to one fifth of a grano.

piccolo, *n.* **3.** The small or treble bugle, usually pitched in E flat.

picconou (pik-ō-nö′), *n.* [Appar. a Canadian F. form of an Amerindian name.] A common name of *Moxostoma lesueuri*, a sucker found in northern North America.

picein (pī′sẹ̄-in), *n.* [L. *picea* (see def.) + *-in*².] A crystalline glucoside, $C_{14}H_{18}O_7 + H_2O$, found in the needles of the fir, *Pinus picea.* When hydrolyzed by emulsin or dilute acids it yields glucose and p-hydroxyacetophenone.

picene (pī′sēn), *n.* [L. *pix* (*pic-*), pitch, + *-ene.*] A crystalline unsaturated polycyclic hydrocarbon,  $\begin{array}{l}C_{10}H_6-CH\\ | \qquad\quad \|\\ C_{10}H_6-CH\end{array}$, with blue fluorescence, which is found in the pitch-like residues from the distillation of lignite-tar and petroleum. It is also made synthetically.

piceol (pī′sẹ-ol), *n.* [*pice*(*in*) + *-ol.*] A name given to p-hydroxyacetophenone obtained by the hydrolysis of picein before its identity was discovered.

piceorufous (pī″sẹ̄-ọ̄-rö′fus), *a.* [L. *piceus*, pitchy, + *rufus*, red, + *-ous.*] Of a very dark, dull red suffused with black.

piceously (pī′sẹ̄-us-li), *adv.* Of a piceous or pitchy color.

picescent (pi-ses′ẹnt), *a.* [See *piceous.*] Nearly or somewhat pitch-black in color. [Rare.]

picha-de-gato (pē″chä-dā-gä′tō), *n.* [Sp. *picha*, penis, + *de*, of, + *gato*, cat.] In Porto Rico, *Scolosanthus versicolor*, a rubiaceous shrub armed with sharp slender spines and bearing small white berries crowned with the persistent calyx.

picha-de-perro (pē″chä-dā-per′rō), *n.* [Sp. *picha de perro*, cynophallus, < *picha*, penis, + *de*, of, + *perro*, dog.] In Cuba, a seaside shrub or small tree, *Capparis cynophallophora*, indigenous to the West Indies and tropical America, bearing peculiar reddish-brown fruit having a flavor of mustard, and sometimes used as a remedy for dropsy. See *bottle-cod.*

pichey, pichy (pich′i), *n.* [Guarani?] A local name in Chile and Argentina of the rare little armadillo, *Dasypus minutus.* *Proc. Zool. Soc. London*, 1902, p. 277.

pichi (pē′chē), *n.* [S. Amer.] In Chile, *Fabiana imbricata*, a small shrub of the nightshade family, with white flowers and the general aspect of a heath. From its leafy resinous tops a fluid extract has been prepared which is efficacious as a remedy for cystitis and inflammation of the urethra.

Pichurim-bean fat. See ★*bean*¹.—**Pichurim camphor, Pichurim fat.** See ★*camphor.*

picite (pī′sīt), *n.* [NL. *picites*, < L. *pix* (*pic-*), pitch, + *-ite.*] An amorphous hydrated ferric phosphate, occurring in dark-brown coatings and stalactitic forms.

pick, *v. t.*—**Pick-off attachment**, an automatic gripping-device for removing the ware or other objects stamped or drawn in a sheet-metal press having a dial-feed. It picks off and removes the object from the revolving female dies as they pass beyond the male die. In this sense it is allied to the ejector.—**To pick the rear.** See *to* ★*sack the rear.*—**To pick up.** (*e*) To catch with the eye; recognize or identify (a distant object looked for).

> The haze in the daytime makes it very difficult to see far, and the mist at sunrise is still worse. We found, on many occasions, that with all our telescopes and field-glasses we could not *pick up* a flag at a range of 4 or 5 miles, or even less. *Geog. Jour.* (R. G. S.), X. 246.

pick¹, *n.* **11.** One weft-thread in a piece of cloth.—**Double pick**, in *weaving*, two picks of weft-threads in the same shed of the warp.—**Round pick**, a small depression of the surface of an electrotype plate: usually caused by an unperceived air-bubble between the copper shell and its base of type-metal.—**Solid pick**, an unintended small dot or blotch in print caused by the accidental adhesion of a bit of metal upon the printing-plate.

pickaroon (pik-ạ-rōn′), *n.* Same as *picaroon*².

pick-a-tree (pik′ạ-trē), *n.* The great green woodpecker. *N. E. D.*

pickax (pik′aks), *v.* **I.** *trans.* To cut or clear away with a pickax.

II. *intrans.* To use a pickax.

pick-dressing (pik′dres″ing), *n.* The process of shaping a stone with the point of a pick. It is a more delicate form of hammer-dressing.

picker, *n.* **3.** (*j*) In *agri.*, an apparatus or machine for picking or gathering cotton in the fields. (*k*) In *mining*: (1) A particular form of hand-chisel. (2) A wire or needle used to pick out the tamping from over a blasting-charge that has failed to explode. [Eng.]

picker-stick (pik′ėr-stik), *n.* Same as ★*pecking-arm.*

picket¹, *n.*—**Small pickets**, pointed stakes employed in forming a military obstacle.

picket¹, *v. t.* **6.** To place a picket or guard (see *picket*¹, *n.*, 3) near a shop or mill, during a strike, to prevent men who do not belong to the striking organization or body from obtaining work in the shop, or to prevent the employers from securing such laborers.

> The men formerly in his employ may be actually drawing "strike pay" from their unions, and "*picketing*" his works to prevent their places being filled. *Encyc. Brit.*, XXXIII. 15.
>
> Kay invented many other machines for carding or combing cotton and others, which may be seen in the Patent Museum in South Kensington. He was beset and *picketed* and much ill-used by those whom he benefited. He had to leave Bury to save his life, and died in poverty and obscurity in France, and it is not known where he is buried. *Sci. Amer. Sup.*, Jan. 10, 1903, p. 22594.

pick-handspike (pik′hand″spīk), *n.* A handspike into the butt of which a steel spike is fitted.

picking, *n.* **9.** A rough sorting or cleaning, as of coal, from impurities.—**Coarse picking** or **plucking**, in *tea-growing*, a picking in which larger leaves are taken than in fine picking.—**Fine picking**, in *tea-growing*, the picking of the unexpanded bud and first three young leaves for the finest grades of tea. Sometimes only a part of a given leaf is taken. See ★*pekoe.*

picking-bed (pik′ing-bed), *n.* The layers of stone beneath the external crust or rag in an English quarry. *M. A. Green*, Eighteenth Century Architecture of Bath, p. 94.

picking-machine (pik′ing-mạ-shēn″), *n.* In *cotton-manuf.*, a scutcher or picker.

picking-plate (pik′ing-plāt), *n.* A piece of metal against which the picking-cam or tappet strikes in throwing the shuttle across a loom.

picking-scroll (pik′ing-skrōl), *n.* A picking-motion employing a scroll for throwing a shuttle across the loom.

picking-shaft (pik′ing-shȧft), *n.* The shaft of a loom which carries the picking-cam or tappet for operating the mechanism which propels the shuttle.

picking-table (pik′ing-tā″bl), *n.* In *transportation*, a platform-carrier or a belt-conveyer when used as a sorting-table. Coal, city refuse, or other mixed material to be sorted is fed to the moving conveyer and carried between two rows of pickers or sorters, who stand on each side of the moving table and pick the slate from the coal, or the old metals, fabrics, etc., from the refuse, as it passes between them. It is used in coal-breakers and destructor plants.

pick-it-up (pik′it-up), *n.* A local (child's) name for the Australian diamond-bird, *Pardalotus*, given on account of its sharp note. *E. E. Morris*, Austral English.

pickle², *n.* **7.** A solution of salt and sulphuric acid in which skins are packed to preserve them. Sometimes other ingredients are used. *Flemming*, Practical Tanning, p. 184.

pickle-moth (pik′l-môth), *n.* The adult of the pickle-worm (which see).

pickle-plant (pik′l-plant), *n.* Same as *slender* or *jointed* ★*glasswort.*

pickle-pot (pik′l-pot), *n.* An early form of condenser for steam-engines, consisting of a small vessel attached to the end of the cylinder and containing water.

> Such condensers were known as "*pickle-pots.*" *Nature*, Nov. 19, 1903, p. 68.

pickle-weed (pik′l-wēd), *n.* Same as *woody* ★*glasswort.*

pickling (pik′ling), *n.* **1.** The act of putting anything in pickle or brine; the process of preserving in pickle.—**2.** The immersion of sheet-iron or wire in acid, in order to clean it.

pickpole (pik′pōl), *n.* A pole into the butt of which a steel point, or pick, is fastened: used by lumbermen. [U. S.]

pickpurse, *n.*—**Purgatory pickpurse, pickpurse purgatory**, a dyslogistic term of sixteenth century controversy, used originally apparently by Latimer, in reference to the use made of the doctrine of purgatory to obtain payments for masses for departed souls, etc.

> It may be well and justly called *Purgatorie Pickpurse*; . . . wealth and great riches of the clergy, was the only mark they aimed at. *H. Smith*, Arrow agst. Ath., 60. *N. E. D.*

pick-up, *a.* **II.** *n.* In *printing*, types already composed and previously used, claimed by the type-setter as his own composition.

picnic, *n.* **2.** Something undeniably good or easy; a 'soft thing'; a snug berth; a treat; an easy job. [Slang.]—**3.** A lively, difficult, or awkard experience. [Slang.]

> I had a *picnic* with him [a kicking horse] coming down the hill by Arbuckle's. *The Century*, LXII. 223.

picoid (pī′koid), *a.* [L. *picus*, woodpecker, + *-oid.*] Resembling or having the characters of the *Picidæ* or woodpeckers.

picoline (pik′ọ̄-lin), *n.* Methylpyridine, $C_5H_4.N.CH_3$, an oily basic liquid formed by the dry distillation of coal, and also made synthetically. There are three varieties, α-, β-, and γ-picoline, which boil at 129°, 143.5°, and 142.5–144.5° C., respectively. Alpha-picoline is found in bone-oil. All three varieties have a strong odor resembling pyridine; they attack organic substances and are strong bases.

picolinic (pik-ọ̄-lin′ik), *a.* [*picoline* + *-ic.*] Derived from picoline.—**Picolinic acid**, a crystalline compound, 2-pyridine-carboxylic acid, $C_5H_4N.COOH$, made by oxidizing α-picoline with potassium permanganate. It melts at 134.5–136° C. and is easily reduced to α-picoline. The two isomeric acids, made by the oxidization of β- and γ-picoline, are known as *nicotinic* and *isonicotinic acid*, respectively.

Picopasseres (pī-kō-pas′ẹ-rēz), *n. pl.* [NL., < L. *picus*, a woodpecker, + *passer*, pl. *passeres*, a sparrow.] A group of birds comprising the *Passeres, Pici*, and a few other families of birds, the combination varying according to the view of the authority. Seebohm calls the group an order, while Fürbringer extends its limits and considers it a suborder.

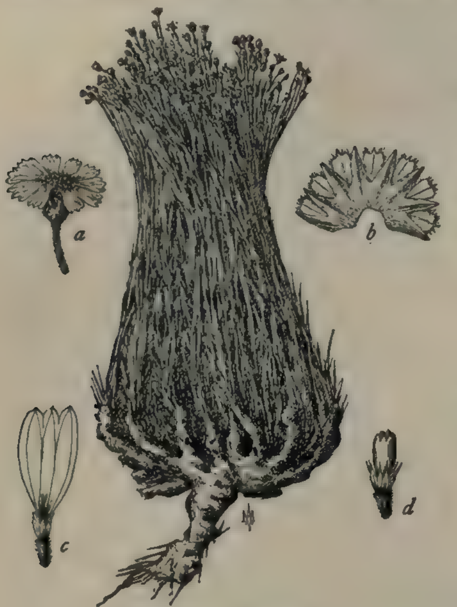
picopasserine (pī-kō-pas′ẹ-rin), *a.* [*Picopasser(es)* + *-ine*¹.] Pertaining to or having the characters of the *Picopasseres*.

picotah, picottah (pi-kọt′ạ̈), *n.* [Also *picota, pacota*; < Pg. *picota*, the brake of a ship's pump.] The name in southern India, of a device for raising water similar to the *shadoof*. See *shadoof*. *Yule and Burnell.*

picqueter (pik′e-tėr), *n.* [F. *piquet* (*de fleurs*), a bunch of artificial flowers, + *-er*.] One who arranges artificial flowers in bunches. *N. E. D.*

picraconitin (pik-ra-kon′i-tin), *n.* [Gr. πικρός, bitter, + E. *aconite* + *-in*².] An amorphous alkaloid of uncertain composition, perhaps $C_{31}H_{43}O_{11}N$, found in aconite-root, and also made by heating aconitin with dilute hydrobromic acid. Also called *benzoylaconin*.

Picradenia (pik-ra-dē′ni-ạ̈), *n.* [NL. (Hooker, 1834), < Gr. πικρός, bitter, + ἀδήν, gland; in allusion to the bitter glands of the corolla in *Picradenia Richardsoni*.] A genus of annual or perennial yellow-flowered herbaceous plants of the family *Asteraceæ*. There are about 12 species, natives of the western United States. The genus is characterized by alternate entire narrow or narrowly lobed leaves, and a double involucre composed of an outer series of narrow rigid bracts which are connate at the base and form a sort of cup inclosing an inner series of separate broader ones. A variety of *P. floribunda* is widely distributed in the southwestern United States and is locally known as *rabbit-weed* or *pingue*. Its rootstocks contain a resinous substance somewhat resembling rubber and the plant has been considered as a possible source of a substitute and adulterant for low-grade rubbers.



Picradenia floribunda.
a, flower-head; *b*, involucre; *c, d*, flowers.

picradonin (pik-rad′ọ-nin), *n.* [Gr. πικρός, bitter, + E. *adon(id)in*.] A very pure form of adonidin.

picramic (pik-ram′ik), *a.* [*picr(ic)* + *am(ine)* + *-ic*.] Derived from picric acid by reduction.—**Picramic acid**, a red crystalline compound, 4,6-dinitro-2-aminophenol, $C_6H_2(OH)(NO_2)_2(NH_2)$, made by the reduction of picric acid with acetic acid and iron, or by some other mild reducing-agent.

picramide (pik-ram′id), *n.* [Gr. πικρός, bitter, + E. *amide*.] A dark-yellow crystalline compound with a bluish luster, made by the action of ammonia on ethyl picrate; 2,4,6-trinitroaniline, $C_6H_2NH_2(NO_2)_3$. It melts at 188° C.

Picrasma (pik-raz′mạ̈), *n.* [NL. (Blume, 1825), in allusion to the bitter bark and wood; < Gr. πικρασμός, bitterness.] A genus of dicotyledonous trees or shrubs belonging to the family *Simaroubaceæ*. They are characterized by their large, unequally pinnate leaves and small flowers in axillary panicles. The 8 species are natives of tropical regions. See *Picræna*.

picrasmin (pik-raz′min), *n.* [*Picrasma* + *-in*².] A bitter principle contained in the wood of quassia, *Picrasma excelsa*.

picrate, *n.*—**Ammonium picrate.** See ★*ammonium*.—**Brugère's picrate powder.** See ★*powder*.—**Potassium picrate**, a substance, crystallizing in golden-yellow needles, which explodes with a heavy shock. Its explosive force is much increased by the addition of potassium nitrate or chlorate, but it becomes much more dangerous in use. It has been employed in the manufacture of Designolle's powder and other powders.

picrin (pik′rin), *n.* [Gr. πικρός, bitter, + *-in*².] A bitter substance, probably impure digitalin, obtained from the foxglove, *Digitalis purpurea*.

picro-. [Gr. πικρός, bitter.] An occasional prefix with mineralogical names, used to indicate the presence of magnesium.

picrocrocin (pik-rọ-krō′sin), *n.* [Gr. πικρός, bitter, + κρόκος, saffron, + *-in*³.] A bitter crystalline glucoside, $C_{38}H_{66}O_{17}$, extracted from saffron. When hydrolyzed it yields glucose and a terpene, $C_{10}H_{16}$. It melts at 75° C.

picrocyanic (pik″rọ-sī-an′ik), *a.* [Gr. πικρός, bitter, + E. *cyanic*.] Noting an acid, the same as *isopurpuric acid*.

picroerythrin (pik″rọ-e-rith′rin), *n.* [Gr. πικρός, bitter, + E. *erythrin*.] A bitter crystalline substance made by boiling erythrin with water, alkalis, or alcohol. It is monoörsellinate of erythrite, $C_{12}H_{16}O_7 + 3H_2O$, the boiling effecting a partial hydrolysis of the erythrin. When boiled with lime it is broken down into carbon dioxid, orcinol, and erythrite. It melts at 158° C.

picroglycion (pik-rọ-glis′i-ọn), *n.* [Gr. πικρός, bitter, + γλυκύς, sweet, + *-i-on*.] Same as *dulcamarin*.

picrol (pik′rol), *n.* [Gr. πικρός, bitter, + *-ol*.] A trade-name of potassium diiodoresorcinolsulphonate, $(\overset{1.3}{HO})_2C_6HI_2SO_3K$, a colorless, odorless, bitter crystalline powder. It is used in surgery as a substitute for iodoform.

picromel (pik′rọ-mel), *n.* [Gr. πικρός, bitter, + μέλι, honey.] A bitter-sweet substance obtained from bile. *N. E. D.*

picronitrate (pik-rọ-nī′trāt), *n.* Same as *picrate*.

picropharmacolite (pik-rọ-fär′ma-kọ-līt), *n.* [Gr. πικρός, bitter, + φάρμακον, drug, + λίθος, stone.] A hydrous phosphate of calcium and magnesium, occurring in white spherical or botryoidal aggregates.

picropodophyllin (pik-rọ-pod-ọ-fil′in), *n.* [Gr. πικρός, bitter, + E. *podophyll(ic)* + *-in*².] The lactone of podophyllic acid. It crystallizes in needles which have a bitter taste and melt at 227° C.

picrosclerotin (pik-rọ-sklē′rọ-tin), *n.* [Gr. πικρός, bitter, + *σκληρωτός, hardened (see *sclerosis*), + *-in*².] A bitter, poisonous alkaloid found in ergot of rye.

picrotin (pik′rọ-tin), *n.* [Gr. πικρός, bitter, + *-t-* + *-in*².] A crystalline, non-toxic, bitter substance, $C_{25}H_{30}O_{12}$ or $C_{15}H_{18}O_7$(?), found in moonseed, *Menispermum cocculus*. It melts at 250–251° C., first turning yellow and beginning to fuse at 245° C.

picrotoxid (pik-rọ-tok′sid), *n.* [*picrotox(in)* + *-id*¹.] A crystalline compound, $C_{15}H_{16}O_6$, formed by the action of acetyl chlorid on picrotoxin, or by passing hydrochloric-acid gas through its ethereal solution. It melts above 310° C.

picrotoxinin (pik-rọ-tok′si-nin), *n.* [*picrotoxin* + *-in*².] A crystalline, poisonous, bitter compound, $C_{15}H_{16}O_6 + H_2O$, formed, together with picrotin, when picrotoxin is boiled with benzene or chloroform, and also in other ways. It melts at 200–201° C.

picryl (pik′ril), *a.* [*picr(ic)* + *-yl*.] Pertaining to or derived from picric acid.—**Picryl brown.** See ★*brown*.

pictarne, *n.* Same as *picktarny*.

pictarnie, *n.* A better spelling of *picktarny*.

pictoglyph (pik′tọ-glif), *n.* [L. *pictus*, painted, + Gr. γλυφή, a carving.] A picture carved in a rock or other hard surface: sometimes synonymous with *petroglyph*.

pictographically (pik-tọ-graf′i-kạl-i), *adv.* In a pictographic manner; by means of pictographs.

pictorial, *a.* **II.** *n.* A pictorially illustrated periodical.

pictorialize (pik-tō′ri-ạl-īz), *v. t.*; pret. and pp. *pictorialized*, ppr. *pictorializing*. [*pictorial* + *-ize*.] To represent pictorially; represent in or as in a picture. [Rare.]

> If he has not so trained himself he is certain to *pictorialize* what he should conventionalize.
> *Encyc. Brit.*, XXXI. 4.

pictura, *n.* **2.** The art of painting; style of painting.

> The models set by the great *pictura* in the works of Polygnotus and his school were familiar to all.
> *Eugénie Sellers*, in Jour. Hellenic Studies, XIII. 9.

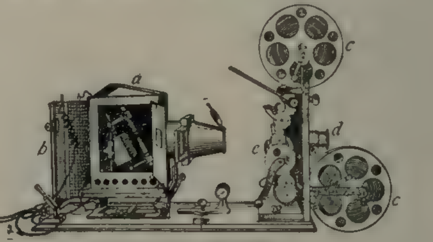
picture, *n.* **8.** A representative; a pattern: as, a *picture* of incompetence; a perfect *picture* of a horse. [Chiefly colloquial.] *Halliwell.*

> I 've seen a vast o' dogs, but Rip was t' prettiest *picter* of a cliver fox-tarrier 'at iver I set eyes on.
> *R. Kipling*, Private Learoyd's Story, Soldiers Three, p. 31.

9. In *med.*, the aggregation of phenomena presented by a disease.

> Tubercular, carcinomatous or syphilitic ulcerations in the rectum may closely simulate the *picture* of dysentery with localization of the lesions in the lower end of the colon. *Phil. Med. Jour.*, Jan. 31, 1903, p. 214.

10. In *theatr.*, the combined optical effect of the scenery, furniture, lighting, etc., and the groupings in which the performers may happen to be placed at any given moment in the play. As each group of performers tends to dissolve, as they move through the action of the play, there is presented on the stage a continuous series of pictures, one insensibly melting into the next, each being a combination of a group of people, with the scenery. The last picture in each act is usually held motionless for an instant to fix it upon the minds of the audience and thus suspend the interest until the next act.—**Final picture**, the last picture in a play; it is designed to be a pictorial presentation of the logical outcome of the problem presented by the play. See *stage position*, under ★*stage*.—**Moving-picture machine**, a machine operated by hand or by a small motor and used in producing the optical effect called a *moving-picture*. The most simple form is the mutoscope. For projections, the machine is a specialized form of lantern, having the usual lens and lamp and a special type of shutter, and also an apparatus for passing a ribbon containing a large number of transparent positives (slides) through the focus of the lens. The ribbon, wound upon a spool, is led by guides before the lens and rewound upon a second spool. This movement is controlled either by sprocket-wheels whose sprockets engage perforations in the edge of the ribbon, or by cams which press at intervals upon the ribbon. Under each of the systems the movement is made intermittent, the ribbon moving the length of one positive or until exactly in focus, when it pauses for a fraction of a second and then advances until the next positive is in position, and so on. This intermittent motion coincides exactly with the operation of the shutter of the lantern, the shutter being closed while the ribbon is in motion and open during the pause, thus allowing each positive in turn to project its image on the screen when at rest. The result of this combined movement of shutter and ribbon is the projection of a series of pictures alternated with periods of darkness when no picture is visible on the screen, persistence of vision serving completely to hide from the spectator the absence of light and causing all of the pictures of the series to blend into one continuous picture. Since each picture exhibits a phase of the motion of the object photographed, the sum of the combined pictures is one picture, apparently exactly reproducing the actual motions and changes of the original scene.



Moving-picture Machine.
a, arc-lamp; *b*, rheostat; *c,c*, film-holders; *d*, objective; *e*, mechanism for moving film and operating shutter.

picture-card (pik′tụ̄r-kärd), *n.* **1.** A card containing a picture: usually intended for the instruction or amusement of children.—**2.** A court card in a pack of cards.

picture-hat (pik′tụ̄r-hat), *n.* A woman's hat supposed to be made in imitation of one shown in some striking portrait (as, for example, a portrait by Gainsborough): usually a wide-brimmed hat with flowing plumes. See *Gainsborough hat*, under *hat*¹. [Colloq.]

picucule (pik′ụ̄-kūl), *n.* [F., < L. *picus*, woodpecker, + *cuculus*, cuckoo.] A bird of the family *Dendrocolaptidæ*.

picuda (pẹ-kö′dä), *n.* [Sp. *picuda*, fem. of *picudo*, beaked, peaked, pointed: see ★*picudo*.] A fish, *Sphyræna picuda*, of the tropical West Atlantic; the great barracuda.

picudilla (pē-kö-dēl′yä), *n.* [Sp., dim. of *picuda*; as a substantive, a species of birds, etc. See ★*picuda*.] A common Spanish name of *Sphyræna picudilla*, a fish of the West Indies and south to Brazil.

picudo (pẹ-kö′dō), *n.* [Sp. *picudo*, beaked, peaked, pointed, < *pico*, a beak, point. See *pike*¹.] A common name in southern Texas and Mexico for the Mexican cotton-boll weevil, *Anthonomus grandis*.

pidgery, *n.* Same as ★*pitcheri*.

pidyon ha ben (pid-yōn′ hä ben′). [Heb.: *pidyon*, redemption, ‹ *padah*, redeem; *ha*, (of) the; *ben*, son.] Among the Jews, 'the redemption of the [first-born] son': a ceremony based upon the words of Exodus xiii. 2, 15: "Sanctify unto me all the first-born, . . . both of man and of beast; . . . but all the first-born of my children I redeem." When the first-born male child is a month old, his father presents him to the priest and says: "This my first-born son is the first-born of his mother, and the Holy One, blessed be his name, commanded me to redeem him," etc. The father then puts five shekels of silver, or its equivalent in money of the country in which he resides, in the hands of the priest. The priest then asks: "Which would you prefer—to give me the child or the five shekels?" The father replies: "I wish to redeem him, and here is the value of his redemption." Then the father pronounces a blessing, and the priest holds the money over the head of the child, and at the same time says: "This [money] is instead of that; this is the exchange for that; this is in remission of that."

pie[1], *n.*—**Washington pie**, sponge layer-cake with pastry cream or chocolate filling.

pie[6] (pẹ-ä′), *n.* [Sp. *pie* = It. *piè*, foot, ‹ L. *pes* (*ped-*), foot. See *foot*.] A Spanish and Spanish-American unit of length, the foot, equal to from 10.97 to 11.13 inches in Spain, and to 11.37 inches in Argentina.

piè (pẹ-ä′), *n.* [It., = Sp. *pie*. See ⋆*pie*[6].] In Italy, a measure of length, the foot, equal, at Lucca, to 11.94 inches.

piece, *n.* 15. A small portion of time; a little while. [Colloq.]

> "Dad," said Dan, "we've done our chores. Can't we go overside a *piece?*" *R. Kipling*, Captains Courageous, iii.

Clear piece, in *chess*, a gain during play which leaves a player with a superiority of forces: as, to have a *clear* rook, bishop, or knight, that is, to have one more rook, bishop, or knight on the board than one's opponent, the other pieces and pawns being in equal numbers on the board.—**Macaroni-piece.** See ⋆*macaroni*, 5.—**Salon piece,** a piece of salon music.—**Set piece.** (*a*) See *set*[1], *p. a.* (*b*) In fireworks, a piece, more or less elaborate, which is fastened to a standard, and when it is ignited, shows a design, such as a face, etc.—**Town piece,** an English copper token issued by a town.—**Twenty-shilling piece,** an English gold coin of Charles I.

piece-fraction (pēs′frak″shọn), *n.* In *printing*, a fraction made by combining two figures (one containing the dividing-line) on bodies one half the size of the type of the text: as in $\frac{11}{22}$ ($^{11}_{22}$).

piece-hall (pēs′hâl), *n.* A building in which piece-goods are kept or sold. See the extract.

> The *piece-hall*, a large quadrangular structure occupying more than 2 acres of ground, erected in 1799 for the lodgment and sale of piece goods, but now used as a market for fish and vegetables. *Encyc. Brit.*, XI. 384.

piece-labor (pēs′lā″bọr), *n.* Labor paid by the piece.

piece-lace (pēs′lās), *n.* Lace made in broad pieces which can be cut and used like cloth. *N. E. D.*

piece-looker (pēs′lu̇k″ėr), *n.* An inspector of cloth that is woven in definite lengths or pieces. *N. E. D.*

piece-market (pēs′mär″ket), *n.* The market for cloth sold by the piece. *N. E. D.* [Eng.]

piece-trade (pēs′trād), *n.* The trade in pieces of cloth. *N. E. D.* [Eng.]

piece-velvet (pēs′vel″vet), *n.* Velvet made in pieces of greater width than that of a ribbon.

piece-wool (pēs′wu̇l), *n.* A small quantity of assorted wool sufficient for the manufacture of a piece, or web, of goods of a certain length and weight: a term used when cloth-manufacture was a home industry.

piecing-machine (pē′sing-ma-shēn″), *n.* In *cotton-manuf.*, a small machine used for piecing two threads together.

Pie-crust ware. See ⋆*ware*[2].

pied-à-terre (pyā-dä-tãr′), *n.* [F., *pied*, foot, *à*, to, on, *terre*, earth.] 1. A temporary lodging; a lodging or small apartment which one keeps for convenience to use in passing through a town, etc.—2. *Mil.*, a foothold; a place from which to sally forth and upon which to retreat, as in a sortie upon an enemy.

> It was on Richthofen's recommendation that the bay of Kiao-chow was selected for the German *pied-à-terre* in China, and the province of Shantung as a German "sphere of influence." *Encyc. Brit.*, XXVIII. 629.

piedmont (pēd′mont), *n.* and *a.* [A generalized use of *Piedmont*, F. *Piémont*, It. *Piemonte* (ML. *Pedemons*, *Pedemontium*), 'foot of the mountain,' a district and province of northwestern Italy. Compare ⋆*monadnock*.] I. *n.* In *phys. geog.*, a district lying along or near the foot of a mountain-range, like the plain of northwestern Italy near the Alps: applied, for example, to the rolling land next east of the Blue Ridge in Virginia, called sometimes the *Piedmont Plain*.

II. *a.* Having the physical character of a piedmont or its relations to a mountain-range: as, a *piedmont* region or district.

> The Mattapony and Pamunkey rivers rise in the "*piedmont*" region of Virginia, and, flowing south-east, join at West Point to form York river, which is throughout a tidal estuary. *Encyc., Brit.*, XXVIII. 918.

> Würm or Starnberger Lake, 15 miles southwest of Munich, is one of several water-bodies *piedmont* to the Alps on the upland of southern Bavaria.
> *W. M. Davis*, in Science, Nov. 29, 1901, p. 858.

Alluvial piedmont plain, a compound alluvial fan; a succession of alluvial fans fringing the base of a mountain-range. The lower edge of such a plain is usually lobate. *Chamberlin and Salisbury*, Geol., I. 173.—**Piedmont belt,** the region at the foot of a mountain-range: as, the *piedmont belt* of Virginia. *W. M. Davis*, in Science, Nov. 29, 1901, p. 859.—**Piedmont glacier.** See ⋆*glacier*.

piedra (pẹ-ā′drä), *n.* [Sp., stone, ‹ L. *petra*, a rock, a stone.] A disease of the hair observed in South America (Colombia), marked by the formation of numerous minute bead-like enlargements.

> In 1876, Osorio of Bogota, described an alteration in the hair, fairly common in Colombia on the hair of women, but exceptional on the hair of men, consisting of a whitish nodosity, hard, of variable size and disposition, which he believed due to the concretion of cells of the hair. The disease is commonly known as *piedra* (stone) on account of the consistence of the nodes and from the crepitation when a comb passes over the affected hairs. Two years later Desenne, in hair from Colombia affected with *piedra*, found nodes formed of spores 12–15 μ, strongly refractile, colourless, with articulated filaments, irregularly scattered outside the hair. Analogous nodular lesions were found in Europe by Knoch in Russia in 1866, Lindermann in 1867, and Beigel in 1869 in England, on the hair of wigs and the hair of patients.
> *Jour. Trop. Med.*, Dec. 15, 1904, p. 393.

pieno (pẹ-ā′nō), *a.* [It. *pieno*, m., *piena*, fem., ‹ L. *plenus*, full. See *plenty*.] In *music*, full: as, *organo pieno*, full organ; *coro pieno*, full chorus; *a voce piena*, with full voice.

pier, *n.*—**Compound pier,** in *arch.*, a pier made up of several prisms or cylinders, or both, or of parts of them. A clustered column is one form of a compound pier.

pier-dam (pēr′dam), *n.* A pier built from the shore, usually slanting down-stream, to narrow and deepen the channel, to guide logs past an obstruction, or to throw all the water on one side of an island; a wing-dam.

Pierian, *a.*—**The Pierian spring,** a fountain in Pieria (a region in northern Thessaly and southern Macedonia), sacred to the Muses, and said to confer poetic and intellectual fire on all who drank of it.

pierid (pī-er′id), *n.* and *a.* I. *n.* A member of the lepidopterous family *Pieridæ*.

II. *a.* Having the characters of or belonging to the family *Pieridæ*.

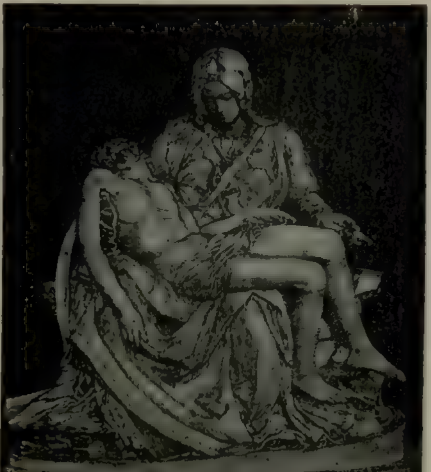
Pierrette (pye-ret′), *n.* [F. fem. dim. of *Pierre*, Peter.] A female buffoon. See *Pierrot*.

piesoclase, *n.* Same as ⋆*piezoclase*.

piesoluminescence, *n.* Same as ⋆*piezoluminescence*.

Piet[2] (pēt), *n.* [D. *Piet*(*er*), Peter.] A nickname for a Boer.

> I ain't more proud of 'avin won,
> Than I am pleased with *Piet*.
>   Ah there, *Piet!*—picked up be'ind the drive!
>   The wonder wasn't 'ow 'e fought, but 'ow 'e kep' alive!
> *R. Kipling*, The Five Nations, Piet, st. 5.



Pietà, by Michelangelo. – In the Vatican.

pietà (pẹ-ạ-tä′), *n.* [It. See *piety*.] In Italian art, painting or sculpture, a composition which represents the Madonna seated and bearing in her arms or on her knees the dead body of Christ. The most famous example is the Pietà of Michelangelo in the Capella della Febbre at St. Peter's, Rome.

> Puvis [de Chavannes] first exhibited in the Salon of 1850 a "*Pietà*." *Encyc. Brit.*, XXXII. 96.

piezoclase (pī′e-zō-klās), *n.* [Irreg. ‹ Gr. πιέζειν, press, + κλάσις, fracture.] In *geol.*, a name proposed by A. Daubrée for those small fractures in rocks which are the result of pressure in earth-movements. *Geikie*, Text-book of Geol., p. 658.

piezocrystallization (pī″e-zō-kris″tạ-li-zā′-shọn), *n.* [Irreg. ‹ Gr. πιέζειν, press, + E. *crystallization*.] Crystallization under great pressure, as in rock-masses. The pressure may be due to both the weight of the superincumbent rock-mass and to orographic movement. *Geikie*, Text-book of Geol., p. 718.

piezo-electric (pī″e-zọ-ẹ-lek′trik), *a.* [Irreg. ‹ Gr. πιέζειν, press, squeeze, + E. *electric*.] Pertaining to or of the nature of piezo-electricity.

piezoluminescence (pī″e-zō-lū-mi-nes′ẹns), *n.* [Irreg. ‹ Gr. πιέζειν, press, + E. *luminescence*.] The emission of light, observed in certain crystals, as the result of pressure. See ⋆*luminescence*.

piezometer, *n.* 6. An instrument for measuring the degree of resistance of the tissues of the body.

piezometric (pī″e-zō-met′rik), *a.* [*piezometer* + *-ic*.] Relating to the piezometer; relating to the pressures measured by the piezometer; relating to pressure in general, especially in the atmosphere, ocean, or other fluid, or within elastic or viscous solids.

piezometry (pī-e-zom′e-tri), *n.* [*piezometer* + *-y*[3].] The measurement of pressures, specifically of the great pressures employed in the investigation of the compressibility of matter; the use of the piezometer.

pifferaro (pif-ẹ-rä′rō), *n.* [It., ‹ *piffero*. See *piffero*.] An Italian strolling musician who plays the piffero.

piffle (pif′l), *v. i.*; pret. and pp. *piffled*, ppr. *piffling*. [Imitative.] 1. To do something (or nothing) in a lazy, ineffective way; idle; dawdle; talk idly or nonsensically.—2. To be squeamish. [Colloq. in both uses.]

piffle (pif′l), *n.* [*piffle*, *v.*] Something trifling or nonsensical; trifling talk; twaddle. [Colloq.]

> He 'd talk a lot of *piffle*, would n't he—oh, but he 's a brilliant sort of chap.
> *Oliver Onions*, Compleat Bachelor, ii.

> After one long afternoon at a garden party, he explained to his major that this sort of thing was "futile *piffle*," and the major laughed.
> *R. Kipling*, The Brushwood Boy, in The Day's Work, p. [397.

piffler (pif′lėr), *n.* A trifler; a twaddler. *N. E. D.*

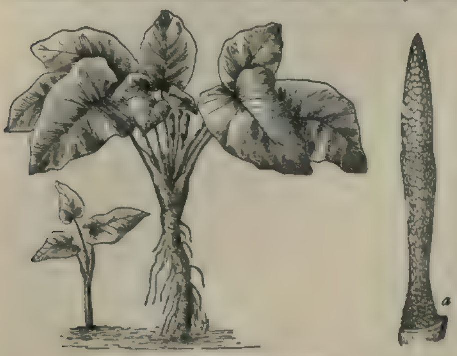
> Lord; but this chap is dull . . . Dull! he 's a perfect *piffler*. *Westminster Gaz.*, Dec. 4, 1896.

piffling (pif′ling), *a.* [*piffle*, *v.*] Trifling; insignificant; twaddling. [Colloq.]

> We are sorry to learn that the long controversy carried on in the English Notes and Queries in regard to the use of the split infinitive has closed with but a *piffling* result.
> *N. Y. Times*, March 18, 1905.

pig[1], *n.* 5. Pig-iron collectively or any specified amount of iron pigs.—6. In *forestry*, see ⋆*rigging-sled*.—**Forest pig,** a species of pig, *Hylochœrus meinhertzhageni*, recently described from the forest region of the upper Kongo, intermediate in its characters between the common pig and the wart-hog.—**Open pig,** open-grained pig-iron; pig-iron having a comparatively large, open grain, usually classed as No. 1 or No. 2 foundry pig.—**Phosphoric pig,** the trade-name for pig-iron containing a large proportion of phosphorus, so as to affect materially its properties and fitness for use.—**Pig-and-ore process.** See ⋆*process*.—**Pigs-in-clover,** a puzzle or game at one time popular (about 1895), consisting of a small round board, with 'pens' or compartments, into and out of which a number of marbles (the pigs) would roll as the board was tipped. The 'game' was to get all the marbles into their assigned places by tipping the board; but as the board was tipped, some other pigs, already penned, would roll out of their pens.—**Scotch pig,** high-grade pig-iron; pig-iron containing a small percentage of impurities: so named because it was formerly imported from Scotland. It is now produced in the United States.

piga (pē′gä), *n.* [Chamorro *piga* = Tagalog *biga*, Fijian *via*, names of species of *Alocasia*.] In Guam, *Alocasia Indica* and *A. macrorrhiza*, giant aroids widely spread throughout the East Indies, the Philippine Islands, and the islands of the Pacific. The starchy corm and stem, though very acrid, owing to the presence of raphides of oxalate of calcium, are eaten in times of scarcity after



Piga (*Alocasia macrorrhiza*).
a, spadix.

having been thoroughly cooked, the application of heat having the effect of breaking up the raphides. See ★*dranu.*

pig-breaker (pig′brā″kėr), *n.* A workman who breaks iron pigs from the sow; also, a machine used for this purpose.

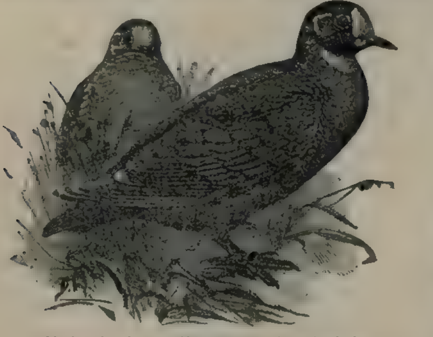
pig-cart (pig′kärt), *n.* A cart in which crockery is carried to be sold. [Scotch.]

pig-cony (pig′kō″ni), *n.* The guinea-pig.

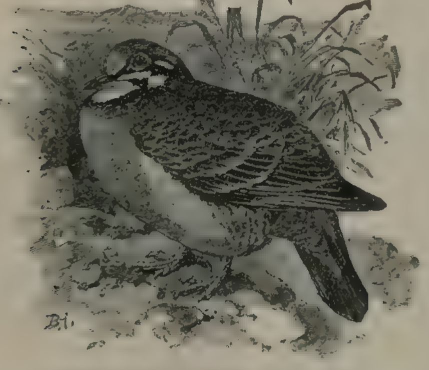
pig-copper (pig′kop″ėr), *n.* Copper in ingots or blocks.

pig-dog (pig′dog), *n.* An Australian name for any dog used in hunting pigs.

pigeon, *n.*—**Cuckoo-pigeon,** a general name for pigeons of the genus *Macropygia*, and their allies. These have long wedge-shaped tails, with plumage more or less brown, often barred. Also called *cuckoo-dove.*—**Harlequin pigeon,** a name applied to the bronzewing, *Histriophaps histrionica*, an Australian fruit-pigeon, on account of its party-colored plumage. *Gould.*—**Painted pigeon,** any one of several small, brightly colored fruit-pigeons of the genus *Ptilopus*, found in Australia, Polynesia, and the Malay Archipelago. A typical example is *P. swainsoni* of eastern Australia, which is orange below, greenish-yellow above. The upper breast is dull green, marked at the lower end by a lilac band, and the crown is lilac edged with yellow.—**Partridge-pigeon,** an Australian ground-pigeon, *Geophaps scripta*, of considerable size, brown above with green reflections, and conspicuous black and white markings on the cheeks.—**Topknot pigeon,** *Lopholaimus antarcticus.* [Australia.]—**Torres Straits pigeon,** a large white variety, *Myristicivora spilorrhoa.* *E. E. Morris*, Austral English.



Harlequin pigeon (*Histriophaps histrionica*).



Partridge-pigeon (*Geophaps scripta*): male.

pigeonberry, *n.* **2.** Locally in California, the cascara sagrada, *Rhamnus Purshiana.* Its fruit is eaten by wild pigeons, to whose flesh it imparts a bitter flavor.—**3.** Locally elsewhere in North America: (*a*) the dwarf raspberry, *Rubus Americanus*; (*b*) the northwestern service-berry, *Amelanchier alnifolia*; (*c*) the bristly sarsaparilla, *Aralia hispida*; (*d*) the alternate-leafed dogwood, *Cornus alternifolia*; (*e*) the partridge-berry, *Mitchella repens.*

pigeonberry-tree (pij′o̤n-bėr-i-trē″), *n.* An Australian tree of the laurel family, *Litsea dealbata*, which yields a tough, close-grained, fragrant yellowish wood.

pigeon-chest (pij′o̤n-chest), *n.* Same as *pigeon-breast*, 2.

pigeon-fieldfare (pij′o̤n-fēld″fãr), *n.* The fieldfare. [Eng.]

pigeon-guillemot (pij′o̤n-gil″e-mo̤t), *n.* One of the sea-pigeons, *Cepphus columba*, inhabiting the North Pacific. It has a white bar on the wing, but no white on the under surface.

pigeon-horntail (pij′o̤n-hôrn″tāl), *n.* Same as *pigeon-tremex.*

pigeon-post (pij′o̤n-pōst), *n.* The method of sending letters by carrier-pigeons. It has been employed largely on islands such as those of New Zealand, and in military stations.

> The last news received was a letter by *pigeon post*, dated July 13. *Geog. Jour.* (R. G. S.), XI. 457.

pigeonpox (pij′o̤n-poks), *n.* A disease of pigeons, chickens, and other fowls, thought to be caused by a fungus. It affects principally the head, in the form of an eruption of round yellow nodules varying in size from a pinhead to a pea.

pigeon's-blood, *n.* **2.** In *ceram.*, a glaze of Oriental porcelain resembling the color of pigeon's blood; a variety of sang-de-bœuf.

pigeon-shot (pij′o̤n-shot), *n.* One who is (well or ill) skilled in pigeon-shooting.

pigeon's-wings (pij′o̤nz-wingz), *n. pl.* Two detent-levers in the building-motion of a cotton-roving frame: so called because of their action. See ★*building-motion.*

pigeon-tick (pij′o̤n-tik), *n.* A true tick, *Argas reflexus*, of the family *Ixodidæ*; the dove-tick. It is found mainly in pigeon-houses in Europe and the United States, and sucks the blood of the birds.

pigeon-toe (pij′o̤n-tō), *v. i.* and *t.*; pret. and pp. *pigeon-toed*, ppr. *pigeon-toeing.* To walk with the toes turned in, as a pigeon does. Also used transitively.

> A green parrot *pigeontoed* his way down the gravel walk. *F. B. Smith*, How Paris Amuses Itself, p. 153.

pigeon-whistle (pij′o̤n-hwis″l), *n.* Same as ★*dove-whistle.*

pig-iron, *n.*—**Whitening of pig-iron,** the fusion of pig-iron in a refinery hearth and the casting of it into flat ingots in a chilled mold, preparatory to conversion into wrought-iron by the puddling process.

pig-jawed (pig′jâd), *a.* Having the upper jaw projecting decidedly beyond the lower, as a dog. *Shaw*, Illustrated Book of the Dog, v.

pig-lifter (pig′lif″tėr), *n.* One who is employed in moving pig-iron. *N. E. D.*

pig-lily (pig′lil″i), *n.* The calla, *Richardia Africana.* [South Africa.]

pig-louse (pig′lous), *n.* Same as *hog-louse.*

pig-magnet (pig′mag″net), *n.* A large electromagnet attached to a crane or hoist and used for handling pig-iron.

pig-maker (pig′mā″kėr), *n.* One who manufactures pig-iron.

pig-man (pig′ma̤n), *n.* One who vends crockery; a mugger. [Scotch.]

pig-market (pig′mär″ket), *n.* **1.** A market held for the purchase and sale of swine.—**2.** [*cap.*] A name vulgarly given to the Proscholium or antechamber of the Divinity School at Oxford. *N. E. D.*

pig-meater (pig′mē″tėr), *n.* A beast fit only for pigs to eat; one that will not fatten. *E. E. Morris*, Austral English. [Australia.]

> '*Pigmeaters!*' exclaimed Ernest; 'what kind of cattle do you call those? Do bullocks eat pigs in this country?' 'No, but pigs eat them, and horses too.'
> *Rolf Boldrewood*, Colonial Reformer, xviii.

pigment, *n.*—**Malarial pigment,** a pigment produced by the malarial organism from the blood-pigment. Two distinct pigments have been described: the one a brownish melanin which does not give the Prussian-blue reaction for iron; the other, possibly a hydroxid of iron, of a yellowish color and giving the reaction in question.—**Pigment-bacteria.** See ★*bacterium.*—**Pigment brown.** See *Sudan* ★*brown.*—**Pigment style,** in *calico-printing*, the method called *pigment-printing.* Very finely ground mineral colors, mixed with albumin, are used as a thickening agent and as a mordant. The cloth is afterward steamed and dried. The steaming has the effect of coagulating the albumin and rendering it insoluble, leaving the colors permanently deposited on the fiber.—**Respiratory pigments,** such bodies as hemoglobin, hemocyanine, and the floridins (found in certain invertebrates and having supposedly a respiratory function), which are intimately concerned in the oxidation-processes which take place in the animal body: they are essentially oxygen-carriers.—**Pigmentary cancer.** Same as *melanocarcinoma* and *melanosarcoma.*—**Pigmentary cirrhosis.** See ★*cirrhosis.*

pigment-printing, *n.* **2.** A photographic process in which the image consists of a pigment held in gelatin. The colors used are standard brown, engraving black, sepia, and red chalk. *Woodbury*, Encyc. Dict. of Photog., p. 375.

pig-mouse (pig′mous), *n.* The water-shrew. *N. E. D.*

pignolia (pig-nō′li-ä̤), *n.* [An It. dimin. of *pignon.*] The seed of the nut- or stone-pine of southern Europe, *Pinus Pinea*, or its kernel. These are eaten like almonds and are used in confectionery. See *nut-pine* and *stone-pine* (*a*) under *pine*^{1}.

pig-pea (pig′pē), *n.* A variety of field-pea. *N. E. D.*

pig-rattle (pig′rat″l), *n.* A terra-cotta rattle in the form of a pig, found in excavations in Cyprus.

> Two bristly fragments may be referred to *pig rattles.*
> *Jour. Hellenic Studies*, XII. 138.

pig-ring (pig′ring), *n.* Same as *hog-ring.*

pig-run (pig′run), *n.* A run or narrow, deep-trodden path made by wild pigs.

> Compactness indispensable to rapid movement in dense forest where the *pig-runs* are the only means of passage.
> *Geog. Jour.* (R. G. S.), XVI. 174.

pig-shop (pig′shop), *n.* A crockery-shop. [Scotch.]

pigskin, *n.* **3.** A foot-ball. [Colloq.]

pigsticker, *n.* **4.** A horse trained to the sport of pigsticking.

pigsticking (pig′stik″ing), *n.* The sport of hunting wild boars, the huntsman being mounted and armed with a spear.

pig-stone (pig′stōn), *n.* A concretion occurring in the intestines of the wild boar. *N. E. D.*

pigtail, *n.* **5.** In *logging*, an iron device driven into trees or stumps to support a wire or small rope.

pigtail-insulator (pig′tāl-in″sṳ̄-lā-to̤r), *n.* See ★*insulator.*

pig-washing (pig′wosh″ing), *n.* The process of removing the silicon from pig-iron by oxidation while molten, but at a comparatively low temperature, so that carbon also will not be oxidized. Phosphorus is also removed. The process is only of limited application. *Phillips and Bauerman*, Elements of Metallurgy, p. 297.

pig-wife (pig′wīf), *n.* A woman who vends crockery. [Scotch.]

pig-wool (pig′wu̇l), *n.* The finer hair of the swine, used in making flies for anglers. *N. E. D.*

pig-yoke (pig′yōk), *n.* *Naut.*, a navigator's name for the common quadrant of reflection, from its resemblance in shape to the yoke sometimes placed around the neck of a pig to keep the animal from rooting.

piharau (pē′hä-rou), *n.* [Maori.] A New Zealand lamprey, *Geotria chilensis.* *E. E. Morris*, Austral English.

piitis (pī-ī′tis), *n.* [NL., < *pia* + *-itis.*] Inflammation of the pia mater.

pike^2, *n.* **2.** (*e*) A chilodopterid fish, *Dinolestes lewini.*—**Gray pike.** (*b*) Same as *sauger.*—**Great Lakes pike,** the common pike.—**Great northern pike,** a maskalonge, *Lucius masquinongy immaculatus*, found in lakes and rivers of Wisconsin and Minnesota.—**Sacramento pike.** Same as ★*squaw-fish.*

pike^3, *v. i.* **2.** To bet very small amounts here and there all over the lay-out, usually following in the wake of some player who is betting heavily.

pike^7 (pīk), *n.* [See *piker.*] A piker.

piker^1, *n.* **2.** One who makes small bets all over the lay-out. See ★*pike*^{3}, *v. i.*, 2.—**3.** On the stock-exchange, a professional speculator. See the extract. [Slang.]

> In the absence of complaisant lambs, the financial cannibals known as "room traders" and "*pikers*" tried to "scalp eighths" out of each other for weeks—to take advantage of fractional fluctuations instead of waiting for big movements. *McClure's Mag.*, June, 1901, p. 159.

piker^2 (pī′kėr), *n.* [*pike*^{1}, *v.*, + *-er*^{1}.] One who uses a pike or pointed implement; specifically, in the United States, in *ice-harvesting*, one who thus controls the movement of cakes of ice.

> Different methods are employed at different places for forcing the cakes of ice through these channels to the runways of the storehouses. The method illustrated in the photograph provides for forces of men known as "*pikers*," who stand beside the channels and force the cakes of ice, as fast as loosened, in the direction of the ice house. *Sci. Amer. Sup.*, Jan. 2, 1904, p. 23408.

Pikermi beds. See ★*bed*^{1}.

pil, *v.* and *n.* A simplified spelling of *pill*.

pila^4 (pē′lä), *n.* [Sp. *pila*, a stone water-trough, a font, < L. *pila*, a mortar. See *pila*^{1}.] A stone horse-trough.

pilæ (pī′lē), *n. pl.* [L. *pila*, pillar.] In *conch.*, concentric ridges developed on the dorsolateral slopes of senile shells in some ammonoid cephalopods.

pilaf, pilaff (pi-läf′), *n.* [Russ. *pilávŭ* (pẹ-läf′), NGr. πιλάφι, a Levantine pronunciation of Turk. *pilāw*, Pers. *pilāu*, etc. See *pilau*.] Same as *pilau*.

pilarite (pil′a̤-rīt), *n.* [Named after Professor *Pilar* of Agram.] A kind of chrysocolla containing a considerable amount of alumina, found in Chile; also, a similar variety which occurs in Utah.

Pilastered femur. See ★*femur*.

pilastering (pi-las′tėr-ing), *n.* **1.** Pilasters collectively.—**2.** In *anthrop.*, the conformation of the femur, in which the dorsal ridge—the linea aspera—assumes large size, thus increasing the relative sagittal diameter of the bone.

pilastrade (pi-las-trād′), *n.* [It. *pilastrata*, ornamented with pilasters.] A row or range of pilasters. *N. E. D.*

pilastric (pi-las′trik), *a.* [*pilaster* + *-ic*.] In *anthrop.*, relating to that form of the femur which is characterized by a strong development of the linea aspera, which assumes the form of a pilaster. *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 143.

pilation (pi-lā′sho̤n), *n.* [L. **pilatio(n-)*, < *pilare*, grow hairy, < *pilus*, hair.] A fracture of the skull marked by a narrow crack without separation or displacement of the bones.

pilaui (pē-lou′ẹ̄), *n.* [Tagalog name.] A tree, *Canarium Luzonicum*, belonging to the family *Balsameaceæ*, closely resembling the Java almond-tree, *Canarium commune*. It yields the soft, white, fragrant resin known commercially as *brea-blanca*, or Manila elemi. Its elongated, pointed, three-sided, edible nuts, called *pili*, have an almond-like flavor and yield a fine oil resembling the oil of almonds. See ★*brea-blanca* and ★*pili*^{3}. [Philippine Islands.]

pilchard, *n.* **2.** (*b*) A fish, *Sardinella sagax*, which visits the Australian shores periodically in large shoals: apparently the same as the Californian and Chilean pilchard, and closely related to the English pilchard, *Sardinella pilchardus*. *E. E. Morris*, Austral English.

pilcher^1, *n.* **4.** *pl.* A child's drawers. [West Indies.]

pile^1, *n.*—**Parallel pile**, the pile of an arrow so shaped as to have the same diameter throughout its length.

pile^3, *n.* **6.** In *gambling*, all the capital a player has to lose on the game; all the chips in front of a player.—**7.** A single hemorrhoidal tumor. See *piles*.—**8.** In *artillery*, a heap of shot or shells piled up by horizontal courses in parallel tiers into a pyramidal or wedge-like form, the form being determined by that of the base, which may be a triangle, a square, or a rectangle. In a triangular pile the base is an equilateral triangle, and there is one sphere at the apex. The numbers in the successive horizontal tiers, reckoned from the top downward, are the triangular numbers 1, 3, 6, 10 . . . $\frac{1}{2}n(n+1)$.—**Muscular pile**, a voltaic pile constructed of layers of muscular tissue, employed in certain physiological experiments.—**Pile of plates**, in *optics*, an arrangement consisting of several parallel glass plates, one behind the other, for the production of polarized light by multiple reflection.

pile^3, *v. t.* **4.** To arrange (spheres) so as to occupy the minimum of volume.

II. *intrans.* To form a pile or heap; often with *up*: as, his debts *piled up*.—**To pile in**, to crowd hastily into something, as a wagon. [Colloq.]—**To pile off**, to hasten off to something, as a picnic. [Colloq.]

pile^4, *n.*—**Pile-fabric frame**, a board, each end of which is provided with transverse metallic arms, the inner edges of which are in turn provided with hooks, upon which plushes, etc., are mounted, to prevent crushing in packing and shipping. These hooks are just far enough apart to permit the pile of these fabrics to remain upright.

pile-building (pīl′ bil″ding), *n.* Same as *pile-dwelling*.

piled, *a.* **3.** In *iron-making*, made up of bars, fagots, or piles, placed together and welded.

pile-drawer (pīl′drâ″ėr), *n.* A pile-puller; a device for drawing piles out of the ground.

pile-driver, *n.*—**Gunpowder pile-driver**, a machine which drives piles by the impact of a weight sliding in ways and thrown up by the force of gunpowder exploded in a mortar-like chamber attached to the head of the pile, the recoil of the explosion also aiding in forcing down the pile.—**Pile-driver car**, a flat car carrying at one end a pile-driver and at the other a cabin containing a steam-boiler and winding-engine. In some cars the pile-driver stands upon a pivoted platform which projects beyond the end of the car, and in others the cabin is also placed upon a platform as a counterweight, the platform in each case serving to bring the pile-driver into any position before or on either side of the car.

pile-house (pīl′hous), *n.* A house built on piles; a pile-dwelling. See *lake-dwelling*, with cut.

Pilema (pī-lē′mä̤), *n.* [NL.] The typical genus of the family *Pilemidæ*. *Haeckel*, 1880.

Pilemidæ (pī-lem′i-dē), *n. pl.* [NL. *Pilema* + *-idæ*.] A family of *Discomedusæ* which consists of rhizostomatous forms having 4 separated subgenital pits, dorsal as well as ventral sucking-frills on the 8 oral arms, 8 rhopalia, and 8–16 or more branched and anastomosing radial canals with a circular canal. It includes *Pilema*, *Phyllorhiza*, *Stomolophus*, and several other genera.

pilentum (pī-len′tum), *n.*; pl. *pilenta* (-tä̤). [L.] A closed carriage with two or four wheels, used by Roman women. Like similar medieval wagons it was arranged with entrance doors in the middle on both sides. Two or three pilenta are represented on the column of Theodosius at Constantinople.

pileole (pil′ẹ̄-ōl), *n.* Same as *pileolus*, 1.

piles, *n. pl.*—**Bleeding piles**, hemorrhoidal tumors, composed of dilated capillaries, which frequently bleed when the bowels move.

pile-screw (pīl′skrö), *n.* The screw or thread cast on the lower end of a cast-iron pile by means of which it is forced into the soil, the pile being turned by a worm-and-gear attachment at the upper end.

pileum, *n.* **2.** In *human anat.*, a cerebral hemisphere. *Buck*, Med. Handbook, II. 148.

pileus, *n.* **5.** A nipple-shield.—**6.** The disk or umbrella of a jellyfish.

pilferage (pil′fėr-ā̤j), *n.* [*pilfer* + *-age*.] The act of pilfering; also things pilfered. [Rare.]

pilgrim, *n.*—**Pilgrim Psalm**, one of the group of Psalms cxx.–cxxxiv., so called by critics who hold that the much-disputed title (see *Gradual Psalms*) has reference to the pilgrimages to the annual festivals at Jerusalem.

pilgrim-scallop (pil′grim-skol″o̤p), *n.* A European scallop, especially *Pecten jacobeus*, the palmer-shell, so called because worn by pilgrims as an evidence of having visited the Holy Land.

pili^2 (pē′lē), *n.* [Polynesian *pili*, to adhere, or stick to.] In the Hawaiian Islands, a long coarse grass, *Andropogon contortus*, used for thatching houses, but very troublesome to sheep on account of its twisted awns which become entangled in their wool.

pili^3 (pē-lē′), *n.* [Tagalog and Bisaya *pili*.] A Philippine name of the nuts of the pilaui-tree, *Canarium Luzonicum*. They are nearly triangular in cross-section and are pointed at each end. The oily kernel has an almond-like flavor and is eaten by the natives. See ★*pilaui*.

pilifer (pil′i-fėr), *n.* [? L. *pilus*, hair, + *ferre*, bear. Cf. *piliferous*.] A lateral prominence on the labrum of a lepidopterous insect, often mistaken for a mandible.

Piliferous cyst. See ★*cyst*.

piliganine (pil′i-ga̤-nin), *n.* A light-yellow, amorphous, poisonous alkaloid, $C_{15}H_{24}ON_2$, found in a club-moss, *Lycopodium saururus*. Also called *pillijanine*.

pilikai (pē-lē-kī′), *n.* [Native name.] In the Hawaiian Islands, *Argyreia tiliæfolia*, a semi-shrubby morning-glory with cordate leaves and beautiful large rose-purple flowers. Unlike many other morning-glories it is not a constant bloomer but blossoms in the autumn. The flowers do not easily fade, but will last a long time after having been plucked. The plant is widely distributed in the East Indies, the Philippine Islands, and some of the islands of the Pacific. In Guam the children string the trumpet-shaped flowers into garlands and on sticks, and are very fond of them as ornaments.

piline (pī′lin), *a.* [L. *pilus*, hair, + *-ine*^{2}.] Consisting of hair; of the nature of hair; hairy.

piling^1, *n.* **3.** Logs ready to be made into piles, or from which piles are made.

piling^3 (pī′ling), *n.* See *pile*^{3}, *v.*—**Antinormal piling**, a system of piling spheres consistent with minimum volume, that is, maximum compactness, giving parallel tiers in triangular arrangement but each tier fitted over the one below so that those of the third tier are placed in spaces vertically above those of the first.

> On normal and *anti-normal piling*. The object of the paper is to exemplify a convenient method of dealing with systematic assemblages of points. Normal piling denotes a particular homogeneous assemblage, whereas the arrangement in *anti-normal piling* is made up of two homogeneous assemblages. *Nature*, Dec. 17, 1903, p. 165.

Normal piling, the piling of spheres as in an artillery pile, where the spheres of the third tier or horizontal course are not vertically above those of the first. See ★*pile*^{3}, *n.*, 8.

pill^3, *n.*—**Compound cathartic pills**, pills containing compound extract of colocynth, calomel, resin of jalap, and gamboge: the *pilulæ catharticæ compositæ* of the United States Pharmacopœia.

pillar, *n.* **13.** In ship-building, a column which supports a deck-beam in the interior of a vessel. Such columns are cylindrical, hollow or solid, or they may be built up of plates and bars. They are shaped at the heads and heels so that they can be securely riveted to the beam or the plating of the deck or hold. A *hold-pillar* is one which extends between the inner bottom or top of the frame floors to the lowest tier of deck-beams. A *deck-pillar* extends between two decks. A *center-line pillar* is on the center-line of the vessel. A *quarter-pillar* is midway between the center-line and the side. Also called *deck-stanchions* and *beam-stanchions*.

> "We also," began the deck-beams, "are discoverers and geniuses. We are of opinion that the support of the *hold-pillars* materially helps us. We find that we lock up on them when we are subjected to a heavy and singular weight of sea above."
>
> *Kipling*, The Ship that Found Herself, in The Day's [Work, p. 100.

Board and pillar working. See *pillar and breast*, under *pillar*.

pillar-bolt (pil′ä̤r-bōlt), *n.* A bolt which projects some distance from the piece in which it is screwed for the purpose of carrying another piece at its outer end; a stud.

pillar-buoy (pil′ä̤r-boi), *n.* A spar-buoy.

pillar-cloud (pil′ä̤r-kloud), *n.* An approximately vertical pillar of cloud, especially the middle portion of a thunder-head, anvil-cloud, or mushroom-cloud, connecting the flat base with the spreading top. See cut at ★*mushroom-cloud*.

pillar-cock (pil′ä̤r-kok), *n.* A gas-cock which controls a gas-burner.

pillar-crane (pil′ä̤r-krān), *n.* A crane in which the boom or the jib is supported by a pillar which may be stationary or may revolve.

pillar-drill (pil′ä̤r-dril), *n.* See ★*drill*^{1}.

Pillared eye. Same as ★*turban-eye*.

pillar-iron (pil′ä̤r-ī″ėrn), *n.* Special rolled iron or steel sections used for building up phenix columns. (See *phenix post*, under *post*^{1}.) The section is that of a curved web channel, or an arc of a circle, with external flanges for bolting or riveting it to the sections on each side, four or more such sections forming a circle.

pillar-plate (pil′ä̤r-plāt), *n.* The plate of a watch-movement next behind the dial. *N. E. D.*

pillar-pump (pil′ä̤r-pump), *n.* A lift- or force-pump carried by a column or pillar which is attached to a suitable base. The pump is usually driven by a handle attached to a fly-wheel, but may be of the lever variety.

pillar-screw (pil′ä̤r-skrö), *n.* A screw used for securing the top plate of a watch or clock to one of the pillars.

pillar-stone (pil′ä̤r-stōn), *n.* A kind of rudely cut monolith found in Porto Rico. They vary in size and shape from simple slabs decorated with incised pictographs on one or both surfaces to rude idols with a head sculptured on one end.

pill-crab (pil′krab), *n.* Same as *pea-crab*.

pillican (pil′i-ka̤n), *n.* [Origin obscure.] A straw fringe, with a heavy plaited head, used as a decoration of the stall-posts in a stable.

pillijanine (pil′i-ja̤-nin), *n.* See ★*piliganine*.

pill-masser (pil′mas″ėr), *n.* A machine for compounding the mass out of which pills are made. *N. E. D.*

pill-nettle (pil′net″l), *n.* The Roman nettle, *Urtica pilulifera*. *N. E. D.*

pillow-lava (pil′ō-lä″vä̤), *n.* A peculiar form of lava-flow which is broken up into ellipsoidal or pillow-like masses.

> The writer has therefore concluded that, on the best working hypothesis, the Newfoundland rock is the product of the extrusion of basic lava into sea-water of some depth. That view is confirmed by Russell's recent discovery of *pillow-lava* formed where the Snake River basalt ran into lake-basins. *Amer. Geol.*, Aug., 1903, p. 78.

pillow-structure (pil′ō-struk″tṳ̄r), *n.* In *petrog.*, the appearance assumed by certain diabases upon weathering, whereby they become rounded along joints and resemble a pile of pillows. *Geikie*, Text-book of Geol., p. 136.

pilocarpidine (pī-lọ-kär′pi-din), *n.* [NL. *Pilocarpus* + *-id* + *-ine*^{2}.] A syrupy alkaloid, $C_{10}H_{14}N_2O_2$, found in jaborandi-leaves (*Pilocarpus pennatifolius*). It has the same physiological effect as pilocarpine, though weaker.

Piloceras (pī-los′ẹ-ras), *n.* [NL., < ? Gr. πῖλος felt, a felt hat, + κέρας, horn.] A genus of holochoanitic orthoceraconic nautiloid cephalopods having heavy, stout, short shells with very wide siphuncle, the apical portions of which are solidified by excessive deposition of shell substance. It occurs in Lower Silurian formations.

Pilocereus (pī-lō-sē′rē̤-us), *n.* [L. *pilus*, hair, + NL. *Cereus*.] A genus or group of cacti, closely allied to *Cereus*, characterized by the presence of copious hairs or bristles in the fruiting area. They are mostly Mexican. *P. Senilis* is the familiar old-man cactus, so named from the white hair-like covering.

pilocystic (pī-lō̤-sis′tik), *a.* [L. *pilus*, hair, + E. *cystic*.] Noting a tumor which contains hair. [Rare.]

pilolite (pī′lō̤-līt), *n.* [Gr. πῖλος, felt, + λίθος, stone.] A name given by Heddle to some kinds of mountain-cork and mountain-leather from Scotland. They are supposed to be peculiar in composition, particularly in being largely hydrated.

pilomotor (pī-lō̤-mō′tọr), *a.* [L. *pilus*, hair, + *motor*, mover.] Designating the muscles, and the nerves innervating them, which are attached to the hair-follicles: their contraction causes the condition called 'goose-flesh.' *Med. Record*, Sept. 28, 1907, p. 544.

pilonidal (pī-lō̤-nī′dal), *a.* [L. *pilus*, hair, + *nidus*, nest, + *-al*1.] Noting a bunch of hair arranged in the shape of a nest: as, a *pilonidal* cyst or sinus, that is, a dermoid cyst or sinus containing hair arranged in the form of a wad.

pilosebaceous (pī″lō̤-sē̤-bā′shius), *a.* [L. *pilus*, hair, + E. *sebaceous*.] Relating to the hairs and the sebaceous glands associated with them. *Buck*, Med. Handbook, I. 79.

pilosism (pī′lō-sizm), *n.* [L. *pilosus*, hairy, + *-ism*.] An abnormal development of hairiness in an individual plant, or a high degree of hairiness normal to a species, due to ecological causes, as in desert plants.

pilosofimbriate (pī-lō-sō̤-fim′bri-āt), *a.* [L. *pilosus*, hairy, + E. *fimbriate*.] Fringed with soft hairs.

pilosohispid (pī-lō-sō̤-his′pid), *a.* In *bot.*, having somewhat stiff hairs. *N. E. D.*

pilot, *n.* 8. In *mach.*, a smaller element acting in advance of another or principal element of the same sort, and causing the latter to come into play when desired.—**Black pilot.** Same as *cow-pilot*.—**Cock-eye pilot**, a fish, *Eupomacentrus leucostictus*, of the West Indies.—**Inland pilot license**, a license issued by the United States local inspectors of steam-vessels, which authorizes the holder to pilot yachts, tugs, and steamboats on certain inland waters of the country.

pilotage, *n.* 5. The house in which a pilot lives; the office of the pilots of a port.

Kettle nodded a word of praise for the mixture and thanks to its concoctor, and Mrs. Nilssen gave a flash of white teeth, and then shuffled away off the verandah, and vanished within the bamboo walls of the *pilotage*.
Cutclyffe Hyne, A Master of Fortune, ii.

pilot-balloon (pī′lọt-ba-lön″), *n.* A small balloon used for ascertaining the direction of air-currents at different levels: most frequently used before ascents of manned balloons.

pilot-chart (pī′lọt-chärt), *n.* A chart published officially by the hydrographic office of any nation, showing the average wind and weather, magnetic variations, ocean currents, fog, ice, temperatures, storm-paths, the best routes for steamers and sailing-vessels, buoys, beacons, lighthouses, storm- and weather-signals, dangerous rocks or shoals, and other information that may be of value to navigators.

pilot-flame (pī′lọt-flām), *n.* Same as *pilot-light*.

pilot-kite (pī′lọt-kīt), *n.* 1. A kite sent up in advance of and used to lift another kite into the air.

The apparatus of Mr. Simmons is described as consisting of a huge '*pilot*' *kite* 49 feet high and 49 feet wide, with another kite below, still larger. The *pilot kite* was first to be raised, and to carry up the second; the two were to be adjusted to the breeze, and the aeronaut was to be suspended in a car, and allowed to ascend 200 or 300 yards.
O. Chanute, Progress in Flying Machines, p. 177.

2. The initial or first kite at the outer end of a line of kites.

The first kite attached to the extreme end of the cable acts as a *pilot*, or initiatory *kite* to raise the series from the ground. *Sci. Amer. Sup.*, April 11, 1903, p. 22804.

pilot-lamp (pī′lọt-lamp), *n.* See ★*lamp*1.

pilot-light, *n.* 2. A lamp placed on a dynamo to show that it is working properly.—3. A small burner burning continuously, used in motor-car practice to ignite the main burner when the demand for power exceeds the supply of energy stored in the generator from a previous ignition.

pilot-major† (pī′lọt-mā″jọr), *n.* A chief or head pilot; also a distinguished voyager and discoverer.

One of the ships, the Edward Bonaventure, Commanded by Richard Chancellor, *pilot-major* of the fleet, was separated from the rest of the little squadron.
W. Scoresby, Account of the Arctic Regions, I. 72.

pilot-motor (pī′lọt-mō″tọr), *n.* See ★*motor*.

pilot-nut (pī′lọt-nut), *n.* A thin nut or tapped thimble screwed temporarily on the threaded end of a bolt to protect the threads from injury while the bolt is being forced through a hole.

pilot-relay (pī′lọt-rē-lā″), *n.* See ★*relay*1.

pilot-signals (pī′lọt-sig″nalz), *n. pl.* Certain prescribed signals, both for day and for night use, by the employment of which a pilot may be summoned on board a vessel to carry her into or out of port.

pilot-snake, *n.* 2. The bull-snake, or pine-snake, *Pityophis*.—3. The copperhead, *Agkistrodon contortrix*. [Rare.]

The Copperhead, also known in different localities by the names Upland Moccasin, Chunkhead, Deaf Adder, *Pilot Snake*, etc., is perhaps to be more dreaded than any other American snake. *Sci. Amer.*, Feb. 14, 1903, p. 118.

pilot-transformer (pī′lọt-trȧns-fôr″mėr), *n.* See ★*transformer*.

pilot-tube (pī′lọt-tūb), *n.* In subaqueous tunneling, a wrought-iron or steel cylindrical shell whose axis coincides with the axis of the tunnel, and whose diameter is less than that of the tunnel, open at both ends, and forced into the soil in advance of the finished tunnel, for the purpose of providing a protection to the men employed in excavating the material at the heading inside the tube, and also of furnishing a central support for the inner ends of radial struts placed outside the tube to support the material forming the roof and sides of the tunnel until permanently supported by the lining. The rear end of the pilot-tube is also used as a support for the radial struts, or the centering, used in constructing the permanent tunnel lining.

The Hudson River tunnel, says Engineering Record, has long held a unique place in American engineering. When it was first started, few believed in it. The method of carrying on the work was changed several times. The *pilot-tube* system of tunneling was invented by Captain Anderson for use in this work, and proved very serviceable. *Sci. Amer. Sup.*, Sept. 12, 1903, p. 23162.

pilot-valve (pī′lọt-valv), *n.* A leading valve; a small valve for admitting steam, water, or air to the operating device of the main valve (of an engine or machine); an auxilliary valve.

pilot-wheel (pī′lọt-hwēl), *n.* A hand-wheel having radial handles projecting from the rim.

pilpul (pil′pöl), *n.* [Aram., discussion, controversy.] Argumentation; searching debates and reasonings on Talmudic subjects among rabbinical scholars.

pilpulist (pil′pọ̈-list), *n.* [*pilpul* + *-ist*.] One who is skilled in disputation; especially one who is versed in the discussions of the rabbis.

The native Jews do not extend their studies further, and I was assured that there is not among them a talmudist or *pilpulist* of any reputation. . . . The Jews who immigrate to Jerusalem usually possess a certain knowledge of the Talmud and a more enlarged experience.
P. Beaton, Jews in the East, II. 93.

pilpulistic (pil-pọ̈-lis′tik), *a.* Pertaining to or of the nature of pilpul.

At this moment, appositely enough, we passed by the village Beth-Hamidrash, whence loud sounds of "*pilpulistic*" (wire-drawn) argument issued. The driver clapped his palms over his ears.
Zangwill, Dreamers of the Ghetto, p. 264.

piltock (pil′tọk), *n.* The name in Shetland, Orkney, and Caithness of the coal-fish, *Merlangus carbonarius*, in its second year. *N. E. D.*

pilulier (pē-lü-lyā′), *n.* [F., < *pilule*, pill.] 1. An instrument for measuring and rolling pills; a pill-making machine.—2. An earthenware pill-pot.

pilus, *n.*—**Pili annulati**, monilethrix.

pily2 (pī′li), *a.* [*pile*4, *n.*, + *-y*1.] Having a soft, woolly coat next the skin, covered by longer hairs: said of dogs. The term is also applied to a coat that is soft when it should be harsh. *Shaw*, Illustrated Book of the Dog, v.

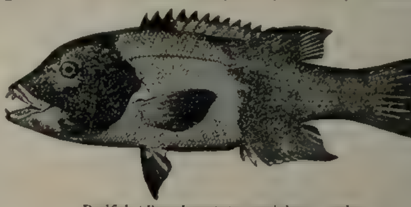
Pimaric acid, an acid, $C_{20}H_{30}O_2$, found in galipot, the resin of a pine, *Pinus maritima*.

pimelic (pi-mel′ik), *a.* [Gr. πιμελή, fat, lard, + *-ic*.] Noting an acid, $C_5H_{10}(COOH)_2$. Several varieties are known. *Normal* or *a-pimelic acid* is heptane diacid, $CO_2H.(CH_2)_5COOH$, and is formed by oxidizing suberone with concentrated nitric acid; it is crystalline and melts at 105° C. *Beta-pimelic acid* is formed when castor-oil is oxidized by nitric acid; it is crystalline and melts at 105.5–106° C. *Gamma-pimelic acid* is made by oxidizing menthol with potassium permanganate; it is crystalline and melts at 86–87.5° C. *Isopimelic acid* is made by boiling amylene bromide and potassium cyanide with water. It forms crystals which melt at 104° C. When camphoric acid is melted with caustic potash another variety is formed, *isopropylsuccinic acid*, $(CH_3)_2CH.CH(COOH)CH_2(COOH)$. It forms crystals that melt at 103° C.

Pimelodella (pim″e-lō̤-del′ä̤), *n.* [NL., < Gr. πιμελώδης, fatty, fat (< πιμελή, fat, lard, + εἶδος, form), + dim. *-ella*.] A genus of catfishes, confined chiefly to the Amazon region.

pimeloma (pim-e-lō′mä̤), *n.*; pl. *pimelomata* (-ma̤-tä̤). [NL., < Gr. πιμελή, fat, + *-oma*.] Same as *lipoma*.

Pimelometopon (pim″e-lō̤-me-tō′pon), *n.* [NL., < Gr. πιμελή, fat, + μέτωπον, forehead, front.] A genus of labroid fishes, found on the American tropical Pacific coast.



Redfish (*Pimelometopon pulcher*): male.
(From Jordan's "Guide to the Study of Fishes.")

pimelorrhea (pim″e-lō̤-rē′ä̤), *n.* [NL. *pimelorrhœa*, < Gr. πιμελή, fat, lard, + ῥοία, flow.] Diarrhea with discharge of fat in the stools.

pimelorthopnœa (pim″e-lôr-thop-nē′ä̤), *n.* [NL., < Gr. πιμελή, fat, + ὀρθός, right, + -πνοια, < πνεῖν, breathe.] Orthopnœa due to excessive obesity.

pimelosis (pim-e-lō′sis), *n.* [NL., < Gr. πιμελή, fat, + *-osis*.] 1. The formation of fat.—2. Fatty degeneration.

pimeluria (pim-e-lū′ri-ä̤), *n.* [NL., < Gr. πιμελή, fat, + οὖρον, urine.] The discharge of fat, or of material resembling it, in the urine.

pimento, *n.*—**Mexican pimento**, a commercial term for the dried berries and flower-buds of a small Brazilian tree, *Myrtus Pseudocaryophyllus*, which are used as a spice.

pimento-dram (pi-men′tō-dram), *n.* A drink made from pimento berries.

Ripe pimento berries are used to make *pimento dram*, a native drink.
Daily Cons. and Trade Reports, Oct. 5, 1907, p. 11.

pimento-grass (pi-men′tō-grȧs), *n.* See *St. Augustine* ★*grass*.

Pimephales (pi-mef′a-lēz), *n.* [Orig. a F. pl. (Rafinesque, 1820); NL., irreg. < Gr. πιμε(λή), fat, lard, + (κε)φαλή, head. An Eng. name of the genus is *fathead* (q. v.).] A genus of minnows of waters of the middle and eastern United States.

pimienta (pē-mē-en′tä), *n.* [Sp. *pimienta*, the fruit of the pepper. See *pimento*.] 1. In Spain, black pepper (*Piper nigrum*) and various kinds of red pepper (*Capsicum*).—2. In the Spanish West Indies and in Mexico, the allspice, *Pimenta Pimenta*.—3. In Porto Rico, the bayberry, *Pimenta racemosa*, which is used in making bay-rum.—**Pimienta malagueta.** (*a*) A name originally applied to the melegueta pepper, or grains of paradise, *Amomum Melegueta* (which see, under *grain*1). (*b*) In Cuba and Porto Rico, the allspice, *Pimenta Pimenta*, and the bayberry, *Pimenta racemosa*.

pimmy (pim′i), *n.* [Samoyed?] A kind of long boot, made of deerskin with sealskin soles, worn by the Samoyeds. See the extract under ★*loupthu*.

pimola (pi-mō′lä̤), *n.* [A trade-name, < *pim(ento)* + *ol(ive)* + *-a*.] An olive stuffed with red sweet peppers.

pimpinellin (pim-pi-nel′in), *n.* [*Pimpinella* + *-in*2.] A bitter crystalline substance, $C_{14}H_{12}O_5$ (?), found in the root of *Pimpinella saxifraga*.

pimple, *n.*—**Amboyna pimple.** Same as *Amboyna* ★*button*.

pimple-land (pim′pl-land), *n.* A local name in Georgia for certain areas the surface of which is marked by concretions of limonite, which are afforded by the clays of the Altamaha formation.

At some localities small brown iron oxide accretions from the size of buckshot to walnuts are abundant at the surface, and the land where these are found is commonly referred to as "*pimple*" *land*. *Science*, Jan. 10, 1908, p. 71.

pimploes (pim′plōz), *n.* [Prob. < Sp. *pimpollo*, a sucker, sprout, or shoot.] In the West Indies, same as *prickly-pear*, 2.

pin¹ (pin), *n.* **10.** (*b*) In *archery*, a place in a bowstaff where a lateral twig has been trimmed off. Such places are weak if the twig is cut off flush.—**12.** In *ceram.*, a small three-sided rod of fire-clay inserted in the side of the saggar to support the ware (as a plate) while it is fired in the kiln.—**Neat as a pin** or **new pin**, perfectly neat or new. [Colloq.]

> She was *neat as a pin* about her housekeepin', too. I tell you, she used to make me walk chalk when I come in the kitchen with mud on my boots!
> *McClure's Mag.*, June, 1901, p. 141.

Pin and girdle, the name of a kind of swindling game.—**Split pin.** (*a*) A metal pin made of wire bent around to form an eye: the points can easily be separated or spread apart after the pin is inserted in its hole, and it is thus prevented from coming out accidentally. Much used for linch-pins. (*b*) A tapered wooden pin having a split in the small end, in which a wedge is inserted to keep the pin from falling out.—**Steady pin.** (*c*) A stud, pin, or short sunk feather, employed for the purpose of preventing a wheel or pulley from turning round upon its shaft. The pin is made to fit a corresponding recess in the part which fits on the shaft. *Lockwood*, Dict. Mech. Eng. Terms.—**To lift** or **raise a pin**, in *archery*, to strengthen a pin by leaving more wood around it than on the rest of the bow. See ★*pin*1, 10 (*b*).

pin¹, *v. t.*—**To pin in**, to drive small wedges or tips of stone into (the mortar joints of masonry) before they dry, the purpose being to force the half-liquid mortar strongly into the large blocks.

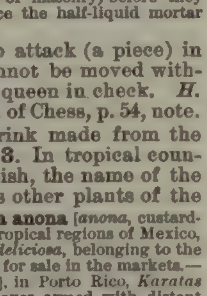
pin², *v. t.* **3.** In *chess*, to attack (a piece) in such a fashion that it cannot be moved without leaving the king or queen in check. *H. Staunton*, Laws and Prac. of Chess, p. 54, note.

piña², *n.* **2.** A sweet drink made from the juice of the pineapple.—**3.** In tropical countries settled by the Spanish, the name of the pineapple and of various other plants of the family *Bromeliaceæ.*—**Piña anona** [*anona*, custard-apple], in the tropical and subtropical regions of Mexico, an introduced fruit, *Monstera deliciosa*, belonging to the arum family, frequently offered for sale in the markets.—**Piña de cuervo** [of the crow], in Porto Rico, *Karatas Karatas*, a plant with large leaves armed with distant incurved spines and yielding a strong fiber; also *Pitcairnia angustifolia*, a plant growing on rocks or on trees, with glaucous leaves and scarlet flowers.—**Piña de sapo** [of the toad], in Porto Rico, an epiphytal bromeliad, *Guzmania erythrolepis.*

pinabete (pē-nä-bā′tā), *n.* [Sp., the silver fir, < *pino*, pine, + *abeto* (*abete*), fir.] In Spain, *Abies Picea*, the silver fir; in Mexico, the sacred fir, *Abies religiosa*, a tree growing in the mountains which yields turpentine having a lemon-like odor and a bitter taste. This is used in medicine as a balsam and in the arts as a medium for mixing paints.

pinac (pē-näk′), *n.* [Pampanga *pinac.*] In Luzon, a lake, especially one that is formed in the rainy season and later disappears.

pinacate-bug (pin-a-kä′te-bug), *n.* Any one of several species of beetles of the tenebrionid genus *Eleodes.* They are clumsy beetles, living under stones and other objects on the ground. When alarmed they elevate the abdomen and discharge an oily fluid.



Pinacate-bug (*Eleodes dentipes*). Natural size.

pinaceous (pi-nā′shius), *a.* Of or pertaining to the *Pinaceæ* or pine family.

Pinacoceras (pin-a-kos′ē-ras), *n.* [Gr. πίναξ (πινακ-), board, + κέρας, horn.] A genus of discocampylous ammonoid cephalopods having compressed discoid involute shells with exceedingly complicated suture-lines: found in Triassic rocks.

pinacoid, *n.* Some authors extend the use of this term to embrace any form which has but two parallel faces; according to this usage, all the possible faces of a holosymmetric triclinic crystal are called *pinacoids.*

Pinacoidal class. See ★*symmetry*, 6.

pinacolin (pi-nak′ō-lin), *n.* [*pinac*(*one*) + *-ol* + *-in*².] An oily liquid, $CH_3.CO.C(CH_3)_3$ or dimethylbutanone, made by distilling pinacone with dilute sulphuric acid, by the dry distillation of calcium isobutyrate, and in other ways. It has an odor like peppermint, and boils at 106° C.

pinacone (pin′a-kōn), *n.* [Gr. πίναξ (πινακ-), a tablet, + *-one.*] **1.** A colorless crystalline compound, $(CH_3)_2C(OH).C(OH)(CH_3)_2$ or tetramethylglycol, made by reducing aqueous acetone with sodium. It melts at 35–38° C. Its crystalline hydrate, $C_6H_{14}O_2 + 6H_2O$, melts at 46.5° C. It loses water when heated, and then boils at 172° C.—**2.** One of the higher homologues of pinacone; any ditertiary alcohol, as butyrone pinacone, $(C_3H_7)_2C(OH)(OH)C(C_3H_7)_2$.

pinacotheca (pin″a-kō-thē′kä), *n.*; pl. *pinacothecæ* (-sē). [L., < Gr. πινακοθήκη, a repository for pictures, < πίναξ (πινάκ-), a board, tablet, picture, + θήκη, a repository.] A picture-gallery, especially in *Gr. antiq.* One of the most important stood just outside the Propylæa on the Acropolis at Athens, on the left as one entered.

pinacothek (pin′a-kō-thek), *n.* Same as ★*pinacotheca.*

pinakid (pin′a-kid), *n.* [Gr. πινακίδιον, dim. of πίναξ, a tablet.] A sponge-spicule of flattened, scale-like form, supposed to be derived from the caltrop.

pinakiolite (pi-nak′i-ō-līt), *n.* [Gr. πινάκιον, dim. of πίναξ, a tablet, + λίθος, stone.] A borate containing magnesium and manganese (formula perhaps $3MgB_2O_4.MnMn_2O_4$), occurring in black tabular orthorhombic crystals: found in Sweden.

pinakoid, *n.* See *pinacoid.*

pinakothek, *n.* Same as ★*pinacotheca.*

Pinales (pī-nā′lēz), *n. pl.* [NL. (Britton, 1901), < *Pinus* + *-ales.*] An order of gymnospermous plants embracing the families *Pinaceæ* and *Taxaceæ.* It is equivalent to the *Coniferæ* of most authors, which it replaces under the rule that the name of a higher group must be formed from that of some genus in the group. See *Coniferæ.*

piña-nona (pē-nyä-nō′nä), *n.* A corruption of *piña anona.* See ★*piña*².

> Another East Indian fruit, called by the Mexicans *piña-nona* (*Monstera deliciosa*), is naturalized in the tropic and subtropic zones of Mexico and is frequently offered for sale in the markets.
> *Amer. Anthropologist*, Jan.–March, 1900, p. 71.

pinastric (pi-nas′trik), *a.* [NL. *pinaster* (*pinastr-*) + *-ic.*] Derived from *Cetraria pinastri.*—**Pinastric acid**, a golden-yellow crystalline acid, $C_{19}H_{14}O_6$, found in the lichens *Cetraria pinastri*, *C. juniperа*, and *Lepra flava*, from which it is extracted by ether. It melts at 178–180° C. Also called *chrysocetraric acid.*

pinatype (pin′a-tīp), *n.* A colored picture obtained by superimposing three gelatin films which have been exposed under negatives taken behind color-screens and dyed corresponding colors. Where the sensitized gelatin is exposed to light it is hardened and will not take the dye.

pinball (pin′bâl), *n.* **1.** Same as *bead-sight.* Also called *pinball-sight.*—**2.** A small round pincushion, usually made on cardboard: sometimes of other forms.

pin-basket (pin′bås″ket), *n.* A large ornamental pincushion, with pins of various lengths artistically inserted so as to resemble a basket, formerly, in some places, presented to the mother of a family on the birth of each child; hence, the youngest child in a family. *N. E. D.* [Eng.]

pin-block, *n.* **2.** Same as *wrest-block.*

pin-bone (pin′bōn), *n.* The end of the pelvis formed by the ischium, showing as a protuberance on either side of the tail.

> Leaving this part, we come to that which gives the Short-horn its standing as a beef animal. Beginning back of the shoulder and along the top we find the valuable cuts which are desirable for the market. The lines on each side of the back should be carried true to the last rib, with a loin thick, preferably inclined to raise some, followed by hooks well covered and smooth, and a long hind quarter, ending in a level tail head and wide *pin-bones.* *Rep. Kansas State Board Agr.*, 1901–02, p. 89.

pin-borer, *n.* **2.** A name also given to various scolytid beetles which make minute holes in the bark of infested trees.—**Apple pin-borer.** Same as *apple* ★*bark-beetle.*

pin-boss (pin′bos), *n.* The boss at the pin end of an engine-crank.

pin-box (pin′boks), *n.* **1.** A box for holding pins.—**2.** In *mech.*, the box which incloses or forms a bearing for the crank-pin or wrist-pin of an engine.

pin-bush² (pin′bůsh), *n.* An Australian tree, *Hakea leucoptera.* See ★*needle-bush* and ★*water-tree*, 2.

pincers, *n. sing.* and *pl.* **3.** A species of herring, *Sardina escamuda.*

pinch, *v.* **I.** *trans.* **9.** To arrest (an offender). [Slang.]

> But the cops *pinched* him just as he was making the fast freight and that finished the gang.
> *McClure's Mag.*, XVI. 570.

10. To steal. [Slang.]

> The youngest pirate was arrested for *pinching* a pocketbook, for economic reasons of his own, and never reached the rendezvous at all. *N. Y. Times*, Sept. 2, 1902.

11. *Naut.*, to sail (a vessel) as close to the wind as she can be brought without spilling the wind out of the sails, that is, without luffing her. A sailing-vessel is said to be *starved for wind* when she is pinched hard.—**Pinch her!** (*naut.*), an order to the helmsman to shiver the sails a little; a command to bring the ship a little closer to the wind while close-hauled.—**To pinch a bet**, in *gambling*, to reduce the amount of a bet, usually after winning the previous one. See *progression.*—**To pinch the wind**, to sail very close to the wind; to point the nose of the vessel so close to the wind that the luffs of the sails lift.

II. *intrans.*—**To pinch out**, in *mining*: (*a*) To run out or disappear; peter out: said of a vein of mineral.

> Sometimes 100 to 200 tons of payable quartz would be raised from one of these so-called reefs, when they would *pinch out*, and it would be found that they were unconnected with other leaders or veins.
> *Goldfields of Victoria*, p. 22, quoted in E. E. Morris, [Austral English.

(*b*) To compress or be squeezed out, as mineral ore from between rock strata.

pinch, *n.* **6.** In *mining*, a partial caving in or compression of the walls of a vein of ore or of a coal-bed, sufficient to disturb the ore or coal-bed. Sometimes called a *pinch-out.*—**To make a pinch**, to make an arrest.

> They *make a pinch* o' some second-class old thief like Jim . . . and tell the reporters they've copped out the flyest man on the turf. *McClure's Mag.*, XVI. 574.

pin-chain (pin′chān), *n.* A chain composed of detachable links fastened together by a pin driven through a hole in the end of one link and corresponding holes in the open ends of the next link. It is used in conveyers and elevators.

pinch-dog (pinch′dog), *n.* A dog used on a wood-turning lathe, in which the piece to be turned is clamped or pinched.

pinch-fit (pinch′fit), *n.* A method of fastening an arm or lever to a shaft by the use of a bolt passing through lugs on the hub of the lever. The bolt squeezes the lugs together, thus pinching the shaft. Also used to clamp the tail-spindle in turning-lathes.

pinch-out (pinch′out), *n.* Same as ★*pinch*, 6.

Pincian (pin′sian), *a.* [L. *Pincianus*, < *Pincius* (It. *Pincio*), the name of a Roman gens, applied, in *Mons Pincius*, to the eighth hill of Rome.] Of or pertaining to a small hill (*Mons Pincius*, Italian *Monte Pincio*, once called *Collis hortorum*, 'Garden Hill') situated within the walls of Rome.

pincoffin (pin′cof-in), *n.* [*Pincoff*, its first manufacturer, + *-in*².] A prepared form of madder, used by dyers. It is made from garancin by acting on it with superheated steam, so that the purpurin is destroyed, while the alizarin remains unaltered.

pindling (pind′ling), *a.* [Appar. a variant of *spindling.*] Spindling; 'peaked'; delicate; unhealthy. [New Eng.]

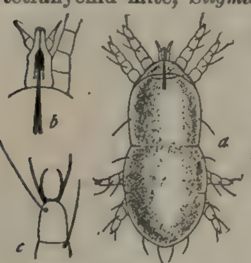
> "Seems to me Leviny's lookin' kinder *pindlin'*, ain't she?" said the fleshy old lady, who was Mrs. Potter; she had buried a good many children of her own years ago.
> *M. E. Wilkins*, Brakes and Wild Vi'lets, Humble Ro-[mance, p. 110.

pine¹, *n.*—**Black pine.** (*e*) In Australia, *Callitris calcarata*, called also *cypress-pine*, *Murray pine*, *red pine*, and *scrub-pine*; and *Callitris robusta*, called also *common pine*, *cypress-pine*, *dark pine*, *Lachlan pine*, *Murrumbidgee pine*, *rock-pine*, and *white pine.* See *coorong* and *cypress*1, 1 (*b*).—**Bristle-cone pine.** Same as *foxtail-pine* (which see, under *pine*1).—**Coast scrub-pine.** See *scrub-*★*pine* (*c*).—**Colonial pine**, the hoop-pine, *Araucaria Cunninghamii.*—**Common pine**, in Australia, *Callitris robusta.* See *coorong.*—**Coulter's pine**, *Pinus Coulteri*, a tree 50 to 70 feet high, scattered at 3000 to 6000 feet altitude through the coast ranges of California. The cones are 10 to 14 inches long, with beaked scales. The seeds were formerly gathered in large quantities by the Indians. The wood is occasionally used for fuel.—**Cuban pine.** Same as *slash-pine.*—**Cypress-pine**, any one of the Australian species of *Callitris.* See *black* ★*pine* (*e*).—**Dark pine**, in Australia, *Callitris robusta.* See *black* ★*pine* (*e*).—**Dundathu pine**, the Queensland kauri, *Dammara robusta.*—**Fat pine**, the long-leafed pine: so called from its resin content.—**Hickory-pine.** (*a*) See *table-mountain pine*, under *pine*1. (*b*) Same as *foxtail-pine* (which see, under *pine*1).—**Huon pine.** See *huon-pine.*—**Illawara Mountain pine**, the Oyster Bay pine, *Callitris rhomboidea.*—**Indian pine**, the loblolly-pine, *Pinus Tæda.*—**Jack-pine.** Same as *gray pine* (which see, under *pine*1). In Canada and Michigan this tree covers extensive sandy levels. In Michigan these are known as *Jack-pine plains.*—**Jeffrey pine.** Same as *bull-pine* (*a*) (which see, under *pine*1).—**Joint-pine**, a plant of the genus *Ephedra* and perhaps other gnetaceous plants; joint-fir.—**King William pine**, *Athrotaxis cupressoides.* Also called *Tasmanian pencil-cedar.*—**Lachlan pine**, see *black* ★*pine* (*e*).—**Light pine**, in Australia, the Oyster Bay pine, *Callitris rhomboidea.*—**Limber pine**, *Pinus flexilis*, one of the Rocky Mountain white pines (see *white pine* (*d*), under *pine*1). It is a short-trunked tree, from 40 to 50 feet high, with a wide, round-topped head. It is thus called from the pliable wood.—**Long-straw pine,** the long-leafed pine, and sometimes the loblolly-pine, which also has the needles rather long.—**Macquarie pine.** Same as *huon pine*.—**Marsh-pine.** Same as *pond-pine* (which see, under *pine*^{1}).—**Mexican nut-pine,** *Pinus cembroides*.—**Murray pine.** (*a*) Same as *black pine* (*a*) (which see, under *pine*^{1}). (*b*) See *black* ★*pine* (*e*).—**Murrumbidgee pine.** See *black* ★*pine* (*e*).—**New Caledonian pine,** *Araucaria Cookii*. See *Araucaria*.—**New Zealand yellow pine.** Same as ★*manoao*.—**Old-field pine.** (*b*) In Florida, same as *cedar pine* (which see, under *pine*^{1}).—**Parasol-pine.** (*a*) Same as *umbrella-pine*. See *Sciadopitys*. This tree is planted around temples in Japan. Its wood is of some economic value. (*b*) Same as *stone-pine* in any of the senses.—**Pine bark-beetle, blister, blister-blight, bunch-grass, leaf-miner, leaf-rust.** See ★*bark-beetle*, etc.—**Pine-leaf fungus.** See ★*fungus*.—**Pine-leaf tube-builder,** a tortricid moth, *Eulia politana*, common to Europe and the northeastern United States, whose larvæ form tubes of pine-needles lined with silk.—**Pine measuring-worm.** See *pine* ★*span-worm*.—**Pine plant-louse.** See ★*plant-louse*.—**Pine saw-fly.** See ★*saw-fly*.—**Pine-slip reaction.** See ★*reaction*.—**Pine span-worm.** See ★*span-worm*.—**Pine web-worm.** Same as ★*pine-pest*.—**Pine-wood still.** See ★*still*^{2}.—**Pitch-pine.** (*d*) In California, same as *Coulter's* ★*pine*. The *Western pitch pine* is the same as *yellow pine* (*c*) (which see, under *pine*^{1}).—**Poverty pine.** Same as *Jersey pine* (which see, under *pine*^{1}).—**Prickle-cone pine.** Same as *Obispo pine* (which see, under *pine*^{1}). This tree is found somewhat abundantly on the California coast northward. It grows 40 to 50 feet high, having at maturity a handsome compact round head. The trunk is occasionally sawn into lumber. Also *swamp-pine*.—**Prickly pine.** (*a*) In Queensland, the spotted tree, *Flindersia maculosa*. (*b*) Same as *table-mountain pine* (which see, under *pine*^{1}).—**Red pine.** (*c*) In Australia, *Callitris calcarata*. See *black* ★*pine* (*e*).—**Riga pine.** See *Riga pine*.—**Rock-pine.** (*a*) A form of the Western yellow pine or bull-pine, ranging widely over the Rocky Mountain region, forming on the Colorado plateau the most extensive pine forests of the continent. See *yellow pine* (*c*). (*b*) In New South Wales, a variety of *Callitris robusta*. See *black* ★*pine* (*e*).—**Sabine** or **Sabine's pine.** Same as *digger-pine* (which see, under *pine*^{1}).—**Scots pine.** Same as *Scotch pine*. [Great Britain.]—**Scrub-pine.** (*b*) See *black* ★*pine* (*e*). (*c*) A low tree, *Pinus contorta*, ranging along the Pacific coast from Alaska to northern California and to some extent inland. It has either a compact round head or an open picturesque one which has given rise to the name *twisted pine*. It seems to grade into the lodge-pole pine. The saccharine cambium is eaten by the Indians. Also *coast scrub-pine*.—**She-pine.** (*a*) See *she-pine*. (*b*) Same as *slash-pine*. Also *she pitch-pine*.—**Swamp-pine.** (*a*) Same as *prickle-cone* ★*pine*. (*b*) Same as *slash-pine*. (*c*) The loblolly-pine.—**Twisted pine.** See *twisted*.—**White-barked** or **white-stemmed pine,** *Pinus albicaulis*, often forming the timber-line in the Rocky, Sierra Nevada, and other Western mountains. It is marked by the brown or creamy-white plate-like scales of its bark. Its timber is of little value. Its large sweet seeds are eaten by the Indians.—**White pine.** (*f*) See *black* ★*pine* (*e*).—**Wild pine.** (*a*) and (*b*) See *wild*. (*c*) In the Bahamas, a species of air-plant, *Tillandsia Balbisiana*. Compare *wild pine* (*b*), under *wild*.—**Yellow pine.** (*f*) In New Zealand, the manoao, *Dacrydium Colensoi*.

pineapple, *n.*—**Oil of pineapple.** See ★*oil*.—**Pineapple penny.** See ★*penny*.—**Pineapple ware.** See ★*ware*^{2}.—**Sugar-loaf pineapple,** a sweet and juicy variety well known in warm countries, but too tender and perishable to ship well.

pineapple-blight (pīn'ap″l-blīt), *n.* See ★*blight*.

pineapple-mite (pīn'ap″l-mīt), *n.* A small tetranychid mite, *Stigmæus floridanus*, which occurs at the bases of the imbricated leaves of pineapple, where its punctures give access to the spores of destructive fungi.



Pineapple-mite (*Stigmæus floridanus*): female.
a, mite; *b*, mouth-part; *c*, claws.
Highly magnified.

pine-borer (pīn'bōr″ėr), *n.* Any one of numerous cerambycid, buprestid, or other beetles which bore into pine timber. Among them are the large pine flat-headed borer, *Calcophora virginiensis*; the Oregon buprestis, *Calcophora angulicollis*; the pine dicerca, *Dicerca tenebrosa*; the common longicorn pine-borer, *Monohammus confusor*; the lesser pine-borer, *Asemum mæstum*; the pine euderces, *Euderces pini*, and many others.—**Ribbed pine-borer,** an American cerambycid beetle, *Rhagium lineatum*, whose larvæ live in the sap-wood of pitch-pine.

pine-butterfly (pīn'but″ėr-flī), *n.* An American pierid butterfly, *Neophasia menapia*, occurring in the Pacific States and in Colorado, whose larvæ live on pine-needles.

Pine-cone fungus. See ★*fungus*.

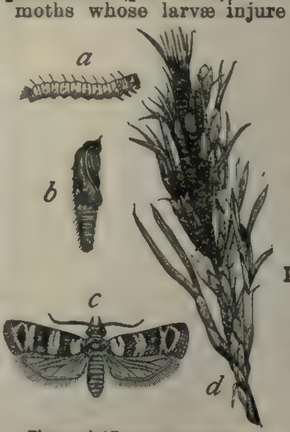
pine-goldfinch (pīn'gōld″finch), *n.* Same as *pine-finch*, 2.

pine-grass (pīn'gràs), *n.* See ★*grass*.

pine-land (pīn'land), *n.* Land covered with a growth of pines.

pine-lily (pīn'lil″i), *n.* See *bear-*★*grass* (*c*).

pine-moth (pīn'môth), *n.* Any one of several moths whose larvæ injure pine-trees. More than 50 species are known to have this habit in the United States, and more than 70 in Europe. The pine-moth of Nantucket is a specific example. It is a tortricid, *Evetria frustrana*, occurring in the northeastern United States, where its larvæ damage the new growth of pine-trees.



Pine-moth (*Evetria frustrana*).
a, larva; *b*, pupa; *c*, moth; *d*, branch showing work of insect.
(After Comstock.)

pinenchyma (pi-neng'ki-mä̤), *n.* [Gr. πίναξ, a tablet, + ἔγχυμα, infusion.] Tissue consisting of thin, flat cells; tabular parenchyma. *N. E. D.*

pinenchymatous (pin-eng-kī'ma̤-tus), *a.* Pertaining to, or of the nature of, pinenchyma.

pinene (pī'nēn), *n.* [*pine*^{1} + *-ene*.] The principal constituent of a large number of volatile oils, especially of those obtained from many varieties of pine. It has the composition $C_{10}H_{16}$, and is the most important of the terpenes. It exists in a dextrorotatory and levorotatory as well as in an inactive form. The compounds formerly called *terebenthene*, *australene*, *eucalyptene*, *laurene*, *olibene*, and *massoyene* are more or less pure pinene, the names having been given when the methods of identifying terpenes were imperfectly developed.

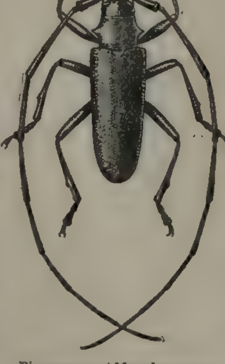
pine-pest (pīn'pest), *n.* An American phycitid moth, *Pinipestis zimmermanni*, occurring in the northeastern United States, where its larvæ bore into the trunks of pines, causing large quantities of gum to exude.

piner^2 (pī'nėr), *n.* [*pine*^{1} + *-er*^{1}.] In Tasmania, a man who cuts Huon pine and brings it down to the coast. *E. E. Morris*, Austral English.

pinery, *n.* **3.** The field or ground in which pineapples are grown.

pine-sap, *n.*—**Sweet pine-sap.** See *Schweinitzia*.

pine-sawyer (pīn'sâ″yėr), *n.* Any one of several cerambycid beetles whose larvæ bore into pine-trunks, as *Monohammus confusor* (sometimes known as the *larger pine-sawyer*), *M. marmorator*, and *M. scutellatus*.



Pine-sawyer (*Monohammus scutellatus*).
Slightly enlarged.

pine-sesian (pīn'sē″ṣiạn), *n.* An American sesiid moth, *Parhamonia pini*, occurring in the eastern United States, whose larvæ bore under the bark of the pine. Also called *pitch-worm*.

pine-slashings (pīn'slash″ingz), *n. pl.* See *slashing*, *n.*, 3.

pine-straw (pīn'strâ), *n.* The fallen needles of pines.

> Mulching the trees with *pine straw*, oak leaves, or something of this nature.
> *U. S. Dept. Agr.*, Div. Veg. Physiol. and Pathol., Bulletin 8, 1896, p. 20.

pine-sugar (pīn'shủg″ä̤r), *n.* Same as ★*pinite*^{2}.

pine-tag (pīn'tag), *n.* The staminate inflorescence of a pine.

> Dinner was fairly pushed off the stove by the decoctions of herbs, spice-wood, *pine tags*, etc.
> *C. D. Warner*, in Harper's Mag., Feb., 1888, p. 486.

pine-tassel (pīn'tas″l), *n.* The pine-weed, *Sarothra gentianoides*, both names noting the resemblance of the branches to pine-needles.

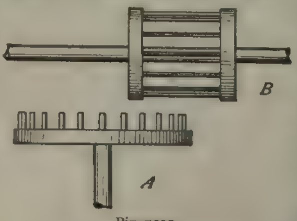
pine-twister (pīn'twis″tėr), *n.* A disease due to the fungus *Melampsora Tremulæ*, which attacks the needles of pine seedlings, causing the thicker ones to become twisted.

pine-wax (pīn'waks), *n.* A waxy substance found in small quantity on the needles of the Scotch fir, *Pinus sylvestris*.

pin-frame (pin'frām), *n.* A false reed in a loom, used in lappet-weaving for the shuttle to run against. *T. W. Fox*, Mechanism of Weaving, p. 273.

pingao (ping'gou), *n.* [Maori.] A spreading seaside cyperaceous plant, *Scirpus spiralis*, native to New Zealand. It has three-angled culms, from 1 to 3 feet high, and long, concave, keeled leaves, which are used for plaiting into belts.

pin-gear (pin'gēr), *n.* A form of toothed gearing, for transmitting motion or power, in which one of the wheels carries cylindrical pins which mesh into the spaces between the teeth of the other wheel. These pins may project from the face of a disk (crown-gear), or may be held between disks on the shaft (lantern-gear); in either case the pin is parallel to the shaft. This gear is used, in modern practice, only in small pinions for clocks and similar light mechanisms. In older millwrighting, wooden pins were much used, even in massive transmissions. When the pins are secured in disks at each end, the lantern-pinion results, so called from its cage-like form. When pins on the face of a disk were used to drive pins in a lantern-gear, the transmission could drive shafts at an angle of 90°. When parallel shafts are to be driven, one wheel must be a toothed wheel, having its contact surfaces mainly inside of the pitch-circle, and with ample clearance-spaces formed at the bottoms of the teeth.



Pin-gear.
A, crown-gear; *B*, lantern-gear.

ping-pong (ping'pong), *n.* [A varied reduplication of *ping*, expressing repeated strokes. Compare *ding-dong*.] Tennis played with small rackets upon a table on which the courts may be marked.

ping-suey (ping-sö'i), *n.* [Chinese.] An inferior grade of China teas, imitating different types of green tea, by some believed not to be the product of the tea-plant at all.

pingue (pē̤n'göā), *n.* [Sp. *pingüe* (*Dict. Sp. Acad.*), fat: referring to the fatty or resinous substance contained in the rootstocks.] A plant of the great plains, *Picradenia floribunda*. See ★*Picradenia*.

pinguedinous (ping-gwed'i-nus), *a.* [L. *pinguedo* (*pingued-*), fatness, + *-ous*.] Fat; greasy. [Rare.]

pinguefaction (ping″gwē̤-fak'sho̤n), *n.* [NL. **pinguefactio(n-)*, < *pinguefacere*, make fat. See *pinguefy*.] Same as ★*pimelosis*.

pinguescence (ping-gwes'e̤ns), *n.* [See ★*pinguescent*.] The process of becoming fat. [Rare.]

pinguescent (ping-gwes'e̤nt), *n.* [L. *pinguescent(em)*, acc. sing. of ppr. of *pinguescere*, grow fat.] Growing fat; flourishing.

Pinguiculaceæ (ping-gwik-ṳ-lā'sē̤-ē), *n. pl.* [NL. (Dumortier, 1829), < *Pinguicula* + *-aceæ*.] A family of dicotyledonous sympetalous plants of the order *Polemoniales*; the bladderwort family. It includes 5 genera, of which *Pinguicula* is taken as the type, and *Utricularia* is the only other important genus. See *Lentibulariaceæ*.

pinguidity (ping-gwid'i-ti), *n.* [*pinguid* + *-ity*.] Fatness.

pinhole, *n.* **3.** In *archery*, the exact center of the target. Hits in the gold are measured by their distance from the pinhole. Compare *pin*^{1}, *n.*, 2 (*b*).—**Pinhole photography.** See ★*photography*.

Pinic acid, a crystalline bibasic acid, $C_9H_{14}O_4$, formed by the oxidation of α-pinonic acid with sodium hypobromite. It melts at 102° C.

pinings (pīn'ingz), *n. pl.* [*pine*^{1} + *-ing*^{1}.] The droppings of pine-needles under a pine-tree or in a pine-wood. [Rare.]

> The morning sun . . .
> On the red *pinings* of their forest floor,
> Drew a warm scent abroad.
> *M. Arnold*, A Dream, l. 5.

pinion^1, *n.* **6.** One of two wings or flat projections of any kind.

> Celts, with sockets similar to those which are so often found in Europe, are unknown in Egypt, but celts with *pinions* are met with there which approach in appearance those with sockets. The *pinions*, which are folded around the handle, are found only on one side.
> *Smithsonian Rep.*, 1890, p. 511.

Ash-gray pinion, a noctuid moth, *Xylina antennata*, whose larva sometimes bores into young apples and peaches in the eastern United States. Formerly known also as *Xylina cinerea*, which see, with cut.

pinion^2, *n.*—**Planetary pinion.** Same as *planet-wheel*, 2.

pinion-shaft (pin′yọn-shȧft), *n.* A shaft which carries a pinion, as in a clock.

pinipicrin (pin-i-pik′rin), *n.* [L. *pinus*, pine, + Gr. *πικρός*, bitter, + *-in*^{2}.] A light yellowish-brown, amorphous, bitter substance, $C_{22}H_{36}O_{11}$, found in the needles of the pine, *Pinus sylvestris*, and in the green parts of the white cedar, *Thuja occidentalis*. When hydrolyzed with dilute sulphuric acid it yields sugar and ericinol.

pinitannic (pin-i-tan′ik), *a.* [L. *pinus*, pine, + E. *tannic*.] Derived from the pine family. —**Pinitannic acid**, a form of tannin found in the white cedar or arbor vitæ, *Thuja occidentalis*.

pinite^{2} (pīn′īt), *n.* [L. *pinus*, pine, + *-ite*^{2}.] A variety of sugar derived from hexahydrobenzene, $C_6H_6(OH)_5(OCH_3)$, which exudes from wounds in the California sugar-pine, *Pinus Lambertiana*. It also occurs in senna-leaves and in Madagascar caoutchouc from *Mateza roritina*. When treated with hydriodic acid it yields methyl iodide and dextro-inosite. Also called *matezite*.

pinivorous (pī-niv′ọ-rus), *a.* [L. *pinus*, pine, + *vorare*, devour.] Feeding upon the seeds or kernels of pine-cones, as do the crossbills. [Rare.]

pink^{2}. **I.** *n.*—**Aniline pink**, an old name for safranine.—**Barbados pink**, the cypress-vine, *Quamoclit Quamoclit*.—**Diamine pink**, a direct cotton coal-tar color of the monoazo type, derived from thioparatoluidine. It dyes unmordanted cotton pink in a salt bath. Also called *diamine rose*.—**English pink**. Same as *Italian pink*.—**Ground pink**. (*a*) See ★*ground-pink*. (*b*) Same as *moss-pink*.—**Indian pink**. (*c*) In California, *Silene Californica*, with flowers of a brilliant scarlet, elegantly slashed, appearing in summer. (*d*) Locally, one of several other plants, namely: in Massachusetts, the wild pink, also the fringed polygala (see *Polygala*, 1); in Illinois, the scarlet painted cup, *Castilleja coccinea*; in the southeastern States, one of the wake-robins, *Trillium stylosum*.—**Marsh-pink**, one of several species of *Sabbatia*, as *S. dodecandra*, the large marsh-pink. See *Sabbatia*.—**New pink**. Same as ★*phloxin P.* —**Pompadour pink**. Same as *rose Pompadour* (which see, under *rose*^{1}).—**Swamp-pink**. (*a*) See *swamp-pink*. (*b*) Same as *grass-pink* (which see, under *pink*^{2}). (*c*) A plant of the bunch-flower family, *Helonias bullata*, found locally in swamps from southern New York to Virginia, and said also to occur on the higher Alleghanies. Its raceme of purple flowers is borne on a stout scape rising from a tuft of leaves which elongate after flowering-time. —**Wild pink**. See *Silene*.

II. *a.*—**Pink 'un.** (*a*) [*cap.*] A nickname given originally to the London Sporting Times, an evening journal which was the first printed on pink paper; hence applied to other evening papers and especially to papers of a low, vulgar type. [Slang.] (*b*) A salacious story. [Slang.]

> Tell us a good story . . . "Lovely needlework"? That's a funny beginning for a *pink 'un*. Well?
> *R. Hichens*, The Londoners, xvi.

pink^{7} (pingk), *a.* and *n.* [Detached from *pink-eye*, *pink-eyed*, and treated, esp. in the dim. *pinky*, as an imitative word, like *dinky*, etc.] Small: said of the eyes and of other things. *Eng. Dial. Dict.* [Prov. Eng.]

pinken (ping′kn), *v. i.* [*pink*^{2} + *-en*^{1}.] To grow pink: flush. [Rare.]

> But with the rising glow of sunrise it [Fusiyama] defines its spotless tip first *pinkening* like the point of some wondrous bud: then it becomes all gold-white.
> *L. Hearn*, in Harper's Mag., Nov., 1890, p. 867.

pinkes (pin′kes), *n.* [Aram., < Gr. *πίναξ*, a board, a tablet.] Among the Jews, a book kept in a synagogue in which are recorded the transactions of the congregation.

pink-fish (pingk′fish), *n.* Same as *blind* ★*goby*.

pink-grass (pingk′gräs), *n.* A sedge, as *Carex glauca* or *C. præcox*, found in pastures. [Eng.]

pinking-iron, *n.* **2.** A sword. See *pink*^{1}, *v.*, 1.

pinking-machine (ping′king-ma-shēn″), *n.* In *shoe manuf.*, a hand- or power-machine for cutting the ornamental edging called *pinking*, used in finishing and decorating shoes. It consists essentially of a leather or hard rubber roll over which the leather or cloth is run, and which serves as a revolving anvil for a revolving cutter which trims and stamps out the edge of the material. By changing the cutter a variety of patterns may be produced.

pinking-punch (ping′king-punch), *n.* An implement for pinking cloth; a kind of pinking-iron.

pink-rust (pingk′rust), *n.* See ★*rust*^{1}.

pinkwood, *n.* **2.** In Tasmania, a tree of the family *Eucryphiaceæ*, *Eucryphia Billardieri*, one of the most beautiful trees in Tasmania, growing from 70 to 100 feet high, with a very straight trunk, 6 to 7 feet in circumference. It bears numerous white flowers, from 1 to 2 inches across, which resemble single white roses, and yields a wood of a pale reddish color.—**3.** In Australia, the wallaby-bush, *Beyeria viscosa*.

pinky^{4} (ping′ki), *a.* and *n.* [Dim. of *pink*^{7}; ult. resting on *pink*^{3}. Compare ★*dinky*.] **I.** *a.* **1.** Of eyes, narrow; drooping.—**2.** Small, in general; very small: as, a *pinky* ring; the *pinky* finger. [Prov. Eng. in both uses.]

II. *n.* The little finger. [Prov. Eng.]

pin-maul (pin′mâl), *n.* Same as ★*ship-maul*.

pinna^{1}, *n.*—**Pinna marina**, the soft, silky golden-brown threads of the byssus of *Pinna*. *The Field*, Oct. 6, 1900, p. 547.

Pinnacites (pin-ạ-sī′tēz), *n.* [NL., prob. an error for **Pinacites*, < Gr. *πίναξ* (*πινακ-*), a board, a tablet.] A genus of microcampylous ammonoid cephalopods having highly involute compressed shells with acute venter and goniatitoid sutures: found in Devonian formations.

pinnacocyte, *n.* An incorrect spelling of *pinacocyte*.

pinnal (pin′ạl), *a.* [*pinna*^{1} + *-al*^{1}.] Of or pertaining to the pinna or outer ear.

pinnatic (pi-nat′ik), *a.* Relating to or resembling a pinna, or slender pointed organ, like those on the arms of crinoids.

pinnatisected (pi-nat′i-sek-ted), *a.* Same as *pinnatisect*.

pinnatodentate (pi-nā-tō-den′tāt), *a.* Pinnate, with toothed leaflets. *N. E. D.*

pinnatopectinate (pi-nā-tō-pek′ti-nāt), *a.* Having lateral projections like the teeth of a comb, arranged pinnately. *N. E. D.*

Pinnatopora (pin-ạ-top′ọ-rä), *n.* [NL., < L. *pinnatus*, pinnate, + (?) Gr. *πόρος*, pore.] Same as *Glauconome*.

pinnel (pin′ẹl), *n.* [Origin obscure.] Coarse gravel: sandstone conglomerate. *N. E. D.* [Local, Eng.]

pinniferous (pi-nif′ẹ-rus), *a.* Having or bearing fins.

pinnigerous (pi-nij′ẹ-rus), *a.* Same as ★*pinniferous*.

pinning-out (pin″ing-out′), *n.* In the manufacture of felt hats. See the extract.

> The second-sizing and *pinning-out* is done by hand at so-called batteries, but instead of doing three at a time wrapped in cloth, only one body is manipulated, being rolled on a board with an instrument not unlike an ordinary rolling-pin. The battery is a large tub surrounded octagonally by planks sloping slightly inward, and filled with water kept hot by condensed steam.
> *Sci. Amer.*, Sept. 30, 1905, p. 262.

pinnulation (pin-ụ-lā′shọn), *n.* In crinoids, the arrangement of the pinnules, or secondary branches, on the arms.

pinnule, *n.* **4.** A small pin fixed upon a pre-telescopic astronomical instrument and serving, like the sight of a gun, to enable the observer to make an accurate pointing upon a star or other celestial object. *Sci. Amer. Sup.*, Dec. 29, 1900, p. 20896.

pinnuliferous (pin-ụ-lif′ẹ-rus), *a.* Bearing pinnules, as the arms of crinoids.

pinny^{1}, *a.* **2.** Noting bronze or wrought-iron when it contains a great many hard spots.

pino (pē′nō), *n.* [Sp. *pino*, a pine-tree.] In Spain and countries settled by the Spanish, a general name for pines and their allies. In Mexico occur the following: *pino blanco* (white pine), *Pinus Montezumæ*; *pino de corcho* (cork-pine), *Pseudotsuga mucronata*; *pino oyamel*, the sacred fir, *Abies religiosa*; *pino piñon*, the nut-pines, *Pinus edulis*, *P. Parryana*, and *P. cembroides*; and *pino real* (royal pine), *Pinus Ayacahuite* and *P. oöcarpa*. See ★*ocotilla* and ★*teocote*.

pinochle, *n.* See *penuchle*.

pinola (pi-nō′lạ̈), *n.* Same as *pinole*, 2.

pinoline (pīn′ọ-lin), *n.* [L. *pinus*, pine, + *-ol* + *-ine*^{2}.] A trade-name of the lighter liquid product obtained in the destructive distillation of resin or colophony. It comes over before the resin-oil, which is the principal product of the distillation. It is used to burn in lamps and for the manufacture of some varnishes. Also known as *resin-spirit*.

piñon, *n.* **2.** In Mexico, the edible seed of *Pinus cembroides*.—**Piñon de Indias**, in countries settled by the Spanish, a name often applied to the oily seeds of *Jatropha Curcas*, the physic-nut.—**Piñon espinoso** (thorny piñon), in Porto Rico, *Erythrina Corallodendron*, a thorny shrub or small tree bearing beautiful clusters of scarlet flowers. Freshly cut stakes of this tree readily take root when thrust into the ground and are consequently much used for forming living fences or hedges about garden-patches.

piñon-bird (pēn-yōn′, pin′yọn-bėrd), *n.* The piñon jay, *Cyanocephalus cyanocephalus*. [Uncommon.]

piñoncillo (pēn-yōn-thēl′yō), *n.* [Sp.-Amer. *piñoncillo*, diminutive of *piñon*, which see.] In countries settled by the Spanish, a name often applied to the oily seeds of several euphorbiaceous plants having purgative properties; in Mexico, especially to *Euphorbia Lathyris*, the introduced caper-spurge, and to *Jatropha Curcas*, the physic-nut.

pinonic (pi-nō′nik), *a.* [*pin*(*ene*) + *-one* + *-ic*.] Derived from pinene.—**Pinonic acid**, a crystalline ketonic acid, $C_{10}H_{16}O_3$, formed by oxidizing pinene with potassium permanganate. It melts at 104° C.

pin-pool (pin′pöl), *n.* See *pool*^{2}.

pin-prick (pin′prik), *n.* The prick of a pin; hence, figuratively, an intentional trifling irritation.—**Pin-prick policy** or **policy of pin-pricks**, in *politics*, a system of small but intentional annoyances which, while they irritate the victim, are too slight to be resented by an open quarrel, and are thus doubly pleasing to the irresponsible tormentor. The phrase was applied at one time to irritations between Great Britain and France said to be fomented by certain politicians and newspapers.

pin-rot (pin′rot), *n.* A fungous disease of the incense-cedar, *Libocedrus decurrens*, caused by one of the *Basidiomycetes*.

pin-spot (pin′spot), *n.* Each of a number of small round spots like pinheads forming a pattern upon a textile fabric. *N. E. D.*

pin-spotted (pin′spot″ed), *a.* Marked by pin-spots, as a fabric. See ★*pin-spot*.

pintadine (pin′tạ-dēn), *n.* [Sp.-Amer. *pintadina*.] A pintadina or pearl-oyster.

> On the acclimatisation and culture of *pintadines*, or true pearl oysters, on the coasts of France, and on the forced production of fine pearls, by M. Raphaël Dubois. Successful experiments have been carried out with Margaritifera vulgaris, which has been acclimatised and made to yield pearls which, although small, are of good quality.
> *Nature*, Oct. 29, 1903, p. 639.

pinto^{2} (pēn′tọ), *n.* [Pg., a particular use of *pinto*, a chicken, lit. spotted. See *pinto*^{1}.] A Portuguese gold coin of the eighteenth century, equal to 400 reis.

pinto^{3} (pin-tō′), *n.* [Tagalog.] In the Philippine Islands, a door.

pin-tooth (pin′töth), *n.* **1.** One of the pointed teeth of the escapement-wheel of a clock or watch.—**2.** A canine tooth. *N. E. D.*

pin-tumbler (pin′tum″blėr), *n.* A small round pin used in certain locks to prevent any but the right key from operating the lock. The pin is in two parts, and the joint must be brought into line with the joint between the case and the key-barrel before the latter will turn. These pin-tumblers are used in Yale locks.

piñuela (pē-nū-ā′lä), *n.* [Sp. *piñuela*, diminutive of *piña*, pineapple.] **1.** In many tropical countries colonized by the Spanish, a name applied generally to plants of the pineapple family, from their resemblance in habit of growth to a pineapple, especially *Bromelia Pinguin*, a plant with rigid, sword-like leaves armed with recurved spines and much used for hedges to inclose garden-patches.—**2.** In Porto Rico, a name applied to epiphytal bromelias and other epiphytal plants, including a number of orchids; among the latter, *Cyrtopodium punctatum*, *Ornithidium coccinium*, and *Oncidium Baueri*.

pinule (pin′ūl), *n.* [NL. **pinulus*, dim. of *pinus*, pine-tree.] In the sponge-spicules, a hexactinellid element in which one or more of the rays have the form of a plume or pine-cone.

pinulhexactine (pin″ūl-hek-sak′tin), *n.* [NL. **pinulus*, pinule, + E. *hexactine*.] In the morphology of the sponge-spicules, a hexactinellid element in which one of the six rays is developed into a plume or pinule.

pinulus, *n.* See *pinnulus*.

pin-valve (pin′valv), *n.* A valve consisting of a conical opening of small diameter into which a tapered plug or pin enters when the valve is closed; a needle-valve.

> The pressure is admitted to or withdrawn from the piston by means of a *pin-valve* actuated by an electromagnet in circuit with a signal battery, which again is under the control of the track battery circuit.
> *Elect. World and Engin.*, July 18, 1903, p. 115.

pinweed (pin′wēd), *n.* **1.** Any plant of the genus *Lechea* (which see), so called from the slender round stem and branches.—**2.** The stork's-bill or alfilerilla, *Erodium cicutarium*.

pin-wire (pin′wīr), *n.* Brass or steel wire of the correct diameter for making pins.

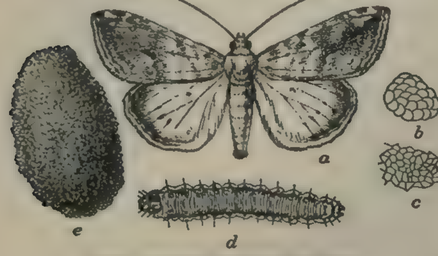
pinyon (pin′yọn), *n.* An Anglicized form of *piñon*.

piod (pē′ōd), *n.* [Chamorro name.] On the island of Guam, the seaside plum, *Ximenia Americana*, a shrub or small tree bearing an edible, spherical, orange-colored drupe which tastes somewhat like a crab-apple with a flavor of bitter almonds. See *Ximenia*.

> A fruit much relished by the fruit-eating pigeons was the *piod* (Ximenia americana), which resembles a small yellow plum with a slight flavor of bitter-almond.
> *Amer. Anthropologist*, Oct.–Dec., 1902, p. 720.

piojo (pi-ō'hō), *n.* [Sp., a particular use of *piojo*, a louse, = Pg. *piolho* = Cat. *poll* = OF. *peoil*, *peou*, ‹ L. *pediculus*, in a vernacular form **peduculus*, a louse: see *pedicular*.] Same as *ten-pounder*, 3.

Pionea (pī-ọ̄-nē'ạ̈), *n.* [NL. (Guenée, 1854), ‹ Gr. *πίων*, fat.] 1. A genus of pyralid moths, erected for certain small European, North American, and African forms. Its species have since been separated and the so-called *cabbage pionea* of North America is now placed in the genus *Evergestis*.—2. [*l. c.*] A moth of this genus.—**Cabbage pionea**, an old popular name of the adult of the cross-striped cabbage-worm, *Evergestis rimosalis*, a pyralid moth occurring in different parts of the United States.



Cabbage Pionea (*Evergestis rimosalis*).

a, moth; *b*, egg-mass; *c*, sculpture of egg; *d*, larva; *e*, cocoon. *a*, *d*, *e*, somewhat enlarged; *b*, *c*, more enlarged. (Chittenden, U. S. D. A.)

Pioneer bee. See ★*bee*¹.

pionemia (pī-ọ̄-nē'mi-ạ̈), *n.* [NL. *pionæmia*, ‹ Gr. *πίων*, fat, + *αἷμα*, blood.] Same as *piarrhæmia*. See *lipæmia*.

piorno (pē-ōr'nō), *n.* [Sp. *piorno*, the Spanish broom.] In Spain, a name of several spiny shrubs, chiefly belonging to the genus *Genista* and related genera, especially *G. florida*, *G. aspalatoides*, *Cytisus albus*, and *Adenocarpus Hispanicus*. *Piorno amarillo* (yellow broom) is *Genista Bætica*; *piorno azul*, or *piorno negro* (blue or black broom), is the hedge-hog plant, *Erinacea Erinacea*; *piorno de crucetillas* (the little-cross broom) is *Vella spinosa*, a cruciferous shrub; and *piorno fino* (fine broom) is a name applied to *Genista Boissieri* to distinguish it from the coarser *G. horrida*.

piorthopnœa (pī-ôr-thop-nē'ạ̈), *n.* [Gr. *πί(ων)*, fat, + *ὀρθός*, right, + *-πνοια*, ‹ *πνεῖν*, breathe.] Same as ★*pimelorthopnœa*.

piously, *adv.* 2. Heartily; sincerely. [Colloq.]

> "I 'm *piously* hoping the drunken brute will tumble over board," Hamilton muttered; "it would save a lot of trouble for everybody."
> *Cutcliffe Hyne*, A Master of Fortune, xi.

Pipa, *n.* 2. [*l. c.*] A toad of the genus *Pipa*.

pipage, *n.* 2. The amount charged for conveyance by pipes or pipe-lines.

> This differential affected adversely a large percentage of Kansas oil. Another gouge was a *pipeage* discount of three per cent. for impurities, which producers declared did not exist. *Outlook*, May 6, 1905, p. 24.

pip-card (pip'kärd), *n.* In a pack of playing-cards, a card in which there are pips only; a card that is not a court card.

> He persuaded him by degrees to make the exchange with twelve figure and fourteen *pip cards*, in all twenty-six cards of the pack. *Burlington Mag.*, Dec., 1903, p. 246.

pipe¹, *v.* I. *intrans.* 6. To wrinkle: said of soft- or loose-grained skins where the grain sometimes wrinkles up in ridges or pipes. *Flemming*, Practical Tanning, p. 375.

II. *trans.* 8. To set or solidify, leaving a hollow or hole in the center: said of steel ingots.—**To pipe the side.** When the commanding officer of a naval vessel, or the president or vice-president of the country, or other dignitaries, or superior officers of foreign governments, or crowned heads, or members of royal families, or of the nobility, are received on board, or are leaving a man-of-war, a certain prescribed number of boys or seamen are assembled at the gangway, where they form two lines from the side of the ship inboard, facing each other, and as the dignitary passes through the lines, the boatswain, or one of his mates, winds (blows) his call (silver whistle) and the side-boys salute by holding their right hands steadily to their caps while the whistle blows. This ceremony is under the immediate charge of the officer of the deck, and is known as *piping the side*.—**To pipe to quarters.** The assembling of the officers and crew at their several stations for exercise, drill, or battle, by the sound of the boatswain's call, is known as *piping to quarters*.

pipe¹, *n.* 23†. See the extract. [Australia.]

> These were the days of '*pipes*.' Certain supposed home truths . . . were indited in clear and legible letters on a piece of paper which was then rolled up in the form of a pipe, and being held together by twisting at one end was found at the door of the person intended to be instructed on its first opening in the morning.
> *Ross*, Hobart Town Almanack, p. 105, quoted in E. E. [Morris, Austral English.

Picco pipe, a diminutive whistle or flageolet about 3¼ inches long, with three holes: so named from the blind performer Picco, who in 1856 astonished London audiences by artistic music on this insignificant appliance.—**S-pipe**, a pipe, usually of lead, molded into a shape resembling the letter S, and used as a trap or water-seal in plumbing or to connect two parallel runs of straight pipe, with provision for slight relative motion with strain on the connecting length.—**Telescopic pipe**, a pipe made in two parts, one of which telescopes or slides into the other; a pipe surrounding the top pipe of a deep-well tube. The use of such a casing permits of some adjustment in the length of the well-tube. Sometimes called a *telescopic suction-slide*.—**T-pipe**, in a locomotive, the short connecting-pipe in the boiler which delivers dry steam to the two pipes which convey the steam to the cylinders.—**Volcanic pipe**, the conduit through which lava and explosive products from deep-seated sources reach the surface.

pipeage, *n.* See *pipage*.

pipe-beetle (pīp'bē"tl), *n.* A beetle of the family *Curculionidæ*: so named from the long proboscis.

pipe-bender, *n.* 3. A machine for bending brass, copper, or iron pipe for cooling-coils or radiators.—4. A concave anvil or block on which sheet-metal is curved to form a pipe.

pipe-carrier (pīp'kar"i-ėr), *n.* In *railroading*, a rolling support for the pipe-rods of a signaling-plant. It consists of a wheel having a concave face, in which the pipe rolls as it is drawn forward or back by the movement of the lever in the signal-cabin. The wheel may turn on a shaft supported by a casting, or may have a fixed arbor which rolls in a horizontal slot in the casting.

pipecolic (pip-ẹ̄-kol'ik), *a.* [*pipecol(ine)* + *-ic*.] Derived from pipecoline.—**Pipecolic acid**, a crystalline acid, $C_5H_{10}N(COOH)$, made by heating dichlorpicolinic acid, with fuming hydriodic acid. It is hexahydropicolinic acid, a derivative of piperidine.

pipecoline (pip'ẹ̄-kō-lin), *n.* [*pipe(ridine)* + *(pi)coline*.] A base, $C_6H_{13}N$, or methylpiperidine. *Alpha-pipecoline*, or 2-methylpiperidine, is an oily liquid which boils at 116.5° C.; it is made by reducing a-picoline, dissolved in alcohol, with sodium. *Beta-pipecoline*, or 3-methylpiperidine, is a liquid which boils at 125–126° C. It is made by reducing 3-methylpyridine (β-picoline) with sodium.

pipe-connection (pīp'kọ-nek"shọn), *n.* A general term for any form of pipe-fitting used to join pipes together.

pipe-coupling, *n.* When a short, bent, or offset pipe is used to connect two pipes which are not in line, it is called an *offset*; if the pipes are at an angle to each other, such a coupling, used in place of an elbow, is called a *bend*; if the two pipes are side by side, it is called a *return-bend*.

pipe-covering (pīp'kuv"ėr-ing), *n.* A covering made from a poor conductor of heat, such as cork or asbestos, placed around a pipe to prevent the flow of heat to or from the interior.

pipe-crimper (pīp'krim"pėr), *n.* A pair of sheet-metal shears fitted with crimping-jaws for crimping sheet-metal pipe.

pipe-dream (pīp'drēm), *n.* A confused fantastic 'dream' or mental illusion produced by smoking opium; hence, figuratively, any fantastic or illusory notion. [Colloq.]

> To just one girl I 've tuned my sad bazoo [lament],
> Stringing my *pipe-dream* off as it occurred.
> *Wallace Irwin*, Love Sonnets of a Hoodlum, Epil., l. 2.

pipe-drop (pīp'drop), *n.* In *elect.*, the fall of potential along a line of metal pipe which forms an accidental return circuit for the current from any system of conductors such as the overhead wires of an electric railway.

> CC represents the voltage of different points of the rails (rail-drop) and EE the voltage of different points of the earth or accidental auxiliary returns (earth-drops or *pipe-drops*). *Elect. Rev.*, Oct. 8, 1904, p. 568.

pipe-fish, *n.*—**Great pipe-fish**, *Siphostoma californiensis*, found on the Pacific coast of the United States.—**Ocean pipe-fish**, *Syngnathus æquoreus*, found on both sides of the temperate Atlantic.—**Sargasso pipe-fish**, *Siphostoma pelagicum*, a large pipe-fish found in tropical parts of the Atlantic, and common in the Mediterranean Sea: often taken in the open sea among floating seaweed of the genus *Sargassum*.

pipe-fitting (pīp'fit"ing), *n.* A coupling, band, elbow, or the like, used in fitting pipes together.

pipe-hanger (pīp'hang"ėr), *n.* In *steam-fitting*, an adjustable loop or support for holding a heavy steam-, gas-, or water-pipe suspended from a ceiling. The loop is hinged at the bottom for convenience in setting up, and is supported by a screw from the ceiling beam or by a clamp that clasps the beam. It is often made square with two supports, having rolls on the loop to allow the pipes to move under expansion or contraction. A ring-shaped loop without hinges and supported on a hook is called a *pipe-ring*. When fitted with a plate for screws it is a *ring pipe-hanger*.

pipe-hyperboloid (pīp'hī-pėr"bọ̄-loid), *n.* One of the two principal species of quadrics in Riemannian space.

> In Riemannean space, we find two principal species—*ellipsoid* (with the varieties ellipsoid of revolution, tube sphere), *pipe-hyperboloid* (with the varieties cone, hyperboloid of revolution or elliptic tube, two planes).
> *Science*, Sept. 16, 1904, p. 365.

pipe-jack (pīp'jak), *n.* A jack adapted to the work of driving an iron pipe in a horizontal direction through the soil. The pipe, protected by a conical plug, is laid in the trench with the point against the unexcavated soil, as under a walk or railroad-track, and the jack is placed upon it, when, by the movement of the handle, the pipe is forced through the soil.

pipe-jointer (pīp'join"tėr), *n.* One who makes or closes the joints in a line of pipe.

> A record should be kept of the history of the pipe from the time it is cast to the time it is laid and jointed in the ground, giving the date, number, diameter, length, thickness, and proof pressure, with the name of the *pipe-jointer* whose work closes the record.
> *Encyc. Brit.*, XXV. 509.

Pipe-line certificate, a receipt, akin to a warehouse receipt, given by a pipe-line to a producer of oil who has paid into its tanks or pipes 1000 barrels of oil. Certificates are not given for less amounts. They are negotiable.

pipe-line (pīp'līn), *v. t.*; pret. and pp. *pipe-lined*, ppr. *pipe-lining*. To convey by means of a pipe-line; provide with a pipe-line.

pipeman (pīp'mạn), *n.* A member of an engine company who is detailed to hold the nozle or pipe of the hose and direct its play. *Amer. Inventor*, May 1, 1904, p. 205.

pipemouth, *n.* Specifically—2. A common name of fishes of the genus *Fistularia*, found in tropical seas, and also of the related genus *Macrorhamphosus* of the Mediterranean. See *Fistularia* and *snipe-fish*.

piper¹, *n.* 3. In *ichth.*: (*c*) Same as ★*balao*¹.—8. In Newfoundland, a haddock which is only half dried.

pipe-rack, *n.* It is also called a *rack-board*.

Piperales (pip-ẹ-rā'lēz), *n. pl.* [NL. (Lindley, 1833), ‹ *Piper*² + *-ales*.] An order of dicotyledonous archichlamydeous (apetalous) plants embracing the three families *Piperaceæ*, *Saururaceæ*, and *Chloranthaceæ*.

piperazine (pip-ėr-az'in or pip'ėr-a-zin), *n.* [L. *piper*, pepper, + *azine*.] A deliquescent crystalline base, $(C_2H_4)_2(NH_2)_2$ or diethylenediamine, which is made by the action of alcoholic ammonia on ethylene chlorid, and in other ways. It melts at 104° C. It is a valuable solvent for uric acid and is used in medicine for that purpose.

piperideine (pī-pe-rid'ẹ̄-in), *n.* Same as ★*hexazene*.

piperidic (pī-pe-rid'ik), *a.* [*piper(ine)* + *-id* + *-ic*.] Derived from piperine.—**Piperidic acid**, a crystalline acid, $NH_2.C_3H_6.COOH$ or 4-aminobutyric acid, made by the successive action of cold nitric and hot hydrochloric acid on piperidyl urethane.

piperidinic (pī-per-i-din'ik), *a.* [*piperidine* + *-ic*.] Derived from piperidine.—**Piperidinic acid.** Same as ★*piperidic acid*.

piperidyl (pī-per'i-dil), *n.* [*piperid(ine)* + *-yl*.] The hypothetical radical, $C_5H_{10}N$, of piperidine.—**Piperidyl urethane**, a liquid, $C_5H_{10}NCO_2C_2H_5$, made by the action of piperidine on ethylchloroformate. It yields piperidic acid when oxidized with nitric acid. It boils at 211° C.

pipe-ring (pīp'ring), *n.* See ★*pipe-hanger*.

piperitone (pī-per'i-tōn), *n.* [L. *piper*, pepper, + *-i-* + *(ke)tone*.] A cyclic ketone contained in the oil of the peppermint-eucalyptus from Australia.

piperno (pē-per'nō), *n.* [It. *pipero*, ‹ *Piperno*, a town in Italy.] An Italian name for trachyte or trachytic tuff characterized by the presence of dark spots or streaks in a light-colored mass, as though brecciated.

> The foundation of the hill [Camaldoli] consists of a volcanic rock, which is quarried at Pianura as building-stone, and which is known by the name of *piperno*.
> *Geog. Jour.* (R. G. S.), X. 478.

pipe-roll, *n.* 2. A roller whose diameter is smaller at the center than at the ends, used as a support for a pipe so that the latter may be free to move endwise when it expands or contracts because of a change of temperature.

piperonal (pī-per'ọ̄-nal), *n.* [L. *piper*, pepper, + *-one* + *-al*³.] A white crystalline substance, $C_8H_6O_3$, the methylene ether of protocatechuic aldehyde. It is made by oxidizing piperic acid with potassium permanganate, and in other ways. Known in perfumery as *heliotropin*, on account of its odor.

piperonylic (pī″pe̤-rō̤-nil′ik), *a.* [*piperon*(*al*) + *-yl* + *-ic.*] Derived from piperonal.—**Piperonylic acid,** a crystalline acid, $C_8H_6O_4$, the methylene ether of protocatechuic acid. It occurs in Paracoto bark and is formed by oxidizing piperonal.

piperovatine (pī″pe̤-rō̤-vā′tin), *n.* [*Piper ovat*(*um*) + *-ine*^{2}.] A crystalline alkaloid, $C_{16}H_{21}NO_2$, extracted from *Piper ovatum* by ether. It melts, with decomposition, at 123° C.

pipery (pip′e̤-ri), *n.* [F. *piperie.*] A native raft or float in the West Indies and South America, of the same nature as a catamaran. *N. E. D.*

piperylene (pī′pe̤-ri-lēn), *n.* [L. *piper*, pepper, + *-yl* + *-ene.*] An oily, unsaturated hydrocarbon, C_5H_{10} or 1,4-pentadiene, made by distilling trimethylpiperidine. It boils at 42° C.

pipe-screwing (pīp′skrö″ing), *n.* **1.** The act or process of joining two pipes by a screwed joint.—**2.** The process of cutting a thread on the end of a pipe.

pipe-stanchion (pīp′stan″sho̤n), *n.* A column made from wrought-iron pipe, for supporting a deck in a ship.

pipe-stand (pīp′stand), *n.* A frame or bracket for holding pipes or for supporting a line of pipe.

Pipe-stem arteries. See ⋆*artery.*

pipe-stone, *n.* **2.** The cast-iron prism lying on the back-stone of a lead-ore hearth and containing an opening for the twyer.

pipe-stop, *n.* **2.** In *organ-building*, a stop of true pipes, that is, flue-pipes, as distinguished from a *reed-stop;* also, any stop on a pipe-organ as distinguished from one on a reed-organ.

pipe-story (pīp′stō″ri), *n.* A fantastic or impossible story, such as one may conceive in a 'pipe-dream.' [Colloq.]

> What appears on its face to be the veriest *pipe-story.*
> *N. Y. Times*, Oct. 16, 1904.

pipe-stove (pīp′stōv), *n.* A hot-blast stove for use in connection with a blast-furnace. The blast is heated by passing through pipes which are heated either by a fire or by the hot gases from the blast-furnace.

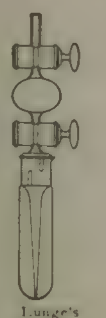
pipe-threader (pīp′thred″ėr), *n.* A machine for cutting screw-threads on the ends of pipes or in pipe-fittings.

pipe-threading (pīp′thred″ing), *n.* The act or process of cutting a screw-thread on a pipe.

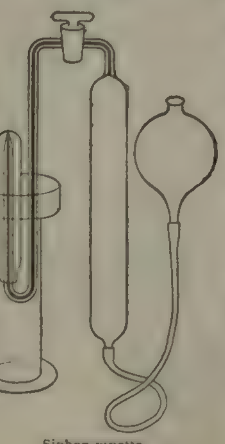
pipe-tower (pīp′tou″ėr), *n.* **1.** A tower or trestle used to support one or more lines of pipe.—**2.** A trestle or support made from pipes or tubing.

pipette, *n.* **3.** A funnel-shaped attachment, with the small end downward, midway in a barometer, to act as a trap to prevent air-bubbles from rising to the top.—**Crampton's pipette,** a pipette especially graduated for use in sugar-analysis.—**Grethen's weighing-pipette,** a graduated glass vessel provided with a stop-cock and an outer guard-tube, used in weighing fuming acids.—**Le Docte's pipette,** a special form of pipette for delivering definite volumes shown by graduation.—**Lunge's pipette,** a special form of pipette used in weighing fuming acids.—**Mohr's pipette,** a pipette used in volumetric analysis.—**Rothe's pipette,** a pipette used in iron analysis.—**Safety pipette,** a pipette for delivering uniformly a given volume of a liquid.—**Siphon-pipette,** an apparatus for transferring gases. It consists of a glass vessel connected with a capillary tube bent on itself and having a stop-cock, and also connected with a reservoir of mercury by means of a piece of rubber pressure-tube.—**Sprengel pipette,** a glass pipette, bent to the shape of the letter U, and terminating in two horizontal capillary tubes: used with advantage as a substitute for the common specific-gravity bottle in determining the density of liquids.—**Treskow's pipette,** a pipette for measuring exact quantities of culture-material into test-tubes.—**Vanier's overflow pipette,** an apparatus consisting of a reservoir for a solution and a graduated device which each time it is filled to overflowing will deliver the same measure of liquid.

Le Docte's Pipette.

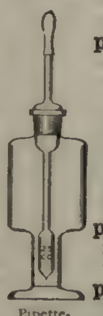


Lunge's Pipette.



Siphon-pipette.

pipette-bottle (pi-pet′bot″l), *n.* A bottle or container having a capped pipette in place of a stopper: used especially for volatile liquids.



Pipette-bottle.

pipe-union (pīp′ū″nyo̤n), *n.* **1.** A screwed union; a device for coupling pipes which consists of three pieces and permits of coupling the pipes without turning either one. One piece is screwed on the end of each pipe, and these are then drawn together by the third, which screws on one of them and has a lip which catches a lip on the other.
2. A flanged union.

pipe-valve (pīp′valv), *n.* Any valve in a line of pipe, as a globe stop-valve.

pipe-welding (pīp′wel″ding), *n.* The act or process of welding together the edges of an iron plate or skelp to form a tube. As the tube is welded it is drawn over a mandrel and through a die, this operation making it round and of the correct size.

pipe-worm (pīp′wėrm), *n.* Same as *tube-worm.*

pipi^2 (pē′pē), *n.* [Maori.] A Maori name of *Mezodesma novæ-zelandicæ*, an edible shell-fish sometimes erroneously called the cockle. *E. E. Morris*, Austral English.

piping-frog (pī′ping-frog), *n.* A small North American tree-frog, *Hyla pickeringi.*

piping-roller (pī′ping-rō″lėr), *n.* The Australian piping-crow, *Gymnorhina tibicen.*

pipiri (pip′i-rē), *n.* [W. Indies. Imitative?] A popular name for one of the larger tyrant-flycatchers, *Tyrannus dominicensis* or *griseus*, common in the West Indies.

pipit, *n.*—**New Zealand pipit,** a name applied to two quite distinct birds, one *Corydalla novæ-zealandiæ*, a true pipit, the other, *Sphenœacus punctatus*, a relative of the nightingale.

pipitzahuac (pē-pit-sä-wäk′), *n.* [Aztec name.] In Mexico, one of several species of *Perezia*, especially *P. Alamani, P. adnata*, and *P. Wrightii*, composites with heads of fragrant rose-purple or white two-lipped flowers, and spinulose-dentate leaves. From the roots of *P. Alamani* and *P. adnata* is prepared a substance called by the same name which has powerful drastic properties and an odor of valerian. It has the form of golden-yellow flakes and is sometimes used as a dye. *Perezia Wrightii* and *P. nana* have tufts of a soft silky substance on the lower part of the stem which is used by the Indians as a styptic to check the flow of blood in wounds. In some parts of Mexico *P. nana* is also sold in the markets as a remedy for gonorrhea.

pipmenthol (pip′men-thol), *n.* [L. *pip*(*er*), pepper, + E. *menthol.*] The menthol from English and American peppermint-oil, which is said by some authorities to be different from ordinary menthol.

Piptomeris (pip-tom′e̤-ris), *n.* [NL. (Turczaninow, 1853), < Gr. *πίπτειν*, to fall, + *μερίς*, part, the calyx lobes in the type species being deciduous after flowering.] A genus of plants of the family *Fabaceæ.* See *Jacksonia.*

pipunculid (pi-pung′kṳ̄-lid), *n.* and *a.* **I.** *n.* A member of the dipterous family *Pipunculidæ.*
II. *a.* Having the characters of or belonging to the family *Pipunculidæ.*

pipy, *a.* **2.** Inclined to pipe or wrinkle on the grain. See ⋆*pipe*^{1}, *v. i.*, 6. *Flemming*, Practical Tanning, p. 432.

piqué, *n.* **4.** In *billiards*, a draw, with the cue held almost perpendicularly, necessitated by the nearness of the cue-ball to an obstructing ball or cushion. It often passes for a massé. See *massé*^{2}. *W. Broadfoot*, Billiards, p. 255.—**Piqué gloves,** gloves in which the inner piece of each finger is sewed on so as to overlap the side pieces.

Piqueria (pi-kwē′ri-ä̤), *n.* [NL. (Cavanilles, 1794), named in honor of Andr. *Piquerio*, a Spanish physician and scientist of the eighteenth century.] A small genus of tropical American composite herbs or subshrubs. It is of general interest because it contains the so-called *Stevia* (but not a true *Stevia*) of florists, much grown for its small, white, fragrant flowers. This plant is *Piqueria trinervia*, of Mexico. It is used for bedding. There is also a form with white-margined leaves and a dwarf compact form. The usual or normal form of the species makes a plant one or two feet tall.

piquet, *n.* **2.** Twelve cards are dealt to each player, two at a time, and no trump is turned. The remaining eight cards are placed on the table face down, divided so that five on the top lie across the three on the bottom. If either player finds he has been dealt a hand which contains no court-card, he scores 10 at once for 'carte blanche.' The object of the game is to hold and score for point, sequence, triplets, and fours. The hands are improved by discarding. The eldest hand discards first, and may take any number of cards from one to five, but must take one. If he takes less than five, he may look at those he might have taken. The dealer can take any or all that the eldest hand leaves, both players discarding before they draw. Announcements are then made, the eldest hand declaring first and in the following order: The point is the suit of the greatest numerical value, reckoning aces 11, court-cards 10, and all others at their pip-value. If the dealer has not a better point than that called by the eldest hand, he says "Good"; if he has an equal one, he says so; if he has better, he says "Not good." The point scores toward game, 1 for each card in it. Sequences are then called. There must be at least three cards, the greatest number in one suit being good. Numbers being equal, the highest card decides which is good. Sequences of five, six, seven, and eight cards count 15, 16, 17, and 18 respectively; three and four, 3 and 4 only. The player holding the best sequence in play can also score any inferior ones he holds, but his adversary cannot score any. Triplets and fours are then called, but they must be tens or better. Four of a kind count 14, three of a kind 3 only. If each has the same number, the highest counts and entitles the holder to count any inferior triplets or fours. After the eldest hand has made all his announcements and has been told whether they are good or not, he leads a card, adding 1 for it, and calling out the total of his score so far. The dealer then announces what he has that is good against the eldest hand's calls. If he wins the first trick, he adds a point for it. The winner of one trick leads for the next, and a point is added for every card led and every winning card played by the second player. If the leader wins the trick, it counts 1 only. Each player constantly repeats the total of his score. If either wins more than six tricks, he adds 10 for cards; if he wins them all, he adds 40 for capot. If either can count to 30 in hand and play combined before his adversary scores a point, he adds 30 to his score for 'pique.' If he can count to 30 in hand alone before his adversary scores a point, he adds 60 for repique. The dealer can never make pique, since the card led stops him, but he may make repique. Equalities do not save the repique. The ordinary game is 100 points, and it is a double game if the loser has not reached 50. *Rubicon piquet* is the modern game, each player having three deals, at the end of which the lower score is deducted from the higher and 100 points added to the winner's side. If the loser has failed to reach 100, all he has scored is added to the winner's score, instead of being deducted.

piracy, *n.* **3.** In *geol.*, that process whereby, because of a higher natural gradient, and therefore more efficient eroding power, one stream cuts back a divide and taps off the head-waters or a tributary of another stream. The captured stream usually turns a sharp angle into its new course and leaves a wind-gap where it formerly flowed. Also called *stream-piracy.*

> The beheading of one stream by another is treated as "*piracy,*" and both "foreign" and "domestic piracy" are explained, the latter phrase being applied to cutting off an ox-bow in a meandering stream.
> *Nature*, July 27, 1905, p. 289.

Domestic piracy, the capture of the head-waters of a stream by one of its own minor tributaries. This form of piracy is possible in very crooked streams where a tributary cutting back may tap the main stream above one of its large bends. *Chamberlin and Salisbury*, Geol., I. 99.—**Foreign piracy,** piracy involving two different stream systems, in contrast with *domestic piracy*, where but one system is affected. See *domestic* ⋆*piracy. Chamberlin and Salisbury*, Geol., I. 99.

pirate, *n.* **5.** A stream that, by reason of its more favorable situation or its greater activity, encroaches upon the territory of a neighboring stream to such extent as to capture a part of its watercourse. *Chamberlin and Salisbury*, Geol., I. 98.

pirate-bug (pī′rā̤t-bug), *n.* Any bug of the family *Reduviidæ* (which see). Also called *cannibal-bug. L. O. Howard*, Insect Book, p. 293.

piratine (pī′ra̤-tin), *a.* [*Pirates* + *-ine*^{1}.] Having the characters of or related to the species of the reduviid genus *Pirates* and its allies.

Piratinera (pī-rat-i-nē′rä̤), *n.* [NL. (Aublet, 1775), of Guianian origin.] A genus of trees of the family *Moraceæ.* See *Brosimum, Galactodendrum*, and *letter-wood.*

pirijao (pē-rẹ̄-bä′ọ̄), *n.* [Native name in Venezuela.] The peach-palm, *Guilielma speciosa.*

piripiri (pē-rẹ̄-pē′rē), *n.* [Polynesian *pili* or *piri*, to adhere or stick to.] The Maori name of *Acæna ovina* and *A. Sanguisorbæ*, with bur-like fruit, which is a pest to sheep. The leaves are made into tea by the natives and are used medicinally. See ⋆*biddy-bid.*

pirita (pē′rẹ̄-tä̆), *n.* [Maori *pirita*, or *kareau pirita*, < *kareau*, whipcord, + *piri*, to fasten together, or entangle.] Same as ⋆*kareau* (which see).

piritu (pē-rē-tö′), *n.* [Braz.] A name given in some parts of Brazil to the sloth.

pirlicue (pėr′li-kū), *n.* [Also *pirliecue, purlicue, parlicue*; < F. *par le queue*, by the tail, at the end.] 1. A dash or flourish at the end of a word in writing. Compare *curlicue.*—2. A review or recital, at the end of a series of addresses or sermons, of the topics treated.

> I doubt the *pirliecue* will please you as little!
> *R. L. Stevenson*, Kidnapped, xxiv.

3. *pl.* Peculiarities or oddities of manner. [Scotch in all uses.]

Piroplasma (pī-rō-plaz′mạ̈), *n.* [NL., < L. *pira*, pear (?), + Gr. πλάσμα, anything formed.] 1. A genus of sporozoans, of the order *Hæmosporidia*. *P. bigeminum* is the parasite which causes Texas cattle-fever and is transmitted by the bites of ticks. Also *Pyrosoma*. *Patton*, 1895.—2. [pl. *piroplasmata* (-mạ-tạ̈).] A protozoan of this genus.

> The Leishman-Donovan body or parasite has been the subject of a research by Lieut. Christophers (Sc. Mem. of the Gov. of India, No. 8). It is met with in India in patients suffering from chronic fever, cachexia, and enlarged spleen. It occurs as a small round or ovoid body 1.5 to 3.5 μ in diameter, free or contained within the leucocytes in the liver and spleen and bone-marrow, but not in the muscles or in the peripheral blood. Christophers observed the parasites also in the arachnoid and in ulcers of the large intestine. He agrees with other British observers that the organism is not a *piroplasma*, as stated by Laveran. *Nature*, May 26, 1904, p. 85.

piroplasmosis (pī″rọ-plaz-mō′sis), *n.* [NL., < *Piroplasma* + *-osis.*] A general name, in human and comparative medicine, for infections of the red blood-corpuscles by parasitic protozoa of the genus *Piroplasma*. These diseases are characterized in general by fever, sudden and very extensive reduction in the red blood-corpuscles, thin watery blood, hematuria, thickened bile, and emaciation. A number of animals are affected at the same time. The infection is spread by means of ticks (*Ixodidæ*). Sometimes *pyroplasmosis.*

> In addition, 'the tropical *piroplasmosis* could not be inoculated into susceptible cattle even with large quantities of blood containing the small piroplasma (*P. parvum*) in great numbers.
> *Jour. Trop. Med.*, Nov. 15, 1904, p. 361.

Piroplasmosis bovis, bovine piroplasmosis, the type of which is Texas fever.—**Piroplasmosis canis**, a very serious anemia of dogs caused by an endoglobular protozoan parasite, *Piroplasma canis*, which is transmitted by ticks (*Hæmaphysalis leachi*).—**Piroplasmosis hominis.** (*a*) A synonym of *dumdum* ★*fever* or ★*kala-azar* (tropical non-malarial splenomegaly) of man, the parasite of which was classified by some authors as a *piroplasma*. See *Leishman-Donovan* ★*body.*" (*b*) Proposed by Wilson and Chowning (1904) as a technical name for Rocky Mountain spotted fever of man, under the supposition that it was caused by a parasite classified as *Piroplasma hominis.*—**Piroplasmosis ovis**, or ovine piroplasmosis, a disease of sheep, similar to Texas fever of cattle, found especially in the valley of the Danube, and caused by a microscopic parasitic protozoön (*Piroplasma ovis*) which lives in the red blood-corpuscles. It is transmitted to healthy sheep by adult ticks (*Rhipicephalus bursa*) descended from parent ticks which have fed on other sheep suffering from the same disease. Known as *carceag.*

pirouette, *n.* 3. In old reed-instruments of the oboe class, the globular cup or bowl in which the reed was inclosed and which served as a kind of mouthpiece. *Sci. Amer. Sup.*, April 29, 1905, p. 24518.

pirssonite (pēr′sọ-nīt), *n.* [Named after Professor L. V. *Pirsson* of New Haven, Connecticut.] A hydrated carbonate of calcium and sodium, $CaCO_3.Na_2CO_3+2H_2O$, occurring in colorless or white prismatic crystals: found at Borax Lake, California.

pirylene (pir′i-lēn), *n.* An unsaturated hydrocarbon, C_5H_6, with a double and a triple bond, made by distilling dimethylpiperideine-*a*-methyl iodide over soda-lime. It is a liquid with a peculiar odor and boils at 60° C.

pisang (pẹ̄-sang′), *n.* [Malay.] In the Malay Archipelago, the banana, *Musa paradisiaca.*—**Wild pisang**, a South African plant, *Strelitzia angusta.*

pisang-ayer (pẹ̄-saug″ä′yär), *n.* [Malay *pisang*, banana, + *ayer*, water.] In the East Indies, the traveler's-tree, *Ravenala Madagascariensis*. See *traveler's-tree.*

piscatorially (pis-kạ̄-tō′ri-al-i), *adv.* In a piscatorial manner; with piscatory intent, as a fisherman.

> Brush Lake, one mile east of the Park, affords rare attractions to the *piscatorially* inclined visitor.
> *Buck*, Med. Handbook, IV. 247.

Piscian (pis′i-ạn), *a.* [NL. *Pisces* (pl. of *piscis*), + *-i-an.*] Denoting stars which have spectra resembling that of the star 19 Piscium: a term proposed by Lockyer.

> Reference is also made to Prof. Hale's suggestion that because the lines which are widened in sun-spots appear as strong dark lines in *Piscian* stars, the effect may be produced because sun-spots are more numerous in such stars. *Nature*, July 14, 1902, p. 262.

piscidine (pis′i-din), *n.* [*Piscid*(*ia*) + *-ine*².] A poisonous crystalline substance, $C_{29}H_{24}O_8$, extracted from the bark of *Piscidia erythrina*. It dilates the pupil of the eye. It melts at 192° C.

pishogue (pi-shōg′), *n.* [Ir. *piseog*, witchcraft.] Witchcraft; incantation; charm. [Irish.]

pisimetacarpal (pī-si-met-ạ-kär′pạl), *a.* Pertaining both to the pisiform bone and to the metacarpus.

pisky (pis′ki), *n.* Same as *pixy.*

Pisolitic iron ore. See ★*iron.*

pisselæum (pis-e-lē′um), *n.* [NL., < Gr. πίσσα, pitch, + ἔλαιον, oil.] An oil-like liquid substance which makes its appearance in boiling pitch. [Rare.]

pistachio-oil (pis-tā′shiō-oil), *n.* See ★*oil.*

pistic² (pis′tik), *a.* [Gr. πιστικός, faithful, genuine, < πίστις, faith, trust.] Pertaining to or of the nature of faith.

Pistillaria (pis-ti-lā′ri-ạ̈), *n.* [NL. (Fries, 1821), < *pistillum*, a pestle, in allusion to the shape of the fungus.] A genus of hymenomycetous fungi of the family *Clavariaceæ*, having simple, clavate, stipitate fruiting-bodies and basidia bearing two spores. About 50 species have been described, most of which are saprophytic. *P. micans* occurs on dead herbaceous stems and leaves in Europe and North America.

pistilligerous (pis-ti-lij′ẹ-rus), *a.* [NL. *pistillum*, pistil, + L. *gerere*, bear, + *-ous.*] Same as *pistillate.*

pistillode (pis′ti-lōd), *n.* [NL. *pistillum*, a pistil, + Gr. εἶδος, form.] The rudiment or vestige of a pistil. Compare *staminode.*

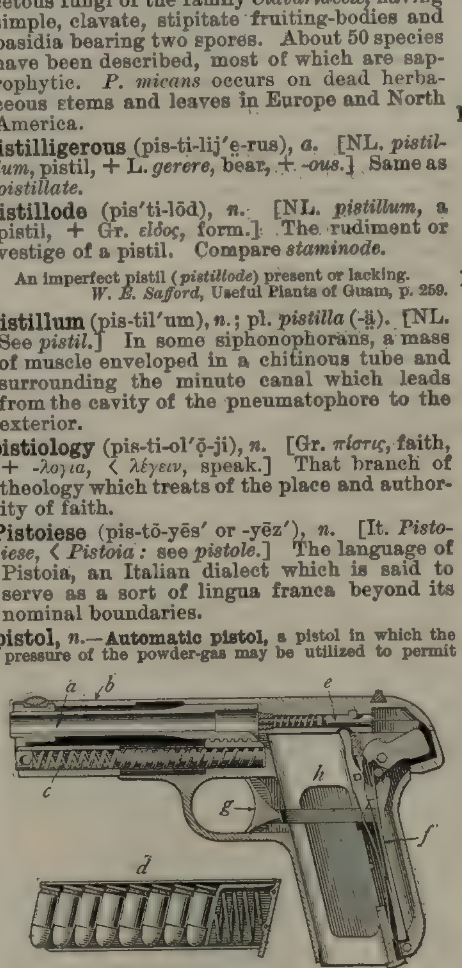
> An imperfect pistil (*pistillode*) present or lacking.
> *W. E. Safford*, Useful Plants of Guam, p. 259.

pistillum (pis-til′um), *n.*; pl. *pistilla* (-ạ̈). [NL. See *pistil.*] In some siphonophorans, a mass of muscle enveloped in a chitinous tube and surrounding the minute canal which leads from the cavity of the pneumatophore to the exterior.

pistiology (pis-ti-ol′ọ̄-ji), *n.* [Gr. πίστις, faith, + -λογια, < λέγειν, speak.] That branch of theology which treats of the place and authority of faith.

Pistoiese (pis-tō-yēs′ or -yēz′), *n.* [It. *Pistoiese*, < *Pistoia*: see *pistole.*] The language of Pistoia, an Italian dialect which is said to serve as a sort of lingua franca beyond its nominal boundaries.

pistol, *n.*—**Automatic pistol**, a pistol in which the pressure of the powder-gas may be utilized to permit continuous firing by continuing pressure on the trigger: there are various kinds, as the Colt, Luger, Mannlicher, etc.



Automatic Pistol.

a, barrel; *b*, slide; *c*, retractor-spring; *a*, cartridge-magazine; *e*, firing-pin; *f*, mainspring; *g*, trigger; *h*, seat for cartridge-magazine.

piston, *n.*—**Combination piston.** See ★*combination.*—**Displacer piston**, an auxiliary piston used in some internal-combustion engines for driving the products of combustion out of the cylinder. A more common device is to flush the cylinder with air after each explosion.—**Spring-piston**, any engine-piston which has spring packing-rings.—**Telescopic piston**, an arrangement of a central piston working in a hollow piston or tube which may work either in a fixed cylinder or in another tube: used in some forms of hydraulic elevators.

piston-area (pis′tọn-ā″rẹ̄-ạ̈), *n.* The area of the flat surface or end of a piston; in an engine, the area of the cross-section of the bore of the cylinder. This is usually slightly greater than the area of the piston, on account of the clearance allowed and the wear, the piston-rings keeping the piston tight.

piston-bellows (pis′tọn-bel″ōz), *n.* A piston-blower; a machine for moving air, consisting of a cylinder which has suitable supply- and exhaust-passages, fitted with valves, and a piston which is moved back and forth in the cylinder.

piston-displacement (pis′tọn-dis-plās″mẹnt), *n.* 1. The distance the piston has traveled from the end of its stroke.—2. The volume of a cylinder having the same diameter as the piston and a length equal to its stroke.

piston-elevator (pis′tọn-el″ẹ̄-vā-tọr), *n.* A form of elevator or lifting-apparatus in which the cage or platform is at the end of a piston-rod, whose piston receives the effort of air, steam, or water to overcome the resistances of the load. When the piston is above the cage, the device is applicable only to small lifts; when it is below, the cylinder can be let into the ground, and less limit in height is set. When the cylinder is below the cage or platform it is usually a ★plunger-elevator (which see).

piston-meter (pis′tọn-mē″tėr), *n.* A device for measuring the quantity of water flowing through a pipe. It operates by the pressure of the water, which moves reciprocating pistons.

piston-motor (pis′tọn-mō″tọr), *n.* Any engine which transforms the pressure of a fluid or gas into rotary motion through the medium of a reciprocating piston and a connecting-rod and crank; a piston-engine. The ordinary steam-engine is an example. *F. R. Hutton*, Gas Engine, p. 77.

piston-recorder (pis′tọn-rẹ̄-kôr″dėr), *n.* In *exper. physiol.* and *psychol.*, a recording-instrument which replaces the Marey tambour in work with the plethysmograph, etc. Within a glass cylinder, which is connected by rubber tubing to the plethysmograph, etc., slides a disk of hard rubber, plaster of Paris, or the like, joined by a vertical rod to the writing lever. The disk and rod constitute the piston. *Amer. Jour. Psychol.*, XII. 327.

piston-ring (pis′tọn-ring), *n.* A packing-ring; a ring, usually of cast-iron, brass, or steel, placed in a groove in a piston for the purpose of preventing the steam or gas from passing the piston. These rings can spring outward and press on the walls of the cylinder either by their own elasticity or because of springs placed behind them to push them out.

piston-spring, *n.* 2. A spring used to force a packing-ring, or other packing for a piston, against the walls of the cylinder.

piston-valve, *n.* 2. A valve located in a piston.

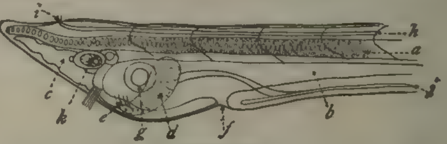
pit¹, *n.* 13. A cavity in the side of the head, between the eye and nostril, found in the poisonous snakes of the subfamily *Crotalinæ*, whence their name of *pit-vipers*. This pit is lined with membrane supplied with branches from the trigeminal nerve, but its exact function is not known. See cut under *pit-viper*

> The word "*pit*" relates to the deep depression found in rattlesnakes, copperheads, and moccasins on both sides of the face between the nostril and the eye. Furthermore, this characteristic applies only to the Crotalids, and its presence at once places the serpent in the "dangerous" category. *Sci. Amer.*, Feb. 14, 1903, p. 118.

Bordered pit. See ★*bordered.*—**Cold pit**, in *gardening*, an earth-pit.—**Floridean pit**, the central pit in the cross-wall of all the red algæ which belong to the *Florideæ*. The pits are closed by a thin membrane and do not permit the free passage of the cell contents in bulk.—**Genetic pit**, a term applied to two pits in a wall separating two plant-cells, together with the fine strands of protoplasm which perforate the wall.

> The common wall separating the pits of the two adjoining cells is pierced by strands of protoplasm. The whole structure, consisting of the two pits and the wall between, is known as a *genetic pit*.
> *Encyc. Brit.*, XXV. 408.

Preoral pit, a depression on the left side in the roof of the buccal cavity of the lancelet, or *Amphioxus*. This pit is constricted off from the anterior end of the archenteron during early life as the left one of a pair of cœlomic pouches, and gives rise to the groove of Hatschek.



Preoral Pit.

Anterior end of young larva of *Amphioxus lanceolatus*, highly magnified. *a*, notochord; *b*, enteric canal; *c*, cœlome of head; *d*, club-shaped gland; *e*, its external aperture; *f*, first gill-slit; *g*, mouth; *h*, nerve-tube; *i*, neuropore; *j*, subintestinal vein; *k*, preoral pit.

(From Parker and Haswell's "Zoology," after Korschelt and Heider, after Hatschek.)

pita, *n.* **3.** In southern Mexico, Central America, and tropical South America, a name applied to various textile plants and the fiber produced from them: especially applied in the low, moist regions of Mexico and Central America to *Karatas Karatas,* which yields a strong and durable fiber.—**Pita de zapateros** (shoemakers' pita), on the Isthmus of Panama, where it grows in the forests, *Karatas Karatas,* the fiber of which is used by the native shoemakers for sewing shoes.

pitahaya, *n.*—**Pitahaya agria** (sour pitahaya), a columnar cactus, *Cereus Cumengii,* common on the peninsula of Lower California, and especially so in the region of Cape St. Lucas. Its fruit, about the size of an egg, is filled with a red, juicy pulp having an agreeable sweet-acid flavor, and is highly esteemed by the natives, who eat it either fresh or in the form of jelly or paste.—**Pitahaya de Agosto,** the fruit of a strawberry-cactus, or alicoche, *Echinocereus conglomeratus,* which in northern Mexico ripens during the month of August.—**Pitahaya de monte** (forest pitahaya), on the Isthmus of Panama, an epiphytal cactus, *Epiphyllum Phyllanthus,* with flat leaf-like branches having a mid-rib and lateral veins, and a crenated margin from the crenatures of which grow the large handsome flowers.—**Pitahaya de San Juan,** the fruit of a strawberry-cactus, or alicoche, *Echinocereus stramineus,* which in northern Mexico is ripe on St. John's day.—**Pitahaya dulce** (sweet pitahaya), a columnar cactus, *Cereus Thurberi,* of the southwestern United States and northern Mexico, the sweet juicy fruit of which is highly esteemed by the Indians and Mexicans. It is larger and sweeter than that of *C. giganteus,* and is used by the Pimas, Maricopas, and Yuma Indians for making a fermented intoxicating drink upon which they become intoxicated on certain festive occasions, the revelry continuing for a week or two at a time and the Indians taking turns so that they may not all be drunk at the same time.

pitajaya (pē-tä-hä'yä), *n.* See *pitahaya.*

pitanga (pē-täng'gä), *n.* [Tupi.] Any one of three species of trees belonging to the genus *Eugenia, E. uniflora, E. Pitanga,* and *E. dasyblasta,* especially the first named. They are natives of Uruguay, Paraguay, and southern Brazil, and bear well-tasting subacid edible fruits. *E. uniflora* is cultivated in the warmer regions of both hemispheres on account of its excellent fruit, and is more commonly known as *Surinam cherry.* See *Surinam* ★*cherry* (*b*).

pitangatuba (pē-täng"gä-tö'bä), *n.* [Tupi.] A Brazilian fruit-tree of the myrtle family, *Eugenia edulis,* the edible fruits of which are the size of apples.

pitayita (pē-tä-yē'tä), *n.* [Mex. *pitahayita,* diminutive of *pitahaya,* which see.] **1.** In Mexico, one of several fruit-bearing cacti which climb upon the trunks and limbs of trees by means of roots; especially *Cereus compressus,* a plant with 3-angled branches rooting at the joints, and large fruit with a pleasant sweet-acid flavor.—**2.** In southern Mexico, one of several species of *Epiphyllum,* sometimes called pitayita de agua, especially *Epiphyllum angulifer, E. latifrons,* or *E. phyllanthoides,* plants with flat, crenated, leaf-like branches, having a mid-rib and lateral veins, and handsome white or red flowers growing from the crenatures.—**3.** In Lower California and several islands of the Gulf of California, *Cereus striatus,* a straggling, weak-stemmed cactus, which hangs over rocks and bushes for support. It has large, fleshy roots, which are sliced and dried, and offered for sale as a remedy for maladies of the throat and lungs.

pit-bank (pit'bangk), *n.* In *mining,* the raised ground or platforms upon which the coals are sorted and screened at the surface. *Gresley.*

pit-bar (pit'bär), *n.* A timber used to support the sides of the shaft of a mine. *N. E. D.*

pit-bird (pit'bėrd), *n.* The reed-warbler. [Local, Eng.]

pit-bottomer (pit'bot"um-ėr), *n.* In *mining,* one who works at the pit-bottom. [Local, Eng.]

pit-brow (pit'brou), *n.* A mound at the mouth of a mine built by the dumping of the refuse.

pitch^1, *v. t.* **10.** To set out, as plants.

> After your crop is *pitched* or planted, in the manner directed, it will require your closest attention.
> *W. Tatham,* Culture and Commerce of Tobacco, p. 122.

11. In *golf,* to strike (the ball) with a lofted club so that it goes up into the air and alights with little roll.

pitch^1, *n.* **7.** (*g*) In *textile manuf.,* the setting, or distance apart, of the wire teeth in card-clothing.—**15.** In *golf,* a ball played with more or less loft. *W. J. Travis,* Practical Golf, p. 65.—**16.** In *cricket:* (*a*) That part of the cricket-field upon which the batting and bowling are done. (*b*) The point at which the ball first touches the ground when bowled. (*c*) Of the ball bowled, the distance between the bowler's wicket and the point where the ball first touches the ground; the length.—**17.** In *building,* the slope, as of a roof; the angle with the horizon, generally stated in terms of the horizontal and vertical. Thus, a tin roof may have a pitch of one in twenty-four, or half an inch to a foot.—**18.** In an electric generator or motor, the distance from the center of a pole to that of the next pole of opposite sign, measured along the pitch-line. *Encyc. Brit.,* XXVII. 578.—**Absolute pitch,** in *music:* (*a*) Precise pitch determined theoretically according to some particular standard or system. (*b*) The memory of such precise pitch, or the power to reproduce it at will. A person with the sense of absolute pitch can name tones correctly upon hearing them, even in fortuitous or distracting relations; can produce particular tones with the voice without help from instruments or other artificial reference; and can even give tones at correct pitch while incorrect tones are being sounded. The capacity or faculty of noting absolute pitch seems to vary in different persons, but it can be greatly cultivated by attention and practice. Many otherwise good musicians lack it, while some who are not specially musical have it. It is often notable in the case of the blind.—**Axial pitch,** the pitch of a screw, the distance between the successive convolutions of the thread of a screw, being the axial distance passed over by the thread of the screw or other helix in one complete revolution around the axis.—**Cake-pitch.** Same as ★*ingot-pitch.*

> Refiners commonly distinguish "ingot- or *cake-pitch*" and "wire-bar pitch"; copper brought to the former contains more cuprous oxide than the latter. These two pitches are, however, not absolutely fixed; they vary with the practice of the individual refiner and with thickness of the cake or bar that is to be cast.
> *Electrochem. Industry,* March, 1904, p. 88.

Circular pitch, the distance along the pitch-circle of a gear or rack from a point on one tooth to the corresponding point on the next tooth. This distance can be found by dividing the pitch-circumference of the gear by the number of teeth on the gear.—**Commercial pitch.** Same as *auction-pitch* (which see, under *pitch*^{1}).—**Forward pitch,** in *elect.,* a pitch or twist of an armature-winding in a clockwise direction, as viewed from the commutator.—**Fractional pitch,** the pitch of a screw-thread which is not an aliquot part of an inch and is not, therefore, directly divisible by or into the pitch of a lead-screw. The ratio of the gears necessary to cut such a thread can be found by reducing the ratio of the pitch of the lead-screw to the pitch to be cut to a simple fraction: thus, if it were necessary to cut a screw of $11\frac{1}{2}$ threads per inch with a lead-screw of 4 threads per inch, we have $\frac{4}{11\frac{1}{2}} = \frac{8}{23}$, the necessary ratio of the gears. **In tough pitch,** in *copper-refining,* said of the metal when by means of the poling process oxygen has been eliminated and carbon not introduced, so that the metal is at its maximum of toughness.—**Normal pitch,** the pitch of a screw, worm, or worm-gear measured normal or perpendicular to the direction of the teeth, as distinguished from the circumferential pitch of wheels or the axial pitch of helices.—**Pitch memory.** See ★*memory* and *absolute* ★*pitch.*—**Pitch number,** in *acoustics,* a numerical designation of the frequency of a musical tone; the number of vibrations which a sounding body makes in a second of time.

pitch^2, *n.*—**Earth-pitch.** Same as *mineral pitch* (which see, under *mineral*).—**Pitch cap.** See ★*cap*^{1}.—**Road-pitch,** boiled coal-tar, brought to the proper consistence and temperature for use in filling the interstices between bricks or wooden blocks in laying pavement.—**Stearin pitch,** a black, lustrous, brittle material, resembling pitch, which is left in the stills after the fatty acids intended for candle-making have been distilled with superheated steam. It is used in making black varnish and for other purposes.—**Trinidad pitch,** a trade-name for asphalt or bitumen from the pitch lake of the island of Trinidad, extracted on a large scale for industrial purposes.

pitchblende, *n.* It is a black mineral found chiefly in the mines of the Erzgebirge, between Saxony and Bohemia, and until recently known simply as the chief source of oxid of uranium, used in staining glass and painting on porcelain. In it have been found many of the substances which have been observed to present the property of radioactivity.—**Joachimsthal pitchblende,** the uranium ore known as pitchblende or uraninite, which has been the chief source of uranium oxid and more recently of radium compounds. It is found at Joachimsthal and Přibram in Bohemia, and on the other side of the same mountain-range at Johanngeorgeustadt, Marienberg, and Schneeberg in Saxony.

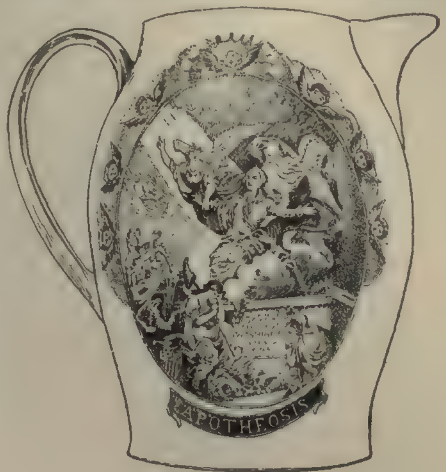
pitch-brand (pich'brand), *n.* [*pitch*^{2} + *brand.*] A brand or mark of ownership made with pitch upon a sheep, etc.; also, figuratively, a distinctive evil mark or characteristic. *N. E. D.*

pitch-cone (pich'kōn), *n.* In *gearing,* the imaginary cone on the surface of which lie the pitch-circles of a bevel-gear; an imaginary cone generated by the revolution of a line drawn from the intersection of the axes of two bevel-gears, to a point in the plane of the axes whose distance from the axes is proportional to the diameters of the gears.

pitch-curve (pich'kėrv), *n.* In *phonet.,* a phonographic curve of a vowel, spoken isolatedly; a curve which shows the course of pitch changes during a vocal utterance.

> The course of pitch is greatly influenced by the neighboring consonants; the more emphatic the consonant, the greater is its influence on the *pitch-curve;* the following consonant often cuts the vowel off at or near the maximum. *Scripture,* Exper. Phonetics, p. 478.

pitcher^2, *n.*—**Washington pitcher,** a jug of cream-colored ware, supposed to be of Liverpool manufacture, having a black printed portrait or design commemorative of Washington.



Washington Pitcher.
Liverpool, England, 1800.
(In the Pennsylvania Museum, Philadelphia.)

pitcheri, pitchery (pich'e̤-ri), *n.* [Also *pitcherie, pidgery,* etc.] A colonial form of ★*pituri.*

> *Pitcherie* is extensively chewed among the aboriginal Australians; it consists of twigs of about the thickness of rye-grass stems, which are first chewed into a mass, then mixed with the ash of gum trees, and made into a paste which is chewed for its stimulating and narcotic effects. *Lancet,* July 18, 1903, p. 152.

pitch-feeling (pich'fē"ling), *n.* In Wundt's *psychol.,* a simple feeling or affective process, specifically correlated with tonal pitch. *W. Wundt* (trans.), Outlines of Psychol., p. 34.

pitchfork, *n.* **3.** *pl.* Either *Bidens cernua,* the nodding bur-marigold, or *B. frondosa,* the black beggar-ticks: so called from the two prong-like awns of the adhesive achenes. See ★*devil's-pitchforks.*

pitchi (pich'i), *n.* [Australian.] A wooden vessel used for carrying food, water, and occasionally infants. [Central Australia.]

> *Pitchi,* a name given to a wooden receptacle hollowed out of a solid block of some tree, such as the Batswing Coral (Erythrina vespertilio), or Mulga (Acacia aneura), and carried by native women in various parts of Australia for the purpose of collecting food in, such as grass seed or bulbs, and sometimes for carrying infants. The shape and size varies much, and the more concave ones are used for carrying water in.
> *E. E. Morris,* Austral English.

pitch-impression (pich'im-presh"o̤n), *n.* In *psychol.* and *phonet.,* the apparent pitch of a tonal complex. Usually the lowest tone of the complex gives the pitch to the whole; but this is not always the case.

> The results obtained by the preceding methods give the *pitch-impressions* of various mouth positions, and, in as far as these mouth positions represent the positions for the vowels, they are of value as phenomena of hearing.
> *Scripture,* Exper. Phonetics, p. 289.

pitch-line, *n.* **2.** In *elect.,* the mean path traveled, in revolving, by the active wires of the armature of a generator or motor.

> The *pitch-line* being defined as a circle drawn through the middle of the length of the inductors, or, in other words, as the mean path traversed by them in their rotation. *Encyc. Brit.,* XXVII. 578.

pitch-mop (pich'mop), *n.* A kind of brush with which melted pitch is laid on the surface of perpendicular work.

pitch-off (pich'ôf), *n.* An unusually abrupt slope.

> At Keeling atoll, in the Paumotu Archipelago, Captain Fitzroy, R. N., found no bottom in 7200 feet at 2200 yards from the breakers—which gives a *pitch-off* exceeding 1: 0.92. *Dana,* Manual of Geol. (4th ed.), p. 20.

pitchometer (pich-om'e-tėr), *n.* [Irreg., < *pitch*^{1} + *-o-meter.*] An instrument for measuring the pitch of a screw-propeller. It consists of an arm normal to and pivoting around a shaft placed in the axial line of the propeller, which carries a sliding pointer-arm with an adjustable point at right angles to the first arm and parallel to the axis of the propeller. By bringing the point of the pointer-arm in contact with a point on the surface of the propeller-blade, its distance from the axis and from the plane of reference at right angles to the axis, formed by the first arm, can be determined from suitable scales on the arm and the pointer. By revolving the system around its axis, a series of such points on the surface can be measured.

pitch-pocket (pich'pok"et), *n.* A cavity in wood, filled with resin.

pitch-rhythm (pich′riᴛʜm), *n.* In *phonet.*, a rhythm produced in its purest form by the alternation of two tones of the same tint, of equal energies and durations, but of different pitches, and with no interval of silence between them. *Scripture*, Exper. Phonetics, p. 519.

pitch-streak (pich′strēk), *n.* In *lumbering*, a seam or shake filled with resin.

pitch-surface (pich′sėr″fās), *n.* In any toothed wheel or gear, the imaginary surface so located with respect to the axis of the wheel that if the teeth were to disappear, and the wheel to drive by frictional contact with a similar surface on the other wheel, the angular-velocity ratio of the two wheels or shafts would be the same as it is with the teeth in action. In spur-gears the pitch-surface is a cylinder; in bevels it is a cone, in skew-bevels a hyperboloid. The laying out of teeth by proper curves is always started from the pitch-surface; the distance between teeth should be measured on it.

pitchuri, *n.* Same as ★*pituri.*

pitch-worm (pich′wėrm), *n.* Same as ★*pinesesian.*

pit-dwelling (pit′dwel″ing), *n.* A dwelling or hut which is largely below the surface so that little more than the roof projects above ground, this often being covered with earth. The term is especially applied to such ancient dwellings of which little more remains than the hole or pit which they occupied.

At Inyanya there are countless "*pit dwellings,*" consisting of a pit and passage and hut platforms. The elucidation of the mystery of their use is assisted by a study of the Niekerk ruins, which are the most remarkable in the country. The area of these ruins is not less than fifty square miles, and within this area it is almost impossible to walk more than ten yards without coming upon a wall. *Athenæum*, Dec. 16, 1905, p. 842.

On the Ancient *Pit-Dwellings* of the Pelorus District, South Island, N. Z. *Geog. Jour.* (R. G. S.), XI. 102.

pit-eye, *n.* **2.** See the extract.

The cages came up crammed and crammed again with the men nearest the *pit-eye*, as they call the place [in a mine] where you can see daylight from the bottom of the shaft.
R. Kipling, At Twenty-Two, in Indian Tales, p. 113.

pit-gage (pit′gāj), *n.* A rain-gage set up at the center of a shallow saucer-like pit, so that the mouth of the gage is at the same height as the surrounding ground.

Professor Joseph Henry, about 1850, recommended to the observers of the Smithsonian Institution the use of the "*pit-gauge*" [rain-gauge]. *Encyc. Brit.*, XXX. 701.

pith, *n.* **2.** (*c*) The soft interior portion of the shaft of a feather.

pithecan (pi-thē′kan), *a.* and *n.* [Gr. πίθηκος, ape, + *-an.*] **I.** *a.* Of or pertaining to apes of the hominiform or manlike type, as *Pithecanthropus.*

II. *n.* A hominiform or man-like ape: a hypothetical animal of higher brain-capacity than the anthropoid apes, but lower than the average in man, yet approaching man in erect gait. See ★*Pithecanthropus*, 1.

Pithecanthropus (pith″ẹ-kan-thrō′pus), *n.* [NL., < Gr. πίθηκος, ape, + ἀνθροπος, man.] **1.** A hypothetical genus proposed by Haeckel to fill the gap between the anthropoid apes and man.

These Ape-like men, or *Pithecanthropi*, very probably existed toward the end of the Tertiary period. They originated out of the Man-like Apes, or Anthropoides, by becoming completely habituated to an upright walk, and by the corresponding stronger differentiation of both pairs of legs. *Haeckel* (trans.), Hist. Creation, II. 293.

2. An extinct hominiform animal approaching the human type more closely than any of the anthropoid apes. The genus is based only on two molar teeth, an incomplete calvarium, and a diseased femur found in central Java, in a deposit of volcanic ash said to be of Pliocene age. The capacity of the calvarium is about two thirds the average of that of the human skull. It is characterized by a low forehead and prominent supra-orbital ridges. The femur measures 455 millimeters in length, is straight, and indicates by its shape that the animal walked erect. The name *Pithecanthropus erectus* was given to it by the discoverer (Dubois) "in order to furnish with a definite habitation and a name the theoretical *Pithecanthropus* of Haeckel." *Beddard*, Mamm., p. 584.

Still, however, in every case earliest man was unmistakably man. No links connecting him with other anthropoids had been found. Very recently, however, have been found, by Du Bois, in Java, the skull, teeth, and thigh bone of what seems to be a veritable missing link, named by the discoverer *Pithecanthropus erectus.* The only question that seems to remain is whether it should be regarded as an ape more manlike than any known ape, or a man more apelike than any yet discovered. The age of this creature was either latest Pliocene or earliest Quaternary. *Le Conte*, in Pop. Sci. Mo., Feb., 1900, p. 548.

pithecian (pi-thē′si-an), *a.* [NL. *Pitheci*(*a*) + *-an.*] Characteristic of or relating to the New World monkeys of the genus *Pithecia;* pithecine: contrasted with ★*cebian.*

pitheciine (pi-thē′si-in), *a.* [NL. *Pitheciinæ.*] Pertaining to or having the characters of the monkeys of the subfamily *Pitheciinæ;* pithecian.

Pithecoid reversion. See ★*reversion.*

pithecometric (pith-ẹ-kọ-met′rik), *a.* [Gr. πίθηκος, ape, + μέτρον, measure.] Of or pertaining to the measurement or proportions of the bodies of the apes in comparison with the human body.

The standard *pithecometric* proposition would then be worded in this more exact way: "The comparative anatomy of all organs within the catarrhine group leads us to one and the same result—the morphological differences between man and the anthropomorphous Old-World apes are not so great as those which separate these anthropoids from the papiomorphous baboons, the lowest of the catarrhines.
Haeckel (trans.), in Smithsonian Rep., 1898, p. 465.

pithecomorphic (pith-ẹ-kọ-môr′fik), *a.* [Gr. πίθηκος, ape, + μορφή, form, + *-ic.*] Having the form or characters of an ape; ape-like. Contrasted with *anthropomorphic.*

pith-fleck (pith′flek), *n.* A minute brown speck found in the wood-layer of many trees, due to the boring of insects.

pit-hole, *n.* **2.** The grave. *Halliwell.*

pit-lathe (pit′lāᴛʜ), *n.* A lathe for which a pit is provided, just in front of the headstock, to allow for the turning of work of large diameter, such as fly-wheels for engines, etc.

pitman, *n.* **4.** See the extract.

Pitsawing was done by two men with a long saw that had cross handles on each end. A stick of timber, hewed square, was placed over a pit, or elevated on trestles. One man stood on top of it and pulled the saw up, and one man stood in the pit below to pull the saw down. The workman on top, who guided the saw along the chalk line and who was supposedly the better man, was called the top-sawyer. The one below was called the *pit-man.* *Fox*, quoted in Dialect Notes, II. vi.

pitomba (pē-tōm′bä), *n.* [Native name in Brazil.] A tree of the myrtle family, *Eugenia Luschnathiana*, native to northern Brazil, which bears edible fruit.

pitombeira (pē-tọm-bā-ē′rä), *n.* [Native name in Brazil.] A tree of the soapberry family, *Talisia esculenta*, native of Brazil. The fleshy aril of the seeds is edible.

piton (pi-toṅ′), *n.* [F.] A point; a peak.

Northern Martinique, like other West Indian islands, is a labyrinth of mornes and *pitons*, i.e., of singularly steep peaks and ridges (partly volcanic cones, partly erosional forms), densely clothed with forests and herbage. *Pop. Sci. Mo.*, July, 1902, p. 274.

pit-planting (pit′plan″ting), *n.* See ★*trench-planting.*

pit-shop (pit′shop), *n.* A cellar or other underground place used as a workshop.

As far back as 1854 we find the [Glasgow tailors'] union resolving that the members employed in a certain notorious underground cellar "should finish their jobs and leave, until a better workshop was got." In the next year . . . the general meeting resolved: "that those employers who have *pit-shops* . . . receive notice to get proper workshops." *Webb*, Indust. Democracy, I. 359.

pittancery (pit′an-sẹ-ri), *n.* The office of the pittancer of a convent; the estate belonging to this office. *N. E. D.*

pitted, *a.* **2.** In *leather-manuf.*, said of skins having little spots or holes in the grain which mark but do not pierce it. They are caused by decomposition or sometimes by the action of salt. *Modern Amer. Tanning*, p. 35.—**Pitted ground.** Same as ★*thimble-surface.*—**Pitted plain.** See ★*plain*1.

pitterpatter (pit′ėr-pat″ėr), *adv.* Same as *pitapat;* also noting a slighter and quicker beat, as of drops of water.

pitting, *n.* **8.** In *geol.*, the excavation of small pits in a surface of rock, usually by some process of solution.

Subsequently an ancient soapstone quarry near Tenallytown was examined. The ancient *pitting* corresponded quite closely with that of the bowlder quarries and the condition of the pits indicated equal age.
Smithsonian Rep., 1890, p. 48.

pittite1 (pit′īt), *n.* [*pit*1 + *-ite*2.] One who frequented the pit in the theater: especially in evidence during the O. P. (old-price) Riots in Covent Garden Theatre, London, in the early part of the nineteenth century.

Then there is an especially noisy night, when rows of standing *pittites* are impelled one row over the other, in dire confusion. *Doran*, Annals of Eng. Stage, II. xxv.

Pittite2 (pit′īt), *n.* [*Pitt* (see def.) + *-ite*2.] One who advocated the policies of William Pitt, especially with regard to France.

pitto (pit′ō), *n.* [Dahomey *kpitu.*] The native name of a kind of beer, made in West Africa, from fermented maize or rice; maize-beer. *N. E. D.*

pittosporaceous (pit″ọ-spọ-rā′shius), *a.* Pertaining to or having the characters of the *Pittosporeæ.*

Pittsford shale. See *Salina* ★*beds.*

pituitary, *a.*—**Pituitary extract**, a substance extracted from the pituitary gland of animals, the action of which in man is to strengthen and retard the action of the heart.—**Pituitary pouch**, a small pocket or pouch, opening in the bottom of the olfactory sac of the lamprey. *Parker and Haswell*, Zoology, II. 124.

pituri (pit′ụ-ri), *n.* [Also *pitury*, *pitchurie*, *pitchiri*, *pitcheri*, *pitcherie*, *pitchery*, *pidgery*, *pedgery*, and *bedgery;* from an aboriginal name.] An Australian solanaceous shrub, *Duboisia Hopwoodii*, the leaves and twigs of which are used as a narcotic masticatory by the aborigines of central Australia. It is sometimes smoked, when dampened and mixed with the ashes of certain plants and rolled up in the form of a cigar. When used in small quantities it acts as a powerful stimulant, assuaging hunger, and enabling long journeys to be made without fatigue. It yields a brown, liquid, acrid alkaloid, called piturine, which is similar to nicotine.

piturine (pit′ụ-rin), *n.* [*pituri* + *-ine*2.] A liquid base, C_6H_8N(?), found in a certain Australian drug obtained from *Duboisia Hopwoodii.* It has an odor resembling nicotine, with which it is believed by some chemists to be identical. See ★*pituri.*

pit-village (pit′vil″āj), *n.* A village formed of pit-dwellings: particularly used in reference to groups of ancient underground dwellings found in England.

pit-wheel (pit′hwēl), *n.* A large gear on a horizontal axis at the end of a rolling-mill: so called because a pit is made for it to allow the rolls to come close to the floor.

pityocampa (pit″i-ọ-kam′pä), *n.* [Gr. πιτυοκάμπη, < πίτυς, pine, + κάμπη, caterpillar.] The larva of the pine procession-moth, *Cnethocampa pityocampa.* *N. E. D.*

pityriasis, *n.*—**Pityriasis linguæ**, the presence of whitish patches of epithelial cells on the tongue.—**Pityriasis nigricans**, a form of chromidrosis in which a dark discoloration of the skin takes place.

piuri, *n.* Same as *purree.*

piutim (pẹ-ö′tēm), *n. pl.* [Heb.] Hymns incorporated in the Jewish festival liturgies. Most of the piutim are acrostically written and contain the name of the composer. See ★*maḥzor.*

pivot-truck (piv′ọt-truk), *n.* A single car-truck, without a car-body, used to transport logs, telegraph-poles, and long timbers. Two trucks are used, the ends of the logs resting on a pivoted bar on each truck, the load joining the two trucks, and the pivots enabling the trucks to pass a curve in the track.

pixol (pik′sol), *n.* Pine-tar made soluble by the addition of soap. It is antiseptic and disinfectant.

P. J. An abbreviation (*a*) of *Justice of the Peace;* (*b*) of *Police Justice;* (*c*) of *Presiding Judge;* (*d*) of *Probate Judge.*

P. L. An abbreviation (*a*) of *Paradise Lost;* (*b*) of *Poet Laureate;* (*c*) [*l. c.* or *cap.*] in *psychol.*, of *partial limen.*

placage (plak′āj), *n.* [F. *plaquer*, to plate. See *plaque.*] The facing of walls with thin slabs of marble or the like, or with stucco or plaster. *N. E. D.*

placard, *n.*—**The Placards**, placards containing the protests of the Reformers against the mass, widely distributed throughout Paris and posted on the walls everywhere in the winter of 1534–5. See the extract.

For the next six years Francis's attitude towards the Reformers oscillated from persecution to favour, according as he was anxious to win the support of the Pope or that of the German princes. But after the winter of 1534–1535, when the breach between the two religious parties was enormously widened by the affair of the "*Placards*" and the terrible persecution which followed it, the king's face began to be set steadily towards Catholicism.
A. Tilley, Lit. French Renaissance, I. 9.

place, *n.* **24.** In *mining*, a drift driven at right angles to a wide lode to form the starting-place for a slide.—**25.** In sporting contests, the relative rank or success secured; specifically, that of the winner, the second, or the third.—**In place.** (*e*) In *mining*, inclosed in fixed rocks: said of a vein or lode which has not been disturbed by a break or slide of the rock.—**Place kick.** See ★*kick.*

placeable (plās′a-bl), *n.* That may be placed.

place-holder (plās′hōl″dėr), *n.* **1.** One who holds a place or office; an office-holder.—**2.** A deputy.

place-mode (plās′mōd), *n.* A statistical mode which prevails in a given species of organisms at a given place and season. See ★*mode*¹, 12.

> It is not thinkable that there should be two "*place-modes*" for the same species and character at the same place and during the same season.
> *Biometrika*, April, 1902, p. 312.

placenta, *n.*—**Allantoic placenta,** that condition of the placenta found in clawed mammals, in which the allantois joins the chorion at an early date.—**Annular placenta,** a placenta which surrounds the fetal envelops like a ring.—**Basal placenta.** See ★*basal.*—**Chorionic placenta,** the condition of the placenta found in ungulates, in which the allantois remains distinct from the chorion for a considerable time.—**Diffuse placenta.** See *diffuse*, 1 (*c*).—**Fetal** or **embryonic placenta,** the portion of the placenta, or afterbirth, derived from the embryo: opposed to the *maternal* ★*placenta*, or portion derived from the uterine tissues of the mother.—**Fundal placenta,** a placenta attached to the fundus of the uterus.—**Maternal placenta,** the portion of the placenta, or afterbirth, which is formed by the uterine tissues of the mother: opposed to the *fetal* or *embryonic* ★*placenta.*—**Placenta marginata,** a placenta the edges of which have no chorionic attachment.—**Placenta truffée,** a diseased placenta which is marked by the presence of numerous small dark-red infarcta.—**Zonary placenta.** Same as *annular* ★*placenta.*

Placental decidua. Same as *decidua serotina.* See *decidua.*

Placenticeras (plas-en-tis'ẹ-ras), *n.* [NL., ‹ L. *placenta*, cake, + Gr. κέρας, horn.] A genus of pachycampylous ammonoid cephalopods having smooth, involute, compressed discoidal shells, often of large size, with very complex sutures, which are of ceratitoid outline in young stages of growth. The genus occurs in Cretaceous rocks.

placentocytotoxin (plạ-sen"tọ-sī-tọ-tok'sin), *n.* [*placenta* + *cytotoxin.*] A cytotoxin directed against placental cells.

placentophagy (plas-en-tof'a-ji), *n.* [NL. *placenta* + Gr. φαγεῖν, eat.] The eating of the placenta: practised in certain parts of the Sudan.

placentule (plạ-sen'tūl), *n.* [NL. *placentula*, dim. of *placenta.*] A small placenta.

placer¹, *n.* **2.** In *ceram.*, a workman in a pottery who places the unburned ware in the saggars and arranges the saggars in the kiln.

placer², *n.*—**Ancient beach placers,** deposits found on the coastal plain along a line of elevated beaches. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Bench placers,** gravel deposits in ancient stream-channels and flood-plains which stand from fifty to several hundred feet above the present streams. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Creek placers,** gravel deposits in the beds and intermediate flood-plains of small streams. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Dry placer,** a deposit of gold in the bed of a stream which has dried up.—**Gravel-plain placers,** placers found in the gravels of the coastal or other lowland plains. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Hillside placers,** a group of gravel deposits intermediate between the creek and bench placers. Their bed-rock is slightly above the creek bed, and the surface topography shows no indication of benching. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**River-bar placers,** placers on gravel flats in or adjacent to the beds of large streams. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Sea-beach placers,** placers reconcentrated from the coastal-plain gravels by the waves along the seashore. *U. S. Geol. Surv.*, Bulletin 328, p. 142.—**Wet placer,** a deposit of gold in the bed of a stream which has not dried up. *Engin. Mag.*, June, 1899, p. 535.

placer² (plā'sėr), *v. t.* [*placer*², *n.*] In *mining*, to mine by the hydraulic process; wash out (gold) from a bank by a stream of water.

placidamente (plä-chẹ̄-dạ̈-men'te), *adv.* [It.] In *music*, in a quiet and placid manner; calmly.

placobranchoid (plak-ọ̄-brang'koid), *a.* [*Placobranch*(*ia*) + *-oid.*] Resembling the *Placobranchia.*

placochromatic (plak"ọ̄-krọ-mat'ik), *a.* [Gr. πλάξ (πλακ-), a plate, + χρῶμα(τ-), color, + *-ic.*] In diatoms, having the endochrome distributed in plates or disks. Compare ★*coccochromatic.*

placodermoid (plak-ọ-dėr'moid), *a.* [*placoderm* + *-oid.*] Resembling or having the characters of the fish-like vertebrates known as *Placodermi* or *Ostracophori.*

placodialin (plạ-kō'di-ạ-lin), *n.* [*Placodi*(*um*) + *-al*³ + *-in*².] A compound found in *Placodium chrysoleucum.* It crystallizes in plates or prisms which melt at 154–156° C.

placodin (plak'ọ-din), *n.* [*Placod*(*ium*) + *-in*².] A compound found in *Placodium melanaspis.* It crystallizes in copper-red plates which melt at 245° C.

placodontoid (plak-ọ-don'toid), *a.* [*placodont* + *-oid.*] Resembling the placodonts.

Placopharynx (plak-ō-far'ingks), *n.* [NL., ‹ Gr. πλάξ (πλακ-), a disk, + φάρυγξ, pharynx.] A genus of suckers found from Michigan to Georgia.

placoplast (plak'ọ̄-plást), *n.* [Gr. πλάξ (πλακ-), a plate, + πλαστός, molded.] A stabiloplast in contact with a chromatophore of a diatom. Compare ★*libroplast.*

placuntoides (plak"un-toi'dēz), *a.* [NL., ‹ Gr. πλακουντοειδής, like a cake, ‹ πλακοῦς (πλακουντ-), a cake, + εἶδος, form.] In *anthrop.*, noting a cranium having a low forehead and a very flat vertex. *G. Sergi* (trans.), Var. of the Human Species, p. 45.

pladobole (plad'ọ-bōl), *n.* [Gr. πλάδος, abundance of fluids, + -βολος, thrown.] In *phytogeog.*, a bolochore in which the propulsion is effected by means of hygroscopicity. See ★*bolochore.* *F. E. Clements.*

plagiator (plā'ji-ā-tọr), *n.* Same as *plagiarist.*

Plagihedral class of crystals. See ★*symmetry*, 6.

plagiocephalus (plā"ji-ọ-sef'ạ-lus), *n.*; pl. *plagiocephali* (-lī). [NL., ‹ Gr. πλάγιος, oblique, + κεφαλή, head.] A plagiocephalic individual.

plagioclinal (plā"ji-ọ̄-klī'nạl), *a.* [Gr. πλάγιος, oblique, + κλίνειν, incline.] In *geol.*, descriptive of or relating to structures which run diagonally or obliquely to the strike of the strata, such as ridges whose axes do not coincide with the strike of the beds.

> Amongst the characteristics of the sculpture there are two noteworthy features. In the first place, there are no escarpments and very little differential denudation: indeed, nearly all the exposed ridges are *plagioclinal*, and at Collier Hill, Beacon Hill, Broombriggs and elsewhere not only are the rocks seen to strike obliquely across the ridges as a whole, but even the smaller crags are *plagioclinal* too.
> *Geog. Jour.* (R. G. S.), XXI. 628.

plagiocœlous (plā"ji-ọ̄-sē'lus), *a.* [Gr. πλάγιος, oblique, + κοῖλος, hollow.] In *ornith.*, noting that condition of the intestine in which the second loop and frequently other loops are folded upon themselves.

Plagiogrammus (plā"ji-ọ-gram'us), *n.* [NL., ‹ Gr. πλάγιος, oblique, + γραμμή, a line.] A genus of blennioid fishes found off the coast of California.

plagiograph (plā'ji-ọ-gráf), *n.* [Gr. πλάγιος, oblique, + γράφειν, write.] An extension of the pantograph, invented by Sylvester, which enlarges or reduces figures, but may be turned at any required angle to the original. Called also a *skew pantograph.*

plagiopatagium (plā"ji-ọ-pat-ạ-jī'um), *n.*; pl. *plagiopatagia* (-ạ̈). [Gr. πλάγιος, oblique, + NL. *patagium.*] That portion of a bat's wing which lies back of the arm and between the fifth finger, the side of the body, and the hind leg. It comprises the 'endopatagium' and 'mesopatagium' of Harrison Allen.

> Fur close and fine, about 7 mm. long on the back. General colour above pale grey, the individual hairs dull whitish, with dark brown tips. Under surface nearly white. Membranes brown, the *plagiopatagium* and interfemoral inconspicuously edged with white.
> *Annals and Mag. Nat. Hist.*, May, 1904, p. 386.

Plagiostomidæ (plā"ji-ọ̄-stō'mi-dē), *n. pl.* [NL. *Plagiostomum* + *-idæ.*] A family of small, usually cylindrical turbellarians of the order *Alloiocœla*, with one genital opening, no accessory female apparatus, and with the testicular follicles in front of, alongside, and behind the brain. The pharynx varies in position and size, and there is no otocyst. It includes several genera, among which are *Plagiostomum*, *Acmostomum*, and *Vorticeros.*

Plagiostomum (plā-ji-os'tọ-mum), *n.* [Gr. πλάγιος, oblique, + στόμα, mouth.] The typical genus of the family *Plagiostomidæ.* *O. Schmidt*, 1851.

plagiotriæne (plā"ji-ọ-trī'ēn), *n.* [Gr. πλάγιος, oblique, + E. *triæne.*] In sponge-spicules, a triæne whose cladi are directed obliquely forward.

plagiotropous (plā-ji-ot'rọ-pus), *a.* Same as *plagiotropic.*

> Some of the *plagiotropous* shoots [of mosses] are isophyllous.
> *K. E. Goebel* (trans.), Organography of Plants, I. 100.

plagiotropy (plā-ji-ot'rọ-pi), *n.* Same as *plagiotropism.*

plagose (plā'gōs), *a.* [L. *plagosus*, ‹ *plaga*, a blow.] Inclined to strike or flog. [Rare.] *N. E. D.*

plague, *n.* **2.** It is an acute infectious disease, known since the second century of the Christian era, occurring chiefly in the poorer quarters of large cities, where the crowding is greatest and the hygienic conditions are bad, and caused by a specific micro-organism, *Bacillus pestis.* The disease prevails most in the tropics or in cities of the temperate zone during the hot season. It occurs under four forms which differ markedly in the severity of their symptoms, the mode of propagation, and the seat of the principal lesions. These forms are: *bubonic plague*, the most common, in which the glands in the groin and sometimes the axilla become enlarged, and there is high fever, with a dry brown tongue, and frequently an eruption due to hemorrhages in the skin; *septicemic plague*, a more virulent form in which the disease usually kills before there is time for the formation of buboes; *pneumonic plague*, or *plague-pneumonia*, the most fatal form of the disease, in which the bacilli lodge in the air-cells and smaller bronchial tubes, where they set up the lesions of pneumonia; *pestis minor*, a very mild form of bubonic plague in which there is but slight swelling of the glands, the fever is never high, and the patient scarcely feels ill. It is common at the beginning of an epidemic outbreak. The pneumonic form is the most infectious, the bacilli being contained in the particles of moisture exhaled in the breath and expelled in coughing. In the bubonic form the infection is probably spread through the agency of fleas and possibly other insects. The lower animals, especially rats, are very subject to this variety of plague. Preventive inoculation with Haffkine's serum (containing dead bacilli and toxins) has been extensively practised in India, with favorable results. Yersin's serum is an antitoxic serum for the cure of developed cases, but is also of service in the prevention of the disease.—**Black plague.** Same as *the black death* (which see, under *death*).—**Cold plague.** See ★*cold.*—**Parrots' plague,** a distemper to which parrots are subject. Also called *parrots' rinderpest.*—**Siberian plague,** a cattle-disease in Siberia, marked by the occurrence of a malignant furuncle or carbuncle: perhaps the same as *anthrax.*—**Tarbagan plague,** a term applied to the bubonic plague in certain parts of Mongolia, where it affects the tarbagan, a marmot-like rodent (*Artomys bobac*), as it does the rats of seaboard places. *Nature*, Nov. 21, 1907, p. 59.—**The white plague,** tuberculosis.

plague-house (plāg'hous), *n.* **1.** A house infected with the plague. *Pepys.*—**2.** A house in which plague-stricken patients are cared for.

plague-pneumonia (plāg'nụ-mō"ni-ạ̈), *n.* Same as *pneumonic plague* (which see, under ★*plague*²).

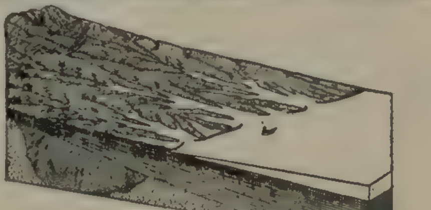
> It has been discovered that only those plague patients who suffer from *plague-pneumonia*—a condition which is fortunately infrequent—are centers of infection, and that the real transmitters of the plague are the rats.
> *Pop. Sci. Mo.*, Sept., 1901, p. 462.

plaid-neuk (plad'nūk), *n.* The corner of a plaid, folded over so as to form a pocket. [Scotch.]

plaidoyer (plā-dwo-yā'), *n.* [F. See *plead.*] In *law.*, a pleading; a plea.

plain¹. **I.** *a.* **16.** In *old music*, said of certain graces or embellishments, like the beat, backfall, etc., when without extension by a shake: opposed to ★*shaked.* Also called *smooth.*

II. *n.*—**Aggradation plain.** See ★*aggradation.*—**Alluvial piedmont plain.** See ★*piedmont.*—**Belted coastal plain,** a coastal plain made of strata of varying texture and composition, arranged roughly parallel to the shore-line.—**Bulwark plains,** dark nearly circular plains upon the moon, surrounded by a ring of mountains: differing from many of the large flat-bottomed craters, like Plato, in being much larger, with diameters exceeding 100 miles.—**Coastal plain,** in general, a plain along the sea-border of a land-area; specifically, a plain thus located, formed by the emergence of a former sea-bottom.—**Embayed coastal plain,** a dissected coastal plain which has been slightly depressed, allowing the ocean waters to enter the valleys, as the region around Chesapeake Bay, Maryland.—**Gradation plain,** a plain formed by a river at grade. *U. S. Geol. Surv.*, *Monographs*, XLI. ill. 93.—**Graded plain,** a plain on which there is an essential balance between corrosion and deposition. *Chamberlin and Salisbury*, Geol., I. 159. **Overwash plain,** the accumulation of debris spread out at the front of a glacier by the action of glacial streams.



Embayed Coastal Plain.

> *Overwash plains.*—The material which lies outside the moraine, and which is believed to be of equal age with it, consists mainly of the gravel and sand carried on beyond the ice by the running waters which emanated from it. Where the waters issuing from the edge of the ice found no valley to receive them, they deposited their burden upon the territory just outside of the ice, building up sand and gravel plains. Such plains slope somewhat promptly away from the moraine, and the deposit of sand and gravel grades off to a thin edge at no great distance from the ice.
> *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1892, p. 40.

Pitted plain, in *geol.*, a glacial plain in which hollows remain, marking the site of ice-blocks.—**Plain of marine denudation,** a nearly even surface produced by the abrasion of a land-mass by the action of the sea, especially by the waves and currents of the shore.—**Plain of subaërial denudation,** a nearly even surface produced by the erosion of a land-mass by weather and streams.—**Stratum-plain,** a land surface reduced by erosion to conformity with the bedding of the underlying rock.—**Structural plain,** a plain conformable to the underlying strata.—**Subaqueous overwash plain,** debris washed out from the front of a glacier and deposited under water. See *overwash* ★*plain.*

If a moraine was being formed at the edge of the glacier at the same time that the numerous glacial streams were building their deltas in the bordering lake, the moraine would be bordered on its outer edge by an overwash plain having the characteristics of a delta, or of a series of coalescing deltas. For overwash plains or glacial deltas of this type the senior author has already proposed the name "*subaqueous overwash plains.*"
R. D. Salisbury, in Geol. Surv. of New Jersey, 1893, p. 240.

plain-fish (plān′fish), *n.* Same as ★*escolar.*

plain-laid (plān′lād), *a.* *Naut.*, noting a rope composed of three strands laid together right-handed, that is, from left to right, or with the sun, or with the revolution of the hands of a clock.

plain-tail (plān′tāl), *n.* Same as ★*escolar.*

plaintif, *n.* A simplified spelling of *plaintiff.*

Plaintiff in error. See ★*error.*

plain-tile (plān′tīl), *n.* [*plain* + *tile*^{1}.] A flat roofing-tile. See *plain tile*, under *tile*^{1}.

Plaisancian (plā-san′si-an), *a.* and *n.* [F. *Plaisance*, a town in France, + *-ian.*] In *geol.*, noting the earliest division of Pliocene time, in the classification by Gaudry and de Lapparent of the European Pliocene: represented by the Pikermi, Baltavar, Mont Lebéron, and Concud beds, which furnish evidence that herbivorous mammals were at that time widely dispersed and abundant.

planar, *a.* **2.** Of or pertaining to a plane. —**Planar lens.** See ★*lens.*

II. *n.* See ★*anastigmat.*

planarity (plā-nar′i-ti), *n.* [*planar* + *-ity.*] The character of being planar or flat.

planation (plā-nā′shon), *n.* [NL. **planatio*(*n*-), < LL. *planare.* See *plane*^{1}, *v.*] The act of planing or making plane or flat; specifically, in *geol.*, the erosive process by which a stream or a glacier produces a nearly level surface; also the result of erosive processes.

The study of the relief of the land in various regions has shown that there are many such remnants, left by incomplete *planation.*
I. C. Russell, Rivers of North America, p. 49.

This period of deposition was in turn closed by a renewed disturbance of an orogenic kind, comparatively slight in amount and local, chiefly affecting certain lines in a northwest and southeast direction. Next came renewed denudation or '*planation*,' and this continued until the enormous volcanic extravasations of the Miocene began. *Science*, March 15, 1901, p. 406.

Lateral planation, the removal of material and the production of a plain by the lateral meandering of a graded stream. *Chamberlin and Salisbury*, Geol., I. 78.

planchment (planch′ment), *n.* [*planch* + *-ment.*] Planking; especially, a ceiling. [U. S.]

Planchment.—Ceiling. Now seldom heard. An old woman said: "The roof wets so, I 'm afraid the *planchment* 'll fall." From planched, that is boarded.
Jour. Amer. Folk-lore, April–June, 1891, p. 159.

plane^1. **I.** *a.*—**Plane figure.** See ★*figure.*—**Plane symmetry.** In *crystal.* See ★*symmetry.*—**Plane wave.** See ★*wave*^{1}.

II. *n.*—**Actinic plane.** See ★*actinic.*—**Anticlinal planes.** Same as ★*anticlinal walls.*—**Apical plane.** See ★*apical.*—**Automatic plane.** Same as *double-acting inclined plane* (which see, under *plane*^{1}).—**Complex plane**, the plane each point of which represents a complex number.—**Cone of planes.** See ★*cone.*—**Declination of a plane.** See ★*declination.*—**Diametral plane.** (*a*) In *crystal.*, see *diametral.* (*b*) In *geom.*, a plane through the center of a sphere.—**Disruption-plane**, in *geol.*, a zone of displacement; a fault-plane.

These lines of movement traverse the Lewisian plateau in various directions, producing planes of disruption, molecular rearrangement of the minerals and the development of foliation. . . . Close to the well-defined *disruption-planes*, . . . the gneiss loses its low angle, is thrown into sharp folds, the axes of which are parallel with the planes of movement.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 617.

Divisional plane, a plane marking a division between two beds or other masses of rock. See ★*division-plane.*—**Focal plane.** (*a*) In *optics*, see *focal.* (*b*) In *line-geom.*, one of the planes of which two are determined by each straight of the congruence taken with each of the two straights consecutive to it by which it is intersected.—**Geometric plane**, in *persp.*, a ground-plane.—**German horizontal plane**, the plane defined by two straights joining on each side the deepest point of the lower eye-socket rim with the point of the upper rim of the osseous auditory passage or acoustic duct lying perpendicularly above the center of the ear-aperture.—**Listing's plane**, a plane which contains the vertical and transverse axis of the eyeball and forms a right angle with the anteroposterior axis.—**Nodal plane**, a node or nodal point in a vibrating column of air, as in an organ-pipe.—**Occipital plane.** (*b*) A plane drawn through the base of the skull in such manner as to cut through the anterior and posterior (more properly the dorsal and ventral) edges of the foramen magnum. The angle formed by the occipital plane and the basicranial axis is open in man and less than a right angle in fishes.—**On plane**, in *coal-mining*, in a direction at right angles to the plane or main joints of a coal-seam.—**Opisthiobasilar plane**, the plane at right angles to the medial plane and passing through the opisthion and the basion.—**Plane of fire**, in *gun.*, the vertical plane containing the line of fire.—**Plane of Hensen**, a plane or line passing through the center of a series of the sarcous elements of a muscle-fibril.—**Plane problem**, a problem concerning points, lines, and figures, which lie in one plane.—**Planes of reference**, systems of planes from which are measured the distances of objects in order to fix their position in space.—**Solution plane**, a direction in a crystal, usually parallel to some simple crystallographic face, in which the substance yields with relative ease to solvent action, as when the crystal of a rock-mass is subjected to great pressure. The development of the minute inclusions to which the schiller is due takes place along solution planes. See ★*schillerization.*—**Structure plane**, a plane that is definitely related to certain geologic structures of a region or terrane, as a fault-plane, joint-plane, or contact-plane between formations.

The tendency of the modern school of physiographers seems to be to ascribe "little importance to geological *structure planes* as a factor in determining the position and the orientation of water courses."
W. H. Hobbs, in Jour. of Geol., Sept.–Oct., 1901, p. 469.

Trochoided plane, a flat surface the center of which moves at a uniform speed in a circle, the plane being kept normal to the surface of a trochoidal wave. *Hargrave.*—**Unit planes**, in *optics*, two planes at right angles to the axis of an optical system, as a lens system, so situated that the distance from the axis to a point in one of the planes is equal to the distance from the axis to its conjugate point in the other plane.

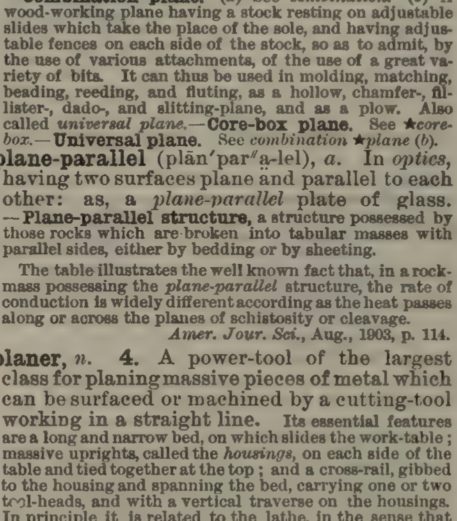
plane^2, *v. t.*—**To plane down**, to press down with a planer the types in a form prepared for press to make them of uniform height and equally level under the impression of a press; also, to shave down the printing-block that is more than type high.

plane^2, *n.*—**Adjustable plane**, a plane in which the angle of the cutting-edge may be varied with respect to the face of the block or stock, and in which the opening at the throat for the chip can be made greater or less.—**Bull-nose plane**, a plane which has the plane-iron at the front end to enable the workman to plane into a corner.—**Combination plane.** (*a*) See *combination.* (*b*) A wood-working plane having a stock resting on adjustable slides which take the place of the sole, and having adjustable fences on each side of the stock, so as to admit, by the use of various attachments, of the use of a great variety of bits. It can thus be used in molding, matching, beading, reeding, and fluting, as a hollow, chamfer-, fillister-, dado-, and slitting-plane, and as a plow. Also called *universal plane.*—**Core-box plane.** See ★*core-box.*—**Universal plane.** See *combination* ★*plane* (*b*).

plane-parallel (plān′par″a-lel), *a.* In *optics*, having two surfaces plane and parallel to each other: as, a *plane-parallel* plate of glass.—**Plane-parallel structure**, a structure possessed by those rocks which are broken into tabular masses with parallel sides, either by bedding or by sheeting.

The table illustrates the well known fact that, in a rock-mass possessing the *plane-parallel* structure, the rate of conduction is widely different according as the heat passes along or across the planes of schistosity or cleavage.
Amer. Jour. Sci., Aug., 1903, p. 114.

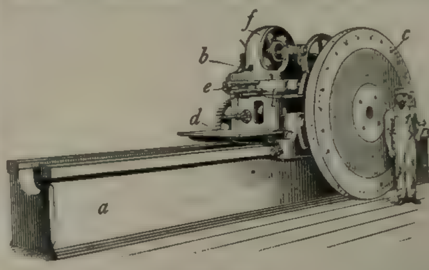
planer, *n.* **4.** A power-tool of the largest class for planing massive pieces of metal which can be surfaced or machined by a cutting-tool working in a straight line. Its essential features are a long and narrow bed, on which slides the work-table; massive uprights, called the *housings*, on each side of the table and tied together at the top; and a cross-rail, gibbed to the housing and spanning the bed, carrying one or two tool-heads, and with a vertical traverse on the housings. In principle it is related to the lathe, in the sense that the work advances against a fixed cutting-tool. It differs from the lathe in the presentation of the work to the tool in a horizontal plane, and from the shaper, slotting-machine, and key-seater in respect to the direction of the effort of the cutting-tool and in the fact that in these machines the work is at rest while the cutting-tool moves; but all five machines are essentially tools making a planer cut, as opposed to the chipping cut of a milling-machine.



Planer.

a, bed with V-ways for traversing table; *b*, traversing work-table; *c*, housings; *d*, cross-rail with vertical traverse on housings; *e*, tool-heads with horizontal traverse on cross-rail; *f*, tool-heads at side of work with vertical traverse on housings; *g*, brace, tying housings together; *h*, mechanism controlling traverse of cross-rail.

The important feature of the planer is the mechanism for operating the traveling work-table. A typical method is by rack and gear. The advance of the work-table carrying the work against and under the cutting-tool held in the cutter-head is slow and powerful; the return of the table under the idle cutter is four times as fast. The feed-motion applied to the cutter-heads gives a cross-feed for those supported by the cross-rail. Where other cutter-heads are supported, one on each side of the uprights of the housing, they are given a vertical feed. By the use of four cutter-heads, two on the cross-rail and two on the uprights, four cuts can be made at each stroke.—**Open-side planer**, a metal-planing machine having only one fixed housing or upright to support the cross-rail, thus leaving the bed unobstructed on one side to receive large pieces.—**Planer and jointer.** See ★*planing-machine.*—**Plate-edge planer**, a machine particularly adapted to planing the edges of plates, angles, and other rolled sections.—**Pony planer**, a wood-planing machine for small work.—**Rack-and-pinion planer**, a planing-machine the bed of which is driven by a rack-and-pinion, as distinguished from a crank-planer or a worm-driven planer.—**Rotary planer**, a power-tool having a large revolving disk armed on the face or the side with a large number of cutting-tools. This disk is mounted on a carriage traveling on a long bed, or, in some machines, is supported by a cross-rail and housing over the work-table. It is essentially a milling-machine.—**Side planer**, a planer having the housing at one side of the bed. A massive arm supported by the housing extends over the bed and carries the cross-rail and cutter-head.



Rotary Planer.

a, bed of machine; *b*, saddle with traverse on bed; *c*, circular cutter-head armed with a great number of inserted cutters; *d*, platform for operators; *e*, control; *f*, motor. Work is placed on the floor close to the cutter-head.

Pläner (plā′ner), *n.* [G. *pläner*, *planer*, rag-stone, also impure chalk.] In *geol.*, a series of limestones, marls, shales, sandstones, and conglomerates representing the littoral facies of both the lower members (Cenomanian and Turonian) of the Cretaceous system in northeastern Germany. Many of the component beds are highly fossiliferous and contain chiefly ammonites, echinoderms, pelecypods, and brachiopods.

plane-sect (plān′sekt), *n.* A definite area or piece of a given plane.

plane-sheaf (plān′shēf), *n.* In *geom.*, the ∞^2 planes on a point.

plane-shear (plān′shēr), *n.* Same as *plank-sheer.*

plane-space (plān′spās), *n.* In *geom.*, a space with the plane as element: the dual of a point-space.

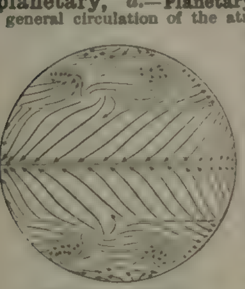
planet, *n.*—**Error of a planet.** See ★*error.*—**Inferior planet**, a planet between the earth and the sun: so called because in ancient astronomy, the earth being supposed to be at the center of the system, these planets are below the sun, which is higher from the earth than they are. Opposed to *superior planet.* See *superior.*—**Minor planet**, one of the multitude of small bodies called *asteroids* or (less correctly) *planetoids.* Their orbits lie between those of Jupiter and Mars, with periods ranging from three years to nine, Eros alone excepted, its perihelion lying very near the orbit of the earth, and its mean distance from the sun and its period being slightly less than those of Mars. (See ★*Eros*, 3.) *Discovery.* Ceres, the first, was discovered by accident on the first night of the nineteenth century by Piazzi at Palermo; but, with very few exceptions, all the rest of the number (now nearing 600) have been discovered by systematic search. Until 1891 this search was conducted by minute examination of fields of the heavens which had been carefully charted (usually by the planet-hunters themselves). If stars not upon the charts were found, a few hours, or at most days, of observation would show whether the interloper was merely a (variable) star overlooked in charting or really in motion. If the latter, a short computation would usually show whether it was a new planet or one previously known. In some cases, however, it is necessary, in order to decide the question, to make an extended calculation of perturbations suffered by the older planet since it was last observed. By October, 1891, 321 asteroids had thus been discovered and duly numbered and named. A new and more fruitful method, the photographic, was then introduced by Max Wolf at Heidelberg, which consists in attaching a camera to an equatorial mounting, driven by accurate clockwork, and pointing it to the sky during an exposure of several hours. The stars in the field will appear on the negative as small round dots, while any moving object, as a planet, will be recognizable at once as a streak. Sometimes several are thus captured upon the same plate. The first planet thus discovered by him, in November, 1891, was (322) Brucia, named in honor of the late Miss Bruce of New York, who supplied the funds with which to procure his instrument, a double camera with 16-inch lenses. Other observers immediately adopted the method, and since 1891 over 250 planets have thus been added to the list, only three or four of them by the old visual process. The year 1903 alone yielded 41, though a number of them may not retain a permanent place on the roll. *Designation.* At first names were assigned from classical mythology (all feminine excepting Eros), but as the supply fell short other mythologies were resorted to, and now names of countries, cities, and people appear, slightly disguised. Since 1894 a considerable number remain unnamed, designated only by the number inclosed in a circle, which constitutes the planet's symbol and makes a name unnecessary. These numbers generally, but now not always, follow the order of discovery, and are assigned by the Berliner Rechenanstalt as soon as sufficient observations have been obtained to determine the planet's orbit and to establish its non-identity with any of the older asteroids, a considerable number of which are now 'adrift,' not having been observed for years, and are every now and then picked up. In 1892, when the photographic discoveries began to crowd in, it was found necessary to devise a provisional designation to be used until the planet's definite number could be assigned. Accordingly, the planets are given letters in the order of announced discovery. After the alphabet was exhausted, astronomers began again with BA, BC, etc. It was in this way that Eros (433) was at first announced as DQ, 1898. *Orbits.* The orbits are of course all ellipses, but with a much wider range of eccentricity and inclination to the ecliptic than those of the major planets. According to the data of the "Annuaire du Bureau des Longitudes" for 1904, there are among the first 500 sixteen with eccentricities exceeding 0.30. Occlo (475) stands at the head with the almost cometary eccentricity of 0.38. Pallas (2) has the greatest inclination, 34⅔°, and there are seven others with inclinations exceeding 25°. These little bodies, on account of their great disturbances by Jupiter, are far more troublesome to follow by calculation than the major planets, and their number is now so great, to say nothing of the probable thousands still undiscovered, that it becomes necessary to limit elaborate computations to such only as present some interesting peculiarity, orbital or 'personal,' so to speak. Indeed, the almost too successful hunt for them may before long be abandoned as unprofitable; and yet there always remains the alluring possibility that any night the negatives may reveal an ultra-Neptunian planet, faint from remoteness but immense, thus at a stroke doubling the known dominion of the sun. *Size.* Ceres (1), the largest, has a diameter of about 500 miles, Pallas (2) about 300, Vesta (4) about 250 (although she is the brightest of the family and is sometimes barely visible to a keen eye), and Juno (3) about 120: all according to measures by Barnard. The rest are much smaller, many of the new discoveries probably not exceeding 15 or 20 miles in diameter, so faint as to be visible only in the largest telescopes, if at all. In mass Ceres may possibly be as much as one five-thousandth as large as the earth, and the united mass of the whole assemblage cannot well be one fiftieth of the earth, as is proved by the non-existence of perceptible perturbations on Mars. *Axial rotation.* A few of these planets show at times marked and regularly periodic variations of brightness, probably due to a spotted surface and axial rotation. On that assumption it is found that Eros rotates in 5 hours 16 minutes, and three others—Lirona (116), Hertha (135), and Tercidina (345)—at about the same rate. Our telescopes are not as yet able to supply any information as to the nature and condition of their surfaces. Presumably they are simply airless rocks. *Origin.* It seems altogether probable that these bodies constitute a single family, but how it came to pass that the matter composing them came to be so scattered instead of forming a single planet is a subject of mere speculation. Various theories have been suggested. The oldest is that they are fragments of an exploded planet; another, that they are due to the disturbing action of Jupiter upon a nebulous ring: but knowledge on this point, if ever attainable, is for the future.—**Station of a planet.** See ★*station.*

plane-table, *n.*—**Photographic plane-table,** in *photographic surveying*, a surveying-camera having its top surface arranged as a plane-table and provided with an alidade to be used in determining and mapping the position of the point or station from which the photographs are taken and the direction in which the axis of the camera is pointed at each exposure.

planetarian (plan-e-tā'ri-an), *a.* and *n.* [*planetary* + *-an.*] **I.** *a.* Of or pertaining to a planet or the planets; planetary.

II. *n.* An inhabitant of a planet.

planetary, *a.*—**Planetary circulation,** an ideal general circulation of the atmosphere of the earth considered as a smooth globe; a system of trade-winds, anti-trades, and lower west winds, and the whirls between them, assumed to correspond with this ideal. Numerous such ideals have been sketched by Thomson, Ferrel, Davis, and others.—**Planetary ellipsoid, hour, system, transmission.** See ★*ellipsoid*, ★*hour*, *solar system*, ★*transmission*.—**Planetary winds.** See ★*planetary circulation.*



Planetary Circulation.
(*Davis.*)

II. *n.*; pl. *planetaries.* An abbreviation of *planetary nebula.* See *nebula.*

> Both the Wolf-Rayet blue bands were present, as in certain *planetaries.*
> *A. M. Clerke*, Problems in Astrophysics, p. 381.

planetesimal (plan-e-tes'i-mal), *a.* and *n.* [NL. **planetesimus*, < *planet(a infinit)esimus*, used to mean 'an infinitesimal or minute planet,' + *-al*^{1}. See *planet* and *infinitesimal.*] **I.** *a.* Of or pertaining to a minute planet or planetary body.—**Planetesimal hypothesis,** a modified form of the meteoritic hypothesis, proposed by Professor T. C. Chamberlin. It assumes that the motions of the small solid masses (*planetesimals*) which compose the original cloud or nebula are orbital and concurrent, so that collisions are infrequent and not violent, and the process of aggregation is extremely gradual. In the meteoritic hypothesis, on the other hand, the meteors, like the molecules in the kinetic theory of gases, are supposed to move indiscriminately in all directions with widely different velocities, so that collisions and rebounds are violent.

> The critical application of accepted principles of physics to the nebular hypothesis by Professor Chamberlin has revealed its weakness even under direct attack. The *planetesimal hypothesis* which he has formulated as a substitute seems much better to explain both the astronomical and geological phenomena. It may not be immediately and universally accepted, as it destroys the present foundation of many geological theories, and because the leaders in science are committed to the old ideas; and in all its claims it may not be true. But its main postulate, that the globe was formed by accretion of cold matter, will probably stand.
> *Amer. Geol.*, Feb., 1904, p. 95.

II. *n.* One of the minute bodies moving in planetary orbits, from time to time overtaking each other and coalescing, and so gradually building up the planets, according to the planetesimal hypothesis.

> The new hypothesis holds that the disseminated planet-forming matter had lost its heat while yet existing in the loose form, as rings or zones or wisps of the parent nebula, and that the globular planets were formed by the slow accretion or infalling of cold, discreet bodies or particles ("*planetesimals*").
> *Amer. Geol.*, Feb., 1904, p. 95.

planetogeny (plan-e-toj'e-ni), *n.* [Gr. *πλανήτης*, planet, + *-γενεια*, < *-γενης*, -producing.] The genesis of planets, or a theory relating to that subject.

planetoid, *n.* See *minor* ★*planet.*

planetologic (plan″e-tọ̄-loj'ik), *a.* [*planetolog(y)* + *-ic.*] Of or pertaining to planetology.

> In Paleozoic times, then, it was the earth itself, not the sun, to which plant and animal primarily stood beholden for existence. This gives us a most instructive glimpse into one *planetologic* process.
> *P. Lowell*, in The Century, Feb., 1908, p. 505.

planetology (plan-e-tol'ọ̄-ji), *n.* [Gr. *πλανήτης*, planet, + E. *-ology.*] The scientific (astronomical) study of the planets.

> *Planetology*, however, will give us the clue to this beclouded hothouse state of things. The earth's own heat, not directly on the crust, but directly on the water, and thence through its atmosphere, was responsible for Paleozoic conditions.
> *P. Lowell*, in The Century, Feb., 1908, p. 505.

planet-stirrer (plan'et-stėr″ėr), *n.* A stirring-paddle which rotates on its own axis while describing a circular path round the inner wall of the vessel in which it operates, as the mixing-vessel in a dyeing- or printing-establishment. *Georgievics* (trans.), Chem. Technol. Textile Fibres, p. 249.

plangorous (plang'go̤-rus), *a.* [*plangor* + *-ous.*] Marked by lamentation.

planing-machine, *n.* **1.** When it contains more than one set of revolving cutter-heads placed in different positions, the planing-machine is called a *surfacer and matcher* or *planer and jointer*; when used in finishing only one surface at a time, it is sometimes called a *surfacer*; when used to finish heavy timber it is called a *timber-dresser*; and when used for combing, planing, matching, and jointing, it is known as a *timber-dresser, -matcher, and -jointer.*

planirostrate (plā-ni-ros'trāt), *a.* Same as *planirostral.*

planispherium (plan-i-sfē'ri-um), *n.*; pl. *planispheria* (-i̤). [NL. *planisphærium.*] Same as *planisphere.*

planity (plan'i-ti), *n.* [*plane*^{1} + *-ity.*] The character of being plane; planeness. [Rare.]

> And so of the straightness of lines, the *planity* of surfaces, and other like geometrical conceptions: they are transcendentalisms suggested (only) by experiences, not in reality comparable with them any more than infinity of space is comparable with mere immensity.
> *R. A. Proctor*, Familiar Science Studies, p. 21.

plank, *n.*—**Plank way of the wood,** with the grain of the wood instead of across it. In Europe before the time of Bewick (1753–1828) blocks for wood-engraving were cut in this manner. It has been the common custom in Japan.

> He (Bewick) engraved across the grain instead of with it, or the "*plank way of the wood*" as he called it.
> *G. E. Woodberry*, Hist. of Wood-engraving, p. 155.

plankage† (plang'kạ̄j), *n.* [OF. *plancage.* See *plank.*] A port-charge sometimes made for the use of planks in dock to discharge or take on a ship's cargo.

plank-buttress (plangk'but″res), *n.* [Translation of G. *plankengerüst.*] One of the broad, flat roots developed vertically at the base of some species of trees as if for props. The plank-buttress is feebly illustrated by the roots of the common American elm and some other Northern trees. Also called *plank-root.*

> The *plank-buttress* is a peculiarity of trees in a tropical climate with abundant rainfall. . . . The physiological causes of the phenomenon and its significance to the life of the tree are still obscure.
> *A. F. W. Schimper* (trans.), Plant-Geog., p. 305.

planking, *n.*—**Inner planking.** Same as *inside* ★*planking.*—**Inside planking,** the ceiling of a vessel.—**Internal planking.** Same as *inside* ★*planking.*

plank-plant (plangk'plant), *n.* An Australian plant, *Bossiæa scolopendria.* *N. E. D.*

plank-root (plangk'röt), *n.* Same as ★*plank-buttress.*

plank-scraper (plangk'skrā″pėr), *n.* A device, usually home-made, for leveling or scraping the soil of agricultural fields to produce a level or uniform surface convenient for irrigation. The scraper is also used for opening or cleaning out distributing-ditches. *Yearbook, U. S. Dept. Agr.*, 1900, p. 504.

planktograph (plangk'tọ̄-gráf), *n.* [NL. *plankton* + Gr. *γράφειν*, write.] A chart showing by means of plotted lines the distribution of the plankton in relation to temperature, time of year, and other controlling factors.

planktology (plangk-tol'ọ̄-ji), *n.* [*plankt(on)* + *-ology.*] That branch of biological science which treats of plankton or the organisms that float or swim in the water.

> On a new theoretical treatment in *Planktology.*
> *Jour. Roy. Micros. Soc.*, June–Oct., 1904, p. 438.

plankton (plangk'ton), *n.* [NL. (in G. spelling) *plankton* (Haeckel), lit. 'that which is drifting,' < Gr. *πλαγκτόν*, neut. of *πλαγκτός*, wandering, drifting (as a ship, a cloud, a road, etc.), < *πλάζεσθαι*, wander, rove (*οἱ πλαζόμενοι*, the planets), in active form *πλάζειν*, cause to wander, lead astray; connected with *πλάγιος*, slanting, oblique.] **1.** In *biol.*: (*a*) The minor animals and plants, including especially the lower organisms, that float or swim together in the water, considered collectively and in contrast with those that live upon the bottom under the water, or on land.

> The *plankton*, the swimming or drifting fauna which never rests on the bottom. *Encyc. Brit.*, XXXIII. 932.

(*b*) The minor animals and plants that float passively in the water, considered collectively and in contrast with those that swim actively. See ★*nekton.*

> Fishes in the form of eggs and young belong in the highest degree to the *plankton*, but not when mature animals.
> *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish [Com., 1889–91, p. 580.

2. Specifically in *phytogeog.*, an aquatic vegetation consisting of freely floating microscopic algæ. Warming divides the plankton flora into oceanic, that of the open sea; neritic (Haeckel), that of the coast; and fresh water. Schimper distinguishes only pelagic, that of the sea, and limnetic, that of fresh-water lakes, the neritic being included in hemiplankton. In pelagic plankton are represented chiefly the *Bacillariaceæ* (diatoms), *Peridiniaceæ*, and *Cyanophyceæ*, chiefly *Oscillatoriaceæ*. Some other groups, as *Protococcaceæ*, are sparingly included. In limnetic plankton the diatoms predominate, the *Cyanophyceæ* come next, and other groups are represented by a few species. As these organisms must exist wholly or mostly in a free-swimming condition, their adaptations are developed toward this end, according to Schimper, in the two directions of decreasing specific gravity and increasing surface with the least possible use of heavy material. The plankton microphytes exist in all seas and lakes in all zones, often in such immense numbers as to give color to the water, as that of the Red Sea, and are also the source of phosphorescence. Plankton is the fundamental nourishment of all animal life in the sea, and is therefore of the highest interest to fishery. The *Cyanophyceæ*, however, are injurious, driving fish away.—**Bathybic plankton,** the animals that float or swim over the bottom of the deep sea without touching or resting upon it; the hypoplankton. See *hypoplankton.*—**Limnetic plankton,** the animals and plants that float or swim at or near the surface of fresh water; the limnoplankton. See ★*limnoplankton.*—**Monotonic plankton,** an aggregation of floating or swimming organisms in which one family or genus predominates, forming half or more than half of the total volume.—**Neritic plankton,** the animals and plants that float or swim in the water in the vicinity of the coast, considered collectively and in contrast with the fauna and flora of the high sea. See *oceanic* ★*plankton.*—**Oceanic plankton,** the animals and plants that float or swim in the high sea, considered collectively and in contrast with those that inhabit the waters near land.—**Pelagic plankton,** the animals and plants that float or swim at or near the surface, considered collectively and in contrast with those that inhabit the depths of the water; the epiplankton. See ★*epiplankton.*—**Plankton pulse,** the repeated occurrence of a regular and gradual appearance and disappearance of the entire volume of the plankton of any body of water.

> The phenomenon of a periodic increase of the plankton volumetrically as a whole, from a minimum to a maximum, followed by a decline to another maximum; the rise and fall being more or less gradual and the data forming when plotted a more or less symmetrical curve resembling that known as the "probability of error" curve, may be designated as the *plankton pulse.*
> *C. A. Kofoid*, Bulletin Ill. St. Lab. Nat. Hist., VI. 298.

Polymixic plankton, an aggregation of floating or swimming organisms in which no one family, genus, or species forms more than half of the total volume. *Haeckel* (trans.), Planktonic Studies, in Rep. U. S. Fish Com., p. 608.—**Zonary plankton,** the organisms that occur in zones of definite depth and are rarely found above or below their natural level. The term is nearly, but not exactly, synonymous with *mesoplankton.* See ★*mesoplankton.*

planktonic (plangk-ton′ik), *a.* [*plankton* + *-ic.*] 1. Belonging to the plankton; floating or swimming.

> The *planktonic* larvæ of epibenthic adults must settle on a suitable bottom within a certain period or die.
> *Encyc. Brit.*, XXXIII. 935.

2. Of or pertaining to the animals and plants that float or swim in the water: as, *planktonic* problems.—**Planktonic current**, a stream or current of floating or swimming organisms; a zoöcurrent. See ★*zoöcurrent.*

plankton-net (plangk′tọn-net), *n.* A conical net of silk bolting-cloth or similar material, provided with a small cup for collecting the plankton from a body of water.

planktonokrit (plangk-ton′ọ̄-krit), *n.* [*plankton* + Gr. κριτής, a judge, umpire (compare *criterion*).] A centrifugal machine which throws out of a sample of water the organisms constituting the plankton, in order that they may be examined and counted.

plankton-pump (plangk′tọ̈n-pump), *n.* A pump which delivers accurately a known quantity of water at each stroke: used for collecting plankton at various depths.

planktont (plangk′tont), *n.* [*plankton* + Gr. ὤν (*οντ-*), being.] An individual of the class of organisms constituting plankton. [Rare.]

> After six years' time and all the manipulation noted the various *planktonts* are apparently as good for microscopic study or for numerical estimation as they were at the start. *Trans. Amer. Micros. Soc.*, 1899–1900, p. 240.

plankway (plangk′wā), *n.* *Naut.*, the narrow portion of deck between the side and the frame of the hatch in a wherry, etc. *N. E. D.*

Planocera (plạ̄-nos′ẹ̈-rạ̈), *n.* [NL.] The typical genus of the family *Planoceridæ*. *De Blainville*, 1828.

Planoceridæ (plạ̄-nọ̄-ser′i-dē), *n. pl.* [NL., < *Planocera* + *-idæ.*] A family of polyclad turbellarians, having no suckers, nuchal tentacles, the mouth about median, and the male copulating apparatus directed backward. It includes several genera, among them being *Planocera*. *Stylochus*, and *Conoceros*.

plano-cylindrical (plā″nō-si-lin′dri-kạl), *a.* Having one plane and one cylindrical surface: said of any cylindrical lens having one plane face.

planocyte (plan′ọ̄-sīt), *n.* [Gr. πλάνος, wandering, + κύτος, a hollow (a cell).] A leucocyte or wandering cell: so called from the fact that it is able to move about in the blood-vessels or other cavities of the body by throwing out pseudopodia like an amœba.

planoferrite (plā-nọ̄-fer′īt), *n.* [L. *planus*, level, + *ferrum*, iron, + *-ite*².] A hydrated ferric sulphate, $Fe_2O_3.SO_3.15H_2O$, occurring in yellowish-green to brown tabular crystals: from the Lautaro mine near Morro Moreno, Atacama.

planographic (plā-nọ̄-graf′ik), *a.* [L. *planus*, level, + Gr. γράφειν, write.] 1. Of or pertaining to plan- or map-making. See *planographist.*—2. Relating to printing from plane surfaces of stone, metal, and the like, in distinction from intaglio and relief-printing.

planography (plạ̄-nog′rạ-fi), *n.* [L. *planus*, plane, + Gr. γράφειν, write.] 1. The art of drawing plans or maps.—2. The art of printing from plane surfaces. See ★*planographic.*

planolite (plan′ọ̄-līt), *n.* [Gr. πλάνος, wandering, + λίθος, stone.] Any fossil impression of an indeterminate cylindrical annelid found on the surface of a stratum.

planoparabolic (plā-nọ̄-par-ạ-bol′ik), *a.* [L. *planus*, level, + E. *parabolic*².] Having characteristics of the plane and the parabola.

planorbiform (plạ̄-nôr′bi-fôrm), *a.* [NL. *Planorbis* + *-form.*] Having the spire depressed so that the whorls lie in the same plane, like those of the genus *Planorbis*; planorboid.

planorboid (plạ̄-nôr′boid), *a.* [NL. *Planorbis* + *-oid.*] Of or pertaining to the gastropod genus *Planorbis*; more particularly, having the form of shell characteristic of that genus; subdiscoid with many whorls and flaring aperture; planorbiform.

> When the whorls become depressed so as practically to lie in one plane, a "*planorboid*" protoconch is produced (Dall). *Amer. Nat.*, Dec., 1902, p. 919.

planorosion (plā-nọ̄-rō′zhọ̈n), *n.* [L. *planus*, flat, + E. (*e*)*rosion.*] The removal and subsequent deposition of fine silt by the rivers in the arid districts of the southwestern United States, when swollen to floods by sudden heavy rains. The deposited silt may be afterward modified by the winds.

> That the deposits in question are composed chiefly of fine clays is due mainly to the effects of *planorosion*, or flood-sheet erosion as it is termed by McGee.
> *Amer. Jour. Sci.*, Dec., 1907, p. 472.

planorosive (plā-nō-rō′ziv), *a.* [L. *planus*, flat, + E. (*e*)*rosive.*] Characteristic of planorosion.

> The two most vigorous geologic processes of the arid regions—the eolian and the *planorosive*, the latter more widely known among the dwellers of those regions as sheet-flood erosion. Both are practically unknown to people living in those parts of the world where there are abundant rains. *Amer. Jour. Sci.*, Dec., 1907, p. 471.

plano-spherical (plā″nō-sfer′i-kạ̈l), *a.* Having one plane and one spherical surface: said of spherical lenses which are either plano-convex or plano-concave.

planospore (plā′nọ̄-spōr), *n.* [Gr. πλάνος, wandering, + E. *spore.*] A spore or detached bud that is motile or able to swim.

plant¹, *n.* 11. In *billiards* generally, the lay or position of balls; in pocket-pool, a sure shot from frozen balls; in one kind of pin-pool, a procedure by which a player may unwittingly make another, instead of himself, winner of the stakes.—**Aërating plants.** See ★*aërate.*—**Aquatic plants.** See ★*aquatic.* **Cultural plant formation.** See ★*formation.*—**Enchanter's plant.** See ★*enchanter.*—**Fungus-digesting plant,** a plant which, having a fungus within its root-cells, is, upon the death of the fungus, able to utilize the albuminoid substances given up by it. *Frank.*—**Le Sueur plant,** the plant or collective machinery required to carry out the Le Sueur process, one of the methods of preparing bleach-liquor by the electrolysis of a solution of common salt.—**Plant formation.** See ★*formation.*—**Plant œcology.** See ★*œcology.*

plant¹, *v. t.* 13. In *chess*, to play (a piece) to a square whence it cannot easily be dislodged.

> Black is now enabled to *plant* the Queen at her 6th.
> *Morphy*, Games of Chess, p. 375.

planta, *n.* 3. (*b*) The sole of a proleg of a lepidopterous larva. *A. S. Packard*, Text-book of Entom., p. 638.

plantad (plan′tad), *adv.* [L. *planta*, sole, + *-ad*³.] In *anat.*, toward the sole of the foot.

plantaginaceous (plan″tạ-ji-nā′shius), *a.* Of or pertaining to the *Plantaginaceæ*.

Plantaginales (plan″tạ-ji-nā′lēz), *n. pl.* [NL. (Engler, 1886), < *Plantago* (*Plantagin-*) + *-ales.*] An order of dicotyledonous sympetalous plants containing the family *Plantaginaceæ* only (which see).

plantain¹, *n.*—**Bracted** (or **large-bracted**) **plantain,** *Plantago aristata*, a species with very narrow leaves and long narrow bracts, native mostly west of the Mississippi but now a common weed eastward from Maine to Georgia.—**Indian plantain.** (*b*) See ★*Mesadenia.*—**Lance-leafed plantain,** the ribwort or English plantain, *Plantago lanceolata*, a weed of lawns and meadows, sometimes regarded as a forage-plant.—**Native plantain,** an Australian fodder-plant, *Plantago varia*, relished by stock, especially sheep.

plantain-shoreweed (plan′tạ̄n-shōr″wēd), *n.* A plant, *Littorella lacustris.*

Plantar neuralgia. Same as *erythromelalgia.*

plantation, *n.* 4. (*b*) (2) See the extract.

> In the Carolinas and Georgia the reports of rice irrigation were generally made for plantations instead of farms. In these states the term "*plantation*" is often applied to small holdings, the word, as thus used, being synonymous with "farm."
> *Dept. of Commerce and Labor* (Bureau of Census), [Bull. 16, p. 18.

7. In *organ-building*, the disposition or arrangement of the pipes of a stop, or of all the stops, on a wind-chest.

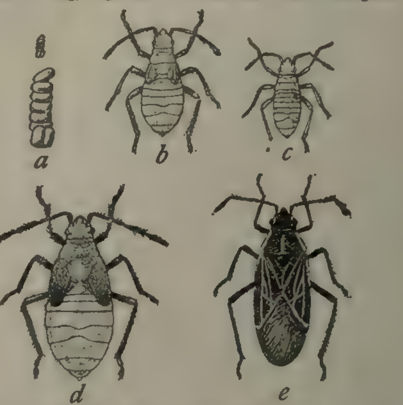
plantationer† (plan-tā′shọ̈n-ėr), *n.* One who took part in the plantation or colonization of Ulster. *N. E. D.*

plantation-measure (plan-tā′shọ̈n-mezh″ụ̈r), *n.* The variety of land-measure formerly used in the plantations of Ireland, in which the acre contained 7840 square yards. *N. E. D.*

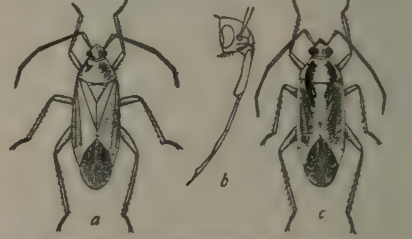
plant-beetle (plant′bē″tl), *n.* A beetle of the family *Chrysomelidæ*; a leaf-beetle.

plant-breeding (plant′brē″ding), *n.* The systematic management of plants by methods designed to secure improved types. The two resources for plant-improvement are selection and hybridization. The former (see *artificial selection* and *methodical selection*, under *selection*) may be practised upon 'chance seedlings' which show desirable characters, as a few heads of wheat in a field, or upon the best individuals from plots grown under conditions favorable to desired variations. The best seeds of the chosen individuals are sown to produce 'mother-plants,' and from the best seeds of approved mother-plants a centgener (see ★*centgener*, 2) is grown, upon which and its offspring (see ★*nursery stock*) selection is practised till a variety is fixed. In place of seedling selection, 'bud selection' is practised in case of plants propagated by cuttings, the best branches or other propagules being chosen. Hybridization (see *hybrid, n.*) serves more or less to combine the desirable qualities of two types, but the great majority of hybrids are worthless, or when not worthless unstable, so that selection must still be practised to secure permanent useful varieties. Plant-breeding aims at some specific end, for example, the removal of an undesirable character, as the beard of wheat, or the enhancement of a valuable quality, as sugar content in the sugar-beet, or the combination of two or more desirable qualities in the same variety, as earliness or good quality with large yield.

plant-bug, *n.*—**Black-lined plant-bug.** Same as *four-lined* ★*leaf-bug.*—**Box-elder plant-bug,** an American coreid bug, *Leptocoris trivittatus*, which does great damage to the box-elder on the tree claims in the western United States.—**Four-lined plant-bug.** Same as *four-lined* ★*leaf-bug.*—**Four-striped plant-bug.** Same as *four-lined* ★*leaf-bug.*—**Hooded plant-bug,** an American coreid bug, *Euthoctha galeator*, of wide distribution and known to suck the sap of young twigs of orange, plum, and other trees.—**Leaf-footed plant-bug.** (*a*) A large American coreid bug, *Leptoglossus phyllopus*, having the hind tibiæ each furnished with a leaf-like expansion: common in the southern United States, where it damages fruit. (*b*) Any one of several members of the genus *Leptoglossus*, which see, with cut.—**Northern leaf-footed plant-bug,** an American coreid bug, *Leptoglossus oppositus*, having a more northern distribution in the United States.—**Southern leaf-footed plant-bug,** the large brown coreid bug, *Leptoglossus phyllopus*, common in the southern United States.—**Tea plant-bug,** either of several East Indian capsid bugs of the genus *Helopeltis*, which damage growing tea-plants: same as ★*mosquito-blight.*—**Timothy plant-bug,** a capsid bug, *Oncognathus binotatus*, common to Europe, Africa, and North America, which feeds on timothy-grass, chenopodium, and other plants.—**Uhler's green plant-bug,** an American pentatomid bug, *Liodrma uhleri*, occurring in the western United States and Mexico.

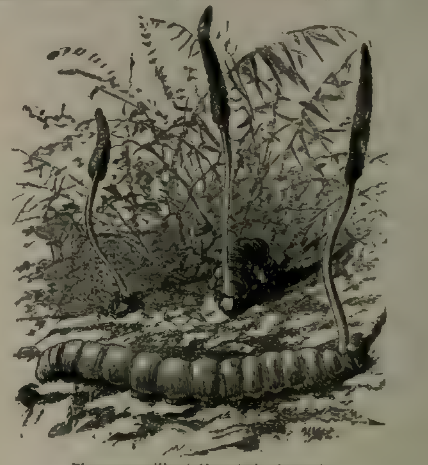


Box-elder Plant-bug (*Leptocoris trivittatus*).
a, eggs, enlarged; *b*, *c*, *d*, stages of nymphs; *e*, adult: all enlarged.
(Marlatt and Howard, U. S. D. A.)



Timothy Plant-bug (*Oncognathus binotatus*).
a, female bug; *b*, enlarged head and beak; *c*, male; *a*, *c*, enlarged; *b*, more enlarged. (After Howard, U. S. D. A.)

plant-caterpillar (plant′kat″ėr-pil-ạ̈r), *n.* The larva of any one of probably several hepialid moths occurring in Australasia, upon



Plant-caterpillar (*Abantiades ingens*).

which grows a fungus, *Sphæria robertsii.* A New Zealand species, *Charagia virescens*, was formerly supposed to be one of the species, but its larva is a trunk-borer, not a root-borer. *Abantiades ingens*, also from New Zealand, is more likely to be one of the infested forms. The fungus kills the caterpillar and sends up a long shoot from the head, which has given rise to another popular name, the *bulrush caterpillar*.

planted, *p. a.* 3. Buried. [Slang.]

> I was sent out here 'long with a lot more tenderfeet to plant beans for our own support, and to spread the gospel for the glory of America. Well, the other tenderfeet are *planted*, and I 'm the only one that 's got any kick left.
> *Cutcliffe Hyne*, A Master of Fortune, ii.

planter, *n.* 5. Specifically, in the Newfoundland fisheries, a middleman between the fisherman and the large dealer. See the extract.

> The merchant, as he is known in Newfoundland, is the large dealer who exports the fish to the tropics and Europe. He buys both from the fishermen and *planters*. The latter are a sort of middlemen, and usually have "stations" located at different points along the coast.
> *Sci. Amer. Sup.*, May 30, 1903, p. 22910.

6. A cattle-thief: so called from their habit of hiding the stolen cattle. [Australia.]

> What 's a little money . . . if your children grow up duffers and *planters*?
> *Rolf Boldrewood*, Colonial Reformer, xxv.

plant-food, *n.* In general, it is any substance that the plant takes in and utilizes in its life-process, as water with its mineral salts, and carbon dioxid. In a special sense it is sometimes restricted by botanists to the first organic compounds (starch-like materials) that are made by the plant, since these are used more or less directly in nourishing the plant.

plant-form (plant′fôrm), *n.* In *decorative design*, a motive or type taken from a plant; a phyllomorph.

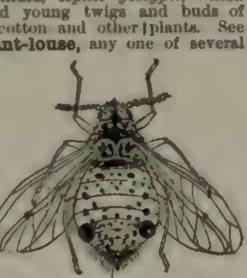
plantigrady (plan′ti-grā-di), *n.* [*plantigrade* + *-y*^{3}.] The state or condition of walking with the sole of the foot applied to the ground, as do the bears: contrasted with ★*digitigrady.*

> In the first group the pes is little different from the typical terrestrial running foot. The phalanges have, as in the raccoons, become much elongated and the soles are often naked. In some cases a distinct *plantigrady* has replaced the previous digitigrady.
> *Amer. Nat.*, Nov., 1903, p. 733.

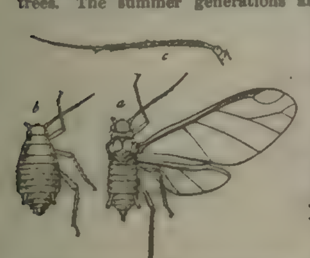
planting, *n.*—**Quincunx planting,** a method of planting trees in which young trees are set in the center and at each corner of successive squares.—**Square planting,** a method of planting trees in which the distance between the rows is equal to the distance between the young trees in the rows.—**Triangular planting,** a method of planting trees in which the unit of arrangement is an equilateral triangle, at each apex of which young trees are placed.

planting-stick (plan′ting-stik), *n.* A stick used to make holes in the soil for the purpose of planting seeds, setting out plants, etc.

plant-louse, *n.*—**Cabbage plant-louse,** a cosmopolitan aphidid, *Aphis brassicæ*, a species common to the United States and Europe. It infests young cabbage-plants.—**Cherry-tree plant-louse.** See ★*cherry-tree.*—**Collier plant-louse,** an English gardeners' name for *Aphis rumicis*, a species which sometimes occurs in enormous numbers on bean-plants in England and on the continent of Europe. Also called *black fly*, *bean-aphis*, and *black dolphin.*—**Corn plant-louse.** See ★*corn*^{1}.—**Currant plant-louse,** an American aphidid, *Aphis ribis*, which affects the leaves of currant, causing them to curl and die.—**Dolphin plant-louse.** Same as *collier* ★*plant-louse.*—**Orange plant-louse,** an American aphidid, *Aphis gossypii*, which feeds on the leaves and young twigs and buds of orange as well as upon cotton and other plants. See ★*cotton-aphis.*—**Pine plant-louse,** any one of several species of *Aphididæ* found commonly on the pine. The common pine plant-louse is *Lachnus strobi*. The white pine schizoneura, *Schizoneura pinicola*, and the pine-leaf chermes, *Chermes pinifoliæ*, are other abundant forms.—**Plum plant-louse,** *Myzus mahaleb*, a species common to Europe and the United States. It hibernates on plum- and peach-trees, and the autumnal and several spring generations are born on these trees. The summer generations are found in various annual plants.—**Wheat plant-louse,** a small green aphidid, *Siphocoryne avenæ*, which sometimes does much damage to winter wheat in the late spring and early summer. Also called *European grain-louse.*



Pine Plant louse (*Lachnus strobi*), enlarged. (After Gissler.)



Wheat Plant-louse (*Siphocoryne avenæ*).
a, migratory female; *b*, sexual female; *c*, antenna of migratory female. Much enlarged.
(Pergande, U. S. D. A.)

plant-totem (plant′tō″tem), *n.* A plant used as a totem. Most totems are animals, but in some cases plants and inanimate objects are used as true totems of clans.

> The prevalence of *plant-totems*.
> *Geog. Jour.* (R. G. S.), XVI. 435.

plantulation (plan-tụ̄-lā′shọn), *n.* [NL. *plantula*, dim. of L. *planta*, a plant, + *-ation.*] In *bot.*, germination. [Rare.]

plan-view (plan′vū), *n.* A top-view; a projection or plan of an object in which the object is supposed to be seen from above.

plappart (plä′pärt), *n.* [G., also *plappert*, *plaphart*, < ML. *blaffardus*, etc.] A German or Swiss coin or money of account formerly in use, of the value of twopence or less.

plaque, *n.* 7. A billon or silver coin current in the fourteenth and fifteenth centuries in Brabant, Liège, Lorraine, and France.

plashing^1, *n.* 2. A surface colored so as to look like granite. See *plash*^{1}, *v. t.*, 2.

plasma-cell (plas′mä̤-sel), *n.* A granular cell in connective tissue. Also *plasma-corpuscle.*

plasma-corpuscle (plas′mä̤-kôr″pus-l), *n.* Same as ★*plasma-cell.*

plasmapsis (plas-map′sis), *n.* [Gr. πλάσμα, plasm, + ἁψίς, a joining.] A fusion of the outer unspecialized protoplasm of reproductive cells: the first stage in the process of conjugation. The subsequent stages are karyapsis and mitapsis. *Cook* and *Swingle.*

plasmase (plas′mās), *n.* [*plasm* + *-ase.*] The ferment which causes the clotting of blood; fibrin ferment.

plasma-stain (plas′mä̤-stān), *n.* In *cytol.*, a stain which differentiates the cytoplasm of a cell, as opposed to a nuclear stain.

plasmatorrhexis (plas″mạ̈-tọ̄-rek′sis), *n.* Same as ★*plasmorrhexis.*

plasminic (plas-min′ik), *n.* [*plasm* + *-in* + *-ic.*] Noting an acid, $C_{15}H_{28}N_6P_6O_{30}$, a derivative of yeast nucleinic acid: apparently representing an intermediary product between thyminic acid and the original substance.

plasmochyma (plas-mọ̄-kī′mä̤), *n.* [Gr. πλάσμα, for 'plasma,' + χυμός, juice.] Those components of cell-protoplasm which are especially rich in albumins.

plasmocyte (plas′mọ̄-sīt), *n.* [Gr. πλάσμα, for 'plasma,' + κύτος, a hollow (a cell).] A colorless blood-corpuscle, or leucocyte, supposed to be a free attraction-sphere. *G. Eisen*, 1897.

plasmodesmus (plas-mō-des′mus), *n.*; pl. *plasmodesmi* (-mi). [NL., < Gr. πλάσμα, for 'plasma,' + δεσμός, band.] One of the delicate protoplasmic strands or bridges which unite the cytoplasm of adjacent cells in plants. *Strasburger*, 1901.

Plasmodium malariæ. (*b*) Same as ★*plasmodium quartanæ.*—**Plasmodium malignum,** the parasite of estivo-autumnal or pernicious malarial fever.—**Plasmodium præcox.** Same as ★*plasmodium malignum.*—**Plasmodium quartanæ,** the parasite of quartan fever.—**Plasmodium tertianæ,** the parasite of tertian fever.—**Plasmodium vivax.** Same as ★*plasmodium tertianæ.* See ★*malaria* (with cut).

plasmodoma (plas-mod′ọ̄-mä̤), *n. pl.* [NL. See *plasmodium.*] Organisms that manufacture proteids out of inorganic matter; plants, as contrasted with animals, which are dependent upon plants for their proteids. See ★*plasmodomism.* *Haeckel.* [Rare.]

plasmodomism (plas-mod′ọ̄-mizm), *n.* [*plasmodom*(*a*) + *-ism.*] The manufacture of proteids out of inorganic matter, in the way that is characteristic of plants. [Rare.]

> The carbon-assimilation in plants—what I call *plasmodomism* . . .—means that the plant is able, under the influence of sunlight, to form carbo-hydrates, and from these new plasm, out of simple inorganic compounds (water, carbonic acid, nitric acid, and ammonia). . . . The animal is unable to do this. It has to take its plasm in its food. . . . We therefore give the title of plasmophagous to these animal "plasma-eaters."
> *Haeckel* (trans.), Wonders of Life, p. 212.

plasmodomous (plas-mod′ō-mus), *a.* [*plasmodom*(*ism*) + *-ous.*] Manufacturing proteids out of inorganic matter, in the way that is characteristic of plants. [Rare.]

> It starts with the Monera, non-nucleated masses of protoplasm which 'stand exactly at the limit between the organic and the inorganic worlds' and have originated by spontaneous generation. Of these, two varieties existed, differing in their physiological activities; the one group, the phytomonera, being *plasmodomous*, building up protoplasm from unorganized material, and the other, the zoomonera, being plasmophagous, finding their nutrition in already organized material.
> *Science*, Aug. 4, 1905, p. 138.

plasmodomy (plas-mod′ọ̄-mi), *n.* [*plasmodom*(*ism*) + *-y*^{3}.] Subsistence upon inorganic matter in the way that is characteristic of plants. [Rare.]

plasmogenesis (plas-mọ̄-jen′e-sis), *n.* [Gr. πλάσμα, for 'plasma,' + E. *genesis.*] The science of the artificial imitations of protoplasm. *Herrera.*

plasmogeny (plas-moj′e-ni), *n.* Same as *plasmogony.*

plasmogony, *n.* 2. The formation or production of the first living beings, as contrasted with *autogeny* or the production of the first living matter. [Rare.]

> I distinguished . —autogeny—(the formation of the first living matter . . .) and *plasmogony* (the formation of the first individualized plasm).
> *Haeckel* (trans.), Wonders of Life, p. 354.

plasmolytically (plas-mọ̄-lit′i-kạ̈l-i), *adv.* In a plasmolytic manner; by the process of plasmolysis. *Science*, May 1, 1903, p. 706.

plasmoma (plas-mō′mä̤), *n.*; pl. *plasmomata* (-mạ̈-tä̤). [NL., < *plasma* + *-oma.*] Any new growth containing many plasma-cells.

> Recently Wright has described in the cells of such a tumor a resemblance to plasma cells and speaks of the new growth as a *plasmoma*.
> *Jour. Exper. Med.*, Nov. 29, 1901, p. 54.

Plasmopara (plas-mop′ạ̈-rä̤), *n.* [NL. (Schörter, 1886), < Gr. πλάσμα, for 'plasma,' + L. *parere*, bring forth.] A genus of parasitic fungi of the family *Peronosporaceæ*, having the mycelium intercellular, the haustoria small and globular, the conidia sometimes forming swarm-spores, and the oöspores globose, smooth, and brownish. About 15 species are known. *P. viticola* causes a serious disease of the grape known as *downy mildew.* See *grape-mildew* and *cucumber* ★*mildew.*

plasmophaga (plas-mof′ạ̈-gä̤), *n. pl.* [NL., < Gr. πλάσμα, for 'plasma,' + φαγεῖν, eat.] Organisms that are dependent upon proteids for their nutrition; animals, as contrasted with plants, which manufacture proteids out of inorganic matter. *Haeckel.* See ★*plasmodomism.*

plasmophagism (plas-mof′ạ̈-jizm), *n.* [*plasmophag*(*a*) + *-ism.*] Subsistence upon proteids that are either immediately or ultimately the products of plants, in the way that is characteristic of animals.

plasmophagous (plas-mof′ạ̈-gus), *a.* [*plasmophag*(*ism*) + *-ous.*] Subsisting upon proteids which are obtained ready made, in the way that is characteristic of animals.

> Plants are plasmodomous; animals *plasmophagous.*
> *Haeckel* (trans.), Wonders of Life, p. 212.

plasmophagy (plas-mof′a-ji), *n.* [*plasmophag*(*ous*) + *-y*^{3}.] Subsistence upon ready-made proteids, in the way that is characteristic of animals. *Haeckel* (trans.), Wonders of Life, p. 213.

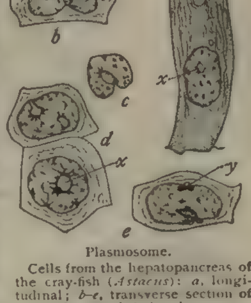
plasmorrhexis (plas-mọ̄-rek′sis), *n.* [NL., < Gr. πλάσμα, for 'plasm,' + ῥῆξις, breaking.] Disintegration of the cell-protoplasm by granular degeneration, vacuolation, and escape of the cell-contents.

plasmoschisis (plas-mos′ki-sis), *n.* [NL., < Gr. πλάσμα, for 'plasm,' + σχίσις, splitting, cleaving.] The process of disorganization of a cell through fission of its protoplasm.

plasmosoma (plas-mō-sō′mä̤), *n.*; pl. *plasmosomata* (-mạ̈-tä̤). [NL.] Same as ★*plasmosome.*

plasmosome (plas′mọ̄-sōm), *n.* [NL. *plasmosoma*, < Gr. πλάσμα, for 'plasm,' + σῶμα, body.] A true cell-nucleolus, distinguished by its affinity for the plasma-stains such as the acid tar-colors: opposed to ★*karyosome.* *Ogata*, 1883.

> In one type this nucleolus remains a *plasmosome*, or true nucleolus, which fades away at the time of division, the chromosomes arising nearly in the usual manner from the chromatin network.
> *Science*, May 31, 1901, p. 865.



Plasmosome.
Cells from the hepatopancreas of the cray-fish (*Astacus*): *a*, longitudinal; *b*–*e*, transverse section of cells. In *a* and *d*, the plasmosome (*x*), or pyrenosome, is seen within the nucleus; in *b* and *c*, it is at a reëntrant angle of the nuclear wall; in *e*, it is seen passing out into the cytoplasm at *y*.
(From Gurwitsch's "Morphologie und Biologie der Zelle.")

plasmosphere (plas′mō-sfēr), *n.* [Gr. πλάσμα, for 'plasm,' + σφαῖρα, sphere.] Same as ★*perisphere.*

plasmotomy (plas-mot′ọ̄-mi), *n.* [Gr. πλάσμα, as 'plasm,' + -τομια, < τέμνειν, cut.] The breaking up of a multinucleate cell into multinucleate fragments, as in the *Myxosporidia*.

Cohn and Doflein have discovered cases of *plasmotomy*, in which a kind of protoplasmic bud of ectosarc and endosarc containing some nuclei becomes detached; these little masses have but to grow in order to form the ordinary protoplasmic masses. *Encyc. Brit.*, XXXII. 817.

Multiple plasmotomy, the formation of buds from the protoplasmic body, as in *Myxidium*.—**Simple plasmotomy**, ordinary fission.

plasome (plas'ōm), *n.* [Gr. πλάσις, a forming, + *-ome*.] One of the hypothetical units of living protoplasm, supposed to possess the properties of assimilation, growth, and reproduction. *Wiesner*, 1892.

In other cases the assumption of invisible protoplasmic units has been inspired by a desire . . . to explain the general vital and assimilative powers of protoplasm, as, for example, the "micellæ" of Nägeli and the "*plasomes*" of Wiesner. *Encyc. Brit.*, XXXII. 41.

plasson (plas'ọn), *n.* [NL., < Gr. πλάσσων, ppr. of πλάσσειν, form: see *plasma*.] The protoplasmic substance of which a cytode, or cell without a nucleus, is supposed to consist. *L. F. Ward*, Dynamic Sociol., I. 316.

plassonellum (plas-ọ-nel'um), *n.*; pl. *plassonella* (-ạ̈). [NL. dim. of *plasson*.] One of the hypothetical living particles without organization, assumed as the representatives of a stage in the evolution of life prior to and culminating in the production of the first organisms. [Rare.]

-plast. [Gr. -πλαστος, πλαστός, formed, molded, < πλάσσειν, form.] A terminal element in some biological words, denoting any primitive living unit or cell: as, *bioplast*, *protoplast*, etc.

plastein (plas'tẹ-in), *n.* [Gr. πλαστός, formed, + *-e-in*.] An albuminous condensation-product formed through the action of certain ferments, such as chymosin and papayotin, upon albumoses in concentrated solution.

plaster, *n.* 4. In a general sense, calcium sulphate, whether deprived by heat of its water of crystallization or not, as, for instance, the crust of hydrated calcium sulphate which forms on salt-boilers' pans, or natural gypsum used as a fertilizer and known as *land-plaster*.

plaster-bead (plȧs'tėr-bēd), *n.* Same as *ground*, in the sense of a plaster strip or molding against which the wet plaster is stopped. See *ground*^{1}, 10 (*i*).

plaster-work (plȧs'tėr-wėrk), *n.* The preparing or putting up of plaster, in the sense of two or three coats, or more, of mortar upon walls or ceilings.

plastic, *a.* 5. Applied by Liebig to the proteid constituents of animal food as serving to form the principal tissues of the body, in contradistinction to the non-nitrogenous portion of the food, which he called *respiratory* as serving for the production of bodily heat by their oxidation.—6. Capable of receiving and of responding to environmental impulses which induce more or less rapid evolution of an organism as a whole or of certain of its organs: the opposite of *conservative* and *persistent*.—**Plastic bronze.** See ★*bronze*.

II. *n.* 1. The art of modeling or molding; sculpture.—2. A molder; a modeler; a statuary. [Now rare, in both uses.]—3. The commercial name for any one of a class of substances, such as celluloid or viscose, which are worked into shape for use by molding or pressing when in a plastic condition.

plasticity, *n.*—**Latent plasticity**, the property of viscous flow which rocks develop, when buried so deep within the earth as to be under a load greater than their crushing resistance at the surface, and yet so tightly confined that they can only yield by flowage. *Geikie*, Textbook of Geol., p. 396.

plastid, *n.* 3. A general name for any permanent organ of the cell except the nucleus and centrosome. *Amer. Nat.*, Oct., 1905, p. 700.

plastidogenetic (plas″ti-dọ-jẹ-net'ik), *a.* [*plastid* + *genetic*.] Producing or giving rise to plastids or cells.

plastid-plasm (plas'tid-plazm), *n.* In *cytol.*, the portion of the cell-protoplasm of plants which gives rise to the plastids, as distinguished from the karyoplasm, or nuclear plasma, and the general cytoplasm. [Rare.]

Thus three forms of protoplasm, nucleoplasm, *plastid-plasm* and cytoplasm comprise all the living material of the cell and may be sharply contrasted with the non-protoplasmic contents. *Amer. Nat.*, May, 1904, p. 371.

Plastin granule, one of the highly refractive granules of plastin, a reserve food-material stored in the cytoplasm of the *Sporozoa* among the *Protozoa*. *Jour. Exper. Med.*, March 17, 1902, p. 306.

plastinoid (plas'ti-noid), *a.* [*plastin* + *-oid*.] Resembling plastin.

plastique (plas-tēk'), *n.* [F. See *plastic*.] A composition, somewhat like plaster of Paris, used in modeling.

plastodynamia (plas″tọ-dī-nā'mi-ạ̈), *n.* [Gr. πλαστός, formed, + δύναμις, power.] The power or capability to develop, such as is exhibited by the living cell.

plastodynamic (plas″tọ-dī-nam'ik), *a.* [Gr. πλαστός, formed, + δύναμις, power, + *-ic*.] Possessing or relating to plastic or formative force.

plastogamic (plas-tọ-gam'ik), *a.* [*plastogamy* + *-ic*.] Pertaining to, exhibiting, or resulting from, plastogamy.

plastogamy (plas-tog'ạ-mi), *n.* [Gr. πλαστός, formed, + γάμος, marriage, + *-y*^{3}.] The fusion of the cytoplasmic bodies of two reproductive cells or of two unicellular organisms.

The difficulty of determining the correlation between the size of Actinosphaeria and the number of cysts built was encountered chiefly in the liability of the creatures to divide or fuse one with another (*plastogamy*) after they had been placed in the vessels to starve and to encyst. *Biometrika*, June, 1903, p. 242.

plastomenite (plas-tom'e-nīt), *n.* A trade-name of a kind of smokeless powder, a mixture of dinitrotoluene and nitrated wood-pulp.

plastotype (plas'tọ-tīp), *n.* [Gr. πλαστός, formed, + τύπος, type.] A model cast from a primary type.

Horizon and Locality.—In the Fort Riley limestone of the lower Permian, three miles west of Stockdale, Kansas. The *plastotype* is in the Yale University Museum. *Amer. Jour. Sci.*, July, 1904, p. 24.

plastron, *n.* 6. In the *Echinodermata*, a space surrounded by the subanal fasciole lying beneath the anus, in spatangoid echinoids.

plata (plä'tä), *n.* [Sp. *plata*, silver. See *plate*, *n.*] Silver.—**Plata pina**, in *metal.*, the spongy silver obtained after the separation of the mercury. *Phillips and Bauerman*, Elements of Metallurgy, p. 747.

platanillo (plä-tä-nēl'yō), *n.* [Sp. *platanillo*, dim. of *plátano*.] 1. In tropical America, a name for the common milkweed, *Asclepias curassavica*.—2. In Mexico, *Canna indica*.

platanist (plat'ạ-nist), *n.* [*Platanist(a)*.] The Gangetic dolphin, *Platanista gangetica*.

platano (plä'tä-nō), *n.* [Sp. *plátano*, < L. *platanus*. See *platanus*.] In countries settled by the Spanish, the common name of the banana and plantain (*Musa paradisiaca* and *M. sapientum*). In Porto Rico the name is especially applied to the starchy plantains, which must be cooked before they can be eaten, the sweet bananas being called *guinéos*.

plate, *n.* 16. In *bacteriol.*, the film of agar-agar or gelatin poured upon a glass plate or into a Petri dish for the purpose of separating specific organisms. See ★*plating*, 3. Also called *poured plate*.—17. A butchers' term for the long, thin cut of beef, weighing usually about 60 pounds, and including the brisket, the navel piece, and the thinner inside piece called the skirt.—18. In *geol.*, a wide area of flat and undisturbed strata.

Towards the north, however, a very extensive '*plate*' without folding appears, which stretches nearly to the Arctic archipelago. *Athenæum*, July 15, 1905, p. 82.

Adanal plate. See ★*adanal*.—**Amalgamated plates**, in *gold-milling*, copper plates (sometimes silver-plated) having an amalgamated surface which are used to catch gold in the stamp-milling process.—**Barlow's plate**, an old device, consisting of a flat form of soft iron, placed in the vicinity of a ship's compass for compensating the latter against the magnetism of the ship's iron. It might be termed the forerunner of the *Flinders bar* (which see).—**Basal plate.** See ★*basal*. **Cathammal plate.** See ★*cathammal*, 2.—**Chlorid plate**, a photographic plate coated with a gelatinochlorid emulsion. -**Cut-off plate.** See ★*cut-off*.—**Dental plate.** (*a*) In *zoöl.*: (1) The plate of pavement-like teeth, as in the jaws of some skates, or any bony plate in the mouth of a fish which bears teeth or has the function of teeth. *Amer. Jour. Sci.*, Aug., 1904, p. 143. (2) In polychætous annelids, one of the chitinous jaws. (3) In the *Brachiopoda*, one of the two erect shelly plates which support the teeth of the ventral valve and rest on the bottom of that valve. By their convergence and union they form the spondylium in some species, and this structure may be supported on a single median plate or septum. See ★*spondylium*. (*b*) In *dental surgery*, a plate of metal, hard rubber, or other material, molded to the shape of the roof of the mouth, which serves as a support for false teeth.—**Ectethmoidal plate**, the ectethmoid, pars plana, or antorbital plate.—**Fundamental plate** or **zone**, the dorsal portion of the lateral wall of the medullary tube on either side.—**Genital plate**, in ophiuroids, the larger of the two barlike plates which bound the genital slit. See *genital* ★*scale*.—**Give-and-take plate.** See ★*give-and-take*.—**Intermarginal plates**, in some starfishes, a series of plates developed between the inframarginals and the supramarginals.—**Marginal plate**, one of the horny plates covering the outer edge of the carapace in turtles.—**Marsupial plate**, in certain crustaceans, one of the lamellate appendages on the basal joints of some of the thoracic limbs, forming, with similar appendages, a brood-pouch or cavity into which the eggs enter and there develop. *Trans. Linn. Soc.*, Zool., May, 1897, p. 30.—**Oral-angle plates**, in ophiuroids, the five pairs of large plates forming the framework which surrounds the mouth.—**Oral plate.** (*a*) In the *Crinoidea*, one of the calyx plates which surround the oral aperture. (*b*) Same as ★*buccal shield*.—**Petri plate**, a Petri dish containing the nutrient medium ready to receive the material from which a culture is to be obtained.

In a *plate* of *petri* at 20° we notice some rare yellow granulated colonies with irregular borders, presenting often some prolongations. After five days some of the colonies from the surface spread, and present one prolongation and rarely two, as the tail of a comet. *Jour. Trop. Med.*, Jan. 15, 1903, p. 31.

Pile of plates. See ★*pile*^{3}.—**Plate-edge planer.** See ★*planer*.—**Plate-girder bridge**, a form of bridge in which trusses are replaced by plate-girders, each formed by a wide, thin, vertical steel plate called the *web*, having on each edge a flange composed of angle-irons riveted to the web. The web is further stiffened by angle-iron stiffeners extending from flange to flange.—**Polar plate.** See ★*polar field*. *Parker and Haswell*, Zoology, I. 203.—**Poured plate.** See ★*plate*, 16.—**Poured plate culture.** See ★*culture*.—**Prochordal plate**, an embryonic tissue situated dorsocephalad of the anterior end of the notochord. It is continuous caudally with the parachordals.—**Punched plate**, in *music-printing*, a plate for printing in which the note-heads, the words, and many technical characters are incised by dies, while the staff-lines, note-stems, etc., are cut by a burin. The indentations thus made are filled with wax to retain the ink. Most sheet-music is thus printed.—**Quarter-wave plate**, in *optics*, a plate of doubly refracting crystal of such thickness that the two components of a beam of light traversing it acquire a difference of phase of $\frac{\pi}{2}$ or a difference of path of a quarter-wave length. Same as *Senarmont's* ★*compensator*.—**Rostral plate**, the anterior plate in the dorsal shield of certain Upper Silurian and Lower Devonian fishes of the family *Pteraspidæ*, order *Heterostraci*.—**Scattering-plate**, a plate, either solid or perforated, against which a jet of water or other fluid may impinge and be broken up and spread into thinner films or smaller masses: used in surface-condensers of steam-engines, for example, to force the steam or the water to exert its heating or cooling effect over a larger area than that of the cross-section of the inlet opening.—**Segmental plate**, the plate of mesoblast on either side of the notochord at the posterior end of the vertebrate embryo. It is from this plate that the mesoblastic segments, or somites, are successively cut off.—**Septal plate**, in the dorsal valve of the articulate brachiopods, one of the vertical plates which support the hinge-plate and rest on the bottom of the shell.—**Sheffield plate**, copper plated with silver; a cheap substitute for solid silver, used for all the purposes for which silver had previously been used. The process, which consisted in rolling out the plate after the sheets of silver and copper had been fused together, originated at Sheffield, England, near the middle of the eighteenth century. The foundation of the best Sheffield plate was composed of copper and brass. This rolled plate was far more durable than the electroplate of the present day.—**Silver plate.** (*a*) See *plate*, 4 and 5. (*b*) A thin coating of silver deposited over the surface of an article made of some other metal.—**Wet plate**, in *photog.*, a glass plate covered with collodion containing soluble chlorids, bromides, and iodides, which, after being put in a bath of silver nitrate, is exposed in the camera while still moist. The process was devised by Scott Archer.

plate, *v. t.* 6. In *paper-making*, to pass a finished or machine-calendered paper through the supplementary rolls called the ★*supercalenders* (which see). See also *supercalendered*.

plateasm (plạ-tē'azm), *n.* [Gr. πλατειασμός, < πλατειάζειν, speak or pronounce broadly, < πλατύς, flat, broad: see *plat*^{3}.] A broad pronunciation. *Blount*, Glossographia.

plateau, *n.*—**Continental plateau**, the mass of a continent considered as rising above the deep ocean-floor, and including the shallow sea-bottom near the land.

On the inner borders of *continental plateaus*, which are the submerged portion of the continental domes, detritus accumulates by marine erosion. *Geog. Jour.* (R. G. S.), X. 129.

Intermont plateau, a plateau which lies between two mountain-ranges. *Dana*, Manual of Geol. (4th ed.), p. 25.—**Plateau glacier.** See ★*glacier*.

plateaulith (pla-tō'lith), *n.* [E. *plateau* + Gr. λίθος, stone.] An eolithic implement found in the plateau gravels of Kent, England. *Nat. Sci.*, Feb., 1898, p. 115.

plate-bolt (plāt'bōlt), *n.* 1. A bolt which slides on a flat plate.—2. A bolt having a wide, flat head. *N. E. D.*

plate-box, *n.* 3. In *founding*, a thin flask or box used in molding plates or very thin, flat pieces. Also called *plate-flask*.

plate-carrier (plāt'kar″i-ėr), *n.* In *photog.*, a thin loose blackened frame inserted in the plate-holder to permit the use of a plate smaller than that for which the holder was originally constructed. Also used in photo-engraving to hold the half-tone screen near to the sensitive plate during exposure. Same as *kit*^{1}, 4.

plate-cylinder (plāt'sil″in-dėr), *n.* See ★*cylinder*.

plate-fish (plāt′fish), *n.* Same as *trunk-fish*; any ostraciont.

plate-flask (plāt′flȧsk), *n.* Same as ★*plate-box*, 3.

plate-frame, *n.* **2.** Same as ★*web-frame.*

plate-furnace (plāt′fėr″nạs), *n.* A furnace, either of the reverbatory or forge type, used by boiler-makers and ship-smiths for heating plates which are to be bent, flanged, or welded.

plate-gilled (plāt′gild), *a.* Having lamella-like gills, as a bivalve; lamellibranchiate.

plate-knee (plāt′nē), *n.* A metal knee consisting of two flat plates giving an extended surface for the bolts. *N. E. D.*

plate-lifter (plāt′lif″tėr), *n.* In *photog.*, a thimble to which a projecting point is fastened for lifting plates from baths.

Platelminthes (plat-el-min′thēz), *n. pl.* Same as *Platyhelminthes.*

plate-lock (plāt′lok), *n.* A lock having the outer case of wood, commonly used on outside doors; also, a lock in which the works are pivoted on an iron plate. *N. E. D.*

platen, *n.* **2.** The feed-roll of a typewriter against which the paper rests while receiving an impression.—**3.** The table of a machine-tool to which the piece to be cut is fastened.

Platephemera (plat-e-fem′ẹ-rạ̈), *n.* [NL., < Gr. *πλατύς*, broad, + NL. *Ephemera.*] A genus of fossil insects based upon a fragmentary neuropteroid wing found in Devonian rocks.

plate-pitch (plāt′pich), *n.* A variety of tough-pitch copper in which the poling, or removal of oxygen, has been carried beyond the wire-bar pitch stage.

> Refiners commonly distinguish "ingot- or cake-pitch" and "wire-bar pitch;" copper brought to the former contains more cuprous oxide than the latter. These two pitches are, however, not absolutely fixed; they vary with the practice of the individual refiner and with thickness of the cake or bar that is to be cast: The thicker the piece, the more oxygen will have to remain in the metal, if a flat surface is to be obtained. A third degree of pitch aimed at is that required by very thin castings, such as electrodes 0.5 inch in thickness. As this pitch lies beyond that of wire-bar copper and differs from it more than to permit its being designated merely a shading, it may be called "*plate-pitch.*"
>
> *Electrochem. Industry*, March, 1904, p. 88.

plate-roll (plāt′rōl), *n.* One of the rolls in a mill for rolling iron or steel plates; a plate-roller.

plate-tongs (plāt′tôngz), *n. pl.* **1.** A pair of tongs for handling hot metal plate in the rolling process.—**2.** Tongs for handling photographic plates or negatives.

plate-tower (plāt′tou″ėr), *n.* An arrangement for bringing about absorption of a gas by a liquid, used in various chemical industries, notably in the manufacture of sulphuric acid. The space within a tower or column is divided up by a number of superposed horizontal partitions with small intervals between them. Each of these partitions consists of a number of stoneware plates perforated with small holes, the holes in any one plate occupying somewhat different positions from those in the plates of the next partitions below and above. The absorbing liquid drips gradually from each partition to the one below it, but a little rim to each perforation secures the retention at all times of a thin film of liquid on the surface of each plate. The gas or mixture of gases passes upward through the tower. The effect is the same as that of the older 'coke-tower'; but greater uniformity of distribution of the liquid, and therefore greater efficiency, is secured.

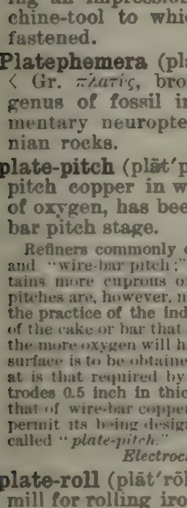


Plate tower.

a, a, a, lead lining; *b, b*, perforated porcelain plates; *c*, bearer, to support plate; *d, e*, distributing pipes for liquid from *f, f*, reservoir; *g*, gas-inlet; *h*, gas-exit.

platform, *n.* **8.** In *phys. geog.*, a shallow sea-bottom near a continent; a continental shelf: as, the Patagonian *platform.*

> British and Continental *Platform.*—A gently shelving platform stretching seawards to varying distances from 20 to 200 miles, terminating in a declivity or escarpment at depths (according to distance from land) varying from 100 to 200 fathoms. *Geog. Jour.* (R. G. S.), XIII. 286.

9. In certain extinct genera of atrematous brachiopods (*Trimerella, Monomerella, Lingulasma*), a raised structure in the posterior portions of the valves, the surface of which served as places of attachment for muscles, while the cavities beneath stored the hepatic and reproductive glands.—**Charging-platform,** the platform from which the charge of fuel and ore is delivered to a blast-furnace, or the charge of fuel and iron to a cupola.—**Flood-platform,** the terrace cut back and leveled off by a stream at its times of flood.

> In its minor features the *flood-platform* resembles the foreshore of a craggy sea-coast. Terraced reefs and irregular bosses of rock, sometimes high enough to form islands at flood-time, roughen its surface; and it is deeply pitted with well-like "pot-holes," ground smooth and true by the rock-drill of whirling torrent-driven stones. The amygdaloidal structure of the basalt is peculiarly favourable to the production of these pits, which, by their numbers and size, are a striking characteristic of the floor of the gorge in many places.
>
> *Geog. Jour.* (R. G. S.), Feb., 1908, p. 141.

Moving platform, a device for transporting passengers a limited distance, consisting of an endless belt or platform which is made to move continuously at a prescribed speed by suitable stationary engines or by motors on the axles of the platform. Seats are usually provided for the passengers, who, by the aid of slower-moving short station platforms, get on and off the platform while it is in motion. A second platform, at higher speed than the first, may be used in connection with the latter, its elements being borne on the top of the carrying-wheels on whose axles the first platform is borne. As the top of a rolling wheel goes through space twice as fast as its axle, the upper platform without gearing goes twice as fast as the main flooring. Compare ★*conveyer*, 4, ★*escalator*, and ★*ramp*, 9.

platform-deck (plat′fôrm-dek), *n.* See ★*deck*, 2.

Platichthys (plạ̈-tik′this), *n.* [NL., < Gr. *πλατύς*, flat, + *ἰχθύς*, fish.] A genus of flounders of the northern Pacific.

platina, *n.* **1.** The word in this form, with the original spelling, is now generally used to signify the mineral, a natural alloy of the pure metal platinum with palladium, rhodium, iridium, osmium, ruthenium, iron, and copper.

platinate (plat′i-nāt), *n.* A compound which may be viewed as a salt produced by the union of platinum dioxid with the oxid of a more basic or electropositive metal: as, sodium *platinate*, $Na_2Pt_3O_7$ or $Na_2O.(PtO_2)_3$.

plating, *n.* **3.** In *bacteriol.*, the pouring of liquefied gelatin or agar-agar containing a mixed culture of bacteria upon a glass plate or into a Petri dish, where the medium hardens and thus permits the isolation of specific organisms. Also *plating-out.*—**4.** In *iron ship-building*, the plates, collectively, arranged in strakes covering any part: as, side-*plating*, the plates forming the outer skin of the vessel above the turn of the bilge; bottom-*plating*, the plates forming the outer bottom of a vessel below the turn of the bilge; deck-*plating*, the covering of the deck-beams, etc.

Outside plating. See ★*shell-plating.* **Plating-behind-armor,** in a war-ship, the heavy plating supported by strong framing on the side of the vessel or in the interior to support the armor-plates. The armor is not usually placed directly on the plating, but interposed between the inner face of the armor and the outer surface of the plating-behind-armor is a thickness of wood backing arranged like the planking of a wooden ship.—**Thimble-plating,** a name used in Great Britain to describe the method of making a cylindrical boiler-shell or -flue of successive rings of plate, in which each ring is made slightly tapering so as to be smaller at one end than at the other by the amount necessary to enter within the end of the next ring to form the lap of the joint. These successive rings should be so arranged that the current of flame or hot gases does not impinge upon the exposed end of the plate at the larger end of the ring. The alternate arrangement of the rings is designed to render them cylindrical, but alternately large and small so as to lap externally and internally alternately; or to render them telescopic, making the boiler of smaller diameter at the end farthest from the fire.

platini-. In *chem.*, a prefix signifying the presence of platinum with apparently tetrad valence: as, potassium *platini*chlorid, K_2PtCl_6, also called potassium chloroplatinate.

platinichlorid (pla-tin-i-klō′rid), *n.* [*platinum* + *chlorid.*] A compound producible by the union of platinum tetrachlorid with the chlorid of a more basic or electropositive metal or radical. Also called *chloroplatinate:* as, potassium *chloroplatinate*, K_2PtCl_6.

platinite (plat′i-nīt), *n.* [*platinum* + *-ite*2.] **1.** A hypothetical compound of platinum monoxid with the oxid of a more basic or electropositive metal. No such compound has actually been obtained in a definite form.—**2.** An alloy of steel with forty to fifty per cent. of nickel, used to replace the metallic filaments of platinum or electric incandescent or glow-lamp bulbs. It has so nearly the same coefficient of expansion as that of glass that difficulties are avoided which occur when a more expansive metal is to be sealed into glass. Used particularly in France. *Nature*, July 6, 1905, p. 237.

platino-. In *chem.*, a prefix signifying the presence of platinum with apparently dyad valence: as, potassium *platino*chlorid, K_2PtCl_4, also called potassium chloroplatinite.

platinocyanic (plat″i-nọ-sī-an′ik), *a.* [*platinum* + *cyan*(*ogen*) + *-ic.*] Containing platinum and cyanogen.—**Platinocyanic acid,** an acid, $H_2Pt(CN)_4$, known only in its salts or in solution. Also called *cyanoplatinous acid.*

platinocyanide (plat″i-nọ-sī′ạ̈-nid), *n.* [*platinocyan*(*ic*) + *-ide.*] A salt of platinocyanic acid. Also called *cyanoplatinite.* The most important is *barium platinocyanide*, $BaPt(CN)_4.4H_2O$ (which see, under ★*barium*).

platinoid, *n.* **2.** An alloy, resembling German silver, composed of 60 parts copper, 14 parts nickel, 24 parts zinc and 1 to 2 parts tungsten. It has a greater resistance than German silver, and it is used largely in electrical work.

platino-iridium (plat″i-nọ-ī-rid′i-um), *n.* Same as ★*iridio-platinum.*

platinum, *n.*—**Birmingham platinum,** an alloy of copper and zinc, the proportions of the former varying from 20 to 46.5 parts and of the latter from 53.5 to 80 parts. The alloy is very brittle, but it casts well and is used only for buttons, on which the letters or designs are brought out by careful pressing. Also known as *platinum-lead.*—**Deville and Debracy's platinum process,** a process in which platinum ore is mixed with an equal weight of galena and fused in a reverberatory furnace, where some glass and litharge are added. The alloy of osmium and iridium accompanying the platinum sinks to the bottom, while the metallic lead combined with the platinum remains at the top and is cast into ingots. The lead is subsequently removed from the platinum by cupellation.—**Mock platinum,** an alloy consisting of 8 parts of brass and 5 parts of zinc.—**Platinum degree, lamp, silver.** See ★*degree*, etc.—**Platinum sponge,** metallic platinum in the form of a soft, loosely aggregated mass, of gray color and without luster, obtained by heating to redness ammonium platinochlorid. It absorbs gases in large quantity, so that if exposed to a stream of hydrogen in the presence of air, hydrogen and oxygen condensed in the pores combine, the metal becomes incandescent, and the hydrogen is set fire to and burns with flame.—**Platinum standard.** Same as *Violle's platinum standard.* See ★*light standard.*—**Platinum tetrachlorid,** platinic chlorid, $PtCl_4$. What is very commonly called by either of these names, the orange-yellow substance produced by dissolving platinum in aqua regia and evaporating the solution, extensively used as an analytical reagent, contains in addition the elements of hydrochloric acid, and is properly called chloroplatinic acid, H_2PtCl_6.—**Platinum toning.** See ★*toning.*—**Scale of the platinum thermometer.** See *thermometer* ★*scale.*—**Wollaston's platinum process,** a wet method of extraction, which consists essentially in bringing platinum into solution with aqua regia, precipitating from this solution platinum-ammonium chlorid by means of ammonium chlorid and ammonia, and then decomposing this compound and separating platinum at a red heat. The platinum obtained from this method is not free from iridium.

platinum-bronze (plat′i-num-bronz″), *n.* An alloy composed chiefly of nickel and tin, with the addition of some platinum and, in some cases, silver and brass. The proportions vary greatly, according to the use of the alloy. Thus, while in the metal for table-utensils the proportion of platinum is less than 1 per cent., it is over 14 per cent. in the alloy used for telescope tubes. The alloy is also used for bells (with some silver), ornaments, and articles of luxury. Platinum-bronzes are not affected by air or water, and retain their polish for a long time.

platinum-lead (plat′i-num-led″), *n.* See *Birmingham* ★*platinum.*

platitudinal (plat-i-tū′di-nạl), *a.* Same as *platitudinous.*

Platner's bile, crystals. See ★*bile*2, ★*crystal.*

platnosphæra (plat-nọ-sfē′rạ̈), *n.* [NL.] In *promorphology*, a polyhedron of many surfaces, all the corners of which coincide with the surface of a sphere.

> The flattened sphere, or facetted sphere (*platnosphæra*).
>
> *Haeckel* (trans.), Wonders of Life, p. 124.

Platoda (plạ-tō′dạ̈), *n. pl.* [NL., < Gr. *πλατύς*, broad, + *εἶδος*, form.] Same as *Platyhelminthes.*

platode, *a.* **II.** *n.* Any platode worm; any member of the phylum *Platyhelminthes.*

Platonician (plā-tọ-nish′ạ̈n), *n.* Same as *Platonist.*

Platonicism (plạ-ton′i-sizm), *n.* Same as *Platonism.*

Platophrys (plat′ọ-fris), *n.* [NL., < Gr. *πλατύς*, flat, + *ὀφρύς*, brow.] A genus of flounders widely distributed in warm seas.

Plattdeutsch (plät′doich), *a.* and *n.* [G., < *platt*, flat, level, low (see *plat*3), + *deutsch*, German (see *Dutch*).] **I.** *a.* Low German: used especially with reference to language. See II.

II. *n.* The Low German language, in a restricted sense; the popular speech of northern

Germany, possessing a considerable literature. See *Low German*, under *German*^{2}, *n.*

Plattel (plä'tel), *n.* A series of shaly gas-coal beds in the upper portion of the Permian Coal-measures of Pilsen, Bohemia, which has afforded valuable gas-producing bituminous shales and also is of high interest through its fauna and flora. It contains primitive *Reptilia* and *Amphibia*, fish, insects, spiders, scorpions, and ferns.

platter-faced (plat'ėr-fāst), *a.* Having a flat, broad face, as the Eskimos and some Asiatic peoples.

Plattner's balance. See ★*balance.*

platy, *a.* **2.** In *geol.*, made up of thin plates of hard rock, or splitting into such thin plates. — **Platy fracture,** a fractured surface of cast-iron from which plates peel off, like mica. This effect is due to the graphite in the cast-iron. *Phillips and Bauerman*, Elements of Metallurgy, p. 272.

platyan (plat'i-an), *a.* [Gr. *πλατύς*, flat, + *-an.*] Having both faces of the vertebral centrum flattened; amphiplatyan.

platybregmate (plat-i-breg'māt), *a.* [Gr. *πλατύς*, flat, + *βρέγμα*, the front part of the head, + *-ate*^{1}.] Same as ★*platybregmatic.*

platybregmatic (plat″i-breg-mat'ik), *a.* [Gr. *πλατύς*, flat, + *βρεγμα(τ-)*, sinciput, + *-ic.*] In *craniom.*, having a flat bregma, or having the region of the bregma flattened.

platycephalic, *a.* **2.** Belonging to one of the divisions of cranial forms given by Aitken Meigs, and characterized by mesaticephalism with flat vertex and rounded occiput.

platycephaloid (plat-i-sef'a-loid), *a.* and *n.* [*platycephal(ous)* + *-oid.*] **I.** *a.* Somewhat platycephalous.

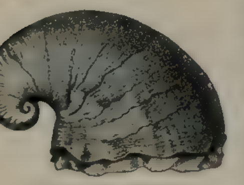
II. *n.* A platycephaloid individual.

Platycephaloidea (plat″i-sef-a-loi'dē-ä), *n. pl.* [NL., < Gr. *πλατύς*, flat, + *κεφαλή*, head, + *εἶδος*, form.] A superfamily of mail-cheeked fishes, having a greatly depressed head and body.

platycephaloidean (plat″i-sef-a-loi'dē-an), *a.* Of or pertaining to the family *Platycephalidæ*, an Old World family of mail-cheeked fishes.

Platycephalus, *n.* **3.** [*l. c.*] A platycephalic cranium. *G. Sergi* (trans.), Var. of the Human Species, p. 44.

Platyceras (plā-tis'e-ras), *n.* [Gr. *πλατύς*, broad, + *κέρας*, horn.] A genus of fossil capuloid gastropods having shells with large body-whorls and small bent or spirally inrolled apex with smooth folded or spinose surface. The genus is represented by numerous species ranging from Upper Cambrian to the Trias, and is specially abundant in Lower Devonian and Subcarboniferous formations.



Platyceras erectum.

platyceroid (plā-tis'e-roid), *a.* [*Platycer(as)* + *-oid.*] Resembling or related to the gastropod genus *Platyceras*. *Amer. Nat.*, Oct., 1907, p. 618.

platychamæcephalic (plat″i-kam″ē-se-fal'ik), *a.* [NL., < Gr. *πλατύς*, flat, + *χαμαί*, on the ground (low), + *κεφαλή*, head, + *-ic.*] In *craniom.*, being both platycephalic and chamæcephalic.

> The Scottish skulls are *platychamæcephalic.*
> *Science*, Oct. 30, 1903, p. 568.

Platychelys (pla-tik'ē-lis), *n.* [NL., < Gr. *πλατύς*, flat, + *χέλυς*, tortoise.] An extinct turtle belonging to the suborder *Amphichelydia*, family *Pleurosternidæ*, from the Upper Jurassic of Europe. It possesses a somewhat depressed carapace, with a number of more or less distinct ridges or prominences on the neurals and costals; neurals short and of irregular contour; sternal bridge short; mesoplastrals not meeting in the middle line; vertebral shields much wider than long; nuchal shield present; intergular undivided; no articulation between pelvis and plastron. It occurs in the Upper Jura of Bavaria, France, and England.

platycnemy (pla-tik-nē'mi), *n.* Same as *platycnemia.*

platycœlian (plat-i-sē'li-an), *a.* Same as *platycœlous.*

platycranial (plat-i-krā'ni-al), *a.* [Gr. *πλατύς*, broad, + *κρανίον*, skull, + *-al*^{1}.] In *anthrop.*, characterized by or exhibiting a skull of more than middle breadth.

> Brachycephaly is associated with *platycranial* characters.
> *W. R. Macdonell*, in Biometrika, March-July, 1904, [p. 240.

platycyrtean (plat-i-sėr'tē-an), *a.* [Gr. *πλατύς*, flat, + *κυρτός*, curved.] Noting a vertebra having the anterior face of the centrum flattened and the posterior face rounded.

platydactylous (plat-i-dak'ti-lus), *a.* Same as *platydactyl.*

platydolichocephalous (plat″i-dol″i-kō-sef'a-lus), *a.* Same as *platydolichocephalic.*

platyglossate (plat-i-glos'āt), *a.* Same as *platyglossal.*

Platygobio (plat-i-gō'bi-ō), *n.* [NL., < Gr. *πλατύς*, flat, + L. *gobio*, goby.] A genus of minnows found in the Mississippi valley.

platyhieric (plat″i-hī-er'ik), *a.* [Gr. *πλατύς*, broad, + *ἱερόν*, sacrum, + *-ic.*] In *anthrop.*, having a sacral index more than 106. *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 187.

platylekanic (plat″i-le-kan'ik), *a.* [Gr. *πλατύς*, flat, + *λεκάνη*, dish (pelvis), + *-ic.*] Same as ★*platypellic*, *Turner.*

platymeria (plat-i-mē'ri-ä), *n.* [NL., < Gr. *πλατύς*, flat, + *μηρός*, thigh, femur.] Sagittal flattening of the upper part of the human femur, a condition found frequently in some races of man.

> The upper third of the femur in some races is sagittally flattened, a condition which is called *platymeria.*
> *Encyc. Brit.*, XXV. 398.

platymeric (plat-i-mer'ik), *a.* [*platymeria* + *-ic.*] Characterized by platymeria. *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 143. — **Platymeric index.** See ★*index.*

platymery (plā-tim'e-ri), *n.* Same as ★*platymeria.* *Philos. Trans. Roy. Soc.* (London), 1897, ser. B, p. 143.

platymesocephalic (plat″i-mes″ō-se-fal'ik), *a.* [Gr. *πλατύς*, flat, + *μέσος*, middle, + *κεφαλή*, head, + *-ic.*] Same as *platymesaticephalic.*

Platyostoma (plat-i-os'tō-mä), *n.* [NL., < Gr. *πλατύς*, flat, + *στόμα*, mouth.] A genus of fossil gastropods having shells composed of numerous rapidly expanding, rounded, closely coiled whorls with small low spire and thickened reflexed inner lip; the *Diaphorostoma.* The genus is represented by numerous species ranging from Silurian to Carboniferous, and is specially abundant in the Lower Devonian formations. Properly *Platystoma.*

platypellic (plat-i-pel'ik), *a.* [Gr. *πλατύς*, flat, + *πέλλα*, bowl (pelvis), + *-ic.*] In *anthrop.*, having an index of the pelvic-brim less than 90. *Amer. Anthropologist*, April–June, 1902, p. 343.

platypezid (plat-i-pez'id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Platypezidæ.*

II. *a.* Having the characters of or belonging to the dipterous family *Platypezidæ.*

platyphippic (plat-i-fip'ik), *a.* and *n.* [Gr. *πλατύς*, flat, + *ἐφίππιος*, for putting on a horse.] **I.** *a.* Having the anterior face of the vertebral centrum flattened and the posterior saddle-shaped.

II. *n.* A vertebra having the centrum flattened in front and saddle-shaped behind.

platypodous (plā-tip'ō-dus), *a.* [*platypod* + *-ous.*] Pertaining to, or having the characters of, the *Platypoda.*

Platypœcilus (plat-i-pē'si-lus), *n.* [NL., < Gr. *πλατύς*, flat, + *ποικίλος*, spotted.] A genus of fishes of the family *Pœciliidæ*, found in fresh waters from Mexico to Panama.

platypsyllid (plat-ip-sil'id), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Platypsyllidæ.*

II. *a.* Having the characters of or belonging to the family *Platypsyllidæ.*

Platyptera, *n.* **2.** In Packard's system of the classification of insects, the fourth order of ametabolous insects. They have four net-veined wings and the mouth-parts adapted for biting, and include the *Termitidæ* and the *Mallophaga.*

platypterigid (plā-tip-ter'i-jid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Platypterigidæ.*

II. *a.* Having the characters of or belonging to the family *Platypterigidæ.*

Platyrhinoidis (plat″i-rī-noi'dis), *n.* [NL. prop. **Platyrrhinoides*, < *Platyrrhina* + Gr. *εἶδος*, form.] A genus of rays of the family *Rhinobatidæ*, found off the coast of southern California.

platyrhynchous (plat-i-ring'kus), *a.* Same as *platyrhynchine.*

platysmal (plā-tis'mal), *a.* [*platysma* + *-al*^{1}.] In *anat.*, originating in or relating to the platysma myoides, a thin muscle lying just beneath the skin on the under anterior side of the neck. *Proc. Zool. Soc. London*, 1899, p. 316.

Platysternidæ (plat-i-stėr'ni-dē), *n. pl.* [NL., < *Platystern(um)*, the type genus, + *-idæ.*] A family of Asiatic fresh-water turtles, known at present from a single species, *P. megalocephalon.*

Platysternum (plat-i-stėr'num), *n.* [Gr. *πλατύς*, broad, + *στέρνον*, the breast.] A genus of fresh-water turtles comprising a small species from southeastern Asia, distinguished at a glance by the great size of the head. The body is depressed, the tail long, slender, and covered with square scales. The only known species, *P. megalocephalon*, is found on the borderland between China and Burma.

platystigmat (plat-i-stig'mat), *n.* [Gr. *πλατύς*, flat, broad, + E. *stigmat(ic).*] A photographic objective of two lens systems of four lenses each, made of Jena glass. The shutter is fitted between the systems. It is a long-focus anastigmat. *Encyc. Brit.*, XXXI. 696.

> Several combinations of triple lenses, constructed more or less on the principles enunciated by Dr. Rudolph, have been brought out by several English and foreign makers, among them Steinheil's "Orthostigmats," made in England by Messrs. R. & J. Beck; Wray's "*Platystigmats*"; Ross's "New Symmetrical Anastigmats"; . . . may be noted.
> *Encyc. Brit.*, XXXI. 696.

Platytroctes (plat-i-trok'tēz), *n.* [NL., < Gr. *πλατύς*, flat, + *τρώκτης*, trout.] A genus of fishes of the family *Alepocephalidæ*, found in the deep sea.

platyurous (plat-i-ū'rus), *a.* [Gr. *πλατύς*, flat, + *οὐρά*, tail.] Having a flat or broad tail.

plaustrum (plâs'trum), *n.*; pl. *plaustra* (-trä). [L.] A heavy two-wheeled cart used by the ancient Romans.

play^1, *v.* **I.** *intrans.*—**To play back,** in *cricket*, to strike the ball with the bat after having stepped back or toward the wicket. *Hutchinson*, Cricket, p. 61.—**To play up.** (*c*) To be equal to the occasion. [Slang.] (*d*) To follow another successfully, with apparent sympathy, in his vein or mood from the theatrical use.

II. *trans.* **16.** In *base-ball*, *foot-ball*, and similar games, to place (a player) in a certain position.—**17.** To accompany in action with music.

> It was the band of the Mavericks *playing* the regiment into its camp; for the men were route-marching with their baggage.
> *R. Kipling*, Kim, v.

To play down and out, in *bridge* and *whist*, to play the higher of two cards, neither of them an honor, on a partner's lead, to show that the third round of the suit can be trumped. See ★*echo*, 8.

play^1, *n.* **14.** A method or manner of performing on a musical instrument, especially as regards the action of the hands. See *close* ★*play.*—**15.** The act or an act of playing (in a game); a separate act of playing.—**Close play,** in *lute-playing*, holding or using the right hand so as to avoid all needless motions. Also called *covert play.* —**In play.** In *golf*, a ball is in play as soon as the player has made a stroke at the teeing-ground at each hole, and it remains in play until it is holed out.—**Mass** or **massed play,** in *foot-ball*, play in which the players act en masse.

> The principle will be laid down that Statehood is not to be achieved by "*massed plays*"—to quote a football term; "one at a time" must be the order of procedure.
> *Rev. of Revs.*, April, 1903, p. 398.

Problem play, a play dealing with some special social or ethical problem, usually divorce, the relations of the sexes, or the enslaved condition of woman: originally applied to plays of Alexandre Dumas.

> Alexander Dumas had created and still monopolized the *problem play*, of which Le Demi-Monde, Le Fils Naturel, La Question d'Argent, Les Idées de Madame Aubray, La Femme de Claude, Monsieur Alphonse, La Visite de Noces, L'Etrangère, Francillon, and Denise may be mentioned as the most characteristic specimens. The *problem play* is the presentation of a particular case, with a view to a general conclusion on some important question of human conduct.
> *Encyc. Brit.*, XXVII. 523.

playa (plä'yä), *n.* [Sp., 'shore,' 'strand.'] In *geol.*, a general name for the plain of silt or mud that marks the bottom of a desiccated lake-basin in the western United States.

playa-lake (plä'yä-lāk), *n.* A lake formed during the wet season, but disappearing by evaporation during the dry season. Playa-lakes are generally very shallow.

> Other lakes, which indicate still more pointedly the contrast between an arid and a humid climate, we may call *playa lakes.* These are broad sheets of shallow water, covering many square miles in winter season, but evaporating to dryness during the summer, their beds becoming hard, smooth mud plains or playas. In many

instances a lake is formed over a playa during a single stormy night, only to disappear beneath the next noonday sun.
I. C. Russell, quoted in Amer. Geol., Sept., 1904, p. 184.

play-boy (plā'boi), *n.* 1†. A boy actor. *B. Jonson*, New Inn, I. i. *N. E. D.*—2. A comic actor.

Where was the *play-boy* could claim an equality,
At comicality, Father, wid you?
A. P. Graves, Father O'Flynn, st. 4.

3. The jack of trumps in spoil-five.

play-club (plā'klub), *n.* In *golf*, a driver; a wooden-headed club with a full-length shaft, used in driving a ball to a great distance.

player, *n.* (*f*) In *harness-manuf.*, a small piece of metal attached by links to the mouthpiece of the bridle.—**Short-card player,** a poker-player: usually applied to a sharper only.

Playhouse tune. See ★*tune*.

playing-place (plā'ing-plās), *n.* In *ornith.*, a locality where the male displays or 'shows off' his plumage to the female; the bower, or run, of a bower-bird.

play-instinct (plā'in″stingkt), *n.* In *psychol.*, one of the group of human instincts which subserve the life and development of the individual as a conscious being. It covers the need of physical exercise, the taste for a life of adventure, the passion for gambling, esthetic activities, etc.

The *play-instinct*, if we use this word to designate the tendency to expend superfluous activity, . . . is a stock which puts forth several branches.
Ribot (trans.), Psychol. of Emotions, p. 198.

P. L. B. An abbreviation of *Poor-law Board*.

P. L. C. An abbreviation of *Poor-law Commissioners*.

Pl. D. An abbreviation of *Plattdeutsch*, Low German.

plea, *n.*—**Negative plea,** in *equity*, a plea not pure. See ★*plea not pure*. **Plea not pure,** in *equity*, a plea which tends to negative the allegations of the complainant's bill, as distinguished from a *pure* ★*plea* (which see). **Plea of the general issue.** Same as *general issue* (which see, under *issue*). **Pure plea,** in *equity*, a plea which sets up as a defense matters wholly outside of the complainant's bill. See ★*plea not pure*.—**Sham plea.** See *sham*.

plead, *v. t.*—**Rule to plead,** a rule or order of court, entered as of course, requiring the defendant to plead within a given time. Failure to comply with it entitles the plaintiff to a judgment by default.

pleasure, *n.*—**Calculus of pleasure.** See *hedonic* ★*calculus*.

pleasure-pain (plezh'ūr-pān″), *n.* and *a.* **I.** *n.* In *psychol.*, a collective term for pleasant and unpleasant affective processes.

As soon as we give up the reference of feeling to a subjective condition of *pleasure-pain*, or of some similar pair of subjective opposites, we have no reason for uniting affective states in general in a common class.
W. Wundt (trans.), Human and Animal Psychol., p. 211.

II. *a.* In *psychol.*, relating to the pleasant and unpleasant affective processes, collectively regarded: as, *pleasure-pain* theories, *pleasure-pain* experiments.

pleasuring (plezh'ūr-ing), *n.* The act of taking pleasure; a pleasure-trip.

plebicolous (plẹ̄-bik'ọ-lus), *a.* [L. *plebs*, the common people, + *colere*, cultivate.] Courting the common people; demagogical. [Rare.]

plebiscitarian (pleb″i-si-tā'ri-ạn), *a.* Same as *plebiscitary*.

plebiscitic (pleb-i-sit'ik), *a.* [*plebiscite* + *-ic*.] Pertaining to, of the nature of, or established by, a plebiscite.

Plectascineæ (plek-tạ-sin'ẹ̄-ē), *n. pl.* [NL., < Gr. πλεκτός, plaited, + ἀσκός, a bag (sac), + *-ineæ*.] A name used by some recent authors to include the order of fungi ★*Aspergillales* (which see).

plectenchyma (plek-teng'ki-mạ̈), *n.* [Gr. πλεκτός, woven, + ἔγχυμα, an infusion.] Same as *pseudoparenchyma*. *Lindau.*

Plectobranchus (plek-tō-brang'kus), *n.* [NL., < Gr. πλεκτός, plaited (infolded), + βράγχια, gills.] A genus of blennioid fishes of the northern Pacific.

plectonephric (plek-tọ-nef'rik), *a.* [Gr. πλεκτος, plaited, twisted, + νεφρός, kidney, + *-ic*.] Having nephridia consisting of networks of fine tubes: as, the *plectonephric* genera of earthworms.

[They] have ceased altogether to look like the excretory tubes in the usual "*plectonephric*" genera.
Proc. Zool. Soc. London, 1894, p. 382.

Plectonephric nephridia, nephridia consisting of networks of fine tubes lying on the body-wall and septa in each segment, as in some earthworms. They open to the exterior and sometimes into the cœloma. Also called *diffuse nephridia*. Compare ★*meganephric*.

plectopter (plek-top'tėr), *n.* [*Plectopter(a)*.] In *entom.*, a member of the order *Plectoptera*.

plectopterous (plek-top'tẹ-rus), *a.* [*Plectopter(a)* + *-ous*.] Having the characters of the *Plectoptera*.

plectospondyly (plek-tọ-spon'di-li), *n.* [Gr. πλεκτός, twisted, < πλέκειν, twist, plait, + σπόνδυλος, a vertebra, + *-y*³.] The condition of being abnormally twisted: noting a condition of vertebræ. *Proc. Zool. Soc. London*, 1894, p. 100.

Plectranthias (plek-tran'thi-as), *n.* [NL., < Gr. πλῆκτρον, spur, + NL. *Anthias*.] A genus of serranoid fishes found in the western tropical Pacific.

Plectromus (plek-trō'mus), *n.* [NL., < Gr. πλῆκτρον, spur, + ὦμος, shoulder.] A genus of berycoid fishes of the deep sea.

Plectropoma (plek-trop'ọ-mạ̈), *n.* [NL., < Gr. πλῆκτρον, spur, + πῶμα, lid.] A genus of serranoid fishes found in the Indian and western Pacific oceans.

Plectrypops (plek'tri-pops), *n.* [NL., < Gr. πλῆκτρον, spur, + ὑπό, under, + ὤψ, eye.] A genus of fishes of the family *Holocentridæ*, of the West Indian fauna.

pledget, *n.* 2. A string of oakum, such as is used in calking the seams of a vessel.

plein air (plañ ãr). [F.: *plein* (< L. *plenus*), full, + *air*, air.] In *painting*, open air, from the phrase *en plein air*, in the open air, out of doors: a term used to characterize the modern point of view in painting, which considers the natural effects of light in nature rather than the artificial effects of the studio. Painting out of doors in plein air appears to have been first adopted as a definite practice by the English painter Constable (1776–1837.) Also *plain-air*.

Not long before the Franco-Prussian war, Manet, finding himself in the country with a friend, for the first time discovered the true value of open air to the effects of painting in his picture "The Garden," which gave rise to the "open air" or *plein air* school.
Encyc. Brit., XXX. 518.

plein-airist (pla-nãr'ist), *n.* [*plein air* + *-ist*.] An artist of the plein-air school.

Plein-airists like Mr. Clausen, Mr. Lathangue, or Mr. Stott have laboriously painted with separate touches of a pigment so stiff that, even though it is applied with a brush, the result has all the appearance of having been done with sticks of colour.
Athenæum, Feb. 7, 1903, p. 183.

pleiobar (plī'ọ-bär), *n.* [Gr. πλείων, more, + βάρος, weight.] An area of high barometric pressure on the daily weather-map: a term introduced by Prestel in 1870.

pleiochromia (plī-ọ-krō'mi-ạ̈), *n.* [NL., < Gr. πλείων, more, + χρῶμα, color.] Increased coloration; specifically, secretion in abnormal amount of the coloring-matter of the bile.

pleiocyclic (plī-ọ-sik'lik), *a.* [Gr. πλείων, more, + κύκλος, circle, + *-ic*.] In *bot.*, perennial; blooming more than one season: said of herbs. Contrasted with ★*hapaxanthous*. Compare ★*dicyclic*, 3 (*b*). See quotation under ★*vegetation-forms*. *Pound and Clements.*

pleiomastia (plī-ọ-mas'ti-ạ̈), *n.* [Gr. πλείων, more, + μαστός, breast.] The condition of having more than one nipple on the breast.

pleiomerous (plī-om'ẹ-rus), *a.* [Gr. πλείων, more, + μέρος, part.] In *bot.*, having more than the normal number of leaf-like parts or organs.

pleiomery (plī-om'ẹ-ri), *n.* [Gr. πλείων, more, + μέρος, part, + *-y*³.] In *bot.*, an increase in the normal or usual number of leaf-like parts or organs.

Pleistocenic (plīs-tọ-sen'ik), *a.* [*Pleistocene* + *-ic*.] Of or pertaining to the Pleistocene.

pleistoseist (plīs'tọ-sīst), *n.* [Gr. πλεῖστος, most, + σειστός, shaken.] In an area affected by an earthquake, that interior portion which has suffered most violently from the shock. It surrounds the epicentrum and extends from it for a distance arbitrarily established by the observer who plots the effects. *Seebach.*

The diagram on page 186 indicates the intensity of a shock in the locus technically called a *pleistoseist* as about four ninths of its intensity at the epicenter.
Science, Dec. 16, 1904, p. 838.

plemochoë (plẹ̄-mok'ọ-ē), *n.* [Gr. πλημοχόη, an earthern water-vessel.] In *Gr. antiq.*, a toilet-vase; a tureen-like receptacle with a standard, for pouring out water. It was especially associated with the last day of the Eleusinian festival.

plemyrameter (plem-i-ram'e-tėr), *n.* [Gr. πλήμυρα, usually πλήμμυρα, flood-tide, + μέτρον, measure.] 1. An apparatus for recording the level and the movements of water, such as a Pitot tube; a water-meter.—2. An apparatus for recording the number, frequency, or length of the waves of water in a lake; specifically, Forel's plemyrameter, which was ultimately replaced by the more accurate limnometer of Sarasin. See ★*limnometer*, with cut.

Plen. An abbreviation of *Plenipotentiary*.

plenalvia (plẹ̄-nal'vi-ạ̈), *n.* [NL., < L. *plenus*, full, + *alvus*, bowels.] Same as ★*grain-sickness*.

Plenary ability. See ★*ability*.

plenipotential (plen″i-pọ-ten'shạl), *a.* [L. *plenus*, full, + *potentia*, power, + *-al*¹.] Same as *plenipotentiary*.

plenitudinous (plen-i-tū'di-nus), *a.* Same as *plenitudinary*. [Rare.]

Plenum fan. See ★*fan*¹.

pleochroitic (plē″ọ-krọ-it'ik), *a.* Pertaining to, or characterized by, pleochroism.

pleocleis (plē'ọ-klīs), *n.* [Gr. πλείων, more, + κλείς, key.] In crustaceans, a tubercle or wart-like protuberance on the first somite of the pleon preventing the elevation of the carapace behind.

pleogamous (plẹ̄-og'ạ-mus), *a.* [*pleogam(y)* + *-ous*.] Characterized by pleogamy.

pleogamy (plẹ̄-og'ạ-mi), *n.* [Gr. πλείων, more, + γάμος, marriage.] In *bot.*, a combination of different types of polygamy.

pleonectic (plē-ọ-nek'tik), *a.* [*pleonexia*.] Pertaining to or characterized by pleonexia; morbidly greedy or covetous.

pleopoda (plẹ̄-op'ọ-dạ̈), *n. pl.* [NL., pl. of *pleopodon*. See *pleopod*.] The swimmerets or appendages of the abdomen of some crustaceans. They may be natatory or branchial in function, or used for retaining the eggs until hatched. In some cases they are rudimentary or lacking entirely or in part.

The abdomen [of a parasite of the hermit crab] consists of six fleshy segments, five of which bear a pair of *pleopoda*.
Bulletin U. S. Fish Com., XXI. 54.

pleopodon (plẹ̄-op'ọ-don), *n.* Same as *pleopod*.

pleopsidic (plē-op-sid'ik), *a.* [*Pleopsid(ium)* + *-ic*.] Derived from *Pleopsidium*.—**Pleopsidic acid,** an acid found in *Pleopsidium chlorophanum*. It forms very thin crystalline plates which melt at 144–145° C.

Pleospora (plẹ̄-os'pọ-rạ̈), *n.* [NL. (Rabenhorst, 1857), alluding to the many-celled spores; < Gr. πλέων, more, + σποράς, seed (spore).] A large genus of pyrenomycetous fungi of the order *Sphæriales*, having scattered or gregarious erumpent perithecia with papillate ostiola. The spores are muriform and yellowish or brown. Over 225 species have been described, fruiting on dead stems, mostly of herbaceous plants. *P. herbarum* is a species common in Europe and North America.

Pleosporaceæ (plē″ọ-spọ-rā'sẹ̄-ē), *n. pl.* [NL., < *Pleospora* + *-aceæ*.] A family of pyrenomycetous fungi named from the principal genus, *Pleospora*.

plerocercoid (plē-rọ-sėr'koid), *n.* [Gr. πλήρης, full, + κέρκος, tail, + *-oid*.] The solid elongate larva, with no bladder, of some cestodes, as *Bothriocephalus latus*, an intestinal parasite found in man and the dog. Compare ★*plerocestoid*.

Dibothriocephalus latus Lühe 1899. . . . Adult parasitic in small intestine of man, dog, and cat; larva (*plerocercoid*) in the muscles and among the viscera of various fish.
Buck, Med. Handbook, II. 792.

plerocestode (plē-rọ-ses'tōd), *n.* Same as ★*metacestode*.

plerocestoid (plē-rọ-ses'toid), *n.* [Gr. πλήρης, full, + E. *cestoid*.] A sexless, encysted stage of a cestoid, as *Bothriocephalus latus*. Also *metacestode*.

pleromal (plẹ̄-rō'mal), *a.* [Gr. πλήρωμα, fullness, + *-al*¹.] 1. Full; abundant; pleromatic.

As variations increase with the number of atoms in a molecule, there may be . . . "billions or trillions of protoplasmic substances, and not one only, as was once assumed." As most closely related to this great *pleromal* sea of life, abounding stand in the higher plants and animals the sexual organs. *G. S. Hall*, Adolescence, I. 412.

2. In *gnosticism*, pertaining to the pleroma, or world of light, or body of eons.—3. Of or pertaining to the plerome, in either the botanical or the zoölogical sense.

plerome, *n.* 3. In *zoöl.*, the mesodermic tissue which fills out the space between the gut and the external epithelium in the body of a tunicate.

The paper includes a useful discussion of the morphological value of the different layers of the Tunicate body, and a suggestion of the term "*plerome*" for the mesodermic tissue filling up the space between the gut and the external epithelium.
Jour. Roy. Micros. Soc., Oct., 1903, p. 603.

plerosis (plḗ-rō′sis), *n.* [NL., ‹ Gr. *πλήρωσις*, a filling, ‹ *πληροῦν*, fill.] Regeneration; specifically, the return of flesh after a wasting illness.

plerotic (plḗ-rot′ik), *a.* [*plerosis* (*-ot-*) + *-ic.*] Relating to, exhibiting, or promoting plerosis, or the restoration of lost flesh or tissue.

Plesiadapidæ (plē″si-ạ̈-dap′i-dē), *n. pl.* [NL., ‹ *Plesiadapis*, generic name, + *-idæ.*] A family of lemur-like animals, which includes small species from the Lower Eocene of Europe and America. *Trouessart*, 1897.

plesiobiosis (plē″si-ọ-bī-ō′sis), *n.* [NL., ‹ Gr. *πλησίος*, near, + *βίωσις*, living.] A form of incipient symbiosis shown by colonies of ants of different species living in close proximity to one another, as, for example, under the same stone, without forming true mixed colonies. *Wheeler*, 1901.

plesiometacarpal (plē″si-ọ-met″ạ̈-kär′pạ̈l), *a.* [Gr. *πλησίος*, near, + E. *metacarpal.*] Possessing vestiges of the upper or proximal portions of the first and fifth metacarpals: applied to certain deer. Contrasted with ⋆*telemetacarpal.*

plesiometacarpalian (plē″si-ọ-met″ạ̈-kär-pā′-li-ạ̈n), *a.* [*Plesiometacarpi* + *-al*^{1} + *-ian.*] Pertaining to or having the characters of the *Plesiometacarpi*.

Plesiometacarpi (plē″si-ọ-met″ạ̈-kär′pī), *n. pl.* [Gr. *πλησίος*, near, + NL. pl. *metacarpi.*] A division of the deer family containing those species in which vestiges of the proximal ends of the second and fifth metacarpals are present. Contrasted with ⋆*Telemetacarpi.*

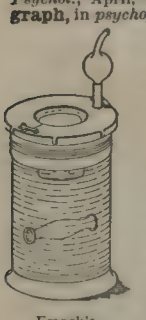
plesiotype (plē′si-ọ-tīp), *n.* [Gr. *πλησίος*, near, + *τύπος*, type.] A specimen identified with some species already described, but not selected by the original describer of that species: in this last respect it differs from an heautotype. *U. S. Nat. Mus.*, Bulletin 53, I. 12.

plessigraph (ples′i-graf), *n.* [Gr. *πλήσσειν*, strike, + *γράφειν*, write.] A special form of pleximeter, designed to reduce the percussed surface to a minimum, so that the user may be able to map out more exactly the limits of any organ or dull area. *Syd. Soc. Lex.*

plessimetry (ple-sim′e-tri), *n.* [*plessimeter* + *-y*^{3}.] The use of the plessimeter, or pleximeter.

plessite (ples′īt), *n.* [Origin uncertain.] A name given by Reichenbach to the nickel-iron alloy which, as seen in the etched surface of a section of meteoric iron, forms a sort of ground-mass inclosed by the bands of kamacite and thin lines of tænite. See *Widmannstättian figures* and ⋆*meteorite.* Plessite is now regarded as an eutectic mixture of kamacite and tænite.

plethysmograph, *n.*—**Finger plethysmograph**, in *physiol.* and *psychophys.*, a plethysmograph which registers the changes of volume occurring in a single finger, instead of in the hand and forearm (as is done by the ordinary forms of the instrument). *Amer. Jour. Psychol.*, April, 1901, p. 327.—**Franck's plethysmograph**, in *psychophys.*, a simple form of plethysmograph, consisting of an upright glass jar for the reception of hand and wrist. The fingers of the hand are closed round a wooden bar set transversely toward the bottom of the jar. The mouth of the jar is closed, first by a rubber cap, and then by a metal cover; both are pierced for the reception of the wrist. A small round opening in the covers allows the passage of a rubber tube, which leads (by way of an expanded glass tube) to another rubber tube, and so to a Marey tambour. The plethysmograph is filled with water up to the middle of the glass tube; the remainder of the transmitting system is filled with air.—**Mosso's plethysmograph**, in *physiol.* and *exper. psychol.*, an instrument devised by A. Mosso for recording changes in the volume of a limb or of some isolated bodily organ. As ordinarily used, the name applies to the hydrosphygmograph, an instrument akin to the plethysmographs of Fick, Kronecker, Franck, Lehmann, and others. A glass tube, filled with warm water, receives the hand and forearm; and changes in the water-level, due to changes in the volume of the limb, are graphically recorded. The physiological plethysmograph consists of a metal box, filled with oil, in which the isolated heart or kidney, etc., is placed. Tubes set in the side of the box allow of the supply of an artificial circulation. Changes in the volume of the organ are recorded as before.



Franck's Plethysmograph.

plethysmographically (plḗ-this-mọ-graf′i-kạl-i), *adv.* By means of a plethysmograph, or after the manner of a plethysmograph.

plethysmography (pleth-is-mog′rạ̈-fi), *n.* The scientific use of the plethysmograph.

pleura^1, *n.*—**Genital pleuræ**, in some *Enteropneusta*, two folds on the dorsal side of the branchial region in which the bulk of the gonads are contained. *Encyc. Brit.*, XXVI. 85.

pleural^2, *a.* **II.** *n.* A pleural process. Specifically: (*a*) One of the bones that in turtles overlie and unite with the ribs, forming the greater portion of the carapace; a costal: correlative with *neural.* Most commonly used in the plural. (*b*) In fishes, one of the long rays of bone attached to the side of the vertebræ and extending downward partly around the abdominal cavity; a rib. *Starks*, Synonymy of the Fish Skeleton, p. 525.

pleurale (plọ̈-rā′lē), *n.*; pl. *pleuralia* (-li-ạ̈). Same as ⋆*pleural*^{2}, *n.*

pleuranthous (plọ̈-ran′thus), *a.* [Gr. *πλευρά*, side, + *ἄνθος*, flower.] In *bot.*, flowering at the side: said of a sympodium in which the inflorescences are borne on lateral axes, the shoot which for the year forms the main axis ending without inflorescence. *J. C. Willis*, Manual and Dict. of Flowering Plants and Ferns, II. 272.

Pleurapophysial lamella. See ⋆*lamella.*

Pleuraspidotheriidæ (plọ̈-ras″pi-dō-thḗ-rī′-i-dē), *n. pl.* [NL., ‹ *Pleuraspidotherium*, type genus, + *-idæ.*] A family of extinct ungulate mammals, of the suborder *Condylarthra*, containing species of small size, with tuberculate molars. The type species is *Pleuraspidotherium*, from the Lower Eocene of Rheims, France.

pleuremphytic (plö-rem-fit′ik), *a.* [Gr. *πλευρά*, side, + *ἔμφυτος*, implanted, inborn.] In *zoöl.*, pertaining to sessile attachment by fixation of the side of an animal to its host or the sea-bottom.

pleurisy, *n.*—**Fibrinous pleurisy** dry pleurisy with considerable fibrinous exudation.—**Humid pleurisy**, bronchitis.—**Serous pleurisy**, the opposite of dry or fibrinous pleurisy, in which there is a profuse watery effusion, but little fibrinous exudate.—**Typhoid pleurisy**, a form of pleurisy marked by symptoms of great prostration.

pleuritogenous (plö-ri-toj′e-nus), *a.* [*pleurit(is)* + *-o-* + *-gen* + *-ous.*] Causing pleurisy.

pleurobranch (plö′rọ-brangk), *n.* Same as *pleurobranchia*^{1}.

pleurobronchitis (plö″rọ-brong-kī′tis), *n.* Pleurisy combined with bronchitis.

pleurocentesis (plö″rọ-sen-tē′sis), *n.* [NL., ‹ Gr. *πλευρά*, rib, pleura, + *κέντησις*, puncture.] Same as *thoracentesis.*

pleurocentrum, *n.* **2.** A dorsal element in the rachitomous vertebræ of certain ganoid fishes and stegocephalian amphibians. It is homologous with the centrum of the reptilian and mammalian vertebra.

pleurochondrite (plö-rọ-kon′drīt), *n.* [Gr. *πλευρά*, the side, + *χόνδρος*, cartilage, + *-ite*^{2}.] The lateral cartilaginous element that by growth and ossification becomes the transverse process in a completed vertebra: correlated with ⋆*centrochondrite* and ⋆*neurochondrite.*

pleurochord (plö′rọ-kôrd), *n.* [Gr. *πλευρά*, side, + E. *chord.*] One of a pair of lateral evaginations of the gut in the collar region in *Actinotrocha* and *Cephalodiscus.*

> As regards Actinotrocha, we suffer from a multiplicity of so-called "notochords." Masterman describes in Actinotrocha and Cephalodiscus a pair of "*pleurochords*," lateral evaginations of the gut in the collar region, the cells of which are vacuolated; these lie farther back than the Enteropneustan stomochord, and do not project into the protocœle. *Encyc. Brit.*, XXIX. 251.

pleurochordal (plö-rọ-kôr′dạl), *a.* [*pleurochord* + *-al*^{1}.] Of or pertaining to the pleurochord; provided with a pleurochord.

pleurocutaneous (plö″rọ-kū-tā′nḗ-us), *a.* [NL. *pleura*, pleura, + E. *cutaneous.*] Relating to both the pleura and the skin.

Pleurodictyum (plö-rọ-dik′ti-um), *n.* [Gr. *πλευρά*, the side, + *δίκτυον*, a net.] A genus of tabulate corals with depressed discoidal coralla consisting of small polygonal funnel-shaped corallites having irregularly perforate walls and faint or obsolete septa. The center of the base of the corallum often holds a vermiform foreign body, which is considered to be the dwelling-tube of a commensal worm.

Pleurodictyum problematicum, Goldf. Lower Devonian; Coblenz. Natural Size. Vermiform foreign body in the center.
(From Zittel's "Palæontology.")

pleurodynic (plö-rọ-din′ik), *a.* [*pleurodyn(ia)* + *-ic.*] Relating to or affected with pleurodynia.

pleurogenous (plö-roj′e-nus), *a.* Same as *pleurogenic.*

Pleurogrammus (plö-rọ-gram′us), *n.* [NL., ‹ Gr. *πλευρά*, side, + *γραμμή*, line.] A genus of fishes of the family *Hexagrammidæ*, found in the northern Pacific.

pleuromarginal (plö-rọ-mär′ji-nạl), *a.* [Gr. *πλευρά*, side, + E. *marginal.*] Relating to the pleural and marginal bones of turtles that form the top and edge of the carapace or bony shell.—**Pleuromarginal fontanelle**, the space or opening that in young turtles, or in the adults of some species, lies between the marginal bones and the ends of the pleurals. *G. R. Wieland*, in Amer. Jour. Sci., Feb., 1904, p. 130.

Pleuromya (plö-rō′mi-ạ̈), *n.* [NL., ‹ Gr. *πλευρά*, the side, + NL. *Mya*^{1}.] A genus of fossil pelecypods typical of the family *Pleuromyacidæ*, with elongate, somewhat gaping shells, which are abundant in formations from the Triassic to the Lower Cretaceous.

Pleuronautilus (plö-rọ-nâ′ti-lus), *n.* [NL., ‹ Gr. *πλευρά*, ribs, + NL. *Nautilus.*] A genus of orthochoanitic cephalopods with discoidal shells having stout volutions and large umbilical opening: found in Triassic rocks.

Pleuronectinæ (plö″rọ-nek-tī′nē), *n. pl.* [NL., ‹ *Pleuronectes* + *-inæ.*] A subfamily of flounders having an unsymmetrical mouth and the teeth chiefly on the blind side.

pleuronectism (plö-rọ-nek′tizm), *n.* [NL. *Pleuronectes* + *-ism.*] The fact or condition of having one side paler than the other, as in flounders (*Pleuronectidæ*). [Rare.]

> A curious asymmetry in the coloration of this species has been noted by more than one observer—'a sort of *pleuronectism*,' van Beneden terms it.
> *F. E. Beddard*, Book of Whales, p. 158.

Pleuronichthys (plö-rọ-nik′this), *n.* [NL., irreg. ‹ Gr. *πλευρά*, the side, + *ἰχθύς*, fish.] A genus of flounders found on both sides of the Pacific Ocean.

pleuropathy (plọ̈-rop′ạ̈-thi), *n.* [Gr. *πλευρά*, the side (pleura), + *πάθος*, disease.] Same as *pleuropathia.*

pleuropericardial (plö-rọ-per-i-kär′di-ạl), *a.* [*pleura* + *pericardium* + *-al*^{1}.] Relating to both pleura and pericardium. *Buck*, Med. Handbook, II. 821.

Pleurophorus (plọ̈-rof′ọ-rus), *n.* [NL., ‹ Gr. *πλευρά*, ribs, + *-φορος*, ‹ *φέρειν*, bear.] A genus of small teleodesmaceous pelecypods which have elongated shells with terminal beaks, smooth or radially ribbed surface, two cardinal teeth in each valve, and the anterior adductor scar forming a deep pit. The genus ranges from the Devonian to the Trias, and is especially abundant in Permian rocks.

pleurophthalmic (plö-rof-thal′mik), *a.* [NL. *Pleurophthalma* + *-ic.*] Relating or pertaining to the *Pleurophthalma*; having the eyes at the external borders of the tentacles, as in certain gastropods.

pleuroplastic (plö-rọ-plas′tik), *a.* [Gr. *πλευρά*, side, + E. *plastic.*] In *plant physiol.*, developing tissue, by a stretching of the meristem, all along the primordium at once: said of a type of leaves. Correlated with *basiplastic*, that is, developing tissue at the apex first and thence to the base; and *eucladous*, forming lobations in the embryonal tissue before the meristem has begun to stretch, which does not happen in the other cases. *Prantl*, cited by K. E. Goebel (trans.), Organography of Plants, II. 312.

pleuropneumonia, *n.* **2.** In *medicine*, pleurisy combined with pneumonia.

pleuropodium (plö-rọ-pō′di-um), *n.*; pl. *pleuropodia* (-ạ̈). [NL., ‹ Gr. *πλευρά*, side, + *πούς* (*ποδ-*), foot.] One of a pair of temporary embryonic or early larval organs on the under side of the first abdominal segment of many insects. They are variously considered as glands, blood-gills, and sense-organs.

pleuropterygian (plö-rop-tẹ-rij′i-ạ̈n), *a.* [NL. *Pleuropterygii* + *-an.*] Pertaining to or having the characters of the selachian fishes of the order *Pleuropterygii.*

Pleuropterygii (plö-rop-tẹ-rij′i-ī), *n. pl.* [NL., ‹ Gr. *πλευρόν*, rib, + *πτερύγιον*, fin.] An extinct order of selachian fishes, chiefly of Carboniferous age. They are characterized by a well-calcified endoskeleton; apparently unsegmented notochord: the pterygoquadrate arcade movably articulated with the cranium; paired fins supported by unjointed, parallel radial cartilages, which may be partly fused at the base, but extend directly outward to the edge of the fin-membrane; and the pelvic fins of males without claspers. The *Pleuropterygii* "exhibit the nearest approach to the hypothetical lateral fin-fold yet met with." *A. S. Woodward*, Vertebrate Palæontol., p. 29.

pleurorhizous (plö-rọ-rī'zus), *a.* Same as *pleurorhizal.*

pleurosperm (plö'rọ-spėrm), *n.* [NL., < Gr. *πλευρόν*, rib, + *σπέρμα*, seed.] In *bot.*, an angiosperm of the group or class which are supposed by Treub to have begun with chalazogamy and to have subsequently assumed the normal mode of fertilization.

pleurosteite (plọ-ros'tẹ-īt), *n.* [Gr. *πλευρόν*, rib, + *ὀστέον*, bone, + *-ite*1.] The center of ossification in the cartilaginous segment that, by ossifying, becomes a rib: correlated with *chondrosteite* and ★*neurosteite.* See the extract under ★*neurosteite.*

pleurostosis (plö-ros-tō'sis), *n.* [NL., < Gr. *πλευρά*, the side (pleura), + *ὀστέον*, bone, + *-osis.*] Ossification of the pleura.

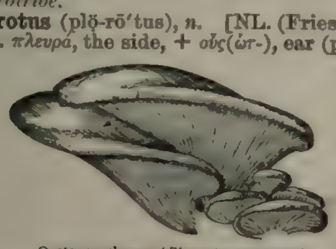
pleurotetanus (plö-rọ-tet'a̤-nus), *n.* [NL., < Gr. *πλευρά*, the side, + *τέτανος*, spasm.] Same as *pleurothotonos.*

pleurotomy (plọ-rot'ọ-mi), *n.* [Gr. *πλευρά*, the side, + *τομή*, a cutting.] Incision through the pleura.

pleurotonus (plọ-rot'ọ-nus), *n.* [Gr. *πλευρά*, the side, + *τόνος*, tension.] Same as *pleurothotonos.*

pleurotribal (plö-rọ-trī'ba̤l), *a.* Same as *pleurotribe.*

Pleurotus (plö-rō'tus), *n.* [NL. (Fries, 1821), < Gr. *πλευρά*, the side, + *οὖς* (*ὠτ-*), ear (pileus); so called from the lateral pileus.] A large genus of white-spored fleshy fungi of the family *Agaricaceæ*, having the pileus usually sessile and attached by one side or with a short eccentric stipe. About 250 species have been described, occurring chiefly on decaying wood. *P. ostreatus* is a common edible species known as the oyster-mushroom, having the flavor of oysters.



Oyster-mushroom (*Pleurotus ostreatus*).
About one third natural size.

pleurotyphoid (plö-rọ-tī'foid), *n.* [*pleur*(*isy*) + *typhoid.*] Typhoid fever accompanied by pleurisy.

pleurum (plö'rum), *n.*; pl. *pleura* (-rä̤). [NL.] Same as *pleuron.* *J. B. Smith*, Econ. Entom., p. 25.

plex, *v. i.* 2. In *phys. chem.*, to acquire greater molecular complexity by having two or more molecules condensed into one molecule; become polymerized. *Trans. Amer. Inst. Elect. Engin.*, 1898, p. 130.

plex (pleks), *n.* [*plex*(*us*).] In *phys. chem.*, the degree of molecular complexity, or of polymerization. *Trans. Amer. Inst. Elect. Engin.*, 1898, p. 131. [Rare.]

Plexaura (plek-sâ'rä̤), *n.* [NL.] The typical genus of the family *Plexauridæ.* *Lamouroux*, 1812.

Plexauridæ (plek-sâ'ri-dē), *n. pl.* [NL. *Plexaura* + *-idæ.*] A family of alcyonarians having a branched colony with a horny axis, the polyps situated all over the thick cœnenchyma, and the spicules large, the cortical being club-shaped and the deeper spindle-shaped. It contains the genera *Plexaura, Eunicea, Psammogorgia*, and *Platygorgia.*

plexial (plek'si-a̤l), *a.* [*plex*(*us*) + *-ial.*] Same as *plexal.*

plexiality (plek-si-al'i̤-ti), *n.* [*plexial* + *-ity.*] The state of being plexiform or of a complex structure.

Plexiform gland, in echinoderms, same as ★*axial organ.*

pleximetry (plek-sim'e-tri), *n.* The use of the pleximeter.

plexodont (plek'sọ-dont), *a.* [Gr. *πλέξις*, a weaving, + *ὀδούς* (*ὀδοντ-*), tooth.] Having complex teeth; having molars with a complicated crown and provided with more than one root. *Proc. Zool. Soc. London*, 1899, p. 555.

plexus, *n.* 4. In *bot.*, the mass of branched and anastomosing filaments of certain algæ.—5. In *phys. geog.*, the irregular and complicated junction of a number of similar features, such as ridges, river channels, etc.

> Stone applies the aptly chosen term of "*plexus*" to such areas, and characterizes them as follows: they are "the most remarkable of all deposits left by glacial rivers . . . its surface covered with a jumble of heaps, mounds, cones, and ridges inclosing all forms of hollows, funnels, hopper-holes, kettle-holes, basins and Roman theatres, many of which are so deep as to inclose lakelets without visible outlet." *Amer. Geol.*, Sept., 1903, p. 166.

Leber's plexus, a network of small veins anterior to Schlemm's canal in the eye.

plezant, *a.* An amended spelling of *pleasant.*

plezurabl, plezure. Amended spellings of *pleasurable, pleasure.*

plf., plff. [*l. c.* or *cap.*] Abbreviations of *plaintiff.*

P. L. G. An abbreviation of *Poor-law Guardians.*

plica, *n.*—**Plicæ circulares**, transverse folds in the mucous membrane of the intestines.—**Plicæ conniventes.** Same as *valvulæ conniventes.*—**Plica epigastrica**, a prominent line on the inner surface of the anterior abdominal wall indicating the course of the epigastric artery.—**Plica hypogastrica**, a prominent line on the posterior surface of the anterior abdominal wall formed by the lateral ligament of the bladder; the remains of the hypogastric artery.—**Plica lunata**, a fold of the conjunctiva at the outer border of the caruncula lacrymalis.—**Plica urachi**, a prominent line on the posterior surface of the anterior abdominal wall, extending from the bladder to the umbilicus, marking the course of the urachus.

plication, *n.*—**Armorican chain of plication**, in *geol.*, a line of upheaval or mountain-making, of late Paleozoic age, extending from the mouth of the Shannon to that of the Loire. *Geikie*, Text-book of Geol., p. 314.

plicator, *n.* 2. More generally, one who or that which causes folds or plaits.

> Each spicule has its musculus exsertor, which is not a single muscle, but is composed of two components,—a *plicator* and a fixator of the sheath.
> *Jour. Roy. Micros. Soc.*, April, 1903, p. 181.

plim1 (plim), *n.* [A minced form of *plumb.*] A plumb; a plummet.

plim1 (plim), *a.* 1. Perpendicular; straight; plumb.—2. Smooth; neat. [Prov. Eng.]

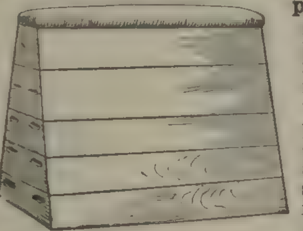
plim2 (plim), *a.* [A minced form of *plump.*] Stout; fat; plump. *Halliwell.* [Prov. Eng.]

plim2, *v.* II. *trans.* To puff or plump out; fill out. [Prov. Eng.]

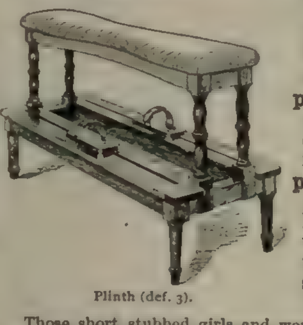
Plimmer bodies. See ★*body.*

Plinian, *a.* 2. In *geol.*, noting the final, most vigorous stage in volcanic eruptions, especially of Vesuvius, during which violent explosions occur, with expulsion of large quantities of steam, ashes, scoriæ, and lava: named after Pliny, the describer of the great eruption of 79 A.D.

plint (plint), *n.* [Sw.] Same as ★*plinth*, 2 and 3.



Plinth (def. 2).



Plinth (def. 3).

plinth, *n.* 2. A gymnastic apparatus, a vaulting-box, consisting of several wooden sections placed on top of one another, so as to make possible variations in height.—3. An apparatus used in therapeutic gymnastics on which the patient sits or lies.

plinthiform (plin'thi-fôrm), *a.* Having the form of a plinth.

plinthlike (plinth'līk), *a.* Like a plinth, with no variation of outline; squarely built. [Rare.]

> Those short, stubbed girls and women . . . of *plinthlike* bigness up and down.
> *W. D. Howells*, in Harper's Mag., July, 1905, p. 195.

Pliocene, *n.* It was the final period of Tertiary time, during which the distribution of land and sea was very much as it is now. The uptilted deposits of this age, which are of world-wide distribution, consist of mostly unconsolidated sands, clays, and marls of marine and terrestrial origin, containing invertebrate and plant remains very similar to those of the present. The vertebrate fauna, on the other hand, differs widely, with numerous extinct types of large size, among which *Dinotherium, Mastodon, Elephas, Equus, Hippopotamus, Rhinoceros*, and *Machærodus* were of gigantic proportions. The Pliocene of southern Europe has been divided into the following stages: lower, Messinian or Plaisancian; middle, Astian; upper, Arnusian or Sicilian. In North America, marine deposits of this age are represented by the Floridian series of the Gulf coast and the Merced and San Pedro series of the Pacific coast; and the terrestrial deposits by the Palo Duro and Blanco beds of Texas and Oklahoma.

Pliocenic (plī-ọ-sen'ik), *a.* [*Pliocene* + *-ic.*] Of or pertaining to the Pliocene period of Tertiary time.

pliosaur (plī'ọ-sâr), *n.* [NL. *Pliosaur*(*us*).] An individual of the genus *Pliosaurus*, which comprises gigantic plesiosaurs with large head, short neck, elongated mandibular symphysis, jaws provided with powerful carinated teeth sometimes 25 centimeters long, and with limb-girdles similar to those of *Plesiosaurus.* The genus occurs in rocks from the Lias to the Upper Jura, in Europe and India.

plique-à-jour (plēk-ä-zhör'), *n.* [F., 'open-work layer.'] A variety of enameling in which the cloisons were not attached to a foundation, but formed a grating into the interstices of which the enamels were melted.

> By *plique-à-jour* we mean filigree-work executed in gold or silver, and filled up with transparent enamels. It existed in the time of Benvenuto Cellini.
> *Henry Cunynghame*, Art-Enamelling, p. 95.

plissé (plẹ-sā'), *a.* [F., pp. of *plisser*, plait, shirr, < *pli*, pl. *plis*, a plait, ply. See *ply.*] Gathered or shirred: said of dress-goods, etc.

plocamobranchiate (plok″a̤-mọ-brang'ki-āt), *a.* Relating to, or having the characteristics of, the *Plocamobranchia;* having rigid filamentary branchial processes, as some gastropods.

plombière (plom-bi-ãr'), *n.* [F., < *plomb*, lead.] An ice-cream in which fruit is frozen.

plot1, *n.*—**Plot survey.** See ★*valuation survey.*—**Sample plot.** See ★*valuation area* and ★*experiment area.*—**Town plot**, an official plan or draft of the site of a town, with its streets, public parks, etc.

plot1, *v. t.* 4. To divide into plots, as a building-site.

> The acre is *plotted* into three building lots.
> *N. Y. Times*, June 23, 1898 (advt.).

plot3 (plot), *v. t.* [F. *peloter*, form into a ball, < *pelote*, a ball. See *pellet* and compare *platoon.*] To press into cakes or balls, as soap.

ploteric (plọ-ter'ik), *a.* [Gr. *πλωτήρ*, a sailor, seaman, < *πλώειν*, sail, float, drift.] Drifting. In marine biology, ploteric organisms are those that drift passively with the current, as contrasted with those that direct their own movements through the water.

plotting-board (plot'ing-bōrd), *n.* *Milit.*, a drawing-board or -table, used in connection with a range-finder, on which the course of a towed target for sea-coast cannon practice, or of a hostile ship, is laid out and a later position predicted. *Jour. U. S. Artillery*, Nov.–Dec., 1903, p. 253.

plout3 (plout), *v. i.* [Origin obscure.] To fall with a splash or plump; plunge or splash in water. [Prov. Eng.] *N. E. D.*

plout3 (plout), *n.* [*plout*3, *v.*] A heavy fall of rain. [Prov. Eng.] *N. E. D.*

plow, *n.* 1. As to their manner of acting upon the soil, plows are either *turning-plows* (those most properly named 'plows'), or *shovel-plows.* They are, further, either *wheel-plows* or *swing-plows* (see *swing-plow*), according as the beam is or is not supported by a wheel; either *walking plows* or *riding plows* (see below); either *single-furrow, double-furrow*, or *multiple-furrow* (gang) *plows* (see *gang-plow*, under *plow*). Turning-plows are either *single-moldboard* (single-breasted), as most often, or *double-moldboard* (double-breasted) (see under *plow;* see also ★*middle-breaker*); and are either *pulverizing plows* (*stubble-plows*) (see under ★*plow;* see ★*scooter*1, 3), or *sod-plows* (which see). For other distinctions see under *plow* and ★*plow.* About the beginning of the nineteenth century English plows were still commonly made of wood, except the share and colter, other working parts being sheathed with sheet-iron. The beam and handles (*stilts*) and the clevis (*bridle, muzzle*) were somewhat as now; the left stilt, joined to the butt of the beam, descended from the latter to the sole, forming the *foot* or *heel;* the sole or slade (*chep*) was the horizontal basal timber; the *sheath* or *head* descended from the beam to the sole in front; the share (*sock*) was fitted upon a mandrel of the sheath or sometimes of the sole; the mold-board or breast (*turn-furrow, wrest*) was so secured to the sheath that its front edge was protected by it, while in the rear it was attached to the foot; the share was often developed into a horizontal cutting edge (*fin* or *feather*) and was then a *broad-finned, feathered*, or *winged sock;* a *mole* or *spear-head sock*, on the contrary, penetrated the soil without cutting the slice, and with this was sometimes used a *bastard colter*, a narrow blade forming a cutting edge for the sheath; land plates (forerunners of the *land-side*) were sometimes placed on the *land side* (that is, the side toward the yet unbroken ground) of the sole.

5. An arm and wooden mold-board, shod with leather, two of which in a gunpowder-incor-

porating mill serve to draw the mixture of niter, sulphur, and charcoal into the track of the heavy edge-runners.—**Breaking plow.** Same as *sod-plow.*—**Calf-tongue plow,** a small plow built on the general lines of a bull-tongue plow.—**Chilled plow,** a plow which has the point and edges of the share of chilled steel or of chill-hardened steel. It is made in many forms. **Digging plow,** a pulverizing plow. [England.]—**Double-breasted plow,** a double mold-board plow. [England.]—**Double-furrow plow.** Same as *double plow* (*a*).—**Multiple-furrow plow,** a gang-plow.—**One-way plow.** Same as *turn-wrest plow.*—**Pulverizing plow,** a turning-plow with steep concave mold-board, fitted to break up the furrow-slice, and thus adapted to stubble-land; a stubble-plow.—**Riding plow.** Same as *sulky-plow* (which see, under *plow*).—**Stump-jump plow.** Same as ★*stump-jumper.*—**Two-furrow plow.** Same as *double-furrow* ★*plow.*—**Walking plow,** any plow operated by the plowman on foot, as distinguished from a sulky-plow.

plow, *v. t.* 7. In *carp.*, to groove the edge of (a board) in tonguing and grooving.—8. To turn over (grain) in malting, so as to expose fresh surfaces to the air and equalize temperature. **To plow out.** (*b*) In *carp.*, see *to* ★*horse out.*

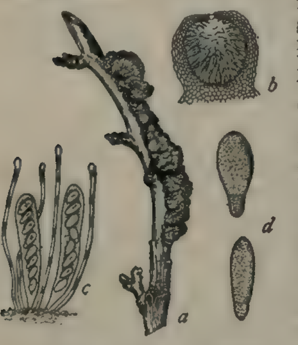
plow-grinding (plou′grīn″ding), *n.* The process of grinding the sides of the wire teeth of card-clothing so as to give them a chisel- or knife-edge. *Nasmith*, Cotton Spinning, p. 135.

plow-ground (plou′ground), *a.* Ground as it were by a plowing or grooving action, that is, ground between: said of card-clothing wire teeth that are ground on their sides by means of an emery disk which passes between them. *Taggart*, Cotton Spinning, I. 176.

plowing (plou′ing), *n.* [Also *ploughing*; < *plow*, *v.*, + *-ing*¹.] 1. The act of turning up earth with a plow; the cultivation of the ground by the plow: as, the *plowing* of new ground; the spring and fall *plowing.*—2. The making of furrows or grooves in anything. See *plow*, *v.*—**Crown-and-furrow plowing,** the process of so running the furrows that new water-furrows occupy the place of the crowns of old ridges or lands; cleaving. Compare ★*casting*, 13, and ★*gathering*, 6.—**Flat plowing,** plowing with flat furrows. See *flat* ★*furrow.*—**Lap-plowing,** plowing with lap furrows. See *lap* ★*furrow.*—**Rib-plowing.** Same as *ribbing*, 2.—**Subsoil-plowing,** plowing with a plow so formed as to stir the under layer of soil without bringing it to the surface; subsoiling.—**Trench-plowing,** plowing with a trench-plow, that is, one so modeled as to cut deep and to mix the upper and lower layers of soil.

plow-light (plou′līt), *n.* A light formerly maintained by husbandmen before certain images in some churches in England. The solicitation of money on Plow Monday (which see) was originally for the support of this light. *London Encyc.*, article *plough.*

Plowrightia (plou-rī′ti-ạ̈), *n.* [NL. (Saccardo, 1883), named for C. B. *Plowright*, an English mycologist.] A genus of pyrenomycetous fungi having the perithecia embedded in black stromata and the spores two-celled and hyaline or light yellow. About 20 species have been described. *P. morbosa* is a parasite which attacks plum- and cherry-trees and forms more or less extensive warty excrescences on the branches, called *black-knots.* See *black-knot*, 2, and ★*black-knot of the gooseberry.*



Plowrightia morbosa, on the cultivated Plum.

a, stroma of the fungus, one third natural size; *b*, perithecium with asci; *c*, asci and paraphyses; *d*, ripe ascospores: *b*, *c*, *d*, highly magnified.

plowter (plou′tėr), *v.* and *n.* Same as *plouter.*

pluck¹, *v.* I. *trans.* 6. In *geol.*, to pry off or tear away, as blocks of rock from the lee side of cliffs or projections, or more moderate slopes: said of the action of moving ice, as in glaciers. See ★*plucking.*

II. *intrans.* 1. To pull sharply, as if at the folds of a skirt: used with *at.*—2. In *geol.*, to break off easily in large pieces, as granite. See ★*plucking.*

plucking (pluk′ing), *n.* An act denoted by the verb *pluck*; specifically in *geol.*, the process by which blocks of bed-rock are torn from their ledges by moving ice. The term is applied especially to this effect on the downward slopes, where the dragging action of ice seems to be of importance, as indicated in the term. Plucking is the process involved in the head-ward extension of glacial valleys and of the excavation of cirques.

> Great stress is laid upon the excavating action of ice by the process of "*plucking*," in which "blocks of bed-rock, being partly surrounded by the ice, are forced from their bearings and rolled or slidden forward" (p. 203).
> *Nature*, July 7, 1904, p. 218.

Close plucking, in *tea-growing*, the system of picking the shoots while very young, leaving no new growth except the *jhannum*, or sheath-leaf, at the base of the shoot. Except late in the season this results in weakening the bushes.—**Coarse plucking,** in *tea-growing*, a mode of picking in which larger leaves are taken than in fine ★plucking (which see).—**Fine plucking,** the picking of the unexpanded terminal leaf and first three young leaves for the finest grades of tea. Sometimes only part of a given leaf is taken.—**Hard plucking,** in *tea-growing*, the policy of picking for the largest immediate returns.

plucky, *a.* 2. In *photog.*, clear and bright: said of a negative or print. Gelatinobromide papers for contact-printing are so designated.

> It is not generally understood that the drying of a negative has a great influence upon its character. If it is dried as quickly as possible the result is a *pluckier* negative richer in contrasts.
> *Woodbury*, Encyc. Dict. of Photog., p. 297.

3. Capable of being plucked; fracturing easily along certain planes: as, a *plucky* rock. See ★*plucking.*

plug, *n.* 13. In *geol.*, a cylindrical mass of lava, a remnant of the last eruption from a volcanic vent, which chilled in the conduit and plugged it up. See *neck*, 6 (*k*), and ★*stock*¹, 35.

> Mount Kenya is an ancient, much-eroded volcano; the highest peak is formed of the rocks of the central *plug.*
> *Geog. Jour.* (R. G. S.), XVI. 249.

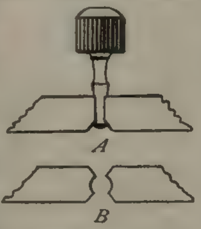
14. A book that does not sell at all. [Booksellers' slang.]—15. In *stone-cutting*, a wedge which is driven into a hole that has been drilled in a stone for the purpose of splitting it. For large pieces of stone a series of holes is drilled and a wedge or plug driven into each.—16. In a steam-engine: (*a*) A plug-rod; a plug-frame. (*b*) A safety-plug; a fusible plug inserted in a boiler and made of some alloy which will melt if the temperature of the metal plate of the shell rises above a certain point by reason of low water.—17. Same as ★*peg*, 7. [Local, U. S.]—**Boat-plug** (*naut.*), a small plug used to stop up the drainage-hole in the bottom of a boat.—**Dittrich's plugs,** inspissated yellowish masses of the size of a small bean, found sometimes in the expectorated matter in putrid bronchitis.—**Navy plug,** a plug tobacco prepared for the British navy, of American material known as *navy leaf*, at present consisting largely of white Burley filler.

plug-and-knock-down (plug″and-nok′doun), *n.* In *lumbering*, a device for fastening boom-sticks together, in the absence of chains. It consists of a withe secured by wooden plugs in holes bored in the booms.

plug-box (plug′boks), *n.* In *mining*, a wooden pipe to carry off water while putting the water-tight casing to a shaft. *N. E. D.*

plug-contact (plug′kon″takt), *n.* In *elect.*, a contact for closing the circuit between neighboring blocks of a resistance-box, which consists of a conical plug fitting into a tapered hole between the blocks.

> The contacts are an old form of the Cambridge Instrument Company's type of *plug-contact*, the cheeks being made of a special white alloy held in round Doulton-ware cups.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1903, p. 36.



A shows the plug in place, closing the electric circuit between two contiguous blocks; *B*, the usual form of the hole as seen from above.

plug-draining (plug′drā″ning), *n.* A system of draining heavy clay land, in which plugs or blocks of wood are placed at the bottom of the cutting to keep the channel open, and are withdrawn after the cutting has been filled up. *N. E. D.* See *plug* ★*drain.*

plug-frame (plug′frām), *n.* A plug-rod; a slotted rod attached to the walking-beam of a Cornish or other slow-moving engine, and so arranged that the ends of the slot hit the valve-handle and control the admission and exhaust of steam to and from the cylinder. *The Engineer* (London), Oct. 23, 1903, p. 404.

plug-gage (plug′gāj), *n.* A solid cylindrical gage or standard for measuring the size of a hole.

plugging (plug′ing), *n.* 1. The act of stopping or occluding a cavity or opening by means of a plug; as applied to an artery, occlusion of the vessel by means of a blood-clot or thrombus. *U. S. Dept. of Agr.*, Rep. on Diseases of the Horse, 1903, p. 203.—2. Wood or metal from which plugs or bungs are to be made.—3. Plugs collectively; specifically, wooden pins inserted in brick- or stonework, to which battens are nailed.—4. The act of testing a melon or a cheese by taking a plug from it. [Local, U. S.]—5. The act of hitting with a ball or bullet. [Local, U. S.]—6. Hard study; cramming. [Slang.]

plug-key (plug′kē), *n.* In *elect.*, a circuit-closing key consisting of a conical plug of metal inserted between metallic blocks. See cut at ★*plug-contact.*

plug-pedal (plug′ped″ạl), *n.* A pedal or a rod ending in a disk or button head, which is pushed with the foot to operate some mechanism, such as a brake.

plug-piston (plug′pis″tọn), *n.* A solid piston; a piston having no packing-rings, and usually longer than is common in the direction of its motion, as related to its diameter.

plug-riots (plug′rī″ọtz), *n. pl.* A name given to certain riotous proceedings about 1842, when cotton-mills in Lancashire were stopped from working by the removal or drawing of a few bolts or 'plugs' in the boilers, so as to prevent steam from being raised. *N. E. D.*

plug-tip (plug′tip), *n.* A rounded apical prolongation of the leaves of *Musa* and some other monocotyledons which are convolute in the bud, regarded by Goebel (the author of the term) as serving to close up the bud. This tip also fills up the space formed by the convolution of the leaf next above. *K. E. Goebel* (trans.), Organography of Plants, II. 309.

plug-tray (plug′trā), *n.* In *ordnance*, a tray on which the breech-plug of a gun travels in and out.

plum¹, *n.* 7. In southern New South Wales, a handsome timber-tree, *Eucryphia Moorei*, having a clear, moderately hard wood of a light brown color. It is often called *acacia*, or *acacia-plum*, since, when not in flower, it resembles some of the larger species of that tree.—**Acacia-plum.** Same as ★*plum*¹, 7.—**Batoko plum,** in southern Africa, a small tree, *Flacourtia Ramontchi*, widely distributed over southern Asia and Africa; or its edible fruit, which is round, sweet, and of the size of a plum. See *Flacourtia*, and *East Indian plum* under *plum*¹.—**Bullace-plum.** See *bullace.* The Southern bullace-plum is *Prunus umbellata*, called also *black sloe* and *hog-plum.*—**Burdekin plum,** a Queensland tree of the cashew family, *Pleiogynium Solandri*, with a hard dark brown wood resembling black walnut.—**Canada plum.** (*b*) A species, *Prunus nigra*, formerly confused with the common wild plum, *P. Americana*, but differing in its less globose orange-red fruit and other details. It is chiefly Canadian, but reaches Georgia. The wild fruit is gathered, and it is the source of some cultivated varieties. To this species mainly belongs also the name of *horse-plum.* See *horse-plum*, 2.—**Cape plum,** the wild plum, *Pappea Capensis*, of South Africa. See *Pappea.*—**Cashmere plum,** *Prunus insititia*, cultivated in Cashmere and Bokhara for its fruit.—**Garden wild plum,** *Prunus hortulana*, a species native from Illinois southward, distinguished from the common wild plum only in recent times. It is the source of many horticultural varieties, of which the wild-goose plum is the best known.—**Goa plum.** Same as the *gray plum* (which see, under *plum*¹).—**Gray plum.** (*b*) In Australia: (1) A large tree of the ebony family, *Diospyros pentamera*, the tough, durable, reddish wood of which is used for tool handles. (2) The caper-tree, *Capparis nobilis.*—**Hog-plum.** (*a*) See *hog-plum.* (*b*) See *bullace-*★*plum.* (*c*) A low species, *Prunus injucunda*, with a very bitter fruit, found in Georgia and Alabama.—**Horse-plum.** (*a*) See *horse-plum.* (*b*) See *Canada* ★*plum.*—**Indian plum.** Same as *East Indian plum* (which see, under *plum*¹).—**Munster plum,** a potato.—**Native plum,** in Australia: (*a*) Same as *black* ★*apple.* (*b*) The *Port Arthur plum* (which see, under *plum*¹).—**Ogeeche plum.** Same as *Ogeeche lime* (which see, under *lime*³).—**Pigeon-plum.** (*c*) In the Bahamas, any one of three species of *Coccolobis*, *C. obtusifolia*, *C. retusa*, and *C. Wrightii.*—**Plum canker.** See ★*canker.*—**Plum-kernel oil.** See ★*oil.*—**Plum leaf-beetle.** See ★*leaf-beetle.*—**Plum-leaf blister.** See ★*blister.*—**Plum plant-louse.** See ★*plant-louse.*—**Sand-plum,** *Prunus Watsoni*, a shrub of sandy lands from Nebraska to Arkansas.—**Sow-plum,** *Prunus normalis*, a species of the southwestern United States.—**White plum,** the Australian ironwood, *Notelæa ligustrina.*

plum, *n.*, *a.*, *adv.*, *v.* A simplified and former spelling of *plumb*².

pluma² (plö′mä), *n.* [Sp. *pluma*, < L. *pluma*, a feather. See *plume.*] A name in the West Indies of a fish, *Calamus calamus.*

plumage, *n.*—**Eclipse plumage,** a dull-colored plumage, usually resembling that of the female, worn for a short time by a brightly colored male bird.

> The *Eclipse plumage* lasts for several weeks till the quills have been renewed.
> *Ogilvie Grant*, Guide to the Gallery of Birds, Brit. Mus., p. 63.

plumagery (plö′māj-ri), *n.* [*plumage* + *-ry.*] The preparing of feathers for use in the arts; feather-working.

plum-aphis (plum′ā″fis), *n.* An aphis, *Aphis prunifolii* Fitch, a species that infests the under sides of plum-leaves, especially in the late spring and early summer.

plumasite (plū′ma-sīt), *n.* [*Plumas* county, California, + *-ite*^{2}.] In *petrog.*, a phaneric igneous rock of variable grain, composed of oligoclase with about 16 per cent. of corundum. *Lawson*, 1903.

plumb^2, *v.* **I.** *trans.* **5.** In *plumbing*, to seal an opening by closing it with solder or other soft metal.

II. *intrans.* To coincide in direction with the plumb-line; be vertically above or below.

> According to them the centre of gravity *plumbs* behind the hip, in front of the knee and through the ankle-joint. Meyer claims that the centre *plumbs* in front of the ankle-joint. *Buck*, Med. Handbook, III. 857.

plumbageous (plum-bā′jẹ-us), *a.* Same as *plumbaginous*. *Annals and Mag. Nat. Hist.*, May, 1901, p. 426.

plumbagin (plum-bā′jẹn), *n.* [Irreg. < *Plumbago*, 2, + *-in*^{2}.] A name given by Dulong to ophioxylin, through an error in identifying the plant from which he obtained the compound.

plumbate (plum′bāt), *n.* [L. *plumbum*, lead, + *-ate*^{1}.] A compound which may be considered as a product of the union of lead dioxid with the oxid of a more basic or electropositive metal: as, potassium *plumbate*, K_2PbO_3 or $K_2O.PbO_2$. Orthoplumbates and metaplumbates are known.

Plumbic dioxid. Same as ⋆*lead dioxid.*

plumbiferous, *a.* **2.** Containing lead: applied, in *ceramics*, to a glaze in which one of the principal ingredients is lead. See *lead-glaze.*

plumbisolvent (plum-bi-sol′vent), *a.* [L. *plumbum*, lead, + E. *solvent.*] Dissolving lead.

plumbite (plum′bīt), *n.* [L. *plumbum*, lead, + *-ite*^{2}.] A rather unstable compound of lead monoxid, which usually acts as a strongly basic oxid, with a still more basic or electropositive metallic oxid: as, potassium *plumbite*, K_2PbO_2 or $K_2O.PbO$.

plum-bladder (plum′blad″ėr), *n.* Same as ⋆*plum-pocket.* See ⋆*Exoascus.*

plumbo-. [L. *plumbum*, lead.] An element in names of minerals indicating the presence of lead.

plumbojarosite (plum″bọ-ja-rō′sīt), *n.* [L. *plumbum*, lead, + E. *jarosite.*] A variety of jarosite which contains lead: from New Mexico. See ⋆*jarosite.*

plumboresinite (plum-bọ-rez′i-nīt), *n.* [L. *plumbum*, lead, + *resina*, resin, + *-ite*^{2}.] Same as *plumbogummite.*

plumbosolvency (plum-bọ-sol′ven-si), *n.* [*plumbosolven(t)* + *-cy.*] Capability of dissolving lead, as in the action of certain natural waters upon the metal of pipes used for their transmission. [Rare.]

> Indeed, the methods of counteracting *plumbo-solvency* in peaty water which are adopted in the moorland districts consist in neutralising the acids in the water with carbonate of soda, with carbonate of lime, or with slaked lime. *Nature*, March 26, 1903, p. 498.

plumbosolvent (plum-bọ-sol′vent), *a.* [L. *plumbum*, lead, + *solvens*, solvent.] Capable of dissolving lead, as water transmitted through a leaden pipe or stored in a lead-lined cistern. [Rare.]

> Further, a decrease of *plumbo-solvent* power is noticed when these acids are reduced in quantity by various natural causes, or by artificial neutralisation. *Nature*, March 26, 1903, p. 498.

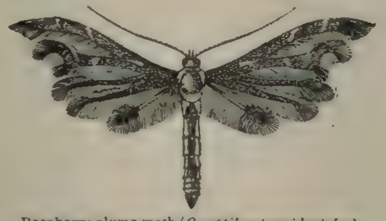
plumbous (plum′bus), *a.* [L. *plumbosus*, containing lead, < *plumbum*, lead. See *plumb*, *n.*, and *-ous.*] In *chem.*, containing lead as a constituent; more specifically, containing lead with apparently dyad valence: as, *plumbous* chlorid, $PbCl_2$, as distinguished from plumbic chlorid, $PbCl_4$.

Plumbum corneum ('horny lead'), in *chem.*, an old name for lead dichlorid, $PbCl_2$, on account of its solidifying from fusion as a translucent mass of tough, horn-like texture. Also, in English form, *horn-lead.*

plumcot (plum′kot), *n.* [*plum* + (*apri*)*cot.*] A name for a class of hybrids between the plum and the apricot, originated by Luther Burbank.

> They are new creations in the fullest sense of the term, like Burbank's *plumcots.* *Science*, Feb. 13, 1903, p. 263.

plume-grass (plöm′gràs), *n.* Any grass of the genus *Erianthus*, the name alluding to the very showy feathery panicles of several species; woolly beard-grass. For the ornamental *E. Ravennæ*, see *Erianthus.* *E. saccharoides*, of the southern United States, also deserves culture for decorative purposes. *E. alopecuroides*, found from New Jersey to Texas on the coast plain, is the *spiral-awned* or *fox-tail plume-grass.*



Raspberry plume-moth (*Oxyptilus tenuidactylus*).
About four times natural size.

plume-moth, *n.*— **Gartered plume-moth**, an American pterophorid moth, *Oxyptilus periscelidactylus*, whose larvæ web together the leaves of the grape-vine.— **Raspberry plume-moth**, an American pterophorid moth, *Oxyptilus tenuidactylus*, of wide distribution in the United States. Its larvæ web the leaves of the raspberry and other plants.

plumeous (plö′mẹ-us), *a.* [L. *plume(us)*, downy, + *-ous.*] Of the nature of down; downy; feathery.

plumiform (plö′mi-fôrm), *a.* [L. *pluma*, feather, + *-form.*] Having the form of a feather; feather-shaped.

plum-knot (plum′not), *n.* Same as *black-knot*, 2.

plummer, plumming. Simplified spellings of *plumber, plumbing.*

plum-moth (plum′môth), *n.* Any one of several moths whose larvæ feed on the foliage of the plum, as the tineid, *Enarmonia* (*Grapholitha*) *prunivora*, or lesser apple-worm, the mottled plum-tree moth, *Apatela superans*, the geometrid *Ania limbata*, the plum-tree sphinx, and the plum-underwing. See cut under *Grapholitha.*

plumosite (plö′mọ-sīt), *n.* [*plumose* + *-ite*^{2}.] Same as *jamesonite.*

plumpen (plum′pẹn), *v. t.* [*plump*^{1}, *a.*, + *-en.*] To make plump; swell out. *N. E. D.*

plumper, *n.* **4.** A tannage which gives leather weight or thickness. *Flemming*, Practical Tanning, p. 375.

plum-pocket (plum′pok″et), *n.* The disease of plums due to *Exoascus Pruni*, which causes the young fruit to swell and dry up. It may also attack the leaves and stems.

plum-pudding, *n.* **2.** See the extract.

> A muscular, fibrous substance known as "*plum pudding*" permeates the blubber of the tongue of these two species of whales [bowhead and right whales], extending longitudinally through the central part and in greater abundance near the roots. Most of it is utterly worthless and is thrown overboard when detached from the fat of the tongue. At times, however, when the fat predominates, the "*plum pudding*" is saved and boiled out with the tongue or the refuse of the whale. *Sci. Amer. Sup.*, March 5, 1904, p. 23551.

plum-rust (plum′rust), *n.* See ⋆*rust*^{1}.

plum-scab (plum′skab), *n.* See ⋆*scab.*

plum-sphinx (plum′sfingks), *n.* Same as *plum-tree* ⋆*sphinx.*

plum-tree, *n.* **2.** In Queensland, a tree of the cashew family, *Buchanania mangoides*, with close-grained, tough, pinkish wood.— **Mottled plum-tree moth.** See ⋆*moth*^{1}.— **Plum-tree sphinx.** See ⋆*sphinx.*

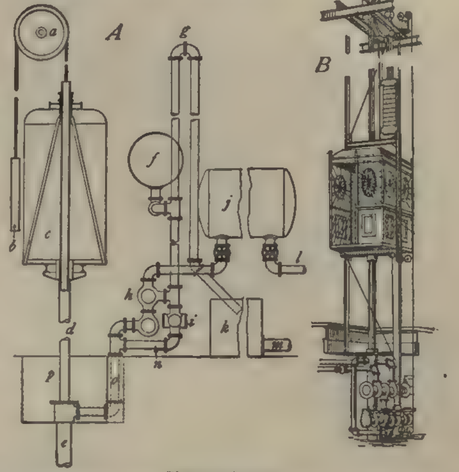
Plumulites (plö-mụ-lī′tēz), *n.* [NL., < L. *plumula*, dim. of *pluma*, feather, + *-ites*, E. *-ite*^{2}.] A generic term applied by Barrande to a Silurian cirriped to which Woodward had previously applied the name *Turrilepas.*

plum-underwing (plum′un″dėr-wing), *n.* See ⋆*underwing.*

plum-wart (plum′wârt), *n.* Same as *black-knot*, 2.

plunge, *v. t.* **4.** In *hort.*, to sink (a pot or box containing a plant) in the ground to the rim or edge. Pots of greenhouse plants are often plunged in the open in warm weather, both for the good of the plants and for their effect in ornamentation.— **5.** To turn over (the telescope of a surveyor's transit or theodolite) in a vertical plane, making the object-glass pass underneath. In transiting the telescope it may pass either above or below.— **6.** In *geol.*, to dip under the surface: used in reference to such structural features as folds where, unless the axis is perfectly horizontal, one end pitches below the horizon or general surface. *Chamberlin and Salisbury*, Geol., I. 488.

plunger-elevator (plun′jėr-el″ẹ-vā-tọr), *n.* A form of elevator or lifting apparatus in which the cage or platform is borne on the top of a long column of steel or iron, which can be slid up and down through the top of a hydraulic cylinder by water-pressure in the latter. The cylinder can be let down into the ground the necessary distance, and when water under pressure is let into it, the plunger is forced upward, carrying up the load at its top. The column is therefore always under the cage, and, except from breakage of the piping or failure of the valves, the fall of the cage is only a remote possibility. The cage and part of the weight of the plunger are counterweighted, and in high lifts the failure of a counterweight cable might cause accident, as well as the fracture of the plunger. In this latter case the danger would be from the cage being projected upward.



Plunger-elevator.
A, diagram of parts; *B*, general view: *a*, overhead pulley; *b*, counterweight; *c*, cage; *d*, plunger; *e*, hydraulic cylinder; *f*, equalizing or auxiliary discharge-tank; *g*, exhaust- or discharge-pipe; *h*, *i*, controlling valves; *j*, receiving water-tank, from pump; *k*, receiving-tank for discharge or exhaust water; *l*, delivery-pipe from pressure-pump; *m*, suction-pipe to pump; *n*, by-pass pipe from pressure to exhaust sides; *o*, thoroughfare pipe between valves and pressure-cylinder; *p*, pit below floor-level, to act also as air-cushion.

plunger-pump, *n.*— **Hollow-plunger pump**, a plunger-pump having a hollow plunger to save weight and wear.

plunk (plungk), *v.* [An imitative variant of *plump*^{2} (compare *bump*^{2}, *hunk*^{2}, *hump*, etc.). In some uses it is directly imitative.] **I.** *trans.* **1.** To strike suddenly, with a dull sound; knock; bang: as, they *plunked* him with stones. [Slang.]— **2.** To knock (away); knock (from).

> One may knock, pop . . . *plunk* . . . the [middle marble] from the "taw." *Dialect Notes*, 1890, p. 24.

3. To shoot; fill full of 'lead' (missiles). [Slang.]

> Instead of using old family shot-guns and *plunking* each other they fought four rounds with bare knuckles. *Boston Transcript.*

4. To pluck (a stringed instrument) so as to produce a low or deep sound; in general, twang.

> An' dey *plunked* de banjo hard,
> An' dey *plunked* de banjo fine.
> *Negro Song*, MS.

II. *intrans.* **1.** To make or emit an abrupt and usually heavy sound: especially used of the rough sounding of a stringed instrument, and sometimes strung out with arbitrary variations (as in the quotation).

> Vulgar tunes that bring the laugh that brings the groan —
> . . . .
> With my "*Plunka*-lunka-lunka-lunka-lunk !"
> *R. Kipling*, Song of the Banjo, st. 12.

2. To croak or cry as a raven. [Scotch.] *N. E. D.*— **3.** To plunge or drop down abruptly. *N. E. D.*

plunk (plungk), *n.* [*plunk*, *v.* For the slang use (def. 3) compare the similar use of *dump*^{2}, *n.*, 2.] **1.** A hard, dull blow: as, to hit one a *plunk.* [Slang.]— **2.** A twang; a twanging sound: as, the *plunk-plunk* of the banjo.— **3.** A dollar. [U. S. slang.]

plunk (plungk), *adv.* [Elliptic use of *plunk*, *v.* or *n.* See ⋆*kerplunk.*] Suddenly; plump: as, he came *plunk* against the half-open door. [Colloq.]

pluperfect, *a.* **2.** In *music*, augmented: said of intervals.

plur. [*l. c.* or *cap.*] An abbreviation (*a*) of *plural*; (*b*) of *plurality.*

pluralism, *n.* **3.** The doctrine that there are as many distinct and separate worlds as there are minds. See the extract.

> The resulting conception would be that of a *pluralism*. Instead of a single continuous world, a universe, we should have as many little worlds as there are minds.
> *C. A. Strong*, Why the Mind has a Body, p. 252.

pluralist, *n.* **2.** An advocate of the theory that the human races have developed from a number of ancestral forms: opposed to *monogenist*.—**3.** In general, one who recognizes a plurality, as of causes, reals, etc.

> Among the *pluralists* no uniform basis of classification has been established. Those who rely strictly upon the morphology of the human malarial parasites rather uniformly agree upon the existence of three species—quartan, tertian, and æstivo-autumnal.
> *Jour. Exper. Med.*, March 25, 1901, p. 483.

pluralistical (plö-ra̤-lis'ti-ka̤l), *a.* Same as *pluralistic*.

pluralistically (plö-ra̤-lis'ti-kal-i), *adv.* In a pluralistic way; in a way that takes into account the existence of several (causes, reals, etc.).

> It ignores all psychological experiences in which the inworkings of a transcendent moral person are known—experiences construed now monistically and now *pluralistically*.
> *Jour. Philos., Psychol. and Sci. Methods*, Aug. 4, [1904, p. 442.

pluranium (plö̦-rā'ni-um), *n.* [NL., < L. *plus* (*plur-*), more (*plures*, several), + *-an-ium*, as in *uranium*, *titanium*, etc.] A name given by Osann to a supposed new chemical element which he thought he had discovered in Russian native platina. He found afterward that it was merely a mixture of already known substances.

plurannual (plö̦-ran'ū̦-a̤l), *a.* and *n.* [L. *plures*, many, several, + *annus*, year: see *annual*.] **I.** *a.* Noting a plant which is normally perennial or biennial, but which becomes annual in a short-season climate because killed by frost, as castor-bean, scarlet-runner bean. See ★*annual*, 3. [Rare.]

> The tomato is often cited as an example, for it is perennial or at least *plur-annual* in its original home.
> *L. H. Bailey*, Survival of the Unlike, p. 295.

II. *n.* A plurannual plant.

plurative (plö'ra-tiv), *a.* [L. *plurativus*, plural.] **1**†. Plural.—**2.** In *logic*, noting a judgment in which more than half, but not all, of the subject is taken. *Atwater*.

pluricarinate (plö-ri-kar'i-nāt), *a.* [L. *plus* (*plur-*), more, + E. *carinate*.] Having several ridges; specifically applied to the scales of reptiles. *Proc. Zool. Soc. London*, 1897, p. 198.

pluricarpellary (plö-ri-kär'pe-lā̤-ri), *a.* [L. *plus* (*plur-*), more, + *carpellary*.] In *bot.*, relating to or having more than one carpel.

> The *pluricarpellary* origin of the pistil in the Lauraceæ.
> *Nature*, Oct. 10, 1907, p. 608.

pluricentral (plö-ri-sen'tra̤l), *a.* [L. *plus* (*plur-*), more, + *centr*(*um*) + *-al*^{1}.] Having more than one center or nucleus.

pluricipital (plö-ri-sip'i-ta̤l), *a.* [L. *plus* (*plur-*), more, + *caput* (*capit-*), head, + *-al*^{1}.] In *bot.*, having more than one head, as a root.

pluricuspidate (plö-ri-kus'pi-dāt), *a.* [L. *plus* (*plur-*), more, + E. *cuspidate*.] Having many cusps, as the tooth of an insectivore; multicuspidate.

plurifetation (plö″ri-fē̦-tā'sho̤n), *n.* [L. *plus* (*plur-*), more, + E. *fetation*.] The condition of bearing or being pregnant with more than one embryo.

plurinuclear (plö-ri-nū'klē̦-ä̤r), *a.* [L. *plus* (*plur-*), more, + *nucleus*, nucleus, + *-ar*^{3}.] Having several nuclei; multinuclear or multinucleate; plurinucleate. *Philos. Trans. Roy. Soc.* (London), 1902, ser. B, p. 364.

pluriovular (plö-ri-ō'vū̦-lä̤r), *a.* [L. *plus* (*plur-*), more, + E. *ovule* + *-ar*^{3}.] Containing more than one ovule: as, a *pluriovular* Graafian follicle.

pluripersonal (plö-ri-pėr'so̤n-a̤l), *a.* [L. *plus* (*plur-*), more, + *persona*, person, + *-al*^{1}.] Supposing several persons: as, a *pluripersonal* hypothesis. *Southey*, Doctor, interchap. xiii.

pluripolar (plö-ri-pō'lä̤r), *a.* [L. *plus* (*plur-*), more, + *polus*, pole, + *-ar*^{3}.] In *biol.*, having several poles: said of ganglion-cells and certain karyokinetic spindles in abnormally dividing cells known as *pluripolar mitoses*. *Nature*, Feb. 4, 1904, p. 320.

plurisegmental (plö″ri-seg-men'ta̤l), *a.* [L. *plus* (*plur-*), more, + E. *segment* + *-al*^{1}.] Having or referring to several segments. *Philos. Trans. Roy. Soc.* (London), ser. B, 1898, p. 152.

pluriserially (plö-ri-sē'ri-a̤l-i), *adv.* In several series.

plurivariant (plö-ri-vā'ri-a̤nt), *a.* [L. *plus* (*plur-*), more, + E. *variant*.] In *phys. chem.*, having a variance equal to three or more. The variance V of a chemical system is expressed by the equation $V = C + 2 - \phi$, where C is the number of independent components, and ϕ is the number of phases in which the system may exist.

plurivore (plö'ri-vōr), *n.* [L. *plus* (*plur-*), more, + *vorare*, eat, devour.] A parasitic fungus which is capable of infecting several different host-plants.

plurivorous (plö̦-riv'ō̦-rus), *a.* [L. *plus* (*plur-*), more, + *vorare*, eat, + *-ous*.] In *bot.*, living upon various hosts. said of parasites. See ★*univorous*.

Plus number. Same as *positive* ★*number*.

plush, *n.*—**Velvet plush**, a short-piled plush fabric.

plush (plush), *v. i.* [*plush*, *n.*] To crush, so as to resemble the surface of plush: said of velveteen and other textiles with a long nap. [Colloq.]

> Velveteen *plushes* for skirts, but it makes nice blouses.
> *The People* (London), Oct. 8, 1905.

plusiid (plö'si-id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Plusiidæ*.

II. *a.* Having the characters of or belonging to the family *Plusiidæ*.

plusquamperfect (plus-kwam-pėr'fekt), *a.* [NL. *plusquamperfectus*, L. *plus quam perfectus*, 'more than perfect.'] In *gram.*, same as *pluperfect*.

pluteal (plö'tē̦-a̤l), *a.* [*plute*(*us*) + *-al*^{1}.] Of or pertaining to a pluteus.

plutean (plö'tē̦-an), *a.* Same as ★*pluteal*.

plutellid (plö̦-tel'id), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Plutellidæ*.

II. *a.* Having the characters of or belonging to the family *Plutellidæ*.

plutocratical (plö-tō̦-krat'i-ka̤l), *a.* Same as *plutocratic*.

plutodemocracy (plö″tō̦-dē̦-mok'ra̤-si), *n.* [Gr. πλοῦτος, wealth, + E. *democracy*.] A democracy controlled by plutocrats.

plutolatry (plö̦-tol'a̤-tri), *n.* [Gr. πλοῦτος, wealth, + λατρεία, worship.] Worship of wealth. *Lowell*, Latest Lit. Essays, p. 157. *N. E. D.*

plutomania (plö-tō̦-mā'ni-ä̤), *n.* [Gr. πλοῦτος, wealth, + E. *mania*.] A mad desire for wealth; specifically, a form of insanity characterized by the delusion of wealth.

plutonometamorphism (plö″tō̦-nō̦-met-a̤-môr'fizm), *n.* [*pluton*(*ic*) + *-o-* + *metamorphism*.] In *geol.*, very deep-seated metamorphism, such as would take place far down in the earth, under great pressure and at high temperature. *Geikie*, Text-book of Geol., p. 765.

plutonomic (plö-tō̦-nom'ik), *a.* [*plutonom*(*y*) + *-ic*.] Of or pertaining to plutonomy or the science of wealth.

plutonomy (plö̦-ton'ō̦-mi), *n.* [Gr. πλοῦτος, wealth, + νόμος, law.] The science of wealth or riches.

> With regard to his [Ruskin's] economic and social ideas there is far less general concurrence, though the years that have passed since Unto this Last appeared have seen the practical overthrow of the rigid *plutonomy* which he denounced.
> *Encyc. Brit.*, XXXII. 333.

Pluvial period. See ★*period*.

pluviogram (plö'vi-ō̦-gram), *n.* [L. *pluvius*, rain, + Gr. γράμμα, a writing.] A record made by a pluviograph.

pluviographic (plö″vi-ō̦-graf'ik), *a.* [*pluviograph* + *-ic*.] Of or pertaining to the pluviograph or self-recording rain-gage; given by or derived from the pluviograph: as, a *pluviographic* record.

pluviography (plö-vi-og'ra̤-fi), *n.* [L. *pluvius*, rain, + Gr. -γραφια, < γράφειν, write.] The method of recording rainfall; the invention and study of pluviographs and pluviograms.

Pluviometric coefficient. See ★*coefficient*.

pluviosity (plö-vi-os'i̤-ti), *n.* [L. *pluvios*(*us*), rainy, + *-ity*.] The condition or character of being rainy; in *meteor.*, the condition of the climate as to rainfall; the pluviometric coefficient of Raulin, or the actual rainfall for any interval of time, expressed as a fraction of an ideal uniform distribution of rain; the normal rainfall for any month divided by one twelfth of the normal rainfall for the year.

Plymouth porcelain. See ★*porcelain*^{1}.

Plynteria (plin-tē'ri-ä̤), *n. pl.* [Gr. Πλυντήρια, neut. pl. of πλυντήριος, of or for washing.] A festival of purification and atonement at Athens. The image of Pallas was stripped, and the clothes carried to the sea and washed. It occurred about the 21st to 25th of the month of Thargelion.

Pm. An abbreviation (*b*) of *premium*.

P. M. An abbreviation (*d*) of *Pacific Mail*; (*e*) of *Past Master*; (*f*) of *Past Midshipman*; (*g*) of *Paymaster*.

P. M. G. An abbreviation (*a*) of *Paymaster-General*; (*b*) of *Postmaster-General*.

pneomanometer (nē″ō̦-mā̤-nom'e-tėr), *n.* [Irreg. < Gr. πνεῖν (indic. πνέω), breathe, + E. *manometer*.] Same as *spirometer*.

pneum. An abbreviation (*a*) of *pneumatic*; (*b*) of *pneumatics*.

pneuma, *n.* **3.** In *theol.*, the spirit; the highest in man and the seat of the divine indwelling, as distinguished from the soul, the seat of the natural human life.

pneumadenia (nū-ma̤-dē'ni-ä̤), *n.* [Gr. πνεῦμα, air, wind, + ἀδήν, a gland.] The gas-secreting thick epithelium in the basal part of the pneumatocyst of the *Physalidæ*.

pneumadrome (nū'ma̤-drōm), *n.* [Gr. πνεῦμα, wind, + -δρομος, < δραμειν, run.] A name given by J. M. Partridge to an air-ship invented by him in 1847. *F. Walker*, Aërial Navigation, p. 117.

pneumatelectasis (nū″ma̤-te-lek'ta̤-sis), *n.* [NL., < Gr. πνεῦμα, breath, + NL. *atelectasis*.] See *atelectasis*.

pneumatic. **I.** *a.* **5.** In *theol.*, relating to the spirit or pneuma, as distinguished from both soul and body; spiritual. See *soul* and *spirit*.—**Pneumatic broom**, an apparatus which employs compressed air in cleaning car-cushions, carpets, etc. In one form a nozle or air-brush at the end of a hose delivers a thin sheet of air under great pressure, which quickly removes dust and dirt from carpets and cushions; in another form the air is drawn into the hose through the nozle by an exhaust. The nozle, when moved over an object, as a carpet, sucks up all litter, dust, and dirt, and conveys them away through the pipes. Collecting- and settling-tanks separate the dirt from the air, so that it may be removed and burned.—**Pneumatic caisson**, a chamber either cylindrical or prismatic in shape used in sinking shafts or excavating for piers, tunnels, or foundations, made either of steel or iron or wood, and so constructed that a pressure of air can be maintained within it. This air-pressure is to be sufficient to keep out the influx of any water which may be met, by balancing the head of such water at the open or working face of the caisson. It requires an air-lock and device for hoisting, as in the standard design defined under caisson. See *caisson*, 3 (*c*).—**Pneumatic chipper.** See ★*chipper*^{1}.—**Pneumatic extension ladder.** Same as *aërial* ★*truck*.—**Pneumatic hammer, jack, sand-rammer, sand-sifter.** See ★*hammer*^{1}, etc.—**Pneumatic school.** See *pneumatic physicians*.—**Pneumatic shutter, stamp, tool, traction.** See ★*shutter*, etc.

II. *n.* **3.** An inflatable rubber tire.—**4.** A vehicle, as a bicycle, motor-cycle, or motor-car, fitted with inflatable rubber tires.

pneumatist (nū'ma̤-tist), *n.* [*pneumat*(*ic*) + *-ist*.] A pneumatic physician. See *pneumatic*.

pneumatized (nū'ma-tīzd), *a.* [Gr. πνεῦμα(τ-), breath, air, + *-ize*.] Provided with air-sacs or -chambers.

> It is noteworthy that some large reptilian Sauropsida . . . had *pneumatized* bones with air-cavities, while the bones of small reptiles are not pneumatic.
> *Smith*, Misc. Coll., IV. Quart. Ser., Pt. 3., p. 392.

pneumatocele (nū'ma̤-tō̦-sēl), *n.* [NL., < Gr. πνεῦμα(τ-), breath (for πνεύμων, lung), + κήλη, tumor.] A tumor or hernia containing air or gas; specifically, hernia of a portion of the lung through an intercostal space.

pneumatogenetic (nū″ma̤-tō̦-jē̦-net'ik), *a.* Same as ★*pneumatogenic*.

pneumatogenic (nū″ma̤-tō̦-jen'ik), *a.* [Gr. πνεῦμα(τ-), breath, + -γενής, -producing, + *-ic*.] Originating by the aid of the heated vapors which are given off by cooling and consolidating masses of eruptive rock: applied to those ores, as cassiterite, which are customarily associated with minerals containing fluorin, boron, etc.

pneumatogenous (nū-ma̤-toj'e-nus), *a.* Same as ★*pneumatogenic*.

pneumatogram, *n.* **2.** A despatch sent by means of a pneumatic tube. [Rare.]

> The pneumatic tube system had been in use for some time. . . . The development of the system was very rapid. It began with the despatch of *pneumatograms*, following the example of Paris.
> *W. T. Stead*, If Christ came to Chicago, v. 6.

pneumatograph (nū′ma-tọ-gråf), *n.* [Gr. *πνεῦμα(τ-)*, breath, + *γράφειν*, write.] An instrument for recording the respiratory movements. See ★*pneumograph.*

pneumatolitic (nū″ma-tọ-lit′ik), *a.* An erroneous spelling of ★*pneumatolytic.*

pneumatologic (nū″ma-tọ-loj′ik), *a.* Same as *pneumatological.*

pneumatolysis (nū-ma-tol′i-sis), *n.* [Gr. *πνεῦμα(τ-)*, air, breath (gas), + *λύσις*, dissolution.] The general process of the formation of minerals, and especially ores, along the contacts of intrusive igneous rocks with their walls, and through the agency of vapors or gases emitted by the molten magma.

The importance of *pneumatolysis* in forming ore deposits was emphasized by the discovery on this continent, soon after the publication of Lindgren's paper, of a number of economically important deposits, especially of copper, which would come within his definition of contact deposits. *Smithsonian Rep.*, 1904, p. 335.

pneumatolytic (nū″ma-tọ-lit′ik), *a.* [*pneumatolysis* (*-lyt-*) + *-ic.*] Belonging to or resulting from pneumatolysis or the action of gases contained in molten rock-magmas. The vapors or gases escaping from molten magmas may act as mineralizers in adjacent rocks and be a source of some ore deposits.

The greisen is an example of Prof. Vogt's "*pneumatolytic*" action in thoroughly acid rocks.
Nature, Feb. 26, 1903, p. 406.

Pneumatomachist (nū-ma-tom′a-kist), *n.* Same as *Pneumatomachian.*

Pneumatomachy (nū-ma-tom′a-ki), *n.* The beliefs of the Pneumatomachians.

pneumatonomy (nū-ma-ton′ọ-mi), *n.* [Gr. *πνεῦμα(-τ)*, spirit, + *νόμος*, law.] Same as *pneumatology*, 3.

pneumatophany (nū-ma-tof′a-ni), *n.* [Gr. *πνεῦμα(τ-)*, spirit, + *-φανεια*, < *-φανης*, < *φαίνεσθαι*, appear.] A manifestation of the Spirit or of spirits. *C. S. Briggs*, Address at Union Sem., New York, May, 1893.

pneumatophobia (nū″ma-tọ-fō′bi-ä), *n.* [Gr. *πνεῦμα(τ-)*, spirit, + *-φοβια*, < *φοβεῖν*, fear.] Fear or dislike of the spiritual.

pneumatophore, *n.* **2.** An apparatus for supplying a person with oxygen when in a place filled with bad or unwholesome air. It consists of a breathing-bag containing alkali in solid form to absorb the carbonic acid gas breathed out of the lungs, and two steel cylinders filled with oxygen at a pressure of about 1,800 pounds per square inch. The apparatus is used principally for entering coal-mines after explosions. Also *pneumatophor.*

In the earlier forms of the *pneumatophor*, the supply of oxygen was adjustable by the wearer of the apparatus, but now the appliance is fitted with an equilibrium valve, rendering the supply automatic and constant and requiring no attention whatever on the part of the wearer.
Sci. Amer. Sup., Feb. 27, 1904, p. 23545.

3. In *phytogeog.*, a lateral root, submerged or more often exposed to the air, at least periodically, so differentiated as to serve the purpose of respiration; a respiratory root. In submerged pneumatophores the aërating tissue often consists of aerenchyma; in projecting pneumatophores it consists of air-containing cork or cortex. Projecting pneumatophores assume an upright position, due to negative geotropism. An example is presented by the knees of the bald cypress. See *knee*, 3 (*d*).

pneumatorachis, pneumatorrhachis (nū-ma-tọ-rā′kis), *n.* [Gr. *πνεῦμα(τ-)*, air, + *ῥάχις*, spine.] The presence of air in the spinal canal.

pneumatotherapeutics (nū″ma-tọ-ther-a-pū′tiks), *n.* [Gr. *πνεῦμα(τ-)*, air, + E. *therapeutics.*] The employment of compressed or rarefied air in the treatment of disease. *Buck*, Med. Handbook, I. 131.

pneumatotherapy (nū″ma-tọ-ther′a-pi), *n.* Same as ★*pneumatotherapeutics.*

pneumaturgy (nū′ma-tėr-ji), *n.* [Gr. *πνεῦμα(τ-)*, spirit, + *ἔργον*, work, + *-y*³.] The control of a person by a spirit; possession. [Rare.]

I claim that this substitution of personality, or spirit-control, or possession, or *pneumaturgy*, is a normal forward step in the evolution of our race.
F. W. H. Myers, in Proc. Soc. Psychical Research, [XVII. 68.

pneumaturia (nū-ma-tū′ri-ä), *n.* [NL., < Gr. *πνεῦμα(τ-)*, air, + *οὖρον*, urine.] The passage of gas from the urethra during micturition.

pneumectasis (nụ-mek′ta-sis), *n.* [NL., < Gr. *πνεῦμα*, breath, + *ἔκτασις*, extension.] Pulmonary emphysema.

pneumic (nū′mik), *a.* [Irreg. < Gr. *πνεύμ(ων)*, lung, + *-ic.*] Pertaining to or derived from the lungs; noting an acid, present in the lungs of man and other mammals, which is supposed to set free the carbonic acid brought to the lungs in the form of carbonate of sodium.

pneumobacillus (nū″mọ-ba-sil′us), *n.*; pl. *pneumobacilli* (-ī). [NL., < Gr. *πνεύμων*, lung, + NL. *bacillus.*] Same as *Friedländer's* ★*bacillus.*

In 1880, Friedländer claimed that he had isolated such an organism, but the *pneumobacillus* then described appears to be inactive as compared with the pneumococcus, isolated by Fraenkel and Talamon. This latter organism, which is usually found in the sputum, is an encapsuled diplococcus. *Encyc. Brit.*, XXXI. 526.

pneumococcal (nū-mọ-kok′al), *a.* [*pneumococcus* + *-al*¹.] Pertaining to or resembling a pneumococcus. *Science*, April 8, 1904, p. 578.

pneumococcic (nū-mọ-kok′sik), *a.* [*pneumococc(us)* + *-ic.*] Same as ★*pneumococcal. Buck*, Med. Handbook, II. 770.

pneumococcous (nū-mọ-kok′us), *a.* Same as ★*pneumococcal.*

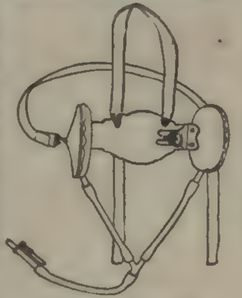
pneumococcus (nū-mọ-kok′us), *n.*; pl. *pneumococci* (-sī). [NL., < Gr. *πνεύμων*, lung, + NL. *coccus.*] A diplococcus which is regarded as the causative factor of acute croupous pneumonia. Also termed *diplococcus pneumoniæ* or *Fraenkel's pneumococcus.* See ★*diplococcus.*

The relationship of the *pneumococcus* and the meningococcus from an epidemiological standpoint.
Med. Record, Feb. 7, 1903, p. 236.

pneumodynamics (nū″mọ-dī-nam′iks), *n.* [Gr. *πνεῦμα(τ-)*, air, + E. *dynamic(s).*] The dynamics of air or gases; pneumatics.

pneumoëmpyema (nū-mọ-em-pi-ē′mä), *n.* [Gr. *πνεῦμα(τ-)*, air, + NL. *empyema.*] In *pathol.*, empyema characterized by the presence of gas.

pneumograph, *n.*—**Fitz pneumograph.** Same as *Harvard* ★*pneumograph.*—**Harvard pneumograph,** in *physiol.* and *psychophys.*, a simple form of pneumograph, originally devised by Marey, but given up by him in favor of a tambour-pneumograph. It consists of a stout spiral spring, incased in rubber tubing, from the one end of which a length of smaller tubing leads to the recording apparatus. The main tube is strapped or chained about the subject's body. Also called *Fitz pneumograph* and *Sumner pneumograph. E. B. Titchener*, Exper. Psychol., I. ii. p. 184.—**Sumner pneumograph.** See *Harvard* ★*pneumograph.*—**Verdin pneumograph,** in *physiol.* and *psychophys.*, a form of pneumograph devised by Marey and made by Verdin of Paris. It consists of two oval tambours, held upon a metal plate and connected by rubber tubing with the recording apparatus. The metal plate is supported by a silk sling, which passes round the neck of the subject; and the plate and tambours are kept in place upon the thorax or abdomen by silk tapes tied round the body. *E. B. Titchener*, Exper. Psychol., I. ii. p. 184.



The Verdin Pneumograph.

Pneumographic pen. See ★*pen*².

pneumolith (nū′mọ-lith), *n.* [Gr. *πνεύμων*, lung, + *λίθος*, stone.] A calculus in the lung. *Buck*, Med. Handbook, III. 232.

pneumolithiasis (nū″mọ-li-thī′a-sis), *n.* [NL., < Gr. *πνεύμων*, lung, + *λιθίασις*, the presence of stone (calculus).] The occurrence of concretions in the lungs.

pneumologic (nū-mọ-loj′ik), *a.* Same as *pneumological.*

pneumologist (nụ-mol′ọ-jist), *n.* [*pneumolog(y)* + *-ist.*] A specialist in diseases of the air-passages; a student of pneumology.

pneumomalacia (nū″mọ-ma-lā′si-ä), *n.* [NL., < Gr. *πνεύμων*, lung, + *μαλακία*, softness.] Softening of the lungs.

pneumomassage (nū″mọ-ma-säzh′), *n.* [Gr. *πνεύμων*, lung, + E. *massage.*] The process of moving the drum-membrane of the ear by means of alternate compression and rarefaction of air in the external auditory canal.

The effect of excessive *pneumo-massage* by the use of rarefacteurs is exerted principally upon the posterior segment of the tympanic membrane, the fibres of which become weakened, resulting in relaxation of the drum membrane. *Detroit Med. Jour.*, Feb., 1903, p. 715.

pneumonectasis (nū-mọ-nek′ta-sis), *n.* [NL., < Gr. *πνεύμων* (*πνευμον-*), lung, + *ἔκτασις*, extension.] Same as ★*pneumectasis.*

pneumonectomy (nū-mọ-nek′tọ-mi), *n.* [NL., < Gr. *πνεύμων* (*πνευμον-*), lung, + *ἐκτομή*, excision.] Same as *pneumectomy. Med. Record*, June 27, 1903, p. 1055.

pneumonia, *n.*—**Caseous pneumonia.** Same as *cheesy pneumonia* (which see, under *pneumonia*).—**Cerebral pneumonia,** pneumonia accompanied with marked delirium.—**Contusion pneumonia,** pneumonia following a blow or other non-penetrating injury of the chest.—**Fibrinous pneumonia.** Same as *croupous pneumonia* (which see, under *pneumonia*).—**Hypostatic pneumonia,** congestion and consolidation of the dependent portion of the lungs when the dorsal position is long maintained, as when one is confined to bed by a long illness or by a broken leg.—**Inhalation pneumonia,** pneumonia due to the inhalation of foreign material, such as dust, food-particles, etc.—**Lobar pneumonia.** See *lobular pneumonia*, under *pneumonia.*—**Massive pneumonia,** pneumonia with a great amount of exudation, choking the air-cells and bronchioles and causing solidification of a large part of the affected lung.—**Septic pneumonia,** inflammation of the lungs following the inhalation of septic material.—**White pneumonia,** syphilitic disease of the lung in the new-born.

Pneumonic plague. See ★*plague*, 2.

pneumonocace (nū-mọ-nok′a-si), *n.* [Gr. *πνεύμων*, lung, + *κάκη*, evil.] Gangrene of the lung.

pneumonomycosis (nū″mọ-nō-mī-kō′sis), *n.* [Gr. *πνεύμων*, lung, + NL. *mycosis.*] Growth of fungus in the lungs. *N. E. D.*

pneumonopexy (nū″mọ-nō-pek′si), *n.* [Gr. *πνεύμων*, lung, + *πῆξις*, fastening.] Fixation of the lung to the chest-wall after partial excision.

pneumonophlebitis (nū″mọ-nọ-flẹ-bī′tis), *n.* [Gr. *πνεύμων*, lung, + *φλέψ* (*φλεβ-*), vein, + *-itis.*] Inflammation of the pulmonary veins.

pneumonophorous (nū-mọ-nof′ọ-rus), *a.* [Gr. *πνεύμων*, lung, + *φέρειν*, bear.] Having lungs.

pneumonopome (nū′mọ-nọ-pōm), *n.* [Gr. *πνεύμων*, lung, + *πῶμα*, lid.] Same as *pneupome.*

pneumonopomous (nū″mọ-nọ-pō′mus), *a.* [*pneumonopome* + *-ous.*] Of or pertaining to a pneumonopome or pneupome.

pneumonotomy (nū-mō-not′ọ-mi), *n.* [Gr. *πνεύμων*, lung, + *-τομια*, < *ταμεῖν*, cut.] Same as *pneumotomy.*

pneumopericardial (nū-mọ-per-i-kär′di-al), *a.* [*pneumopericardi(um)* + *-al*¹.] Pertaining to or indicating the presence of pneumopericardium: applied to a sound heard, by auscultation, in pleurisy.

pneumoperitoneum (nū″mọ-per″i-tō-nē′um), *n.* [Gr. *πνεύμων*, lung, + *περιτόναιον*, peritoneum.] The presence of gas in the peritoneal cavity.

pneumoperitonitis (nū″mọ-per″i-tọ-nī′tis), *n.* [Gr. *πνεύμων*, lung, + NL. *peritonitis.*] Inflammation of the peritoneum with the presence of gas in the peritoneal cavity.

pneumophysis (nụ-mof′i-sis), *n.*; pl. *pneumophyses* (-sēz). [Gr. *πνεύμων*, lung, + *φύσις*, growth.] One of two membranous air-sacs connected with the ductus ejaculatorius of a male honey-bee.

pneumotherapy (nū-mọ-ther′a-pi), *n.* [Gr. *πνεύμων*, lung, + *θεραπεία*, medical treatment.] Aërotherapeutics.

Pneumotherapy is a branch of physical and physiological treatment which has not received much attention in this country. *Med. Record*, July 11, 1903, p. 71.

pneumothyra (nū-moth′i-rä), *n.*; pl. *pneumothyræ* (-rē). [NL., < Gr. *πνεύμων*, lung, + *θύρα*, a door.] In siphonophorans, one of the communications between the concentric chambers of the pneumatocyst.

pneumotoxin (nū-mọ-tok′sin), *n.* [Gr. *πνεύμων*, lung, + E. *toxin.*] A glycerin extract of the *Diplococcus pneumoniæ*, which supposedly contains the specific toxic principle of the organism.

pneumotyphoid (nū-mọ-tī′foid), *n.* [Gr. *πνεύμων*, lung, + E. *typhoid.*] Typhoid fever accompanied by pneumonia.

pneumotyphus (nū-mọ-tī′fus), *n.* [NL., < Gr. *πνεύμων*, lung, + NL. *typhus.*] Pneumonia complicating typhoid or typhus fever.

pnixis (nik′sis), *n.* [NL., < Gr. *πνῖξις*, choking, < *πνίγειν*, choke, suffocate.] Suffocation.

pnxt. [*l. c.* or *cap.*] An abbreviation of the Latin *pinxit*, he (or she) painted (it).

po. An abbreviation of *pole*, a measure.

P. O. An abbreviation (*c*) of *Postal Order;* (*d*) of *Province of Ontario.*

poach², *v. i.* **2.** To gain an unfair advantage at the start of a race. [Slang.]

With a rope, just as with the starting-gate which has been introduced of late years in the horse race, there is no possibility of *poaching* at the start or of a false start.
E. N. Gardner, in Jour. Hellenic Studies, XXIII. 264.

Poales (pọ-ā′lēz), *n. pl.* [NL. (Small, 1903), < *Poa* + *-ales.*] A large order of monocotyledonous plants characterized by having the flowers in the axils of dry chaffy scales or glumes, and arranged in spikes or spikelets.

It embraces the *Poaceæ*, or grass family, and the *Cyperaceæ*, or sedge family. See *Glumaceæ*.

pob (pob), *n.* [Also *pab;* origin obscure.] The refuse of flax or jute. [Scotch.]

pochade (pọ-shäd′), *n.* [F., < *pocher*, sketch quickly, lit. pocket, < *poche*, a pocket.] A slight, rough sketch which can easily be erased for correction. [French art slang.]

pochard, *n.*—**Tufted or crested pochard**, a European duck, *Aythya cristata*, something like the redhead but having a crest.

pochettino (pọ-chet-tē′nō), *a.* [It., dim. of *pochetto*, little. See ★*pochetto*.] In *music*, in the phrase *un pochettino*, a very little.

pochetto (pọ-chet′tō), *a.* [It., dim. of *poco*, a little. See *poco*.] In *music*, in the phrase *un pochetto*, a little.

pochote (pō-chō′tạ), *n.* [Mex., < Nahuatl *pochotl*.] A name applied to several trees yielding silk-cotton, especially to *Ceiba pentandra* and *C. grandiflora*, and in the state of Tabasco to *Maximilianea hibiscoides*.

pocil. An abbreviation of the Latin *pocillum*, a little cup.

Pocillopora (pō-si-lop′ọ-rạ̈), *n.* [NL.] The typical genus of the family *Pocilloporidæ*. *Lamarck.*

Pocilloporidæ (pō″sil-lọ-pō′ri-dē), *n. pl.* [NL. *Pocillopora* + *-idæ*.] A family of madreporarian corals, consisting of colonial forms having tabulæ, small septa, well or slightly developed columella, polyps with disk, tentacles, and one pair of long mesenterial filaments. The intercorallite structure is cœnenchymal and solid. It contains the genera *Pocillopora* and *Seriatopora*.

pocket, *n.* 12. A small cavity in a rock-surface or in the channel of an intermittent stream, sometimes holding a pool of water. Also called a *water-pocket*.—13. In Australia: (*a*) A bar formed by a river at a bend, much curved and hollowed out near its shore end. (*b*) A circular, hollowed-out spot in thick scrub.—**Blind pocket**, in *billiards*, a pocket the elbow or edge of which is likely to repel a ball. This can usually be overcome by giving the ball a twist.—**Branchial pocket.** See ★*branchial*.—**Iliac pocket.** Same as *iliac* ★*recess*.—**Pocket measure**, a bill in the hands of a member of a legislature, which he may or may not introduce, according to circumstances.—**Seessel's pocket**, a depression in the pharyngeal membrane in the embryo.—**To enlarge the pocket**, in *ball-pool* and *Eng. billiards*, to use twist in order to help the cue-ball to hole itself. *W. Broadfoot*, Billiards, p. 259.

pocketable (pok′et-ạ-bl), *a.* [*pocket* + *-able*.] That can be pocketed; of a book, small enough to be put into one's pocket. [Rare.]

> But of course the [book] is not portable in the sense of being *pocketable*.
> *N. Y. Times*, Sat. Rev., July 1, 1905, p. 436.

pocket-book, *n.* 5. A fresh-water mussel, *Lampsilis capax* or *L. ventricosus*, which has round valves of great depth.

pocket-boom (pok′et-böm), *n.* In *lumbering*, a boom in which logs are held after they are sorted.

pocket-hole (pok′et-hōl), *n.* The opening by which the hand may be introduced into a pocket.

pocketing (pok′et-ing), *n.* A cotton fabric of which the pockets of men's clothes are made. It is both plain and twilled and of various colors. Usually in the plural.

pocket-loup (pok′et-löp), *n.* A magnifying-glass or -lens for the pocket.

pocksha (pok′shạ̈), *n.* [Appar. from one of the Amerindian forms of ★*pocosin*.] A tangled, swampy tract of country. [Maryland.]

Pocono series. See ★*series*.

pocosin (pō-kō′sin), *n.* [Also *pocoson*, *pocason*, *poquosin*, *poquoson*, *pocoarson*, etc. (see also ★*pocksha*); from an Algonkian dialect of Maryland or Virginia, perhaps **poquoesin*, 'at or near the opening out or widening' (of a river?), cognate with Massachusetts *pohqui*, it breaks, is broken, *pohquanum*, he opens, etc., with many derivates (J. Hammond Trumbull, Natick dict., p. 128), Ojibwa *pâkissin*, it is open.] A tract of low land; a swamp; a marsh. [Maryland, Virginia, and part of the Carolinas.] *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 253.

pod, *n.* 5†. The blade of a cricket-bat.

> It [the bat] was therefore made straight in the *pod*.
> *Hutchinson*, Cricket, p. 6.

Black pod, a disease which attacks the pods of the chocolate-tree, *Theobroma Cacao*, caused by the fungus *Phytophthora omnivora*.

pod, *v. i.* 4. To assemble in small bands: specifically applied to the pups, or young, of the fur-seal.

> The "*podding*" of these young pups in the rear of the great rookeries of St. Paul, is one of the most striking phases of this remarkable exhibition of highly-organized life. *Elliott*, Fur Seal Islands of Alaska, p. 41.

P. O. D. An abbreviation (*a*) of *Pay on delivery;* (*b*) of *Post-office Department*.

podal (pō′dạl), *a.* [Gr. πούς (ποδ-), foot, + *-al*[1].] Pertaining to the foot or to a footlike organ; resembling a foot; pedal; podalic.

> The minimum amount of *podal* surface is offered to the water in resistance. *Amer. Nat.*, Jan., 1904, p. 23.

Podal membrane, in some worms, as the *Spionidæ*, a membrane usually attached along the outer margin of the notopodial cirri and the neuropodia.

podanipter (pō-dạ-nip′tėr), *n.* [Gr. ποδανιπτήρ.] In *class. antiq.*, a vessel for washing the feet; a foot-pan.

podarthrocace (pō-där-throk′a-sē), *n.* [NL., < Gr. πούς (ποδ-), foot, + NL. *arthrocace*.] Destructive inflammation of the joints of the foot.

podatus (pọ-dā′tus), *n.* [ML.] In *medieval musical notation*, a ligature which represents an ascending step or skip. Also called *pes*.

Podaxaceæ (pod-ak-sā′sẹ-ē), *n. pl.* [NL., < *Podaxon* + *-aceæ*.] A small family of gasteromycetous fungi, so named from the typical genus *Podaxon*.

Podaxon (pọ-dak′son), *n.* [NL. (Fries, 1829), < Gr. πούς (ποδ-), foot, + ἄξων, axis.] A genus of gasteromycetous fungi of the family *Podaxaceæ*, which have the peridium more or less elongate and scaly, with a stipe which extends through to the apex of the peridium in the form of a columella. Some 16 species have been described. They occur in the warmer arid portions of the earth. *P. carcinomalis* is found in South Africa.

pod-corn (pod′kôrn), *n.* See ★*maize*, 1.

poddly (pod′li), *n.* [Origin obscure.] A New Zealand and Australian fish, *Sebastapistes percoides*, called in Victoria *red-gurnet perch*. *E. E. Morris*, Austral English.

poddy, *a.* **II.** *n.* A common name of *Myxus elongatus*, a fish found in Australia.

podeon (pō′dẹ-on), *n.* [NL., < Gr. ποδεών, a narrow end, < πούς (ποδ-), foot.] That portion of the abdomen of a petiolate hymenopterous insect which constitutes the petiole proper, between the propodeon and the metapodeon. *Cambridge Nat. Hist.*, V. 491.

podial, *a.*—**Podial pore**, in echinoderms, one of the openings through which the tube-feet project. *Proc. Zool. Soc. London*, 1896, p. 1037.

II. *n.* A general term for a bone of the carpus or tarsus. The plural, 'podials,' is commonly used to denote the bones of the carpus and tarsus considered collectively.

> This motion is confined to the proximal *podials*.
> *Amer. Nat.*, Jan., 1904, p. 2.

Podicipidæ (pod-i-sip′i-dē), *n. pl.* The commonly accepted form of *Podicipedidæ*.

podicipidine (pod-i-sip′i-din), *a.* [*Podicipidæ* + *-ine*.] Pertaining to, resembling, or having the characters of the *Podicipedidæ* or grebes.

> The pelvis in Æchmophorus occidentalis well exhibits all the characters of this compound bone among the *podicipidine* types. *Amer. Nat.*, Jan., 1904, p. 20.

podion (pō′di-on), *n.* Same as *podium*.

podium, *n.* 5. In echinoderms, one of the tube-feet.

podobranch (pod′ọ-brangk), *n.* Same as *podobranchia*.

podocarp (pod′ọ-kärp), *n.* [Gr. πούς (ποδ-), foot, + καρπός, fruit.] In *bot.*, a stipitate fruit, that is, one in which the ovary is borne by a gynophore. *Jackson*, Glossary.

podocarpic (pod-ọ-kär′pik), *a.* [*Podocarp*(*us*) + *-ic*.] Derived from *Podocarpus*.—**Podocarpic acid**, a crystalline acid, $C_{17}H_{22}O_3$, almost the only constituent of the resin of old trees of *Podocarpus cupressina imbricata*, a Javan evergreen. It melts at 187–188° C.

podocarpous (pod-ọ-kär′pus), *a.* [*podocarp* + *-ous*.] Of the nature of a podocarp; pertaining or belonging to the *Podocarpeæ*.

Podocnemididæ (pod″ok-nẹ-mid′i-dē), *n. pl.* [NL. *Podocnem*(*us*) + *-idæ*.] A family of pleurodiran turtles ranging possibly from the Upper Cretaceous to the recent period: distinguished from the *Pelomedusidæ* in having the quadratojugal connected with the parietals.

podoconus (pọ-dok′ọ-nus), *n.*; pl. *podokoni* (-nī). [NL., < Gr. πούς (ποδ-), foot, + κῶνος, a cone.] In some radiolarians, a conical mass of endoplasm, rich in food particles and granules, which connects the perforated disk with the center of the central capsule.

pododerm (pod′ọ-dėrm), *n.* [Gr. πούς (ποδ-), foot, + δέρμα, skin.] The true skin or cutis continued downward within the horn capsule or hoof of animals. It contains no sweat- or oil-glands. Its function is to secrete the horn of the hoof. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 554.

podomancy (pod′ọ-man-si), *n.* [Gr. πούς (ποδ-), foot, + μαντεία, divination.] Same as *pedomancy*.

podomere (pod′ọ-mēr), *n.* [Gr. πούς (ποδ-), foot, + μέρος, part.] One of the joints which compose the axis of the leaf-like abdominal appendage in the phyllopod *Crustacea*. *Parker and Haswell*, Zoology, I. 488.

Podophthalmidæ, *n. pl.* 2. A family of cyclometopous brachyurous crustaceans containing the genus *Podophthalmus*.

podophyllic, *a.* 2. Derived from *Podophyllum*.—**Podophyllic acid**, an amorphous acid, $C_{15}H_{16}O_7$, salts of which are formed when podophyllotoxin is boiled with alkalies. The free acid is separated by adding acetic acid to a solution of its salts.

podophylloquercitin (pod-ọ-fil-ọ-kwėr′si-tin), *n.* [*Podophyllum* + *quercitin*.] A yellow crystalline substance, $C_{23}H_{16}O_{10}$, perhaps identical with quercitin, which is found in the root of the May-apple, *Podophyllum peltatum*. It melts at 180–182° C.

podophyllotoxin (pod-ọ-fil-ọ-tok′sin), *n.* [*Podophyllum* + *toxin*.] A bitter crystalline substance, $C_{15}H_{14}O_6 + 2H_2O$, found in the root of the May-apple, *Podophyllum peltatum*. It melts at 117° C. or, when anhydrous, at 157° C.: used as a purgative.

podophyllous, *a.* 2. Noting the tissue of that part of the inner surface (keratogenous membrane) of the hoofs of animals which forms the sensitive wall.

> The seat of greatest congestion will always be found in the neighborhood of the toe, because of the increased vascularity of that part, and, although at times it is limited to the *podophyllous* tissue alone, any or all parts of the keratogenous membrane may be affected by the congestion and followed finally by inflammation.
> *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, [p. 421.

podostemaceous (pod″ọ-stẹ-mā′shius), *a.* Pertaining to, or having the characters of, the *Podostemaceæ*.

podostemad (pod-ọ-stē′mad), *n.* A plant of the order *Podostemaceæ*.

podosthenic (pod-os-then′ik), *a.* [Gr. πούς (ποδ-), foot, + σθένος, strength, + *-ic*.] Having the locomotor organs in front: said of certain animals.

Podothecus (pod-ọ-thē′kus), *n.* [NL., < Gr. πούς (ποδ-), foot, + θήκη, a case. The name alludes to the groove for the receptacle of the ventrals, which appears in preserved specimens.] A genus of agonoid fishes of northern seas.

Podozamites (pod″ọ-za-mī′tēz), *n.* [NL. (Friedrich Braun, 1843), < Gr. πούς (ποδ-), a foot, + *Zamites*. The chief character distinguishing it from *Zamites* is the short subpedicel or footstalk of the leaflets.] A large genus of fossil plants classed in the family *Cycadaceæ*, but probably belonging to the *Bennettitaceæ*, known only by its stems and foliage. It is characterized by pinnate leaves with numerous lanceolate leaflets which are narrowed at the base into a short subpedicel, joined to the rachis by an articulation, and deciduous. A large number of species has been described from nearly all Mesozoic deposits, especially from the Jurassic.

pod-rust (pod′rust), *n.* A fungous disease of beans which attacks the stems, leaves, and fruit: caused by *Colletotrichum Lindemuthianum*. Also called *anthracnose of beans*.

Podsnappery (pod′snap-ẹ-ri), *n.* [Mr. *Podsnap*, a character in Dickens's "Our Mutual Friend."] The characteristic or mental attitude of Mr. Podsnap. See the extract.

> Happily acquainted with his own merit and importance, Mr. Podsnap settled that whatever he put behind him he put out of existence. . . . He considered other countries [except as a medium for commerce] . . . a mistake; and of their manners and customs would conclusively observe, "Not English!" when PRESTO! with a flourish of the arms . . . they were swept away. . . . Nothing else [than his notions] To Be — anywhere! As so eminently respectable a man, Mr. Podsnap was sensible of its being required of him to take Providence under his protection. Consequently he always knew exactly what Providence meant. Inferior and less respectable men might fall short of that work, but Mr. Podsnap was always up to it. And it was very remarkable (and must have been very comfortable) that what Providence meant, was invariably what Mr. Podsnap meant.
> *Dickens*, Mutual Friend, I., i. 11.

podurid (pō-dū′rid), *n.* and *a.* **I.** *n.* A member of the thysanurous family *Poduridæ*.

II. *a.* Having the characters of or belonging to the family *Poduridæ*.

Pœcilia (pē-sil′i-ä), *n.* [NL., < Gr. *ποικίλος*, spotted.] A genus of small fishes of the family *Pœciliidæ*. They are mud-eating and viviparous, and inhabit fresh and brackish waters in the West Indies and Mexico, and southward to South America.

Pœciliidæ (pē-si-lī′i-dē), *n. pl.* [NL., < *Pœcilia* + *-idæ*.] A family of fishes of the suborder *Haplomi*, found in fresh and brackish water, some of them in bays and arms of the sea, in southern Europe, Asia, Africa, and America.

pœcilitic, *a.* and *n.* **2.** In *petrog.*, a term used by G. H. Williams in 1886 (in the form *poikilitic*) to designate the texture of those igneous rocks in which comparatively large crystals act as a matrix for many smaller ones, which are included in the larger ones, and, when these are cleavable, produce luster-mottling.

pœciloblast (pē′si-lō-blȧst), *n.* [Gr. *ποικίλος*, many-colored, + *βλαστός*, germ.] A nucleated red blood-corpuscle of abnormal shape. Also *poikiloblast*.

pœcilocythemia (pē″si-lō-sī-thē′mi-ä), *n.* [NL., < Gr. *ποικίλος*, many-colored, + *κύτος*, a hollow (a cell), + *αἷμα*, blood.] Same as *pœcilocytosis*.

pœcilocyttaria (pē″sil-ō-si-tā′ri-ạ), *n. pl.* [NL., < Gr. *ποικίλος*, variegated, + *κύτταρος*, a cell or a comb.] In Saussure's classification of the social wasps (in the French form *Polycyttares*), those forms in which the layers of comb have a paper covering and are supported by an object such as the branch of the tree on which the nest is built.

Pœcilodermis (pē″si-lō-dėr′mis), *n.* [NL. (Schott and Endlicher, 1832), < Gr. *ποικίλος*, mottled, + *δέρμα*, skin: so named from the character of the calyx in the type species.] A genus of tropical or subtropical Australian sterculiaceous trees or shrubs with entire or lobed leaves and axillary, paniculate, or rarely racemose inflorescence. It is distinguished from *Sterculia* mainly by the position of the radicle next the hilum and by the villous seeds usually adhering to the equally villous carpels. Eleven species are recognized, a few of which are known in cultivation in Europe. See *bottle-tree* and ★*hat-tree*, 2.

pœcilodynamous (pē″si-lō-dī′nạ-mus), *a.* [Gr. *ποικίλος*, many-colored, + *δύναμις*, power, potency.] Of various potencies or characters: said of an organism cross-bred between two pure parental races or varieties which exhibits a patchwork or mosaic combination in regard to a parental character, with respect to this character. [Rare.]

> In such a case Correns speaks of the characters as *pœcilodynamous*, a sufficiently expressive term.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., [1902, I. 156.

pœcilogenesis (pē″si-lō-jen′e-sis), *n.* [Gr. *ποικίλος*, variegated, + E. *genesis*.] The origin or beginning of the color-markings shown by many animals. [Rare.]

> The Origin of the Markings of Organisms (*Pœcilogenesis*) due to the Physical rather than to the Biological Environment; with Criticisms of the Bates-Muller Hypotheses.
> *A. S. Packard*, Proc. Amer. Phil. Soc., XLIII. No. 178, [p. 393.

pœcilogeny (pē-si-loj′e-ni), *n.* [Gr. *ποικίλος*, variegated, + *-γενης*, -producing.] The growth or development of color-markings in organisms. [Rare.]

> If we examine the works of Brongniart and of Scudder on fossil insects it becomes apparent that *pœcilogeny* was an active process as early as the Carboniferous period.
> *A. S. Packard*, Proc. Amer. Phil. Soc., XLIII. 1904, p. 446.

pœcilogony (pē-si-log′ō-ni), *n.* [Gr. *ποικίλος*, various, + *γόνος*, generation.] Diversity among the germ-cells of an organism.

> Green algæ may have a more or less important influence on the development of the ova; there is sometimes a kind of symbiosis, the occurrence of which may give rise to a kind of *pœcilogony*.
> *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 509.

pœciloid (pē′si-loid), *a.* [Gr. *ποικίλος*, variegated, + *εἶδος*, form.] Of or pertaining to the family *Pœciliidæ*, fresh-water fishes of southern Europe, Asia, Africa, and America: commonly known as *killifishes*. Some of them occur in bays and arms of the sea.

pœcilomere (pē′si-lō-mēr), *n.* [Gr. *ποικίλος*, variegated, + *μέρος*, part.] A spot on the body of an animal where change of color is particularly liable to take place.

> Shortly before the moult in many animals the colour of the pelage fades, beginning along certain definite areas and from certain centres, termed "*pœcilomeres*."
> *Jour. Roy. Micros. Soc.*, Feb., 1905, p. 41.

pœcilothermal (pē″si-lō-thėr′mạl), *a.* Same as *pœcilothermic*.

pœcilothermous (pē″si-lō-thėr′mus), *a.* Same as *pœcilothermic*.

Poederlian (pē-dėr′li-an), *n.* [*Poederle*, a district in Belgium.] In *geol.*, a member of the Middle Pliocene series of Belgium, which forms the upper part of the Scaldesian stages of marine sands.

poenamu, *n.* See ★*pounamu*.

poeticize (pō-et′i-sīz), *v. t.*; pret. and pp. *poeticized*, ppr. *poeticizing*. Same as *poetize*.

poetomachia (pō″et-ō-mā′ki-ä), *n.* [Gr. *ποιητής*, poet, + *μάχη*, fight.] A battle of the poets. The quotation refers to a stage quarrel between Ben Jonson and Marston, Dekker, and others at the end of the sixteenth century.

> Mr. Fleay . . . regards ["Every Man out of his Humour"] as the cause of the so-called Elizabethan *poetomachia*.
> *N. and Q.*, 9th ser., IX. 282.

poet's-viol (pō′ets-vī″ọl), *n.* See ★*rebab*.

Pogonichthys (pō-gō-nik′this), *n.* [NL., < Gr. *πώγων*, beard, + *ἰχθύς*, fish.] A genus of fishes of the family *Cyprinidæ*, found in fresh waters of the Pacific slope.

pogonion (pō-gō′ni-on), *n.*; pl. *pogonia* (-ä). [NL., < Gr. *πωγώνιον*, dim. of *πώγων*, beard.] In *craniom.*, the most prominent point of the mental protuberance. *Von Török.*

pogonip (pog′ō-nip), *n.* [Amerindian.] A frozen fog, formed in the coldest weather in the mountain valleys of Idaho, Nevada, and Colorado. When inhaled it often produces severe pulmonary trouble.

> The *pogonip* fog is peculiar to elevated altitudes in the Nevada Sierras. It ascends from the valleys, and its chill embrace is so much feared by the Indians, who are predisposed to affections of the lungs, that they change their camp if apprised by the atmospheric conditions that the dreaded fog is approaching.
> *Sci. Amer.*, April 16, 1892, p. 240.

Pogonip group. See ★*group*1.

pogonologist (pō-gō-nol′ō-jist), *n.* [*pogonolog(y)* + *-ist*.] One who makes a study of beards; a writer on beards. [Rare.]

pogonology (pō-gō-nol′ō-ji), *n.* [Gr. *πώγων*, beard, + *-ology*.] The study of beards; a treatise on beards. [Rare.]

Pogonoperca (pō″gō-nō-pėr′kä), *n.* [Gr. *πώγων*, beard, + *πέρκη*, perch.] A genus of serranoid fishes of the Indian and western tropical Pacific oceans.

pogonotrophy (pō-gō-not′rō-fi), *n.* [Gr. *πώγων*, beard, + *τροφή*, nourishment.] The growing or cultivation of a beard. [Rare.]

pogrom (pō-grom′), *n.* [Russ. *pogromŭ*, desolation.] In Russia, an organized massacre, particularly a massacre of Jews that is countenanced more or less openly by the officials.

> The *Pogroms* are attributed by Mr. Lucien Wolf, a well-known and responsible writer, to direct Governmental action. They were, however, carried out by the assistance of local mobs, animated by interested prejudice, if not by superstition.
> *Athenæum*, Jan. 26, 1907, p. 99.

pogromist (pō-grom′ist), *n.* [*pogrom* + *-ist*.] In Russia, one who takes part in or promotes organized massacre, as of Jews.

> France, Mr. Wolf explains, has her investments, and we our "Agreement" to ease us from pressure in our Persian interests:
> "Small wonder that the '*pogromists*' laugh at Europe, and now pursue their work without intermission or disguise! But here the victims are not only Russian Jews, or even Russian Liberals and Revolutionists. The whole moral consciousness of the free nations of the West—and not least of England herself—is being degraded by this officially nurtured apathy."
> *Athenæum*, Jan. 26, 1907, p. 99.

pogy, *n.* **3.** Same as *Lake Tahoe trout* (which see, under *trout*1).

poi2 (pō′ē), *adv.* [It., < L. *post*, after.] In *music*, then; later: as, *adagio poi allegro*, slowly, then quickly; or *poi segue*, then follows.

poids de marc (pwo dẹ mär′). [F.: *poids*, weight; *de*, of; *marc*, a weight of 8 ounces (half a pound): see *marc*2.] A system of weights used in France before the partial adoption of the metric system in 1812. *C. Hering*, Conversion Tables, p. 61.

poietic (poi-et′ik), *a.* [Gr. *ποιητικός*, < *ποιητής*, a maker. See *poet*, *poetic*.] Creative; originative.

> The importance of preserving the "*poietic*," i.e. originative, types of man.
> *Nature*, Aug. 10, 1905, p. 337.

poikilitic, *a.* Same as ★*pœcilitic*.

poikiloblast (poi′ki-lō-blȧst), *n.* Same as ★*pœciloblast*.

poikilocyte (poi′ki-lō-sīt), *n.* Same as *pœcilocyte*.

poikilocytosis (poi″ki-lō-sī-tō′sis), *n.* Same as *pœcilocytosis*.

poikilothermal (poi″ki-lō-thėr′mạl), *a.* Same as ★*pœcilothermal*.

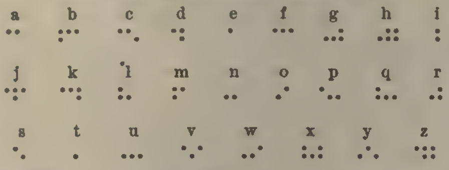
poikilothermic (poi″ki-lō-thėr′mik), *a.* Same as *pœcilothermic*.

poikilothermous (poi″ki-lō-thėr′mus), *a.* Same as ★*pœcilothermous*.

poimenic (poi-men′ik), *a.* [Gr. *ποιμενικός*, pastoral, < *ποιμήν*, a shepherd.] Of or pertaining to pastoral theology.

point1, *n.* **2.** (*l*) In *med.*, same as *vaccine-point*.—**11.** (*g*) In *medieval musical notation*, a punctus or note.—**26.** (*d*) In *archery*: (1) The forward end of an arrow: opposed to *butt*. (2) *pl.* Credits given in a shooting-match for the highest score and the highest number of hits. Two points are given for total score, two for total hits, and one each for score and hits at each distance.—**30.** One of the colored lines woven into the short edge of the Mackinaw or Hudson Bay blanket, which, according to their number, determine the quality, and therefore the value, of the blanket: as, a one- or two-*point* blanket.—**31.** A system of embossed writing and printing for the use of the blind, the letters and signs being composed of groups of embossed points. The printing is done (*a*) from movable type on which the points are cast, the type being set as in the usual way; (*b*) from stereotype or electrotype plates; (*c*) from metal sheets, upon which the characters for literature, music, etc., have been embossed by the stereograph, a machine designed for this purpose. See ★*point system*, below.—**Actual point.** Same as *finite* ★*point*.—**Arago's neutral point,** a region about fifteen to twenty degrees above the antisun where, after sunset and before sunrise, Arago found that the sky light is not polarized but is neutral.—**Babinet's neutral point,** a region in the sky, about as far above the sun as Arago's point is above the antisun, characterized by the absence of polarized light.—**Basal points,** in *geom.*, those common to a pencil of conics.—**Base point.** (*b*) A place for a target in an archery ground, usually marked with white tape. Also *target point*.—**Boscovichian point.** See ★*Boscovichian*.—**Brewster's neutral point,** a region below the sun similar to Babinet's neutral point.—**Brianchon point,** the point which is the bearer of the 3 diagonals in Brianchon's theorem of the hexagram. This hexagram has 60 Brianchon points.—**Brocard points.** [From a French geometer, H. *Brocard*.] The point within a triangle which its sides will contain after equal positive rotations, ω, about their vertices is the direct or first *Brocard point*, Ω; after equal negative rotations, $-\omega$, about their vertices is the retrograde or second *Brocard point*, Ω', of the triangle. The angle $+\omega$ is called the *Brocard angle of the triangle*.—**Broca's point,** the central point of the external auditory meatus.—**Cardinal point.** (*d*) In *psychophys.*, the point on the curve which correlates stimulus with intensity of sensation (see *Weber's law*, under *law*1) at which the ratio of sensation to stimulus is greatest; that is, the point at which change of sensation-intensity is exactly proportional to change of stimulus.—**Cold-rigor point.** See ★*cold*.—**Corresponding points.** See ★*corresponding*.—**Critical point.** (*c*) See ★*critical*. (*d*) The point of temperature or other variable at which a physical or chemical change in an element or compound takes place. When the change extends over several degrees, the area of the change is called a *critical range* or *critical zone*. (*e*) If, with temperatures for abscissæ and pressures for ordinates, we construct the curve which shows the pressure of the saturated vapor of the liquid as it varies with temperature, the curve will rise from left to right and will terminate in a point corresponding to the critical temperature and pressure. This point is called the *critical point of the pressure curve* for the given substance, or, briefly, the *critical point* for that substance. Sometimes the critical temperature is called the critical point.—**Cuspidal point,** in *geom.*, a double point whose two tangents coincide.—**Cuspidal point of a surface.** Same as *pinch-point*.—**Darwin's point.** Same as *Darwin's tubercle* (which see, under *tubercle*).—**Disparate points,** in *optics*, points upon the two retinas which are not identical. See *identical* ★*points*.—**Double points of a homographic transformation,** the two points which are unchanged by the transformation. Thus, if the transformation is $x' = \frac{(a+c)x-ab}{x-b+c}$, the double points are $x = a$ and $x = b$.—**Essential singular point,** in the *theory of functions*, a point $x = c$ of the function fx when fx has for c an essential singularity.—**Eutectic point** or **temperature,** in *phys. chem.*, the fusing-point of a eutectic mixture.—**Expression-point.** (*a*) See *expression-point*. (*b*) A term used by Cope to denote the appearance in large numbers of a group of animals for some time in existence, but not prominent. This usually marks the culminating point of the group and gives a definite character, or 'expression,' to the fauna of that period.—**External point,** in the plane of a conic, a point such that from it two tangents can be drawn to the curve.—**Far-point,** in *optics*, the point which marks the outer limit of distinct vision; the point beyond which an object is no longer clearly seen. Opposed to *near-point*.—**Figurative point,** in *geom.*, the point common to two parallels.—**Finite point,** in *geom.*, one which can be reached from any assigned point by a finite number of finite operations. — **Fixed point of a transformation,** in the *theory of functions,* a point not altered by the transformation. — **Focal point,** in *line geom.*, one of the ∞^2 points, two on each ray or straight of the congruence, where this straight is intersected by two consecutive to it. — **Frégier point** of a given point on a conic, the cointersection point of chords subtending a right angle at the fixed point. — **French point.** See *punto di Venezia* ★*lace.* — **Full point,** in *printing,* the period or full stop placed at the end of a completed sentence or of an abbreviation. — **Fundamental points,** in projective coördinates, the points whose coördinates are ∞ and 0. — **Gambler's point,** in *all-fours,* the point for game, which is the only one that must be played for. — **Geometry on a point.** See ★*geometry.* — **Gergónne's point,** Γ, the point common to the sects from the vertices of a triangle to the points of contact of the inscribed circle. — **Grebe point.** Same as *Lemoine* ★*point.* — **Harmonically conjugate points.** Same as *harmonic conjugates.* — **Harmonic points,** in *geom.* See ★*harmonic.* — **Harmonic points on a conic,** in *projective geom.*, four points on a conic projected from any (and so every) fifth point on the conic by 4 harmonic straights. — **Ideal point,** in *geom.*: (*a*) Same as *figurative* ★*point.* (*b*) The point determined by two ultraparallels. — **Identical points,** in *physiol.* and *psychol. optics,* retinal points which are anatomically congruent, that is, points upon the two retinas which, if the eyes are in the primary position, are similarly situated with regard to the center of the retina. See ★*corresponding points* (*b*). — **Indicator-point.** See ★*indicator-point.* — **Indifferent point,** in *phys. chem.*, a point on the curve which exhibits the relation between temperature and the solubility of a given salt, which corresponds to an indifferent equilibrium. — **Infinitely distant point.** Same as *figurative* ★*point.* — **Intercardinal points,** southeast, southwest, northwest, northeast. — **Intersecting point.** See *perspective, n.*, 3. — **Invariable points** of a system of 3 directly similar figures, three fixed points on the circle of similitude through which pass every triad of copunctal corresponding straights. — **Inverse point.** If on a ray from a fixed point O we take P_1 and P' such that the rectangle $OP_1 . OP'$ equals the square on a fixed sect *r*, then the points P_1 and P' are each the inverse of the other with regard to O, the center of inversion, and r, the radius of inversion. — **Isolated point** of a set, one about which a region can be marked out containing no other point of the set. — **Jugomaxillary point,** in *craniom.*, the point on the antero-inferior angle of the malar bone. — **Lemoine point,** the symmedian point; the isogonal conjugate to the centroid of a triangle. See also *cosine* ★*circle.* — **Limiting point.** (*a*) See *limit, v.* (*b*) In an infinite aggregate of points not extending to an infinite distance, a point *a* such that the points of the aggregate which are in the neighborhood of *a* for any number *h* however small, themselves constitute an infinite aggregate. It may or may not be a point of the aggregate. — **McBurney's point,** a point on the abdomen midway between the umbilicus and the anterior superior spine of the ilium, where pressure usually causes pain in cases of appendicitis. See ★*appendicitis.* — **Material point,** in *mech.*, a point to which mass is assigned; or a body the volume of which is supposed to be zero and its mass concentrated in a point: a conception employed to simplify dynamical relations. — **Mean point.** See ★*mean*³. — **Median point.** See ★*median*¹. — **Middle point.** When a sailing vessel is hove-to, she will round up into the wind, then fall off until the after canvas fills, when she will again come up to the wind, and the point midway between this coming up and falling off is termed the *middle point,* to which must be applied the leeway, variation, and deviation in order to obtain the true course made good. — **Monro's point,** the point on the outer edge of the rectus abdominis muscle where it is crossed by a line drawn from the umbilicus to the anterior superior spine of the ilium. — **Multiple point.** (*a*) See *multiple.* (*b*) In *physical chemistry,* a point (in the diagram which expresses the circumstances of a thermodynamic system) in which more than two curves intersect. Also called a *transition point.* *American Chemical Journal,* March, 1904, p. 302. (*c*) On a surface, a point through which three or more sheets of the surface pass. — **Nagel's point,** N_g, the point common to the sects from the vertices of a triangle to the points of contact of the escribed circles in its sides. — **Neutral point,** in *thermo-elect.*, the point at which the electromotive force between the two metals used in a thermocouple becomes zero. The neutral point is reached when the mean temperature of the two junctions has a certain value. It is constant for a given couple, but varies with the combination of metals employed. — **Nodal points.** (*b*) Two conjugate points, in a lens system, such that a ray through the one is conjugate and parallel to a ray through the other. — **Non-essential singular point,** the point $x = c$ when the analytic function fx can be made analytic about c by multiplication by $(x - c)^m$ where m is a positive integer. — **Opposite points,** the end-points of a sphere's diameter. — **Ordinary point,** a value of the variable of a function for which that function has a determinate finite value. — **Pencil point.** See ★*pencil*¹. — **Perfect aggregate of points,** an aggregate all of whose points are limiting points of it, and all whose limiting points are points of it. — **Physical point,** in *physics,* a point to which are assigned all the properties which mass involves with the exception of volume or extension. See *point*¹, 12. — **Point at infinity.** (*b*) Same as *figurative* ★*point.* — **Point involution.** See ★*involution.* — **Point of augmentation,** in *musical notation,* same as *dot*¹ (*c*) (1). — **Point of condensation.** Same as *limiting* ★*point* (*b*). — **Point of undulation,** in *math.*, a critical point on both sides of which $\frac{d^2y}{dx^2}$ has the same sign. At a point of undulation the tangent does not cross the curve, but has higher contact with it. — **Point-print, -printing.** See ★*point*¹, 31, ★*point system.* — **Point system,** a system of raised points used in forming symbols that stand for letters, both lower case and capitals, numerals, punctuation and other marks, and musical notation and signs. Several systems of points have been used. See ★*Braille.* A system in common use among the blind in the United States is called the *New York point system.* In this system the letters, numerals, and other marks or signs are formed out of four basic groups of points arranged in two horizontal parallel lines. These groups are called bases and are as follows: first base, :, second base, ::, third base, :::, fourth base, ::::—all lower-case letters being formed of the first three bases and the capitals from the fourth base.

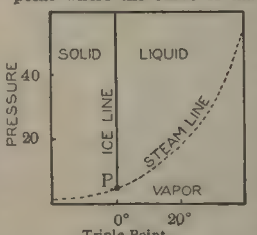
NEW YORK POINT SYSTEM ALPHABET.



Capitals are formed by adding to each small letter one or two additional points to raise the letter to the fourth (four-point) base. The following letters show how the capital is developed from the small letter:

Numerals are formed from the first and second bases as follows, but are always preceded by the third-base character to distinguish them from lower-case letters:

See ★*kleidograph* and ★*stereograph,* 2. Compare also *Moon* ★*system.* — **Point to point method.** See ★*method.* — **Point writing.** See ★*point-writing.* — **Proper point.** Same as *finite* ★*point.* — **Quiescent point,** in *naval arch.*, the point in the interior of a vessel which is approximately stationary when the vessel is rolling in smooth water. The vessel may be considered as swinging like a pendulum on a horizontal axis passing through the quiescent point. — **Rational point,** in *geom.*, a point whose coördinates are rational. — **Real point.** Same as *finite* ★*point.* — **Regular point,** a point in whose neighborhood a given monogenic function is always finite. — **Representative point** for $z \equiv x + iy$, the point whose rectangular coördinates are x, y. — **Rubber points,** points added to the score of the side which wins the rubber, 2 in whist and 100 in bridge. — **Scale of points,** a list of the numerical values accorded certain physical characteristics of animals, used in determining the degree of excellence of the animals. — **Schedule point,** in the *postal service,* a post-office at which the time of starting of outgoing mails is fixed by an official schedule. — **Shooting** or **standing point,** a place for an archer to stand while shooting: usually marked with red tape. — **Singular point.** (*b*) In the theory of functions, one about which a one-valued analytic function is not analytic. For example $1/(x-c)^m$ is analytic about all points near $x = c$, but not about $x = c$. — **Singular point of a function,** a singular point of the curve or surface which represents the function. See *singular.* — **Steiner's point,** the point of the circumcircle diametrically opposite Tarry's point. — **Symcentral point.** See ★*symcentral.* — **Symmedian point.** See ★*symmedian* and *cosine* ★*circle.* — **Target point.** See *base* ★*point* (*b*). — **Tarry's point,** the point on the circumcircle of a triangle at which the perpendiculars from its vertices upon the sides of its first Brocard triangle are concurrent. — **Topically ordinary point.** See ★*ordinary.* — **Transition point.** Same as *multiple* ★*point.* — **Triple point.** (*a*) See *triple.* (*b*) In *phys.*, the point where the curve of maximum vapor-pressure of a liquid meets the ice-line of that substance. At the pressure and temperature which correspond to the *triple point* (P) all three phases of the substance, the solid, liquid, and gaseous, may coexist in stable equilibrium. (*c*) In *phys. chem.*, a point in the diagram which expresses the circumstances of a thermodynamic system, in which three curves intersect. — **United points,** in *geom.*, in every conjective correlation the two points which coincide with their corresponding points. — **Unit point.** (*a*) In projective coördinates, the point whose coördinate is 1. (*b*) In *optics,* the points in which the unit planes of a lens system intersect the axis of the system. — **Vandyke points.** See *Vandyke,* 1. — **Yield point,** in *elasticity,* that point upon the curve representing the elongation of a stretched wire, beyond which the wire is no longer able to sustain the pull without further elongation. The yield point lies between the elastic limit and the breaking point.



Triple Point.

> After passing the *yield point* the elongation increases very rapidly with the load.
>
> *Poynting and Thomson,* Properties of Matter, p. 55.

point¹, *v.* **I.** *trans.* **12.** To dress (as stone) with a point. Pointing is the first operation when stone is to be faced smoothly. — **13.** To establish the position of selected points in (a work of sculpture). If three points are given the position of a fourth may be determined by its distance from them. See *pointing,* 4. — **14.** Same as ★*gun*¹.

II. *intrans.* — **To point high,** to sail close to the wind.

point-aggregate (point′ag″rẹ̄-gāt), *n.* The set of points, in *n*-dimensional space, constituting the domain of definition of a function of *n* variables.

pointer-board (poin′tėr-bōrd), *n.* In *ordnance,* a contrivance belonging to the days of smooth-bore ordnance, which was designed to assist the gun-captain in training his piece upon the target.

point-charge (point′chärj), *n.* An electric charge which for convenience in mathematical discussion is regarded as concentrated in a single point in space.

> Taking the electrostatic field due to a *point-charge,* the author [S. J. Barnett] considers the equilibrium of a portion of the field bounded by an elementary circular cone and two concentric spheres, and shows that the tension along the lines of force requires a pressure of equal amount at right angles to them.
>
> *Nature,* March 2, 1905, p. 409.

point-circle, *n.* **2.** A circle whose radius is zero.

point-complex (point′kom″pleks), *n.* A lineoid. See ★*lineoid.*

point-congruence (point′kong″grọ̈-ẹns), *n.* The intersection of two independent lineoids.

pointed, *a.* **4.** In *printing,* pierced with points: said of a sheet of paper.

pointer, *n.* **9.** See the extract and ★*silker.*

> From the cutters' room the leather, which has assumed the shape of the glove, is sent to the "silkers," who embroider the back, and then to the "makers." Some make the gloves, that is they sew the fingers and put the thumbs in; others, called "welters," are engaged in welting or hemming the glove round the edge of the wrist; still others, called "*pointers,*" work the ornamental lines on the back.
>
> *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22629.

10. Same as ★*gun-pointer.*

> The turrets are trained by one man, the trainer; and each gun is pointed by another man, the *pointer,* who fires the gun. *Sci. Amer.*, June 18, 1904, p. 475.

11. One of a pair of bullocks yoked ahead of the pole-bullocks. See the extract.

> Twelve bullocks is the usual number in a team, the two polers and the leaders being steady old stagers; the pair next to the pole are called the '*pointers,*' and are also required to be pretty steady.
>
> *C. H. Eden,* My Wife and I in Queensland, p. 36, quoted [by E. E. Morris, Austral English.

12. In *surveying,* particularly hydrographic surveying, a plotting-instrument comprising a graduated circle with three projecting radial arms capable of being set at given angular distances apart: used for the purpose of determining on a map the unknown position of a point or station by the three-point problem. — **White pointer,** an Australian name for the great white shark, *Carcharodon rondeletii,* the so-called man-eater.

point-field (point′fēld), *n.* In *geom.*, the ∞^2 points on a plane.

point-firing (point′fīr″ing), *n.* In *vet. surg.*, same as ★*line-firing,* except that the operation is done by means of a pointed iron or thermo-cautery: an operation used chiefly in cases of bony enlargements where deep firing is necessary. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 291.

point-group (point′gröp), *n.* **1.** In *geom.*, a discrete system of points.

> The effect of a group of N points in determining an algebraic curve of order *n* (called hereafter a C_n) need not depend on N and *n* alone. It may, and often does, happen that the N points do not supply N independent conditions for a C_n, but only a smaller number $N - r_n$. In any case, if the *point-group* N is given, the number r_n has a definite positive (integral or zero) value.
>
> *F. S. Macaulay,* in Proc. London Math. Soc., XXIX. 673.

2. A system of points of intersection of two curves.

> This theorem [of Euler's], which includes Pascal's theorem for conics, introduced *point groups,* or systems of points of intersection of two curves, into geometry.
>
> *Fink,* History of Mathematics, p. 240.

pointillage (pwaṅ-tē-yäzh′), *n.* [F., < *pointiller,* to dot, stipple.] Massage with the finger-tips.

pointillé, *a.* **2.** Painted or produced by means of dots of pure tints. See ★*pointillism.*

pointillism (pwaṅ′til-izm), *n.* [F. *pointillisme.* See *pointillé.*] A method of painting in which luminosity is produced by laying on the colors in points or dots which are blended by the eye, invented by French impressionists; a form of impressionism. See the extract.

> It was in 1886 that the doctrinaire ferment came to a head, and what was supposed to be a scientific method of colour was formulated. This was *pointillisme,* the resolution of the colours of nature back into six bands of the rainbow or spectrum, and their representation on the canvas by dots of unmixed pigment. These dots, at a sufficient distance, combine their hues in the eye with the effect of a mixture of coloured lights, not of pigments, so that the result is an increase instead of a loss of luminosity.
>
> *Encyc. Brit.*, XXIX. 414.

pointillist (pwaṅ′til-ist), *n.* and *a.* [F. *pointilliste*. See *pointillism*.] **I.** *n.* A painter who follows the methods of pointillism.

> Pissarro experimented in the new method, but abandoned it, and other names among the *Pointillistes* are Paul Signac, Vincent van Gogh, and van Rysselberghe. The theory opened the way for endless casuistries,'and its extravagances died out in the later exhibition of the Indépendants or were domesticated in the Salon by painters like M. Henri Martin. *Encyc. Brit.*, XXIX. 414.

II. *a.* Of or relating to pointillism or the pointillists; exhibiting pointillism.

> There are several fallacies, however, theoretical and practical, in this "spectral palette" and *pointillist* method. If we depart from the three primaries of the Helmholtz hypothesis, there is no reason why we should stop at six hues instead of six hundred. *Encyc. Brit.*, XXIX. 414.

pointing, *n.* **9.** In *printing*, the operation of making points in paper as guides to exact register.

> Three-fourths of the folding machines of the present day are supplied with automatic feeders. Folding machines have been greatly improved also by parallel-fold arrangements and by automatic *pointing*. *Census Bulletin* 216, June 28, 1902, p. 65.

pointing-box (poin′ting-boks), *n.* See ★*box-tool*.

point-net (point′net), *n.* An imitation Brussels lace.

point-plane (point′plān), *n.* A plane of points or a point-field.

point-print (point′print), *n.* Paper embossed with dots or raised points arranged according to the point system of tangible writing or printing used by the blind. See ★*point*^{1}, 31, ★*point-printing*, and ★*point system*.

point-printing (point′prin″ting), *n.* Printing in the point system used by the blind. See ★*point*^{1}, 31, and ★*point system*. It is point-embossing on paper to produce what is called *point-print*. Point-printing employs no ink and the composing is done with one point or type by hand, the type being set up in the stick in two lines to form the characters of the point-alphabet. Embossing is done in any form of embossing-press and the type can be stereotyped and copied into electrotype plates. Sheet-metal plates can be embossed in the stereograph and then used to emboss paper. Paper can also be embossed in a form of type-writer called the *kleidograph*. See ★*kleidograph*, ★*point system*, and ★*stereograph*, 2.

point-row (point′rō), *n.* In *geom.*: (*a*) the aggregate of all points on a straight; (*b*) certain separate costraight points.

pointsman, *n.* **2.** In *grouse-shooting*, a driver stationed on the flank of the line of a drive, to turn the birds toward the guns.

point-source (point′sōrs), *n.* A source of light or a source from which any system of waves emanates, the dimensions of which are so small that the waves may be regarded as emanating from a single point in space.

> If the *point-source* is in motion, the pan-potential requires Dopplerisation as well as the ordinary potential. *Nature*, Jan. 1, 1903, p. 203.

point-space (point′spās), *n.* In *geom.*, space with the point as element.

> The Plane Geometry of the Point in *Point-Space* of Four Dimensions. *Science*, Oct. 2, 1903, p. 435.

point-transformation (point′trans-fôr-mā″shon), *n.* See ★*transformation*.

point-writing (point′rī″ting), *n.* Writing by means of the point system used by the blind. See ★*point*^{1}, 31, and ★*point system*. It is done by embossing the points on paper by means of a stylus formed of a short piece of wire inserted in a suitable handle and having a blunt, rounded point. The paper is laid on a metal plate with grooves or indentations arranged in parallel lines, each point being embossed in the paper by pressing it into the grooves or indentations. The embossing proceeds from right to left, suitable spaces being left after each letter and after each word. When the sheet of paper is embossed it may be painted on the back with a solution of shellac in alcohol. This, when dry, stiffens the paper to prevent the points from breaking down under the pressure of the finger when being read by touch. The sheet is then reversed and read by touch from left to right.

poison, *n.* **2.** In its scientific sense this word applies to any substance which, taken in small quantity into the body of a living animal, is capable by its chemical action, exerted locally or after absorption into the blood, of producing death or notable injury. This definition excludes substances which act mechanically, such as broken glass, or physically, as very hot water.—**English purple poison,** a trade-name of an arsenical insecticide, a by-product from the manufacture of aniline red: essentially the same as *London purple* or *Paris* ★*purple*.—**Hemotropic poison,** a poison which has a selective affinity for the red corpuscles of the blood.—**Poison apparatus,** in *entom.*, the apparatus for the secretion and injection of poison, consisting usually of one or two glands connected with the sting, as in bees, wasps, and ants, or with the beak, as in mosquitos, biting-flies, and the predatory *Heteroptera*.—**Poison land.** See ★*land*^{1}.

poisonberry-tree (poi′zn-ber-i-trē″), *n.* Same as ★*butter-bush*.

poison-bush (poi′zn-bush), *n.* In Australia, same as *poison-plant*, in all senses.—**Desert poison-bush.** Same as *poison-plant* (*a*).—**Dogwood poison-bush,** *Myoporum deserti*, an Australian shrub which is especially poisonous to sheep, but only when in fruit.—**Ellangowan poison-bush,** in Queensland, same as *dogwood* ★*poison-bush*.—**Peach-leaved poison-bush,** *Trema aspera*, a shrub or tree of the nettle family.

poison-claw (poi′zn-klâ), *n.* One of the first pair of legs in the myriapods of the orders *Chilopoda* and *Schizotarsia*. The poison-glands with which they are provided secrete a liquid poison which runs down a canal into the chitinous claw and so into the wound made by the claw.

poison-cup, *n.* **2.** In *bot.*, the remnants of the volva or veil which persist in cup-like form at the base of the stem of many of the poisonous mushrooms.

poison-daisy (poi′zn-dā″zi), *n.*; pl. *poison-daisies* (-ziz). The mayweed.

poison-fish (poi′zn-fish), *n.* A fish, *Emmydrichthys vulcanus* Jordan, of Tahiti, with stinging spines. It lies in crevices of lava, and can scarcely be distinguished from an irregular lump of lava-rock.

Poison-fish (*Emmydrichthys vulcanus* Jordan).
(From Jordan's "Guide to the Study of Fishes.")

poison-flag (poi′zn-flag″), *n.* See ★*flag*^{3}.

poisoning (poi′zn-ing), *n.* **1.** The administration of a poison.—**2.** The morbid state, acute or chronic, induced by any poison.—**Forage poisoning,** a non-infectious disease which principally affects horses. It results from eating moldy food or food which is undergoing fermentation. Also called *cerebrospinal meningitis*.

Poisonous spines. See ★*spine*.

poison-root (poi′zn-röt), *n.* *Æsculus pavia*, the twigs and roots of which were used to stupefy fish. *N. E. D.*

poison-tree, *n.* **2.** In Australia, the blinding-tree or tiger's-milk, *Excæcaria Agallocha*, often called *river poison-tree* on account of its habitat and in distinction from another species of the same genus. See *tiger's-milk*.—**Scrub poison-tree,** a small Queensland tree, *Excæcaria Dallachyana*.

Poitea (poi′tẹ̄-ạ̈), *n.* [NL. (Ventenat, 1808), named in honor of Antoine *Poiteau* (1766–1854), a French botanist.] A genus of plants of the family *Fabaceæ*. They are shrubs with rose or purple flowers in axillary pendulous racemes. Four species are recognized, natives of Haiti and Santo Domingo. *P. galegoides* is sometimes cultivated in hot-houses as an ornament. See *Vilmorinia*.

poivrade (pwo-vräd′), *n.* [F., < *poivre*, pepper.] Pepper-sauce.—**Poivrade sauce.** See ★*sauce*.

poke^1, *v. t.* **3.** In *cricket*, to bat in a cramped, over-cautious style.

poke^1, *n.* **5.** In *cricket*: (*a*) A cramped, timid batting stroke. (*b*) A batsman who plays in a cramped, over-cautious style.

poke-blown (pōk′blōn), *a.* [*poke*^{2} + *blown*.] Having the air-bladder unduly distended, the eyes bulging out, and the esophagus protruding from the mouth: a condition of fishes which have been brought up from a considerable depth in the sea.

poke-hole (pōk′hōl), *n.* A hole in the wall of a furnace through which a slice-bar or poker can be thrust for the purpose of poking the fire.

poke-hooked (pōk′hukt), *a.* [*poke*^{2} + *hooked*.] Hooked in the stomach, having swallowed bait, hook, and all: said of a fish.

> "Help us here, Harve. It 's a big un. *Poke-hooked* too." . . .
> He had taken the bait right into his stomach, . . .
> "Say, this is great!" Harvey cried as the fish came in gasping and splashing — nearly all *poke-hooked* as Dan had said. *R. Kipling*, Captains Courageous, iii.

pokeloken (pōk-lō′kẹn), *n.* [Also *pokeloke*, *pokologan*; identical with *Popelogan*, a place-name in New Brunswick, and the probable source of both *logan* and *bogan* in like sense; appar. of like origin, in the first element, as *pocosin*, namely, Massachusetts *pohqui*, open out, Ojibwa *pâkissin*, it is open. One writer derives it "from the Maliseet *pecelaygan*, a place for stopping."] A marshy tract or stagnant pool extending into the land from a stream or lake. See the quotation under ★*logan*^{2}. *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 254; also April–June, 1903, p. 129.

poke-pudding (pōk′pud″ing), *n.* [*poke*^{2}, *n.*, + *pudding*.] **1.** A pudding cooked in a bag; a bag-pudding: applied in ridicule to a corpulent person. [Scotch.]—**2.** One of several local English names for the bottle-tit or long-tailed tit, *Acredula caudata*.

poker^1, *n.* (*d*) In *cotton-manuf.*, a vertical rod or rack which sustains and gives motion to the bobbin or ring-rail of a roving or ring-spinning machine; also, a rod with similar functions in other machines: sometimes called a *lifting-poker*.

poker^3, *n.*—**Domino poker,** a game resembling poker, played with dominoes instead of cards.—**Show-down poker,** a game of poker in which the limit is so small that one cannot bluff, and the hands must always be shown to win the pool.—**Stud poker.** See ★*stud-poker*.

poker-dice (pō′kėr-dīs), *n.* A game played with five ordinary dice, or with special dice having on their faces the A, K, Q, J, 10, 9 of any suit in a pack of cards. Any number can play, each in turn having three throws. After the first cast the player can take up and cast again as many of the five dice as he pleases, setting aside what he wishes to keep out. After setting aside what he wishes from the second throw he can cast the remaining dice again. He is not obliged to throw more than once or twice if he is satisfied with the cast so far. The best poker combination wins. In the eastern United States, when ordinary dice are used aces beat sixes, but in the western United States and in Australia aces are low.

poker-work (pō′kėr-wėrk), *n.* A method of drawing or engraving on wood by the use of a red-hot poker; also, the work so produced. See *poker-painting* and *pyrography*.

Pol. An abbreviation of *Polish*.

Polack, *n.* **2.** A name given to the Jews of the Polish provinces, by their Lithuanian coreligionists. The former, in turn, call the latter ★*Litvaks* (which see).

polampore, *n.* Same as *palampore*.

Poland-China (pō′lạnd-chī′nạ̈), *n.* An American breed of hogs originating in Ohio in 1840 as the result of crossing several breeds, including the Poland and Big China. The original Poland-China, a large, coarse animal, was crossed with the Berkshire and the modern breed is a black and white pig that yields a large amount of merchantable meat.

Polandian (pọ̄-lan′di-ạ̈n), *n.* Same as *Polandian* ★*epoch*.

polar, *a.* **6.** Having opposite properties at its two ends.

> This kind of multiplication, where AB=—BA, is called *polar* because the product AB has opposite properties at its two ends. *R. F. Scott*, Treatise on the Theory of Determinants, [p. 13.

International Polar Commission. See ★*commission*^{1}.—**Polar axis.** (*b*) In *geom.*, the initial line for polar coördinates.—**Polar body,** one of two minute cells, known respectively as the *first* and *second polar bodies*, which arise by a very unequal mitotic division of the animal ovum, or primary oöcyte, before or soon after fertilization. The second polar body sometimes divides again equally, so that the egg thus gives rise to one large cell (the egg proper) and three small cells (polar bodies). These four cells are sometimes called *oötids*, and are morphologically equivalent to the four equal spermatids derived by two successive so-called maturation divisions from a primary spermatocyte.—**Polar caps of cold air.** See ★*cap*^{1}.—**Polar capsule,** in the spores of *Myxosporidia*, a pear-shaped body containing a spirally coiled filament and situated at one pole of the spore. The capsules vary from one to four in number and each communicates with the exterior by a fine canal through which the filament may be shot out, the discharge being naturally effected by the action of the digestive juices of the host upon the capsule. The filament enters the epithelium of the digestive tract and acts as an organ of fixation holding the spore in place. The valves of the spore then separate allowing the sporozoite to escape. The latter emerges in the form of a minute amœbula and penetrates the wall of the digestive tract.—**Polar cubic, cyclone.** See ★*cubic*, etc.—**Polar discontinuity,** the sort of discontinuity which exists at a non-essential singular point or a pole of an analytic function, *fx*.—**Polar field,** in ctenophorans, as *Hormiphora*, one of a pair of elongated, band-like, ciliated tracts into which the sensory pit is produced on either side in the sagittal plane. Also called *polar plate*.—**Polar filament,** in *Myxosporidia*, a coiled thread contained in a polar capsule.—**Polar ray.** See ★*ray*^{1}.—**Polar reciprocal of a surface.** See ★*reciprocal*.—**Polar region,** in *electrother.*, the part of the body lying directly below or surrounding the electrode. Also *polar zone*.—**Polar symmetry.** See ★*symmetry*, 6.

II. *n.* **2.** A great circle two of whose points are each a quadrant from a given point: it is the polar of the given point.—**3.** Given a trihedral; to each face from the vertex erect a perpendicular ray on the same side as the third edge; the trihedral they form is the polar of the given one.—**Method of**

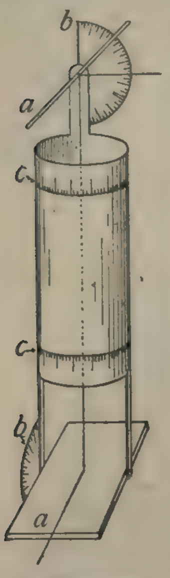
reciprocal polars. See ★*method.*—**The polar of a triangle,** ABC, for a conic *a*, the axis *s* of perspective of the triangle ABC and its reciprocal A′B′C′.

polarimeter, *n.*—**Pickering's polarimeter,** one in which the light to be examined passes through a grille with parallel bars and spaces of equal width. The light enters a double-image prism of Iceland spar which separates the centers of the ordinary and of the extraordinary images of the spaces by the width of the spaces so that one set of images is seen alternating with the other. These are examined by the analyzer or Nicol prism, which is turned about its axis until the two sets of images appear of exactly the same brightness.

polarimetric (pō″lar-i-met′rik), *a.* In *optics*, of or pertaining to the measurement of polarized light; of or pertaining to polarimetry or the scientific use of the polarimeter.

From a *polarimetric* investigation of the racemisation of amygdalin, the author shows that it is probable that the process is a catalytic one induced by the presence of alkalies. *Jour. Phys. Chem.*, May, 1904, p. 372.

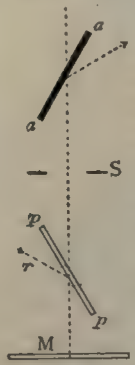
polariscope, *n.*—**Biot's polariscope,** a simple reflecting polariscope. It consists of two polished mirrors of black glass whose angles and positions relative to one another may be varied.—**Nörrenberg polariscope,** a form of polariscope having as polarizer an unsilvered glass plate and as analyzer a mirror of black glass. A ray of light (*r*) is reflected downward at the angle of complete polarization by the unsilvered mirror *pp* and is returned in a vertical path by the silvered mirror M. A portion of this ray reaches the analyzer of black glass *aa* at the angle of complete polarization. The analyzing mirror *aa*, which is mounted so as to revolve about an axis in the vertical ray, reflects an amount of light which varies with its position. When the plane of incidence of the analyzer is at right angles with that of the polarizer, extinction of the ray occurs. The object to be observed under the action of the polarized light is placed upon the stage S. The Nörrenberg polariscope has the advantage of simplicity of construction, mirrors being used instead of polarizing prisms. It also affords a large field. It is, however, deficient in illumination.—**Savart's polariscope,** a device for detecting small amounts of plane polarized light. It consists of two thin plates of equal thickness cut from a uniaxial crystal such as quartz. These are superposed with their principal sections at right angles and are mounted in front of a Nicol prism the polarizing plane of which bisects the angle of the principal sections of the plates. Polarization of the light passing through this instrument is indicated by interference fringes in the field.



Biot's Polariscope.

(From Preston's "Theory of Light.")

a, *a*, mirrors; *b*, *b*, semicircles; *c*, *c*, graduated rings.



Nörrenberg Polariscope.

Polariscopic analysis, the determination or identification of substances by means of polarized light.—**Polariscopic camera.** See ★*camera.*

polaristrobometrograph (pō-lạr-i-strob-ọ-met′rọ-gräf), *n.* [NL. *polaris*, polar, + Gr. *στρόβος*, a whirling about, + *μέτρον*, measure, + *γράφειν*, write.] An instrument for following the progress of chemical reactions between optically active substances where such reactions affect the rotation of the plane of polarization of light transmitted by the substances; a form of recording-polarimeter.

polarite (pō′lär-īt), *n.* [*polar* + *-ite*^{2}.] A trade-name for a sand which contains magnetic oxid of iron. It was used for filter-beds in England, but was found to be expensive.

Each of the filter beds has an area of 900 square feet and a normal thickness of 3 feet 1 inch. The top layer is fine sand, the second is sand and *polarite* mixed in the proportion of 6 inches of the latter to 5 inches of the former, and then follow layers of material of gradually increasing size. *Engin. Record*, Nov. 26, 1898, p. 561.

polarity, *n.* **1.** (*b*) In *biol.*, the imaginary cause of the regeneration in a mutilated organism of a part like that which has been removed.

Trembley, Spallanzani, and Bonnet knew that, in general, at the end of a piece of an animal from which a head has been cut off a new head develops, and from the posterior cut surface of a piece a new posterior part is regenerated. Allman was the first to give the name "*polarity*" to this phenomenon. *T. H. Morgan*, Regeneration, p. 38.

If a planarian is cut in two at almost any level a new tail regenerates on the posterior end of the anterior piece and a new head on the anterior end of the posterior piece. It appears that the same material is doubly potent, being able at nearly every level to form a head or a tail. Something in the piece itself determines that a head shall develop at the anterior cut surface and a tail at a posterior cut surface. This "something" is what we call *polarity*. *Amer. Nat.*, July–Aug., 1904, p. 503.

(*c*) That endowment of plants, plant-organs, and even of spores and cells, by virtue of which they tend to develop axially and with a distinction of base and apex; verticibasality. This polarity inheres even in small pieces of a stem in such wise that they tend to throw out roots from the end originally nearest the base and shoots from that farthest from it. Accordingly the basal end of a piece or whole is termed (first by Vöchting) the *root-pole*, the apical end the *shoot-pole*, the latter also *stem-pole* (Pfeffer). Polarity is either (relatively) stable, as in flowering plants, or labile (changeable). Some low organisms are apolar.

5. In *geom.*, a conlocal reciprocation in which any two corresponding elements are doubly correlated.—**Plane polarity** (*geom.*), a reciprocation between two coplanar planes in which any two corresponding elements are doubly correlated.—**Quadric polarity,** in *geom.*, a polarity in which the reciprocation is with regard to a quadric.

In the biology notes the body cavities and nephridia of the Actinotrocha are discussed by Dr. R. P. Cowles, while the mathematical notes deal with linear correspondences, the orthic cubic curve, and the construction of *quadric polarity* in space. *Nature*, June 9, 1904, p. 140.

polarization, *n.* **3.** In *geom.*, the passing to or taking the polar: of two polar figures or formulas either results from the other by polarization.—**4.** In *biol.*, the replacement or regeneration of lost parts in the axial or stereometrical relations which they exhibited before they were lost. See ★*polarity*, 1 (*b*).

Likewise, there are animals every piece of which produces, at either end, that organ towards which it was directed in the normal condition. We may speak in such cases of *polarization*. *J. Loeb*, Biol. Lectures, 1893, p. 43.

5. In *elect.*, the property of acting differently according as the current, electric or magnetic, is in one direction or the opposite direction.—**Arago's law of polarization,** the law that when a beam of light is partially polarized at the surface of a transparent medium the reflected and transmitted beams exhibit equal amounts of polarization, the planes of polarization being at right angles to each other.—**Electrochemical polarization,** the counter-electromotive force produced by the passage of an electric current through an electrolytic conductor (see ★*conductor*, 9 (2)), due to the deposition of the products of decomposition of the electrolyte on the terminals.—**Magnetic polarization,** the fact of being permanently magnetized and so responding to one magnet pole by attraction and to the other by repulsion.—**Polarization cell, tube.** See ★*cell*, ★*tube.*—**Remanent polarization,** in *elect.*, residual polarization of an electrolytic or voltaic cell.—**Rotatory polarization.** See *rotatory.*—**Residual polarization,** electrolytic polarization that persists after the removal of the impressed electromotive force.

polarize, *v. t.*—**Polarizing colorimeter,** a colorimeter in which the comparison tint is obtained by placing a properly cut selenite plate between Nicol prisms.

II. *intrans.* In *elect.*, to fall off in electromotive force, as a voltaic cell, by the liberation of hydrogen at the positive terminal.

In the local battery system, since the work required of the battery is intermittent and during only a small per cent. of the time, the batteries used are, with very few exceptions, of the open-circuit type; unfortunately, there is not yet a battery of this class known that will not *polarize* in a short time, which means that it has temporarily exhausted itself and must rest for awhile before it is as efficient as it was at the beginning of its work. *Elect. World and Engin.*, Jan. 24, 1903, p. 150.

polba (pōl′bä), *n.* [Russian.] Same as *spelt*^{1}.

pole^1, *n.* **5.** The tall, erect, flowering stem sent up by the species of *Agave* (century-plant) when about to complete their life-cycle, particularly that of the sisal hemp, *Agave rigida*, cultivated for its fiber in Yucatan, Florida, etc. Plants at the pole-bearing stage are said to be *in pole.* Plantlets are formed on the branches of the inflorescence which serve for propagation, and are known as *pole-plants.*—**6.** In *forestry*, a tree from 4 to 12 inches in diameter breast-high. See *tree* ★*class.* A *small* or *low pole* is a tree from 4 to 8 inches in diameter breast-high; a *large* or *high pole*, one from 8 to 12 inches in diameter breast-high. Also called *high pole.*—**7.** In *archery*, a case of canvas, or other material, to carry bows from place to place.—**Spring pole.** (*a*) A springy pole attached to the tongue of a logging-sled and passing over the roll and under the beam, for holding the weight of the tongue off the horses' necks. (*b*) A device for steadying a cross-cut saw, so that one man can use it, instead of two.—**To go up the pole,** in British army slang, to "go in" for promotion; to climb toward the top.

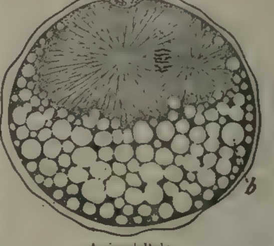
"Have a drink, Tom?"
"No, I 'm *going up the pole.*"
N. and Q., 9th ser., XI. 238.

pole^1, *v. t.* **4.** The melted metal is stirred with a stick of green wood, the steam evolved serving to agitate the metal thoroughly and to bring all parts of it into contact with the charred surface of the wood, the carbon of the latter combining with and eliminating the last traces of oxygen which render the metal brittle. The advantage of the method consists in the ease with which the action can be suspended by removing the wood while a sample of copper is taken out and tested as to its toughness, the process being in like manner permanently stopped when the desired 'tough pitch' has been attained, since continued contact with carbon would lead to this element being taken up and the copper again rendered brittle. See *poling*, 2.

pole^2, *n.* **8.** In *math.*: (*d*) The cointersection point of the joins when two correlated polystigms have the joins of their paired dots and codots copunctal. (*e*) In *function-theory*, a non-essential singular point.—**9.** In *cytol.*, one of the ends of the achromatic spindle in mitosis, or indirect cell-division. The opposite end is sometimes called the *antipole.*

The equatorial chromatic wreath resolves itself into loops arranged with their closed ends directed inwards towards a central point and their free ends outwards. These loops undergo horizontal cleavage from looped to free end, and the looped ends pass along the surface of the spindle towards *pole* and antipole. *Encyc. Brit.*, XXV. 393.

Animal pole, in *embryol.*, that portion of the egg which goes to form the nervous and sensory organs, as opposed to the *vegetative pole* which forms the alimentary tract.—**Blue pole,** in *elect.*, that pole of a magnet which according to convention is sometimes painted blue to indicate its character: usually the south-seeking pole of a magnet.—**Compression of the poles.** See ★*compression.*—**Coronal poles,** the hypothetical poles of magnetization of the sun's nucleus. *F. H. Bigelow*, U. S. Weather Bur., Bulletin 11, p. 501.—**False pole,** in *elect.*, a consequent pole due to irregular magnetization, as when a bar is so magnetized as to have poles elsewhere than at its ends.—**Guards or guardians of the pole.** See ★*guard.*—**Magnetic pole.** (*c*) That point or region of a magnet through which the lines of flux pass in entering or leaving the iron.—**Pole of a circle** on a sphere, a point in which the perpendicular to the circle's plane through the center meets the sphere.—**Pole of a function,** $f(x)$, a value of x for which $f(x) = \infty$. **Pole of a straight,** MN, for two points A and B, the fourth harmonic of the cross of MN and AB for A and B.—**Pole of a triangle,** ABC, for a conic *a*, the center O of perspective of the triangle ABC and its reciprocal A′B′C′.—**Pole of a wave,** in *optics*, that point, in a wave-front from which the wave reaches a given point external to the wave in the least time. The pole of a plane wave, with respect to any external point, is that point in the wave-front which is nearest to the external point.—**Pole of cold** or **cold pole,** in high latitudes, the place of lowest temperature: in January the pole of cold is probably not at the north pole, but in northeastern Siberia, near Verkhoyansk.—**Pole of snow,** in high latitudes, the place of most or of longest-lasting snow. *Geog. Jour.* (R. G. S.), XI. 175.—**Red pole.** (*b*) That pole of a magnet which according to convention is sometimes painted red to indicate its character: usually the north-seeking pole of a magnet.—**Salient pole,** a pole at the end of a bar-magnet, or of the core of an electromagnet, as distinguished from a consequent pole.—**Testing pole,** in *electrotherap.*, the indifferent electrode.—**Trailing pole-corner,** that corner or edge of the pole-piece of a dynamo-electric generator from which conductors on the surface of the armature move after they have entered the air-gap of the machine; the following pole-corner. The other edge or corner of the pole-piece is called the *leading pole-corner.*—**Vegetative pole,** in *embryol.*, the lower or yolk-laden pole of the ovum: so called because in teloblastic ova it gives rise to the alimentary tract or 'vegetative' organs of the embryo: opposed to the *animal* ★*pole*, which see.



Animal Pole.

Egg of the annelid *Nereis*, showing polar bodies, *a*, at the animal pole, in the granular protoplasm of which lies the dividing cleavage nucleus; below is the vacuolated vegetative pole; *b*, oil-globule. Enlarged.

(From Wilson's "The Cell.")

pole-burn (pōl′bėrn), *n.* See ★*burn*^{1}, 5 (*b*).

polecat-tree (pōl′kat-trē), *n.* A native buckthorn, *Rhamnus Caroliniana*, a shrub or small tree found through the southern United States. It bears a small, black, globose, sweetish fruit, whence it is generally called *Indian cherry.* Also called *yellow-wood.* [Texas.]

pole-cell (pōl′ sel), *n.* **1.** A polar body or directive; one of the minute cells which are separated from the egg before fertilization is completed.—**2.** Same as ★*teloblast.*

pole-compass (pōl′kum″pạs), *n.* See ★*compass.*

pol. econ., polit. econ. Abbreviations of *political economy.*

pole-corpuscle (pōl′kôr″pus-l), *n.* The centrosome of a cell. *Van Beneden.*

pole-cure (pōl′kūr), *v. t.*; pret. and pp. *pole-cured*, ppr. *pole-curing.* To cure (tobacco) mainly without artificial heat, by suspending (it) on poles in open or closed sheds or barns.

The wilted plant is fixed directly upon the poles with twine or is supported by sticks crossing from pole to pole; or the 'primed' leaves are strung on twine stretching from stick to stick. The curing may be regulated by controlling the ventilation, and fire may be used in case of extreme dampness. This method is practised with nearly all American tobaccos, except those named under ★*fire-cure* and ★*flue-cure.*

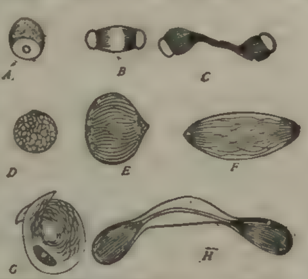
> The present method of manipulating these tobaccos after they are *pole-cured* is quite different.
> *U. S. Dept. Agr.*, Rep. 62, p. 30.

poleman (pōl′man), *n.* One who carries a pole or uses a pole as a weapon.

polemize (pol′e-mīz), *v. i.*; pret. and pp. *polemized*, ppr. *polemizing.* [Gr. *πολεμίζειν*, wage war.] To engage in controversy; write polemically.

pole-plant (pōl′plant), *n.* See ★*pole*^{1}, 5.

pole-plate, *n.* **2.** One of the masses or spheres of achromatic substance at the poles of the mitotic spindle in dividing protozoa. The pole-plates probably represent the attraction-spheres of other animals. Also called *end-plates.* — *R. Hertwig*, 1877.



Mitotic Division in Infusoria. (R. Hertwig.)

A-C, macronucleus of *Spirochona*, showing pole-plates; *D-H*, successive stages in the division of the micronucleus of *Paramæcium*; *D*, the earliest stage, showing reticulum; *G*, following stage ("sickle-form") with nucleolus; *F*, chromosomes and pole-plates; *F*, late anaphase; *H*, final phase. (From Wilson's "The Cell.") Highly magnified.

poler (pō′lėr), *n.* [*pole*^{1}, *v.*, + *-er*^{1}.] **1.** A person who poles a boat; one who pushes something, as a car, with a pole.— **2.** In Australia, one of a pair of bullocks yoked to the pole.

> Twelve bullocks is the usual number in a team, the two *polers* and the leaders being steady old stagers.
> *C. H. Eden*, My Wife and I in Queensland, p. 36, quoted [by E. E. Morris, Austral English.

pole-seat (pōl-sēt), *n.* A seat designed to be attached to a telegraph or cable pole. *Elect. World and Engin.*, Feb. 18, 1905, p. 363.

pole-shoe (pōl′shö), *n.* In an electric machine, the broadened end of the field pole where it faces the armature.

Pole-star recorder, a device for keeping a record of the visibility of the pole-star during the night-time. Pickering's pole-star recorder consists simply of a photographic lens or telescope and a sensitive plate on which is made the record of the circle described by the star's image.

pole-sweat (pōl′swet), *n.* Same as *pole-burn.* See ★*burn*^{1}, 5 (*b*).

pole-trap (pōl′trap), *n.* A trap set on the top of a pole to catch birds.

> The introduction last July into Parliament of a Bill to abolish the *pole-trap* is likewise the subject of a commendatory note. *Nature*, Oct. 15, 1903, p. 578.

polic (pol′ik), *a.* [*p*(*yroxene*) + *ol*(*ivin*) + *-ic.*] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*^{1}), containing or having the properties of the normative minerals, pyroxene, olivin, and akermanite.

Police judge, justice. See *police magistrate.*

policy^{1}, *n.*— **Pin-prick policy.** See ★*pin-prick.*— **Tea-kettle policy,** the advocacy of the boiling of all water employed for drinking and culinary purposes, as a preventive of typhoid fever, cholera, and other water-borne diseases. [Colloq.]

policy^{2}, *n.*—**Floating policy,** in *insurance law*, a policy which insures goods of a certain defined class the specific articles of which are subject to change, as a stock of merchandise in a store, etc.— **Mixed policy** in *insurance*, a policy which is valued as to certain specified property and open as to other. See *open* and *valued policy*, under *policy.* — **Voyage policy,** in *marine insurance*, a contract of insurance, the duration of the risk of which is determined by the time taken for a specified voyage by the insured vessel.

Poligné shale. See ★*shale*^{2}.

poling, *n.* **6.** In *dyeing*, the process of working loose cotton or wool fiber in dye-vats with poles.— **7.** In *elect.*, the adjustment or arrangement of the poles of an open magnetic circuit.

> By this arrangement and a suitable *poling* of the coils a minimum of mutual induction may be made to take place. *Elect. World and Engin.*, Nov. 21, 1903, p. 843.

poling-board (pō′ling-bōrd), *n.* One of several short planks or scantlings used at the heading of a tunnel through soft material. They are driven parallel with the axis of the tunnel into the material to be excavated, near the top of the heading and in advance of the lining or permanent timber, and serve to support the roof of the heading until the entire face of the heading can be excavated and the lining or permanent timbering can be brought up and completed. See ★*forepale*, 2.

polinium (pọ-lin′i-um), *n.* [NL.] The name given by Osann to a supposed new chemical element which he thought he had detected in Russian native platinum. He afterward found that it was merely impure iridium.

polioplasm (pol′i-ọ-plazm), *n.* [Gr. *πολιός*, gray, + *πλάσμα*, something formed.] The internal granular plasma or protoplasm proper of the cell, as distinguished from the cortical plasma, paraplasm, or hyaloplasm. *Nägeli.*

polisandro (pō-lẹ-sän′drō), *n.* A corruption of *palisandro*, a name for rosewood. Same as ★*cobano.* See also *palisander.*

polish^{1}, *n.*— **Desert polish.** See ★*desert*^{1}, *n.*

polisher, *n.* (*c*) Same as *polissoir.* (*d*) In *marble-working*, a hinged horizontal arm, carrying a polishing-disk. It is adjustable to various heights and is free to swing over the table on which the slabs of marble to be polished are laid.

polishing-block (pol′ish-ing-blok), *n.* **1.** A block held by the jaws of a vise and shaped to receive, or furnish a rest for, an object to be polished.— **2.** A block used for polishing with a fine powder, such as crocus. The polishing-powder adheres to the block, which is of softer material than the piece to be polished.

polishing-machine, *n.*— **Belt polishing-machine.** See ★*sandpapering-machine.*

polishing-red (pol′ish-ing-red), *n.* A workman's name for colcothar or red oxid of iron, Fe_2O_3, used as a polishing material.

polissoir, *n.* **2.** A small implement for polishing the finger-nails.

polista (pọ-lēs′tạ), *n.* [Philippine Sp., < *polo*, a form of servitude. See ★*polo*^{3}.] In the Philippine Islands, a native obliged, under Spanish rule, to render the personal service called *polo.* See ★*polo*^{3}.

Polistotrema (pọ-lis-tọ-trē′mä), *n.* [NL., irreg. < Gr. *πολύς*, many, + *-ιστος*, superlative suffix, + *τρῆμα*, hole. The name alludes to the large number of gill-openings.] A genus of hagfishes, of the family *Heptatremidæ*, found in the eastern Pacific.

politarch (pol′i-tärk), *n.* [Gr. *πολιτάρχης*, < *πολίτης*, citizen, + *-αρχης*, < *ἄρχειν*, rule.] A civic magistrate, in certain cities, under the Romans.

politarchic (pol-ī-tär′kik), *a.* [Gr. *πολιτεία*, citizenship, + *ἀρχή*, rule.] Noting the national stage of social aggregation. *L. F. Ward*, Dynam. Sociol., I. 466.

politics, *n.*— **Peanut politics,** mean, unworthy, underhand politics. [U. S. Slang.]

politzerization (pol″it-zėr-i-zā′shọn), *n.* The act of politzerizing; the process of forcing air through the Eustachian tube into the middle ear by means of a rubber bulb with tube attachment. The tube is inserted into one nostril, the other nostril is closed, and as the patient swallows, thereby shutting off the pharynx from the nares, the bulb is compressed and the current of air dilates the Eustachian tube.

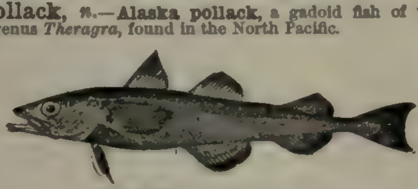
Politzer's bag. See ★*bag*^{1}.

polk^{4} (pōlk), *n.* [Russ. *polkŭ*, an army, a regiment.] In Russia, a regiment.

Polka redowa, a quick dance in triple measure.

poll^{1}, *v. t.*— **To poll a jury.** See ★*jury.*

pollack, *n.*— **Alaska pollack,** a gadoid fish of the genus *Theragra*, found in the North Pacific.



Pollack (*Theragra chalcogramma*).
From Jordan's "Guide to the Study of Fishes.")

pollack-whale (pol′ak-hwāl″), *n.* One of the smaller finback-whales, *Balænoptera borealis*, which reaches a length of 40 feet. It is bluish black above with light spots, and white below. Known in Norway as the *Sejhval* and in books as *Rudolphis rorqual.* *Amer. Nat.*, Sept., 1904, p. 614.

pollakiuria (pol″ạ-ki-ū′ri-ạ̈), *n.* [NL., < Gr. *πολλάκις*, often, + *οὖρον*, urine.] Frequent urination.

pollantine (pol′an-tin), *n.* [*poll*(*en*) + *ant*(*itoxin*) + *-ine*^{2}.] A trade-name for serum antitoxin prepared with pollen, for use as a cure for hay-fever.

pollen-basket (pol′en-bȧs″ket), *n.* Same as *corbiculum.*

pollenin (pol′en-in), *n.* [For **pollinine*, < L. *pollen* (*pollin-*) + *-ine*^{2}.] A name formerly given to the residue which remains after treating pollen with water, alcohol, and caustic potash. It is apparently impure cellulose.

pollenizer (pol′en-ī-zėr), *n.* [*pollenize* + *-er*^{1}.] Any agency that pollenizes flowers, as wind, water, or insects.

> Müller finds it difficult to explain the origin of the blue coloring by the selective influence of the *pollenizers*, and regards the question of its evolution as still unsolved.
> *Amer. Nat.*, June, 1903, p. 382.

pollen-tetrad (pol′en-tet″rad), *n.* One of the groups of four in which, by subdivision of a mother-cell, pollen-grains are usually produced.

> The lie of the division-walls in the *pollen-tetrad*, is determined by the conformation of the pollen-mother-cells.
> *K. E. Göbel* (trans.), Organography of Plants, II. 625.

pollex, *n.* **2.** (*c*) The movable joint of the forceps of the lobster, crawfish, or crab; a dactylopodite.

> The added structure is, however, not a true forceps with one movable finger, but a movable piece with two immobile prongs that otherwise resemble the index and *pollex* of a forceps. [An Aberrant Limb in a Cray-fish.]
> *Biol. Bulletin*, Jan., 1904, p. 75.

pollinator (pol′i-nā-tôr), *n.* Same as ★*pollenizer.*

> It would be difficult to find greater extremes in conspicuousness than is presented by the magnificent color masses of Rhododendron and Kalmia, and the small concealed flowers of Gaultheria, yet these latter do not want for *pollinators.* *Amer. Nat.*, June, 1903, p. 368.

polmitic (pol-mit′ik), *a.* [*p*(*yroxene*) + *ol*(*ivin*) + *m*(*agnetite*) + *i*(*lmenite*) + *t*(*itanite*) + *-ic.*] In *petrog.*, in the quantitative system of classification of igneous rocks (see ★*rock*^{1}), having equal or nearly equal amounts of polic minerals (normative pyroxene, olivin, akermanite) and mitic minerals (normative magnetite, ilmenite, titanite, etc.).

polo^{1}, *n.* The game may be played by any number of persons, from two or three to half a dozen on a side. The ponies are limited to a specified height or weight, and are specially bred and trained for the sport. The mallet is long enough for the player to reach the ball on the ground when he is sitting upright in the saddle, and is provided with a strap which goes over the hand. The object of the game is to drive the ball through goals erected at each end of the field. The side which succeeds in driving the ball through these goals the greater number of times during certain fixed periods of play wins the game. There is one referee whose duty it is to start the play, and also to throw the ball in when it has been knocked out of bounds. The boundary of the field consists of a board projecting above the ground about a foot, which usually prevents the rolling ball from going out of bounds. The rules of the game differ somewhat in different countries. The English rules insist upon on-side methods, but allow the hooking of mallets; while the American rules admit of off-side play, but not of thus interfering with an opponent's stroke.

polo^{3} (pō′lō), *n.* [Philippine Sp., usually in pl., in the phrase *polos y servicios*; from a native term.] In the Philippine Islands, formerly, an obligation imposed upon each Filipino man, except those of high rank, to labor forty days in each year on public works, such as the making or repair of roads and bridges, etc. The obligation lasted from the age of 16 or 18 years to the age of 60 years, and could be commuted by a money payment.

polo^{4} (pō′lō), *n.* [Polynesian name.] In Samoa, the cannibal apple, *Solanum Uporo*, and other plants of the nightshade family, bearing smooth red fruit. See *cannibal* ★*apple*, and *cannibal's tomato*, under *tomato.*

poloid (pol′oid), *n.* [*pole*^{2} + *-oid.*] Same as *polhode.*

polonium (pọ-lō′ni-um), *n.* [NL., < *Polonia*, Poland.] A radioactive substance discovered in pitchblende by M. and Mme. Curie in 1898: named in honor of Poland, the native country of Mme. Curie. It was found that bismuth precipitated by sulphureted hydrogen from an acid solution of pitchblende carried down with it something possessed of marked radioactivity. The radiation caused electrical conduction in gases, rendered phosphorescent a screen coated with barium platinocyanide, and produced a latent image on a photographic plate protected by a screen opaque to ordinary light. The radioactive substance in question was found to resemble bismuth, not only in being thrown down by sulphureted hydrogen, but in furnishing salts soluble in acid but precipitated by water and by ammonia. Partial separation from bismuth was effected, but only to the extent of producing salts of the latter metal of considerably increased radioactivity. Polonium is identical with the radioactive bismuth of Giesel and the radiotellurium of Marckwald. The last-named investigator has gone much farther in the separation of polonium from other substances. By deposition from solution on a plate of metallic bismuth, and by precipitation by stannous chlorid, separating bismuth and in part tellurium, an extremely active product was obtained, but in very small quantity—only 1.5 gram from 2 tons of pitchblende. Afterward, by precipitating all remaining tellurium by hydrazine hydrochlorid, and throwing down the polonium by stannous chlorid, the radioactive substance was obtained in the finally concentrated state as a precipitate weighing only 4 milligrams, or 1 part from 500 million parts of pitchblende. The radioactivity of this final product was, however, extraordinary, one hundredth of a milligram sufficing to render a surface of zinc sulphid phosphorescent so that it could be seen by a large audience. Even in this most concentrated form no directly visible light is given off. The radiation is of the *α* or non-penetrating type. No gaseous emanation is given off, and activity is not induced on surrounding bodies. The activity of polonium gradually decreases, and falls to half its original value in 143 days. Rutherford has shown that polonium is a disintegration-product of radium and accordingly of uranium. It is the seventh successive product which has been identified as formed from the radium emanation, and is therefore known as radium G.—**Polonium rays.** See ★*ray*1.

polot (pō-lōt′), *n.* [Tagalog.] Syrup of any kind. [Philippine Is.]

poltergeist (pọl′tėr-gīst), *n.*; pl. *poltergeister* (-gīs-tėr). [G., < *poltern*, rumble, rattle, clatter (earlier *boldern*, variant of *bollern*: see *boulder*, *n.*), + *geist*, spirit, = E. *ghost.*] A ghost or spirit that indicates its presence by the sound of moving objects, knocks, and similar noises.

Vampires appear in the character of the *poltergeist* or knocker, as causing those disturbances in houses which modern spiritualism refers in like manner to souls of the departed. *E. B. Taylor*, Primitive Culture, II. 193.

poltina (pọl-tē′nä), *n.* [Russ. *poltina.*] A Russian silver coin, the half-ruble.

poltophagy (pol-tof′a̤-ji), *n.* [Gr. *πόλτος*, porridge, + *-φαγια*, < *φαγεῖν*, eat.] The practice of masticating the food thoroughly, and not merely biting it into bits, before swallowing. [Rare.]

I have called this way of taking food *Poltophagy* (poltos=masticated, finely divided), and the other, psomophagy (psomos=biting, tearing). *H. Higgins*, Humaniculture, p. 52.

poltorak (pōl′tọ-räk), *n.* [Pol. *póltorak*, < *póltora* (Russ. *poltorá*), one and a half.] A Polish coin equal to one and one half groschen, or one twenty-fourth of a thaler.

poltra (pōl′tra̤), *n.* [Hung. *póltra*, a half-groschen: compare ★*poltorak.*] A small copper coin of Hungary.

polvillos (pọl-vēl′yōs), *n. pl.* [Sp. *polvillo*, fine dust.] The metallic sulphids and mercury remaining in a tentadura after the earthy and lighter particles have been washed off. *Phillips and Bauerman*, Elements of Metallurgy, p. 743.

polyacid (pol-i-as′id), *a.* [Gr. *πολύς*, many, + E. *acid.*] In *chem.*, of a base, equivalent in combining capacity to an acid radical of valence greater than unity.—**Polyacid alcohols.** See ★*polyvalent.*

polyacron (pol-i-ak′ron), *n.*; pl. *polyacra* (-ra̤). [Gr. *πολύς*, many, + *ἄκρον*, summit.] In *geom.*, the figure formed, or the solid bounded, by plane polygons so situated that each side is common to two, the number of summits determining its type; a polyhedron.

polyact, *a.* **II.** *n.* A polyaxon sponge-spicule; a polyactine.

polyactine (pol-i-ak′tin), *n.* [Gr. *πολύς*, many, + *ἀκτίς* (*ἀκτιν-*), ray.] A sponge-spicule of many rays. *Encyc. Brit.*, XXXII. 813.

polyadenoma (pol″i-ad-e-nō′ma̤), *n.*; pl. *polyadenomata* (-ma̤-ta̤). [Gr. *πολύς*, many, + *ἀδήν*, gland, + *-oma.*] The enlargement of an aggregation of glands.

polyanthy (pol′i-an-thi), *n.* [*polyanth*(*ous*) + *-y*3.] In *phytogeog.*, the production of numerous flowers, viewed as a means, through abundant seed-production, of the maintenance or extension of the hold of the species.

polyarch (pol′i-ärk), *a.* [Gr. *πολύς*, many, + *ἀρχή*, origin.] In *bot.*, having numerous centripetally developed xylem plates: said of some radial vascular cylinders.

polyarchical (pol-i-är′ki-ka̤l), *a.* Of the nature of a polyarchy. See *polyarchy*1.

polyarchy2 (pol′i-är-ki), *n.* [*polyarch* + *-y*3.] The character or condition of being polyarch. See ★*polyarch.*

The thick roots of *Iris* . . . are examples of a high degree of *polyarchy.* *De Bary* (trans.), Comp. Anat. Phanerogams and Ferns, [p. 357.

polyargyrite (pol-i-är′ji-rīt), *n.* [Gr. *πολύς*, many, + *ἄργυρος*, silver, + *-ite*2.] A sulphantimonite of silver ($12Ag_2S.Sb_2S_3$) occurring in black isometric crystals: found at Wolfach in Baden.

polyarthritic (pol″i-är-thrit′ik), *a.* Pertaining to or suffering from polyarthritis.

polyatomicity (pol-i-at-ọ-mis′ị-ti), *n.* [*poly-* + *atomicity.*] Atomicity or valence of a grade higher than unity. See *valence*2, 1.

polyaxile (pol-i-ak′sil), *a.* Same as *polyaxial.*

polyaxon, *a.* **2.** In *neurol.*, noting nerve-cells which have several axons, or axis-cylinder processes: opposed to ★*monaxon*, 2.

polyazin (pol-i-az′in), *n.* [Gr. *πολύς*, many, + E. *azin.*] In *organic chem.*, any compound containing in its molecules a cyclic linking of atoms two or more of which consist of nitrogen.

polyazole (pol-i-az′ōl), *n.* [Gr. *πολύς*, many, + E. *azole.*] An azole with two or more nitrogen atoms in place of the same number of methine groups.

polybathic (pol-i-bath′ik), *a.* [Gr. *πολύς*, much, + *βάθος*, depth.] In *biol.*, living at great depths in the sea. *N. E. D.*

polyblast (pol′i-blast), *n.* [Gr. *πολύς*, many, + *βλαστός*, germ.] In *embryol.*, the cell-mass forming the segmenting ovum; the morula. *E. R. Lankester*, 1873.

polyblastic (pol-i-blas′tik), *a.* [*polyblast* + *-ic.*] Pertaining to, or of the nature of, a polyblast or morula.

polybromide (pol-i-brō′mid), *n.* [Gr. *πολύς*, many, + E. *bromide.*] In *chem.*, a simple bromide containing in its molecule more than a single atom of bromine.

polybunic (pol-i-bū′nik), *a.* Same as ★*polybunous.*

polybunous (pol-i-bū′nus), *a.* [Gr. *πολύς*, many, + *βουνός*, a hill.] Having teeth with many rounded tubercles. *Proc. Zool. Soc. London*, 1893, p. 205.

polybuny (pol-i-bū′ni), *n.* [*polybun*(*ous*) + *-y*3.] The fact or condition of having teeth with many rounded tubercles. See *bunodont.* *Proc. Zool. Soc. London*, 1893, p. 205.

polycarboxylic (pol″i-kär-bok-sil′ik), *a.* [Gr. *πολύς*, many, + E. *carboxyl* + *-ic.*] Containing more than one carboxyl group.—**Polycarboxylic acid,** a polybasic organic acid, or one that contains more than one carboxyl group, as succinic acid, $C_2H_4(COOH)_2$, or ethane-dicarboxylic acid.

polycarpous, *a.* **2.** Same as *polycarpic.*

Polycarpous, those [roots] which produce successive crops. *Rusby and Jelliffe*, Morphol. and Hist. of Plants, p. 150.

polycarpy (pol′i-kär-pi), *n.* [*polycarp*(*ous*) + *-y*3.] In *bot.*, an abnormal number of carpels: a teratological condition.

polycentral (pol-i-sen′tra̤l), *a.* Same as *polycentric.*

Another paper . . . shows that there were seven distinct centres of destructive violence, and that the earthquake was a true *polycentral* one. *Nature*, Feb. 21, 1907, p. 398.

polycephalic (pol″i-se-fal′ik), *a.* [Gr. *πολύς*, many, + *κεφαλή*, head.] Having several or many heads; polycephalous.

polychætal (pol-i-kē′ta̤l), *a.* Polychætous. *Nature*, Dec. 11, 1902, p. 144.

polycheiria (pol-i-kī′ri-a̤), *n.* [NL., < Gr. *πολύς*, many, + *χείρ*, hand.] A condition in which there is a supernumerary hand.

polychlorid (pol-i-klō′rid), *n.* [Gr. *πολύς*, many, + E. *chlorid.*] In *chem.*, a simple chlorid containing in its molecule more than a single atom of chlorin.

polychromasia (pol″i-krọ-mā′zia̤), *n.* [NL., prop. **polychromatia*, < Gr. *πολύς*, many, + *χρῶμα*, color.] Same as ★*polychromatophilia.*

polychromate (pol-i-krō′māt), *n.* [*polychrom*(*ic*) + *-ate*1.] In *chem.*, a salt which may be viewed as consisting of two or more combining units of chromium trioxid combined with the oxid of a more basic element or radical, as potassium trichromate, $K_2Cr_3O_{10} = K_2O.(CrO_3)_3$.

Polychromatic sculpture, sculpture on the surface of which various colors have been applied. Polychromatic effects may be secured by paint, by glazes on a clay foundation, or by the use of different materials, as ivory and gold.

polychromatist (pol-i-krō′ma̤-tist), *n.* [*polychromat*(*ic*) + *-ist.*] One who uses, or favors the use of, many colors in painting or decoration. *N. E. D.*

polychromatophil, polychromatophile (pol-i-krō′ma̤-tọ-fil), *a.* and *n.* [Gr. *πολύς*, many, + *χρῶμα*(*τ-*), color, + *φιλεῖν*, love.] **I.** *a.* Having an affinity for more than one dye; taking both acid and basic stains: noting especially certain degenerated or immature forms of red blood-corpuscles.

Polychromatophile degeneration is present in a small degree. *Med. Record*, Feb. 28, 1903, p. 324.

II. *n.* A degenerated or immature form of red blood-corpuscle which stains not only in the presence of the acid dyes, as does the normal cell, but also in that of the basic dyes.

polychromatophilia (pol″i-krō′ma̤-tọ-fil′i-a̤), *n.* [NL., < Gr. *πολύς*, many, + *χρῶμα*(*τ-*), color, + *-φιλια*, < *φιλεῖν*, love.] The condition of the red blood-corpuscles, in which they take both acid and basic stains; polychromasia.

polychromatophilic (pol″i-krō″ma̤-tọ-fil′ik), *a.* Same as ★*polychromatophil.*—**Polychromatophilic degeneration.** See ★*degeneration* and ★*polychromatophil.*

polychromatous (pol-i-krō′ma̤-tus), *a.* Same as *polychromatic.*

polychromia (pol-i-krō′mi-a̤), *n.* [NL., < Gr. *πολύς*, many, + *χρῶμα*, color.] In *pathol.*, excessive formation of pigments, as in the bile.

polychromine (pol-i-krō′min), *n.* [Gr. *πολύς*, many, + *χρῶμα*, color, + *-ine*2.] A direct cotton coal-tar color. Same as ★*primulin*, 2.—**Polychromine B,** a direct cotton coal-tar color of the stilbene type. In a salt bath it dyes unmordanted cotton a reddish brown, but it is not until it is subsequently diazotized and developed that the best results are obtained. When developed with *β*-naphthol a claret red is produced, and with phenylene-diamine a deep brown.

polychromism (pol′i-krō-mizm), *n.* [*polychrome* + *-ism.*] The condition of being spotted or marbled with several colors or shades of color.

Albinism, partial albinism and *polychromism* in hagfishes. *Amer. Nat.*, Index, Jan., 1904.

polychromous (pol′i-krō-mus), *a.* [*polychrome* + *-ous.*] Same as *polychrome.*

polyclad (pol′i-klad), *n.* [*Polyclad*(*ida*).] One of the *Polycladida.*

In Triclads and *Polyclads* the brain is little more than a thickening due to the fusion of these tracts at the anterior end and on the ventral surface. *Encyc. Brit.*, XXXI. 793.

polyclade (pol′i-klād), *n.* Same as ★*polyclad.* *Buck*, Med. Handbook, IV. 658.

Polycladida (pol-i-klad′i-da̤), *n. pl.* [NL., < Gr. *πολύκλαδος*, having many branches.] An order of marine turbellarians. They have the pharynx leading into a central enteron which is produced laterally into a number of cæca that sometimes branch and extend nearly to the margin of the body.

polycladose (pol-i-klā′dōs), *a.* [Gr. *πολύκλαδος*, many-branched.] Having cladomes with many branches: said of sponge-spicules.

polycormic (pol-i-kôr′mik), *a.* [Gr. *πολύς*, many, + *κορμός*, tree-trunk.] In *bot.*, having several trunks or coördinate stems.

polyctenid (pō-lik′te-nid), *n.* and *a.* **I.** *n.* A member of the hemipterous family *Polyctenidæ.*

II. *a.* Having the characters of or belonging to the family *Polyctenidæ.*

polycyanide (pol-i-sī′a̤-nid), *n.* [Gr. *πολύς*, many, + E. *cyanide.*] A simple cyanide containing in its molecule more than one combining unit of the radical cyanogen.

polycyclic, *a.* **2.** In *elect.*, noting a system of electric distribution by alternating currents, in which the energy maxima of the flow of power of the different circuits overlap so as to give a total flow of power of constant intensity. This is the case in a symmetrical or hemisymmetrical polyphase system. See ★*polyphase.* *Jour. Inst. Elect. Engin.* (London), 1902–03, p. 751.—**3.** In *chem.*, containing more than one atomic ring in the molecule.—**Polycyclic hydrocarbon,** a hydrocarbon containing more than one atomic ring, as naphthalene, $C_{10}H_8$, and anthracene, $C_{14}H_{10}$, which are dicyclic and tricyclic, respectively.

Polycystidea (pol″i-sis-tid′ẹ-a̤), *n. pl.* [NL., < Gr. *πολύς*, many, + *κύστις*, bag, + *-idea.*] A group of gregarines having the body differentiated into protomerite, deutomerite, and (sometimes) epimerite; the *Septata.* Compare *Monocystidea.*

polycystin (pol-i-sis′tin), *n.* [*Polycystis* + *-in*2.] A little known crystalline carotin, found in the alga *Polycystis flosaquæ.*

polycystinan (pol-i-sis′ti-nan), *a.* Same as ★*polycystin.*

polycythemic (pol-i-sī-them′ik), *a.* [*polycythemia* + *-ic.*] Relating to or affected with polycythemia.

Polydactylus (pol-i-dak′ti-lus), *n.* [NL., < Gr. *πολύς*, many, + *δάκτυλος*, finger.] A genus of fishes of the family *Polynemidæ*, containing numerous species found in warm seas.

polydemic (pol-i-dem′ik), *a.* [Gr. *πολύς*, many, + *δῆμος*, people, + *-ic.*] In *phytogeog.*, growing in several countries, as a genus or species: opposed to ★*endemic:* introduced by Fenzl (1833), to replace the term *sporadic* of de Candolle. See ★*sporadic.*

polydemonism (pol-i-dē′mọn-izm), *n.* [Gr. *πολύς*, many, + *δαίμων*, demon.] That form of religion which is based on the belief that all phenomena of nature are controlled by independent supernatural powers, more or less anthropomorphic.

polydemonistic (pol-i-dē-mọ-nis′tik), *a.* Pertaining to or characterized by polydemonism.

polydomous (po-lid′ọ-mus), *a.* [Gr. *πολύς*, many, + *δόμος*, house, + *-ous.*] Consisting of or inhabiting more than one nest: opposed to ★*monodomous:* applied to a formicary or ant colony. *Forel.*

polydrometry (pol-i-drom′e-tri), *n.* [Gr. *πολύς*, many, + *δρόμος*, course, + *μέτρον*, measure.] That part of the science of mathematics which treats of polydromic figures or functions.

polydynamic (pol″i-dī-nam′ik), *a.* [Gr. *πολύς*, many, + *δύναμις*, power.] Pertaining to or having many powers or forces. [Rare.]

polyeidism (pol-i-ī′dizm), *n.* [Gr. *πολυειδής*, of many forms or kinds (< *πολύς*, many, + *εἶδος*, form), + *-ism.*] The assumption of several different forms by an organism during its life-history, as, for example, among insects which undergo metamorphosis. *Lubbock.*

polyelectronic (pol″i-ē-lek-tron′ik), *a.* [*poly-* + *electron* + *-ic.*] Containing two or more electrons.

polyergic² (pol-i-ėr′jik), *a.* [Contraction of *polyenergidic;* < Gr. *πολύς*, many, + E. *energid* (see def. below), < Gr. *ἐνεργεῖν*, to work, + *-ic.*] In *plant physiol.*, having more than one protoplasm unit, that is, nucleus with the dominated protoplasm (the *energid* of Sachs): opposed to ★*monergic.* The energid is taken as the plant unit instead of the cell, because several may be contained in one cell and because some are without cell walls.

> Our recently acquired knowledge of the cell teaches us then that we must no longer distinguish between unicellular and pluricellular but between monergic and *polyergic* plants.
> *K. E. Goebel* (trans.), Organography of Plants, I. 23.

polygalactia (pol″i-ga-lak′ti-ạ̈), *n.* [NL., < Gr. *πολύς*, many, + *γάλα* (*γαλακτ-*), milk.] The secretion of an abnormal amount of milk.

polygalic (pol-i-gal′ik), *a.* [*Polygala* + *-ic.*] Derived from *Polygala.*— **Polygalic acid,** an acid found in Seneca snakeroot, *Polygala Senega*, from the aqueous abstract of which it is precipitated by lead acetate.

polygamic (pol-i-gam′ik), *a.* [LGr. *πολύγαμος*, polygamous, + *-ic.*] Pertaining to or of the nature of polygamy; polygamous.

polyganglionic (pol″i-gang-gli-on′ik), *a.* [Gr. *πολύς*, many, + *γάγγλιον*, ganglion, + *-ic.*] Possessing many glands or ganglia.

polygene (pol′i-jēn), *a.* [Gr. *πολύς*, many, + *γέν(εσις)*, origination.] Noting those volcanic cones which are the result of successive eruptions: contrasted with ★*monogene.* The term was suggested by A. Stübel. *Geikie*, Text-book of Geol., p. 322.

polygenesis, *n.* **2.** Origination or derivation from more than one species, or, in a very restricted sense, from more than one pair: contrasted with *monogenesis.* Compare ★*polyphylesis.*

> From this suggestion sprang the doctrine of *polygenesis*, which was opposed by those who preferred the theory of monogenesis, i.e., the descent of all mankind from a single pair. *Sci. Amer. Sup.*, 1906, p. 25192.

Polygenetic colors. See ★*color.*— **Polygenetic regeneration.** Same as *facultative* ★*regeneration.*

polygenetically (pol″i-jẹ̄-net′i-kạl-i), *adv.* In a polygenetic manner; relating to the origin of organisms by polygenesis.

polygerm (pol′i-jėrm), *n.* [Gr. *πολύς*, many, + E. *germ.*] The developing egg of certain *Encyrtidæ* and other parasitic *Hymenoptera*, which ultimately develops into several or many embryos. *L. O. Howard*, in Science, Dec. 21, 1906, p. 813.

poly-germander (pō′li-jėr-man″dėr), *n.* Same as *poly.*

polyglobulism (pol-i-glob′ụ̄-lizm), *n.* [Gr. *πολύς*, many, + L. *globulus*, globule, + *-ism.*] An increase in the number of the red blood-corpuscles.

polyglottal (pol-i-glot′ạl), *a.* Same as *polyglottous.*

polyglottist (pol′i-glot-ist), *n.* [*polyglot* + *-ist.*] Same as *polyglot*, 2.

polyglycolid (pol-i-glī′kọ̄-lid), *n.* [*poly-* + *glycolid.*] See ★*glycolid.*

Polygnotan (pol-ig-nō′tạn), *a.* [*Polygnot*(*us*) + *-an.*] Of or pertaining to Polygnotus, a famous painter who flourished in ancient Athens in the middle of the fifth century B.C., or to his work, or his severe and powerful style; especially, describing certain vase paintings which are supposed to resemble his work in style or composition.

polygon, *n.* **2.** A train of sects whose last point is identical with the first.— **3.** In *ordnance*, a place especially arranged for making ballistic tests of guns, projectiles, armor, and powder. Same as *proving-ground.*— **Cyclic polygon,** a polygon whose vertices are concyclic.— **Diagonal of a polygon,** a sect that is not a side, but whose end-points are vertices of a polygon.— **Exterior polygon,** in *fort.*, the polygon having as vertices the bastion-centers of a fortification.— **Heronic cyclic polygon,** a cyclic polygon whose sides, diagonals, and area are expressible by whole numbers.— **Link polygon.** Same as *funicular polygon.*— **Plane polygon,** a polygon whose vertices are coplanar.— **Polar polygon,** in *geom.*, of a convex spherical polygon ABCD . . ., a new spherical polygon A′ B′ C′ D′ . . . , where A′ is that pole of BC which has A in its hemisphere, etc.— **Polygon of motion.** See ★*motion.*— **Polygon of vectors,** the geometrical construction, or vector diagram, based upon the principle of vector addition and utilized in mechanics for the composition and resolution of forces, velocities, accelerations, or other vector quantities. If AB, BC, CD, DE, EF, etc., are lines representing forces or other vector quantities, and if these are joined as shown in Fig. 1, the length of each line representing the magnitude of the quantity and the direction of the line its direction, then the line FA is the resultant obtained by the composition of all these vector quantities. Conversely, if AF is a line representing by its length and direction any vector quantity such as force or velocity, any polygon whatever, of which AF is one of the sides, will give a possible resolution of this vector quantity into components, the remaining sides of the polygon representing the components into which AF is resolved. If the vector quantities in question are forces, the diagram is called the *polygon of forces;* if they are velocities, it is called the *polygon of velocities.* Where only two forces, velocities, accelerations, or other vector quantities are to be combined, or where it is desired to resolve such a vector quantity into two components, the polygon becomes a *triangle of forces, velocities*, or *accelerations.* If AB and BC, Fig. 2, represent two vector quantities, AC is the resultant vector; and if, conversely, AC is a vector quantity, any two lines, AB and BC, which form sides of a triangle of which AC is the third side, are two possible components into which AC may be resolved. The *parallelogram of forces, velocities*, etc., is a form of vector diagram based upon the same principle as the triangle of vectors; but in this case the two vector quantities to be combined are drawn from the same point (the point of application) and their resultant is the diagonal of the parallelogram of which the two vectors AB and AC, Fig. 3, are adjacent sides. The diagonal AD of this parallelogram is obviously of the same length and has the same direction as the third side of the corresponding triangle of vectors in Fig. 2.— **Simple polygon,** a polygon all of whose vertices are distinct from one another, no vertex falling within a side, and no two sides having a point within in common.— **Star polygon,** a regular polygon whose sides intersect.— **Undivided polygon,** a polygon no side of which cuts another.

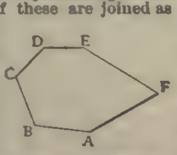


Fig. 1. Polygon of Vectors.

Fig. 2. Triangle of Vectors.

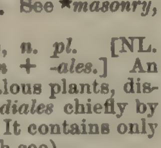

Fig. 3. Parallelogram of Vectors.

Polygonal masonry, method. See ★*masonry*, ★*method.*

Polygonales (pol-i-gọ̄-nā′lēz), *n. pl.* [NL. (Lindley, 1833), < *Polygonum* + *-ales.*] An order of dicotyledonous apetalous plants, distinguished from the *Chenopodiales* chiefly by the fruit, which is an achene. It contains only the family *Polygonaceæ* (which see).

polygonation (pol″i-gọ̄-nā′shọn), *n.* The work of conducting a survey by the polygonal method; a survey system conducted by the polygonal method: an alternative method to triangulation.

> *Polygonation*, or geodetic traverse-work, as it should be called here, is, on the other hand, an operation that may be easily carried on by the bottom of valleys, at the side of the roads or paths already existent.
> *Geog. Jour.* (R. G. S.), XVI. 330.

polygonic (pol-i-gon′ik), *a.* [*polygon* + *-ic.*] Same as *polygonal.* [Rare.]

polygonin (pọ̄-lig′ọ̄-nin), *n.* [*Polygon*(*um*) + *-in*².] A crystalline compound, apparently a glucoside, $C_{21}H_{20}O_{10}$, found in the root-bark of *Polygonum cuspidatum.* It is a derivative of methylanthraquinone.

polygraf, polygrafy. Amended spellings of *polygraph, polygraphy.*

polygram, *n.* **2.** In *geom.*, a system of *n* coplanar straights (sides), with all the flat-pencils (fans) they determine.

polygraph, *n.* **4.** A modified form of sphygmograph by which two or more tracings can be taken simultaneously.

polygynæcial, *a.* Same as *polygynœcial.*

polygyny, *n.* **2.** Of a male animal, the state of having more than one female mate. *N. E. D.*

polygyria (pol-i-jī′ri-ạ̈), *n.* [NL., < Gr. *πολύς*, many, + *γῦρος*, turn (see *gyrus*).] The presence of more than the usual number of convolutions in the brain.

Polyhedral cell. See ★*cell.*

polyhedron, *n.*— **Convex polyhedron,** a polyhedron through no edge of which pass more than two faces, and which has no summits on different sides of the plane of a face.— **Eulerian polyhedron,** a polyhedron that satisfies Euler's theorem that the number of faces increased by the number of summits exceeds by two the number of edges.— **Simple polyhedron,** a polyhedron having the summits all distinct from one another, no summit within an edge, and no two faces with a point within in common.

polyhistorian (pol″i-his-tō′ri-ạn), *n.* [*polyhistor* + *-ian.*] Same as *polyhistor.*

> The same neglect, at least of sculpture and painting, strikes us in Voltaire, who as *polyhistorian* can in some measure compare with Leibnitz.
> *Smithsonian Rep.*, 1891, p. 661.

polyhistoric (pol″i-his-tor′ik), *a.* [*polyhistor*(*y*) + *-ic.*] Pertaining to or exhibiting polyhistory or wide and varied knowledge. [Rare.]

polyhistory (pol-i-his′tọ̄-ri), *n.* [*polyhistor* + *-y*³.] Great and varied learning; the attainments of a polyhistor. [Rare.]

polyhydria (pol-i-hī′dri-ạ̈), *n.* [NL., < Gr. *πολύς*, much, + *ὕδωρ* (*ὑδρ-*), water.] Dropsy.

polyideic (pol″i-ī-dē′ik), *a.* [*polyide*(*ism*) + *-ic.*] Pertaining to or characterized by polyideism.

polyideism (pol″i-ī-dē′izm), *n.* [Gr. *πολύς*, many, + *ἰδέα*, idea, + *-ism.*] In *psychol.*: (*a*) The concurrence of a number of ideas in consciousness: opposed by Ribot, as the normal state of consciousness, to the relative *monoideism* of attention. (*b*) Extreme suggestibility; openness to suggestion by ideas of all kinds: applied by Ochorowicz to the hypnotic state.

polyinfection (pol″i-in-fek′shọn), *n.* [Gr. *πολύς*, many, + E. *infection.*] Infection with more than one variety of pathogenic organism. *Buck*, Med. Handbook, VII. 128.

polyiodide (pol-i-ī′ọ̄-did), *n.* [Gr. *πολύς*, many, + E. *iodide.*] A simple iodide containing in its molecule more than a single atom of iodine.

polylith (pol′i-lith), *n.* [Gr. *πολύς*, many, + *λίθος*, stone.] A shaft or column built up of several blocks: opposed to *monolith.* [Rare.]

polylithic, *a.* **2.** Noting a deposit consisting of several kinds of minerals or rocks.

> These crevices and fissures are filled with a *polylithic* mass of brown and white "calcic spar" in a soft talcose quartz, together with quartz-porphyrite and intensely hard quartz-rhyolite in a more or less "brecciated" condition. *Sci. Amer. Sup.*, Jan. 25, 1908, p. 61.

polylithionite (pol-i-lith′i-ọ̄-nīt), *n.* [Gr. *πολύς*, much, + NL. **lithion* for *lithium* + *-ite*².] A lithium-mica from Greenland, near zinnwaldite, but containing more alkalis and very little iron.

polylobular (pol-i-lob′ụ̄-lạ̈r), *a.* [Gr. *πολύς*, many, + E. *lobule* + *-ar*³.] Having many lobules.

polymastic (pol-i-mas′tik), *a.* [*polymast*(*ia*) + *-ic.*] Pertaining to or exhibiting polymastia, or the presence of more than two breasts or nipples.

Polymastigina (pol-i-mas-ti-jī′nạ̈), *n. pl.* [NL.] A family of flagellate protozoans. The body is somewhat oval, with a broader or pointed hinder end produced into two flagella. At the anterior end there are two or three flagella on each side. The family includes the genera *Hexamitus* and *Megastoma.*

polymastism (pol-i-mas′tizm), *n.* Same as *polymastia.* *Buck*, Med. Handbook, II. 465.

polymasty (pol′i-mas-ti), *n.* Same as *polymastia.* *G. S. Hall*, Adolescence, I. 421.

polymelian, *a.* **II.** *n.* An animal having supernumerary limbs; a polymelius.

> In the enormous majority of *polymelians* the repetition consists of parts of a complementary pair.
> *Bateson*, Material for a Study of Variation, 9, p. 554.

polymelous (po-lim′e-lus), *a.* [Gr. *πολυμελής*, having many limbs, + *-ous.*] Having more than the normal number of limbs; polymelian.

Three *Polymelous* Frogs. *Amer. Nat.*, Jan., 1901, p. 27.

polymeniscous (pol″i-mẹ̄-nis′kus), *a.* [*poly-* + *menisc*(*us*) + *-ous.*] Consisting of, or having, many lenses, or facets, as an insect's eye. *J. A. Thomson*, Outlines of Zoology, p. 304. *N. E. D.*

polymeric, *a.* 2. Same as *polymerous.*

polymeter, *n.* 3. A meteorological instrument consisting of a combination of thermometer and hair-hygrometer for the determination of temperature, humidity, dew-point, etc.

polymethylene (pol-i-meth′i-lēn), *n.* [*poly-* + *methylene.*] A cyclic compound containing three or more methylene groups. The most important are the naphthenes or derivatives of hexamethylene or hexahydrobenzene.

polymetochic (pol″i-me-tō′kik), *a.* Pertaining to or characterized by polymetochia.

polymicrobial (pol″i-mī-krō′bi-ạl), *a.* [*poly-* + *microbe* + *-ial.*] Relating to or caused by more than one form of micro-organism.

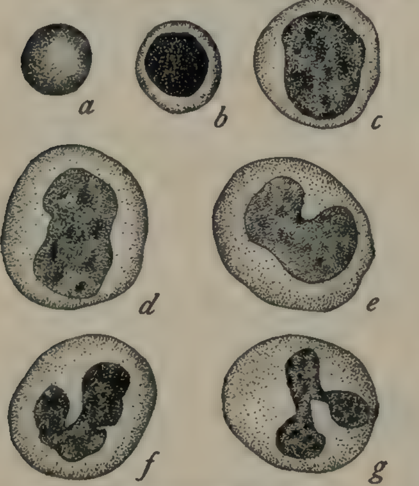
On acute *polymicrobial* osteomyelitis, by M. Ragalski. In a case of osteomyelitis of the clavicle, both the coli bacillus and staphylococcus were found to be present in the blood from the bone. *Nature*, May 8, 1902, p. 48.

polymixic (pol-i-mik′sik), *a.* [Gr. πολύς, much, + μῖξις, mixture.] Manifesting much mixture; much mixed. In *marine biol.*, an aggregation of organisms is said to be polymixic if no one form or group of forms comprises more than one half of the total volume. —**Polymixic plankton.** See ★*plankton.*

Polymorpha (pol-i-môr′fä), *n. pl.* [NL., < Gr. πολύς, many, + μορφή, form.] A series or suborder of coleopterous insects, in Sharp's system, including the older series *Clavicornia* and *Serricornia.*

polymorphistic (pol″i-môr-fis′tik), *a.* [*polymorphism.*] Pertaining to, or exhibiting, polymorphism.

polymorphonuclear (pol-i-môr-fō-nū′klẹ̄-är), *a.* [Gr. πολύς, many, + μορφή, form, + L. *nucleus*, nucleus, + *-ar*^{3}.] Having polymorphous nuclei; containing numerous nuclei of variable size and shape, as certain leucocytes.



Polymorphonuclear Cells.

From the normal blood of man; magnified 1200 times (from dry preparation of H. F. Müller).

a, red blood-cell; *b*, lymphocyte; *c* and *d*, mononuclear leucocytes; *e*, transitional leucocyte; *f* and *g*, leucocytes with polymorphous nuclei.

(From Böhm-Davidoff-Huber's "Text-book of Histology.")

There is practically entire absence of infiltration by *polymorphonuclear* leucocytes. *Med. Record*, Feb. 14, 1903, p. 271.

polymorphosis (pol-i-môr′fọ̄-sis), *n.* Same as *polymorphism.*

polymyodous (pol-i-mī-ō′dus), *a.* [*Polymyodi* + *-ous.*] Having many muscles attached to the syrinx; pertaining to or resembling the *Polymyodi*, or *Oscines.* [Rare.]

polymythy (pol′i-mith-i), *n.* [*poly-* + *myth* + *-y*^{3}.] Multiplicity of myths or stories; specifically, the introduction of several stories into one narrative or play.

Polymythy (Polymythie) in Shakespeare's Dramatic Poems, . . . I must confess that this word is new to me, but the paper has reference to Shakespeare's manner of combining several plots or actions in one play, and so obtaining by likeness or contrast a fulness of effect which could not have been got by simply setting forth the main action of the play. *Trans. New Shak. Soc.*, 1877–79, App. iv.

Polynephria (pol-i-nef′ri-ạ̈), *n. pl.* [NL., < Gr. πολύς, many, + νεφρός, kidney.] Those insects which possess many Malpighian or urinary tubes, as distinguished from the *Oligonephria.*

polynephrious (pol-i-nef′ri-us), *a.* In *entom.*, possessing many urinary tubules, as the *Polynephria.* *A. S. Packard*, Text-book of Entom., p. 354.

Polynesian, *a.* 3. Noting a family of languages having general affinities of form and considerable similarity of vocabulary, spoken throughout Polynesia, except in the western areas included in Melanesia and Micronesia. They are of simple structure, with a minimum of sounds and a prevalence of vowels. Though fluent to a degree that makes them comparable with Italian, they are without inflections, and are in other respects similar to the Malayan languages with which they form a larger group called the *Malay-Polynesian* or *Malayo-Polynesian.* —**Polynesian rosewood.** Same as ★*banago* (*a*).

Polynesic (pol-i-nē′sik), *a.* 1. Same as *Polynesian.*—2. [*l. c.*] Occurring in insulated patches. *Allbutt*, System of Medicine, VII. 50. *N. E. D.* [Rare.]

polyneural (pol-i-nū′rạl), *a.* [Gr. πολύς, many, + νεῦρον, nerve, + *-al*^{1}.] Relating to, containing, or innervated by, several nerves.

polyneuritic (pol″i-nụ̄-rit′ik), *a.* [*polyneuritis* + *-ic.*] Relating to, associated with, or affected with, polyneuritis: as, a *polyneuritic* psychosis. *Med. Record*, Aug. 1, 1903, p. 177.

polynodal (pol-i-nō′dạl), *a.* [Gr. πολύς, many, + L. *nodus*, node, + *-al*^{1}.] Having or producing many nodes: as, a *polynodal* oscillation: said of certain complex types of vibration.

polynoid (pol′i-noid), *n.* and *a.* [*Polynoë* + *-oid.*] A marine annelid of the genus *Polynoë*; resembling such an annelid.

Certainly the *Polynoids*, bristling as they do with stiff chaetae along each side, must be rather unpleasant to their smaller enemies. *Cambridge Nat. Hist.*, II. 266.

polynomic (pol-i-nom′ik), *a.* Same as *polynomial.*

polynuclear, *a.* II. *n.* A cell, such as certain colorless blood-corpuscles or leucocytes, which contains many nuclei. *R. C. Cabot*, Clinical Exam. of the Blood, p. 64.

polynucleate (pol-i-nū′klẹ̄-āt), *a.* Same as *polynuclear.*

polynucleated (pol-i-nū′klẹ̄-ā-ted), *a.* Containing many nuclei; polynuclear. *Buck*, Med. Handbook, II. 30.

polynucleolar (pol-i-nī′klē-ọ-lạ̈r), *a.* [*poly-* + *nucleolus* + *-ar*^{3}.] Having more than one nucleolus in the nucleus: said of certain cells.

polynym (pol′i-nim), *n.* [An erroneous form for *polyonym.*] One of several names (pseudonyms) appearing together as those of authors of a work.

C. M., J. H. G., M. R., *polynym* [Campbell Mackinnon, now of Jamaica] [Joseph H. Gibbs] [Montgomerie Ranking]. *Ralph Thomas*, Handbook Fictitious Names, p. 35.

polyodic^{1} (pol-i-ō′dik), *a.* [Gr. πολύς, many, + ᾠδή, song, + *-ic.*] In *music*, same as *polyphonic*, 3. Attempts are occasionally made to differentiate these terms (as by Rockstro in *Grove's* Dict. of Music (edition 1883), III. 288, note), but they are not sustained by usage.

polyodic^{2} (pol-i-od′ik), *a.* [Fr. *polyodique*, < Gr. πολύς, many, + ὁδός, way.] In *biol.*, advancing along several paths: used by Giglio-Tos, in the phrase *polyodic development*, opposed to the *monodic development* advocated by him, which sets out with the principle that owing to the nature of 'bimolecular development' two daughter-cells must be different from each other and from the mother-cell. [Rare.]

polyodontal (pol″i-ọ̄-don′tạl), *a.* [*polyodont* + *-al*^{1}.] 1. Same as *polyodont.*—2. In *elect.*, having several armature teeth for each pole of the field: said of certain generators and motors.

Low-voltage machines are usually provided with *polyodontal* windings, these windings having several separate armature teeth per pole per phase, while the high-voltage machines are generally monodontal. *Encyc. Brit.*, XXXI. 889.

polyodontia (pol″i-ọ̄-don′ti-ạ̈), *n.* [NL., < Gr. πολύς, many, + ὀδούς (ὀδοντ-), tooth.] The presence of supernumerary teeth.

polyœstrous (pol-i-es′trus), *a.* [*polyœstr*(*um*) + *-ous.*] Having two or more recurrent periods of sexual desire: contrasted with ★*monœstrous.* *Philos. Trans. Roy. Soc.* (London), 1903, ser. B, p. 50.

polyœstrum (pol-i-es′trum), *n.* [NL., < Gr. πολύς, many, + οἶστρος, vehement desire.] The fact or condition of having several successive periods of sexual desire, as some domesticated animals.

There is a perfect gradation between the monœstrous condition of some wild sheep and the extreme *polyœstrum* of certain merinos. *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 484.

polyonychia (pol″i-ọ̄-nik′i-ạ̈), *n.* [NL., < Gr. πολύς, many, + ὄνυξ, nail.] The presence of supernumerary nails.

polyophthalmia (pol″i-of-thal′mi-ä), *n.* [NL., < Gr. πολύς, many, + ὀφθαλμός, eye.] In *teratol.*, the presence of more than two eyes.

Polyopia monophthalmica, a condition in which an object regarded by one eye appears double or multiple. *Buck*, Med. Handbook, III. 493.

polyopsia, poliopsy (pol-i-op′si-ạ̈, -op′si), *n.* [NL., < Gr. πολύς, many, + ὄψις, view.] Same as *polyopia.*

polyorchis (pol-i-ôr′kis), *n.* [Gr. πολύς, many, + ὄρχις, testicle.] One who has more than two testicles.

polyorchism (pol-i-ôr′kizm), *n.* [Gr. πολύς, many, + ὄρχις, testicle, + *-ism.*] A condition in which there are more than two testes.

polyorexia (pol″i-ọ̄-rek′si-ạ̈), *n.* [NL., < Gr. πολύς, much, + ὄρεξις, appetite.] Excessive appetite. Also *polyorexis.*

polyose (pol′i-ōs), *n.* [*poly-* + *-ose.*] An old name for ★*polysaccharide.*

polyotia (pol-i-ō′shi-ä), *n.* [NL., < Gr. πολύς, many, + οὖς (ὠτ-), ear.] In *teratol.*, the presence of more than two ears.

polyp, *n.* 2. In *pathol.*, same as *polypus*, 2.

polypal (pol′i-pạl), *a.* [*polyp* + *-al*^{1}.] Of or pertaining to a polyp.

The *polypal* wall throughout is nearly transparent and only slightly coloured. *Trans. Linn. Soc.*, Zool., Oct., 1902, p. 299.

polypapilloma (pol-i-pap-i-lō′mạ̈), *n.* [NL., < Gr. πολύς, many, + NL. *papilloma.*] An affection characterized by the presence of many papillomata.

polypathia (pol-i-path′i-ạ̈), *n.* [NL., < Gr. πολύς, many, + πάθος, disease.] The simultaneous occurrence of several diseases in the same individual.

polypeptide (pol-i-pep′tid), *n.* [Gr. πολύς, many, + E. *peptide.*] A chemical product formed by the condensation of two or more amino-acid radicals. *Emil Fischer.*

polyperythrin (pol″i-pe-rith′rin), *n.* [*polyp* + *erythrin.*] A floridin (respiratory pigment) found in certain cœlenterates.

polypetal (pol′i-pet-ạl), *n.* [*polypetal*(*ous*).] A polypetalous plant. *Grant Allen.* [Rare.]

polyphagist (pọ̄-lif′ạ-jist), *n.* [*polyphag*(*ic*) + *-ist.*] One who practises polyphagy; an omnivorous animal. [Rare.]

polyphagous, *a.* 2. Specifically, of certain animal parasites, requiring more than one host in order to complete their life-cycle: contrasted with ★*monophagous*, 2.

polyphalangism (pol-i-fạ̄-lan′jizm), *n.* [Gr. πολύς, many, + φάλαγξ, phalanx, + *-ism.*] The presence in a finger or toe of more than the normal number of phalanges.

polypharmacist (pol-i-fär′mạ-sist), *n.* [*polypharmac*(*y*) + *-ist.*] One who practises polypharmacy. [Rare.]

polypharmacon (pol-i-fär′mạ-kon), *n.*; pl. *polypharmaca* (-kạ̈). [Gr. πολυφάρμακος, having many drugs, < πολύς, many, + φάρμακον, drug.] A compound remedy containing many ingredients.

polyphase (pol′i-fāz), *a.* [Gr. πολύς, many, + E. *phase*^{1}, *n.*] In *elect.*, having components of various phase: referring to an alternating-current system in which several currents of equal frequency are used, which differ from one another in phase by a definite fraction of a period, as, in the three-phase system, three currents differing by one third period, in a quarter-phase system, two currents differing by one quarter period. Polyphase systems have the advantage of being better suited for power transmission and distribution than the single-phase system, and are therefore usually preferred. They require three or more conductors for transmission, and apparatus can be connected either between the different conductors of the system, or from the respective conductors to a common neutral conductor. In the former case the connection is called *ring-connection*, in the latter, *star-connection*, and the currents flowing in these respective connections *ring-currents* and *star-currents.* In the three-phase system, the ring-connection is usually called *delta-connection*, the star-connection *Y-connection.* The different circuits of polyphase apparatus may be designed for star- or for ring-connection, without essential change of their electrical characteristics.

polyphaser (pol′i-fā-zėr), *n.* In *elect.*, a polyphase alternating-current generator.

polyp-head (pol′ip-hed), *n.* Same as ★*hydrocephalis.*

polyphrasia (pol-i-frā′ziạ̈), *n.* [NL., < Gr. πολύς, much, + φράσις, speaking.] Garrulousness, especially as a symptom of a pathological condition.

polyphylesis (pol″i-fī-lē′sis), *n.* [Gr. πολύς, many, + φῦλον, tribe, + *-esis.*] In *biol.*, the independent or polyphyletic origin of a variety or race or species at different times or in different places.

> Whether or not the peach has proceeded from the almond, it has certainly given rise to nectarines. . . . Peter Collinson, in 1741, recorded the first case of a peach-tree producing a nectarine, and in 1766 he added two other instances. . . . Professor Chapman states that he has often seen in Virginia very old peach-trees bearing nectarines.
> *Darwin*, Variation of Animals and Plants, I. 360–362.

> The growing belief in *polyphylesis.*
> *Science*, June 10, 1904, p. 885.

polyphyodontism (pol-i-fī-ọ-don′tizm), *n.* [*polyphyodont* + *-ism.*] The fact or condition of having several sets of teeth, or a succession of teeth, as fishes and toothed reptiles. *Proc. Zool. Soc. London*, 1897, p. 598.

polypide-bud (pol′i-pid-bud″), *n.* In polyzoans, a bud originating in the zoœcium or in a statoblast. In the former case the development of the bud follows the degenerative changes that result in the formation of the ★brown body (which see).

> The budding of Polyzoa has been studied by Seeliger (*loc. cit.*), who finds, with most others who have investigated this subject, that the *polypide-bud* is derived from ectoderm and mesoderm only. *Encyc. Brit.*, XXXI. 527.

polypine (pol′i-pin), *a.* [*polyp* + *-ine.*] Of the nature of or belonging to polyps. *N. E. D.*

polyplast (pol′i-plȧst), *n.* [Gr. πολύς, many, + πλαστός, formed.] A polyplastic cell; a cell that assumes various forms or undergoes transformation into an element of different character.

Polyplastina (pol-i-plas-tī′nạ̈), *n. pl.* [NL.] In Labbe's classification of the *Coccidiidea*, a group in which the schizont divides into numerous archispores. It includes *Eimeria*, *Klossia*, and other genera. Compare ★*Oligoplastina.*

polyplegia (pol-i-plē′ji-ạ̈), *n.* [NL., < Gr. πολύς, many, + πληγή, stroke.] **1.** Paralysis of many muscles simultaneously or in succession.—**2.** Same as ★*pamplegia.*

polypnœic, polypneic (pol-ip-nē′ik), *a.* [*polypnœa* + *-ic.*] Relating to, characterized by, or causing, polypnœa or rapid breathing.

polypodia (pol-i-pō′di-ạ̈), *n.* [NL., < Gr. πολύπους, many-footed, < πολύς, many, + πούς (ποδ-), foot.] In *teratol.*, the presence of more than two feet.

polypodous (pọ-lip′ọ-dus), *a.* [Gr. πολύπους (πολυποδ-), many-footed, + *-ous.*] Having many legs, or having many abdominal legs; polypod. *A. S. Packard*, Text-book of Entom., p. 22.

polypody, *n.* **2.** In *zoöl.*, the condition of having many legs or many abdominal legs.

> In these insects the *polypody* in the embryo is outgrown, or lost, the embryos and larvæ not having even the temporary rudiments of abdominal appendages.
> *A. S. Packard*, Text-book of Entom., p. 707.

3. Same as ★*polypodia.*—**Golden polypody**, *Phlebodium aureum*, an epiphytic middle American fern, the stout creeping rootstock of which is densely clothed with bright golden chaffs.—**Gray polypody**, the hoary polypody, *Polypodium polypodioides.* See *polypody*, 1.

polyporaceous (pol″i-pō-rā′shius), *a.* Resembling or belonging to the fungous family *Polyporaceæ.*

polypore (pol′i-pōr), *n.* [NL. *Polyporus.*] A fungus belonging to the genus *Polyporus.*

> Several years ago a correspondent in the Northwest sent me a fine specimen of a *polypore* which he found on the trunk of a tall tree in northern Idaho or western Montana. *Science*, Dec. 12, 1902, p. 954.

polyporic (pol-i-pō′rik), *a.* [*Polyporus* + *-ic.*] Found in plants of the genus *Polyporus.*—**Polyporic acid**, a yellowish crystalline acid, $C_{18}H_{14}O_4$, found in a fungus of the genus *Polyporus.*

polypose² (pol′i-pōz), *n.* [*poly-* + *pose*².] **1.** A combination or trick photograph in which a person appears in several positions on the same plate.—**2.** A multiphotograph. See ★*multiphotography.* *Wall*, Dict. of Photog., p. 520.

polypotrite (pol′i-pọ-trīt), *n.* [L. *polypus*, polypus, + *tritus*, pp. of *terere*, crush.] A surgical instrument used for the removal of polypi by crushing.

polypragmatism (pol-i-prag′mạ-tizm), *n.* [*polypragmat(ic)* + *-ism.*] The character of being polypragmatic, or officious, or meddlesome.

polypragmatist (pol-i-prag′mạ-tist), *n.* [*polypragmat(ic)* + *-ist.*] One who is polypragmatic, or officious, or meddlesome.

polyprene (pol′i-prēn), *n.* The colorless hydrocarbon $C_{10}H_{16}$, occurring in india-rubber. The impurities are removed by successive extraction with water, alcohol, and ether. The residue is dissolved in chloroform and precipitated as pure polyprene by adding alcohol. It is apparently a polyterpene of high molecular weight.

polyprothesy (pol-ĭ-proth′e-si), *n.* [Gr. πολύς, many, + πρόθεσις, preposition. See *prothesis.*] In *philol.*, the habit of using many prepositions: opposed to ★*oligoprothesy.*

polyprothetic (pol″i-prọ-thet′ik), *a.* Characterized by polyprothesy.

polypsychical} (pol-i-sī′ki-kạl), *a.* [*poly-* + *psychical.*] Having many souls; many-souled. *N. E. D.* [Rare.]

> The master [Wordsworth], indeed, was a prophet of humanity; but he was wiser in love than terror, in admiration than pity, and rather intensely than actively human; capacious to embrace within himself the whole nature of things and beings, but not going out of himself to embrace anything; a poet of one large sufficient soul, but not *polypsychical* like a dramatist.
> *Mrs. Browning*, The Book of the Poets, p. 393.

polypsychism (pol-i-sī′kizm), *n.* [Gr. πολύς, many, + ψυχή, soul, + *-ism.*] **1.** The doctrine or theory that a multiplicity of souls exists in each person.

> Polyzoism.—The property, in a complex organism, of being composed of minor and quasi-independent organisms (like the polyzoa or "sea-mats"). . . . The word *polypsychism* is sometimes used to express the psychical aspect of polyzoism.
> *F. W. H. Myers*, Human Personality, I. Glossary.

2. The belief that natural phenomena are caused by a multiplicity of spiritual beings. *N. E. D.*

polyricinoleic (pol-i-ris-i-nō′lẹ-ik), *a.* [*poly-* + *ricinol(ic)* + *-e-ic.*] Formed, by condensation, from ricinolic acid.—**Polyricinoleic acid**, a name applied to complex acids formed by the condensation of ricinolic acid, which can be recovered by treatment with hot alcoholic potash.

polysaccharide (pol-i-sak′ạ-rid), *n.* [*poly-* + *saccharide.*] One of the group of complex carbohydrates which yield simple sugars when hydrolyzed by the action of enzymes, acids, or alkalis. The term sometimes includes the disaccharides and trisaccharides, but is more correctly limited to substances of the general formula $(C_6H_{10}O_5)_n$, where *n* is probably a large number. Starch, cellulose, dextrine, glycogen, and gums are polysaccharides.

polysaccharine (pol-i-sak′ạ-rin), *a.* Of the nature of a polysaccharide.

polysalicylide (pol-i-sal′i-si-līd), *n.* A crystalline condensation-product of salicylic acid, $\left(C_6H_4<\begin{matrix}CO\\O\end{matrix}\right)_n$, formed, together with tetrasalicylide, when a solution of the acid in toluene is heated with phosphorus oxychlorid. It is slowly converted into salicylic acid by the action of boiling concentrated caustic soda.

polyscopic (pol-i-skop′ik), *a.* [*polyscop(e)* + *-ic.*] Pertaining to, or of the nature of, a polyscope; multiplying objects, as a lens. See *polyscope*, 1.—**Polyscopic lens.** See ★*lens.*

polysemant (pol-i-sē′mạnt), *n.* [LG. πολυσήμαντος, having many meanings, < Gr. πολύς, many, + σῆμα, sign.] A word having more than one signification.

polysemantic (pol″i-sẹ-man′tik), *a.* [*polysemant* + *-ic.*] Having more than one signification, as a word.

polysemous (pol-i-sē′mus), *a.* [Gr. πολύς, many, + σῆμα, sign.] Having many meanings.

polyseptate (pol-i-sep′tāt), *a.* Same as *multiseptate.*

polyserial (pol-i-sē′ri-ạl), *a.* [Gr. πολύς, many, + L. *series*, series, + *-al*¹.] Arranged in many or multiple series.

polysialia (pol″i-sī-ā′li-ạ̈), *n.* [NL., < Gr. πολύς, many, + σίαλον, saliva.] Excessive flow of saliva; salivation; ptyalism.

polysiderite (pol-i-sid′e-rīt), *n.* [Gr. πολύς, many, + E. *siderite.*] A name given by Daubrée to those meteoric stones, or aërolites, which are characterized by a relatively large amount of nickeliferous metallic iron present in disseminated grains. See ★*meteorite.*

polysilicate (pol-i-sil′i-kāt), *n.* [Gr. πολύς, many, + E. *silicate.*] A salt which may be viewed as containing two or more combining units of silicon dioxid combined with the oxid or oxids of more basic elements or radicals, as orthoclase, $KAlSi_3O_8$ or $K_2Al_2Si_6O_{16} = K_2O.Al_2O_3.(SiO_2)_6$.

polysilicic (pol″i-si-lis′ik), *a.* [Gr. πολύς, many, + E. *silicon* + *-ic.*] Noting an acid which may be viewed as containing two or more combining units of silicon dioxid combined with the elements of water, as the hypothetical acid represented by the formula $H_4Si_3O_8 = (H_2O)_2.(SiO_2)_3$.

polysiphonic (pol″i-sī-fon′ik), *a.* [Gr. πολύς, many, + E. *siphon* + *-ic.*] Composed of several adherent tubes, as the hydrocaulus of some hydromedusans. Compare ★*monosiphonic.* *Sedgwick*, Textbook of Zoölogy, I. 125.

polysolvol (pol-i-sol′vol), *n.* [*poly-* + L. *solvere*, dissolve, + *-ol.*] A trade-name of sodium sulphoricinate.

polysomatous (pol-i-sō′mạ-tus), *a.* [Gr. πολύς, many, + σῶμα (σωματ-), body, + *-ous.*] Having several bodies.

polysomia (pol-i-sō′mi-ạ̈), *n.* [NL., < Gr. πολύς, many, + σῶμα, body.] In *teratol.*, the condition of having more than one body.

polyspermatous (pol-i-spėr′mạ-tus), *a.* Same as *polyspermous.*

polyspermia (pol-i-spėr′mi-ạ̈), *n.* [NL., < Gr. πολύς, many, much, + σπέρμα, seed.] **1.** Excessive secretion of semen.—**2.** Same as *polyspermy.*

polyspermic (pol-i-spėr′mik), *a.* [*polysperm(y)* + *-ic.*] Pertaining to or characterized by polyspermy or polyspermia.

polyspondyly (pol-i-spon′di-li), *n.* [Gr. πολύς, many, + σπόνδυλος, vertebra.] The character of being made up of a number of slender rings more numerous than the neural and hæmal arches: noting a type of vertebral column characteristic of the chimæroid fishes.

polystation (pol′i-stā-shọn), *n.* [Gr. πολύς, many, + E. *station.*] In *telephony*, a station having a party line and thus serving several subscribers. Also *multistation.* *Abbot*, Telephony, v.

polystele (pol′i-stēl), *n.* [Gr. πολύς, many, + στήλη, pillar.] In *bot.*, an axial cylinder which has more than one plerome strand. See ★*stele*³, 2.

polystelic (pol-i-stē′lik), *a.* [*polystele* + *-ic.*] In *bot.*, having more than one stele or plerome strand in the axial cylinder, as in the genus *Gunnera.* See ★*stele*³, 2.

polystelous (pol-i-stē′lus), *a.* Same as ★*polystelic.*

polystely (pol-i-stē′li), *n.* [*polystele* + *-y*³.] In *bot.*, the condition of being polystelic.

polystichia (pol-i-stik′i-ạ̈), *n.* [NL., < Gr. πολύς, many, + στίχος, row.] The presence of more than one row of eyelashes on each lid.

polystichoid (pọ-lis′ti-koid), *a.* [NL. *Polystich(um)* + *-oid.* See *polystichous.*] Of, having the characters of, or resembling, *Polystichum*, a genus of polypodiaceous ferns. See ★*Polystichum.*

Polystichum (pọ-lis′ti-kum), *n.* [NL. (Roth, 1800), < Gr. πολύς, many, + στίχος, row, probably referring to the rows of sori.] A genus of dryopteroid polypodiaceous ferns well marked by their erect habit, dryish texture, and chaffy vascular parts, and by having the ultimate divisions of the frond mainly auriculate and spinulose. It is distinguished from *Dryopteris* by its centrally peltate indusia. There are about 75 species, mainly boreal in distribution, many of them well known. See *holly-fern*, *Christmas fern* (under *Christmas*), and *Aspidium*, 1.

Polystictus (pol-i-stik′tus), *n.* [NL. (Fries, 1851), < Gr. πολύς, many, + στικτός, punctured, dotted, spotted.] A large genus of fungi of the family *Polyporaceæ*, having the pileus mostly leathery and the pores consisting of a single layer, usually developing from the center toward the margin. Over 450 species are given by Saccardo. They are widely distributed and occur chiefly on decaying wood. *P. sanguineus* is a common species having a bright red pileus.

polystigm, *n.* 2. See ★*polystim.*

polystim (pol′i-stim), *n.* [For *polystigm.*] In *geom.*, a system of *n* coplanar points (dots), with all the ranges they determine (connectors).

polystomous (pọ-lis′tọ-mus), *a.* Same as *polystomatous.*

polystylar (pol-i-stī′lạ̈r), *a.* Same as *polystyle.*

polysulphid (pol-i-sul′fid), *n.* [Gr. πολύς, many, + E. *sulphid.*] A simple sulphid containing in its molecule more than one atom of sulphur, as calcium pentasulphid, CaS_5.

polysulphonic (pol″i-sul-fon′ik), *a.* [Gr. πολύς, many, + E. *sulphonic.*] Containing more than one sulphonic group, $(-SO_3H)$.—**Polysulphonic acid**, an organic acid containing more than one sulphonic group, as benzene-trisulphonic acid, $C_6H_3(SO_3H)_3$.

polysulphuret (pol-i-sul′fụ̄-ret), *n.* Same as ★*polysulphid.*

polysyllabicity (pol″i-sil-ạ̈-bis′i-ti), *n.* [*polysyllabic* + *-ity.*] Same as *polysyllabicism.*

polysyndetic (pol″i-sin-det′ik), *a.* [*polysyndet*(*on*) + *-ic.*] Of the nature of or characterized by polysyndeton.

polysynthetize (pol-i-sin′the-tīz), *v. i.*; pret. and pp. *polysynthetized*, ppr. *polysynthetizing*. [*polysynthet*(*ic*) + *-ize.*] To employ, or exhibit, polysynthesis; have a polysynthetic character.

> More remarkable still is the usage of the *polysynthetising* languages of North America, where the idea of time or mode is altogether absent from the verb, and personal relations are alone indicated.
>
> *Sayce*, Principles of Comparative Philol., p. 93.

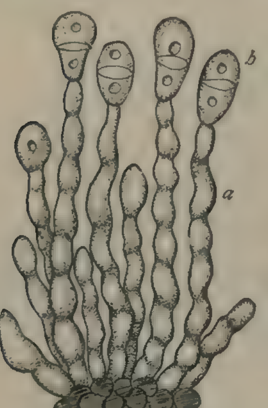
polytechnician (pol″i-tek-nish′ạ̈n), *n.* [F. *polytechnicien*, < *polytechnic* + *-ian.*] A student or graduate of a polytechnic school.

polytelite (pọ-lit′e-līt), *n.* [Gr. πολυτελής, very valuable, + *-ite*2.] A finely granular ore from mines near Freiberg in Saxony, probably an argentiferous tetrahedrite.

polythelia (pol-i-thē′li-ạ̈), *n.* [NL., < Gr. πολύς, many, + θηλή, nipple.] The presence of supernumerary nipples on the breasts.

polythionic (pol″i-thī-on′ik), *a.* Noting any one of a series of acids each member of which contains in its molecule two atoms of hydrogen and six of oxygen, with a number of sulphur atoms varying from two to six: as dithionic acid, $H_2S_2O_6$, and tetrathionic acid, $H_2S_4O_6$.

Polythrincium (pol-i-thrin′si-um), *n.* [NL. (Kunze, 1817).] A genus of hyphomycetous fungi having erect dark-colored fasciculate conidiophores which bear uniseptate greenish conidia. The single species, *P. Trifolii*, causes a leaf-spot of clover. It is said to be the conidial condition of *Thyllachora Trifolii.*



Polythrincium Trifolii.
a, conidiophores; *b*, conidia. Enlarged.
(Drawn from Engler and Prantl's "Pflanzenfamilien," after Corda.)

polytone (pol′i-tōn), *n.* [Gr. πολύς, many, + E. *tone*1.] Having several or varied tones: opposed to *monotone.*

polytopic (pol-i-top′ik), *a.* [Gr. πολύς, many, + τόπος, place, + *-ic.*] 1. Same as ★*polytopical.*—2. Of or pertaining to polyphylesis with respect to space, or the independent origin, in two or more places, of a variety or race or species.

> The idea that a species may originate in more than one place, simultaneously or not, did not originate with Briquet, but he resuscitated it and christened it the *polytopic* theory. *Science*, June 10, 1904, p. 885.

polytopical (pol-i-top′i-kạ̈l), *a.* [*polytopic* + *-al*1.] Relating to or discussing a number of topics.

> Polygraphic denoting . . . collections of several works by one or many authors, *polytopical* denoting works on many subjects.
>
> *C. A. Cutter*, Rules for a Dict. Cat. (4th ed.), p. 21.

polytrichia (pol-i-trik′i-ạ̈), *n.* [NL., < Gr. πολύτριχος, very hairy, < πολύς, many, + θρίξ (τριχ-), hair.] The presence of hair on unusual locations or in excessive amount.

polytrophic (pol-i-trof′ik), *a.* [Gr. πολύς, many, + τροφή, nourishment, + *-ic.*] Capable of carrying on more than one kind of fermentation: applied to certain bacteria. See ★*monotrophic.*

polytropic, *a.* 2. Versatile; capable of adopting various expedients. *N. E. D.* [Rare.]—3. Noting the action of certain poisons upon more than one variety of cells or tissues.

> In the case of "*polytropic*" poisons—and a very large number of poisons must come under this category—the chief response—i.e., the chief antitoxin production—might take place in tissues which the clinician could not discover to have been affected.
>
> *Lancet*, March 16, 1901, p. 784.

Polytropic curve. See ★*curve.*

polytungstate (pol-i-tung′stāt), *n.* [*poly-* + *tungstate.*] A salt which may be viewed as consisting of two or more combining units of tungsten trioxid combined with the oxid of a more basic element or radical, as sodium metatungstate, $Na_2W_4O_{13} = Na_2O.(WO_3)_4$.

polytungstic (pol-i-tung′stik), *a.* [*poly-* + *tungst*(*en*) + *-ic.*] Noting an acid which may be viewed as containing two or more combining units of tungsten trioxid combined with the elements of water, as metatungstic acid, $H_2W_4O_{13} = H_2O_1\,(WO_3)_4$.

polytypal (pol-i-tī′pal), *a.* [Gr. πολύς, many, + τύπος, type, + *-al*1.] Same as *polytypical.*

polyvalence (pọ-liv′ạ-lẹns), *n.* [*poly-* + *valence*2.] Same as *multivalence.*

polyvalent (pọ-liv′ạ̈-lẹnt), *a.* [*poly-* + *valent.*] Having a valence greater than unity: used of chemical elements and radicals. The term is sometimes used, less correctly, of compounds, especially of alcohols and phenols, derived from polyvalent radicals. Such compounds are now correctly termed *polyacid alcohols.*

> The oxidation of *polyvalent* phenols by laccase leads not only to organic acids, but even to the production of carbonic acid. Bertrand observed in one case that for 23.3 cc. absorbed oxygen as much as 13.7 cc. of carbonic acid were produced. *U. S. Dept. Agr.*, Rep. 59, p. 26.

Polyvalent serum. See ★*serum.*

polyxene (pol′ik-sēn), *n.* [Gr. πολύς, many, + ξένος, host.] The name given by Hausmann to native platina on account of the large number of rare metals it contains.

polyxeny (pọ-lik′se-ni), *n.* [Gr. πολύς, many, + ξένος, host, + *-y*3.] De Bary's term for fungi which inhabit hosts of several different species. See ★*monoxeny* and ★*dixeny.*

polyzoic, *a.* 2. Having the characters of the *Polyzoa*; existing in the form of a colony composed of a number of zoöids.—3. In *Sporozoa*, designating a spore that produces many falciform bodies. Contrasted with ★*monozoic*, ★*dizoic*, etc. *Labbé.*—4. In cestodes, having the body consisting of metamerically arranged regions each containing a set of generative organs, as in *Tænia.* Compare ★*monozoic.*

polyzoism (pol-i-zō′izm), *n.* [*polyzo*(*ic*) + *-ism.*] The habit of life of the *Polyzoa*; existence as a colony of zoöids.

polyzoniid (pol-i-zō′ni-id), *n.* and *a.* I. *n.* A member of the myriapodous family *Polyzoniidæ.*

II. *a.* Having the characters of or belonging to the family *Polyzoniidæ.*

pom., pomol. Abbreviations of *pomological.*

pomace-fly (pum′ạ̄s-flī), *n.* Any one of several flies, of the genus *Drosophila*, which are attracted to and breed in overripe fruit or apple-pomace.—**Vine-loving pomace-fly**, *Drosophila ampelophila*, a species of fly fond of overripe grapes.

pomarosa (pō-mä-rō′sä), *n.* [Sp. *poma*, apple, + *rosa*, rose.] The rose-apple. See ★*jambos.*

pomato (pọ-mä′tō or pọ-mā′tō), *n.* [*po*(*tato*) + (*to*)*mato.*] A fruit said to be the result of amalgamation of the potato and tomato, produced by Luther Burbank. It is a small tomato-like fruit, with white flesh, edible either raw or cooked.

> The "*pomato*," one of the most wonderful creations, now under way. This may be called a tomato growing upon a potato. It produces in abundance a white, fragrant, succulent, delicious fruit upon the potato-tops, something unlike any fruit ever known before, and may be eaten cooked or as a salad, or as other fresh fruits, the flavor resembling the "po-ha" berry of the Hawaiian Islands. *The Century*, March, 1905, p. 668.

pomegranate.—**Native pomegranate**, in Australia, either of two small trees of the caper family, *Capparis nobilis*, also called *caper-tree*, and *C. Mitchellii*, also known as *native orange.* The fruits of the latter species are less than half the size of those of the former; hence it is usually known as *small native pomegranate.* See *caper-tree* and *native* ★*orange* (*b*).

pomette bleue (po-met′blė′), *n.* [French, *pommette*, dim. of *pomme*, apple; *bleue*, fem. of *bleu*, blue.] The hog's-haw, *Cratægus brachyacantha*, found along streams, etc., from southern Arkansas to Louisiana and Texas. It is a beautiful round-topped tree 40 or 50 feet high, with clusters of bright blue fruit in August.

pomiculture (pō′mi-kul-tụ̈r), *n.* [L. *pomum*, fruit, + *cultura*, cultivation.] Fruit culture; the cultivation and improvement of fruit.

> The Bosniacs show themselves absolutely incapable of *pomiculture*; they plant their fruit-trees almost as close together as cabbages and expect them to thrive. Our Consul produced magnificent peaches by simply planting the miserable Bosnian substitute properly.
>
> *A. J. Evans*, Through Bosnia, vi.

pomiculturist (pō′mi-kul″tụ̈r-ist), *n.* [*pomicultur*(*e*) + *-ist.*] One who is occupied with pomiculture or the raising of fruit.

pommel-joint (pum′el-joint), *n.* Same as *saddle-joint.* *Buck*, Med. Handbook, I. 552.

pommer (pum′ėr), *n.* [G.] Same as *bombard*, 6.

Pomodon (pō′mọ-don), *n.* [NL., < Gr. πῶμα, lid, + ὀδούς (ὀδοντ-), tooth.] A genus of serranoid fishes found on the coasts of Chile and Peru.

Pomona green. (*b*) Same as *iodine* ★*green* (*b*).

pomonic (pọ-mō′nik), *a.* [*Pomon*(*a*) + *-ic.*] Of or pertaining to fruits. [Rare.]

pomp2 (pomp), *n.* Short for *pompadour.* [Colloq.]

Pompadour pink. Same as *rose Pompadour* (which see, under *rose*1).

Pompadourism (pom′pạ̈-dör-izm), *n.* [*Pompadour* (see def.) + *-ism.*] Frivolity, like that of the Marquise de Pompadour; a frivolous act or thing. [Rare.]

> It is unfair to relegate it [pastel-painting]—as fashion has foolishly done for so long—to the bunch of pretty triflings which Carlyle called "*Pompadourisms.*"
>
> *Encyc. Brit.*, XXXI. 495.

pompano, *n.*—**Great pompano.** Same as *permit*2.—**Silvery pompano**, *Trachinotus argenteus*, a fish of the West Indies.

pompey1 (pom′pi), *v. t.*; pret. and pp. *pompeyed*, ppr. *pompeying.* [Humorous for *pamper.* Invented by Dickens.] To pamper.

> When I was old enough, I was to be apprenticed to Joe, and until I could assume that dignity I was not to be what Mrs. Joe called "*Pompeyed*," or (as I render it) pampered. Therefore, I was not only odd-boy about the forge, but if any neighbour happened to want an extra boy to frighten birds . . . I was favoured with the employment. *Dickens*, Great Expectations, vii.

pompey2 (pom′pi), *a.* [Origin obscure.] Bulging or sagging in a dangerous degree: said of a floor in a burning building; also, applied to ice when it is in a similar dangerous condition from thawing, etc. [Local, U. S.]

> The floor is "*pompey*," as the firemen say, when it bulges and sags. It is then time to get out. That is all true. It was thought time and again that firemen had been lost in the building. *N. Y. World*, Jan. 3, 1904.

pompholygous (pom-fol′i-gus), *a.* [Gr. πομφόλυξ (-λυγ-), a bubble, + *-ous.*] Affected with pompholyx. *N. E. D.*

> I have received a Scotch paper, in which it is stated that poor "Maud" is to be slashed all to pieces by that mighty man, that *pompholygous*, broad-blown Apollodorus, the gifted X.
>
> *Tennyson*, in Alfred Lord Tennyson: A Memoir, I. 410.

pompier (pôṅ-pyā′), *n.* [F., a pump-maker, etc., < *pompe*, a pump.] 1. In France: (*a*) A fireman. (*b*) In the tailoring business, a bushelman; a repairer.—2. A scaling-ladder used by firemen. See cut under *ladder.*

> The . . . *pompier* as it is called consists of a 15-foot length of narrow and very tough hickory, with a two-foot steel hook on one end and stout hickory crossbars at intervals of a foot throughout the length of the ladder. The hook, it may be explained, is armed with sharp teeth.
>
> *Sci. Amer.*, April 4, 1903, p. 240.

pompilid (pom′pi-lid), *n.* and *a.* I. *n.* A member of the hymenopterous family *Pompilidæ.*

II. *a.* Having the characters of or belonging to the family *Pompilidæ.*

pompom1 (pom′pom), *n.* [Imitative of the sound of the discharge.] A one-pounder automatic Maxim gun. [Colloq.]

pompom2 (pom′pom), *n.* [American Indian (Yakima).] A religious dance observed by the Yakima Indians of Washington, similar in character to the religious dances held by other tribes of the plateaus of Washington, Idaho, Montana, and British Columbia. It seems that the pompom relates to the belief of the return of the dead. Young people have the right to contract marriages during these dances.

pompon^3 (pom-pōn′), *n.* [Cuban Sp.] A common name of *Anisotremus surinamensis*, of the family *Hæmulidæ*, found from Florida to Brazil.

ponceau^1, *n.*—**Anisidine ponceau.** Same as *anisidine* ★*scarlet.*—**Brilliant ponceau G.** Same as ★*ponceau 2R.*—**Brilliant ponceau 2G.** Same as ★*ponceau 2G.*—**Brilliant ponceau 4R.** (*a*) An acid dyestuff of the monoazo type prepared by combining diazotized β-naphthylamine-monosulphonic acid with α-naphthol-monosulphonic acid. Also called *double brilliant scarlet.* (*b*) Same as *cochineal* ★*red A.*—**Crystal ponceau,** an acid coal-tar color of the monoazo type derived from β-naphthylamine. It dyes wool scarlet in an acid bath. Also *crystal scarlet 6R.*—**Cumidine ponceau,** an acid coal-tar color of the monoazo type derived from cumidine. Also *ponceau 4R.*—**Fast ponceau 2B,** an acid coal-tar color of the diazo type prepared by combining diazotized aminoazobenzene-disulphonic acid with β-naphthol-disulphonic acid. It dyes wool scarlet from an acid bath. Also called *ponceau S.*—**Ponceau B, BO, 5R, 3RB, 4RB, 6RB, 2S,** and **10RB,** acid coal-tar colors of the diazo type produced by combining diazotized azo-amido compounds with the various β-naphthol-sulphonic acids. They all dye wool various hues of scarlet from an acid bath.—**Ponceau 2G,** an acid coal-tar color of the monoazo type prepared by combining diazotized aniline with one of the β-naphthol-disulphonic acids. It dyes wool a reddish orange from an acid bath. Also called *orange R* and *brilliant ponceau 2G.*—**Ponceau G, 2G, J, JJ, GR, R, 2R, 3R, 4R,** and **RT.,** acid coal-tar colors prepared by combining diazotized amidobenzene, toluene, xylene, or cumidine with one of the β-naphthol-sulphonic acids. They all dye wool various hues of scarlet from an acid bath. **Ponceau 4GB.** Same as *crocein* ★*orange.*—**Ponceau 6R.** Same as ★*scarlet 6R.*—**Ponceau S.** Same as ★*acid-ponceau.*

poncif (poṅ-sēf′), *n.* [F., < *ponce*, pounce.] In *ceram.*, a paper pattern with perforated outlines through which a design can be pounced on to the ware as a guide in decorating it.

pond-duck (pond′duk), *n.* A wild duck.

ponderant (pon′dẹ-rant), *a.* [See *ponderance.*] Having weight; heavy.

ponderary (pon′dẹ-rā̤-ri), *a.* Same as *ponderal.*

pond-hunter (pond′hun″tėr), *n.* A naturalist who devotes himself to the investigation of pond life. *Encyc. Dict.*

> The *pond-hunter* of twenty-five years ago would have found a treasure indeed in a book like this.
>
> *Nature*, Jan. 21, 1897, p. 266.

ponding (pon′ding), *n.* [*pond* + *-ing*^{1}.] The checking of a stream current or the damming back of its waters by some temporary obstruction. The chief causes of natural ponding are faulting and differential elevation or warping of the strata, an effective dam often resulting from the folding or displacement.

> If the *ponding* is slight, a marsh may develop above the obstruction; if more considerable, a lake is formed.
>
> *Chamberlin and Salisbury*, Geol., I. 163.

pond-man (pond′man̤), *n.*; pl. *pond-men* (-men). In *logging*, one who collects logs in the mill-pond and floats them to the gangway.

pond-skater (pond′skā″tėr), *n.* Any one of the aquatic bugs of the family *Hydrobatidæ*. See *skater*, 2.

pond-smelt (pond′smelt), *n.* *Hypomesus olidus.* See *smelt*^{2}, 1 (*b*).

pond-tortoise (pond′tôr″tis), *n.* Any small fresh-water turtle.

pone^3, *n.* 2. In English and American card games, as bridge, the player who sits at the right of the dealer. See ★*bridge*^{2}.

ponerid (pọ-nē′rid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Poneridæ*.

II. *a.* Having the characters of or belonging to the family *Poneridæ*.

poneroid (pọ-nē′roid), *a.* [NL. *Poner(a)* + *-oid.*] Resembling ants of the family *Poneridæ*.

pong (pong), *v. i.* [Origin obscure.] To improvise on the stage; gag. [Slang.]

pongo, *n.* 3. The larger flying phalanger of Australia, belonging in the genus *Petauroides*. [Australia.]

Pon. Max. An abbreviation of the Latin *Pontifex Maximus*, Supreme Pontiff.

Pons-oblongata, the pons Varolii and medulla oblongata considered together.

pont^1†, *n.* [L. *pons* (*pont-*), a bridge.] A bridge.

pont^2 (pont), *n.* [D. *pont*, a boat.] 1†. A large flat-boat; a float.—2. A ferry-boat operated by means of a cable. [South Africa.]

Pontian stage. See ★*stage.*

ponticello (pọn-ti-chel′lō), *n.* [It., dim. of *Ponte*, < L. *pons* (*pont-*), bridge. See *pons.*] 1. Same as *bridge*^{1}, 7.—2. A break in the voice, especially that below the falsetto. See *break, n.*, 9.—**Sul ponticello,** in *violin-playing*, with the bow close to the bridge.

ponticin (pon′ti-sin), *n.* [NL. (*Rha*)*pontic(um)* + *-in*^{2}.] A crystalline glucoside found in certain species of rhubarb, *Rheum Rhaponticum* and *R. undulatum*.

ponticular (pon-tik′ū-lär), *a.* [*ponticulus* + *-ar*^{3}.] Relating to the ponticulus or propons. *Buck*, Med. Handbook, II. 251.

ponticule (pon′ti-kūl), *n.* [NL. *ponticulus.*] Same as ★*ponticulus*. *Buck*, Med. Handbook, I. 637.

ponticulus (pon-tik′ū-lus), *n.* [NL. use of L. *ponticulus*, a little bridge, dim. of *pons*, a bridge.] In *anat.*: (*a*) Same as *propons*. (*b*) A ridge on the posterior surface of the concha of the ear, giving attachment to the retrahens aurem muscle. (*c*) A ridge which passes between the pyramid and the promontory on the wall of the tympanum. (*d*) A bridge which passes between the right lobe of the liver and the lobus Spigelii.

pontif, *n.* A simplified spelling of *pontiff*.

pontific, *a.* 3. Of or relating to a bridge. [A punning use.]

> 'T is an ill wind, said he, catching off the notary's castor. . . . The poor notary crossed the bridge. . . . Luckless man that I am! said the notary . . . to be driven forth out of my house by domestic winds, and despoiled of my castor by *pontific* ones!
>
> *Sterne*, Sentimental Jour., p. 243.

pontifical^1, *a.*—**Pontifical States,** formerly, in Italy, several central states forming a sovereignty under the spiritual and temporal rule of the Pope. They were, for the most part, merged in the kingdom of Italy in 1860.

Pontine fibers. See ★*fiber*^{1}.

pontinium (pon-tin′i-um), *n.* [NL.] An alloy of 1000 parts of lead, 15 parts of tin, and 1 part of sodium. It is used for lead accumulators. *Electrochem. Industry*, April, 1904, p. 159.

Pontinus (pon-tī′nus), *n.* [NL., < L. *pontinus*, < *pons*, a bridge. The name alludes to the suborbital stay.] A genus of scorpænoid fishes found in rather deep water in warm seas.

ponto (pon′tō), *n.* A factory form of *pontil*.

pontoon, *n.* 6. Same as ★*catamaran*, 4.

pontospinal (pon-tọ-spī′nal̤), *a.* Relating both to the pons Varolii and to the spinal cord.

pony, *n.* 8. Something very small of its kind: an attributive use.

> Besides the full reports delivered to large papers are the "*pony*" reports condensations of the full reports, sold at a cheaper rate.
>
> *Census Bulletin* 216, June 28, 1902, p. 67.

Pony express. See ★*express.*

II. *a.* Having rather short, well rounded bodies: applied to cattle.

pony, *v. t.* 2. To pay; settle; put: with *up*. [Slang, U. S.]

> "*Pony up* or we will run you in." is the formula which secures the requisite backsheesh to the officers of the law. *W. T. Stead*, If Christ came to Chicago, v. 3.

> I took him on to oblige a friend of mine, and to-day a walking delegate told him he would have *to pony up* 10 dols. if he wanted to stay on the job. He has n't earned that much yet.
>
> *Architect and Contract Reporter*, Sup., April 24, 1903, [p. 28.

ponya (pon′yä̆), *n.* [Hopi.] A sort of altar constructed by the religious societies of the Hopi during their ceremonies. *Amer. Anthropologist*, April–June, 1901, p. 212.

pony-grass (pō′ni-gràs), *n.* One of the reed-bents, *Calamagrostis neglecta*, native in northern Europe and North America, ranging along the northern borders of the United States, and most abundant in the Rocky Mountain region. It is liked by stock, especially horses, and has succeeded well under experimental cultivation.

pony-man (pō′ni-man̤), *n.* A man who looks after ponies, or has charge of ponies in a caravan, etc. *Geog. Jour.* (R. G. S.), XV. 563.

poo (pö), *n.* See ★*mancala*.

pooja, *n.* Same as ★*poojah*.

poojah, puja (pö′jä), *n.* [Skt. *puja*, worship.] Rites performed in Hindu idol-worship; any Hindu religious ceremony or rite; also figuratively, in ridicule. *N. E. D.*

pook^1 (pu̇k), *n.* [Also *puck*. Origin uncertain.] 1. A heap, as of hay, oats, or barley: a cock. [Local, Eng.]—2. A thin, tall stack of corn in the sheaf, in shape a steep cone, 9 or 10 feet high, built up temporarily in the harvest-field in wet seasons, for drying the corn before it is carried to the main rick. *N. E. D.* [Local, Eng.]

pook^1 (pu̇k), *v. t.* To make a pook of; make into a pook. [Local, Eng.]

pook^2 (pök), *v. t.* [Origin uncertain.] To pluck or pick with the thumb and finger. [Scotch.]

pooka (pö′kä̆), *n.* [Ir. *pūca*: see *puck.*] In Irish tradition, a spirit or spook in the form of a horse.

pookawn (pö-kân′), *n.* [Also *pookhaun*; appar. a transferred use of Ir. *pucán*, a he-goat.] A one-masted fishing-smack; a 'hooker.' *Eng. Dial. Dict.*

> Unseaworthy curraghs and *pookawns*.
>
> *Jane Barlow*, Founding of Fortunes, p. 170.

pool^1 (pöl), *v.* **I.** *trans.* In *quarrying*, to make a hole in (rock) for inserting a wedge; also, to undermine (coal) to cause (it) to fall.

II. *intrans.* To form pools, as water; stagnate.

pool^2, *n.* 2. There are many varieties of billiards included under the name of *pool*, but they may be reduced to four classes, namely, *pocket-*, *pin-*, *cork-*, and *bottle-pool*, which are variously played with from two to twenty-two balls, the first named usually on a six-pocket and occasionally on a four-pocket table, the second and third on a table without pockets, and the fourth on one with or without pockets.—**Ball-pool,** a game of billiards in which counting is done wholly by holing balls, such as 'pyramid,' 'snooker,' 'two-ball,' etc.; in America, the game usually played with sixteen balls on a six-pocket table.—**Black pool,** an amplification of English billiard-pool, deriving its name from the introduction of a black ball to which exceptional monetary awards and penalties attach. A pink ball is also sometimes added. Masking balls cannot be lifted out of the way, as once was the custom in almost all the English pool games, and as obtains in most still.—**Chicago pool,** one of the varieties of billiard-pool, of American origin. Its object is to hole balls, numbered from 1 to 15, in their numerical order. Also known as *rotation pool* and *crazy pool.*—**Color-ball pool.** See *pool*^{2}, 2 (*b*).—**Continuous pool,** a form of billiard-pool in which the scoring of the game is continued until all the balls in each frame have been pocketed, and the game may consist of any number of balls or points up which may be agreed upon. Each ball pocketed scores one point for the striker, and the game is usually scored upon the string of buttons over the table, as in regular billiards.—**Cork-pool,** a French variety of billiard-pool in which the object is to knock down a cork on top of which the stakings are placed. It is variously played according to locality, sometimes with one cork and sometimes with more. *W. Broadfoot*, Billiards, p. 429.—**Domino pool,** the block-game of dominoes, played for a pool by any number of persons from three to six.—**Fifteen-ball pool.** See *pool*^{2}, 2 (*a*).—**Following pool.** Same as *color-ball* ★*pool.*—**Italian pool,** substantially the same as pin-pool, with the exception that a fourth (blue) ball is used.—**Keeley pool,** an American version of ball-pool.—**Nearest-ball pool,** an English billiard-pool game in which the striker must play at that one of the fifteen object-balls which is nearest his own, unless all balls are in balk when he himself is in hand.—**Pyramid pool.** See *pool*^{2}, 2 (*a*).—**Selling pool,** an English billiard game in which a small stake is played for: not a true pool.—**Single pool,** a variation of ordinary English or color-ball pool. *W. Broadfoot*, Billiards, p. 416.—**Skittle pool,** a billiard game, played in America with ten white and three black pins, and in England with ten white pins, but with never more than two and sometimes with no black pins. The score is 31.—**Snooker pool,** a game in which to the fifteen red balls and most of the ways of English pyramid pool are added many of the ways of ordinary English or following pool, together with four of its balls (brown, blue, green, and yellow), with sometimes a pink and a black ball, the white, as in pyramid pool, always being the cue-ball.—**Three-pool,** a variation of ordinary English or color-ball pool.

pool-table (pöl′tā″bl), *n.* A billiard-table with pockets, usually 6 in number, one in the middle of each side and one at each corner.

poon^2 (pön), *n.* [Korean *hpun*, answering to Chinese *făn* (*fun*), a tenth part.] A subsidiary coin of Korea, equivalent to .08 of a United States cent.

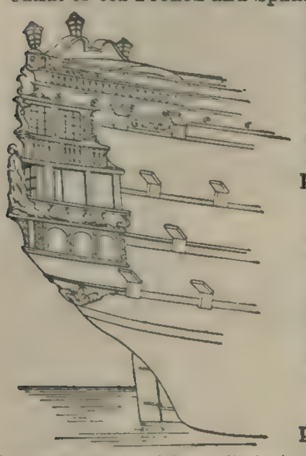
poonac (pö′năk), *n.* [Cingalese.] The oil-cake left after expressing cocoanut-oil from copra or from fresh cocoanuts. It forms an important article of export from Ceylon and is used for feeding cattle and for fertilizing.

Poonah painting. See ★*painting*.

poöphyte (pō′ọ-fīt), *n.* [Gr. πόα, grass, + φυτόν, plant.] A grass-land plant. Poöphytes are regarded by Pound and Clements (the authors of the term) as a subdivision of mesophytes. See ★*mesophyte*.

poöphytic (pō-ọ-fit′ik), *a.* [*poöphyte* + *-ic.*] In *phytogeog.*, consisting of, having the character of, or pertaining to, poöphytes. *Pound and Clements.*

poop-royal (pōp-roi′a̤l), *n.* A short deck peculiar to old French and Spanish ships of the line, and which was placed over the after part of the poop-deck for the exclusive use of the admiral and his staff.



Poop-royal of the Royal George (England).

poop-staff (pöp′ ståf), *n.* A flagstaff at the stern of a vessel.

> The Grosser Carl had fallen away before the wind, and was spouting flame from stem-head to *poop-staff.*
> *Cutcliffe Hyne,* A Master of Fortune, xii.

poop-stringer (pöp′ string″-ėr), *n.* In *nav. arch.*, a continuous horizontal plate fitted on the ends of the poop-deck beams to connect and to strengthen them.

pooquaw (pö′kwâ), *n.* [A reduction of **poquaock, pequaock,* < Narragansett *poquaûhock* (whence also *quahog*), lit. 'closed shell' (in distinction from the gaping clam, *Mya arenaria*), < *pohkeni,* dark (closed), + *hogki,* it covers, in comp., as a noun, a shell, a scale.] The round clam (hard clam). *Jour. Amer. Folk-lore,* Oct.–Dec., 1902, p. 254. [Nantucket.]

poor, *a.*—**Little Sisters of the Poor,** a religious association of women founded in France by the Abbé Le Pailleur for the care of the old and infirm poor. It is now spread throughout the world.

II. *n.* In England, a gadoid fish, *Gadus minutus.*

poor (pör), *v. t.* [*poor, a.*] To pet in a pitying, compassionate way. [Local, U. S.]

poor-man's-flannel (pör″manz-flan′el), *n.* The mullen, *Verbascum Thapsus.*

poor-soldier (pör′sōl″jėr), *n.* A local Australian name for the friar-bird, *Philemon corniculatus,* a large bareheaded honey-eater.

poor-weed (pör′wēd), *n.* One of the button-weeds, *Diodia teres,* found in dry or sandy soils from Connecticut to New Mexico, chiefly near the coast. It is a brownish plant of a low, radiating habit.

pooseback (pös′bak), *adv.* [Appar. < (*pap*) *poose* + *back*¹ (after *pickaback*)] Same as *pickaback. Jour. Amer. Folk-lore,* Oct.–Dec., 1902, p. 254.

pootly-nautch (pöt′li-nâch), *n.* [Also *putli-, puttully-nautch;* < Hind. *kāṭh-putlī-nāch,* 'wooden puppet-dance': *kāṭh,* wood, *putlī,* puppet, *nāch,* dance.] A puppet-show. *Yule and Burnell.*

pop¹, *n.* **4.** The time during which a reaction or pop safety-valve stays open.

> The construction of these valves embodies a self-adjusting feature which automatically regulates the "*pop*" of the valve or maintains the least waste of steam between the opening and closing points, an improvement which will be readily appreciated, as there is no necessity of re-adjusting to regulate the *pop* on changes in the set pressure. *Elect. World and Engin.,* May 28, 1904, p. 1039.

pop⁵ (pop), *n.* A colloquial shortening of *pop-corn:* as, the golden *pops.* See ★*maize,* 1.

pop. An abbreviation of *population.*

p. o. p. In *photog.,* an abbreviation of *printing-out paper. Nature,* Sept. 25, 1902, p. 519.

popadam (pop′a̤-da̤m), *n.* [Also *poppadum, popodam;* < Tamil *pappaḍam,* contr. of *paruppu-aḍam,* lentil cake.] A thin scone or wafer, made of any kind of pulse or lentil flour, seasoned with asafetida, etc., fried in oil, and in western India baked crisp, and often eaten at European tables as an accompaniment to curry. *Yule and Burnell.*

Popanoceras (pop-a̤-nos′e̤-ras), *n.* [NL., < Gr. πόπανον, a round cake, + κέρας, horn.] A genus of phyllocampylous ammonoid cephalopods with compressed discoid, mostly strongly involute shells having a flattened venter and rather simple sutures. They occur in the Permian rocks.

pop-beer (pop′bēr), *n.* A non-alcoholic, sweetened, and variously flavored beverage containing carbon dioxid, sold in bottles: so named from the explosive noise produced by the opening of the bottle. [Colloq., U. S.] *Dialect Notes,* III. iii. p. 196.

pop-centered (pop′sen″tėrd), *a.* Having a conical hole at the center in which to start a drill.

pop-chamber (pop′chām″bėr), *n.* Same as ★*huddling-chamber.*

pop-corn, *n.*—**Golden, pearl, rice pop-corn.** See ★*maize,* 1.

popcorn-flower (pop′kôrn-flou″ėr), *n.* In California, a plant of the genus *Plagiobothrys,* or, more broadly, of any of the genera ncluded under the name *white* ★*forget-me-not* (which see). The white flowers are crowded on the outside of a curled rachis, giving them somewhat the appearance of pop-corn.

pop-eye (pop′ī), *n.* **1.** A deep-sea fish, *Macrourus cinereus,* found in Bering Sea.—**2.** A disease of fishes. It more frequently occurs among those that are kept in hatchery-ponds than among those that are left in a more natural state. In fish affected by it, the eyes protrude from the head, and frequently little blisters appear on different parts of the body.

> They consisted of water bacteria, the pus cocci, bacteria obtained from diseased fishes, a chromogen from the disease known as "*pop-eye.*"
> *Rep. U. S. Fish Com.,* 1901, p. 126.

pop-glove (pop′gluv), *n.* The foxglove.

Popian (pō′pi-a̤n), *a.* Of, belonging to, or resembling, the poet Pope. [Rare.]

> John Keats, in his poem entitled 'Sleep and Poetry,' has well characterized the soulless poetry of the period between the Restoration and the poetical revival in the latter part of the eighteenth century, but more especially of the *Popian* period.
> *H. Corson,* Introd. to Study of Browning's Poetry, i.

Poplar box, goat-moth, leaf-beetle, mocha-stone moth. See ★*box*¹, ★*goat-moth,* ★*leaf-beetle,* ★*moth*¹.

poplar-aphis (pop′lä̤r-ā″fis), *n.* Either *Pemphigus bursarius* or *P. spirothecæ,* both of which form galls on the leaf-stalks of the poplar.

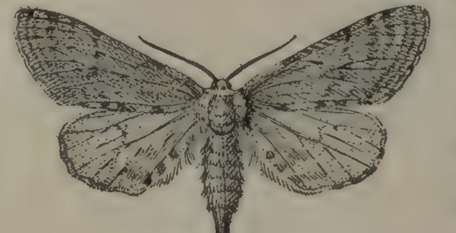
poplar-beetle (pop′lä̤r-bē″tl), *n.* A chrysomelid beetle, *Lina populi,* which feeds on poplar leaves.

poplar-hawk (pop′lä̤r-hâk), *n.* A large sphingid moth, *Smerinthus populi.*

poplar-pine (pop′lä̤r-pīn), *n.* Same as *Lombardy poplar.*

poplar-rust (pop′lä̤r-rust), *n.* See ★*rust*¹.

poplar-worm (pop′lä̤r-wėrm), *n.* Any one of many species of lepidopterous larvæ which feed on the poplar. Among them are the stout poplar span-worm, larva of *Lycia ursaria,* the larvæ of the antiopa, arthemis, and disippus butterflies, the larva of the io moth, and many others, including more than 60 species in the United States alone.



Moth of Poplar Span-worm (*Lycia ursaria*).
Female. Natural size.

poplin, *n.*—**Norwich poplin,** a poplin with a silk warp and a linen weft.

Popliteal fossa. See ★*fossa*¹.

Popocrat (pop′o̤-krat), *n.* [*Pop*(*ulist*) + (*Dem*)*ocrat.*] In U. S. politics, a name sometimes applied to a member of the Democratic party who was alleged to have adopted the principles of the Populists. [Humorous.]

popofka (po-pof′kä̤), *n.* [Russ.] An obsolete Russian type of monitor in which the outline of the deck was approximately circular: named from its inventor, Admiral Popoff.

popoluca (pō-pō-lö′kä̤), *n.* [Nahuatl *popoloca,* one who speaks badly, that is, speaks Nahuatl badly, and hence one who speaks another language.] One who speaks a foreign tongue: a name applied to members of various tribes in Mexico and Central America, but not the name of any particular tribe. Its use has led to much confusion. *Stand. Nat. Hist.,* VI. 207.

popover (pop′ō-vėr), *n.* A kind of hot bread made of thin, smooth, well-beaten batter baked in earthen cups or gem-pans.

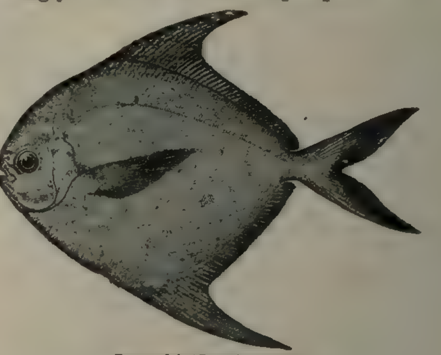
poppet, *n.*—**Sliding poppet,** the tail-stock of a lathe; a head or support carrying the dead-center, which can be slid along the ways to accommodate various lengths of work.

poppet-lashings (pop′et-lash″ingz), *n. pl.* In *nav. arch.,* chain-cables which are used in launching to support a vessel by being passed around the poppets and over the poppet-rib-bands, from side to side.

poppling (pop′ling), *n.* An agitation of the surface waters of the ocean, moderate in character and without uniformity.

poppy, *n.*—**Iceland poppy,** the arctic poppy, *Papaver alpinum.*—**Matilija poppy.** See ★*Romneya.*—**Tulip-poppy.** See ★*Hunnemannia.*

poppy-fish (pop′i-fish), *n.* **1.** In Jamaica, a species of harvest-fish, *Peprilus paru,* of the family *Stromateidæ.*—**2.** In California, a related species, *Palometa simillima,* often wrongly called the California pompano.



Poppy-fish (*Peprilus paru*).
(From Jordan's "Guide to the Study of Fishes.")

popularist (pop′ṳ̄-lä̤r-ist), *n.* [*popular* + *-ist.*] One who aims at popularizing scientific and other technical subjects; a popularizer.

> To say nothing of Mr. Wells and other competent *popularists,* examples may readily be drawn from more recondite sources. *Nature,* Sept. 8, 1904, p. 450.

population, *n.* **4.** In *biometry,* a species, race, variety, or group of organisms that can be differentiated from other groups.

> For the biometrician the type of any group (or "*population*" in the biometric sense) is fixed by the whole complex of statistical constants . . . which suffice to differentiate it sensibly from other groups or populations.
> *Biometrika,* Nov., 1903, p. 510.

Center of population. See ★*center*¹.—**Median point of population,** the point of intersection of the east-and-west line which equally divides the population as regards north and south, with the north-and-south line which equally divides the population as regards east and west, as regards numbers and not assumed weight, as in determining the ★*center of population* (which see). In 1900 the meridian 84° 51′ 29″ divided the population of the United States equally as regards east and west, and the parallel of lat. 40° 4′ 22″ N. divided it equally as regards north and south, both lines meeting in Spartanburg, Indiana. In 1880 the median point was in lat. 39° 57′ N. and long. 84° 7.2′ W.—**Moment of population.** See ★*moment.*

populational (pop-ṳ̄-lā′sho̤n-a̤l), *a.* [*population* + *-al*¹.] Of, pertaining to, or based on, population. *N. E. D.* [Rare.]

Populism (pop′ṳ̄-lizm), *n.* [L. *populus,* people, + *-ism.*] The political principles and policies of the Populists.

> In 1896 the spirit of *Populism* wholly captured the Democratic organization. *Rev. of Revs.,* Aug., 1900, p. 133.

Populist (pop′ṳ̄-list), *a.* and *n.* **I.** *a.* Of or pertaining to the People's Party, a political organization established in the United States in 1891, having for its chief objects expansion of the currency, State control of railways, and the placing of restrictions upon the ownership of land.

> It has been well said that a Socialism which proposes, like Bellamy's, to abolish the separate states of the American Union, is therein attempting quite as hard a feat as the abolition of private property. The *Populist* Party is not fully committed to either attempt.
> *Encyc. Brit.,* XXXII. 671.

II. *n.* A member of the People's Party.

Populistic (pop-ṳ̄-lis′tik), *a.* [*Populist* + *-ic.*] Of or pertaining to the Populists or to Populism; of the nature of Populism.

> [The free-silver movement] had been taken up by the *Populistic* element in certain Western farming States, because that element had always favored cheap money and high prices. *Rev. of Revs.,* Aug., 1900, p. 133.

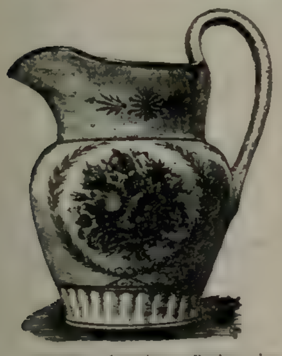
pop-valve (pop′valv), *n.* A pop safety-valve; a safety-valve which, by reason of an increase in the area over which the steam-pressure acts as the valve begins to open, opens very quickly with a popping sound.

> On a level road, at a speed of 10 or 12 miles per hour, the steam is usually maintained at a pressure of 150 pounds to the square inch. The *pop-valve* is set at 240 pounds.
> *Hiscox,* Horseless Vehicles, p. 108.

porae (pō′rä-ā̤), *n.* [Maori.] In New Zealand, a cirritoid fish, *Chilodactylus douglasi.*

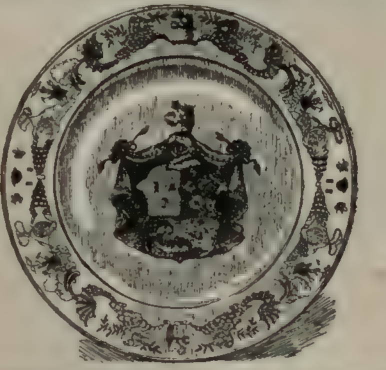
Porambonites (pō″ram-bō-nī′tēz), *n.* [NL., < Gr. πόρος, pore, + ἄμβων, a ridge.] A genus of protrematous brachiopods having globose thick shells with concentrically ribbed and pitted surface, found in the Silurian rocks of the Baltic region of Europe.

porangi (pō′ran-gi), *a.* [Maori *porangi*, hurried, deranged, mad.] Sad; sorry; sick; in low spirits. *E. E. Morris*, Austral English.



American Porcelain. Pitcher by William Ellis Tucker, Philadelphia, hard porcelain, about 1832.

In the Pennsylvania Museum, Philadelphia.



Armorial Porcelain. Plate, Chinese, Eighteenth Century. In the Pennsylvania Museum, Philadelphia.

porcelain^1, *n.*—**American porcelain.** Porcelain was not made in America until about the beginning of the nineteenth century. The following are the more important varieties: (1) *Bennington Parian*, the first Parian ware produced in the United States, after its introduction in England about 1842, at the United States Pottery at Bennington, Vermont, beginning with 1845. The principal productions were ornamental figures and jugs and pitchers with relief decorations, either in plain white or a blue-pitted ground. See ★*thimble-surface*, also *Bennington* ★*pottery*. (2) *Carr porcelain*, soft-paste porcelain and Parian ware produced by James Carr, of New York city, from about 1876 until 1885. (3) *Cartlidge porcelain*, soft-paste porcelain and Parian, made by Charles Cartlidge, at Greenpoint, New York, from 1848 to 1856. Among his products were table-services, door-plates and hardware furnishings artistically painted, and Parian portraits, plaques, and busts of eminent men. (4) *Carved Belleek*, a variety of Belleek porcelain made at Trenton, New Jersey, and carved in artistic low-relief designs while in the dry clay state, before burning. Vases and lamp-shades have been made in this style, the effect of the varying thickness of the walls, when artificial light is introduced, being that of a lithophane. (5) *Greenpoint porcelain*, a name given to the hard-paste porcelain produced at the Union Porcelain Works, at Greenpoint, New York, from 1865 to the present time. The principal product has been hardware furnishings, but a large amount of decorative ware, in the form of vases, figures, groups, and busts, has also been produced there. (6) *Hemphill porcelain*, a hard-paste porcelain made in Philadelphia from 1832 to 1837. See *Tucker* ★*porcelain*, below. (7) *Hulme porcelain*, hard-paste porcelain produced in Philadelphia in 1828. See *Tucker* ★*porcelain*, below. (8) *Kurlbaum and Schwartz porcelain*, hard-paste porcelain manufactured in Philadelphia from about 1851 to 1855. This product was of the finest quality of body and mechanical execution, the decorations being carefully painted in gold. (9) *Mead porcelain*, a fine quality of soft-paste porcelain made by Dr. Mead, in New York city, during the second decade of the nineteenth century: the first soft-paste porcelain that is known to have been produced in the United States. Known vases of this manufacture are entirely white, with handles modeled in the forms of winged female figures. (10) *Smith-Fife porcelain*, hard-paste porcelain made in Philadelphia about 1830, somewhat resembling the Tucker porcelain of the same period, in body, decorations, and shapes, but of a more yellowish tint of paste. (11) *Tucker porcelain*, a true hard-paste porcelain, with a small percentage of bone-ash, of a bluish tint, made by William Ellis Tucker, of Philadelphia, from 1825 to 1832. The earliest products were decorated with brown or sepia landscapes. In 1828 Thomas Hulme formed a copartnership with Tucker, under the style of Tucker & Hulme, but retired from the firm in about one year. In 1832 Joseph Hemphill was admitted as a partner, and a few months later Mr. Tucker died. The business was then carried on by Hemphill alone for several years. In 1837, Thomas Tucker, a brother of the founder, became sole proprietor, but in the following year the manufacture ceased. During Hemphill's proprietorship the ware was greatly improved. Potters and decorators were brought from Europe, and for a few years the manufacture was eminently successful. The ware resembled the French hard-paste porcelain of the same period, in body, shapes, and painted decorations. During the best period landscapes and wreaths of flowers were painted on the glaze in refined colorings, and the quality of the gilding was superior to that of the imported wares. The products of the factory were table-services, decorative jugs, vases in the French style, fruit-baskets, ornamental figures, ornate cologne-bottles, night-lamps, and a multiplicity of shapes, both useful and ornamental. This was the first hard-paste porcelain produced in America, and in many respects it has not since been surpassed. **Anspach porcelain,** hard-paste porcelain made at Anspach, Bavaria, after 1718. This ware, which was variously marked, was well made and decorated.—**Armorial porcelain,** a variety of hard-paste porcelain made in China in the eighteenth century, with painted and enameled armorial bearings of prominent European families, brought from the East by the East India Company. Often improperly called *Lowestoft porcelain.*—**Asbestos porcelain,** a porous substance, somewhat resembling ordinary porcelain, made from powdered asbestos.—**Bourg-la-Reine porcelain,** soft-paste porcelain manufactured at Bourg-la-Reine, France, by Jacques and Jullien, who transferred their works from Mennecy in 1773. **Broseley porcelain.** See *Broseley* ★*dragon* and *Salopian* ★*porcelain.* **Carr porcelain.** See *American* ★*porcelain.* **Caughley porcelain.** Same as *Salopian* ★*porcelain.*—**Chelsea-Derby porcelain,** soft-paste porcelain made at Derby and Chelsea, England, conjointly, by William Duesbury, who, being at that time proprietor of the Derby works, purchased in 1769 the Chelsea works. The Chelsea-Derby period, as it is called, lasted from that time until about 1786. During this period some of the best productions of these celebrated factories were made, including the famous Chelsea-Derby figures.—**Ch'ing porcelain.** See *Tsing* ★*porcelain.*—**Clignancourt porcelain.** A factory was established at Clignancourt, France, in 1775, by Pierre Deruelle, for the manufacture of hard- and soft-paste porcelain, under the patronage of the Count de Provençe, brother of the king.—**Coalbrookdale porcelain.** See *Coalport* ★*porcelain.*—**Coal porcelain,** vessels and other objects cut out of compact anthracite coal or turned on lathes and afterward polished on the buffing-wheel. *Sci. Amer.*, Sept. 12, 1903, p. 191.—**Coalport porcelain,** soft-paste porcelain made by John Rose at Coalport, England. In 1799 Rose bought the Caughley works from Thomas Turner (see *Salopian* ★*porcelain*), and in 1814 the business was removed to Coalport. In 1822 the Nantgarw works, near Cardiff, Wales, were also absorbed by the Coalport works.—**Duck-egg porcelain,** a local name for certain old Welsh porcelains, especially that made at the manufactory in Swansea, which was established in 1768. *W. Turner*, in Burlington Mag., V. 397.—**Frankenthal porcelain,** hard-paste porcelain made at a factory established at Frankenthal, Bavaria, by Paul Hannong, in 1754. The factory was closed in 1800.—**Fürstenberg porcelain,** hard-paste porcelain made at Fürstenberg, Germany. The manufacture was established in 1750 by a workman from the Hochst factory, under the patronage of the Duke of Brunswick. The usual mark is the capital letter F in script.—**Greenpoint porcelain.** See *American* ★*porcelain.* **Green porcelain.** Same as ★*martaban.*—**Gripsholm porcelain,** porcelain made in China, marked in large lettering "Gripsholm," for the royal Swedish palace, about thirty miles from Stockholm, on the southern shore of Lake Mälaren. Pieces of this porcelain are found in public collections.—**Herend porcelain,** hard-paste porcelain made at Herend, Hungary, by Maurice Fischer, from about 1800 to 1830. His products include many well-executed imitations of various wares of Europe and Asia, such as Capodimonte and Chinese porcelain. They are usually marked with the shield and crown of Hungary.—**Hirado porcelain,** a pure white, or blue-and-white, porcelain of fine texture and beautiful workmanship, made in the district of Mikawachi, Japan. It derives its name from a family named Hirado. The best examples of Hirado ware were produced about the middle of the eighteenth century. Also called *Mikawachi porcelain.*—**Höchst porcelain,** hard-paste porcelain made from 1720 to 1794 at a previously established faience-factory at Höchst, Germany. The manufacture was introduced by a workman named Ringler, who came from the Vienna works. Fine ware was produced, especially in figures and groups. The mark consisted of a star inclosed in a circle, adapted from the arms of the Archbishop of Mainz.—**Kronenburg porcelain.** See *Ludwigsburg* ★*porcelain.*—**Limbach porcelain,** hard-paste porcelain made at Limbach, Saxe-Meiningen, Germany, from about 1761.—**Louis Philippe porcelain,** porcelain made at the Sèvres factory, France, for King Louis Philippe, and bearing his monogram and the names of his various châteaux.—**Lowestoft porcelain.** (*b*) See *armorial* ★*porcelain.*—**Ludwigsburg porcelain,** hard-paste porcelain made from 1758 to 1821, under the patronage of Charles Eugène, Duke of Wurtemberg. The manufacture was established at Ludwigsburg (Kronenburg), Germany, by a workman named Ringler, who came from the Vienna works. This was one of the largest manufactories in Germany, justly celebrated for the beauty of its ware. The mark was a crown above a double C, the initial of Duke Charles.—**Mikawachi porcelain.** Same as *Hirado* ★*porcelain.* Also written *Mikawaji.*—**Ming porcelain,** a style of Chinese porcelain supposed to have been made during the Ming dynasty, from 1368 to 1643 A.D. Authors differ widely as to its characteristics and prevailing color.—**Nantgarw porcelain,** porcelain made at the factory in Nantgarw in Wales, which was established in 1811 and closed in 1822. *W. Turner*, in Burlington Mag., V. 397.—**Napoleon porcelain,** porcelain made at the Sevres factory, France, for the use of Napoleon III., and bearing the initial N.—**New Hall porcelain,** hard-paste porcelain made at New Hall, Hanley, England, from about 1781 to 1812, noted for being the first porcelain successfully manufactured in the Staffordshire district. About the year 1812 bone china superseded the hard-paste porcelain at New Hall, and continued to be made until 1825, when the manufacture of porcelain at these works ceased. See *Bristol porcelain*, under *porcelain*^{1}, also *Plymouth* ★*porcelain.* **Niderviller porcelain,** hard-paste porcelain made at Niderviller, France, from about 1760. Artistic work was produced here by the best artists. A characteristic style of decoration, on both porcelain and pottery, was the imitation of veined woods, on which frequently appeared the representation of white cards bearing pictures in black, a style that was afterward imitated at other European factories.—**Plymouth porcelain,** hard-paste porcelain made by William Cookworthy, of Plymouth, England, from about 1768. The mark for Plymouth porcelain is the sign for the planet Jupiter and the chemical symbol for tin, a character resembling the figures 2 and 4 combined. See *Cookworthy porcelain*, under *porcelain*^{1}.—**Porcelain stone,** feldspar; growan stone.—**Red porcelain,** vitrified ware of a deep-red color; specifically, a red ware made by the Elers brothers in Staffordshire, late in the seventeenth century. See *Elers* ★*ware.*—**Royal Saxon porcelain.** See *Dresden porcelain*, under *porcelain*^{1}.—**Rudolstadt porcelain,** hard-paste porcelain manufactured from about 1758 at Sitzerode, or Volkstadt, and afterward removed to Rudolstadt, Schwarzburg, Germany. The later products of this factory are blue-and-white porcelain.—**St. Cloud porcelain,** soft-paste porcelain made at St. Cloud, France, from about 1695 to 1773. This was the first soft-paste porcelain made in France.—**St. Petersburg porcelain,** hard-paste porcelain made at St. Petersburg, Russia, particularly that produced at the imperial factory. The manufacture was established about 1744 by the Empress Elizabeth Petrovna, through workmen from the Dresden factory. The ware is of fine paste and usually has a bluish tint. The marks which have been used are the ciphers of the reigning monarchs.—**Salopian porcelain,** a soft-paste porcelain made at Caughley, Shropshire, England, after 1772, by Thomas Turner. One of the most characteristic varieties of ware made at this factory was blue transfer-printed china imitating Oriental patterns. See *willow pattern*, under *willow*^{1}, and *Broseley* ★*dragon.* See also *Salopian ware*, under *Salopian*^{1}.—**Sung porcelain,** a Chinese porcelain or stoneware supposed to have been produced under the Sung dynasty, from 960 to 1279 A.D.—**Tsing porcelain,** a variety of porcelain made in China since 1643, in the present Tsing dynasty.—**Tucker porcelain.** See *American* ★*porcelain.*—**Vienna porcelain,** hard-paste porcelain made at Vienna from about 1720. This factory was started by a workman from the Dresden works. In 1747 the factory was purchased by the government. Vienna porcelain is noted for its artistic decorative work. The mark was the shield of the arms of Austria, usually painted in blue beneath the glaze. After 1784 pieces were also marked with the date scratched in the paste.

porcelainization (pôrs″lạ̄n-i-zā′shọn), *n.* The process or the result of porcelainizing. See *porcelainized.*

porcelainize (pôrs′lạ̄n-īz), *v. t.*; pret. and pp. *porcelainized*, ppr. *porcelainizing.* To make porcelain; convert into porcelain; in *geol.*, cause to resemble porcelain. See *porcelainized.*

porcelain-kiln (pôrs′lạ̄n-kil), *n.* A porcelain-oven. See the extract.

> It [hard porcelain] is fired in biscuit at a low temperature, in the second story of the *porcelain kiln*, using for its baking the surplus heat passing away after having done its greater work in the first story or glost kiln where the glazing is done. At this first burning the ware receives only sufficient fire to make it properly fasten together in form. . . . In this condition it is what is termed porcelain biscuit, and is ready for the glaze-tub. . . . The pieces are placed separately in the saggers. The heat in firing hard porcelain [in the first story or glost kiln] is carried to such a high degree that the ware touches the point of pliability, almost the melting-point. At this great heat the body is vitrified; at the same time the glaze, from its slightly softer composition, is melted into the body of the ware, producing a hard, vitreous, and homogeneous material properly known as true, hard porcelain.
>
> *E. A. Barber*, Pottery and Porcelain of the U. S., p. 258.

porcelain-mill (pôrs′lạ̄n-mil), *n.* A mill for grinding materials used in the manufacture of porcelain.

porcelainous, *a.* Same as *porcelanous.*

porcelain-printing (pôrs′lạ̄n-prin″ting), *n.* 1. The printing of cloth with a white color on a blue ground: a method carried into Europe by the French from their East Asiatic colonies.—2. The transfer of a printed engraving to porcelain, usually before it is glazed.

porcelain-shell (pôrs′lạ̄n-shel), *n.* A kind of cowry.

porcelanic (pôr-se-lan′ik), *a.* Same as *porcelanous.*

Porcellanaster (pôr-se-lạ̄-nas′tėr), *n.* [NL.] The typical genus of the family *Porcellanasteridæ.* *Sir C. W. Thomson.*

Porcellanasteridæ (pôr″se-lạ̄-nas-ter′i-dē), *n. pl.* [NL., < *Porcellanaster* + *-idæ.*] A family of starfishes of the order *Phanerozonia*, having opposite ambulacral plates, and thin lamelliform marginal plates traversed by cribriform organs. It includes several genera, among them being *Porcellanaster*, *Caulaster*, and *Ctenodiscus.*

Porcellia (pôr-sel′i-ạ̈), *n.* [NL., < Gr. πόρκης, a ring or hoop.] A genus of rhipidoglossate gastropods with discoidal, widely umbilicate shells, having a long slit subtended by a prominent slit-band along the median line of the outer whorls. It occurs in Devonian and Carboniferous rocks.

porcherine (pôr′she-rin), *n.* A trade-name of a synthetical sweetening substance, used in the same manner as saccharin.

Porcupine opener. See ★*opener.*

porcupine-bird (pôr′kū-pīn-bėrd), *n.* The striated wren, *Amytis striata*, of Australia, which inhabits the thick porcupine-grass.

porcupine-boiler (pôr′kū-pīn-boi″lėr), *n.* A steam-boiler having a vertical center cylinder or drum from which radiate horizontally many straight radial tubes. This makes a combination of the water-tube and cylindrical boilers. *Power*, March, 1904, p. 146.

porcupine-grass, *n.* 2. In Australia, any one of several species of grasses belonging to the genus *Triodia*, especially *T. Mitchelli*, *T. irritans*, and *T. pungens*, growing on the sand-hills of desert regions. They form rounded tussocks as large as 10 feet in diameter, from which the stiff, sharp-pointed leaves radiate in all directions, often causing discomfort to the traveler.—**Porcupine-grass ant.** See ★*ant*1.

porcupine-hair (pôr′kū-pīn-hãr″), *n.* In *pathol.*, same as *hystricismus*.

porcupine-machine (pôr′kū-pīn-ma-shēn″), *n.* In *cotton-manuf.*, any machine used in the preparatory processes having a cylinder or beater with a number of teeth, spikes, or blades.

porcupine-parrot (pôr-kụ̄-pīn-par″ọt), *n.* A local name for a ground-parrakeet, *Geopsittacus occidentalis*, of central Australia, which frequents the dense porcupine-grass of that region.

pore^2, *n.*—**Aboral pore.** See ★*aboral.*—**Bordered pore.** Same as ★*bordered pit.*—**Dermal pores.** (*a*) In sponges, the perforations in the dermal membrane over the incurrent canals. (*b*) Minute openings, in the integument of starfishes, through which project the dermal branchiæ.—**Dorsal pores,** openings in the body-wall of many species of earthworms which place the body-cavity in communication with the exterior.—**Genital pore.** (*a*) In *ichth.*, an opening through the wall of the urogenital sinus through which the ova pass to the exterior. (*b*) In the *Cystoidea*, a small opening in the plates of the calyx occasionally present between the mouth and the anus. Also called the *ovarian aperture.*—**Male pore,** in oligochætous annelids, the opening of the sperm-duct to the exterior. *Proc. Zool. Soc. London*, 1896, p. 203.—**Neurenteric pore,** the termination of the neurenteric canal.—**Physical pore,** a pore or interstice too small to be detected under the microscope or by any direct means. The existence of physical pores is inferred from certain properties of matter such as its compressibility. See *pore*^{2}, 1.—**Sensible pore,** a pore or interstice of such size that it may be detected by direct observation. See *pore*^{2}, 1.—**Urinary pore,** the common external opening of the two ureters in fishes; the urinary pore opens either into a urogenital sinus, or directly on the outer surface of the body.

pore-area (pōr′ā″rẹ̄-ạ̈), *n.* In sponges, an aggregation of ostia into sieve-like areas. Also called *pore-sieve*.

> The larger specimen has 20 oval depressed *pore-areas* and 2 oscules, . . . the floor of the *pore-areas* is covered with membrane perforated by groups of pores.
> *Proc. Zool. Soc. London*, 1900, p. 132.

pore-canal (pōr′kạ-nal″), *n.* 1. See ★*canal*^{1}.—2. One of the fine canals in the integument of many insects, which pass through the chitinous layers and end externally in minute pores. *A. S. Packard*, Text-book of Entom., p. 188.

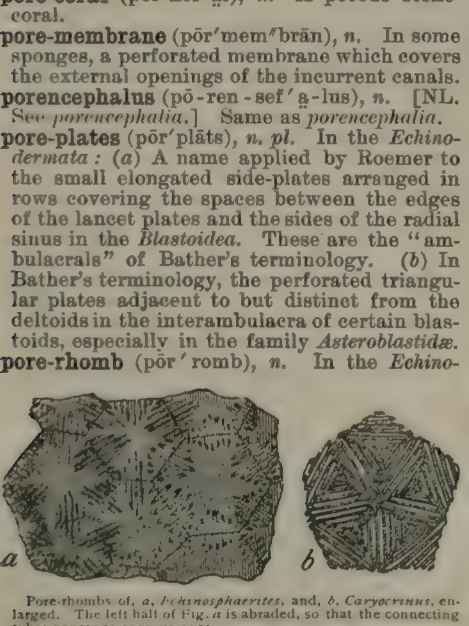
pore-coral (pōr′kor″ạl), *n.* A porous stone-coral.

pore-membrane (pōr′mem″brān), *n.* In some sponges, a perforated membrane which covers the external openings of the incurrent canals.

porencephalus (pō-ren-sef′ạ-lus), *n.* [NL. See *porencephalia*.] Same as *porencephalia*.

pore-plates (pōr′plāts), *n. pl.* In the *Echinodermata*: (*a*) A name applied by Roemer to the small elongated side-plates arranged in rows covering the spaces between the edges of the lancet plates and the sides of the radial sinus in the *Blastoidea*. These are the "ambulacrals" of Bather's terminology. (*b*) In Bather's terminology, the perforated triangular plates adjacent to but distinct from the deltoids in the interambulacra of certain blastoids, especially in the family *Asteroblastidæ*.

pore-rhomb (pōr′romb), *n.* In the *Echinodermata*, a type of rhombic area traversed by parallel canals terminating in pores, observed on the external surfaces of some cystidean thecæ. Each area overlaps the edges of two adjoining plates in such manner that the suture between the plates forms an axis of the rhomb.



Pore-rhombs of, *a*, *Echinosphaerites*, and, *b*, *Caryocrinus*, enlarged. The left half of Fig. *a* is abraded, so that the connecting tubes appear as open grooves.

(From Zittel's "Palaeontology.")

pore-sieve (pōr′siv), *n.* Same as ★*pore-area.*

porfyritic, porfyry. Amended spellings of *porphyritic*, *porphyry*.

porge (pōrj), *v. t.*; pret. and pp. *porged*, ppr. *porging*. [Perhaps from L. *purgare*, cleanse.] In *Jewish ritual*, to make ceremonially clean, as a slaughtered animal, by drawing out and removing the sinews and veins. *N. E. D.*

porgee^1 (pôr′jē), *n.* An East Indian silk fabric of coarse texture.

porgee^2 (pôr′gi), *n.* Same as *porgy*.

porger (pōr′jėr), *n.* [*porge, v.*] In *Jewish ritual*, one who porges. See ★*porge*.

porgy, *n.* 2. Same as *white perch* (which see, under *perch*^{1}).—**Deep-water porgies,** fishes of the genus *Otrynter*, found in deep water off the west coast of Florida.—**Grass-porgy,** *Calamus arctifrons*, of the Gulf of Mexico.—**Jolt-head porgy,** *Calamus bajonado*, of the West Indies.—**Little-head porgy,** *Calamus proridens*, of the West Indies.—**Little-mouth porgy,** *Calamus penna*, found from Florida to Brazil.—**Red porgy,** *Pagrus pagrus*, found on both sides of the Atlantic.—**Saucer-eye porgy,** *Calamus calamus*, of the West Indies.—**Shad-porgy.** Same as *grass-*★*porgy*.—**Southern porgy,** *Stenotomus aculeatus*, of the South Atlantic coast of the United States.—**White-bone porgy,** *Calamus leucosteus*, of the South Atlantic coast of the United States.

Poria (pō′ri-ạ̈), *n.* [NL. (Persoon, 1797), < Gr. πόρος, a pore.] A large genus of fungi of the family *Polyporaceæ*, having the fructification resupinate and frequently spreading over considerable areas of dead trunks and branches. Over 280 species are reported by Saccardo. *P. Radula*, a species with white angular toothed pores, is frequent on dead wood in Europe and North America.

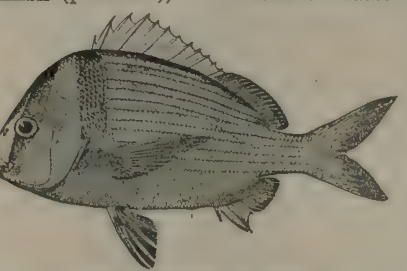
Porichthys (pọ-rik′this), *n.* [NL., < Gr. πόρος, pore, + ἰχθύς, a fish.] A genus of fishes of the family *Batrachoididæ*, found on the Pacific coast of America.

Porina (pọ-rī′nạ̈), *n.* [NL. (Acharius, 1810), < Gr. πόρος, a pore, + dim. *-ina*.] 1. A large genus of pyrenocarpous lichens of the family *Pyrenulaceæ*, having the thallus crustaceous and simple scattered perithecia with punctiform ostioles. About 150 species have been referred to this genus. They occur on bark of trees and rocks.—2. A genus of chilostomatous bryozoans having erect or incrusting zoaria with flattened branches and raised tubular zoœcial orifices. It is represented by species ranging from the Cretaceous to recent time.

porinin (pō′ri-nin), *n.* [*Porina* + *-in*^{2}.] A colorless crystalline compound, $(C_3H_6O)_n$, found in the lichen *Porina* (*Pertussaria*) *glomerata*.

porion (pō′ri-ọn), *n.*; pl. *poria* (-ạ̈). [NL., < Gr. πόρος, pore.] In *craniom.*, the median point at the posterior border of the canalis incisivus. *Von Török.*

porkfish (pōrk′fish), *n.* A common name of *Anisotremus virginicus*, a fish of the family *Hæmulidæ*, found from Florida to Brazil.



Porkfish (*Anisotremus virginicus*).

(From Jordan's "Guide to the Study of Fishes.")

pork-measles (pôrk′mē″zlz), *n.* See ★*measles*.

pornographist (pôr-nog′ra-fist), *n.* Same as *pornographer*. [Rare.] *The Nation*, Aug. 3, 1893, p. 79.

Poroclinus (pō-rọ-klī′nus), *n.* [NL., < Gr. πόρος, pore, + NL. *Clinus*.] A genus of blennioid fishes found in northern seas.

Porocottus (pō-rọ-kot′us), *n.* [NL., < Gr. πόρος, pore, + NL. *Cottus*.] A genus of cottoid fishes found in northern seas.

porocyte (pō′rọ-sīt), *n.* [Gr. πόρος, pore, + κύτος, a hollow.] In sponges, an epithelial cell perforated by a pore. The pore places the gastral cavity in communication with the exterior by means of an intracellular duct or canal.

porodic (pọ-rod′ik), *a.* [Gr. πωρώδης, πωροειδής, like tufa (< πῶρος, tufa, + εἶδος, form), + *-ic*.] Like tufa; in *petrog.*, colloid: chiefly applied to structureless rocks or minerals, such as flint, wood-opal, hyalite, etc.

porodine (pō′rọ-din), *n.* [Gr. πόρος, pore, + εἶδος, form, + *-ine*^{2}.] In *petrog.*, an amorphous mineral or rock derived from a colloidal mass, such as gelatinous silica, in contrast to one that is a glass. *Breithaupt.*

porodite (pō′rọ-dīt), *n.* [Gr. πωρώδης, πωροειδής, like tufa (see *porodic*), + *-ite*.] See the extract.

> The unaltered fragmental forms of the basalts, as well as of the other volcanic rocks, are called tufas, while I have denominated all the altered and old fragmental forms as *porodites*.
> *M. E. Wadsworth*, Harvard University, Museum of [Comparative Zoology, Bulletin, v. 280.

poroditic (pō-rọ-dit′ik), *a.* Of the nature of porodite.

porogam (pō′rọ-gam), *n.* [*porogam*(*ic*).] A porogamic plant. See ★*porogamic*.

porogamic (pō-rọ-gam′ik), *a.* [Gr. πόρος, pore, + γάμος, marriage, + *-ic*.] In *bot.*, fertilized by way of the micropyle instead of the chalaza. See ★*porogamy*.

porogamous (pọ-rog′ạ-mus), *a.* [*porogam*(*y*) + *-ous*.] Characterized by porogamy.

porogamy (pọ-rog′ạ-mi), *n.* [Gr. πόρος, passage.] In *bot.*, fertilization by the passage of the pollen-tube through the micropyle: the most common method with flowering plants. In a limited number of plants the pollen-tube enters through the chalazal region (*chalazogamy*), when the fertilization is said to be *basigamous*, or rarely through the apex, when the fertilization is termed *acrogamous*. *K. E. Goebel* (trans.), Organography of Plants, II. 615.

porokeratosis (pō-rọ-ker-ạ-tō′sis), *n.* [NL., < Gr. πόρος, pore, + κέρας (κερατ-), horn, + *-osis*.] An affection of the horny layer of the skin marked by a depressed area bounded by an irregular raised ridge.

Poromitra (pō-rọ-mit′rạ̈), *n.* [NL., < Gr. πόρος, pore, + μίτρα, belt, girdle.] A genus of fishes of the family *Berycidæ*, found in the deep sea.

Poromya (pō-rọ-mī′ạ̈), *n.* [NL., < Gr. πόρος, pore, + L. *mya*. See *Mya*.] The typical genus of the family *Poromyidæ*. *Forbes*, 1844.

Poromyidæ (pō-rọ-mī′i-dē), *n. pl.* [NL. *Poromya* + *-idæ*.] A family of septibranchiate bivalves having short siphons, an elongated foot, and well-developed palps. On each half of the septum there are several groups of lamellæ separated by orifices. It includes two genera, *Poromya* and *Silenia*.

poroplastic (pō-rọ-plas′tik), *a.* [Gr. πόρος, pore, + E. *plastic*.] Porous and plastic: applied to a kind of porous felt, plastic when heated, used by surgeons. *N. E. D.*

> A *poroplastic* felt splint. *Lancet*, March 16, 1901, p. 780.

poroporo (pō-rō-pō′rō), *n.* [Maori *poroporo*, *poporo*, plants of the genus *Solanum*.] In New Zealand, *Solanum aviculare*, a shrub bearing fruit about the size of a small plum, edible when ripe, but very acrid before maturing. This fruit was commonly used by the early colonists in the neighborhood of Wellington for making jam. See *kangaroo-apple*.

poros (pō′ros), *n.* [Gr. πῶρος, a kind of marble, tufa, a stalactite, etc.] A limestone quarried near Piræus: the common building stone of Athens. Previous to the occupation by the Persians in 480 B.C. all the monuments on the Acropolis were of this material. Many interesting remains, often charmingly colored, have been recovered.

poroscope (pō′rọ-skōp), *n.* [Gr. πόρος, pore, + σκοπεῖν, view.] An apparatus for determining the porosity or degree of permeability of a substance.

> The examination of the plans, number of stories, construction and interior arrangement of the house should include the permeability and hygroscopic properties of the building material. Our general knowledge of the relative permeability of different kinds of building material will enable us to form an opinion, but for exact determinations the use of a *poroskop*, or gasometer and manometer, becomes necessary.
> *Buck*, Med. Handbook, IV. 768.

porose, *a.* 3. Of or pertaining to the *Porosa*.

porosity, *n.*—**Selective porosity,** in *geol.*, porosity (of a rock) as determining the presence in it of ores: noting the dissemination of ores in open-textured rock, into which they have entered in solution because of its porosity, in preference to less open rock.

Here, as at Cripple Creek, we have examples of the doctrine of "*selective porosity*" — that is to say, certain zones of rock are rich, because the metal-bearing solutions found the fissured portions to be the easiest channels for their passage, and coursed with greater abundance through them. *Encyc. Brit.*, XXX. 763.

porotic (pọ̄-rot'ik), *a.* and *n.* **I.** *a.* Causing porosis or the formation of callus; indurating.
II. *n.* Any drug or other agent which promotes the growth of connective tissue, induration of the tissues, or the formation of callus.

poroto (pọ̄-rō'tọ̄), *n.* [Native.] A Chilian popular name for the brown or reddish bean.

Porphyra, *n.* 2. [*l. c.*] In *med.*, same as *purpura*.

porphyrate (pôr'fi-rāt), *n.* [*porphyr*(*ic*) + *-ate*.] A salt of porphyric acid.

porphyration (pôr-fi-rā'shọn), *n.* Same as *porphyrization*.

Porphyrian (pôr-fir'i-ạn), *a.* [L. *Porphyrius*, Porphyry, + *-an*.] Of or pertaining to Porphyry (about 233–305 A.D.), a neo-Platonic philosopher and opponent of Christianity.

porphyric^1 (pôr-fir'ik), *a.* Same as *porphyritic*. *Encyc. Brit.*, XXV. 426.

porphyric^2 (pôr-fir'ik), *a.* [Gr. *πορφύρα*, purple, + *-ic*.] Noting an acid, $C_{10}H_4N_2O_7$, obtained from euxanthone by the action of nitric acid. With ammonium carbonate it produces a deep-red color.

porphyrine (pôr'fi-rin), *n.* [Gr. *πορφύρα*, purple, + *-ine*^{2}.] A white amorphous alkaloid, $C_{21}H_{25}N_3O_2$, found in the bark of *Pala constricta*. Its salts have a blue fluorescence. It melts at 97° C.

porphyrogene (pôr'fi-rọ̄-jēn), *n.* [Gr. *πορφύρα*, purple, + *-γενης*, -born.] Born in the purple. *Poe*, The Haunted Palace, st. 3. See *porphyrogenitus*.

porphyrogenite†, *n.* Same as *porphyrogenitus*.

porphyrous (pôr'fi-rus), *a.* [Gr. *πόρφυρος*, purple, + *-ous*.] Purple.

> O spirit of rage and might,
> Who canst unchain the links of winter-stark,
> And bid earth's stubborn metals flow like oil,
> Her *porphyrous* heart-veins boil;
> Whose arrows pierce the cloudy shields of dark.
> *R. Bridges*, Prometheus the Firegiver, l. 1272.

porphyroxine (pôr-fi-rok'sin), *n.* [Gr. *πορφύρα*, purple, + E. *ox*(*ygen*) + *-ine*.] A substance found in opium, once believed to be a distinct alkaloid, but now known to be a mixture of several alkaloids.

porphyruria (pôr-fi-rö'ri-ạ̈), *n.* [NL., < Gr. *πορφύρα*, purple, + *οὖρον*, urine.] The presence in the urine when voided of a purplish pigment derived from the blood.

porphyry, *n.* 4. In *ceram.*, a hard colored body made by Josiah Wedgwood, in imitation of porphyry.—**Artificial porphyry**, a trade-name for iron furnace-slag used for building and paving.—**Bird's-eye porphyry**, a name, current among miners, for any porphyritic, eruptive rock with round phenocrysts, especially of quartz. *Contrib. to Econ. Geol.*, U. S. Geol. Surv., 1902, p. 72.—**Claystone-porphyry.** See ★*claystone-porphyry*.—**Rhomben-porphyry** [*G.*], porphyry in which the phenocrysts of feldspar (soda-orthoclase to potash-oligoclase) have a form approaching that of a rhombohedron, yielding rhombic cross-sections. It is related to the syenites and occurs chiefly in Norway. *Von Buch.*

Porpita (pôr'pi-tạ̈), *n.* [NL.] The typical genus of the family *Porpitidæ*. *Lamarck.*

Porpitidæ (pôr-pit'i-dē), *n. pl.* [NL. *Porpita* + *-idæ*.] A family of siphonophorans having a circular umbrella without crest and a pneumatocyst which is divided into an octoradiate central part and numerous concentric rings. The gonostyles are provided with mouths, the tentacles have many stalked cnidospheres, and pneumothyræ are present. It contains the genera *Porpita*, *Porpitella*, *Porpalia*, and *Porpema*.

porporate (pôr'pọ̄-rāt), *a.* [It. *porporato*, < L. *purpuratus*, clad in purple, < *purpura*, purple.] Clad or robed in purple. [Rare.]

> Make your brothers priests,
> Paul shall be *porporate*, and Girolamo step
> Red-stockinged in the presence when you choose,
> But save one Franceschini for the age.
> *Browning*, Ring and Book, v. 227.

Porro prism binocular. See ★*binocular* and *Porro's system of* ★*prisms*.

port^1, *n.* —**Courtesies of the port.** See ★*courtesy*.—**Open port.** See the extract.

In China at the present time (1902) certain *ports* are designated "free and *open*." This phrase means that the ports in question are (1) open to foreign trade, and (2) that vessels engaged in over-sea voyages may freely resort there. Exemption from payment of customs duties is not implied, which is a matter distinct from the permission granted under treaty engagements to foreign vessels to carry cargoes to and from the "treaty ports." *Encyc. Brit.*, XXVIII. 514.

Port of refuge. See the extract.

Whatever the reason for putting into the *port of refuge*, provided it was necessary for the common safety, the expenses of going in, and the consequent expenses of getting out (if she sails again with all or part of her original cargo), are allowed as G. A. *Encyc. Brit.*, XXVI. 32

To run down a port, in *navigation*, to sail north or south until the latitude of the port is reached, then head due east or west on that parallel until the port heaves into view. This method was formerly commonly used by the poorly schooled merchant navigator who had no chronometer to aid him in finding the longitude of his ship, and whose knowledge of nautical astronomy enabled him merely to manipulate the ancient pig-yoke for a meridian observation of the sun.—**Treaty port.** See ★*treaty-port*.

port^2, *n.*—**Reëntrant port**, a gun-port on a war-ship in which the side of the vessel is inflected inward so as to permit a greater angle of training without making a large opening. See cut under ★*battle-ship* showing reëntrant ports on gun-deck. Also called *embrasure-port*.

portage^1 (pōr'tạ̄j), *v.*; pret. and pp. *portaged*, ppr. *portaging*. [*portage*^{1}, *n.*] **I.** *trans.* To carry; pack, as a boat around a portage.

I took with me a King folding canvas boat. It was perfection in its way, but I made a mistake in buying a 14-footer. It is altogether too large for one man to *portage*. *Recreation*, April, 1901, p. 277.

II. *intrans.* To carry; proceed by carrying (a boat or load); make a portage.

After *portaging* across a divide, we may on the same day have the enjoyment of descending a swift-flowing stream. *Geog. Jour.* (R. G. S.), X. 4.

portative, *a.* **II.** *n.* Same as *portative organ* (which see, under *organ*^{1}).

port-buckler (pōrt'buk″lėr), *n.* See *buckler*, 2.

port-captain (pōrt'kap″tạn), *n.* *Naut.*, the marine superintendent of a line of vessels.

port-duty (pōrt'dū″ti), *n.* Harbor dues.

ported, *a.* 2. In *mech.*, having ports; fitted with ports for admission or exhaust or for both.

porter^2, *n.* 4. (*e*) A rope-carrier or supporter; a wheel or roller on a support used to sustain a traction- or transmission-rope and prevent its sagging and striking the ground between its terminal points.

Porteranthus (pōr-tẹ-ran'thus), *n.* [NL. (Britton, 1894), < *Porter* + Gr. *ἄνθος*, flower; named in honor of T. C. *Porter* (1822–1901), an American botanist.] A genus of plants of the family *Rosaceæ*. See *Gillenia*.

porter-bar (pōr'tėr-bär), *n.* Same as *porter*^{2}, 4 (*b*).

Porter-Clark process. See ★*process*.

Port Ewen limestone. See ★*limestone*.

Portheus (pōr'thẹ̄-us), *n.* [NL., appar. < Gr. *πορθειν*, ravage.] A gigantic extinct teleost fish of the family *Ichthyodectidæ*, characterized by a single row of strong conical teeth of variable size fixed in sockets in both jaws, an ossified sclerotic in the orbit, movable articulation of palatine and ethmoid, three suborbital plates, and a large well-developed operculum. The pectoral and pelvic fins are provided with broad anterior rays. The dorsal fin is short and situated well back, and the caudal fin is forked. The total number of vertebræ is 83. The dimensions of the large species *Portheus molossus* Cope are as follows: total length, 15 feet 8 inches; length of skull, 2 feet 2 inches; spread of tail, 3 feet 9 inches. The genus is confined to the Cretaceous rocks, and the finest specimens have been obtained from the Niobrara Chalk of Kansas. Found also in European Cretaceous.

port-hole, *n.* 3. In *zoöl.*, one of the minute apertures or cinclides in the body-wall of a sea-anemone through which the gastric filaments or acontia are protruded. *Parker and Haswell*, Zoology, I. 175.

portico, *n.*—**Subgenital portico**, in some *Discomedusæ*, a large single central chamber lying immediately below the floor of the stomach and above the brachial disk. *Parker and Haswell*, Zoology, I. 171.

portion, *n.*—**Schroeder's portion of urea**, the amount of daily urea formation which occurs in the liver.

portiuncula (pōr-ti-ung'kụ̄-lạ̈), *n.* [ML. use of L. *portiuncula*, dim. of *portio*(*n*-), portion.] An indulgence granted to those who on August 2 visit the churches in which the Third Order of St. Francis is canonically established.

port-light (pōrt'līt), *n.* A plate of heavy glass set in a hinged frame and fitted to a port in a ship's side.

portmanteau-word (pōrt-man'tō-wėrd″), *n.* A name given by Lewis Carroll (C. L. Dodgson), in "Through the Looking-glass," to words formed by him on the composite system. [Humorous.]

> "'Twas brillig, and the slithy toves
> Did gyre and gimble in the wabe:
> All mimsy were the borogoves,
> And the mome raths outgrabe.

"'Slithy' means 'lithe' and 'slimy.' . . . You see it's like a portmanteau — there are two meanings packed up into one word. . . . 'Mimsy' is 'flimsy and miserable' (there's another *portmanteau* for you)."
Lewis Carroll, Through the Looking-glass, pp. 127–129

Porto Bello ware. See ★*ware*^{2}.

portolan (pōr'tọ̄-lan), *n.* Same as ★*portolano*.

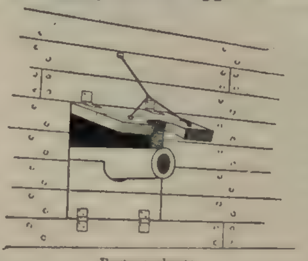
A series of World-maps and Mediterranean *portolans*. *Geog. Jour.* (R. G. S.), XII. 374.

portolano (pōr-tō-lä'nō), *n.*; pl. *portolani* (-nē). [It. *portolano*, pilot, log-book.] Originally the book of sailing-directions accompanying a chart, but later applied to any chart or map.

In fact, there is hardly any map of the middle age, before the beginning of the *Portolani*, which can sustain a comparison in the matter of contour with the "Cottoniana." *Geog. Jour.* (R. G. S.), XV. 131.

Porto Rico bark. See ★*bark*^{2}.

port-pendants (pōrt'pen″dạnts), *n. pl.* Ropes belonging to the upper sections of the port-shutters or lids of old-fashioned men-of-war. They were made fast to rings on the outside of the lids and then rove through holes in the sides of the vessel on the decks next above the ports. By means of these pendants and a tackle the upper covers were raised and lowered.



Port-pendants.

portrayment (pōr-trā'mẹnt), *n.* Same as *portrayal*.

port-riggle (pōrt'rig″l), *n.* *Naut.*, same as *port-flange* (which see).

portsman (pōrts'mạn), *n.*; pl. *portsmen* (-mẹn). A citizen or inhabitant of one of the Cinque Ports. *N. E. D.* [Eng.]

portulano, *n.* Same as ★*portolano*.

portunal (pōr'tụ̄-nạl), *n.* [G., < L. *Portunalis*, pertaining to *Portunus*, the god of harbors.] An organ-stop, the pipes of which are of wood and are open, and larger at the top than at the mouth. Also *portunal-flute*. *Stainer and Barrett.*

portunal-flute (pōr'tụ̄-nạl-flöt″), *n.* [See ★*portunal*.] In *organ-building*, a stop with open wooden pipes, larger at the top than at the bottom.

port-vent (pōrt'vent), *n.* [As of F. **porte-vent*, carry-wind.] A pipe conveying the wind in an organ or bagpipe. *N. E. D.*

Thereupon Malcolm set his *port-vent* to his mouth, rapidly filled his bag, . . . and then sent from the instrument such a shriek, . . . that . . . his adversary pressed both hands to his ears.
Geo. MacDonald, Marquis of Lossie, xi.

Port-wine mark or **stain.** Same as *capillary* ★*nævus*.

porulose (pō'rọ̈-lōs), *a.* [NL. **porulosus*, < **porulus*, dim. of *porus*, pore.] Having minute apertures or pores; minutely porose.

Free; disk-shape, circular, nearly flat above and below; both surfaces minutely *porulose*.
Dana, Zoophytes, p. 705.

porus, *n.* 2. In *entom.*, one of the minute pits on the upper surface of the antennæ, supposed to be olfactory in function.

In a great number of insects Erichson described on the upper surface of the antennæ peculiar minute bits, "*pori*," which, according to him, were covered by a thin membrane, and to which he ascribed the perception of smell. *A. S. Packard*, Text-book of Entom., p. 266.

pos., **poss.** Abbreviations (*a*) of *possession*; (*b*) of *possessive*.

posaune, *n.* 2. In *organ-building*, a powerful reed-stop, usually of 16-feet pitch.

posca (pos'kạ̈), *n.* [L.] A drink consisting of vinegar or wine diluted with water.

pose^2, *v. t.* 6. At *dominoes*, to set (the first domino). *Amer. Hoyle*, p. 445.

poseur (pō-zėr'), *n.* [F., < *poser*, pose. See *pose*^{2}.] One who poses, or takes an attitude, physical or mental, which is assumed for effect; one who attitudinizes.

Above all, she never affronted genuine artists by inviting self-advertising quacks and *poseurs* to meet them and make capital from the association.
J. L. Ford, in Smart Set, Sept., 1905, p. 91.

Posidonia (pos-i-dō'ni-ạ̈), *n.* [NL., < Gr. Ποσειδώνιος, adj., < Ποσειδῶν, Poseidon (Neptune).] Same as ★*Posidonomya*.

Posidonomya (pos-i-dō-nọ-mī'a̤), *n.* [NL., < *Posidonia* + *Mya*, genera of *Pelecypoda*.] A genus of prionodesmacean pelecypods having compressed, equivalve, concentrically plicated, thin-walled shells, with rounded outlines and short straight hinge-line. The species range from Silurian to Jurassic, and are especially abundant in Permian, Triassic, and Jurassic formations.

position, *n.* 5. Specifically, in *archery*, the attitude or standing of an archer in the act of shooting.—**Casselberry position,** a prone position of a patient after intubation, in which swallowing can occur without danger of fluid entering the tube.—**Day position,** in *bot.*, the position assumed by leaves during the day, as compared with that assumed by them during the night: that is, chiefly a horizontal position. Compare *night* ★*position*.—**Diagonal position,** in *bot.*, the position of an organ intermediate between median and lateral.—**Maritime positions,** the latitude and longitude of certain places on the seacoast.—**Night position,** in *bot.*, the position assumed by leaves during the night, as compared with that assumed by them during the day: that is, a more or less vertical position. Compare *day* ★*position*.—**Position cosine.** Same as *direction cosine*.—**Principal position,** in the *optics of crystals*, that position of a crystal, in the field of the polariscope, where the plane of the optic axes of the specimen coincides with the plane of polarization of the analyzer or with that of the polarizer. Another position, sometimes called the *second principal position*, is that where the plane of the optic axes makes an angle of 45° with the plane of the analyzer.—**Sims's position,** in *surg.*, a posture on the side with the under arm behind the back and the knees drawn up, assumed by the patient in gynecological examinations.—**Trendelenburg position,** in *surg.*, a posture on the back with the legs hanging down over the foot of the operating-table, the latter being so inclined that the body rests on a plane of 45°, the pelvis being higher than the head.—**Walcher's position,** in *surg.*, a position on the back, at the foot of a table, with the thighs hanging down over the edge. A woman in labor is sometimes placed in this position in order to increase the size of the pelvic inlet.

position-circle (pọ-zish'ọn-sėr"kl), *n.* The graduated circle of a position-micrometer.

positival (poz-i-tī'va̤l), *a.* [*positive* + *-al*^{1}.] Of a positive, real, or actual, character: opposed to *ideal*. *Grote*, Moral Ideals, p. 13. *N. E. D.*

positive, *a.* 11. Specifically, noting an oiling or lubricating device in which the oil is made to flow by pressure, due either to gravity or to pumping.

> Instead of depending on splash lubrication alone for oiling every part of the engine, *positive* oil feeds are led to each of the crankshaft bearings, and the crankshaft is pierced with suitable passages to conduct oil to the cranks themselves, so that the connecting rod boxes also receive plenty of oil. *Sci. Amer.*, Feb. 21, 1903, p. 134.

Positive culture. See ★*culture*.—**Positive number.** See ★*number*.

II. *n.*—**Bronze positive,** in *photog.*, a picture obtained by exposing a glass plate coated with a mixture of cane-sugar, glucose, gum arabic, and honey, which is sensitized by ammonium bichromate, and which after exposure is developed by applying bronze powder with a tuft of cotton-wool.

positively, *adv.* (*h*) In *mech.*, depending only on that which cannot fail without breaking; not depending on springs or gravity. See *positive motion*.

positivity, *n.* 2. The degree of exactness reached in the scientific determination of phenomena. *L. F. Ward*, Outlines of Sociol., p. 7.

positor, *n.* 2. In *surg.*, a repositor.—**Uterine positor,** an instrument employed in rectifying malpositions of the uterus.

poso (pō-sō'), *n.* [Tagalog *posó*.] In the Philippine Islands, a knot of hair held together by a comb, worn by Tagalog women.

posong (pọ-song'), *n.* [Tagalog *posong*, proud, arrogant, passionate, Ilocano *pusóng*, pride, arrogance.] In the Philippine Islands, a person who runs amuck.

possess, *v. t.*—**Not possessed,** a plea to an action of trover denying that the plaintiff was possessed of the goods when the action was commenced.

possession, *n.* 8. In the terminology of psychical research, a change of mental disposition, occurring in the state of trance, so marked as to suggest the substitution of a novel personality for the known personality of the subject.

> Trance is a name applied to a form of automatism, whether healthy or morbid, in which the automatist appears to be in some way altered, or even asleep, but in which he may speak or write certain matter of which his normal personality is ignorant at the time, and which it rarely remembers on his return to waking life. If there appears to be not merely a modification but a substitution of personality in the trance, it is called *possession*. Trance occurs spontaneously in so-called somnambulism, as a result of disease in hysteria, and as a result of suggestion, etc., in hypnotic states. A fuller analysis shows classes which slide into each other in various ways.
> *F. W. H. Myers*, in Proc. Soc. Psychical Research, [June, 1902, p. 67.

Law of possession. See ★*law*^{1}.

possessival (po-se-sī'va̤l), *a.* [*possessiv(e)* + *-al*^{1}.] Of or pertaining to the possessive case; possessive. *J. Earle*, Philol. Eng. Tongue, p. 522. *N. E. D.*

possessor, *n.*—**Naked possessor,** an occupant of land whose only apparent right or title to the land is the fact of possession.

possum-grape (pos'um-grāp), *n.* See ★*grape*^{1}.

possum-haw (pos'um-hâ), *n.* The deciduous holly, *Ilex decidua*, found on borders of streams and swamps from Maryland through the coast States to Texas and northward to Missouri. It is a small tree, or eastward a shrub.

post^{1}, *n.* 7. In a lock, a wire or cylindrical projection over which the tube of the key fits. Its purpose is to interfere with or prevent the picking of the lock by a lever or wire.—**Heads and posts.** See ★*head*.—**Inner post** (*naut.*), an oak timber joined to the foreside of the stern-post for the seating of the transoms.—**Post-and-rail tea.** See ★*tea*^{1}.—**Silence post,** in Australian race-tracks, a post erected at some distance from the members' stands, and beyond which book-makers are not allowed to ply their calling. *Encyc. Brit.*, XXIX. 334.

post^{2}, *n.*—**Cossack post,** an outpost composed of a few soldiers under a non-commissioned officer.—**General post,** in the early days of the postal service of Great Britain, the post despatched from the general post-office in London, once a day or on certain stated days, to all post-offices (then established) throughout the country: distinct from the local service known as the *penny post*, and later the *twopenny post*, which was under different management. See *penny post*, under *post*2.—**General-post day,** the day on which the general post was despatched or received.—**General-post delivery,** the delivery of the letters received by the general post; the first delivery of the day.

post^{2}, *v. t.* 6. To order or detail.

> Colonel Tanner returned from Gilgit in April, 1882, and, after a few months' absence on leave to England, was *posted* in November, 1882, to the charge of the Darjeeling party. *Geog. Jour.* (R. G. S.), XI. 557.

7. In *chess*, to move (a piece) to a square; occupy a square with (a piece).

> The White King would have been *posted* at Q's 4th.
> *Morphy*, Games of Chess, p. 47.

post^{5}, *adv.* and *prep.*—**Post litem motam,** in *law*, after the commencement of an action, or after the dispute has arisen.

postage, *n.* 3†. The hire of a horse for traveling; the sum paid for the hire.

> Each horse's hire or *postage*.
> *Act of* 1660, quoted in Joyce, Hist. of Post Office, p. 29, [note.

4. The sending of letters, etc., by post.

Postal scales. See ★*scale*2.—**Postal telegraph.** See ★*telegraph*.—**Postal trade,** the purchasing of goods through the post by means of 'mail orders.' See the extract.

> What is called in England "*postal trade*," and in America "mail order business," is growing very rapidly.
> *Encyc. Brit.*, XXV. 99.

Postal treaty. See ★*treaty*.

postantennal (pōst-an-ten'a̤l), *a.* [L. *post*, behind, + NL. *antenna* + *-al*^{1}.] Situated behind the antennæ.—**Postantennal organ,** Lubbock's name for the prostemmatic or ante-ocular organ possessed by certain *Collembola*.

postatlantal (pōst-at-lan'ta̤l), *a.* [L. *post*, behind, + *atlas* (*-ant-*) + *-al*^{1}.] Lying behind the atlas, or first cervical vertebra. *Philos. Trans. Roy. Soc.* (London), 1891, ser. B, p. 73.

post-auger (pōst'â"gėr), *n.* See *post-hole auger* and cut, under *auger*, 2.

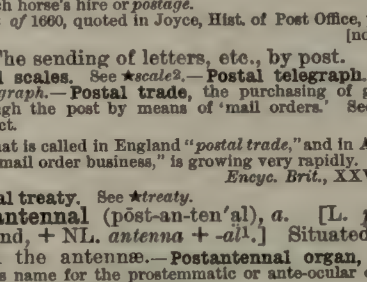
postauricular (pōst-â-rik'ū-lä̤r), *a.* [L. *post*, behind, + *auricula*, auricle, + *-ar*^{3}.] Situated behind the auricle, or ear. *Annals and Mag. Nat. Hist.*, Sept., 1903, p. 343.

postaxiad (pōst-ak'si-ad), *adv.* Same as ★*postaxially*. *Proc. Zool. Soc. London*, 1895, p. 319.

Postaxial border, the posterior edge of a limb when extended at right angles to the body: often well defined.

postaxially (pōst-ak'si-a̤l-i), *adv.* Backward; posteriorly of the median line of a limb which is extended at right angles to the body.

post-beetle (pōst'bē"tl), *n.* A beetle the larva of which bores in posts or other timber.—**Powder post-beetle,** any one of several species of ptinid beetles: applied especially to species of the genus *Lyctus* the larvæ of which bore into dry hardwood timber, filling their burrows with a fine powder. They do especial damage to hardwood furniture and to ax handles and the handles of agricultural implements.



Powder Post-beetle (*Lyctus planicollis*).

a, larva; *b*, adult; *c*, pupa; *d*, leg of larva; *a*, *b*, *c*, much enlarged, *d*, more enlarged. (Chittenden, U. S. D. A.)

post-boat (pōst'bōt), *n.* A mail-boat; a packet-boat.

postbrachium (pōst-brā'ki-um), *n.*; pl. *postbrachia* (-a̤). [NL., < L. *post*, behind, + *brachium*, arm.] The posterior process of the corpus quadrigeminum. *Buck*, Med. Handbook, II. 163.

postbuccal (pōst-buk'a̤l), *a.* [L. *post*, behind, + E. *buccal*.] Situated behind the buccal region: as, the *postbuccal* segments of leeches. *Buck*, Med. Handbook, IV. 701.

postbulbar (pōst-bul'bä̤r), *a.* [L. *post*, behind, + E. *bulbar*.] Situated or occurring behind or caudal to the spinal bulb or oblongata. *Philos. Trans. Roy. Soc.* (London), ser. B, 1898, p. 168.

postcæcal (pōst-sē'ka̤l), *a.* [L. *post*, behind, + *cæc(um)* + *-al*^{1}.] Situated behind the cæcum.

postcalcarine (pōst-kal'ka̤-rin), *n.* [L. *post*, behind, + E. *calcarine*.] Noting the posterior portion of the calcarine fissure. G. Elliot Smith has substituted *retrocalcarine* because *postcalcarine* has been employed in another sense by other writers. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 327.

post-card, *n.*—**Picture** or **pictorial post-card,** a post-card upon the reverse side of which a picture, photographic or other, is printed: said to have been first introduced in Switzerland. It is not an official government issue and requires a stamp, one cent in the United States and a halfpenny in Great Britain.

postcardinal (pōst-kär'di-na̤l), *a.* [L. *post*, behind, + E. *cardinal*.] Situated behind the heart; specifically, noting a vein in embryos and in certain fishes which is posterior to the heart and conveys the blood from the mesonephros, vertebral column, and trunk. *Proc. Zool. Soc. London*, 1898, p. 4.

post-cart (pōst'kärt), *n.* A cart in which mail is carried.

> Jamie was to sail from London to Dundee, and come on to Thrums from Tilliedrum in the *post-cart*.
> *J. M. Barrie*, Window in Thrums, xvi.

post-cenal (pōst-sē'na̤l), *a.* [L. *post*, after, + *cena*, dinner, + *-al*^{1}.] Occurring, or relating to what occurs, after dinner. [Rare.]

postcentral (pōst-sen'tra̤l), *a.* [L. *post*, behind, + E. *central*.] In *anat.*, situated behind the central fissure of the brain. *Buck*, Med. Handbook, II. 137.

postcentralis (pōst-sen-trā'lis), *n.* [NL., < L. *post*, behind, + *centralis*, central.] A fissure in the cerebral cortex caudad or posterior to and more or less parallel with the central fissure or fissure of Rolando. *Proc. Zool. Soc. London*, 1903, p. 20.—**Postcentralis superior,** the dorsal, superior, or upper portion of the postcentral fissure.

postcentrum (pōst-sen'trum), *n.*; pl. *postcentra* (-trä̤). [NL., < L. *post*, behind, + *centrum*, center.] One of the vertebral disks without neural and hæmal arches which occur in conjunction with those thus provided. The condition is found in some fishes. Contrasted with ★*precentrum*.

postcerebellar (pōst"ser-ẹ-bel'ä̤r), *a.* [L. *post*, behind, + E. *cerebellar*.] Situated in the hinder part of the cerebellum.

postcerebral (pōst-ser'ē-bra̤l), *a.* [L. *post*, behind, + E. *cerebral*.] Situated behind or posterior to the cerebrum. *Proc. Zool. Soc. London*, 1902, p. 181.

postchiasmatic (pōst"kī-az-mat'ik), *a.* [L. *post*, behind, + E. *chiasm* + *-atic*.] Situated behind the chiasm.—**Postchiasmatic commissure.** See ★*commissure*.

postcibal (pōst-sī'ba̤l), *a.* [L. *post*, after, + *cibus*, food, + *-al*^{1}.] Happening, done, or uttered, after a meal: as, a *postcibal* speech.

postclavicula (pōst-kla-vik'ụ-lä̤), *n.*; pl. *postclaviculæ* (-lē). [NL.] Same as *postclavicle*. *Starks*, Synonymy of the Fish Skeleton, p. 521.

postclival (pōst-klī'va̤l), *a.* [L. *post*, behind, + *clivus* + *-al*^{1}.] Situated posterior to any clivus, particularly the clivus Blumenbachii of the sphenoid bone, or the superior inclined surface of the vermis of the cerebellum.—**Postclival fissure.** See ★*fissure*.

postclypeus (pōst-klip'ẹ-us), *n.*; pl. *postclypei* (-ī). [NL., < *post-* + *clypeus*.] In *entom.*, the posterior of the two sclerites into which the clypeus of insects is sometimes divided. *Cambridge Nat. Hist.*, V. 93.

post-Columbian (pōst-kọ-lum′bi-ạn), *a.* After the discovery of America by Columbus. See ★*Columbian*^{2}.

> The Cracau globe is, except the Lenox globe, the first known *Post-Columbian* globe, and is quite the first to show any part of the New World, to divide the same from Asia, and to apply to it the name America.
> *Geog. Jour.* (R. G. S.), XVIII. 221.

postcolumellar (pōst″kol-ū-mel′ạ̈r), *a.* [L. *post*, after, + E. *columellar*.] Situated behind the columella.

postcommissural (post-kọ-mis̱′ū-ral), *a.* [L. *post*, behind, + E. *commissural*.] Relating to the posterior commissure of the brain.—**Postcommissural fibers.** See ★*fiber*^{1}.

postcondylar (pōst-kon′di-lạ̈r), *a.* [L. *post*, behind, + E. *condylar*.] Lying back of a condyle, or joint, especially back of the condyle of the human humerus.

postconnubial (pōst-kọ-nū′bi-ạl), *a.* [L. *post*, after, + *connubi*(*um*), marriage, + *-al*^{1}.] Subsequent to marriage.

post-contact (pōst′kon″takt), *a.* In *anthrop.*, relating to the period after contact between a primitive culture and the trade and influence of a higher.

postcornu (pōst-kôr′nū), *n.*; pl. *postcornua* (-ạ̈). [NL., < L. *post*, behind, + *cornu*. See *cornu*.] The posterior horn of the lateral ventricle of the brain. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 382.

post-croaker (pōst′krō″kėr), *n.* A fish, same as *spot*, 7 (*a*).

post-Darwinian (pōst-dạ̈r-win′i-ạn), *a.* Subsequent to the time of Charles Darwin: noting, in particular, biological science since the publication of "The Origin of Species," or since the period when the researches of biologists were directed and stimulated by Darwin's example. As there are few great lines of biological research that were not considered by Darwin, there is no distinctively post-Darwinian biology, although such great progress has been made in the investigation of many biological problems that they may properly be regarded as new.

> Next to phylogenetic research, investigations in cell-division and fertilisation stamp the *Post-Darwinian* period of Zoology. *Nat. Sci.*, Nov., 1896, p. 313.

postdental (pōst-den′tạl), *a.* [L. *post*, behind, + E. *dental*.] Situated behind the teeth; in *phonetics*, applied to a consonant pronounced by placing the tongue against the gum or palate just behind the teeth. *N. E. D.*

postdevelopmental (pōst″dē̱-vel-up-men′tal), *a.* [L. *post*, after, + E. *development* + *-al*^{1}.] Occurring after the period of development has ceased. *Buck*, Med. Handbook, V. 107.

postdigital (pōst-dij′i-tạl), *a.* [L. *post*, behind, + E. *digital*.] Lying behind the digits or toes.

postdiphtheritic (pōst″dif-thē-rit′ik), *a.* [L. *post*, after, + E. *diphtheritic*.] Following an attack of diphtheria. *Buck*, Med. Handbook, I. 284.

postdiscoidal (pōst-dis-koi′dạl), *a.* [L. *post*, behind, + E. *discoidal*.] In *entom.*, situated behind the discoidal cell in the wing of a lepidopterous insect. *Proc. Zool. Soc. London*, 1898, p. 419.

postembryonal (pōst-em′bri-ọn-ạl), *a.* Same as *postembryonic*. *Geog. Jour.* (R. G. S.), XVIII. 85.

postepileptic (pōst″ep-i-lep′tik), *a.* [L. *post*, after, + E. *epileptic*.] Following an epileptic paroxysm. *Buck*, Med. Handbook, III. 847.

posteriad (pos-tē′ri-ad), *adv.* [*posteri*(*or*) + *-ad*^{3}.] In a posterior direction; toward the posterior end of the animal body; posteriorly. *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 58.

posteriormost (pos-tē′ri-ọr-mōst), *a.* Situated the farthest behind in a series of several posterior elements.

posterodorsad (pos″te̱-rọ̄-dôr′sad), *adv.* [L. *posterus*, hinder, + E. *dorsad*.] Backward and toward the line of the back; in a quadruped, backward and upward. *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 59.

posterodorsal (pos′te̱-rọ̄-dôr′sal), *a.* [L. *posterus*, hinder, + E. *dorsal*.] Situated on the hinder part of the back. *Proc. Zool. Soc. London*, 1901, p. 281.

postero-external (pos″te̱-rọ̄-eks-tėr′nạl), *a.* [L. *posterus*, hinder, + E. *external*.] Posterior and external, or on the outer side.

> The longer axis of each process is diagonal, *posteroexternal* and anterointernal; the conjoined process is subtrigonal, the angles *posteroexternal* and anterior.
> *Bulletin Amer. Mus. Nat. Hist.*, 1902, p. 293.

postero-inferior (pos″te̱-rọ̄-in-fē′ri-ọr), *a.* [L. *posterus*, hinder, + E. *inferior*.] Posterior and inferior: used quite generally in anatomical descriptions to locate the position of any part of a structure or organ with reference to the head or anterior end of the body, or with reference to the part of the same structure or organ which may be in advance of and above the level of the part described. *Buck*, Med. Handbook, II. 162.

> It differs from the grebes in that it articulates with the *postero-inferior* angle of the ischium upon either side.
> *Amer. Nat.*, Jan., 1904, p. 30.

postero-internal (pos″te̱-rọ̄-in-tėr′nạl), *a.* [L. *posterus*, hinder, + E. *internal*.] Posterior and internal, or on the inner side.

> A *postero-internal* cusp on crown of second molar.
> *Amer. Jour. Sci.*, Jan., 1904, p. 29.

posteromedial (pos″te̱-rọ̄-mē′di-ạl), *a.* [L. *posterus*, hinder, + E. *medial*.] Situated behind and toward the median line. *Proc. Zool. Soc. London*, 1901, p. 263.

posteromedian (pos″te̱-rọ̄-mē′di-ạn), *a.* [L. *posterus*, hinder, + E. *median*.] Situated in the median line posteriorly.

> Marked degeneration of the *postero-median* columns of the cord. *Buck*, Med. Handbook, I. 118.

posteromesial (pos″te-rọ̄-mes′i-ạl), *a.* [L. *posterus*, hinder, + E. *mesial*.] Situated at the back and on the middle line.

posteropygal (pos″te̱-rọ̄-pī′gal), *a.* and *n.* [L. *posterus*, hinder, + E. *pygal*.] **I.** *a.* Noting the median one of the pygal plates when three are present, the pygal plates being those bony plates, not connected with any vertebra, which lie behind the neurals and form part of the carapace in turtles.

II. *n.* A posteropygal plate.

posterosuperiorly (pos″te̱-rọ̄-sū-pē′ri-ọr-li), *adv.* Backward and upward, or toward the line of the back.

posterotemporal, *a.* **II.** *n.* Same as *supraclavicle*. *Starks*, Synonomy of the Fish Skeleton, p. 520.

posteroventrad (pos″te̱-rọ̄-ven′trad), *adv.* [L. *posterus*, hinder, + E. *ventrad*.] Backward and downward, or toward the ventral side; posteroventrally.

> Where it approaches the posterior end of the sinus venosus (*sv*) it arches ventrad, gradually assuming a dorso-ventral attitude posterior to the heart (*ht*) and *postero-ventrad* to the sinus venosus.
> *Trans. Amer. Micros. Soc.*, Nov., 1903, p. 57.

posteroventrally (pos″te̱-rọ̄-ven′trạl-i), *adv.* Backward and downward; posteroventrad. *Proc. Zool. Soc. London*, 1902, I. 89.

posterula (pos-ter′ụ-lạ̈), *n.* [NL., dim., < L. *posterus*, behind.] The space behind the turbinated bodies in the nose.

postessive (pōst-es′iv), *a.* [L. *post*, after, + *esse*, be, + *-ive*.] In *gram.*, noting the case which expresses position behind. *Amer. Anthropologist*, Jan.–March, 1903, p. 26.

postethmoid (pōst-eth′moid), *a.* [L. *post*, after, + E. *ethmoid*.] Situated behind the ethmoid bone.

postface (pōst′fās), *n.* [L. *post*, after, + E. (*pre*)*face*.] See the extract.

> A *postface* may be [said to be] a . . . preface at the end of a book, . . . for which a great writer of French fought hard. *G. Saintsbury*, Pref. to Scott's Dryden, p. ix.

postfixed (pōst-fikst′), *a.* Noting certain muscular and cutaneous areas in which some of the nerves of supply originate at a more caudal level than in allied species. *Philos. Trans. Roy. Soc.* (London), 1898, ser. B, p. 116.

postfixture (pōst-fiks′tụ̄r), *n.* From a comparative standpoint, the condition where nerve-fibers from a more caudal level are distributed to given muscular and cutaneous areas. *Philos. Trans. Roy. Soc.* (London), 1898, ser. B, p. 116.

postfossette (pōst-fo-set′), *n.* The pit or depression just back of the second cross-crest, or metaloph, in such a tooth as the molar of a horse or rhinoceros. See cut under ★*tooth*, 1.

postfrontal. **I.** *a.*—**Postfrontal shield,** the loral shield of snakes and lizards. The term is somewhat indefinite.

II. *n.* **2.** Same as ★*postfrontal shield*.

postganglionic (pōst″gang-gli-on′ik), *a.* [L. *post*, behind, + E. *ganglionic*.] Noting the region behind or posterior to a ganglion, as nerve-fibers which are about to pass through a ganglion. *Nature*, Feb. 25, 1904, p. 407.

postgenerate (pōst-jen′e̱-rāt), *v. t.*; pret. and pp. *postgenerated*, ppr. *postgenerating*. [L. *post*, after, + E. *generate*.] To regenerate (an embryo or organism) from a part.

> A half-embryo develops from either of the first two blastomeres of the frog's egg, if the other blastomere has been injured or destroyed, but . . . subsequently the missing half of the embryo is *postgenerated*.
> *T. H. Morgan*, Regeneration, p. 216.

postgeneration (pōst″jen-e̱-rā′shọn), *n.* The restoration or regeneration of a whole organism from a part by the rearrangement of the material contained in the part.

> *Post-generation* now begins in the reorganized and cellulated half; the cells become changed over into the different layers and organs that make the new half-embryo. *T. H. Morgan*, Regeneration, p. 220.

postgenerative (pōst-jen′e̱-rạ̄-tiv), *a.* Pertaining to, of the nature of, or illustrative of, postgeneration.

> It is most difficult to account for these *post-generative* changes. *T. H. Morgan*, Regeneration, p. 221.

postgenial (pōst-jē̱-nī′ạl), *a.* and *n.* [L. *post*, behind, + E. *genial*.] **I.** *a.* Situated behind the chin.

II. *n.* In *herpet.*, one of the posterior of two pairs of large horny shields lying back of the mental and between the infralabials, on the under side of the jaw; a posterior chin-shield: correlated with ★*pregenial*.

post-glacial, *a.* **2.** Of or pertaining to any portion of Pleistocene time subsequent to the final recession of the continental ice-sheet.

II. *n.* A sediment deposited under conditions consequent upon the retreat of a continental glacier.

postglottidean (pōst-glo-tid′ē̱-an), *a.* [L. *post*, behind, + E. *glottidean*.] Situated back of the glottis. *Proc. Zool. Soc. London*, 1899, p. 91.

postgracile (pōst-gras′il), *a.* [L. *post*, behind, + (*lobus*) *gracilis*.] Posterior to the lobus gracilis: noting a fissure which separates the slender and semilunar lobes of the cerebellum.

postgula (pōst′gū-lạ̈), *n.*; pl. *postgulæ* (-lē). [NL., < *post-* + *gula*.] In *entom.*, a sclerite behind the gula, present in the second maxilla or labium of dermapterous insects. *A. S. Packard*, Text-book of Entom., pp. 54, 68.

posthemiplegic (pōst″hem-i-plej′ik), *a.* [L. *post*, after, + NL. *hemiplegia* + *-ic*.] Following an attack of hemiplegia. *Buck*, Med. Handbook, I. 599.

posthemorrhagic (pōst″hem-ọ-raj′ik), *a.* Following a profuse loss of blood. *Buck*, Med. Handbook, I. 281.

postheterotype (pōst-het′e̱-rọ̄-tīp), *a.* [L. *post*, after, + E. *heterotype*.] Following upon heterotype mitosis or cell-division: said of the differentiation of the spermatids and oötids after the divisions of the spermatocytes and oöcytes.

> Thus in a fern, the whole prothallium is composed of *post-heterotype* cells, and the sexual elements only arise from a relatively small number of them.
> *Nature*, Feb. 4, 1904, p. 321.

post-hook (pōst′hůk), *n.* In a harness for a horse, the ornamental hook over which the check-rein is hung.

post-horn, *n.* **2.** Same as *bugle*^{2}, 1.—**3.** A musical phrase or call, such as is given by a post-horn or bugle.

posthyoidean (pōst-hī-oi′dē̱-an), *a.* [L. *post*, after, + E. *hyoid* + *-e-an*.] In *embryol.* and *anat.*, situated behind or posterior to the hyoid arch.—**Posthyoidean cleft.** See ★*cleft*^{1}.

posthypnotic (pōst-hip-not′ik), *a.* Occurring after arousal from the somnambulistic state of hypnosis, or relating to the period following upon such arousal

> Many cases of the *post-hypnotic* effects of suggestion appear explicable on these two principles of the condition of memorial functioning and of autosuggestion.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 332.

posthypophysis (pōst-hī-pof′i-sis), *n.*; pl. *posthypophyses* (-sēz). [NL., < *post-* + *hypophysis*.] The posterior lobe of the cerebral hypophysis. *Buck*, Med. Handbook, II. 145.

posticum, *n.* **4.** [pl. *postica* (-kạ̈).] In Rauff's terminology of sponge morphology, the cloacal openings of the exhalant canals or aporrhysa.

postilium (pōst-il′i-um), *n.*; pl. *postilia* (-ạ̈). [NL., < *post*, behind, + *ilium*.] In *ornith.*, that part of the ilium which lies back of the acetabulum or socket for the head of the femur. *Proc. Zool. Soc. London*, 1898, p. 96.

postillon (pos-tē̱-yôn′), *n.* [F. *postillon*, a postilion.] In *music*, same as ★*post-horn*, 3.

postinfluenzal (pōst″in-flọ̈-en′zạl), *a.* [L. *post*, after, + E. *influenza* + *-al*^{1}.] Occurring after an attack of influenza. *Buck*, Med. Handbook, V. 16.

postinsular (pōst-in′ṣū-lär), *a.* [L. *post*, after, + *insula*, island, + *-ai*^{3}.] Situated behind an insula; specifically, behind the island of Reil. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 627.

postjacent (pōst-jā′sẹnt), *a.* [L. *post*, behind, + *jacens* (*jacent-*), lying. See *adjacent.*] Lying or situated behind or in the rear; posterior.

postlarval (pōst-lär′vạl), *a.* [L. *post*, after, + E. *larval.*] Subsequent to metamorphosis; after having passed through the larval or immature stage: generally used in speaking of tailless amphibians that have gone through the tadpole stage, or in the case of tailed amphibians, that have shed their external gills and undergone the changes that accompany this process. Thus *Amblystoma* is the postlarval form of siredon.

> The next moult leads at once to the *postlarval* stage, in which the adult form is assumed.
> *Proc. Zool. Soc. London*, 1903, p. 26.

postlicentiate (pōst-lī-sen′shi-āt), *a.* [L. *post* + E. *licentiate.*] Subsequent to the title of licentiate: applied to a degree given to a licentiate of any profession.

> The suggestion made that the *post-licenciate* title of Doctor of Public Health be established by legal enactment in the State of New York.
> *Med. Record*, Feb. 14, 1903, p. 266.

postmandibula (pōst-man-dib′ụ̄-lạ̈), *n.* In *ichth.*, same as ★*articulary.*

postmandibular (pōst-man-dib′ụ̄-lạ̈r), *a.* [L. *post*, behind, + E. *mandibular.*] Situated behind the mandible: as, the *postmandibular* arch.

postmastoid (pōst-mas′toid), *a.* [L. *post*, after, + E. *mastoid.*] Situated behind the mastoid process. *Buck*, Med. Handbook, II. 261.

postmaximal (pōst-mak′si-mạl), *a.* [L. *post*, after, + *maxim*(*um*) + *-al*^{1}.] Following a maximum, in any sense of that word. *Buck*, Med. Handbook, I. 139.

postmeatal (pōst-mẹ̄-ā′tạl), *a.* [L. *post*, after, + *meat*(*us*) + *-al*^{1}.] Situated behind a meatus.

postmedia (pōst-mē′di-ạ̈), *n.* [NL., < *post-* + *media.*] A longitudinal vein in the wings of certain insects, between the media and the cubitus. It is vein VI of Comstock's system. *Comstock*, Manual of Insects, p. 65.

postmedial (pōst-mē′di-ạl), *a.* [L. *post*, after, + E. *medial.*] Beyond the median cell in the wing of a lepidopterous insect. *Proc. Zool. Soc. London*, May–Dec., 1902, p. 306.

postmesenteric (pōst″mez-en-ter′ik), *a.* [L. *post*, after, + E. *mesenter*(*y*) + *-ic.*] Situated behind the mesentery; being in the posterior part of the mesentery. *Buck*, Med. Handbook, II. 675.

postmesoræum (pōst-mes-ọ̄-rē′um), *n.*; pl. *postmesoræa* (-ä). [L. *post*, behind, + NL. *mesoræum.*] The posterior fold of the mesentery in elasmobranchs (sharks and rays), carrying the digitiform process of the intestine and that part of the intestine lying posterior to it. *Proc. Zool. Soc. London*, 1890, p. 671.

postmineral (pōst-min′ẹ-rạl), *a.* Subsequent to the deposition of minerals, either ore or gangue, in a vein or other ore-body: chiefly employed in discussions of the origin and geological history of ore-deposits and specially applied to faults.

> *Post-mineral* or Secondary Fissures.—It is important to look for evidence of recent or *post-mineral* faulting that may be connected with secondary enrichment of the deposits; where, as is often the case, this is parallel, or nearly so, to the plane of the vein, it is sometimes difficult to detect. *Technical Lit.*, Sept., 1907, p. 189.

Post-mortem wart. See ★*wart.*

postmundane (pōst-mun′dān), *a.* [L. *post*, after, + *mundanus*, of the world (see *mundane*).] Subsequent to the end of the world. See *antemundane.*

postmutative (pōst-mū′tạ̄-tiv), *a.* [L. *post*, after, + E. *mutative.*] Applied to languages in which words are inflected by means of affixes placed after the stem or radical part. *N. E. D.*

post-Mycenæan (pōst″mī-sẹ̄-nē′ạn), *a.* [L. *post*, after, + E. *Mycenæan.*] Subsequent to the Mycenæan period. See ★*Mycenæan. Nature*, Nov. 20, 1902, p. 59.

postnasal, *n.*—**Postnasal shield**, a horny scale which forms part of the head-covering of some lizards, and lies just back of the supranasal. The term is somewhat indefinite and the shield is found only when there are several shields in the region of the nose.

postnatus, *n.* **II.** *a.* Referring to a second son; referring to a person born after a particular event. See the noun.

postneural (pōst-nū′rạl), *a.* and *n.* [L. *post*, behind, + E. *neural.*] **I.** *a.* Posterior to the neural plate.

II. *n.* An unpaired membrane-bone in the carapace of the turtle, lying immediately posterior to the last neural plate. There are from two to four of these postneural plates, the last of which in shape and position forms part of the peripheral or marginal series of plates. These are also termed *pygals* or *pygal plates.*

postnodal (pōst-nō′dạl), *a.* and *n.* [L. *post*, after, + *nodus*, node, + *-al*^{1}.] **I.** *a.* Situated behind the nodus of a dragon-fly's wing.

II. *n.* Any one of several cells behind the nodus of the wing of a dragon-fly.

postocular, *a.* and *n.* **I.** *a.*—**Postocular shield**, in *herpet.*, a shield or scute lying back of the eye and below the supraocular.

II. *n.* Same as ★*postocular shield.*

> Frontal small, slightly broader than the supraocular . . . ; one *postocular.*
> *Proc. Zool. Soc. London*, 1903, p. 128.

post-office, *n.*—**Distributing post-office**, an office where mail-matter is distributed by the carriers or sent to substations for local delivery.

Postoral circlet, in *embryol.*, a postoral band of cilia in the larvæ of certain marine worms.

Postorbital process. See *postorbital*, 1 (*a*).

postpalatine, *n.* **II.** *a.* Pertaining to the posterior portion of the palatine bones: as, the *postpalatine* region, *postpalatine* process, etc. *Annals and Mag. Nat. Hist.*, Jan., 1901, p. 44.

postpalmar (pōst-pal′mạ̈r), *a.* and *n.* [L. *post*, after, + E. *palmar.*] In Wachmuth's and Springer's terminology of crinoid structure, noting those plates of the brachia which are above the palmars and which form the free portions of the crinoid arms. They are termed *fourth brachials*, etc., in Bather's terminology.

postparalytic (pōst″par-ạ-lit′ik), *a.* [L. *post*, after, + E. *paralysis* (*-lyt-*) + *-ic.*] Following paralysis. *Buck*, Med. Handbook, V. 95.

postparietal, *a.* **2.** In *anat.*, referring to the posterior portion of the parietal lobe of the brain; noting an artery supplying this part. *Buck*, Med. Handbook, II. 253.

postpatagium (pōst-pat-ạ̄-jī′um), *n.*; pl. *postpatagia* (-ạ̈). [NL., < L. *post*, after, + *patagium.*] In *ornith.*, the triangular fold of skin, just back of the shoulder-joint, which runs from the side of the body to the upper posterior face of the upper arm. *Parker and Haswell*, Zoology, II. 352.

postpeduncle (pōst-pẹ̄-dung′kl), *n.* Same as *postpedunculus.*

postpeneplain (pōst-pē′nẹ̄-plān), *a.* [L. *post*, after, + E. *peneplain.*] Subsequent to the peneplanation of a district. [Rare.]

> The structural axes in this region have a general northwest-southeast trend, which is paralleled by the trend of the pre-Eocene schistosity as well as the axes of post-Miocene folding and faulting and the later *post-peneplain* warping in the adjacent Ellensburg quadrangle.
> *Science*, June 17, 1904, p. 921.

postperforated (pōst-pėr′fọ̄-rā-ted), *a.* Perforated posteriorly.—**Postperforated space.** Same as *posterior perforated space.* See *perforated space* (*b*), under *perforated.*

postpermanent (pōst-pėr′ma-nẹnt), *a.* [L. *post*, after, + E. *permanent.*] Coming after the permanent set of molars.

> A potential 4th dentition, the *post-permanent* series.
> *Proc. Zool. Soc. London*, 1896, p. 584.

postpubertal (pōst-pū′bėr-tạl), *a.* [L. *post*, after, + E. *pubert-y* + *-al*^{1}.] Subsequent to the period or occurrence of puberty. *Buck*, Med. Handbook, IV. 420.

post-pump (pōst′pump), *n.* A pump which is attached to a post for support.

post-pyramid (pōst-pir′ạ̈-mid), *n.* [L. *post*, behind, + E. *pyramid.*] In *anat.*, the funiculus gracilis, formerly called the *posterior pyramid.*

post-rank (pōst′rank), *n.* The rank of post-captain in a navy.

> The promotion to *post-rank*, to which he was fully entitled, came somewhat tardily in August 1801.
> *Encyc. Brit.*, VII. 539.

postremogeniture (pōs-trē-mọ̄-jen′i-ṭūr), *n.* [L. *postremus*, last, + E. *geniture.* See *primogeniture.*] The right of the youngest born.

postretinal (pōst-ret′i-nal), *a.* [L. *post*, behind, + NL. *retina* + *-al*^{1}.] Situated behind the retina.—**Postretinal fiber.** See ★*fiber*^{1}.

post-road, *n.* **2.** In the United States, any road, way, or street, including water-routes, over which the United States mail is carried.

postrostral (pōst-ros′trạl), *a.* [L. *post*, behind, + E. *rostral.*] Situated behind the rostrum.

post-route (pōst′röt), *n.* A route, whether by rail or boat, designated as the required line or route for the transmission of the mails.

postscapula (pōst-skap′ụ̄-lạ̈), *n.*; pl. *postscapulæ* (-lē). [NL., < L. *post-*, behind, + *scapula.*] The part of the scapula below the spine.

postscarlatinal (pōst″skär-lạ-tī′nạl), *a.* [L. *post*, after, + NL. *scarlatina* + *-al*^{1}.] Following scarlet fever as a sequela. *Buck*, Med. Handbook, V. 378.

postseptal (pōst-sep′tạl), *a.* [L. *post*, after, + *sept*(*um*), septum, + *-al*^{1}.] Situated posterior to any septum, especially to one of the structures so designated in the brain or medulla.—**Postseptal fissure.** See ★*fissure.*

postsequent (pōst-sē′kwẹnt), *a.* [L. *post*, after, + E. *sequent.*] Noting a river or valley which has originated on the side slope of a consequent valley.

postspinous (pōst-spī′nus), *a.* [L. *post*, behind, + E. *spinous.*] Situated back of the spine of the scapula.—**Postspinous fossa**, the depression on the posterior side of the spine of the scapula. More commonly *postscapular fossa.*

postsplenial (pōst-splē′ni-ạl), *a.* [L. *post*, behind, + E. *splenial.*] Noting a sulcus or fissure on the median surface of the carnivore brain, posterior to and sometimes joining the splenial fissure. *Trans. Linnean Soc., London*, Zool., Feb., 1903, p. 388.

post-spoon (pōst′spön), *n.* A long-handled shovel having a spoon-shaped blade. A similar shovel with a wider and shorter blade is called a *telegraph-spoon.*

poststernal (pōst-stėr′nạl), *a.* [L. *post*, behind, + E. *sternal.*] Situated behind the sternum.

postsylvian, *a.* **II.** *n.* A postsylvian process; specifically, a fissure in the mammalian brain lying behind, or posterior to, and more or less parallel with, the Sylvian fissure. Also known as the *posterior suprasylvian*, or *fissura postsylvia. Trans. Linnean Soc., London*, Zool., Feb., 1903, p. 334.

postsynapsis (pōst-si-nap′sis), *n.* [NL., < L. *post*, after, + NL. *synapsis.*] In *cytol.*, the stage following upon or succeeding the synapsis of the chromosomes in the cell-nucleus. Also called *late synapsis. Biol. Bulletin*, Feb., 1904, p. 158.

postsynsacral (pōst-sin-sā′krạl), *a.* and *n.* [L. *post*, behind, + *synsacrum* + *-al*^{1}.] **I.** *a.* Situated behind the synsacrum.

II. *n.* A vertebra back of the synsacrum of a bird; a caudal vetebra. [Rare.]

> There are 6 or 7 *post-synsacrals*—free caudal vertebræ. Of these the 4th and 6th bear pointed intercentra, which, however, are completely fused with their respective centra. *Proc. Zool. Soc. London*, 1903, p. 273.

postsyphilitic (pōst″sif-i-lit′ik), *a.* [L. *post*, after, + NL. *syphilis* + *-it-ic.*] Following an attack of syphilis as a sequela. *Buck*, Med. Handbook, VII. 378.

post-tergum (pōst-tėr′gum), *n.*; pl. *post-terga* (-gạ̈). [NL., < L. *post*, after, + *tergum*, back.] The last of the three parts into which the tergal aspect of an abdominal or thoracic segment of a coleopterous larva is supposed, normally, to be divided, the other parts being the prætergum and the tergum.

post-thoracic (pōst-thọ̄-ras′ik), *a.* [L. *post*, behind, + E. *thoracic.*] Lying behind the thorax; back of those vertebræ that bear ribs connected with the sternum: in this sense restricted to birds and reptiles, since the thorax of mammals includes all rib-bearing vertebræ, whether the ribs reach the sternum or are floating ribs.

> Dr. Gadow correctly observes of the geckos that they possess very long and slender *post-thoracic* ribs, which meet each other in the middle line.
> *Nature*, May 5, 1904, p. 6.

post-thyroidal (pōst-thī′roi-dạl), *a.* [L. *post*, behind, + E. *thyroidal.*] Situated back of the thyroid cartilage of the larynx. *Proc. Zool. Soc. London*, 1901, p. 297.

post-tragus (pōst-trā′gus), *n.*; pl. *post-tragi* (-jī). [NL., < L. *post*, behind, + *tragus.*] A prominence back of the tragus, found in the ears of some animals.

post-traumatic (pōst-trâ-mat′ik), *a.* [L. *post*, after, + E. *traumatic.*] Occurring after, or as a consequence of, a wound.

post-triangular (pōst-trī-ang′gụ̈-lạ̈r), *a.* and *n.* [L. *post*, after, + E. *triangular.*] **I.** *a.* Situated behind the triangular: noting the triangular cell in the hind wing of a dragon-fly. *Proc. Zool. Soc. London*, 1896, p. 522.

II. *n.* The triangular cell in the hind wing of a dragon-fly.

post-Tridentine (pōst-trī-den′tin), *a.* [L. *post*, after, + E. *Tridentine.*] Belonging to a time subsequent to the Council of Trent.

post-trigonal (pōst-trig′ọ̄-nạl), *a.* [L. *post*, behind, + E. *trigonal.*] Situated behind or beyond the trigonal or triangular cell in a dragon-fly's wing. *Proc. Zool. Soc. London*, 1902, p. 73.

post-trochal (pōst-trō′kạl), *a.* [L. *post*, behind, + Gr τροχός, wheel, circle, + *-ic.*] Situated behind the prototroch: said of the position of cells or organs in the trochophore larva of marine annelids.

postulancy (pos′ṭụ̄-lạn-si), *n.* [*postulan(t)* + *-cy.*] The status or period of candidacy of a postulant. See *postulant.*

postulate, *n.*— **Dedekind's postulate.** If S_1 and S_2 are any two non-empty subsets in S, such that every element of S belongs either to S_1 or to S_2, and every element of S_1 precedes every element of S_2, then there is an element X in S such that (1) any element that precedes X belongs to S_1, and (2) any element that follows X belongs to S_2.— **Euclid's postulate,** with regard to parallels. See *postulate*, 2 (5). As translated by Williamson (Oxford, 1781), the postulate is: "And if a straight line meeting two straight lines make those angles which are inward and upon the same side of it less than two right angles, the two straight lines being produced indefinitely will meet each other on the side where the angles are less than two right angles."— **Farkas Bolyai's postulate,** every three points are costraight or concyclic.— **Ludlam's parallel postulate,** "two straight lines which cut one another cannot both be parallel to the same straight line" (1794). See *Euclid's* ★*postulate.*— **Parallel postulate,** the postulate that through a given point there is not more than one parallel to a given straight line. See *Euclid's* ★*postulate.*— **Postulate of closure.** Same as *Dedekind's* ★*postulate.*— **Postulate of the circle.** See ★*circle.*— **Saccheri's postulate,** the postulate that there is a triangle whose angle-sum is two right angles.

posture, *n.*— **Trendelenburg posture.** Same as *Trendelenburg* ★*position.*

postvaccinal (pōst-vak′si-nạl), *a.* [L. *post*, after, + E. *vaccine* + *-al*¹.] Following vaccination, especially as a sequela. *Buck*, Med. Handbook, VII. 251.

post-Vedic (pōst-vē′dik), *a.* [L. *post*, after, + E. *Vedic.*] Belonging to a time subsequent to that of the Rig Veda.

postvertebral (pōst-vėr′tẹ̄-brạl), *a.* [L. *post*, after, + NL. *vertebra* + *-al*¹.] Situated behind one or more vertebræ.

pot¹, *n.* **11.** (*c*) In *poker*, a jack-pot; a pool formed by equal contributions from all the players before the deal. —**15.** In *geol.*: (*a*) The earthy or consolidated material found in a pot-hole. (*b*) A pot-like cavity in rock, which contains earthy matter. (*c*) A rounded and pot-like mass of ore, such as often occurs in the case of brown hematites or limonites distributed through clays and ochers.— **Ace in the pot.** See ★*ace.* **Pattinson's pots,** a series of pots used in separating silver and lead, the method being based on the fact that the greater the proportion of silver, the higher is the melting-point of the alloy.— **Pots and pearls,** an abbreviation for potash and pearlash. [Colloq.]

> For John had worked in his early day,
> In "*Pots and Pearls,*" the legends say,
> And kept a shop with a rich array
> Of things in the soap and candle way.
> *J. G. Saxe*, Proud Miss MacBride, st. xvii.

Rich pot, in the Pattinson process for desilverizing lead, the pot, at the opposite end of the series of such vessels from the market pot, in which rich lead accumulates, containing about 600 ounces of silver to the ton, to be cupeled in order completely to isolate the silver.— **Sheffield pot,** a crucible or pot made of graphite, in which crucible-steel is melted: so called because it was early used at Sheffield, England. *Nature*, May 5, 1904, p. 1.— **To be in one's pots,** to be intoxicated.— **To sweeten the pot,** in *poker*, to add to a jack-pot that has not been opened on the previous deal, each player contributing one chip. Also called *fattening.*

pot⁴ (pot), *n.* [Dan., a pot, a measure. See *pot*¹.] A Danish liquid measure equal to .212 gallons.

Pot. An abbreviation (*a*) of the Latin *potassa*, potash; (*b*) [*l. c.*] of *potential;* (*c*) of the Latin *potio*, potion.

potability (pō-tạ-bil′ị-ti), *n.* The character of being potable; potableness.

potage² (pọ-täzh′), *n.* [F.] Soup.

potagerie (po-täzh-rē′), *n.* [F.] Herbs or vegetables collectively; a kitchen-garden.

potagery† (po-taj′ẹ-ri), *n.* An Anglicized form of ★*potagerie.*

> *Potagery*, is a Term signifying all sorts of Herbs or Kitchen-plants, and all that concerns them, considered in general.
> *Evelyn*, tr. De La Quintinye, Compleat Gard'ner, Dictionary. *N. E. D.*

pot-ale (pot′āl), *n.* The residue left in the still from the first distillation of fermented wash in the manufacture of whisky. It contains a little lactic acid, which can be recovered and utilized in connection with dyeing processes.

potamian (pọ-tā′mi-ạn), *a.* Same as *potamic.*

Potamogetonaceæ (pot″ạ-mọ-jē″tọ-nā′sẹ-ē), *n. pl.* [NL. (Engler, 1886), < *Potamogeton* + *-aceæ.*] A family of monocotyledonous plants of the order *Naiadales*, the pondweed family, typified by the genus *Potamogeton.* It is distinguished from the *Naiadaceæ*, with which it was formerly united, chiefly by the distinct carpels and the disk-like or cup-like stigmas. It contains nine genera, of which *Potamogeton, Zostera, Ruppia*, and *Zannichellia* are the most important.

potamogetonetum (pot″ạ-mọ-jē″tọ-nē′tum), *n.* [*Potamogeton* + *-etum.*] A zone of vegetable growth near the shore of a body of water, characterized by the presence of the genus *Potamogeton.*

potamologist (pot-ạ-mol′ọ-jist), *n.* [*potamolog(y)* + *-ist.*] A student of potamology.

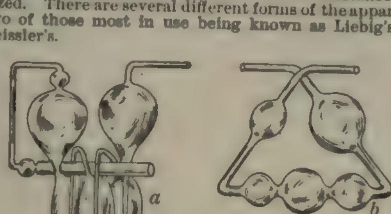
potamometer (pot-ạ-mom′e-tėr), *n.* [Gr. ποταμός, river, + μέτρον, measure.] An instrument for measuring the force of a current of water.

potamophobia (pot″ạ-mọ-fō′bi-ạ̈), *n.* [NL., < Gr. ποταμός, river, + -φοβια, < φοβεῖν, fear.] Morbid fear of rivers, especially of crossing one. *Ribot* (trans.), Psychol. of Emotions, p. 213.

potamoplankton (pot″ạ-mọ-plangk′tọn), *n.* [Gr. ποταμός, river, + NL. *plankton.*] The plankton of rivers as distinguished from that of lakes and oceans. See *pelagic* and *limnetic* ★*plankton.*

potash, *n.*— **Bichromate of potash.** See *potassium bichromate*, under *potassium.*— **Potash blue.** See ★*blue.* — **Stick potash,** caustic potash (potassium hydroxid) cast into cylindrical sticks one fourth or one third of an inch in diameter, for surgical use as an escharotic: also frequently used in this form in the chemical laboratory to absorb vapor of water and carbon dioxid from gaseous mixtures.

potash-bulbs (pot′ash-bulbz), *n. pl.* In *chem.*, a piece of apparatus, used in the ultimate analyses of organic substances, consisting of several connected bulbs of light glass containing a strong solution of potassium hydroxid. The potassium hydroxid absorbs the carbon dioxid formed in burning a weighed portion of the substance to be analyzed, the gain in weight of the apparatus showing the quantity of carbon dioxid produced, from which can be calculated the quantity of carbon in the substance analyzed. There are several different forms of the apparatus, two of those most in use being known as Liebig's and Geissler's.



Potash-bulbs.
a, Geissler's form; *b*, Liebig's form.

potassio-antimonious (pọ-tas″i-ọ-an-ti-mō′ni-us), *a.* Containing potassium and antimony (with its lower valence) as constituents. Potassio-antimonious tartrate is common tartar emetic, $2(K(SbO)C_4H_4O_6).H_2O$.

potassiobismuthic (pọ-tas″i-ọ-biz′muth-ik), *a.* Containing potassium and bismuth as constituents. Potassiobismuthic nitrate, in strongly alkaline solution, is Böttger's reagent for the detection of glucose in urine.

potassiomercuric (pọ-tas″i-ọ-mėr-kū′rik), *a.* Containing potassium and mercury (with its higher valence) as constituents. Potassiomercuric iodide ($KHgI_3$) is frequently used as a reagent for the detection of vegetable alkaloids, and sometimes for their quantitative determination.

potassioplatinic (pọ-tas″i-ọ-plạ-tin′ik), *a.* Containing potassium and platinum (with its higher valence) as constituents. Potassioplatinic chlorid is the same as potassium chloroplatinate (K_2PtC_6).

potassiosulphate (pọ-tas″i-ọ-sul′fāt), *n.* A double sulphate of potassium and some other metal or radical: as, aluminium *potassiosulphate*, common alum.

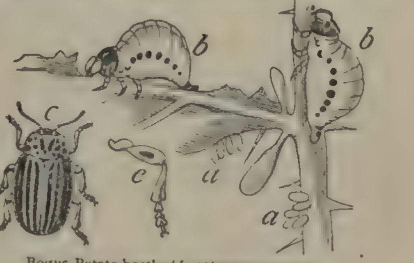
Potassium chloroplatinate. See ★*platinichlorid.*— **Potassium chloroplatinite.** See ★*chloroplatinite.* — **Potassium hydrogen sulphate,** potassium acid sulphate, or bisulphate of potash ($KHSO_4$).— **Potassium iodide.** See ★*iodide.*— **Potassium manganate,** the "mineral chameleon" (see *chameleon mineral*) of earlier chemists, so named from the readiness with which its solution changes color from green to purple by taking up oxygen, producing the permanganate. It is chiefly as material for the production of this latter salt that the manganate is now made.— **Potassium perchlorate.** See ★*perchlorate.*— **Potassium permanganate,** a salt which dissolves in water with a rich red-purple tint, the color disappearing on removal of oxygen which is easily given up in definite amount to substances which are ready to combine with it. Hence this salt, of which the formula is $KMnO_4$, is extensively used in volumetric analysis, as, for example, in the determination of iron in its ores.— **Potassium sulphate,** a salt which is produced largely, in working the Stassfurt deposits, from kainite and by decomposing the potassium chlorid of carnallite with kieserite: extensively used in the manufacture of glass and of alum, and in a more or less crude condition as an ingredient of fertilizers.

potassoxyl (pō-tas-ok′sil), *n.* The radical consisting of an atom of oxygen in combination with an atom of potassium (KO).

potato, *n.*— **Bacteriosis of the potato.** See ★*bacteriosis.*— **Black rot of sweet potato.** See *black* ★*rot.*— **Brown rot of the potato.** See ★*rot.*— **Chinese potato.** See ★*cinnamon-vine* and *yam*, 1.— **Chytridiose of potato.** See ★*chytridiose.*— **Goa potato,** the prickly yam, *Dioscorea aculeata*, a species widely spread in the East Indies and in the islands of the Pacific. The starchy tubers form an important food-staple in many places during certain seasons of the year.— **Horse potatoes,** a sailors' name for yams.— **Kafir potato,** a Natal plant of the mint family, *Plectranthus esculentus.* It bears tubers resembling potatoes, which are used by the natives as food.— **Salaga potato,** a West African plant of the mint family, *Coleus Salagensis*, native to Togoland, which bears edible tubers resembling potatoes.— **Potato early blight, potato late blight.** See ★*blight.*— **Potato flea-beetle, flea-bug.** See ★*flea-beetle*, ★*flea-bug.*— **Sweet-potato borer.** See ★*borer.*

potato-ball (pọ-tā′tō-bâl), *n.* The globose berry of the potato, *Solanum tuberosum.* See *potato*, 2.

potato-beetle, *n.*— **Bogus potato-beetle,** an American chrysomelid beetle, *Leptinotarsa juncta*, which rather closely resembles the Colorado potato-beetle and feeds on wild species of *Solanum.*— **Striped potato-beetle.** (*a*) The Colorado potato-beetle. (*b*) A meloid beetle, *Epicauta vittata.* Also called the *old-fashioned potato-beetle.*— **Three-lined potato-beetle,** an American chrysomelid beetle, *Lema trilineata*, yellow in color and with three black elytral stripes. It feeds on the leaves of the Irish potato. See cut at *Lema.*



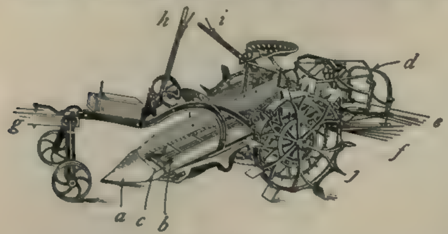
Bogus Potato-beetle (*Leptinotarsa juncta*).
a, a, eggs; *b, b*, larvæ; *c*, beetle; *e*, leg: *a, b, c*, enlarged; *e*, more enlarged. (After Riley.)

potato-clay (pọ-tā′tō-klā), *n.* A fine silicious lumpy clay used as a base by the Hopi in the manufacture of certain artificial ceremonial pigments. *Smithsonian Rep.* (Nat. Mus.), 1900, p. 469.

potato-curl (pọ-tā′tō-kėrl), *n.* A disease of the potato-plant, marked by the curling and withering of the leaves, caused by a fungus, *Verticillium atroalbum.*

potato-cutter (pọ-tā′tō-kut″ėr), *n.* In *agri.*, a hand-machine for slicing potatoes. It consists of a rectangular box, open below, containing fixed knives and a pivoted cover for pressing a potato laid upon the knives down upon them and pushing the cut pieces out below. It cuts in slices or quarters or both, and preserves the eyes of each piece ready for planting. Other machines have a knife-box and a simple hand-lever for pushing the potato through the nest of knives.

potato-digger, *n.* The smallest of these machines is a simple double or lifting plow having long steel fingers at the back. The plow lifts the soil, tubers, and plants, and pushes them upon the fingers, the soil falling between them, and the roots and tops being left behind on the ground. Another form of plow is provided with a horizontal wheel armed with long fingers. As the plow opens the soil, the revolving wheel picks out and separates the tubers and roots, and throws them to one side. More powerful machines, operated by four horses, open the rows and, by means of screens, clean the tubers from the soil, separate them from the tops, and deliver tops and tubers in separate lines, behind. Sometimes called a *potato-harvester.*



Potato-digger.

a, shovel point for lifting plants and soil; *b*, screen for sifting out soil; *c*, elevator with flights carrying plants and tubers over and up screen; *d*, vibrating rack for shaking tubers out of plants; *e*, rack made of rods delivering the plants; *f*, rack delivering tubers; *g*, pole; *h*, lever controlling depth of shovel point; *i*, lever controlling delivery; *j*, wheel supporting machine and delivering power to elevator and rack, and armed with radial stops to prevent slipping in soft ground.

potato-fly (pọ-tā'tō-flī), *n.* Any one of several species of blister-beetles which eat potato-leaves. *Epicauta vittata* is an example.

potato-gun (pọ-tā'tō-gun), *n.* A special form of powder-gun for dusting potato-plants with an insecticide.

potato-harvester (pọ-tā'tō-här″ves-tėr), *n.* Same as ★*potato-digger.*

potato-hiller (pọ-tā'tō-hil″ėr), *n.* A horse-tool for scraping and gathering the loose soil about young potato-plants, in hilling or ridging. It consists of two mold-boards placed under a plow-beam. The tool is guided by means of plow-handles. It resembles a ridger. See ★*ridger*, 3.

potato-moth (pọ-tā'tō-môth), *n.* A cosmopolitan gelechiid moth, *Phthorimæa operculella*, whose larva attacks potato tubers and also mines the leaves of tobacco.

potato-planter, *n.* These machines have reached a high degree of efficiency. Some forms open the soil, automatically deposit the seed-potatoes at fixed distances, and cover them by means of followers or disks. Others, under the guidance of a boy riding behind the driver, distribute the seed as desired. Some forms employ a cutter or disk in advance of the plow to assist in opening the soil, and all types employ some form of attachment for distributing fertilizer in connection with the planting.

potato-plow (pọ-tā'tō-plou), *n.* A potato-digger (which see).

potato-race (pọ-tā'tō-rās), *n.* A race in which each runner picks up and carries to the starting-line, one at a time, potatoes placed at intervals along the course. Usually there are eight potatoes for each runner, placed at intervals of two yards.

potato-scab (pọ-tā'tō-skab), *n.* A disease of the potato tuber due to the fungus *Oöspora scabies.*—**Potato-scab gnat.** See ★*gnat*1.

potato-sorter (pọ-tā'tō-sôr″tėr), *n.* A machine for cleaning and sorting potatoes. Some are cylindrical riddles; others use a traveling elevator-screen which cleans and sorts the potatoes and packs the merchantable ones in barrels.

potato-sphinx (pọ-tā'tō-sfingks), *n.* A large sphingid moth, *Phlegethontius quinquemaculata*, whose larva feeds on potato-, tomato-, and tobacco-plants.

potato-sprayer (pọ-tā'tō-sprā″ėr), *n.* A machine for spraying rows of potato-plants.

potato-stones (pọ-tā'tō-stōnz), *n. pl.* A local name for hollow brown nodules of quartz lined with crystals of the same mineral found at Bristol, England.

potato-tree (pọ-tā'tō-trē), *n.* A hardy, showy Chilian shrub, *Solanum crispum*, which grows from 12 to 15 feet high, and bears fragrant bluish-purple flowers and yellowish-white fruit the size of peas.

potato-weevil (pọ-tā'tō-wē″vl), *n.* Same as *potato-stalk weevil* (which see, under *weevil*).

potato-worm (pọ-tā'tō-wėrm), *n.* The larva of the potato-sphinx.

pot au feu (pō tō fė'). [F., 'pot at the fire.'] A French dish which resembles beef stew: also used to designate soup stock and the pot in which soup stock is prepared.

Poteau stage. See ★*stage.*

Potency of a set or series, in *math.*, its power or cardinal number.—**The potency of the continuum**, the potency of the sequence of all the numbers from 0 to 1, or of all the points of the sect (0, 1).

potential. I. *a.*—**Potential gradient**, in *elect.*, the mean decrease of potential per unit distance. *Science Abstracts*, III, Sec. A, p. 395.—**Potential slope.** Same as ★*potential gradient.*—**Potential variation.** See ★*variation.*

II. *n.* 2. (*e*) In *elect.*, an incorrect abbreviation of *potential difference*, or *electric pressure.*—**Contact difference of potential**, in *elect.*, a difference of potential produced by the contact of two different metals or other substances, and not due to any chemical action between them.—**Difference of potential.** (*b*) See ★*difference.*—**Discharge potential**, in *elect.*, the voltage at the terminals of a vacuum-tube or similar apparatus, between which an electric discharge occurs.—**Electrostatic potential.** See *potential*, 2 (*c*).—**Negative potential**, electric potential of a point or region, such that the tendency of flow is from the earth toward it.—**Thermodynamic potential**, a function of the energy, entropy, temperature, pressure, and volume of a system which has its minimum value when the system is in equilibrium. One of its usual forms, known as the *thermodynamic potential at constant pressure*, is given by the equation $\zeta = \epsilon - \theta\eta + \rho\nu$.

potentialize, *v. t.* 2. To give power to; make potent. [Rare.]

> [He] felt assured of victory if his war club was made in imitation of that of the enemy and *potentialized* by a plume or inscription appealing to the Apache deity.
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. xxiii.

potentiometer, *n.*—**Liquid potentiometer**, in *elect.*, a device for measuring the fall of potential in a liquid column traversed by an electric current.

potentite (pō'ten-tīt), *n.* [*potent* + *-ite*2.] A trade-name of an explosive consisting of a mixture of finely divided guncotton (about 45 to 65 per cent.) with potassium nitrate.

Poterioceras (pọ-tē-ri-os'ẹ-ras), *n.* [NL., < Gr. ποτήριον, a drinking-cup, + κέρας, horn.] A genus of cyrtochoanitic nautiloid cephalopods with short, stout, and straight or curved shells, the apertures of which are subtrigonal in senile individuals. Several species are known from the Silurian to the Carboniferous.

Poteriocrinus (pọ-tē-ri-ok'ri-nus), *n.* [NL., < Gr. ποτήριον, a drinking-cup, + κρίνον, lily (see *crinoid*).] A genus of dicyclic fistulate crinoids, with very large tubular ventral sac as long as the arms, represented by numerous species in the Upper Devonian and Lower Carboniferous rocks.

potestal (pọ-tes'tal), *a.* [L. *potestas*, power, + *-al*1.] In *Rom. antiq.*, of or pertaining to potestas. See *potestas.* [Rare.]

> The leaders . . . of the other school are of the opinion that my action is only suspended while the child or slave is in my potestas, because I cannot proceed against myself, but that it revives on the *potestal* relationship coming to an end. *Muirhead*, Gaius, IV. § 78.

pot-grease (pot'grēs), *n.* Fat saved from the household cooking of meat, used in soap-making. Also known as *kitchen-stuff.*

pothead, *n.* 2. A form of joint or connector used in electric line work in passing from a single conductor to a group of parallel wires.

> The station terminal of the cable is on the ground floor and consists of a series of concrete cells, the cable being provided with a *pot-head* at this point and spreading from a three-conductor cable to single-conductor cable. *Elect. World and Engin.*, March 5, 1904, p. 427.

pot-head (pot'hed), *v. i.* To expand at the end to form a cup or pot: said of electrical cables which, when used for very high voltages, have their covering or armor spread out to form a cup, which is then filled with insulating material. The armor is usually of lead, hence the potheading can easily be done, and prevents short-circuiting between the cable and cover or armor.

pot-hole (pot'hōl), *v. t.*; pret. and pp. *pot-holed*, ppr. *pot-holing.* To produce in (a solid rock mass) a hole by the action of stones and silt whirled around in an eddy of water. The effect of such action is to produce a deep cylindrical hole, called a *well*, or a hollowed cavity, called a *pot-hole*, or, in rare cases, a very large and deep, more or less cylindrical and hollowed cavern, called a *giants' kettle* or *cauldron.*

> The vertical extent of such erosion works out at about 2 millimetres per year, which corresponds to the removal of only 5 milligrammes of rock per ton of silt-laden water, and of this Mr. Ball thinks that at least two-thirds is accounted for by the *pot-holing* action.
> *Geog. Jour.* (R. G. S.), XXI. p. 672.

pot-leg (pot'leg), *n.* 1. The leg of a pot.—2. Broken pieces of cast-iron used as shot.

> And at shot-range a man can be killed just as definitely by a dose of *pot-leg* out of a gas-pipe barrel as he can by a dum-dum bullet sent through scientific rifling. Indeed, for close-quarter fighting *pot-leg* is far more comprehensive, and far less likely to miss than the lonely modern bullet. *Cutcliffe Hyne*, A Master of Fortune, iii.

pot-man, *n.* 3. The workman who ladles the lead crystals into the pots in the Pattinson process. *Phillips and Bauerman*, Elements of Metallurgy, p. 691.

Potomac cat. See ★*cat*1.—**Potomac formation**, or **group.** See ★*formation.*

potomato (pō-tọ-mä'tō or pō-tọ-mā'tō), *n.* [*po*(*tato*) + *tomato.*] A name given to plants produced by grafting the potato on the tomato and vice versa. The plants are readily intergrafted, and the union will persist throughout the normal life of the particular plants that are grafted; but no economic results follow the operation. Recently, the word *pomato* has also been used, chiefly for reputed sex crosses between the potato and tomato. See ★*pomato.*

potong† (pō-tong'), *n.* [Tagalog.] In the Philippine Islands, a colored wrap for the head, as worn by the Tagals at the time of the Spanish conquest.

potoroo (pō-tọ-rö'), *n.* [Native Austral.] One of the small rat-kangaroos of the genus *Potorous*, the generic name being a Latinization of the native name.

pototromoparanœa (pō″tọ-trō-mọ-par″ạ-nē'ạ̈), *n.* [L. *potus*, drink, + Gr. τρόμος, a trembling, + παράνοια, delirium.] Delirium tremens.

potrero (pō-trā'rọ), *n.* [Sp. *potrero*, pasture, < *potro*, a colt.] In Spanish-American countries, a cattle-farm or ranch.

pot-seine (pot'sān), *n.* A net with a central pot or bag, used in taking fishes.

> The purpose of this contrivance is to provide a *pot-seine* to be used with or without scows and adapted to fish only with the tide and to be held by leads or guides, one at each side. *Sci. Amer.*, Feb. 28, 1903, p. 160.

pot-spade (pot'spād), *n.* In *whaling*, a long-handled, sharp-edged spade used for handling the blubber while boiling out the oil.

pot-steel (pot'stēl), *n.* Cast-steel; crucible steel: so called because it is melted in a pot or crucible.

pot-stick, *n.* 2. In a camp, the stick or pole on which the kettle is suspended over the fire.

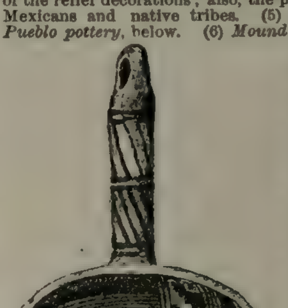
> Camping-grounds, *pot-sticks*, fire, implements, utensils, canoes, and geographical names.
> *Geog. Jour.* (R. G. S.), X. 3.

Potters' asthma, pneumonoconiosis.—**Potters' bronchitis.** Same as ★*potters' asthma.*

potter-bee (pot'ėr-bē), *n.* See ★*bee*1.

potter-wasp, *n.*—**Fraternal potter-wasp**, an American wasp, *Eumenes fraterna*, which builds clay cells and stores them with canker-worms or similar slender lepidopterous larvæ.

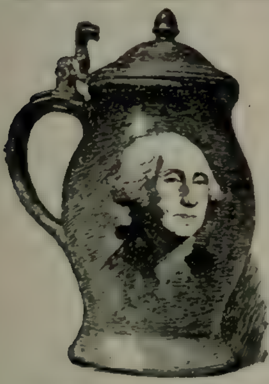
pottery, *n.*—**Akahada pottery**, earthenware made in Akahada, a province of Yamato, Japan, in the seventeenth and eighteenth centuries.—**American pottery.** (*a*) *Aboriginal pottery.* Pottery has been produced by various native peoples throughout North, Central, and South America from an early period, and in certain sections is still manufactured. The most important and characteristic of the native American warés are the following: (1) *Cliff-dwellers' pottery.* See *Pueblo pottery*, below. (2) *Costa Rican pottery*, a rude earthenware made by the natives of Costa Rica and found in the ancient ruins of that country. Cinerary urns are abundant in this ware. (3) *Atlantic Indian pottery*, a coarse, sandy pottery made by the Indian tribes of the Atlantic coast from Maine to Florida. It is partly baked and usually occurs in the forms of pots or jars with rude ornamentation produced by scratching simple patterns on the plastic surface or molding the clay in the interior of coarse textile fabrics or basketwork. (4) *Mexican pottery*, ware found among the ancient remains of Mexico. The most distinctive variety is a black or red pottery modeled in grotesque shapes, in which serpents, heads of gods, and symbolical figures form conspicuous features of the relief decorations; also, the pottery of the modern Mexicans and native tribes. (5) *Moki pottery.* See *Pueblo pottery*, below. (6) *Mound pottery*, a primitive pottery found in the ancient mounds of the Mississippi valley. Also called *mound-builders' pottery.* It is generally of coarse texture, though sometimes of fine, smooth clay, and is occasionally covered with a dark-red pigment. The usual forms are bowls and pots, frequently made in the rude semblance of the human figure, animals, and vegetable forms. (7) *Nicaragua pottery*, ware made by the natives of Nicaragua in Central America. It is distinguished by its modeled forms in imitation of animals, idols, and conventional sculptures. Much of it is of a mortuary or sepulchral nature. (8) *Peruvian pottery*, pottery found in the ancient cemeteries of Peru. The ware is either red or black, and occurs in a great variety of shapes simulating almost every object in nature and illustrating



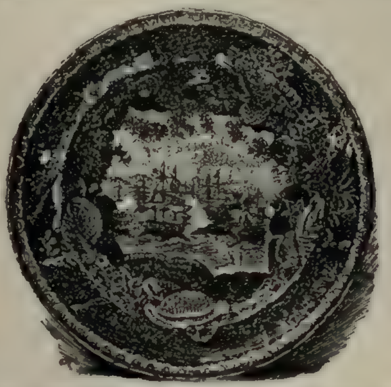
Pueblo Pottery.—Dipper, from ancient ruins in Arizona.

(In the Pennsylvania Museum, Philadelphia.)

every phase of domestic life. The portrait-vases or water-vessels are carefully modeled in the forms of human heads, lifelike or grotesque. Many of these are furnished with an arched tube extending above, from which rises a central spout. (9) *Pueblo pottery*, a peculiar variety of earthenware made by the Pueblo Indians, or house-building tribes, of the western slope of the Rocky Mountains. This pottery is of several varieties, the best having a grayish-white body with geometrical decorations in black and various colors, covered with a gloss, produced by polishing or rubbing the surface with smooth stones. In the ancient cliff ruins of Colorado, Utah, New Mexico, and Arizona this ware has been found in surprising abundance. The modern Moki Indians of Arizona and the Pueblo and Zuñi Indians of New Mexico still practise the ancient art of their ancestors. (10) *Zuñi pottery*. See *Pueblo pottery*, above. (*b*) The first white settlers in America made pottery, but not until the end of the seventeenth century was any attempt made to produce a better grade of ware than the commonest sorts of household utensils. The following are the more important varieties produced after that time: (1) *Beech pottery*, pottery made by Ralph Bagnall Beech, of Philadelphia, between 1845 and 1857; particularly a white ware with inlaid designs of mother-of-pearl, and painted portraits of prominent men on a black or blue enameled or japanned ground. (2) *Bennington pottery*, earthenware made at Bennington, Vermont, between 1846 and 1858, at the United States Pottery, which was operated by Lyman and Fenton. Brown-glazed, Rockingham, and scrodled wares, of good body and excellent glaze, were produced there in a great variety of forms, as picture-frames, toby jugs, hunting-pitchers, book-shaped flasks, mantel ornaments, and figures of animals, such as well-modeled deer, cows, dogs, and lions. See *flint-enameled ware*, below. (3) *Biloxi pottery*, a common pottery body made in a great variety of eccentric shapes and frequently covered with rich, mottled glazes. The principal features of this ware are extreme thinness and lightness of weight and originality of treatment by crimping, crumpling, and twisting the clay in every conceivable manner. It is made at Biloxi, Mississippi. (4) *Burlington white ware*, ware first produced at Burlington, New Jersey, about 1684, by agents of Dr. Daniel Coxe, of London, one of the proprietors and afterward governor of West New Jersey. This was the first white ware made in the American colonies. (5) *Cushman stoneware*, a salt-glazed stoneware with cobalt-blue decorations and, occasionally, incised designs, made by Paul Cushman at Albany, New York, about 1809,—a date found on numerous pieces bearing his name. (6) *Flint-enameled ware*, a fine grade of Rockingham or tortoise-shell ware, made at Bennington, Vermont. The glaze is heavy and brilliant, with mottlings of brown, blue, and olive, sometimes in monochrome and occasionally in combination. Patented by Lyman and Fenton in 1849. (7) *Grueby faïence*, a hard pottery body covered with opaque enamels in dull or mat finish, produced by the Grueby Faïence Co. of Boston, Massachusetts. The prevailing color is cucumber-green, although other colors, such as claret, light blue, and yellow, have been used. The shapes are adopted mainly from ancient Egyptian forms, the ornamentation being principally conventionalized leaf forms in low relief. (8) *Hammered pottery*, a variety of decorative earthenware made at Chelsea, Massachusetts. The surface of the ware is hammered before burning, and is thus covered with a network of flat facets in regular patterns, resembling the surface of hammered metal. Over this indented groundwork carved sprays of flowers are applied in relief designs. (9) *Jersey City pottery*, earthenware produced at the Jersey City Pottery, New Jersey, between 1825 and 1892, consisting of hunting-pitchers, toby jugs in brown glaze, coarse blue and white ware, after the style of Wedgwood's jasper ware, and household and druggists' wares of every description. The principal modeler of these works was Daniel Greatbach, who originated many of the now famous shapes. (10) *Pennsylvania-German pottery*, coarse red earthenware made by the German settlers in eastern Pennsylvania during the eighteenth century and the first half of the nineteenth. The art was brought from Germany, where slip-decoration flourished for several centuries. See *tulip ware*, below. (11) *Rookwood pottery*, a manufactory of pottery established at Cincinnati, Ohio, in 1880, by Mrs. Maria Longworth Nichols; also, the ware produced at Rookwood Pottery, which is of a hard earthenware or stoneware body with underglaze decorations painted in colored clays on the green ware. One of the distinguishing features of Rookwood is the tinting and blending of the ground colors beneath the heavy, transparent, colored glazes. Among the most important styles of ware produced at this establishment are cameo or shell-tinted, dull-finished, carved, modeled, and mat-glazed wares; but the factory is more especially noted for its 'standard' ware, with tinted grounds and heavy glazes, and the highly artistic quality of its ornamentation. (12) *Southwark white ware*, a fine grade of pottery made at Southwark, a suburb of Philadelphia, from 1769 to 1774. This ware was of white body with blue underglaze decorations, after the style of the Bow and Worcester wares of that period. (13) *Teco ware*, a modern pottery made by the American Terra Cotta and Ceramic Co. of Chicago, Illinois, with modeled or sculptured decorations and mat glazes, usually of a mottled grayish-green color. (14) *Tulip ware*, a name given to the sgraffito and slip-decorated red earthenware made by the Pennsylvania-German potters in eastern Pennsylvania during the eighteenth century and the first half of the nineteenth, in the decoration of which the tulip predominated.—**Anglo-American pottery**, English cream-colored ware of the first third of the nineteenth century, bearing transfer-printed designs of American subjects, such as views of prominent buildings, scenery, and portraits of eminent men. This ware was made especially for the American market. It was printed at first in black or dark blue, and later in various colors.—**Arabic pottery**, pottery made by the Arabs from the eighth to the sixteenth century, consisting of tiles, mosaics, and decorative earthenware. The earliest pottery of the Arabs in Europe was probably a silicious glazed ware. In 1239 James I. of Aragon granted a special charter to the Saracen or Arab potters of Játiva (now San Felipe de Játiva), allowing them to pursue their calling on the payment annually of one bezant. Early in the sixteenth century the Saracenic potters were producing well-made gilded faïence.—**Avisseau pottery**, an imitation of the rustiques figulines of Bernard Palissy by Victor Avisseau of Tours, France, whose pottery was established in 1842.—**Avon pottery**. (*a*) Earthenware made at Avon, near Fontainebleau, France, in the early part of the seventeenth century, consisting principally of figures of animals and figurines. (*b*) A modern faïence with tinted ground, somewhat resembling the earlier products of the Rookwood Pottery, made at the Avon Pottery, Cincinnati, Ohio, about 1885.—**Azimgarh pottery**, a rude earthenware made at Azimgarh, India, of a fine black color, with silvery ornamentation, produced by scratching the pattern on the surface of the burned ware and rubbing into the lines an amalgam of tin and mercury.—**Azure pottery**, a variety of stoneware decorated in blue. See the extract.



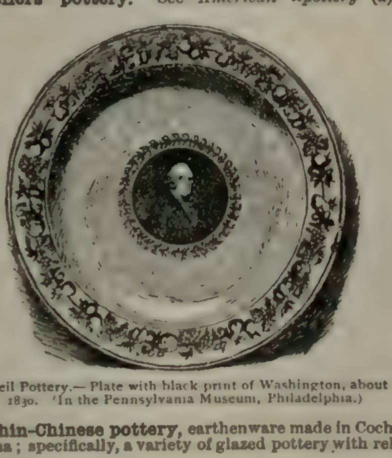
Rookwood Pottery.— Mug, Cincinnati, Ohio, underglaze decoration, portrait of General Washington.
(In the Pennsylvania Museum, Philadelphia.)



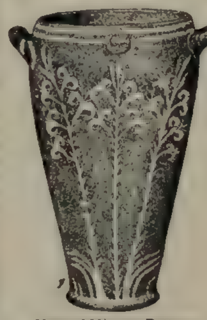
Anglo-American Pottery.— Plate with dark blue print of Captain McDonough's victory on Lake Champlain, 1814.
(In the Pennsylvania Museum, Philadelphia.)

> Among the other French potteries of the sixteenth century we must mention those of Savignies and La Chapelle-aux-Pots, small villages in the neighbourhood of Beauvais, where . . . a kind of stoneware covered with plain blue enamel was also manufactured. This ware, mentioned by Rabelais and the historians of that period, by whom it is termed *azure pottery*, was of sufficient value to be presented to sovereigns. It is now rather scarce.
>
> *Gasnault and Garnier*, S. K. Handbooks, French Pottery, p. 31.

Barbizet pottery, an imitation of the rustiques figulines of Bernard Palissy made by Victor Barbizet, of Paris, France, since 1850. See *Palissy ware*, under *ware*^{2}.—**Biloxi pottery**. See *American ★pottery* (*b*).—**Bordeaux pottery**, stanniferous faïence made at Bordeaux, France, during the eighteenth century, in the styles of the Rouen, Nevers, and Moustiers potteries.—**Cafaggiolo pottery**, majolica ware made at Cafaggiolo, Italy, in the fifteenth and sixteenth centuries. Its principal characteristics are a pure white enamel and a rich dark-blue grounding laid on with a coarse brush.—**Castel Durante pottery**, majolica produced at Castel Durante, Italy, during the sixteenth and seventeenth centuries. The decorations frequently consist of grotesques, dolphins, sea-horses, masks, and festoons, arranged in symmetrical patterns. Many of the pharmacy jars and plaques with paintings of large heads are attributed to Castel Durante.—**Cliff-dwellers' pottery**. See *American ★pottery* (*a*).—**Cochin-Chinese pottery**, earthenware made in Cochin-China; specifically, a variety of glazed pottery with relief decorations.—**Costa Rican pottery**. See *American ★pottery* (*a*).—**Creil pottery**, cream-colored ware, or queen's-ware, made at Creil, France, late in the eighteenth and in the first half of the nineteenth century, by a firm of English potters who introduced transfer-printing in the decoration of table-services.—**Deruta pottery**, tin-enameled pottery made at Deruta, Italy, in the sixteenth century. Some pieces ascribed to this source possess a beautiful madreperla luster, similar to that of the Pesaro pottery.—**Forli pottery**, tin-enameled pottery, or majolica, made at Forli, Italy, in the fifteenth and sixteenth centuries.—**Gien pottery**, a variety of pottery which somewhat resembles tin-enameled ware but has a plumbiferous glaze, made at Gien, France, in imitation of the styles of Marseilles, Rouen, and other French faïence and of certain old Italian wares.—**Gombei pottery**, Japanese earthenware with a rough gray glaze, more or less crackled, made by Gombei Kurisaki at Matsue, Japan, before 1695. See *Idzumo ★pottery*.—**Gubbio pottery**, majolica made at Gubbio, Italy, in the sixteenth century, particularly a rich, ruby-lustered pottery made by Giorgio Andreoli.—**Higo pottery**, earthenware made in the province of Higo, Japan, showing Korean influence.—**Idsumo pottery**. Same as *Idzumo ★pottery*.—**Idzumo pottery**, earthenware made in the province of Idzumo, Japan, the most common variety having a brilliant reddish-brown glaze, shading into yellow. Also written *Idsumo*.—**Iga pottery**, earthenware made in the province of Iga, Japan.—**Imbe pottery**, earthenware made at Imbe, in the province of Bizen, Japan. See *Bizen pottery*, under *pottery*.—**Indian pottery**. See *American ★pottery* (*a*).—**Ipsen pottery**, terra-cotta made in the style of the ancient Greco-Roman pottery, at Copenhagen, Denmark. In beauty of form and purity of decorative designs the Ipsen reproductions compare favorably with the classical vases.—**Jersey City pottery**. See *American ★pottery* (*b*).—**Karatsu pottery**, hard pottery made at Karatsu, in the province of Hizen, Japan; particularly prized by the Japanese.—**Kishiu pottery**, earthenware made at Wakayama, in the province of Kii, Japan.—**Kiyomizu pottery**, a kind of pottery manufactured in the Kiyomizu district, Kioto, Japan. Also written *Kiyomidsu*. See *Kiyomidzu porcelain*, under *porcelain*.^{1}—**Lille pottery**, a stanniferous faïence, resembling that of Rouen, made at Lille, France, in the eighteenth century. It is distinguished by a fine white enamel and inferior decorations and colors.—**Limoges pottery** a name given to underglaze, slip-painted earthenware, or barbotine, first produced about 1875 at Limoges, France, and extensively imitated by amateur decorators in the United States. Also called *Haviland faïence*.—**Longwy pottery**, a faïence produced at Longwy, France, since about 1838, decorated with enameled colors, often in Oriental styles and frequently covered with a crackled glaze.—**Lunéville pottery**, stanniferous faïence made at Lunéville, France, from about 1731; also, biscuit figures and groups, made of a local white clay, frequently stamped "Terre de Lorraine."—**Malaga pottery**, a variety of pottery made at Malaga, Spain, in the fourteenth and fifteenth centuries, noted for its beautiful golden luster. This was probably the most ancient center for the manufacture of Hispano-Moresque pottery.—**Marseilles pottery**, tin-enameled faïence produced at Marseilles, France, from before 1700 to the end of the eighteenth century. This ware was noted for its beautifully modeled shapes and graceful handles and feet, and its fine colors. The mark generally used was the fleur-de-lis.—**Mexican pottery**. See *American ★pottery* (*a*).—**Mino pottery**, a pottery which derives its name from the province of Mino, Japan, where it is made.—**Minoan pottery**, pottery of the Minoan period found in Crete. There are three styles — early, middle, and late.—**Mi Shima Karatsu pottery**, Karatsu pottery, made in Japan, in the Mi Shima style of decoration. See *Karatsu ★pottery* and *Mi Shima ★ware*.—**Moki pottery**. See *Pueblo pottery*, under *American ★pottery* (*a*).—**Mound-builders' pottery**. Same as *mound ★pottery*.—**Mound pottery**. See *American ★pottery* (*a*).—**Moustiers pottery**, tin-enameled faïence made at Moustiers, France, from about 1679 through the eighteenth century.—**Nevers pottery**, stanniferous faïence made at Nevers, France, in the latter part of the sixteenth and through the seventeenth and eighteenth centuries, in the style of Italian majolica. The clay and glaze were of considerable hardness, while the colorings of the decorations were weak. See *faïence patriotique*.—**Nicaragua pottery**. See *American ★pottery* (*a*).—**Ohi pottery**, earthenware made at Ohi, a village in the eastern part of Kanazawa, Japan.—**Pavia pottery**, pottery produced at Pavia, Italy, in the seventeenth century, of a rich brown color, with sgraffito decorations.—**Pennsylvania-German pottery**. See *American ★pottery* (*b*).—**Peruvian pottery**. See *American ★pottery* (*a*).—**Pesaro pottery**, majolica made at Pesaro, Italy, in the sixteenth century, noted for its madreperla luster.—**Pueblo pottery**. See *American ★pottery* (*a*).—**Raku pottery** [Jap. *raku*, ease, comfort], earthenware of light gray clay and of a coarse texture, with a heavy glaze, usually red or black. It is made at various places in Japan, particularly in Kioto. See the extract.



Creil Pottery.— Plate with black print of Washington, about 1830. (In the Pennsylvania Museum, Philadelphia.)



Vase of Minoan Pottery.
Found in the Minoan palace at Cnosus, Crete.
(From "Annual of the British School at Athens.")

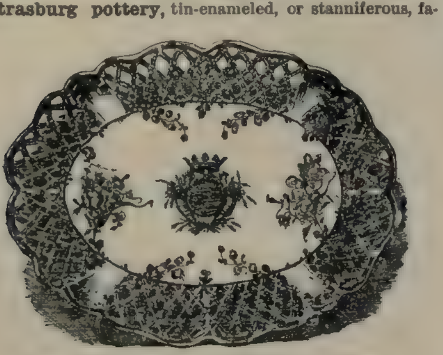
> *Raku* derives its name from incidents connected with its first production. Chōjiro, the son of a Korean potter, attracted the attention of Hideyoshi, who invited him to build an oven near a pleasure-house named Juraku. Hideyoshi became his patron and later gave to Chōjiro's son a gold seal or stamp bearing the character *Raku*, which signifies happiness.
>
> *E. S. Morse*, Japanese Pottery, p. 259.

Rato pottery, earthenware made at Rato, Portugal, in a great variety of styles, including imitations of Palissy, Rouen, and other wares.—**Rimini pottery**, majolica of the fifteenth, sixteenth, and seventeenth centuries, made at Rimini, Italy; characterized by good painting, strong coloring, and fine enamel. Lead-glazed ware was also produced there.—**Romano-British pottery**, pottery made by the ancient Romans in Great Britain or found there among Roman remains.—**Rookwood pottery.** See *American* ★*pottery* (*b*).—**Saracenic pottery.** See *Arabic* ★*pottery*.—**Savona pottery**, earthenware made at Savona, Italy, in the seventeenth and eighteenth centuries. Vases, drug-jars, and services were produced in abundance.—**Sceaux pottery**, tin-enameled faïence made at Sceaux, near Paris, France, in the latter half of the eighteenth century. This ware was frequently modeled in artistic shapes, figures, and groups, and painted with floral and figure subjects.—**Shigaraki pottery**, earthenware made at Shigaraki, province of Omi, Japan. It is of a reddish tint, with a rough surface, often having a heavy running glaze over the surface glaze.—**Shino pottery**, a rough, hard pottery, with a coarse white crackled glaze, produced in the province of Owari, Japan, usually in the forms of bowls, plates, and incense-boxes. See the extract.

> Records state that the earliest pieces recognized under the name of *Shino* date back to 1700 or before, and are due to Shino Saburo or Shino Oribe (pseudonym Shino So-on), a tea-lover who made them by order of his prince.
> *E. S. Morse*, Japanese Pottery, p. 191.

Siena pottery, majolica made at Siena, Italy, in the sixteenth century, of excellent finish and carefully painted.—**Sinceny pottery.** Same as *Sinceny ware* (which see, under *ware*2).—**Soma pottery**, a variety of earthenware made in the province of Iwaki, Japan, frequently bearing a decorative design of a tethered horse and the crest of the house of Soma. See the extract.

> The founder of *Sōma pottery* was Tashiro Goyemon. . . . Tashiro remained with Ninsei for seven years, and this great potter in reward for Tashiro's diligence and faithfulness permitted him to use Sei, one of the characters of his name, and thus Tashiro Goyemon became Tashiro Seijiyemon, and the mark Sei was used in his work. Tashiro [Seijiyemon] returned to Nakamura in 1631, and made pottery at the order of his master (the lord of Sōma).
> *E. S. Morse*, Japanese Pottery, p. 310.



Strasburg Pottery.—Platter with openwork border, 18th century, from Strasburg, Alsace-Lorraine. (In the Pennsylvania Museum, Philadelphia.)

Strasburg pottery, tin-enameled, or stanniferous, faïence made at Strasburg, from about 1710 (?) to about 1780. It was noted for its lightness of weight, its milky-white enamel, and the brilliancy of its colors, particularly the purples and pinks.—**Takatori pottery**, pottery made at Takatori, a village in Chikuzen province, Japan. It is usually of a fine clay, covered with brown glaze.—**Talavera pottery**, pottery made at Talavera, one of the principal sites of the industry in Spain, during the seventeenth and eighteenth centuries, particularly a ware with white glaze and well-painted decorations.—**Urbino pottery**, majolica ware made at Urbino, Italy, in the sixteenth and seventeenth centuries. The vases and other pieces were usually of large size and well modeled, and painted with subjects from sacred and profane history.—**Vegetable pottery**, a variety of earthenware made of clay mixed with the powdered bark of the carisse or pottery-tree of Brazil.—**Yatsushiro pottery**, earthenware produced near the town of Yatsushiro, province of Higo, Japan.—**Zuñi pottery.** See *Pueblo pottery*, under *American* ★*pottery* (*a*).

potting, *n.* 5. In *billiards*, the act of holing a ball.

pot-valve (pot′valv), *n.* A lift safety-valve which somewhat resembles a pot in form. Guides are cast on the top of the seat-casting to keep the valve in position when it is lifted.

pouch, *n.*—**Abdominovesical pouch.** See ★*abdominovesical*.—**Cæcal pouches.** See ★*cæcal*.—**Cœlomic pouch.** See ★*cœlomic*.—**Douglas's pouch.** Same as *rectovaginal pouch* (which see, under *pouch*).—**Enterocœlic pouch**, in *embryol.*, an outpouching or diverticulum of the enteron, and hence containing a portion of the enterocœle or primitive gut-cavity.—**Esophageal pouch**, in earthworms, one of the paired hollow projections along the posterior portion of the esophagus, with the lumen of which they are in communication.—**Gastric pouch**, in jellyfishes, as *Aurelia*, one of the interradial prolongations of the stomach toward the circumference.—**Gutteral pouch**, an elongated dilated sac communicating at one end with the middle ear and at the other end with the pharynx, and containing air. It is found only in solipeds and is the same as the Eustachian tube of man. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 128.—**Internemal gastral pouch**, in *Narcomedusæ*, an interradial pouch projecting from a radial pouch into the lobes of the peripheral part of the umbrella.—**Prussak's pouch.** Same as *Prussak's* ★*space*.—**Rathke's pouch**, a pocket or depression in the roof of the mouth, just in front of the septum, which temporarily separates the mouth from the pharyngeal cavity in embryonic vertebrates. The wall of Rathke's pouch takes part in forming the pituitary body.

pouching (pouch′ing), *n.* 1. The act of putting anything into a pouch or pocket.—2. The formation of a pouch or of a sac-like projection or indentation; the pouch or sac thus formed. See the extract under *pouch*, *v. i.*

pouch-shell (pouch′shel), *n.* The shell of a small pond-snail, *Physa hypnorum*.

poudre (pödr), *n.* [F.] Powder; gunpowder.—**Poudre B**, an explosive, one of the earlier kinds of smokeless powder, manufactured in France for use in the Lebel rifle, pattern of 1886. It consisted of about 68 per cent. guncotton, 30 per cent. soluble pyroxylin, and 2 per cent. paraffin. Also known as *Vieille's powder*.—**Poudre BN**, an explosive, a modified form of poudre B, consisting of insoluble pyroxylin (guncotton) and soluble pyroxylin, but with the addition of barium and potassium nitrates and a little sodium carbonate.

poulard (pö-lärd′), *n.* [F. *poularde*.] A young hen fattened for the table; a spayed hen. *N. E. D.*

Poulson telephonograph. Same as ★*magnetophonograph*.

Poultry acariasis. See ★*acariasis*.

poultry-car (pōl′tri-kär), *n.* A special type of box-car fitted with racks for poultry-boxes containing live poultry, and provided with conveniences for feeding and watering the birds in transit.

poultry-tick (pōl′tri-tik), *n.* An American ixodid, *Argas americanus*, destructive to poultry in the southwestern United States.

pounamu (pō-ö-nä′mö), *n.* [Maori.] Nephrite; jade; greenstone. [Australia.]

pounce-powder (pouns′pou″dėr), *n.* Same as *pounce*2.

pouncet† (poun′set), *n.* [*pounce*2 + *-et*.] Same as *pounce*2, 2 (in *pouncet-box*).

pound1, *n.*—**Egyptian pound**, a current coin, the unit of money of the English protectorate in Egypt and the Sudan. It is divided into 100 piasters, and is equivalent to $4.943 in United States gold.

> The unit is the *Egyptian pound*, which is divided into 100 piastres, the piastre being again divided into 10 milliemes. The *Egyptian pound* weighs 8.500 grammes, and contains 875 parts out of 1000 of fine gold. Its approximate value in English currency is £1, 0s. 6d.
> *Encyc. Brit.*, XXVII. 700.

Mint pound, the troy pound adopted by act of Congress in 1828 as the basis for all coinage in the United States, and kept at the United States Mint in Philadelphia. It is taken from its safe only at the annual meeting of the Assay Commission. It is of brass of unknown density, and therefore fit to serve as a standard only for the practical purpose prescribed by law. The Bureau of Standards regards this troy pound as agreeing with the troy pound deduced from the standard kilogram 20, which is the ultimate standard for all weights in the United States. See ★*prototype*, 2.—**Pound-and-pint idler**, an English naval term, referring to the purser of the ship.—**Pound Col**, a proposed industrial unit for electrochemical energy equivalent to 500 ampere-days; the electrical quantity which will generate one pound of hydrogen.

pound2, *n.* 1. (*b*) A compartment in an abattoir in which animals can be kept until they are slaughtered. *Encyc. Brit.*, XXXII. 644.

poundage1, *n.* 4. A commission of so much in a pound upon the earnings of weavers, paid in some parts of England to superintendents of weaving-plants. *R. Marsden*, Cotton Weaving, p. 476.

poundage2, *n.* 3. The series of pounds in an abattoir in which animals can be kept until they are slaughtered. *Encyc. Brit.*, XXXII. 644.

pound-degree (pound′dē̤-grē″), *n.* A compound unit which denotes the quantity of heat necessary to raise one pound of water one degree in temperature at the temperature corresponding to the greatest density of water. The value of a Fahrenheit pound-degree is one British thermal unit or 778 foot-pounds.

pour1, *n.* 3. In *founding*: (*a*) the quantity of material or molten metal poured from one charging of a cupola; (*b*) the act or operation of pouring molten metal into a mold.

pouring-stick (pōr′ing-stik), *n.* In *plumbing*, a notched stick or wooden spatula used in guiding the stream of hot solder in wiping a joint.

pourprite (pör′prit), *n.* [F. **pourprite*, < *pourpre*, purple.] A dark blackish-red material found in the sediment of old wines. It is probably a mixture of several substances.

pourriture (pö-ri-tür′), *n.* [F., < *pourrir*, < L. *putrire*, rot.] A decay of the roots of the vine due to unfavorable environment: distinguished from *pourridié*.

Pourtalesia (pör-ta-lē′ṣi-ạ̈), *n.* [NL.] A genus of living apetalous irregular echinoids, of the spatangid family of *Echinoidea*, remarkable on account of the extreme reduction and partial obliteration of members of the apical system of plates.

poussé (pö-sā′), *a.* [F., pp. of *pousser*, push.] In *violin-playing*, with an up-bow.

powami (pō-wä′mē̤), *n.* [Also *powamu*; a Hopi word.] An annual ceremony performed by the Hopi of Oraibi, usually during February.

> The name *Powami* is derived from powatani, to put in order, in proper shape or condition, as by this ceremony the fields and gardens are put in proper condition, symbolically, protected against destructive forces (sand storms, ants, etc.), and in every way consecrated, as it were, for the approaching planting season.
> *Field Columbian Museum Pub.*, Anthrop. ser., III. 71, [note.

powan, *n.* 2. A name applied to the salmon in parts of Great Britain: equivalent to the Welsh name *gwyniad*.

powder, *n.*—**Alizarin blue powder.** See ★*blue*.—**Alizarin powder.** Same as *alizarin* ★*carmine*.—**Amide powder.** See ★*amide*.—**Atlas powder**, an explosive mixture containing 75 per cent. of nitroglycerin, mixed with wood-fiber, sodium nitrate, and magnesium carbonate: used principally for blasting.—**Blue powder**, a by-product in the manufacture of zinc-white, consisting partly of oxidized and partly of finely divided metallic zinc. It settles nearer the hearths than does the zinc-white.—**Brown powder**, a gunpowder in which the charcoal is prepared at a low temperature or is underburned. The proportions of the ingredients are niter 82 parts, sulphur 3 parts, and charcoal 15 parts.—**Brugère's picrate powder** or **Brugère powder**, a smokeless gunpowder consisting of 54 per cent. of ammonium picrate and 46 per cent. of potassium nitrate.—**Castellanos powder**, a trade-name of an explosive consisting of a mixture of nitroglycerin, nitrobenzene, "fibrous material," and silicious earth. Another variety contains a picrate along with nitroglycerin, sodium nitrate, carbon, sulphur, and an insoluble mineral salt, such as silicate or oxalate of calcium.—**Colonia powder**, an explosive, originally made at Cologne, consisting essentially of nitroglycerin, infusorial earth, nitrate of baryta, wood-pulp, sulphur, and bicarbonate of soda.—**Courteille's triumph safety-powder**, a trade-name of an explosive consisting of sodium nitrate, sulphur, charcoal, peat and coal, metallic sulphates, and oleaginous matter.—**David powder**, a powder applied to plants as a fungicide and insecticide, made with 30 parts of quicklime and 8 parts of copper sulphate (the former slaked and the latter dissolved with as little water as possible), the mixture being dried in the sun.—**Designolles's powder**, an explosive consisting essentially of potassium picrate and niter in varying proportions. In some varieties charcoal also is introduced.—**Dupont's powder**, a kind of smokeless powder, originated at the Dupont powder-works, and consisting of guncotton dissolved in nitrobenzene.—**E. C. powder, No. 1**, a trade-name of a smokeless powder for sporting use, consisting of soluble pyroxylin and barium nitrate, with small quantities of other substances.—**Gray powder**, a powder made by triturating mercury with chalk, occasionally employed as a remedy for acid diarrhea in children.—**Green powder.** Same as *methyl green* (which see, under *green*1).—**Hercules powder**, a trade-name of an explosive consisting of 40 per cent. nitroglycerin, 31 per cent. potassium nitrate, 3.34 per cent. potassium chlorate, 10 per cent. magnesium carbonate, and 15.66 per cent. sugar: but it is made of various strengths, ranging from 20 to 75 per cent. nitroglycerin, and sodium nitrate is said to be used in place of potassium nitrate.—**Johnson's powder**, an explosive for use in sporting firearms, consisting essentially of nitrocellulose less highly nitrated than the most explosive guncotton. It is similar in general character to E. C. powder and Schultze powder.—**Judson powder**, a trade-name of a variety of dynamite, the lowest grade of which consists of 5 per cent. nitroglycerin, 64 per cent. sodium nitrate, 16 per cent. sulphur, and 15 per cent. cannel-coal. Other grades are made, up to 33 per cent. nitroglycerin.—**Leonard powder**, a smokeless gunpowder consisting largely of nitroglycerin, with some insoluble guncotton and a slowing agent.—**Mammoth powder**, the largest size of granulation into which the mill-cake of ordinary gunpowder is broken.—**Maxim powder**, an explosive agent, a variety of smokeless powder for use in firearms, patented by Hiram S. Maxim. It is prepared in a special way, and consists of nitroglycerin, insoluble and soluble guncotton, sodium carbonate, and a little castor-oil. In a grade of later introduction a small quantity of urea was employed.—**Melland's paper powder**, an explosive for use in firearms, prepared by dipping strips of porous paper in a watery solution of potassium chlorate, nitrate, ferrocyanide, and a little chromate, with starch and suspended charcoal powder, drying, and protecting against moisture by a coating of xyloidine dissolved by acetic acid.—**Nobel's safety-powder**, a blasting-material composed of nitroglycerin absorbed by a porous, inexplosive substance: now generally known as *dynamite No.* 1. See ★*dynamite*.—**Normal powder**, a trade-name of an explosive, a variety of smokeless powder, manufactured in Sweden, consisting of 96.21 per cent. insoluble nitrocellulose, 1.80 per cent. soluble nitrocellulose, and 1.99 per cent. resin: said to have been adopted for use in the Swiss army.—**Pebble powder**, gunpowder in very large grains, up to 1¼ or 2 inches in diameter, approximately cubical in shape, made from a slab of press-cake of the proper thickness, which is divided by two pairs of cutting-rolls into strips of width equal to the thickness and then into cubical blocks of length equal to the width: to be distinguished from *prism* or *prismatic powder*, of which the grains are formed individually by pressure.—**Pertuiset's powder**, the trade-name of an explosive, composed of 2,000 parts of potassium chlorate, 1,000 parts of sulphur, 125 parts of sporting gunpowder, and 20 parts of animal charcoal. It has been used in the manufacture of explosive bullets.—**Peyton powder**, a smokeless gunpowder consisting of 40 per cent. of nitroglycerin and 40 per cent. of guncotton, with other substances, the whole being incorporated into a plastic mass and then formed into grains of proper size for the gun in which it is to be used.—**Podechard powder,** a French insecticide and fungicide preparation designed for use upon grape-vines. It consists of 100 kilograms of quicklime, 20 of sulphate of copper, 10 of flowers of sulphur, 15 of wood-ashes, and 50 liters of water at 20° C. The sulphur is added after the rest of the mixture has stood for 24 hours; the whole is then well mixed, dried, and forced through a fine sieve.—**Powder blue.** See ★*blue.*—**Powder of fusion,** a name given to a mixture of 3 parts niter, 1 sulphur, and 1 sawdust, which, if set on fire in a walnut-shell filled with it, produces so high a temperature that a small silver or copper coin embedded in the material is melted. Also known as *Baumé's quick flux.*—**Prism powder.** Same as *prismatic powder* (which see, under *powder*). The grains are produced, individually, by heavy pressure in a mold.—**Progressive powder,** a gunpowder so made that it burns slowly at first and afterward more rapidly, in order to avoid the high pressures due to immediate rapid combustion. This is accomplished by so molding the grain as to make its surface more dense than the interior, or by forming a number of small dense grains into a large grain.—**Schultze powder,** a trade-name of an explosive, sold as a kind of smokeless powder for sporting-guns, consisting of about 32.5 per cent. insoluble nitrocellulose, 28 per cent. soluble nitrocellulose, 1.5 per cent. cellulose, 27.5 per cent. barium nitrate, 2.5 per cent. sodium nitrate, 2.5 per cent. potassium nitrate, 4 per cent. paraffin, and 1.5 per cent. moisture or other volatile matter. See ★*nitrolignin.*—**Smokeless powder.** See ★*gunpowder.*—**Triumph safety powder,** a trade-name for an explosive, analogous to ordinary gunpowder but made with sodium nitrate instead of potassium nitrate and having peat, coal, and less valuable substances instead of much of the charcoal. Also known as *Courteille's powder.*—**Vieille's powder.** Same as ★*poudre B.*—**Volney's powder,** an explosive made by mixing nitrated derivatives of naphthalene with saltpeter and sulphur. Two grades have been prepared, the more powerful consisting of nitrated naphthalene No. I (chiefly tetranitronaphthalene) 2.18 lbs., saltpeter .19 lb., and sulphur .16 lb.; and the less violent nitrated naphthalene No. II (chiefly mononitronaphthalene) 1.00 lb., saltpeter 3.30 lbs., and sulphur .51 lb.—**W. A. powder,** a variety of smokeless powder proposed for use in guns of all calibers of the United States army and navy. Insoluble guncotton of the highest grade is used, and carefully prepared nitroglycerin. The latter is dissolved in acetone, and the guncotton added, with more acetone and the necessary deterrent, until complete gelatinization is effected. The pasty mass is pressed into solid threads or perforated cords or cylinders to suit the various calibers, and these are then cut to proper lengths and carefully dried.—**Wetteren powder,** a kind of smokeless powder manufactured at Wetteren by the Belgian government. It was originally composed of nitroglycerin and nitrocellulose, incorporated with the aid of amyl acetate as a solvent, but its composition has undergone modification, one variety being essentially a nitrocellulose compound.—**White powder,** an explosive proposed by Augendre and Pohl as a substitute for common gunpowder. It consists of potassium chlorate, potassium ferrocyanide, and cane-sugar, all in fine powder and simply mixed, not requiring granulation; but its storage and use are not free from danger, and on explosion it erodes iron or steel guns to a serious extent.—**Wood powder,** a trade-name of a smokeless powder designed for sporting use and consisting mainly of nitrated cellulose. There are several modifications, containing in varied proportions insoluble and soluble pyroxylin, sometimes with unaltered cellulose or lignin, and with barium, sodium, or potassium nitrate.

powder-barrel (pou′dėr-bar″el), *n.* A barrel made especially for the shipment and storage of gunpowder.

powder-blue (pou′dėr-blö″), *n.* A peculiar dull shade of blue used on Chinese porcelain. See the extract.

> The calcined cobaltiferous ore of manganese was either mixed with the white glaze . . . or it was blown through gauze upon the raw white body of the piece and subsequently glazed over to produce the magnificent effect of *powder blue.* *S. W. Bushell*, Oriental Ceram. Art, p. 312.

powder-hog (pou′dėr-hog), *n.* *Naval*, a floating magazine: same as ★*powder-vessel* (which see).

powdering-machine (pou′dėr-ing-ma̤-shēn″), *n.* 1. A machine for spreading bronze- or other powder over a surface to which it will adhere.—2. A pulverizing-machine. [Rare.]

powderize (pou′dė̤-rīz), *v. t.*; pret. and pp. *powderized*, ppr. *powderizing.* [*powder* + *-ize.*] 1. To reduce to a powder; pulverize.—2. To fill or mix with a powder, such as talcum, as soap.

> When a large quantity of filling material is needed, it becomes very difficult to rub the soap through the sieves. In case this difficulty arises, only one thing can be done to lighten the task, and that is to *powderize* the soap when the mixed materials are still warm, and this facilitates the work very much.
> *Sci. Amer. Sup.*, April 18, 1903, p. 22818.

powder-posted (pou′dėr-pōs″ted), *a.* Noting posts, and other timber, which have been attacked by the dry-rot fungus *Merulius lachrymans.* See *dry-rot*, 1.

powder-tank (pou′dėr-tangk), *n.* A metallic case with sides and bottom of sheet-copper, and the top of composition with an air-tight fitting cover.

powder-vessel (pou′dėr-ves″l), *n.* A naval vessel designed for carrying powder, always distinguishable by the red flag which she flies. See ★*powder-hog.*

powellite (pou′el-īt), *n.* [Named after J. W. *Powell* of the United States Geological Survey.] Calcium molybdate, $CaMoO_4$, occurring in yellow tetragonal crystals: found in Idaho, also in Michigan.

powellize (pou′el-īz), *v. t.*; pret. and pp. *powellized*, ppr. *powellizing.* [W. *Powell* of Liverpool, the inventor of the process.] To saturate (wood), at a boiling temperature, with a solution of cane-sugar in order to increase its durability. *Sci. Amer. Sup.*, Sept. 5, 1903, p. 23138.

power[1], *n.* 15. In *geom.*: (*b*) The power of a point A with respect to a point-pair PP′ costraight with it is the product of the two sects from it to the pair—positive if it is on the same side of them, negative if it is between them. If m is the sect from A to the midpoint M of the sect PP′, and h half the sect PP′, then $AP.AP' = (m+h)(m-h) = m^2-h^2$. This power is null if A coincides with P or P′. (*c*) The power of one point with respect to another is the square of the sect between them. (*d*) The power of a point with respect to a straight is the perpendicular from the point to the straight. (*e*) The power of a point with respect to a sphere or circle is its power with respect to a point-pair costraight with it and on the sphere or circle. (*f*) The square on the center-sect of two circles less the squares on their radii is the power of the two circles, or the power of one circle with respect to the other.—23. In the *theory of assemblages*: (*a*) If the aggregates or sets A and B are equivalent they are said to have the same power. (*b*) A transfinite cardinal.

> The transfinite cardinals, which are also called *powers*, may be defined in the first place so as to include the finite cardinals. *B. A. W. Russell*, Prin. of Math., p. 304.

Apparent power, in an alternating-current circuit, the product of volts and amperes which is greater than the true power if the current is out of phase with the electromotive force, that is, if the current reverses earlier or later than the electromotive force, or if the current wave differs in shape from the wave of electromotive force.—**Calorific power.** See ★*calorific.*—**Center of power.** See ★*center*[1].—**Illusory power** or **illusory appointment.** In *law*, when the donee of a power, having discretion to appoint among several beneficiaries, disposes of the estate in an unequal and inequitable manner between them, he is said to make an illusory appointment: for example, A has a power to appoint an estate worth $1,000 between C and D, and he gives C $950 and D $50. Such an appointment was good at the common law, though not in equity.—**Maritime power,** a country which possesses seaports and a navy of sufficient power to protect them.—**Naked power,** in *law*, a collateral power. See *power*[1], 7 (*c*).—**Power of appointment.** See appoint, *v. t.*, 5.—**Resolving power.** (*b*) In *spectroscopy*, the power of any device used for dispersion, such as a prism, grating, or echelon, to separate adjacent spectral lines.—**Restraining powers,** in *law*, limitations or restrictions imposed by the donor of a power upon the donee.—**Separating power,** in *astron.*, the power of a telescope in showing as separate two luminous points near each other. It is usually expressed by stating the least angular distance at which the separation is perceptible.—**Specific refracting power.** Same as *specific* ★*refractivity.*—**Thermo-electric power,** the electromotive force due to a thermo-electric couple, consisting of two given metals, when the difference between the temperatures of the hot and the cold junction is one degree centigrade.—**Tractive power,** power available for pulling or hauling; the hauling-power that can be exerted by a locomotive or other motor. It is a certain definite proportion of the weight on the driving-wheels, usually, in wheels on tracks, one fourth or one fifth.—**Unit of power.** See ★*unit.*

power[1] (pou′ėr), *v. t.* [*power*[1], *n.*] To furnish with power, specifically with motive power.

> It is in the *powering* of the two vessels that the great advance in marine engineering is most apparent.
> *Engin. Mag.*, March, 1899, p. 1011.

power[2] (pou′ėr), *n.* [Also *poor*; Cornish dial. *power*, of obscure origin.] A small codfish, *Gadus minutus*, called also *power-cod.* *Jago*, The Ancient Language, and the Dialect of Cornwall, p. 242. [Cornwall.]

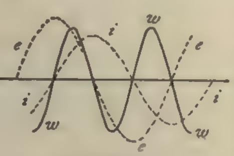
power-board (pou′ėr-bōrd), *n.* In *elect.*, a switchboard for circuits used in the distribution of power, as distinguished from a switchboard for lighting-circuits.

> The *power-board* is a handsome marble panel equipped with Weston ammeter and voltmeter arranged for taking readings on the various circuits. There are over-load and under-load circuit-breakers for the storage battery charging circuit, and the necessary knife switches, tubular fuses, regulating resistances, etc.
> *Elect. Rev.*, Sept. 17, 1904, p. 444.

power-boat (pou′ėr-bōt), *n.* A boat which is propelled by an engine; specifically, a boat having an internal-combustion engine to furnish the driving power. See ★*motor-boat.*

power-cod (pou′ėr-kod), *n.* Same as ★*power*[2].

power-curve (pou′ėr-kėrv), *n.* In *elect.*, a curve showing the variations in the instantaneous values for the power developed in an alternating-current circuit. Since the power at any instant is the product of current and electromotive force, the power-curve, which is usually a curve of sines, has a zero ordinate whenever either current or electromotive force is zero. The curve w in the figure is the power-curve of a circuit in which e is the curve of electromotive force and i the curve of current. These are in quadrature, for which case the power-curve is a curve of sines of twice the frequency of e or i and incloses equal positive and negative areas. The power developed in such a circuit therefore always equals that absorbed.



Power-curve.

power-door (pou′ėr-dōr), *n.* In *ship-building*, a sliding water-tight door which can be opened or closed quickly by electric, hydraulic, or pneumatic power attachments. In recent United States war-vessels there are several such doors which can be closed in an emergency from a distant position (as the pilothouse) by a suitable controlling mechanism.

power-factor (pou′ėr-fak″tọr), *n.* The ratio of the real to the apparent power in an alternating-current circuit. In a circuit where the wave-forms of current and electromotive force are sine-forms, the power factor is numerically equal to the cosine of the phase-difference.—**Power-factor meter.** See ★*meter*[1].

power-feed (pou′ėr-fēd), *n.* and *a.* **I.** *n.* In any machine, the feed or feeding mechanism which is operated by power, as distinguished from a feed operated by hand.

II. *a.* Having a feed mechanism operated by power.

power-gas (pou′ėr-gas), *n.* Any form of gas used for generating power; specifically, gas which is generated in a gas-producer and is used in an internal-combustion engine. It is poorer in the illuminant gases than the ordinary gas-works product used for lighting purposes, but often has a higher calorific value or heating-power. It can usually be produced more cheaply than illuminating-gas since it does not have to be enriched by other hydrocarbon elements.

> The heat of the gases respectively of the producer is entirely sufficient for furnishing such a quantity of steam as is required for the generation of an effective *power-gas.* The utilization of the fuel in suction gas producers is much higher than in pressure producers and reaches 80 per cent. or more. *Elect. Rev.*, Sept. 24, 1904, p. 515.

power-meter (pou′ėr-mē″tėr), *n.* An instrument, usually an integrating wattmeter, for measuring the power delivered to an electric circuit. *Science Abstracts*, VI. sec. B, p. 66.

power-myth (pou′ėr-mith), *n.* See ★*myth.*

power-plant (pou′ėr-plant), *n.* An aggregation of boilers, gas-producers, and engines and their accessories for the generation of power; a station where power is generated by steam or other engines or by water-wheels. The power may be transformed into electrical energy in the same station.

power-rail (pou′ėr-rāl), *n.* An insulated rail through which current is conveyed to the motors of certain types of electric railway. *Trans. Amer. Inst. Elect. Engin.*, 1899, p. 220.

power-scale (pou′ėr-skāl), *n.* A device for indicating the amount of power transmitted, as by shafting.

power-series (pou′ėr-sē″riz), *n.* A series which proceeds according to the ascending positive integral powers of a variable. Thus the series $a_0 + a_1x + a_2x^2 + \ldots + a_nx^n + \ldots$ whose coefficients a are independent of x, is a power-series or integral series in x.

power-station (pou′ėr-stā″shọn), *n.* A power-house; a building or buildings with the machinery and appliances contained therein for converting thermal or mechanical potential energy into a utilizable force; a place where power is generated or converted.

power-wheel (pou′ėr-hwēl), *n.* In *ceram.*, a potters' wheel, operated by a mechanical force such as water-power, steam, or electricity.

Pozzuolana cement. See ★*cement.*

P. P. An abbreviation (*a*) of *Parish Priest*; (*b*) of the Latin *Pater Patriæ*, Father of his Country; (*c*) [*l. c.*] in *law*, of *per procuration*, done by proxy; (*d*) of the Latin *punctum proximum*, nearest point (namely, of accommodation to which the eye can adjust itself).

P. P. I. An abbreviation of *Policy Proof of Interest.*

ppp., pppp. Symbols representing the word *pianissimo.*

PP. S. An abbreviation of the Latin *post postscriptum*, a second postscript.

P. Q. An abbreviation (*a*) of *Previous Question*; (*b*) of *Province of Quebec*.

Pr. 2. In *chem.*, the symbol for *praseodymium*.

P. R. An abbreviation (*a*) of the Latin *Populus Romanus*, the Roman People; (*b*) of *Porto Rico*; (*c*) of the Latin *punctum remotum*, farthest point (namely, of accommodation to which the eye can adjust itself).

P. R. A. An abbreviation of *President of the Royal Academy*.

practico (präk′ti-kō), *n.* [Sp., a practitioner, etc. See *practice*.] In the Philippines and Cuba, a guide.

practicum (prak′ti-kum), *n.*; pl. *practica* (-kä̤). [NL., < Gr. πρακτικός, of or pertaining to action. See *practic*.] An example for student practice, as in laboratory or field work. *Hunt*, The Cereals in America.

præabdomen, preabdomen (prē-ab-dō′men), *n.* [NL., < L. *præ*, before, + *abdomen*.] The anterior broad portion of the abdomen of scorpions. *Parker and Haswell*, Zoology, I. 605.

præbrachium, prebrachium (prē-brā′ki-um), *n.*; pl. *præbrachia, prebrachia* (-ä̤). [NL. *præbrachium*, < L. *præ*, before, + *brachium*, arm.] 1. The anterior process of the corpus quadrigeminum.—2. In *zoöl.*, that part of the wing-membrane of a bat lying in advance of the arm; the antebrachial membrane or propatagium.

præcentralis, precentralis (prē-sen-trā′lis), *n.* [NL., < L. *præ*, before, + *centralis*, central.] A fissure cephalad or anterior to, and more or less parallel with, the central fissure (fissure of Rolando) of the brain.—**Præcentralis superior.** Same as *supercentral* ★*fissure*. *Proc. Zool. Soc. London*, 1903, p. 16.

præcentrum, precentrum (prē-sen′trum), *n.*; pl. *præcentra, precentra* (-trä̤). [NL., < L. *præ*, before, + *centrum*.] One of the vertebral disks which carry neural and hemal arches, when found alternating with those that are not thus furnished: contrasted with ★*postcentrum*. The condition is found in some fishes. *Gadow*.

præcordium, precordium (prē-kôr′di-um), *n.*; pl. *præcordia, precordia* (-ä̤). Same as *precordial region* (which see, under *precordial*).

præcornual, precornual (prē̤-kôr′nṳ̄-al), *a.* [NL. *præcornu* + *-al*¹.] Relating to the præcornu. *Buck*, Med. Handbook, II. 171.

Prædentata (prē-den-tā′tä̤), *n. pl.* [NL., < L. *præ*, before, in front, + *dentatus*, toothed.] A suborder of herbivorous dinosaurs including quadrupedal and bipedal forms. It is distinguished by the presence of a toothless predentary bone in front of the mandible; by the premaxillæ being either wholly or partly edentulous; and by the slender postpubes, which are directed downward and backward parallel to the ischium. Its members may be armored or unarmored. They occur in formations from the Upper Jura to the Upper Cretaceous in North America and Europe. Also *Predentata*.

præ-ilium, pre-ilium (prē-il′i-um), *n.*; pl. *præ-ilia, pre-ilia* (-ä̤). [NL., < L. *præ*, before, + *ilium*.] In *ornith.*, that part of the ilium which lies in front of the acetabulum.

præmedia, *n.* See ★*premedia*.

prænarial, *a.* 2. Preceding or situated anterior to the nares or nostrils: applicable either to anatomical structure, as, *prænarial* border; or to direction, as, *prænarial* elongation of snout. *Trans. Zool. Soc. London*, Dec., 1900, p. 182.—**Prænarial septum**, a vertical bony plate situated in front of the narial openings.

II. *n.* That portion of the facial region of a vertebrate head which lies anterior to the opening of the nares or nostrils.

Prænestine (prē̤-nes′tin), *a.* and *n.* [NL. *Prænestinus*, adj., *Prænestini*, n. pl., < *Præneste*, Gr. Πραίνεστος and Πραίνεστε, an ancient city of Latium.] **I.** *a.* Of or pertaining to Præneste.

> The engraved metal caskets of the kind commonly known as *Prænestine* cistæ, because they have been found for the most part at Prænestê, the modern Palestrina.
> *Woltmann and Woermann*, History of Painting, I. 88.

II. *n.* An inhabitant of Præneste (now Palestrina).

> The Romans. . . . were inclined to sneer at the pronunciation and idiom of the *Prænestines*.
> *Encyc. Brit.*, XXXIII. 897.

præpatagium, prepatagium (prē-pat-ā̤-ji′um), *n.*; pl. *præpatagia, prepatagia* (-ä̤). [NL., < L. *præ*, before, + *patagium*.] The triangular membrane on the front of a bird's wing, lying between the humerus and forearm. *Parker and Haswell*, Zoology, II. 352.

præpenna, prepenna (prē-pen′ä̤), *n.*; pl. *præpennæ, prepennæ* (-ē). [NL., < L. *præ*, before, + *penna*, feather.] A feather of the nestling plumage of birds which resembles the succeeding feather, or teleoptile, and is not of the nature of down.

> The neossoptiles of the Palæognathæ consist of *prepennæ* only, but these present many features of great interest. Trans. *Zool. Soc. London*, Dec., 1900, p. 162.

præplumulæ, preplumulæ (prē-plö′mṳ̄-lē), *n. pl.* [NL., < L. *præ*, before, + *plumula* (which see).] The downy covering of young birds when it does not consist of prepennæ, that is, is not connected with the definite feathers which appear later. *Trans. Linnean Soc.*, Zool., Nov., 1898, p. 253.

præscutellar, prescutellar (prē-skū′te-lär), *a.* [*præscutell*(*um*) + *-ar*³.] In *entom.*, of or pertaining to the præscutellum. *Proc. Zool. Soc. London*, 1898, p. 318.

Præsian (prē′si-a̤n), *a.* Of or pertaining to the ancient Præsus in Crete, especially to antiquities discovered by excavations in its site.

> The stone jambs characteristic of *Praesian* houses are here more massive than usual.
> *R. C. Bosanquet*, in An. Brit. School at Athens, VIII. [262.

prætergum, pretergum (prē-tėr′gum), *n.*; pl. *præterga, preterga* (-gä̤). [NL., < L. *præ*, before, + *tergum* (which see).] The anterior of the three parts into which the tergal aspect of a segment of a coleopterous larva is normally divided.

pragmatic, *a.* 3. A term used (by Kant) to denote rules of action (otherwise denominated 'counsels of prudence') which have to do with the attainment of happiness. As used by him, it is antithetic to the term 'practical,' which refers to principles of action (otherwise called 'categorical imperatives') which have to do with the attainment of virtue.

> We might . . . call the first kind of imperatives technical (belonging to art), the second *pragmatic* (to welfare), the third moral (belonging to free conduct generally, that is, to morals).
